freedom, absolute Light, absolute Beatitude. Is there then an unbridgeable gulf between that which is beyond and that which is here or are they two perpetual opposites and only by leaving this adventure in Time behind, by overleaping the gulf can men reach the Eternal? That is what seems to be at the end of one line of experience which has been followed to its rigorous conclusion by Buddhism and a little less rigorously by a certain type of Monistic spirituality which admits some connection of the world with the Divine, but still opposes them in the last resort to each other as truth and illusion. But there is also this other and indubitable experience that the Divine is here in everything as well as above and behind everything, that all is in That and is That when we go back from its appearance to its Reality. It is a significant and illuminating fact that the knower of Brahman even moving and acting in this world, even bearing all its shocks, can live in some absolute peace, light and beatitude of the Divine. There is then something here other than that mere trenchant opposition,—there is a mystery, a problem which one would think must admit of some less desperate solution. This spiritual possibility points beyond itself and brings a ray of hope into the darkness of our fallen existence.

And at once a first question arises—is this world an unchanging succession of the same phenomena always or is there in it an evolutionary urge, an evolutionary fact, a ladder of ascension somewhere from an original apparent Inconscience to a more and more developed consciousness, from each development still ascending, emerging on highest heights not yet within our normal reach? If so, what is the sense, the fundamental principle, the logical issue of that progression? Everything seems to point to such a progression as a fact—to a spiritual and not merely a physical evolution. Here too there is a justifying line of spiritual experience in which we discover that the Inconscience from which all starts is apparent only, for in it there is an involved Consciousness with endless possibilities, a consciousness not limited but cosmic and infinite, a concealed and self-imprisoned Divine, imprisoned in Matter but with every potentiality held in its secret depths. Out of this

apparent Inconscience each potentiality is revealed in its turn, first organised Matter concealing the indwelling Spirit, then Life emerging in the plant and associated in the animal with a growing Mind, then Mind itself evolved and organised in Man. This evolution, this spiritual progression — does it stop short here in the imperfect mental being called Man? Or is the secret of it simply a succession of rebirths whose only purpose or issue is to labour towards the point at which it can learn its own futility, renounce itself and take its leap into some original unborn Existence or Non-Existence? There is at least the possibility, there comes at a certain point the certitude that there is a far greater consciousness than what we call Mind, and that by ascending the ladder still farther we can find a point at which the hold of the material Inconscience, the vital and mental Ignorance ceases; a principle of consciousness becomes capable of manifestation which liberates not partially, not imperfectly, but radically and wholly this imprisoned Divine. In this vision each stage of evolution appears as due to the descent of a higher and higher Power of consciousness, raising the terrestrial level, creating a new stratum, but the highest yet remain to descend and it is by their descent that the riddle of terrestrial existence will receive its solution and not only the soul but Nature herself find her deliverance. This is the Truth which has been seen in flashes, in more and more entirety of its terms by the line of seers whom the Tantra would call the hero-seekers and the divine seekers and which may now be nearing the point of readiness for its full revelation and experience. Then whatever be the heavy weight of strife and suffering and darkness in the world, yet if there is this as its high result awaiting us, all that has gone before may not be counted too great a price by the strong and adventurous for the glory that is to come. At any rate the shadow lifts; there is a Divine Light that leans over the world and is not only a far-off incommunicable Lustre.

It is true that the problem still remains why all this that yet is should have been necessary — those crude beginnings, this long, dark and stormy passage — why should the heavy and tedious price be demanded, why should evil and suffering ever have been

there? For to the how of the fall into the Ignorance as opposed to the why, as to the effective cause, there is a substantial agreement in all spiritual experience. It is the division, the separation, the principle of isolation from the Permanent and One that brought it about; it is because the ego set up for itself in the world affirming its own desire and self-affirmation in preference to its unity with the Divine and its oneness with all; it is because instead of the one supreme Force, Wisdom, Light determining the harmony of all forces each Idea, Force, Form of things was allowed to work itself out as far as it could in the mass of infinite possibilities by its separate will and inevitably in the end by conflict with others. Division, ego, the imperfect consciousness and groping and struggle of a separate self-affirmation are the effective cause of the suffering and ignorance of this world. Once consciousnesses separated from the One Consciousness, they fell inevitably into ignorance and the last result of ignorance was Inconscience; from a dark immense Inconscient this material world arises and out of it a soul that by evolution is struggling into consciousness, attracted towards the hidden Light, ascending but still blindly towards the lost Divinity from which it came.

But why should this have happened at all? One common way of putting the question and answering it ought to be eliminated from the first,—the human way and its ethical revolt and reprobation, its emotional outcry. For it is not, as some religions suppose, a supra-cosmic, arbitrary, personal Deity himself altogether uninvolved in the fall who has imposed evil and suffering on creatures made capriciously by his fiat. The Divine we know is an Infinite Being in whose infinite manifestation these things have come—it is the Divine itself that is here, behind us, pervading the manifestation, supporting the world with its oneness; it is the Divine that is in us upholding itself the burden of the fall and its dark consequence. If above it stands for ever in its perfect Light, Bliss and Peace, it is also here; its Light, Bliss and Peace are secretly here supporting all; in ourselves there is a spirit, a central presence greater than the series of surface personalities which, like the supreme Divine itself, is not overborne by the

fate they endure. If we find out this Divine within us, if we know ourselves as this spirit which is of one essence and being with the Divine, that is our gate of deliverance and in it we can remain ourselves even in the midst of this world's disharmonies, luminous, blissful and free. That much is the age-old testimony of spiritual experience.

But still what is the purpose and origin of the disharmony — why came this division and ego, this world of a painful evolution? Why must this evil and sorrow enter into the divine Good, Bliss and Peace? It is hard to answer to the human intelligence on its own level, for the consciousness to which the origin of this phenomenon belongs and to which it stands as it were automatically justified in a supra-intellectual knowledge, is a cosmic and not an individualised human intelligence; it sees in larger spaces, it has another vision and cognition, other terms of consciousness than human reason and feeling. To the human mind one might answer that while in itself the Infinite might be free from those perturbations, yet once manifestation began infinite possibility also began and among the infinite possibilities which it is the function of the universal manifestation to work out, the negation, the apparent effective negation — with all its consequences — of the Power, Light, Peace, Bliss was very evidently one. If it is asked why even if possible it should have been accepted, the answer nearest to the Cosmic Truth which the human intelligence can make is that in the relations or in the transition of the Divine in the Oneness to the Divine in the Many, this ominous possible became at a certain point an inevitable. For once it appears it acquires for the Soul descending into evolutionary manifestation an irresistible attraction which creates the inevitability — an attraction which in human terms on the terrestrial level might be interpreted as the call of the unknown, the joy of danger and difficulty and adventure, the will to attempt the impossible, to work out the incalculable, the will to create the new and uncreated with one's own self and life as the material, the fascination of contradictions and their difficult harmonisation — these things translated into another supraphysical, superhuman consciousness, higher and wider than the mental, were the temptation that

led to the fall. For to the original being of light on the verge of the descent the one thing unknown was the depths of the abyss, the possibilities of the Divine in the Ignorance and Inconscience. On the other side from the Divine Oneness a vast acquiescence, compassionate, consenting, helpful, a supreme knowledge that this thing must be, that having appeared it must be worked out, that its appearance is in a certain sense part of an incalculable infinite wisdom, that if the plunge into Night was inevitable the emergence into a new unprecedented Day was also a certitude, and that only so could a certain manifestation of the Supreme Truth be effected — by a working out with its phenomenal opposites as the starting-point of the evolution, as the condition laid down for a transforming emergence. In this acquiescence was embraced too the will of the great Sacrifice, the descent of the Divine itself into the Inconscience to take up the burden of the Ignorance and its consequences, to intervene as the Avatar and the Vibhuti walking between the double sign of the Cross and the victory towards the fulfilment and deliverance. A too imaged rendering of the inexpressible Truth? but without images how to present to the intellect a mystery far beyond it? It is only when one has crossed the barrier of the limited intelligence and shared in the cosmic experience and the knowledge which sees things from identity that the supreme realities which lie behind these images — images corresponding to the terrestrial fact — assume their divine forms and are felt as simple, natural, implied in the essence of things. It is by entering into that greater consciousness alone that one can grasp the inevitability of its self-creation and its purpose.

This is indeed only the Truth of the manifestation as it presents itself to the consciousness when it stands on the border line between Eternity and the descent into Time where the relation between the One and the Many in the evolution is self-determined, a zone where all that is to be is implied but not yet in action. But the liberated consciousness can rise higher where the problem exists no longer and from there see it in the light of a supreme identity where all is predetermined in the automatic self-existent truth of things and self-justified to an absolute

consciousness and wisdom and absolute Delight which is behind all creation and non-creation and the affirmation and negation are both seen with the eyes of the ineffable Reality that delivers and reconciles them. But that knowledge is not expressible to the human mind; its language of light is too undecipherable, the light itself too bright for a consciousness accustomed to the stress and obscurity of the cosmic riddle and too entangled in it to follow the clue or to grasp the secret. In any case, it is only when we rise in the spirit beyond the zone of the darkness and the struggle that we enter into the full significance of it and there is a deliverance of the soul from its enigma. To rise to that height of liberation is the true way out and the only means of the indubitable knowledge.

But that liberation and transcendence need not necessarily impose a disappearance, a sheer dissolving cut from the manifestation; it can prepare a liberation into action of the highest Knowledge and an intensity of Power that can transform the world and fulfil the evolutionary urge. It is an ascent from which the return is no longer a fall but a winged or self-sustained descent of light, force and Ananda.

It is what is inherent in force of being that manifests as becoming; but what the manifestation shall be, its terms, its balance of energies, its arrangement of principles depends on the consciousness which acts in the creative force, on the power of consciousness which being delivers from itself for manifestation. It is in the nature of being to be able to grade and vary its powers of consciousness and determine according to the grade and variation its world or its degree and scope of self-revelation. The manifested creation is limited by the power to which it belongs and sees and lives according to it and can only see more, live more powerfully, change its world by opening or rising towards or making descend a greater power of consciousness that was above it. This is what is happening in the evolution of consciousness in our world, a world of inanimate matter producing under the stress of this necessity a power of life, a power of mind which bring into it new forms of creation and still labouring to produce, to make descend into it some

supramental power. It is farther an operation of creative force which moves between two poles of consciousness. On one side there is a secret consciousness within and above which contains in it all potentialities — there eternally manifest, here awaiting delivery — of light, peace, power and bliss. On the other side there is another outward on the surface and below that starts from the apparent opposite of unconsciousness, inertia, blind stress, possibility of suffering and grows by receiving into itself higher and higher powers which make it always recreate its manifestation in larger terms, each new-creation of this kind bringing out something of the inner potentiality, making it more and more possible to bring down the Perfection that waits above. At last the line will be crossed that will make possible the entire reversion and the manifestation in the terms of ensouled Matter of That which is above. As long as the outward personality we call ourselves is centred in the lower powers of consciousness, the riddle of its own existence, its purpose, its necessity is to it an insoluble enigma; if something of the truth is at all conveyed to this outward mental man, he but imperfectly grasps it and perhaps misinterprets and misuses and mislives it. His true staff of walking is made more of a fire of faith than any ascertained and indubitable light of knowledge. It is only by rising toward a higher consciousness beyond the line and therefore superconscious now to him that he can emerge from his inability and his ignorance. His full liberation and enlightenment will come when he crosses the line into the light of a new superconscious existence. That is the transcendence which was the object of aspiration of the mystics and the spiritual seekers.

But in itself this would change nothing in the creation here; the evasion of a liberated soul from the world makes to that world no difference. But this crossing of the line if turned not only to an ascending but to a descending purpose would mean the transformation of the line from what it now is, a lid, a barrier, into a passage for the higher powers of consciousness of the Being now above it. It would mean a new creation on earth, a bringing in of the ultimate powers which would reverse the conditions here, in as much as that would produce a creation

raised into the full flood of spiritual and supramental light in place of one emerging into a half-light of mind out of a darkness of material unconsciousness. It is only in such a full flood of the realised spirit that the embodied being could know, in the sense of all that was involved in it, the meaning and temporary necessity of his descent into the darkness and its conditions and at the same time dissolve them by a luminous transmutation into a manifestation here of the revealed and no longer of the veiled and disguised or apparently deformed Divine.

*

I suppose you have not read my “Riddle of This World”,¹ but it is a similar solution I put there. X’s way of putting it is a trifle too “Vedantic-Theistic”—in my view it is a transaction between the One and the Many. In the beginning it was you (not the human you who is now complaining but the central being) which accepted or even invited the adventure of the Ignorance; sorrow and struggle are a necessary consequence of the plunge into the Inconscience and the evolutionary emergence out of it. The explanation is that it had an object, the eventual play of the Divine Consciousness and Ananda not in its original transcendence but under conditions for which the plunge into the Inconscience was necessary. It is fundamentally a cosmic problem and can be understood only from the cosmic consciousness. If you want a solution which will be agreeable to the human mind and feelings, I am afraid there is none. No doubt if human beings had made the universe, they would have done much better; but they were not there to be consulted when they were made. Only your central being was there and that was much nearer in its temerarious foolhardiness to Vivekananda’s or X’s than to the repining prudence of your murmuring and trembling human mentality of the present moment—otherwise it would never have come down into the adventure. Or perhaps it did not realise what it was in for? It is the same with the wallowers

¹ *The preceding letter was published under the heading “The Riddle of This World” in a book of the same name in 1933.—Ed.*

under their cross. Even now they wallow because something in them likes the wallowing and bears the cross because something in them chooses to suffer. So?

The Disharmonies of Earth

That brings me to your second question² about the missing Harmony and the actual disharmonies of earth, a dissonance out of which like most people you build a justification for a saving flight towards Nirvana,— although in the true theory of Mayavada harmony and disharmony are of equal value or rather equal non-value: for the glory of Heaven and the joy of the gods are as much an illusion and, if anything, a greater illusion than any ugliness of life or redundancy of human suffering. But I agree with you that disharmony is what is the matter with the world here and it is harmony that is the one thing desirable. Then the whole question is whether harmony is intended to be found or not or whether the very nature and condition and grain of life is a disharmony that, because the very root of life is ego and division, is incurable. The Mayavadin contends that it is; Buddha also decided that the only way out of suffering and disharmony was out of life into the permanence or perhaps the nothingness of Nirvana. But the question is whether what is now is the base of existence or only a temporary phase of existence here. Is life radically just an expression of ego and division? and is there nothing else, is there not behind it the unity of the Divine? and cannot it be brought out,— cannot we get rid in the end of the little things on the surface and express these greater things behind it? If, as spiritual experience shows us, the unity of the Divine is there at the very base and if as both ancient and modern knowledge declare, there has been a spiritual evolution from down upwards,— though the modern speaks only of an evolution of the body with the consciousness

² *The first question of the correspondent concerned “the results of the manifestation of a new supramental principle in the earth-consciousness”. See Sri Aurobindo’s letters beginning “There is not much profit” and “As I have said” on pages 280–84.—Ed.*

depending on it and the ancient, as in the Tantras, only of a spiritual evolution of the soul from vegetable life-form to the human mind-life,—then there is no reason why this spiritual evolution should not arrive beyond its present incomplete and therefore still disharmonious consciousness in man to its logical consummation, an expression of the Divine. There is not only no reason why it should not, but such an arrival is inevitably pointed to both by the logic of reason and the gaze of intuition. Not only so, but the first step towards solution has been taken by the Yogan's extension of consciousness beyond ego and division; spiritual experience has shown that the embodied soul can arrive beyond ego and division to consciousness governed by the unity of the one Self or the Divine; and the existence of the Jivanmukta proves that one can thus exceed ego and division and yet live and act, so that life in the Divine is not an imagination or a fable.

The ascension above ego and division is no doubt only a first step achieved in rare individuals, but in evolution it is the first step which counts and makes all the rest possible. Also, no doubt, to stand above an egoistic and divided world and act on it from the egoless heights of the spirit is not enough—a power is needed and a process,—the descent of a power that can bring harmony because in its nature it is at once superior, fundamental and comprehensive and a discovery of the process that fits the power. All achievement in embodied life has been made possible by the discovery of the necessary power and the effective process. It must so also be done in the achievement of harmony in a still discordant earth-nature.

Is there any conclusive reason for declaring such an achievement or spiritual evolution impossible? The only argument you advance amounts to this only that it has not been done yet and that shows that it cannot be done. That reasoning has not much value. It is the usual logic of the physical intellect which is bound by what is and believes that to be definitive. It has been used against all new or yet unaccomplished ideas or achievements and, when they have been accomplished, still urged against their successors. The physical mind always comes in with its fixed line

of the present and “No farther” and when the fixed line of the present is unfixed and overpassed, it again erects a new line and cries “No farther”. If an “elemental” who had attained to the physical mind had been present at the different stages of the earth-history he would have argued like that. When only matter was there and there was no life, if told that there would soon be life on earth embodied in matter, he would have cried out, “What is that? It is impossible, it cannot be done. Life is possible only in a subtle body. It has never been and never will be embodied in gross matter. What, this mass of electrons, gases, chemical elements, this heap of mud and water and stones and inert metals, how are you going to get life in that? Will the metal walk? can the stone live? will you take mud and water and make out of it a body that can move, feel, act, desire?” But life came in spite of the impossibility and living forms were developed—plant and tree and living bodies were built out of the protoplasm and molecule; some ingenious force or being evolved slowly out of that through millions of years with an amazing patience, using chemical and biological elements alike, gene and gland and heart and brain and nerve and cell and living tissue and the animal walked and bounded and man arose evolving through tens of thousands, perhaps millions of years in the body of an erect two-footed animal. There again the physical-minded elemental would have intervened and cried out, “What is this that is being attempted? No, no, impossible. Such a thing has never been done. Reflexes, memories, associations, instinctive combinations of life and action, these things of course are possible; but reason, intelligent will, conscious planning and creation, art, poetry, philosophy in this savage shambling creature? An animal cannot evolve powers and activities which have never been possessed except by the gods and the Asuras. How can this material animal organism ever be capable of such a [*incomplete*]

Chapter Two

Spiritual Evolution and the Supramental

Human History and Spiritual Evolution

There have been times when the seeking for spiritual attainment was, at least in certain civilisations, more intense and widespread than now or rather than it has been in the world in general during the past few centuries. For now the curve seems to be the beginning of a new turn of seeking which takes its start from what was achieved in the past and projects itself towards a greater future. But always, even in the age of the Vedas or in Egypt, the spiritual achievement or the occult knowledge was confined to a few; it was not spread in the whole mass of humanity. The mass of humanity evolves slowly, containing in itself all stages of the evolution from the material and the vital man to the mental man. A small minority has pushed beyond the barriers, opening the doors to occult and spiritual knowledge and preparing the ascent of the evolution beyond mental man into spiritual and supramental being. Sometimes this minority has exercised an enormous influence as in Vedic India, Egypt or, according to tradition, in Atlantis, and determined the civilisation of the race, giving it a strong stamp of the spiritual or the occult; sometimes they have stood apart in their secret schools or orders, not directly influencing a civilisation which was sunk in material ignorance or in chaos and darkness or in the hard external enlightenment which rejects spiritual knowledge.

The cycles of evolution tend always upward, but they are cycles and do not ascend in a straight line. The process therefore gives the impression of a series of ascents and descents, but what is essential in the gains of the evolution is kept or, even if eclipsed for a time, reemerges in new forms suitable to the new ages.

The Creation has descended all the degrees of being from

the Supermind to Matter and in each degree it has created a world, reign, plane or order proper to that degree. In the creating of the material world there was a plunge of this descending Consciousness into an apparent Inconscience and an emergence of it out of that Inconscience, degree by degree, until it recovers its own highest spiritual and supramental summits and manifests their powers here in Matter. But even in the Inconscience there is a secret Consciousness which works, one may say, by an involved and hidden Intuition proper to itself. In each stage of Matter, in each stage of Life, this Intuition assumes a working proper to that stage and acts from behind the veil, supporting and enforcing the immediate necessities of the creative Force. There is an intuition in Matter which holds the action of the material Energy together and dictates the organisation of the material world from the electron to the sun and planet and their contents. There is an intuition in Life which similarly supports and guides the play and development of life in matter till it is ready for the mental evolution of which man is the vehicle. In man also the creation follows the same upward process,— the intuition within develops according to the stage he has reached in his progress. Even the precise intellect of the scientist, who is inclined to deny the separate existence or the superiority of intuition, yet cannot really move forward unless there is behind him a mental intuition which enables him to take a forward step or to divine what has to be done. Intuition therefore is present at the beginning of things and in their middle as well as at their consummation.

But Intuition takes its proper form only when one goes beyond the mental into the spiritual domain, for there only it comes fully forward from behind the veil and reveals its true and complete nature. Along with the mental evolution of man there has been going forward the early process of another evolution which prepares the spiritual and supramental being. This has had two lines, one the discovery of the occult forces secret in Nature and of the hidden planes and worlds concealed from us by the world of Matter and the other the discovery of man's soul and spiritual self. If the tradition of Atlantis is correct, it is that

of a progress which went to the extreme of occult knowledge but could go no farther. In the India of Vedic times we have the record left of the other line of achievement, that of spiritual self-discovery; occult knowledge was there but kept subordinate. We may say that here in India the reign of Intuition came first, intellectual Mind developing afterwards in the later philosophy and science. But in fact the mass of men at the time, it is quite evident, lived entirely on the material plane, worshipped the Godheads of material nature, sought from them entirely material objects. The effort of the Vedic mystics revealed to them the things behind through a power of inner sight and hearing and experience which was confined to a limited number of seers and sages and kept carefully secret from the mass of humanity — secrecy was always insisted on by the mystics. We may very well attribute this flowering of intuition on the spiritual plane to a rapid reemergence of the essential gains brought down from a previous cycle. If we analyse the spiritual history of India we shall find that after reaching this height there was a descent which attempted to take up each lower degree of the already evolved consciousness and link it to the spiritual at the summit. The Vedic age was followed by a great outburst of intellectual philosophy which yet took spiritual truth as its basis and tried to reach it anew, not through a direct intuitive or occult process as did the Vedic seers, but by the power of the mind's reflective, speculative, logical thought; at the same time processes of Yoga were developed which used the thinking mind as a means of arriving at spiritual realisation, spiritualising this mind itself at the same time. Then followed an era of the development of philosophies and Yoga processes which more and more used the emotional and aesthetic being as the means of spiritual realisation and spiritualised the emotional level in man through the heart and feeling. This was accompanied by Tantric and other processes which took up the mental will, the life-will, the life of sensations and made them at once the instruments and the field of spiritualisation. In Hathayoga and in the various attempts at divinisation of the body there is also a line of endeavour which attempted to arrive at the same achievement with regard

to living matter; but this still awaits the discovery of the true characteristic method and power of spirit in the body. We may say therefore that the universal Consciousness after its descent into Matter has conducted the evolution there along two lines, one of ascent to the discovery of the self and spirit, the other of descent through the already evolved levels of mind, life and body so as to bring down the spiritual consciousness into these also and to fulfil thereby some secret intention in the creation of the material universe. Our Yoga is in its principle a taking up and summarising and completing of this process, an endeavour to rise to the highest possible supramental level and bring down its consciousness and powers into mind, life and body.

The condition of present-day civilisation, materialistic with an externalised intellect and life-endeavour, which you find so painful, is an episode, but one which was perhaps inevitable. For if the spiritualisation of mind, life and body is the thing to be achieved, the conscious presence of the Spirit even in the physical consciousness and material body, an age which puts Matter and the physical life in the forefront and devotes itself to the effort of the intellect to discover the truth of material existence, had perhaps to come. On one side, by materialising everything up to intellect itself it has created the extreme difficulty of which you speak for the spiritual seeker; but on the other hand it has given the life in Matter an importance which the spirituality of the past was inclined to deny to it. In a way it has made the spiritualisation of it a necessity for spiritual seeking and so aided the descent movement of the evolving spiritual Consciousness in the earth-nature. More than that we cannot claim for it; its conscious effect has been rather to stifle and almost extinguish the spiritual element in humanity; it is only by the divine use of the pressure of contraries and an intervention from above that there will be the greater spiritual outcome.

*

All the phases of human history may be regarded as a working out of the earth-consciousness in which each phase has its place and significance, so this materialistic-intellectual phase had to

come and has had, no doubt, its purpose and significance. One may also hold that one of its uses was as an experiment to see how far and whither the human consciousness would go through an intellectual and external control of Nature with physical and intellectual means only and without the intervention of any higher consciousness and knowledge—or that it may help by resistance to draw the spiritual consciousness that is growing behind all vicissitudes to attempt the control of Matter and turn it towards the Divine, as the Tantriks and Vaishnavas tried to do with the emotional and lower vital nature, not contenting themselves with the Vedantic turning of the mind towards the Supreme. But it is difficult to go farther than that or to hold that this materialism is itself a spiritual thing or that the dark, confused and violent state of contemporary Europe was an indispensable preparation for the descent of the Spirit. This darkness and violence which seems bent on destroying such light of mental idealism and desire of harmony as had succeeded in establishing itself in the mind of humanity, is obviously due to a descent of fierce and dark vital Powers which seek to possess the human world for their own, not for a spiritual purpose. It is true that such a precipitation of Asuric forces from the darker vital worlds has been predicted by some occultists as one first result of the pressure of the Divine Descent on their vital domain, but it was regarded as a circumstance of the battle, not as something helping towards the Divine Victory. The churning of Matter by the attempt of the human intellect to conquer material Nature and use it for its purposes may break something in the passivity and inertia, but it is done for material ends, in a rajasic spirit, with a denial of spirituality as its mental basis. Such an attempt may end, seems to be ending indeed in chaos and a disintegration, while the new attempts at creation and reintegration seem to combine the obscure rigidity of material Nature with a resurgence of the barbaric brutality and violence of a half animal vital Nature. How are the spiritual Forces to deal with all that or make use of such a churning of the energies of the material universe? The way of the Spirit is the way of peace and light and harmony; if it has to battle it is precisely because of the presence

of such forces which seek either to extinguish or to pervert the spiritual light. In the spiritual change inertia has to be replaced by the divine peace and calm, the rajasic troubled energy by a tranquil and potent, pure and liberated dynamis, while the mind must be kept plastic for the workings of a higher Light of Knowledge. How will the activity of Materialism lend itself to that change?

Materialism can hardly be spiritual in its basis because its basic method is just the opposite of the spiritual way of doing things. The spiritual works from within outward, the way of materialism is to work from out inwards. It makes the inner a result of the outer, fundamentally a phenomenon of Matter and it works upon that view of things. It seeks to "perfect" humanity by outward means and one of its main efforts is to construct a perfect social machine which will train and oblige men to be what they ought to be. The loss of the ego in the Divine is the spiritual ideal; here it is replaced by the immolation of the individual to the military and industrial State. Where is there any spirituality in all that? Spirituality can only come by opening of the mind, vital and physical to the inmost soul, to the higher Self, to the Divine, and their subordination to the spiritual forces and instrumentation as channels of the inner light, the higher Knowledge and Power. Other things, mental, aesthetic, vital, are often misnamed spirituality, but they lack that essential character without which the word loses its true significance.

*

All that you say only amounts, on the general issue, to the fact that this is a world of slow evolution in which man has emerged out of the beast and is still not out of it, light out of darkness, a higher consciousness out of first a dead and then a struggling and troubled unconsciousness. A spiritual consciousness is emerging and it is through this spiritual consciousness that one can meet the Divine. Religions, full of mental and vital mixed, troubled and ignorant stuff, can only get glimpses of the Divine; positivist reason with its questioning based upon things as they are and refusing to believe in anything that may or will be cannot get

any vision of it at all. The spiritual is a new consciousness that has to evolve and has been evolving. It is quite natural that at first and for a long time only a few should get the full light, while a greater number but still only a few compared with the mass of humanity, should get it partially. But what has been gained by the few can at a stage of the evolution be completed and more generalised and that is the attempt which we are making. But if this greater consciousness of light, peace and joy is to be gained, it cannot be by questioning and scepticism which can only fall back on what is and say, "It is impossible, impossible — what has not been in the past cannot be in the future; what is so imperfectly realised as yet, cannot be better realised in the future." A faith, a will or at least a persistent demand and aspiration are needed — a feeling that with this and this alone I can be satisfied and a push towards it that will not cease till it is done. That is why a spirit of denial and scepticism stands in the way, because they stand against the creation of the conditions under which spiritual experience can unroll itself. In the absence of faith and firm will to achieve, the Divine has to manifest in conditions which are the most adverse to that manifestation. It can be done, but you cannot expect it to be easily done.

*

I do not know what Mahatma Gandhi means by complete realisation.¹ If he means a realisation with nothing more to realise, no farther development possible, then I agree — I have myself spoken of farther divine progression, an infinite development. But the question is not that; the question is whether the Ignorance can be transcended, whether a complete essential realisation turning the consciousness from darkness to light, from an instrument of the Ignorance seeking for Knowledge into an instrument or rather a manifestation of Knowledge proceeding to greater

¹ These observations were made with regard to a statement by Mahatma Gandhi: "I hold that complete realisation is impossible in this embodied life. Nor is it necessary. A living immovable faith is all that is required for reaching the full spiritual height attainable by human beings." This statement appeared in an article submitted to Sri Aurobindo by the correspondent.—Ed.

Knowledge, Light enlarging, heightening into greater Light, is or is not possible. My view is that this conversion is not only possible, but inevitable in the spiritual evolution of the being here. The embodiment of life has nothing to do with it. This embodiment is not of life, but of consciousness and its energy, of which life is only one phase or force. As life has developed mind, and the embodiment has modified itself to suit this development (mind is precisely the main instrument of ignorance seeking for knowledge), so mind can develop supermind which is in its nature knowledge not seeking for itself, but manifesting itself by its own automatic power, and the embodiment can again modify itself or be modified from above so as to suit this development. Faith is a necessary means for arriving at realisation because we are ignorant and do not yet know that which we are seeking to realise; faith is indeed knowledge giving the ignorance an intimation of itself previous to its own manifestation, it is the gleam sent before by the yet unrisen Sun. When the Sun shall rise there will be no longer any need of the gleam. The supramental knowledge supports itself, it does not need to be supported by faith; it lives by its own certitude. You may say that farther progression, farther development will need faith. No, for the farther development will proceed on a basis of knowledge, not of Ignorance. We shall walk in the light of knowledge towards its own wider vistas of self-fulfilment.

*

I do not see what answer you can give to your uncle that would satisfy him, as he is evidently living in the mentality of the past and would not readily understand anything about spiritual evolution, the supermind and the Divine Manifestation in life and matter. You can perhaps tell him casually that it is not our hope to transform suddenly the whole human race. Your object is precisely to lead a higher life away from the ordinary world, only it is not solitary; there is a collective side to it and a side, not only of meditation, but of work, action and creation. There is nothing in this that is impossible.

*

It is quite possible that there have been periods of harmony on different levels, not supramental, which were afterwards disturbed—but those could only be a stage or resting place in a world of spiritual evolution out of the Ignorance.

*

This is a world of evolution in Matter. If everything were supramental from the beginning, there would be no place for evolution.

*

The evolution I speak of is not the evolution of the Darwinian theory.

Spiritual and Supramental

Spiritual and supramental are not the same thing. The spiritual planes from higher mind to Overmind are accessible to the old sadhanas so there is no difficulty about that. If they were not accessible there would have been no Yoga at all and no Yogis in the past in India.

*

If spiritual and supramental were the same thing, as you say my readers imagine, then all the sages and devotees and Yogis and sadhaks throughout the ages would have been supramental beings and all I have written about the supermind would be so much superfluous stuff, useless and otiose. Anybody who had spiritual experiences would then be a supramental being; the Asram would be chock-full of supramental beings and every other Asram in India also. Spiritual experiences can fix themselves in the inner consciousness and alter it, transform it, if you like; one can realise the Divine everywhere, the Self in all and all in the Self, the universal Shakti doing all things; one can feel merged in the Cosmic Self or full of ecstatic bhakti or Ananda. But one may and usually does still go on in the outer active parts of Nature thinking with the intellect or at best

the intuitive mind, willing with a mental will, feeling joy and sorrow on the vital surface, undergoing physical afflictions and suffering the struggle of life in the body with death and disease. The change then only will be that the inner self will watch all that without getting disturbed or bewildered, with a perfect equality, taking it as an inevitable part of Nature, inevitable at least so long as one does not withdraw to the Self out of Nature. That is not the transformation I envisage. It is quite another power of knowledge, another kind of will, another luminous nature of emotion and aesthesis, another constitution of the physical consciousness that must come in by the supramental change.

*

Spiritual realisation can be had on any plane by contact with the Divine (who is everywhere) or by perception of the Self within, which is pure and untouched by the outer movements. The Supermind is something transcendent—a dynamic Truth consciousness which is not here yet and has to be brought down from above.

The Overmind and the Supramental

There are many aspects of the Divine and of existence manifested as separate by the Overmind. Different minds are drawn by different aspects and each follows its own path to its own goal. Each is free to follow its own path and is not bound by another.

As for the Supramental, it is by definition a consciousness above the Overmind in which all aspects are infused in the integral Divine. But none is bound to seek after the Supramental consciousness if his tendency is elsewhere.

The manifestation is complex and there are beings in it who belong to various levels. If a soul wishes to plunge into the Divine through Nirvana or seeks spiritual fulfilment in a world of the Gods, such as Vaikuntha or Goloka, it has the freedom to do so, to follow its own tendency.

The discovery of the Supramental is especially important for the spiritual evolution on the earth. If the souls here have to reach

it eventually, no doubt the Divine will evolve them to seek it. There is nothing compelling all to reach it by a progress towards it in direct line or by the same path and stages. It is possible for them to be satisfied with another path and intermediary partial fulfilment. If it is their destiny, they may return afterwards to pursue the further ascent to the Supramental level.

The Gita accepted the current belief that freedom from birth was the consequence of reaching the highest state. It is a natural deduction from the belief that this is not only a world of Ignorance but cannot be ever anything else.

*

Yes, there has been some progress in that respect [*psychicisation*] and all progress in the psychic or spiritual consciousness of the sadhaks makes the descent more easy. But the main cause [*of the descent of Light and Power*] is that the Overmind principle which is the immediate secret support of the present earth-nature with all its limitations is more and more undergoing the pressure of the Supramental and letting through a greater Light and Power. For so long as the Overmind intervenes (the principle of the Overmind being a play of forces, each trying to realise itself as the Truth) the law of struggle remains and with it the opportunity for the adverse Forces.

*

It is not immortality *of* the body, but the consciousness of immortality *in* the body that can come with the descent of Overmind into Matter or even into the physical mind or with the touch of the modified Supramental Light on the physical mind-consciousness. These are preliminary openings, but they are not the supramental fulfilment in Matter.

Involution and Evolution

The involution is of the Divine in the Inconscience and it is done by the interposition of intermediate planes (Overmind etc., mind, vital)—then the plunge into the Inconscient which is the

origin of matter. But all that is not a process answering to the evolution in the inverse sense—for there is no need for that, but a gradation of consciousness which is intended to make the evolution upwards possible.

*

Man has evolved from Matter—or rather Nature has evolved first the plant, then the animal, then Man in a regular succession out of Matter. What is involved is not Man, but mind and life and spirit. “Involved” means that they are there even though there seems to be no mental activity (as in the tree) and no mental or vital activity (as in the stone); as the evolution goes on the involved life appears and begins to organise itself and the plants appear and then the animals; next mind, first in the animal, and then man appears.

*

Everything here that belongs strictly to the earth plane is evolved out of the Inconscient, out of Matter—but the essential mental being exists already, not involved on the mental plane. It is only the personal mental that is evolved here by something rising out of the Inconscient and developing under a pressure from above.

*

What is meant here² is the Divine in its essential manifestation which reveals itself to us as Light and Consciousness, Power, Love and Beauty. But in its actual cosmic manifestation the Supreme, being the Infinite and not bound by any limitation, can manifest in itself, in its consciousness of innumerable possibilities, something that seems to be the opposite of itself, something in which there can be Darkness, Inconscience, Inertia, Insensibility, Disharmony and Disintegration. It is this that we see at the basis of the material world and speak of nowadays as the Inconscient—the inconscient Ocean of the Rigveda in which the One was hidden and arose in the form of this Universe,—

² *The statement is not available.—Ed.*

or, as it is sometimes called, the non-being, Asat. The Ignorance which is the characteristic of our mind and life is the result of this origin in the Inconscience. Moreover, in the evolution out of inconscient existence there rise up naturally powers and beings which are interested in the maintenance of all negations of the Divine, error and unconsciousness, pain, suffering, obscurity, death, weakness, illness, disharmony, evil. Hence the perversion of the manifestation here, its inability to reveal the true essence of the Divine. Yet in the very base of this evolution all that is divine is there involved and pressing to evolve, Light, Consciousness, Power, Perfection, Beauty, Love. For in the Inconscient itself and behind the perversions of the Ignorance Divine Consciousness lies concealed and works and must more and more appear, throwing off in the end its disguises. That is why it is said that the world is called to express the Divine.

Your statement about the supramental evolution is correct except that it does not follow that humanity as a whole will become supramental. What is more likely to happen is that the supramental principle will be established in the evolution by the descent just as the mental principle was established by the appearance of thinking Mind and Man in earthly life. There will be a race of supramental beings on the earth just as now there is a race of mental beings. Man himself will find a greater possibility of rising to the planes intermediary between his mind and supermind and making their powers effective in his life, which will mean a great change in humanity on earth, but it is not likely that the mental stage will disappear from the ascending ladder and, if so, the continued existence of a mental race will be necessary so as to form a stage between the vital and the supramental in the evolutionary movement of the spirit.

Such a descent of higher beings as you suggest may be envisaged as a part of the process of the change. But the main part of the change will be the appearance of the supramental being and the organisation of a supramental nature here, as a mental being has appeared and a mental nature organised itself during the last stage of the evolution. I prefer nowadays not to speak of the descent of the higher beings because my experience is that

it leads in the minds of the sadhaks to a vain and often egoistic romanticism which distracts the attention from the real work, that of the realisation of the Divine and the transformation of the nature.

*

In the descent it [*falsehood*] begins with Mind, in the evolutionary ascent it is difficult to say where it begins—for here the beginning is Inconscience and Ignorance; but I suppose we may say that conscious falsehood begins with the beginnings of mind still involved in Life or appearing out of it.

*

An evolution from the Inconscient need not be a painful one if there is no resistance; it can be a deliberately slow and beautiful efflorescence of the Divine. One ought to be able to see how beautiful outward Nature can be and usually is, although it is itself apparently “inconscient”. Why should the growth of consciousness in inward Nature be attended by so much ugliness and evil spoiling the beauty of the outward creation? Because of a *perversity* born from the Ignorance, which came in with Life and increased in Mind—that is the Falsehood, the Evil that was born because of the starkness of the Inconscient’s sleep separating its action from the luminosity of the secret Conscient that was all the time within it. But it need not have been so except for the overriding Will of the Supreme which meant that the possibility of Perversion by inconscience and ignorance should be manifested in order to be eliminated through being given their chance, since all possibility has to manifest somewhere: once it is eliminated, the Divine Manifestation in Matter will be greater than it otherwise could be because it will gather all the possibilities involved in this difficult creation and not some of them as in an easier and less strenuous creation might naturally be.

“From beauty to greater beauty, from joy to intenser joy, by an especial adjustment of the senses”—yes, that would be the normal course of a divine manifestation, however gradual, in

Matter. “Discordant sound and offensive odour” are creations of a disharmony between consciousness and Nature and do not exist in themselves; they would not be present to a liberated and harmonised consciousness for they would be foreign to its being, nor would they afflict a rightly developing harmonised soul and Nature. Even the “belching volcano, crashing thunderstorm and whirling typhoon” are in themselves grandiose and beautiful things and only harmful or horrible to a consciousness unable to meet or deal with them or make a pact with the spirits of the Wind and Fire. You are assuming that the manifestation from the Inconscient must be what it is now and here and that no other kind of world of Matter was possible, but the harmony of material Nature in itself shows that it need not necessarily be a discordant, evil, furiously perturbed and painful creation — the psychic being, if allowed to manifest from the first in Life and lead the evolution instead of being relegated behind the veil, would have been the principle of a harmonious outflowering; everyone who has felt the psychic at work within him, freed from the vital intervention, can at once see that this would be its effect because of its unerring perception, true choice, harmonic action. If it has not been so, it is because the dark Powers have made Life a claimant instead of an instrument. The reality of the Hostiles and the nature of their role and trend of their endeavour cannot be doubted by anyone who has had his inner vision unsealed and made their unpleasant acquaintance.

The Supermind and the Lower Creation

It [*the Supermind*] can act directly on everything if it is brought down into the material consciousness — at present in the arrangement of things here it is latent behind and acts through other media.

*

No, one can't say that [*there is a direct supramental action at work in plants*]. It is the vital force that works, but there is a sort of underlying Intuition in this Life-Force which is behind

the whole action and that is what one might call a reflection or delegated Power at the back of which is latent Supermind.

*

There is no reason why the vegetable, animal and human life should not evolve in the Truth and not in the Ignorance—if once the Knowledge is there in the earth-plane.

Speculations about the Supramental Descent

It is not perhaps very useful to forecast by the mind what will be the precise results of the descent of a supramental consciousness into a world in which up to now the mental intelligence has been the highest evolutionary product and leading power. For the supermind is a consciousness which will work in a very different way from the mind and the lines laid down for it by the latter are not likely to be respected by the greater energy in its self-organisation and operation here.

*

There is not much profit in mental and intellectual speculations about what precisely the results would be of the introduction of a supramental principle and a supramental organisation and order in the earth-consciousness and the earth-life. In all probability the speculations would be quite beside the mark or, even where they hit on some broad lines, would draw them wrong and all awry and out of proportion; for the intellectual mind is a different and inferior power of consciousness; it is analytical and synthetic, pulling things to pieces and putting them together in order to understand and deal with them, proceeding by representation and abstraction and formulas and schematic figures; it imposes a rigid logic on an illogical world in order to bring about a fixed and mechanical order; it cuts up, divides, compares, contrasts, confronts one element of existence contradictorily with another; classifies according to similarity and difference. In the end it produces a system of things explained and intelligible; but each such system is only a segment of truth dried up into

a formula. Life compelled into these systems either escapes and flows through its hard set lines and undermines and slowly or quickly upsets or transmogrifies the system till it is no longer what it pretends to be or else it remains fossilised and cramped within until it dies or until an explosion of its suppressed forces liberates it into a new order. Supermind is a totally different power. It has a whole-vision and an essential vision; it reposes on an all-seeing authority of Truth which spontaneously produces harmony according to the inner truth of the One and the inner truth of the Many in the One. Out of things that to the mind are opposites and incompatible contrasts it takes in each its essence and joins them harmoniously into a single piece. This it does by raising them beyond their separated appearances and putting them in the light of the one Truth where they can find their reality and their reconciling principle. The things that in the mind are in constant conflict or with only a patched-up truce between them, liberty and order, commonality and individuality and the rest will in supermind find their natural harmony because they are not only indispensable aspects of the essential whole, but themselves one. But for this our existing materials mind, life, body must be supramentalised; otherwise the discordances and oppositions of mind will remain oppositions and discords, the confusions and conflicts of life will remain confused and conflicting, the cramps and limits of form will prevent plastic change, perfection, fulfilment. Mind has failed to liberate and perfect life, because it has imperfectly mentalised life and form, without finding their secret by which they can find themselves and their perfection through a higher light than their own half-conscious self-feeling. Supermind will supramentalise fully mind, life and body and in the very doing of it liberate their own perfection because it is in supermind that the full and perfect secret of mind, life and form are treasured and await their time of descent into terrestrial nature.

*

As I have said [*in the preceding letter*], speculation on the results of the manifestation of a new supramental principle in the earth-

consciousness organising itself there as mind, life and matter have already organised themselves—for that is what it comes to—is a little perilous and premature, because we must do it with the mind and the mind has not the capacity to forecast the action of what is above itself—just as a merely animal or vital perception of things could not have forecast what would be the workings of Mind and a mentalised race of beings here. The supermind is a different order of consciousness far removed from the mental—there are in fact several grades of higher consciousness between the human mind and the supramental. If the earth were not evolutionary but a typal world, then indeed one could predict that the descent of a higher type of consciousness would swallow up or abolish the existing type. Ignorance would end and the creation in the ignorance disappear either by transmutation or by annihilation and replacement. The human mental kingdom would be transformed into the supramental; the vital and subhuman, if it existed in the typal world, would also be changed and become supramental. But, earth being an evolutionary world, the supramental descent is not likely to have such a devastating completeness. It would be only the establishment of a new principle of consciousness and a new order of conscious beings and this new principle would evolve its own forms and powers in the terrestrial order. Even the whole human kingdom need not and would not be transformed at once or to the whole supramental extent. But at the same time the beginning of a supramental creation on earth is bound to have a powerful effect on the rest of terrestrial existence. Its first effect on mankind would be to open a way between the order of the Truth-light and the orders of the Ignorance here on earth itself, a sort of realised gradation by which it would be possible for mental man to evolve more easily and surely from the Ignorance towards the Light and, as he went, organise his existence according to these steps. For at present the grades of consciousness between mind and supermind act only as influences (the highest of them very indirect influences) on human mind and consciousness and cannot do more. This would change. An organised higher human consciousness could appear or several degrees

of it, with the supermind-organised consciousness as the leader at the top influencing the others and drawing them towards itself. It is likely that as the supramental principle evolved itself the evolution would more and more take on another aspect — the Daivic nature would predominate, the Asuro-Rakshaso-Pishachic prakriti which now holds so large a place would more and more recede and lose its power. A principle of greater unity, harmony and light would emerge everywhere. It is not that the creation in the Ignorance would be altogether abolished, but it would begin to lose much of its elements of pain and falsehood and would be more a progression from lesser to higher Truth, from a lesser to a higher harmony, from a lesser to a higher Light, than the reign of chaos and struggle, of darkness and error that we now perceive. For according to all occult teaching the evolutionary creation could have been such but for the intervention of the Powers of Darkness — all traditions including that of the Veda and Upanishads point under different figures to the same thing. In the Upanishads it is the Daityas that smite with evil all that the gods create, in the Zoroastrian tradition it is Ahriman coming across the work of Ahura Mazda, the Chaldean tradition uses a different figure. But the significance is the same; it is the perception of something that has struck across the harmonious development of creation and brought in the principle of darkness and disorder. The occult tradition also foresees the elimination of this disturbing element by the descent of a divine Principle or Power on earth, but gives to it usually a sudden and dramatic form. I conceive that the supramental descent would effect the same event by a progressive elimination of the darkness and evolution of the Light, but with what rate of rapidity it would be rash to try to forecast or prefigure.

This is a very general statement, but perhaps it is a sufficient answer to your first question. I need only add that there is nothing to prevent the supramental creation, the creation in the higher Truth-Light from being evolutionary, a continuous efflorescence of the Divine Truth and Harmony in a manifold variety, not a final and decisive creation in a single fixed type. What would be decisive would be the crossing of the border

between twilight and Light, the transference of the base of development from the consciousness in the Ignorance to the Truth-consciousness. That would be, on this level, final. The transition into a world of spirits would only effectuate itself, first, if the whole earth-consciousness became thoroughly supramentalised, secondly, if after that the turn were to a realisation here of the principle of those worlds of Sachchidananda where determination disappears in the interpenetration of All-in-All. But that would be to look too far into the potentialities of the future. In short, if the supramental principle came down it would not be in order to reproduce Heaven here under celestial conditions but to “create a new Heaven and a new earth” in the earth-consciousness itself, completing and transmuting but not abolishing the earth order.

It is evident that the creative process here could be greatly modified and transmuted by the appearance of the supramental principle. What would be its exact forms is a more difficult question, for the principle of a supramental creation is obvious but the possibilities of its manifestation are many and it is only the dynamic Truth itself that can choose and determine.

Section Two

The Supramental Descent and Transformation

Chapter One

The Descent of the Supermind

Inevitability of the Descent

The descent of the supramental is an inevitable necessity in the logic of things and is therefore sure. It is because people do not understand what the supermind is or realise the significance of the emergence of consciousness in a world of “inconscient” Matter that they are unable to realise this inevitability. I suppose a matter-of-fact observer if there had been one at the time of the unrelieved reign of inanimate Matter in the earth’s beginning would have criticised any promise of the emergence of life in a world of dead earth and rock and mineral as an absurdity and a chimaera; so too afterwards he would have repeated his mistake and regarded the emergence of thought and reason in an animal world as an absurdity and a chimaera. It is the same now with the appearance of supermind in the stumbling mentality of this world of human consciousness and its reasoning ignorance.

*

If the supramental descent is decreed, nothing can prevent it; but all things are worked out here through a play of forces, and an unfavourable atmosphere or conditions can delay even when they cannot prevent. Even when the thing is destined, it does not present itself as a certitude in the consciousness here (Overmind-mind-vital-physical) till the play of forces has been worked out up to a certain point at which the descent not only is, but appears as inevitable.

*

The descent of the supermind is a long process or at least a process with a long preparation and one can only say that the work is going on sometimes with a strong pressure for completion, sometimes retarded by the things that rise from below

and have to be dealt with before farther progress can be made. The process is a (spiritual) evolutionary process concentrated into a brief period—it could be done otherwise (by what men would regard as a miraculous intervention) only if the human mind were more flexible and less attached to its ignorance than it is. As we envisage it, it must manifest in a few first and then spread, but it is not likely to sweep over the earth in a moment. It is not advisable to discuss too much what it will do and how it will do it, because these are things the Supermind itself will fix, acting out of that Divine Truth in it, and the mind must not try to fix for it grooves in which it will run. Naturally, the release from subconscious ignorance and from disease, duration of life at will, and a change in the functioning of the body must be among the ultimate results of a supramental change; but the details of these things must be left for the supramental Energy to work out according to the truth of its own nature.

A Beginning, Not a Completion

What we are doing, if and when we succeed, will be a beginning, not a completion. It is the foundation of a new consciousness on earth—a consciousness with infinite possibilities of manifestation. The eternal progression is in the manifestation and beyond it there is no progression.

If the redemption of the soul from the physical vesture be the object, then there is no need of supramentalisation. Spiritual Mukti and Nirvana are sufficient. If the object is to rise to supra-physical planes, then also there is no need of supramentalisation. One can enter into some heaven above by devotion to the Lord of that heaven. But that is no progression. The other worlds are typal worlds, each fixed in its own kind and type and law. Evolution takes place on the earth and therefore the earth is the proper field for progression. The beings of the other worlds do not progress from one world to another. They remain fixed to their own type.

The purely monistic Vedantist says, all is Brahman, life is a dream, an unreality, only Brahman exists. One has Nirvana or

Mukti, then one lives only till the body falls — after that there is no such thing as life.

They do not believe in transformation, because mind, life and body are an ignorance, an illusion — the only reality is the featureless, relationless Self or Brahman. Life is a thing of relations; in the pure Self, all life and relations disappear. What would be the use or the possibility of transforming an illusion that can never be anything else (however transformed) than an illusion? There is no such thing for them as a “Nirvanic life”.

It is only some Yogas that aim at a transformation of any kind except that of ignorance into knowledge. The idea varies, — sometimes a divine knowledge or power or else a divine purity or an ethical perfection or a divine love.

What has to be overcome is the opposition of the Ignorance that does not want the transformation of the nature. If that can be overcome, then old spiritual ideas will not form an obstacle.

It is not intended to supramentalise humanity at large, but to establish the principle of the supramental consciousness in the earth-evolution. If that is done, all that is needed will be evolved by the supramental Power itself. It is not therefore important that the mission should be widespread. What is important is that the thing should be done at all in however small a number; that is the only difficulty.

If the transformation of the body is complete, that means no subjection to death — it does not mean that one will be bound to keep the same body for all time. One creates a new body for oneself when one wants to change, but how it will be done cannot be said now. The present method is by physical birth — some occultists suppose that a time will come when that is not necessary — but the question must be left for the supramental evolution to decide.

The questions about the supermind cannot be answered profitably now. Supermind cannot be described in terms that the mind will understand, because the terms will be mental and mind will understand them in a mental way and mental sense and miss their true import. It would therefore be a waste of time and energy which should be devoted to the preliminary work

—psychicisation and spiritualisation of the being and nature without which no supramentalisation is possible. Let the whole dynamic nature led by the psychic make itself full of the dynamic spiritual light, peace, purity, knowledge, force; let it afterwards get experience of the intermediate spiritual planes and know, feel and act in their sense; then it will be possible to speak last of the supramental transformation.

*

All that [*ideas such as “everything will soon be spiritualised”*] is absurd. The descent of the supramental means only that the Power will be there in the earth consciousness as a living force just as the thinking mental and the higher mental are already there. But an animal cannot take advantage of the presence of the thinking mental Power or an undeveloped man of the presence of the higher mental Power — so too everybody will not be able to take advantage of the presence of the supramental Power. I have also often enough said that it will be at first for the few, not for the whole earth, — only there will be a growing influence of it on the earth life.

*

It [*the world*] wants and it does not want something that it has not got. All that the supramental could give, the inner mind of the world would like to have, but its outer mind, its vital and physical do not like to pay the price. But after all I am not trying to change the world all at once but only to bring down centrally something into it it has not yet, a new consciousness and power.

*

Not in their entirety [*will cosmic Mind, Life and Matter be transformed*] — for that is not our business. It is ourselves that we have to transform and change the earth consciousness by bringing in the supramental principle into the evolution there. Once there it will necessarily have a powerful influence on the whole earth-life — as mind has had through the evolution of men, but much greater.

*

It is not possible for a force like the Supramental to come down without making a large change in earth conditions. It does not follow that all will become supramentalised and it is not necessary—but mind itself will be influenced as life has been influenced by the development of mind on earth.

*

Nothing permanent can be done without the real Supramental Force. But the result of its descent would be that in human life intuition would become a greater and more developed force than it now is and the other intermediate powers between Mind and Supermind would become also more common and develop an organised action.

*

It is not for considerations of gain or loss that the Divine Consciousness acts—that is a human standpoint necessary for human development. The Divine, as the Gita says, has nothing to gain and nothing that it has not, yet it puts forth its power of action in the manifestation. It is the earth-consciousness, not the supramental world that has to gain by the descent of the supramental principle—that is sufficient reason for it to descend. The supramental worlds remain as they are and are in no way affected by the descent.

*

It [*the descent of the Supermind*] would not necessarily be known by everybody beforehand. Besides even if the descent were here one would have to be ready before one could get the final change.

*

It is the supermind we have to bring down, manifest, realise. Anything higher than that is impossible at this stage of the evolution except as a reflection in the consciousness or a power delegated and modified in its descent.

*

The descent of the Supramental can hasten things, but it is not going to act as a patent universal medicine or change everything in the twinkle of an eye.

Clarifications about the Supramental Descent

But what will happen when the supramental comes down is a matter for the supramental to decide — no use laying down laws for it beforehand with the mind. It is the Truth-consciousness, sir — it will act according to the divine Truth behind things.

*

It is the very principle of this Yoga that only by the supramentalisation of the consciousness which means rising above mind to supermind and the descent of the supermind into the nature can the final transformation be made. So if nobody can rise above mind to supermind or obtain the descent of the supermind, then logically this Yoga becomes impossible. Every being is in essence one with the Divine and in his individual being a portion of the Divine, so there is no insuperable bar to his becoming supramental. It is no doubt impossible for the human nature being mental in its basis to overcome the Ignorance and rise to or obtain the descent of the Supermind by its own unaided effort, but by surrender to the Divine it can be done. One brings it down into the earth Nature through his own consciousness and so opens the way for the others, but the change has to be repeated in each consciousness to become individually effective.

*

There need not be [*catastrophes when the Supramental descends*]. There will necessarily be great changes but they are not bound to be catastrophic. When there is a strong pressure from Overmind forces for change, then there are likely to be catastrophes because of the resistance and clash of forces. The supramental has a greater, in its fullness a complete mastery of things and power of harmonisation which can

overcome resistance by other means than dramatic struggle and violence.

*

There are three powers of the cosmos to which all things are subject—creation, preservation and destruction; whatever is created lasts for a time, then begins to crumble down. The taking away of the power of destruction implies a creation that will not be destroyed but last and develop always. In the Ignorance destruction is necessary for progress—in the Knowledge, the Truth-creation, the law is that of a constant unfolding without any Pralaya.

*

It is not by a general descent that people come out of the physical mind. If one chooses to remain in the physical mind, one million descents can come down and make no difference to him.

*

The Supermind coming down on earth will change nothing in a man if he clings to the ego.

Chapter Two

Descent and Transformation

A World-Changing Yoga

What is a perfect technique of Yoga or rather of a world-changing and Nature-changing Yoga? Not one that takes a man by a little bit of him somewhere, attaches a hook and pulls him up by a pulley into Nirvana or Paradise. The technique of a world-changing Yoga has to be as multiform, sinuous, patient, all-including as the world itself. If it does not deal with all the difficulties or possibilities and carefully deal with each necessary element, has it any chance of success? And can a perfect technique which everybody can understand do that? It is not like writing a small poem in a fixed metre with a limited number of modulations. If you take the poem simile, it is the Mahabharata of a Mahabharata that has to be done. And what, compared with the limited Greek perfection, is the technique of the Mahabharata?

Next, what is the use of *vicārabuddhi* in such a case? If one has to get to a new consciousness which surpasses the reasoning intellect, can one do it on lines which are to be judged and understood by the reasoning intellect, controlled at every step by it, told by the intellect what it is to do, what is the measure of its achievements, what its steps must be and what their value? If one does that, will one ever get out of the range of the reasoning intelligence into what is beyond it? And if one does, how shall others judge what one is doing by the intellectual measure? How can one judge what is beyond the ordinary consciousness when one is oneself in the ordinary consciousness? Is it not only by exceeding yourself that you can feel, experience, judge what exceeds you? What is the value of a judgment without the feeling and experience?

What the Supramental will do the mind cannot foresee or lay down. The mind is Ignorance seeking for the Truth, the

Supramental by its very definition is Truth Consciousness, Truth in possession of itself and fulfilling itself by its own power. In a supramental world imperfection and disharmony are bound to disappear. But what we propose just now is not to make the earth a supramental world but to bring down the Supramental as a power and established consciousness in the midst of the rest — to let it work there and fulfil itself as Mind descended into Life and Matter and has worked as a Power there to fulfil itself in the midst of the rest. This will be enough to change the world and to change Nature by breaking down her present limits. But what, how, by what degrees it will do it is a thing that ought not to be said now — when the Light is there, the Light will itself do its work — when the Supramental Will stands on earth, that Will will decide. It will establish a perfection, a harmony, a Truth-creation — for the rest, well, it will be the rest — that is all.

*

I certainly hope to bring down an effective power of the Truth which will replace eventually the Falsehood that has governed the minds and hearts of men for so long. The liberation of a few individuals is a thing that is always possible and has always been done — but, to my seeing, it cannot be the sole aim of existence. Whatever the struggles and sufferings and blunders of humanity, there is still in it an urge towards the Light, an impulse towards a greater Truth not only of the soul but the life. If it has not been done yet, it is surely because those who reached the Light and the greater Truth, rested there and saw in it more a means of escape for the soul than a means of transformation for the life. The liberation of the spirit is necessary, nothing can be done without it — but the transformation is also possible.

*

You have missed altogether the qualifying words which I put with great care and prominent emphasis¹ — if you don't read

¹ In a letter published in Letters on Himself and the Ashram, volume 35 of THE COMPLETE WORKS OF SRI AUROBINDO, p. 649. — Ed.

carefully, you will necessarily misunderstand what I write. I said "*This transformation* cannot be done individually *in a solitary way only.*" No individual solitary transformation apart from the work for the earth (which means more than any individual transformation) would be either possible or useful. (Also no individual human being can by his own power alone work out the transformation, nor is it the object of the Yoga to create an individual superman here and there.) The object of the Yoga is to bring down the supramental consciousness on earth, to fix it there, to create a new race with the principle of the supramental consciousness governing the inner and outer individual and collective life. Therefore the existence of the Asram, whatever difficulties it created for ourselves or for the individual, was inevitable. The method was the preparation of the earth consciousness in the human being as represented by the members of the Asram and others (with also a certain working in the general earth consciousness) so as to make the descent of the supramental Force possible. That Force accepted by individual after individual according to their preparation would establish the supramental consciousness in the physical world and so create a nucleus for its own expansion.

*

As far as I can see, once the supramental is established in Matter, the transformation will be possible under much less troublesome conditions than now are there. These bad conditions are due to the fact that the Ignorance is in possession and the hostile Powers an established authority, as it were, who do not care to give up their hold and there is no full force of Light established in the earth consciousness which would not only meet but outweigh their full force of darkness.

*

It is the darkest nights that prepare the greatest dawns—and it is so because it is into the deep unconsciousness of material life that we have to bring, not an intermediate glimmer, but the full glory of the divine Light.

The Vital World and the Supramental Descent

When there is a pressure on the vital world due to the preparing Descent from above, that world usually precipitates something of itself into the human. The vital world is very large and far exceeds the human in extent. But usually it dominates by influence not by descent. Of course the effort of this part of the vital world is always to maintain humanity under its sway and prevent the higher Light.

*

The vital descent cannot prevent the supramental—still less can the possessed nations do it by their material power, since the supramental descent is primarily a spiritual fact which will bear its necessary outward consequences. What previous vital descents have done is to falsify the Light that came down as in the history of Christianity where it took possession of the teaching and distorted it and deprived it of any widespread fulfilment. But the supermind is by definition a Light that cannot be distorted if it acts in its own right and by its own presence. It is only when it holds itself back and allows inferior Powers of consciousness to use a diminished and already deflected Truth that the knowledge can be seized by the vital Forces and made to serve their own purpose.

The Nature and Scope of the Transformation

When the mind, life and body are entirely divine and supramentalised, that is the perfect transformation and the true transformation is the process that leads towards it.

*

It is not a question of “can” or “cannot” [*the Divine Force transform someone*]—it is a question of what is necessary for the true transformation. Theoretically the Force can transform you in one hundredth of a second from an animal to a god, but that would not be transformation or the working out of a spiritual evolution, it would be mere thaumaturgy, i.e. miracle

working without a significance or purpose.

*

The whole of humanity cannot be changed at once. What has to be done is to bring the Higher Consciousness down into the earth-consciousness and establish it there as a constant realised force, just as mind and life have been established and embodied in Matter, so to establish and embody the Supramental Force.

*

It would not be possible to change all that [*ordinary life on earth*] in a moment—we have always said that the whole of humanity will not change the moment there is the Descent. But what can be done is to establish the higher principle in the earth consciousness in such a way that it will remain and go on strengthening and spreading itself in the earth-life. That is how a new principle in the evolution must necessarily work.

*

There is no proposal to transform the whole earth consciousness—it is simply to introduce the supramental principle there which will transform those who can receive and embody it.

The Earth, the Earth Consciousness and the Supramental Creation

The earth is the place of evolution in which all these [*universal*] forces meet and try to manifest and out of their working something has to develop. On the other planes (the mental, vital etc.) there is not the evolution—there each acts separately according to its own law.

*

It [*the earth*] contains all the potentialities which come out in the beings of earth and also much that is unexpressed.

*

It is first through the individual that it [*the supramental activity*] becomes part of the earth consciousness and afterwards it spreads from the first centres and takes up more and more of the global consciousness till it becomes an established force there.

*

The consciousness of this Earth alone [*is the earth consciousness*.]. There is a separate global consciousness of the earth (as of other worlds) which evolves with the evolution of life on the planet.

*

Yes, all that [*humans, animals, vegetables, minerals*] is the earth consciousness — mineral = matter, vegetable = the vital-physical creation, animal = the vital creation, man = the mental creation. Into the earth consciousness so limited to mind, vital, matter has to come the supramental creation. Necessarily *at first* it cannot be in a great number — but even if it is only in a few at first, that does not mean that it will have no effect on the rest or will not change the whole balance of the earth-nature.

The Supramental Change and the Ananda Plane

The supramental change is the ultimate stage of siddhi and it is not likely to come so soon; but there are many levels between the normal mind and the supermind and it is easy to mistake an ascent into one of them or a descent of their consciousness or influence for a supramental change.

It is quite impossible to ascend to the real Ananda *plane* (except in a profound trance), until after the supramental consciousness has been entered, realised and possessed; but it is quite possible and normal to feel some form of Ananda *consciousness* on any level. This consciousness wherever it is felt is a derivation from the Ananda plane, but it is very much diminished in power and modified to suit the lesser power of receptivity of the inferior levels.

*

I presume it is the development of the Truth Power and the Ananda Power in the overmind consciousness that is being pursued. The transcendent Ananda in itself could descend only after the complete Supramentalisation of the being and would mean a stupendous change in the earth consciousness. It is the divine Truth in the overmind and the divine Ananda in the overmind that can now prepare their manifestation and it is that which is being indicated in these experiences.

Chapter Three

The Supramental Transformation

Preparatory Steps towards the Supramental Change

It is not possible to have the direct supramental working now. The Adhar is not yet ready. First one must accept an indirect working which prepares the lower planes for the supramental change.

*

The gate of the supramental cannot be smashed open like that. The Adhar has to be steadily prepared, changed, made fit for the supramental Descent. There are several powers between the ordinary mind and the supramental and these must be opened up and absorbed by the consciousness — only then is the supramental change possible.

*

To speak of “receiving power from the supramental when we are not conscious” is strange. When one is not conscious, one can still receive a *higher* force; the Divine Shakti works often from behind the veil, otherwise in the ignorant and unconscious condition of the human being she would not be able to work at all. But the nature of the force or action is modified to suit the condition of the sadhak. One must develop a very full consciousness before one can receive anything from the direct supramental Power and one must be very advanced in consciousness even to receive something of it modified through the Overmind or other intermediate region.

The Supramental Influence and Supramentalisation

Who told you that it [*the supermind*] was descending on the physical consciousness without touching the mind and vital?

Certainly no part of the Nature has been supramentalised — that is not possible, until the whole being has been put under the supramental influence. The supramental influence must come first, the supramental transformation can only come afterwards.

*

A touch or influence of the supramental is not the same thing as supramentalisation. To suppose that the physical can be supramentalised before the mental and vital is an absolute absurdity. What I said was that the mind and vital could not be supramentalised so long as the physical was left as it was, untouched by the supramental descent.

*

It is quite impossible for the supramental to take up the body before there has been the full supramental change in the mind and the vital. X and others seem always to expect some kind of unintelligible miracle — they do not understand that it is a concentrated evolution, rapid but following the law of creation, that has to take place. A miracle can be only a moment's wonder. A change according to the Divine Law can alone endure.

*

If the supramental can stand in the mind and vital, then it must stand in the physical also. If it does not stand in the physical, it cannot stand in the mind and vital also; it will be something else, not the supramental.

*

It [*the supermind*] cannot be brought down into the mind and vital without being brought down into the physical also. One can feel its influence or get something from it, but bringing down means much more than that.

*

The supermind is a harmonious whole — it is not a mixture of light and ignorance. If the physical mind is not supramentalised,

then there will be in mind a mixture of ignorance, but then it will not be supermind there, but something else. So also with the vital. All that can manifest in the mind separately is a partly supramentalised overmind.

*

There can be no conquest of the other planes by the supermind, but only an influence, so long as the physical is not ready.

*

Aspiration is necessary in all spiritual aims from whatever part of the consciousness. The supermind can descend into the physical only if there is brought down into it the power of higher and higher levels till the supramental intensity is possible.

Premature Claims of Possession of the Supermind

It is very unwise for anyone to claim prematurely to have possession of the supermind or even a taste of it. The claim is usually accompanied by an outburst of superegoism, some radical blunder of perception or a gross fall into wrong condition and wrong movement. A certain spiritual humility, a serious un-arrogant look at oneself and quiet perception of the imperfections of one's present nature and, instead of self-esteem and self-assertion, a sense of the necessity of exceeding one's present self, not from egoistic ambition, but from an urge towards the Divine would be, it seems to me, for this frail terrestrial and human composition far better conditions for proceeding towards its supramental change.

*

He is using the word supermind too easily. What he describes as supermind is a higher illumined consciousness; a modified supramental light may touch it, but not the full power of the supermind; and, in any case, it is not the supermind. He speaks of a supramental part which is unreceptive,—that is impossible, the supramental cannot be unreceptive. The supermind is the

Truth-consciousness itself; it already possesses the Truth and does not even need to receive it. The word *vijnāna* is sometimes used for the higher illumined Intelligence in communication with the Truth, and this must be the part in himself which he felt—but this is not the supermind. One can enter into supermind only at the very end of the sadhana, when all difficulties have disappeared and there is no obstacle any longer in the way of the realisation.

*

The question arose and always arises because of an eagerness in the vital to take any stage of strong experience as the final stage, even to take it for the overmind, supermind, full siddhi. The supermind or the overmind either is not so easy to reach as that, even on the side of Knowledge or inner experience only. What you are experiencing belongs to the spiritualised and liberated mind. At this stage there may be intimations from the higher mind levels, but these intimations are merely isolated experiences, not a full change of consciousness. The supermind is not part of mind or a higher level of mind—it is something entirely different. No sadhak can reach the supermind by his own efforts and the effort to do it by personal tapasya has been the source of many mishaps. One has to go quietly stage by stage until the being is ready and even then it is only the Grace that can bring the real supramental change.

*

The action that took place was not supramental; the fact that you were aware of a centre in the brain shows that it was through the mind that it was done. The force that acted was the Divine Power which can work in this way on any plane, supramental, mental, vital or physical or on all the planes together. The supramental action can only be achieved after a long discipline of Yoga directed towards that end; it cannot be an initial experience.

That there was no mental expectation was all to the good; if there had been an expectation, the mind might have been active and interfered and either prevented the experience or else stood in the way of its being pure and complete.

Chapter Four

Transformation and the Body

The Transformation of the Body

It is quite true that the surrender and the consequent transformation of the whole being is the aim of the Yoga — the body is not excluded, but at the same time this part of the endeavour is the most difficult and doubtful — the rest, though not facile, is comparatively less difficult to accomplish. One must start with an inner control of the consciousness over the body, a power to make it obey more and more the will or the force transmitted to it. In the end as a higher and higher Force descends and the plasticity of the body increases, the transformation becomes possible.

*

It is absolutely idle to think of transforming the body when other things that are so much easier to do — though of course none is easy — are not done. The inner must change before the outermost can follow. So what is the use of such a concentration — unless one thinks that everything else is perfect, which would be a rather astonishing claim. What has to be done with the body at first is to make it open to the Force, so as to receive strength against illness and fatigue — when they come, there must be the power to react and throw them off and to keep a constant flow of force into the body. If that is done, the rest of the bodily change can wait for its proper time.

*

The supramental perfection means that the body becomes conscious, is filled with consciousness and that as this is the Truth consciousness all its actions, functionings etc. become by the power of the consciousness within it harmonious, luminous, right and true — without ignorance or disorder.

The Hathayogic method is to bring an immense vital force into the body and by this and by certain processes keep it strong and in good health and a capable instrument.

The Transformation of the Body in Other Traditions

It [*a body of light seen by the correspondent in a vision*] is the luminous body spoken of in the Veda as possessed by the beings of the higher planes. It is supposed by certain schools of Yoga in the East and West that in the final transformation on earth man will develop a body having these qualities. It was called the *corps glorieux*, “body of glory”, by the Mother’s first spiritual instructor.

*

It has been the idea of many who have speculated on the subject that the body of the future race will be a luminous body (*corps glorieux*) and that might mean radio-active.¹ But also it has to be considered (1) that a supramental body must necessarily be one in which the consciousness determines even the physical action and reaction to the most material and these therefore are not wholly dependent on material conditions or laws as now known, (2) that the subtle process will be more powerful than the gross, so that a subtle action of Agni will be able to do the action which would now need a physical change such as increased temperature.

*

I did not intend to evade anything, except that in so far as I do not yet know what will be the chemical constitution of the changed body, I could not answer anything to that. That was why I said it needed investigation.

I was simply putting my idea on the matter which has always been that it is the supramental which will create its own

¹ *The correspondent asked whether the chemicals in a transformed body would become “more Peace-active, Light-active, Force-active (as we say, radio-active)”*. — Ed.

physical basis. If you mean that the supramental cannot *fulfil itself* in the present body with its present processes that is true. The processes will obviously have to be altered. How far the constitution of the body will be changed and in what direction is another question. As I said it may become as you suggest radio-active: Théon (Mother's teacher in occultism) spoke of it as luminous, *le corps glorieux*. But all that does not make it impossible for the supramental to act in the present body for change. It is what I am looking forward to at present.

Of course a certain preliminary transformation is necessary, just as the psychic and spiritual transformation precedes the supramental. But this is a change of the physical consciousness down to the submerged consciousness of the cells so that they may respond to higher forces and admit them and to a certain extent a change or at least a greater plasticity in the processes. The rules of food etc. are meant to help that by minimising obstacles. How far this involves a change of the chemical constitution of the body I cannot say. It seems to me still that whatever preparatory changes there may be, it is only the action of the supramental Force that can confirm and complete them.

*

If the consciousness cannot determine the physical action and reaction in the present body, if it needs a different basis, then that means this different basis must be prepared by different means. By what means? Physical? The old Yogis tried to do it by physical tapasya; others by seeking the elixir of life etc. According to this Yoga, the action of the higher Force and consciousness which includes the subtle action of Agni has to open and prepare the body and make it more responsive to Consciousness-Force instead of being rigid in its present habits (called laws). But a different basis can only be created by the supramental action itself. What else but the supermind can determine its own basis?

*

I read the Bible,—very assiduously at one time. When I have looked at it, it has always given me a sense of imprecision in the

thought-substance, in spite of the vividness of the expression, and that makes it very difficult to be sure about these things. This passage about the body, for instance—although St. Paul had remarkable mystic experiences and, certainly, much profound spiritual knowledge (profound rather than wide, I think)—I would not swear to it that he is referring to the supramentalised body (*physical body*). Perhaps to the supramental body or to some other luminous body in its own space and substance, which he found sometimes as if enveloping him and abolishing this body of death which he felt the material envelope to be. This verse like many others is capable of several interpretations and might refer to a quite supraphysical experience. The idea of a transformation of the body occurs in different traditions, but I have never been quite sure that it meant the change in this very matter. There was a Yogi some time ago in this region who taught it, but he hoped when the change was complete, to disappear in light. The Vaishnavas speak of a divine body which will replace this one when there is the complete siddhi. But, again, is this a divine physical or supraphysical body? At the same time there is no obstacle in the way of supposing that all these ideas, intuitions, experiences point to, if they do not exactly denote, the physical transformation.

*

The physical Nature does not mean the body alone but the phrase includes the transformation of the whole physical mind, vital, material nature—not by imposing siddhis on them, but by creating a new physical nature which is to be the habitation of the supramental being in a new evolution. I am not aware that this has been done by any Hathayogic or other process. Mental or vital occult power can only bring siddhis of the higher plane into the individual life—like the Sannyasi who could take any poison without harm, but he died of a poison after all when he forgot to observe the conditions of the siddhi. The working of the supramental power envisaged is not an influence on the physical giving it abnormal faculties, but an entrance and permeation changing it wholly into a supramentalised physical. I did not

learn the idea from Veda or Upanishad, and I do not know if there is anything of the kind there. What I received about the supermind was a direct, not a derived knowledge given to me; it was only afterwards that I found certain confirmatory revelations in the Upanishad and Veda.

Transforming the Body Consciousness

That [*stopping at each stage of transformation in order to deal with the body*] is hardly possible. The body consciousness is there and cannot be ignored, so that one can neither transform the higher parts completely leaving the body for later dealing nor make each stage complete in all its parts before going to the next. I tried that method but it never worked. A predominant overmentalisation of mind and vital is the first step, for instance, when overmentalising, but the body consciousness retains all the lower movements unovermentalised and until these can be pulled up to the overmental standard, there is no overmental perfection, always the body consciousness brings in flaws and limitations. To perfect the overmind one has to call in the supramental force and it is only when the overmind has been partially supramentalised that the body begins to be more and more overmental. I do not see any way of avoiding this process, though it is what makes the thing so long.

*

The fallacy of the argument [*that after supramentalisation severe attacks on the body will still be possible*] lies in the premiss laid down in the beginning that even after supramentalisation difficulties and attacks will continue. In the supramental consciousness such attacks are not possible — the coexistence of the supramental and the lower darkness in the same being and body is not possible. It is precisely for that reason that the supramentalisation of the body consciousness is laid down as the condition of the successful transformation. If attacks continue and can come in successfully, it means that the body consciousness is not yet supramentalised.

Death and the Supramental Transformation

The change of the consciousness is the necessary thing and without it there can be no physical siddhi. But the fullness of the supramental change is not possible if the body remains as it is, a slave of death, disease, decay, pain, unconsciousness and all the other results of the ignorance. If these are to remain the descent of the supramental is hardly necessary—for a change of consciousness which would bring mental-spiritual union with the Divine, the Overmind is sufficient, even the Higher Mind is sufficient. The supramental descent is necessary for a dynamic action of the Truth in mind, vital and body. This would imply as a final result the disappearance of the unconsciousness of the body; it would no longer be subject to decay and disease. That would mean that it would not be subject to the ordinary processes by which death comes. If a change of body had to be made, it would have to be by the will of the inhabitant. This (not an obligation to live 3000 years, for that too would be a bondage) would be the essence of physical immortality. Still, if one wanted to live 1000 years or more, then supposing one had the complete siddhi, it should not be impossible.

*

Death is necessary in the evolution, because the body can progress no longer—cannot suffice any longer as an instrument for the progress or evolution of the consciousness—it has to change its physical instrument and get a new one. If something can be brought into the body that will make it a plastic instrument for the soul, then only death is no longer necessary. If the supramental transformation is complete that is what should happen.

*

It [*death*] has no separate existence by itself, it is only a result of the principle of decay in the body and that principle is there already—it is part of the physical nature. At the same time it is not inevitable; if one could have the necessary consciousness

and force, decay and death is not inevitable. But to bring that consciousness and force into the whole of the material nature is the most difficult thing of all — at any rate in such a way as to annul the decay principle.

*

Immunity from death by anything but one's own will to leave the body, immunity from illness are things that can be achieved only by a complete change of consciousness which each man has to develop in himself, — there can be no automatic immunity without that achievement.

*

That² is the argument of the Mayavadin to whom all manifestation is useless and unreal because it is temporary — even the life of the gods is no use because it is in Time, not in the Timeless. But if manifestation is of any use, then it is worthwhile having a perfect manifestation rather than an imperfect one. "Have to be left willingly" is a contradiction in terms. One keeps the body as long as one wills, with an illumined will, leaves it or changes it according to the same will. That is a very different thing from a body assailed constantly by desire and suffering and death brought on by decay or illness. Always assuming that the divine manifestation or any manifestation is worthwhile.

As for the second argument,³ change and progress are not excluded from the supramental life. I do not see why the change of cells, supposing it continues in the supramentalised body, takes away from the value of the transformation, if it is a change to something equally or more conscious and luminous.

*

Well, don't you know that old men sometimes get a new or third set of teeth in their old age? And if monkey glands can renew

² *The correspondent asked, "What is the need of transformation if the body will have to be left willingly or unwillingly?" — Ed.*

³ *The correspondent asked, "Since the body cells undergo changes from second to second, what value has the transformation of the body?" — Ed.*

functionings and forces and can make hair grow on a bald head, as Voronoff has proved by living examples,—well? And mark that Science is only at the beginning of these experiments [*to prolong life*]. If these possibilities are opening before Science, why should one declare their absolute impossibility by other means?

*

There is no ambiguity that I can see.⁴ “*En fait*” and “*attachée*” do not convey any sense of inevitability. “*En fait*” means simply that in fact, actually, as things are at present all life (on earth) has death attached to it as its end; but it does not in the least convey the idea that it can never be otherwise or that this is the unalterable law of all existence. It is at present a fact for certain reasons which are stated,—due to certain mental and physical circumstances—if these are changed, death is not inevitable any longer. Obviously the alteration can only come “if” certain conditions are satisfied—all progress and change by evolution depends upon an “if” which gets satisfied. If the animal mind had not been pushed to develop speech and reason, mental man would never have come into existence,—but the “if”, a stupendous and formidable one, was satisfied. So with the ifs that condition a farther progress.

The Conquest of Death

As for the conquest of death, it is only one of the sequelae of supramentalisation—and I am not aware that I have forsworn my views about the supramental descent. But I never said or thought that the supramental descent would automatically make everybody immortal. The supramental descent can only make the best conditions for anybody who can open to it then or thereafter attaining to the supramental consciousness and its

⁴ Sri Aurobindo is referring to the ambiguity seen by the correspondent in two statements of the Mother: “If this belief [in the necessity of death] could be cast out . . . death would no longer be inevitable” and “Death as a fact has been attached to all life upon earth. . . .” (*The Mother, Questions and Answers 1929-1931*, 2003 ed., p. 36) The correspondent read these statements in French.—Ed.

consequences. But it would not dispense with the necessity of sadhana. If it did, the logical consequence would be that the whole earth, men, dogs and worms, would suddenly wake up to find themselves supramental. There would be no need of an Asram or of Yoga.

What is vital is the supramental change of consciousness — conquest of death is something minor and, as I have always said, the last physical result of it, not the first result of all or the most important — a thing to be added to complete the whole, not the one thing needed and essential. To put it first is to reverse all spiritual values — it would mean that the seeker was actuated not by any high spiritual aim but by a vital clinging to life or a selfish and timid seeking for the security of the body — such a spirit could not bring the supramental change.

Certainly, everything depends on my success. The only thing that could prevent it, so far as I can see, would be my own death or the Mother's. But did you imagine that that [*my success*] would mean the cessation of death on this planet, and that sadhana would cease to be necessary for anybody?

*

There can be no immortality of the body without supramentalisation; the potentiality is there in the Yogic force and Yogis can live for 200 or 300 years or more, but there can be no real principle of it without the Supramental.

Even Science believes that one day death may be conquered by physical means and its reasonings are perfectly sound. There is no reason why the Supramental Force should not do it. Forms on earth do not last (they do in other planes) because these forms are too rigid to grow expressing the progress of the spirit. If they become plastic enough to do that, there is no reason why they should not last.

*

Death is there because the being in the body is not yet developed enough to go on growing in the same body without the need of change and the body itself is not sufficiently conscious. If

the mind and vital and the body itself were more conscious and plastic, death would not be necessary.

*

As for immortality, it cannot come if there is attachment to the body,—for it is only by living in the immortal part of oneself which is unidentified with the body and bringing down its consciousness and force into the cells that it can come. I speak of course of Yogic means. The scientists now hold that it is (theoretically at least) possible to discover physical means by which death can be overcome, but that would mean only a prolongation of the present consciousness in the present body. Unless there is a change of consciousness and change of functioning, it would be a very small gain.

*

Immortality is one of the possible results of supramentalisation, but it is not an obligatory result and it does not mean that there will be an eternal or indefinite prolongation of life as it is. That is what many think it will be, that they will remain what they are with all their human desires and the only difference will be that they will satisfy them endlessly; but such an immortality would not be worth having and it would not be long before people are tired of it. To live in the Divine and have the divine consciousness is itself immortality and to be able to divinise the body also and make it a fit instrument for divine works and divine life would be its material expression only.

*

It depends on the consciousness [*whether one wants to live a long life*]. As it is, at present, most people do not get tired of life; they die because they must, not because they want to—at least, that is true of the vital; it is only a minority that tire of life and for many of these it is due to the discomforts of old age, continued ill-health, misfortune. Supposing a consciousness descended in the body that got rid of these discomforts, would people get tired of life in the same way merely because of its

length or would they have some source of perpetual interest within as well as without that would keep them on—that is the question. Of course physical immortality would not mean that one is tied down to the body, but that one is not subject to disease and death, but can keep or leave the body at will. I don't know whether Ashwatthaman lives on because he cannot die or because he won't die—whether it is for him a doom or a privilege. There are by the way animals that live for many centuries, but as they have not the philosophic mind the question for them does not arise—probably they take it as a matter of course.

*

What you say about being tired of life, is true. Edison's family was very long lived but his grandfather after a century found it too long and died because he wanted to. On the other hand there are men who are strongly vital and do not get tired of life, like the Turk who died recently at 150, I think, but was still eager to live.

*

The ideal would be not to be subject to Death, but to change the body whenever it is necessary with full consciousness.

The Reproductive Method of the Supramental

The [*reproductive*] method of the supramental is more likely to be psychological than material. But these are things that we leave to the Supermind to arrange when it is there.

*

It is not at all certain that the hereditary method will be used for the reproduction of supermen. If it were used, the seed would have to be very different from what it is now—and the question would not arise.

Part Four

Problems of Philosophy, Science, Religion and Society

Section One

Thought, Philosophy, Science and Yoga

Chapter One

The Intellect and Yoga

Intellectual Truth and Spiritual Experience

Intellectual truths? Do you think that the intellectual truth of the Divine is its real truth? In that case there is no need of Yoga. Philosophy is enough.

*

Philosophy knows nothing about peace and silence or the inner and outer vital. These things are discovered only by Yoga.

*

Yoga is not a thing of ideas but of inner spiritual experience. Merely to be attracted to any set of religious or spiritual ideas does not bring with it any realisation. Yoga means a change of consciousness; a mere mental activity will not bring a change of consciousness, it can only bring a change of mind. And if your mind is sufficiently mobile, it will go on changing from one thing to another till the end without arriving at any sure way or any spiritual harbour. The mind can think and doubt and question and accept and withdraw its acceptance, make formations and unmake them, pass decisions and revoke them, judging always on the surface and by surface indications and therefore never coming to any deep and firm experience of Truth, but by itself it can do no more. There are only three ways by which it can make itself a channel or instrument of Truth. Either it must fall silent in the Self and give room for a wider and greater consciousness; or it must make itself passive to an inner Light and allow that Light to use it as a means of expression; or else it must itself change from the questioning intellectual superficial mind it now is to an intuitive intelligence, a mind of vision fit for the direct perception of the divine Truth.

If you want to do anything in the path of Yoga, you must fix

once for all what way you mean to follow. It is no use setting your face towards the future and then always looking back towards the past; in this way you will arrive nowhere. If you are tied to your past, return to it and follow the way you then choose; but if you choose this way instead, you must give yourself to it single-mindedly and not look back at every moment.

*

My reason for wanting you to get rid of the mental concepts is that they are rigid and keep you tied to the idea and feeling of your incapacity and the impossibility of the sadhana. Get rid of that and a great obstacle disappears.

You would then see that there is no reason for the constant sense of grief and despair that reacts upon your effort and makes it sterile. I simply want you to put yourself, if it is possible, in that state of quietude and openness which is favourable to the higher consciousness and its action; if it is not possible at present, I have still said that I will do my utmost to help you to the experience. That does not mean that the utmost has been yet done or that it can be done in a few days. But (although people are not giving me the freedom of mind and disposal of time which I had asked for), it will be done.

*

The point about the intellect's misrepresentation of the "formless" (the result of a merely negative expression of something that is inexpressibly intimate and positive) is very well made and hits the truth in the centre. No one who has had the Ananda of the Brahman can do anything but smile at the charge of coldness; there is an absoluteness of immutable ecstasy in it, a concentrated intensity of silent and inalienable rapture that it is quite impossible even to suggest to anyone who has not had the experience. The eternal Reality is neither cold nor dry nor empty — you might just as well talk of the midsummer sunlight as cold or the ocean as dry or perfect fullness as empty. Even when you enter into it by elimination of form and everything else, it seizes as a miraculous fullness that is truly the Purnam — when it is

entered affirmatively as well as by negation, there can obviously be no question of emptiness or dryness. All is there and more than one could ever dream of as the all. That is why one has to object to the intellect thrusting itself in as the *sabjāntā* judge — if it kept to its own limits, there would be no objection to it. But it makes constructions of words and ideas which have no application to the Truth, babbles foolish things in its ignorance and makes its constructions a wall which refuses to let in the Truth that surpasses its own capacities or scope.

*

You can tell him Mother does not discuss these mental problems [*such as the existence of evil in the world*] even with the disciples. It is quite useless trying to reconcile these things with the intellect. For there are two things: the Ignorance from which the struggle and discord come and the secret Light, Unity, Bliss and Harmony. The intellect belongs to the Ignorance. It is only by getting into another consciousness that one can live in the Light and Bliss and Unity and not be touched by the outward discord and struggle. That change of consciousness therefore is the only thing that matters; to reconcile with the intellect could make no difference.

*

Yes, you need not listen to the “common sense” of others at least; usually there is much that is common in it but very little that is sense. What your inner being feels is rather to be followed than the superficial reasonings of the outer intelligence.

*

How can Reason be the sole arbiter [*in the quest for Truth*]? Whose reason? The reason in different men comes to different, opposite or incompatible conclusions. We cannot say that Reason is infallible, any more than feeling is infallible or the senses are infallible.

*

Russell has the doubts because he has no spiritual experience, Rolland because he takes his emotional intellectuality for spirituality, Tagore—

If one is blind, it is quite natural—for the human intelligence which is rather an asinine thing at its best—to deny light; if one's highest natural vision is that of glimmering mists, it is equally natural to believe that all high vision is only a mist or a glimmer. But Light exists for all that—and for all that, spiritual Truth is more than a mist and a glimmer.

Intellectual Arguments against Spirituality

I have read Leonard Woolf's article,¹ but I do not propose to deal with it in my comments on Professor Sorley's letter²—for apart from the ignorant denunciation and cheap satire in which it deals, there is nothing much in its statement of the case against spiritual thought or experience; its reasoning is superficial and springs from an entire misunderstanding of the case for the mystic. There are four main arguments he sets against it and none of them have any value.

Argument number one. Mysticism and mystics have always risen in times of decadence, of the ebb of life and their loud quacking is a symptom of the decadence. This argument is absolutely untrue. In the East the great spiritual movements have arisen in the full flood of a people's life and culture or on a rising tide and they have themselves given a powerful impulse of expansion and richness to its thought and art and life; in Greece the mystics and the mysteries were there at the prehistoric beginning and in the middle (Pythagoras was one of the greatest of mystics) and not only in the ebb and decline; the mystic cults flourished in Rome too when its culture was at high tide; many great spiritual personalities of Italy, France, Spain sprang up

¹ Leonard Woolf, "Quack, Quack! or Having it Both Ways" [a review of C. E. M. Joad, Counterattack from the East: The Philosophy of Radhakrishnan (London: Allen and Unwin, 1932)]. "New Statesman and Nation", vol. 6, no. 145 (2 December 1933): pp. 702–4.

² See the letters on pages 357–68.—Ed.

in a life that was rich, vivid and not in the least touched with decadence. This hasty and inept generalisation has no truth in it and therefore no value.

Argument number two. A spiritual experience cannot be taken as a truth (it is a chimaera) unless it is proved just as the presence of a chair in the next room can be proved by showing it to the eye. Of course, a spiritual experience cannot be proved in that way, for it does not belong to the order of physical facts and is not physically visible or touchable. The writer's position would amount to this that only what is or can easily be made evident to everybody without any need of training, development, equipment or personal discovery, is to be taken as true. This is a position which, if accepted, would confine knowledge or truth within very narrow limits and get rid of a great deal of human culture. A spiritual peace, for example,—the peace that passeth all understanding—is a common experience of the mystics all over the world—it is a fact but a spiritual fact, a fact of the invisible; when one enters it or it enters into one, one knows that it is a truth of existence and is there all the time behind life and visible things. But how am I to "prove" these invisible facts to Mr. Leonard Woolf? he will turn away saying that this is the usual decadent quack quack and pass contemptuously on—perhaps to write another cleverly shallow article on some subject of which he has no personal knowledge or experience.

Argument number three. The generalisations based on spiritual experience are irrational as well as unproven. Irrational in what way? Are they merely foolish and inconceivable—infrarational—or do they belong to a suprarational order of experience to which the ordinary intellectual canons do not apply because these are founded on phenomena as they appear to the external mind and sense and not to an inner realisation which surpasses these phenomena? That is the contention of the mystics and it cannot be dismissed by merely saying that as they do not agree with ordinary experience, therefore they are nonsense and false. I would not undertake to defend as unimpeachable all that Joad or Radhakrishnan may have written—such as the formula that "the universe is good",—but for

many or most of the statements marshalled for condemnation by the writer one can surely say that they are not irrational at all. “Integrating the personality” may have no meaning to him, it has a very clear meaning to many, for it is a truth of experience—and, if modern psychology is to be believed, it is not irrational since there is in our being not only a conscious but an unconscious or subconscious or concealed subliminal part and it is not impossible to become aware of both and make some kind of integration. To “transcend both consciousness and unconsciousness” gets at once a rational meaning if we admit that as there is a subconscious so there may be a superconscious part of our being. To reconcile disparate parts of our nature or our perception or experience of things is also not such a ridiculous or meaningless phrase. It is not absurd to say that the doctrine of Karma reconciles determinism and free-willism, since this doctrine supposes that our own past action and therefore our past will determined to a great extent the present results but not so as to exclude a present will modifying them and creating a fresh determinism of our existence yet to be. The phrase about the value of the world is quite intelligible once we see that it refers to a progressive value not determined by the good or bad experience of the moment, a value of existence developing through time and taken as a whole. As for the statement about God, it may have little or no meaning if it is taken in connection with the superficial idea of the Divine current in popular religion, but it is a perfectly logical result of the premiss that there is an Infinite and Eternal which is manifesting in itself Time and things that are phenomenally finite. One may accept or reject this complex idea of the Divine which is founded on a coordination of the data of long spiritual experience passed through by thousands of seekers in all times, but I fail to see why it should be considered unreasonable. If it is because that would mean “to have it not only in both ways but in every way”, I do not see why this should be so reprehensible or a complex manifestation of a single Essence, Consciousness or Force should be considered *prima facie* inadmissible. There can be after all a synthetic and global view and consciousness of things which is

not bound by the oppositions and divisions of a more analytical and selective or dissecting intelligence.

Argument number four. The plea of intuition is only a facile cover for an inability to explain or establish by the use of reason — Joad and Radhakrishnan reason, but take refuge in intuition because their reasoning fails. Can the issue be settled in so easy and trenchant a way? The fact is that the mystic stands on an inner knowledge, an inner experience — but if he philosophises, he must try to explain to the reason, though not necessarily always by the abstract reason alone, what he has seen to be the Truth. He cannot but say, "I am explaining a truth which is beyond outer phenomena and the intelligence which depends on phenomena; it is really the outcome of a certain kind of direct experience and the intuitive knowledge which arises from that experience, so it cannot be adequately communicated by symbols appropriate to the world of outer phenomena — yet I am obliged to do as well as I can with these to help me towards some statement which will be intellectually acceptable to you." There is no wickedness or deceitful cunning therefore in using metaphors and symbols with a cautionary "as it were", — so objected to by Mr. Woolf in the simile of the focus, which is surely not intended as an argument but as a suggestive image. I may observe that the writer himself takes refuge in metaphor, beginning with the famous "quack quack", and an adversary might well reply that he does so in order to damn the opposite side while avoiding the necessity of a sound philosophical reply to the ideas he dislikes and repudiates. An intensity of belief is not the measure of truth, but neither is an intensity of unbelief the right measure.

As to the real nature of intuition and its relation to the intellectual mind, that is quite another and very large and complex question which cannot be dealt with in a short space. I have confined myself to pointing out that this article is a quite inadequate and superficial criticism. A case can be made against spiritual experience and spiritual philosophy and its positions, but to deserve a serious reply it must be put forward by a better advocate and it must touch the real centre of the problem which

lies here. As there is a category of facts to which our senses are our best available but very imperfect guide, as there is a category of truths which we seek by the keen but still imperfect light of our reason, so according to the mystic, there is a category of more subtle truths which surpass the reach both of the senses and the reason but can be ascertained by an inner direct knowledge and direct experience. These truths are supersensuous but not the less real for that—they have immense results upon the consciousness changing its substance and movement, bringing especially deep peace and abiding joy, a great light of vision and knowledge, a possibility of the overcoming of the lower animal nature, vistas of a spiritual self-development which without them do not exist. A new outlook on things arises which brings with it, if fully pursued into its consequences, a great liberation, inner harmony, unification—many other possibilities besides. These things have been experienced, it is true, by a small minority of the human race, but still there has been a host of independent witnesses to them in all times, climes and conditions and numbered among them are some of the greatest intelligences of the past, some of the world's most remarkable figures. Must these possibilities be immediately condemned as chimaeras because they are not only beyond the average man in the street but also not easily seizable even by many cultivated intellects or because their method is more difficult than that of the ordinary sense or reason? If there is any truth in them, is not this possibility opened by them worth pursuing as opening a highest range to self-discovery and world-discovery by the human soul? At its best, taken as true, it must be that—at its lowest, taken as only a possibility, as all things attained by man have been only a possibility in their earlier stages, it is a great and may well be a most fruitful adventure.

*

I know it is the Russian explanation of the recent trend to spirituality and mysticism that it is a phenomenon of capitalist society in its decadence. But to read an economic cause, conscious or unconscious, into all phenomena of man's history is part of the

Bolshevik gospel born of the fallacy of Karl Marx. Man's nature is not so simple and one-chorded as all that—it has many lines and each line produces a need of his life. The spiritual or mystic line is one of them and man tries to satisfy it in various ways, by superstitions of all kinds, by ignorant religionism, by spiritism, demonism and what not, in his more enlightened parts by spiritual philosophy, the higher occultism and the rest, at his highest by the union with the All, the Eternal or the Divine. The tendency towards the search for spirituality began in Europe with a recoil from the nineteenth century's scientific materialism, a dissatisfaction with the pretended all-sufficiency of the reason and the intellect and a feeling out for something deeper. That was a pre-war phenomenon, and began when there was no menace of Communism and the capitalistic world was at its height of insolent success and triumph, and it came rather as a revolt against the materialistic bourgeois life and its ideals, not as an attempt to serve or sanctify it. It has been at once served and opposed by the post-war disillusionment—opposed because the post-war world has fallen back either on cynicism and the life of the senses or on movements like Fascism and Communism; served because with the deeper minds the dissatisfaction with the ideals of the past or the present, with all mental or vital or material solutions of the problem of life has increased and only the spiritual path is left. It is true that the European mind having little light on these things dallies with vital will-o'-the-wisps like spiritism or theosophy or falls back upon the old religionism; but the deeper minds of which I speak either pass by them or pass through them in search of a greater Light. I have had contact with many and the above tendencies are very clear. They come from all countries and it was only a minority who hailed from England or America. Russia is different—unlike the others it had lingered in mediaeval religionism and not passed through any period of revolt—so when the revolt came it was naturally anti-religious and atheistic. It is only when this phase is exhausted that Russian mysticism can revive and take not a narrow religious but the spiritual direction. It is true that mysticism *à revers*, turned upside down, has made Bolshevism

and its endeavour a creed rather than a political theme and a search for the paradisal secret millennium on earth rather than the building of a purely social structure. But for the most part Russia is trying to do on the communistic basis all that nineteenth-century idealism hoped to get at—and failed—in the midst of or against an industrial competitive environment. Whether it will really succeed any better is for the future to decide—for at present it only keeps what it has got by a tension and violent control which is not over.

The Valley of the False Glimmer

One feels here [*in the letters of Krishnaprem*] a stream from the direct sources of Truth that one does not meet so often as one could desire. Here is a mind that can not only think but see—and not merely see the surfaces of things with which most intellectual thought goes on wrestling without end or definite issue and as if there were nothing else, but look into the core. The Tantriks have a phrase *paśyantī vāk* to describe one level of the Vak-Shakti, the seeing Word; here is *paśyantī buddhi*, a seeing Intelligence. It might be because the seer within has passed beyond thought into experience, but there are many who have a considerable wealth of experience without its clarifying their eye of thought to this extent; the soul feels, but the mind goes on with mixed and imperfect transcriptions, blurs and confusions in the idea. There must have been the gift of right vision lying ready in this nature.

It is an achievement to have got rid so rapidly and decisively of the shimmering mists and fogs which modern intellectualism takes for Light of Truth. The modern mind has so long and persistently wandered—and we with it—in that Valley of the False Glimmer that it is not easy for anyone to disperse its mists with the sunlight of clear vision so soon and entirely as has here been done. All that is said here about modern humanism and humanitarianism, the vain efforts of the sentimental idealist and the ineffective intellectual, about synthetic eclecticism and other kindred things is admirably clear-minded, it hits the target. It is not by

these means that humanity can get that radical change of its ways of life which is yet becoming so imperative, but only by reaching the bedrock of Reality behind,—not through mere ideas and mental formations, but by a change of the consciousness, an inner and spiritual conversion. But that is a truth for which it would be difficult to get a hearing in the present noise of all kinds of many-voiced clamour and confusion and catastrophe.

A distinction, the distinction very keenly made here, between the plane of phenomenal process, of externalised Prakriti, and the plane of Divine Reality ranks among the first words of the inner wisdom. The turn given to it in these pages is not merely an ingenious explanation; it expresses very soundly one of the clear certainties you meet when you step across the border and look at the outer world from the standing-ground of the inner spiritual experience. The more you go inward or upward, the more the view of things changes and the outer knowledge Science organises takes its real and very limited place. Science, like most mental and external knowledge, gives you only truth of process. I would add that it cannot give you even the whole truth of process; for you seize some of the ponderables, but miss the all-important imponderables; you get, hardly even the how, but the conditions under which things happen in Nature. After all the triumphs and marvels of Science the explaining principle, the rationale, the significance of the whole is left as dark, as mysterious and even more mysterious than ever. The scheme it has built up of the evolution not only of this rich and vast and variegated material world, but of life and consciousness and mind and their workings out of a brute mass of electrons, identical and varied only in arrangement and number, is an irrational magic more baffling than any the most mystic imagination could conceive. Science in the end lands us in a paradox effectuated, an organised and rigidly determined accident, an impossibility that has somehow happened,—it has shown us a new, a material Maya, *aghaṭana-ghaṭana-patiyasi*, very clever at bringing about the impossible, a miracle that cannot logically be and yet somehow is there actual, irresistibly organised, but still irrational and inexplicable. And this is evidently because Science

has missed something essential; it has seen and scrutinised what has happened and in a way how it happened, but it has shut its eyes to something that made this impossible possible, something that it is there to express. There is no fundamental significance in things if you miss the Divine Reality; for you remain embedded in a huge surface crust of manageable and utilisable appearance. It is the magic of the Magician you are trying to analyse, but only when you enter into the consciousness of the Magician himself can you begin to experience the true origination, significance and circles of the Lila. I say "begin" because the Divine Reality is not so simple that at the first touch you can know all of it or put it into a single formula; it is Infinite and opens before you an Infinite Knowledge to which all Science put together is a bagatelle. But still you do touch the essential, the eternal behind things and in the light of That all begins to be profoundly luminous, intimately intelligible.

I have once before told you what I think of the ineffective peckings of certain well-intentioned scientific minds on the surface—or apparent surface—of the spiritual Reality behind things and I need not elaborate it. More important is the prognostic of a greater danger coming in the new attack by the adversary, the sceptics, against the validity of spiritual and supraphysical experience, their new strategy of destruction by admitting and explaining it in their own sense. There may well be a strong ground for the apprehension; but I doubt whether, if these things are once admitted to scrutiny, the mind of humanity will long remain satisfied with explanations so ineptly superficial and external, explanations that explain nothing. If the defenders of religion take up an unsound position, easily capturable, when they affirm only the subjective validity of spiritual experience, the opponents also seem to me to be giving away without knowing it the gates of the materialistic stronghold by their consent at all to admit and examine spiritual and supraphysical experience. Their entrenchment in the physical field, their refusal to admit or even examine supraphysical things was their tower of strong safety; once it is abandoned, the human mind pressing towards something less negative, more helpfully positive will pass to it

over the dead bodies of their theories and the broken debris of their annulling explanations and ingenious psychological labels. Another danger may then arise,—not of a final denial of the Truth, but the repetition in old or new forms of a past mistake, on one side some revival of blind fanatical obscurantist sectarian religionism, on the other a stumbling into the pits and quagmires of the vitalistic occult and the pseudo-spiritual—mistakes that made the whole real strength of the materialistic attack on the past and its credos. But these are phantasms that meet us always on the border line or in the intervening country between the material darkness and the perfect Splendour. In spite of all, the victory of the supreme Light even in the darkened earth-consciousness stands firm beyond as the one ultimate certitude.

Art, poetry, music are not Yoga, not in themselves things spiritual any more than philosophy either is a thing spiritual or science. There lurks here another curious incapacity of the modern intellect—its inability to distinguish between mind and spirit, its readiness to mistake mental, moral and aesthetic idealisms for spirituality and their inferior degrees for spiritual values. It is mere truth that the mental intuitions of the metaphysician or the poet for the most part fall far short of a concrete spiritual experience; they are distant flickers, shadowy reflections, not rays from the centre of Light. It is not less true that, looked at from the peaks, there is not much difference between the high mental eminences and the lower climbings of this external existence. All the energies of the Lila are equal in the sight from above, all are disguises of the Divine. But one has to add that all can be turned into a first means towards the realisation of the Divine. A philosophic statement about the Atman is a mental formula, not knowledge, not experience: yet sometimes the Divine takes it as a channel of touch; strangely, a barrier in the mind breaks down, something is seen, a profound change operated in some inner part, there enters into the ground of the nature something calm, equal, ineffable. One stands upon a mountain ridge and glimpses or mentally feels a wideness, a pervasiveness, a nameless Vast in Nature; then suddenly there comes the touch, a revelation, a flooding, the mental loses itself

in the spiritual, one bears the first invasion of the Infinite. Or you stand before a temple of Kali beside a sacred river and see what? — a sculpture, a gracious piece of architecture, but in a moment mysteriously, unexpectedly there is instead a Presence, a Power, a Face that looks into yours, an inner sight in you has regarded the World-Mother. Similar touches can come too through art, music, poetry to their creator or to one who feels the shock of the word, the hidden significance of a form, a message in the sound that carries more perhaps than was consciously meant by the composer. All things in the Lila can turn into windows that open on the hidden Reality. Still so long as one is satisfied with looking through windows, the gain is only initial; one day one will have to take up the pilgrim's staff and start out to journey there where the Reality is for ever manifest and present. Still less can it be spiritually satisfying to remain with shadowy reflections; a search imposes itself for the Light which they strive to figure. But since this Reality and this Light are in ourselves no less than in some high region above the mortal plane, we can in the seeking for it use many of the figures and activities of Life; as one offers a flower, a prayer, an act to the Divine, one can offer too a created form of beauty, a song, a poem, an image, a strain of music, and gain through it a contact, a response or an experience. And when that divine Consciousness has been entered or when it grows within, then too its expression in life through these things is not excluded from Yoga; these creative activities can still have their place, though not intrinsically a greater place than any other that can be put to divine use and service. Art, poetry, music, as they are in their ordinary functioning, create mental and vital, not spiritual values; but they can be turned to a higher end, and then, like all things that are capable of linking our consciousness to the Divine, they are transmuted and become spiritual and can be admitted as part of a life of Yoga. All takes new values not from itself, but from the consciousness that uses it; for there is only one thing essential, needful, indispensable, to grow conscious of the Divine Reality and live in it and live it always.

*

It seems to me that Krishnaprem has seen very clearly with his usual accuracy and his mind of sight, *paśyanti buddhi*, the truth about yourself and your sadhana. I think that you could not do better than accept his diagnosis and follow entirely his suggested treatment. Especially you should accept his assurance about the final result and give no room in your mind to any doubt on that point or any disposition to give up your own case as hopeless. To my eyes you seem to have been making very good progress in several directions and I have no doubt about your emerging from your difficulties into the light.

I do not think there is any real impasse, I mean no inescapable hold-up on the road from which you cannot get out; it only seems to be to you like that because of the difficulties created for you by your intellect. It is because of its preconceptions and fixed judgments that you cannot make the equation he considers needful for you. The intellect is full of things like that and cannot by itself see truly the things that reveal their meaning fully only in the light of psychic or spiritual truth; the equation he speaks of belongs to that order. The intellect is of use for perceiving material facts and their relations but even these it cannot be relied on to see rightly in their total reality; it may see rightly, but as often wrongly and always only partly and imperfectly. Moreover, as the modern psychologists have discovered, it sees them coloured by the hues supplied from its own individual temperament, its own psychological personality and from its own peculiar angle. It thinks it is seeing quite objectively and impersonally but it does not so see and cannot so see; a dog might as well try to escape from its own pursuing tail: the human intellect's thought and sight cannot escape from its own subjectivity and colouring personality. The deeper and more accurate view of things can be more easily attained by the mind of sight which Krishnaprem has so much developed, *paśyanti buddhi*. You may say that you have got only your intellect to help you with its judgments and opinions: but mental judgments and opinions — well, they are always personal things and one can never be perfectly sure that one's own are correct and the judgments and opinions of others which differ

widely or even diametrically from one's own are mistaken. But you need not be always solely dependent on this fallible and limited instrument; for, although you have not developed the mind of sight as Krishnaprem has done, it is certainly there. I have always seen that when you have been in a psychic condition with bhakti or the higher part of the mind and the vital uppermost in you this mind of sight has come out and your ideas, feelings and judgments have become remarkably clear, right and often luminous. This has only to develop, you will then be able to see more clearly what Krishnaprem sees and many of your difficulties will disappear and the equation you want to make may become clear to you.

As for surrender, you already have it initially in your will to serve for the sake of service without claiming reward or success and without attachment to wealth or fame. If you extend that attitude into your whole sadhana, then realisation is sure. In any case, you should throw away all obsession of the sense of failure or the impossibility of success in your sadhana. Krishnaprem is surely right in telling you, when the Grace is on you and what he names as the Radhashakti is there to give you its unseen help, that the success of your sadhana is sure and the realisation will come. The impasse is a temporary block; your trust will become complete and the road to realisation clear.

Chapter Two

Doubt and Faith

Doubt and Yoga

As to doubts and argumentative answers to them I have long given up the practice as I found it perfectly useless. Yoga is not a field for intellectual argument or dissertation. It is not by the exercise of the logical or the debating mind that one can arrive at a true understanding of Yoga or follow it. A doubting spirit, "honest doubt" and the claim that the intellect shall be satisfied and be made the judge on every point is all very well in the field of mental action outside. But Yoga is not a mental field, the consciousness which has to be established is not a mental, logical or debating consciousness—it is even laid down by Yoga that unless and until the mind is stilled, including the intellectual or logical mind, and opens itself in quietude or silence to a higher and deeper consciousness, vision and knowledge, sadhana cannot reach its goal. For the same reason an unquestioning openness to the Guru is demanded in the Indian spiritual tradition; as for blame, criticism and attack on the Guru, it was considered reprehensible and the surest possible obstacle to sadhana.

If the spirit of doubt could be overcome by meeting it with arguments, there might be something in the demand for its removal by satisfaction through logic. But the spirit of doubt doubts for its own sake, for the sake of doubt; it simply uses the mind as its instrument for its particular dharma and this not the least when that mind thinks it is seeking sincerely for a solution of its honest and irrepressible doubts. Mental positions always differ, moreover, and it is well known that people can argue for ever without one convincing the other. To go on perpetually answering persistent and always recurring doubts such as for long have filled this Asram and obstructed the sadhana, is merely to frustrate the aim of the Yoga and go against its central

principle with no spiritual or other gain whatever. If anybody gets over his fundamental doubts, it is by the growth of the psychic in him or by an enlargement of his consciousness, not otherwise. Questions which arise from the spirit of enquiry, not aggressive or self-assertive, but as a part of a hunger for knowledge can be answered, but the “spirit of doubt” is insatiable and unappeasable.

*

I have started writing about Doubt, but even in doing so I am afflicted by the “doubt” whether any amount of writing or of anything else can ever persuade the eternal doubt in man which is the penalty of his native ignorance. In the first place, to write adequately would mean anything from 60 to 600 pages, but not even 6000 convincing pages would convince Doubt. For Doubt exists for its own sake; its very function is to doubt always and, even when convinced, to go on doubting still; it is only to persuade its entertainer to give it board and lodging that it pretends to be an honest truth-seeker. This is a lesson I have learnt from the experience both of my own mind and of the minds of others; the only way to get rid of Doubt is to take Discrimination as one’s detector of truth and falsehood and under its guard to open the door freely and courageously to experience.

All the same I have started writing, but I will begin not with Doubt but with the demand for the Divine as a concrete certitude, quite as concrete as any physical phenomenon caught by the senses. Now, certainly, the Divine must be such a certitude not only as concrete but more concrete than anything sensed by ear or eye or touch in the world of Matter; but it is a certitude not of mental thought but of essential experience. When the Peace of God descends on you, when the Divine Presence is there within you, when the Ananda rushes on you like a sea, when you are driven like a leaf before the wind by the breath of the Divine Force, when Love flows out from you on all creation, when Divine Knowledge floods you with a Light which illumines and transforms in a moment all that was before dark, sorrowful and obscure, when all that is becomes part of the One Reality, when

the Reality is all around you, you feel at once by the spiritual contact, by the inner vision, by the illumined and seeing thought, by the vital sensation and even by the very physical sense, everywhere you see, hear, touch only the Divine. Then you can much less doubt it or deny it than you can deny or doubt daylight or air or the sun in heaven — for of these physical things you cannot be sure that they are what your senses represent them to be; but in the concrete experience of the Divine, doubt is impossible.

As to permanence, you cannot expect permanence of the initial spiritual experiences from the beginning — only a few have that and even for them the high intensity is not always there; for most the experience comes and then draws back behind the veil waiting for the human parts to be prepared and made ready to bear and hold, first, its increase and then its permanence. But to doubt it on that account would be irrational in the extreme. One does not doubt the existence of air because a strong wind is not always blowing or of sunlight because night intervenes between dawn and dusk. The difficulty lies in the normal human consciousness to which spiritual experience comes as something abnormal and is in fact supernormal. This weak limited normality finds it difficult at first even to get any touch of that greater and intenser supernormal or it gets it diluted into its own duller stuff of mental or vital experience, and, when the spiritual does come in its own overwhelming power, very often it cannot bear or, if it bears, cannot hold and keep it. Still once a decisive breach has been made in the walls built by the mind against the Infinite, the breach widens, sometimes slowly, sometimes swiftly, until there is no wall any longer, and then there is the Permanence.

But the decisive experiences cannot be brought, the permanence of a new state of consciousness in which they will be normal cannot be secured if the mind is always interposing its own reservations, prejudgments, ignorant formulas or if it insists on arriving at the Divine certitude as it would at the quite relative truth of a mental conclusion, by reasoning, doubt, enquiry and all the other paraphernalia of Ignorance feeling and fumbling around after Knowledge; these greater things can only be brought by the progressive opening of a consciousness

quieted and turned steadily towards spiritual experience. If you ask why the Divine has so disposed it on this highly inconvenient basis, it is a futile question,—for this is nothing else than a psychological necessity imposed by the very nature of things. It is so because these experiences of the Divine are not mental constructions, not vital movements; they are essential things, not things merely thought but realities, not mentally felt but felt in our very underlying substance and essence. No doubt, the mind is always there and can intervene; it can and does have its own type of mentalisings about the Divine, thoughts, beliefs, emotions, mental reflections of spiritual Truth, even a kind of mental realisation which repeats as well as it can some kind of figure of the higher Truth, and all this is not without value, but it is not concrete, intimate and indubitable. Mind by itself is incapable of ultimate certitude; whatever it believes, it can doubt; whatever it can affirm, it can deny; whatever it gets hold of, it can and does let go. That, if you like, is its freedom, noble right, privilege; it may be all you can say in its praise, but by these methods of mind you cannot hope (outside the realm of physical phenomena and hardly even there) to arrive at anything you can call an ultimate certitude. It is for this very compelling reason that mentalising or enquiring about the Divine cannot by its own right bring the Divine. If the consciousness is always busy with small mental movements,—especially accompanied, as they usually are, by a host of vital movements, desires, pre-possessions and all else that vitiates human thinking, even apart from the native insufficiency of reason,—what room can there be for a new order of knowledge, for fundamental experiences or for those deep and stupendous upsurgings or descents of the Spirit? It is indeed possible for the mind in the midst of its activities to be suddenly taken by surprise, overwhelmed, swept aside while all is flooded with a sudden inrush of spiritual experience. But if afterwards it begins questioning, doubting, theorising, surmising what this might be and whether it is true or not, what else can the spiritual Power do but retire and wait for the bubbles of the mind to cease?

I would ask one simple question of those who would make

the intellectual mind the standard and judge of spiritual experience. Is the Divine something less than Mind or is It something greater? Is mental consciousness with its groping enquiry, endless argument, unquenchable doubt, stiff and unplastic logic something superior or even equal to the Divine Consciousness or is it something inferior in its action and status? If it is greater, then there is no reason to seek after the Divine. If it is equal, then spiritual experience is quite superfluous. But if it is inferior, how can it challenge, judge, make the Divine stand as an accused or a witness before its tribunal, summon It to appear as a candidate for admission before a Board of Examiners or pin It like an insect under its examining microscope? Can the vital animal hold up as infallible the standard of its vital instincts, associations and impulses and judge, interpret and fathom by it the mind of man? It cannot because man's mind is a greater power working in a wider, more complex way which the animal vital consciousness cannot follow. Is it so difficult to see similarly that the Divine Consciousness must be something infinitely wider, more complex than human mind, filled with greater powers and lights, moving in a way which mere Mind cannot judge, interpret or fathom by the standard of its fallible Reason and limited mental half-knowledge? The simple fact is there that spirit and mind are not the same thing and that it is the spiritual consciousness into which the Yогin has to enter (in all this I am not in the least speaking of the supermind) if he wants to be in permanent contact or union with the Divine. It is not then a freak of the Divine or a tyranny to insist on the mind recognising its limitations, quieting itself, giving up its demands and opening and surrendering to a greater Light than it can find on its own obscurer level.

This does not mean that the Mind has no place at all in the spiritual life; but it means that it cannot be even the main instrument, much less the authority to whose judgment all must submit itself, including the Divine. Mind must learn from the greater Consciousness it is approaching and not impose its own standards on it; it has to receive illumination, open to a higher Truth, admit a greater Power that does not work according

to mental canons, surrender itself and allow its half-light half-darkness to be flooded from above till where it was blind it can see, where it was deaf it can hear, where it was insensible it can feel, and where it was baffled, uncertain, questioning, disappointed it can have joy, fulfilment, certitude and peace.

This is the position on which Yoga stands, a position based upon constant experience since men began to seek after the Divine. If it is not true, then there is no truth in Yoga and no necessity for Yoga. If it is true, then it is on that basis, from the standpoint of the necessity of this greater consciousness that we can see whether Doubt is of any utility for the spiritual life. To believe anything and everything is certainly not demanded of the spiritual seeker; such a promiscuous and imbecile credulity would be not only unintellectual, but in the last degree unspiritual. At every moment of the spiritual life until one has got fully into that higher Light, one has to be on one's guard and to be able to distinguish spiritual truth from pseudo-spiritual imitations of it or substitutes for it set up by the mind and by vital desire. A power to distinguish between truth of the Divine and the lies of the Asura is a cardinal necessity for Yoga. The question is whether that can best be done by the negative and destructive method of doubt, which often kills falsehood but rejects truth too with the same impartial blow, or a more positive, helpful and luminously searching power can be found which is not compelled by its inherent ignorance to meet truth and falsehood alike with the stiletto of doubt and the bludgeon of denial. An indiscriminateness of mental belief is not the teaching of spirituality or of Yoga; the faith of which it speaks is not a crude mental belief but the fidelity of the soul to the guiding light within it, a fidelity which has to remain firm till the light leads it into knowledge.

*

As for the doubts of which you have written, I cannot write much today for obvious reasons and in any case writing is not the remedy, though it may help and encourage—for these doubts rise not from the intellect but from the vital mind which sees things

according to its condition and mood and needs something else than what the mind asks for to satisfy it. It is perfectly true that these reasonings have no force when the vital is in its true poise of love or joy or active and creative power, and when the vital is depressed then it is hard and seems sometimes impossible, so long as the depression is there, to surmount the trouble. But still the clouds do not last for ever—and even one has a certain power in the mind to shorten the period of these clouds, to reject and dissipate them and not to allow them to remain until they disappear in the course of nature.

By all means use the method of japa and bhakti. I have never insisted on your using the method of dry or hard tapasya—it was some idea or feeling in your own mind that made you lay so much stress on it. There are some to whom it is natural and necessary for a time, but each ought to move in his own way and there is no one rule for all—even if the objective is and must be the same, contact and union and opening to the Divine.

In the end these doubts and depressions and despairs must cease. Where the call of the soul perseveres, the response of the Divine must come.

Na hi kalyānakṛt kaścid durgatim tāta gacchati.¹

*

There is no reason why your present condition should be more than a passing phase, unless you yourself choose that it should be otherwise. If it is the “imposition” of the rule of Karmayoga on you that is the cause of your doubts, it is unjustified, because there is no imposition or compulsion, and you need only work if you wish to do so; if you think that by sitting in meditation only you will best progress, you are free to do it.

I did not answer to your statement of your doubts, because they seem to repose on certain statements and suppositions about myself (which are quite inaccurate) and I do not usually care to enter into personal matters. I do not know who gave you this information, e.g. that I have not done my sadhana in full

¹ “Never does anyone who practises good, O beloved one, come to woe.” Gita 6.40.
—Ed.

heat of work but have had to lead a very quiet and extremely retired life all the time. I am afraid, whoever he is, he knows nothing about either my past life or my present life or my Yoga. As for the ground put forward that there is no precedent for progress during work or for such a method, nor have people in the past been able to do it, it amounts to a statement that there has never been any such thing as Karmayoga or a Karmayogi, that the Gita was never written or was not founded on any truth of experience and that no Yogi ever did works as part of his sadhana. There seems to be some exaggeration in these statements from whatever quarter they may have been breathed into your mind. I have never said that the Supermind is working in the sadhaks here; I have said the contrary in many letters.

I say so much however only to indicate the quite gratuitous character of the affirmations on which these doubts are founded — from wherever they may come. But a detailed answer is hardly necessary; for meditation is not forbidden in this sadhana. Except for those who prefer to go through work alone, meditation and works and bhakti each in its place make up the foundations of the sadhana. But you are free to follow the way of meditation alone, as some others do, if you think that better.

*

I agree with most of what Krishnaprem says, though one or two things I would put from a different angle. Your reasonings about faith and doubt have been of a rather extravagant kind because they came to this that one must either doubt everything or believe everything however absurd that anybody says. I have repeatedly told you that there is not only room for discrimination in Yoga, but a need for it at every step — otherwise you will get lost in the jungle of things that are not spiritual — as for instance the tangle of what I call the intermediate zone. I have also told you that you are not asked to believe everything told you by anybody and that there is no call to put faith in all the miraculous things narrated about Bijoykrishna or another. That, I have said, is a question not of faith but of mental belief — and faith is not mental belief in outward facts, but an intuition of

the inner being about spiritual things. Krishnaprem means the same thing when he says that faith is the light sent down by the higher to the lower personality. As for the epithet “blind” used by Ramakrishna, it means as I said, not ignorantly credulous, but untroubled by the questionings of the intellect and unshaken by outward appearances of fact. E.g. one has faith in the Divine even though the fact seems to be that the world here or at least the human world is driven by undivine forces. One has faith in the Guru even when he uses methods that your intellect cannot grasp or approves things as true of which you have yet no experience (for if his knowledge and experience are not greater than yours, why did you choose him as a Guru?). One has faith in the Path leading to the goal even when the goal is very far off and the way covered by mist and cloud and smitten repeatedly by the thunderbolt. And so on. Even in worldly things man can do nothing great if he has not faith — in the spiritual realm it is still more indispensable. But this faith depends not on ignorant credulity, but on a light that burns inside though not seen by the eyes of the outward mind, a knowledge within that has not yet taken the form of an outer knowledge.

One thing however — I make a distinction between doubt and discrimination. If doubt meant a discriminant questioning as to what might be truth of this or that matter, it would be a part of discrimination and quite admissible; but what is usually meant now by doubt is a negation positive and peremptory which does not stop to investigate, to consider in the light, to try, to inquire, but says at once, “Oh, no, I am never going to take that as possibly true.” That kind of doubt may be very useful in ordinary life, it may be practically useful in battering down established things or established ideas or in certain kinds of external controversy to undermine a position that is too dogmatically positive; but I do not think it is of any positive use in matters even of intellectual inquiry. There is nothing it can do there that impartial discrimination cannot do much better. In spiritual matters discrimination has a huge place, but negating doubt simply stops the path to Truth with its placard “No entry” or its dogmatic “This far and no farther.”

As for the intellect it is indispensable to man up to a certain point; after that it becomes an inferior instrument and often misleading and obstructive. It is what I meant when I wrote, “Reason was the helper; reason is the bar.”² Intellect has done many things for man; it has helped to raise him high above the animal; at its best it has opened a first view on all great fields of knowledge. But it cannot go beyond that; it cannot get at Truth itself, only at some reflections, forms, representations of it. I myself cannot remember to have ever arrived at anything in the spiritual field by the power of the intellect—I have used it only to help the expression of what I have known and experienced, but even there it is only certain forms that it provided, they were used by another Light and a larger Mind than the intellect. When the intellect tried to decide things in this field, it always delayed matters. I suppose what it can do sometimes is to stir up the mind, plough it or prepare—but the knowledge comes only when one gets another higher than intellectual opening. Even in Mind itself there are things higher than the intellect, ranges of activity that exceed it. Spiritual knowledge is easier to those than to the reasoning intelligence.

*

The abnormal abounds in this physical world; the supernormal is there also. In these matters, apart from any question of faith, any truly rational man with a free mind (not tied up like the rationalist's or so-called freethinker's at every point with triple cords of *a priori* irrational disbelief) must not cry out at once, “Humbug! falsehood!”, but suspend judgment until he has the necessary experience and knowledge. To deny in ignorance is no better than to affirm in ignorance.

*

As for the faith-doubt question you evidently give to the word faith a sense and a scope I do not attach to it. I will have to

² Sri Aurobindo, Essays in Philosophy and Yoga, volume 13 of THE COMPLETE WORKS OF SRI AUROBINDO, p. 199.

write not one but several letters to clear up the position. It seems to me that you mean by faith a mental belief in an alleged fact put before the mind and senses in the doubtful form of an unsupported asseveration. I mean by it a dynamic intuitive conviction in the inner being of the truth of supersensible things which cannot be proved by any physical evidence but which are a subject of experience. My point is that this faith is a most desirable preliminary (if not absolutely indispensable—for there can be cases of experience not preceded by faith) to the desired experience. If I insist so much on faith—but even less on positive faith than on the throwing away of *a priori* doubt and denial—it is because I find that this doubt and denial have become an instrument in the hands of the obstructive forces and clog your steps whenever I try to push you to an advance. If you can't or won't get rid of it, ("won't" out of respect for the reason and fear of being led into believing things that are not true, "can't" because of contrary experience) then I shall have to manage for you without it, only it makes a difficult instead of a straight and comparatively easy process.

Why I call the materialist's denial an *a priori* denial is because he refuses even to consider or examine what he denies, but *starts* by denying it, like Leonard Woolf with his "quack quack", on the ground that it contradicts his own theories, so it can't be true. On the other hand the belief in the Divine and the Grace and Yoga and the Guru etc. is not *a priori*, because it rests on a great mass of human experience which has been accumulating through the centuries and millenniums as well as the personal intuitive perception. Therefore it is an intuitive perception which has been confirmed by the experience of hundreds and thousands of those who have tested it before me.

*

Go on the path of Yoga without doubt of the ultimate success—surely you cannot fail! Doubts—they are nothing; keep the fire of aspiration burning, it is that that conquers.

Faith in Spiritual Things

I do not ask “undiscriminating faith” from anyone, all I ask is fundamental faith, safeguarded by a patient and quiet discrimination — because it is these that are proper to the consciousness of a spiritual seeker and it is these that I have myself used and found that they removed all necessity for the quite gratuitous dilemma of “either you must doubt everything supraphysical or be entirely credulous”, which is the stock-in-trade of the materialist argument. Your doubt, I see, constantly returns to the charge with a repetition of this formula in spite of my denial — which supports my assertion that Doubt cannot be convinced, because by its very nature it does not want to be convinced; it keeps repeating the old ground always.

*

X upbraids you for losing your reason in blind faith, but what is his view of things except a reasoned faith; you believe according to your faith, which is quite natural, he believes according to his opinion, which is natural also but no better so far as the likelihood of getting at the true truth of things is in question. . . . Each reasons according to his view of things, his opinion, that is, his mental constitution and mental preference. So what's the use of running down faith which after all gives something to hold on to amidst the contradictions of an enigmatic universe? If one can get at a knowledge that knows, it is another matter; but so long as we have only an ignorance that argues, well, there is a place still left for faith — even, faith may be a glint from the knowledge that knows, however far off, and meanwhile there is not the slightest doubt that it helps to get things done. There's a bit of reasoning for you! just like all other reasoning too, convincing to the convinced, but not to the unconvincible, i.e., who don't agree with the ground upon which the reasoning dances. Logic after all is only a measured dance of the mind, nothing else.

*

Your dream was certainly not moonshine; it was an inner experience and can be given its full value. As for the other questions, they are full of complications and I do not feel armed to cut the Gordian knot with a sentence. Certainly, you are right to follow directly the truth for yourself and need not accept X's or anybody else's proposition or solution. Man needs both faith and reason so long as he has not reached a surer insight and greater knowledge. Without faith he cannot walk certainly on any road, and without reason he might very well be walking, even with the staff of faith to support him, in the darkness. X himself founds his faith, if not on reason, yet on reasons; and the rationalist, the rationaliser or the reasoner must have some faith even if it be faith only in reason itself as sufficient and authoritative, just as the believer has faith in his faith as sufficient and authoritative. Yet both are capable of error, as they must be since both are instruments of the human mind whose nature is to err, and they share that mind's limitations. Each must walk by the light he has even though there are dark spots in which he stumbles.

*

The faith in spiritual things that is asked of the sadhak is not an ignorant but a luminous faith, a faith in light and not in darkness. It is called blind by the sceptical intellect because it refuses to be guided by outer appearances or seeming facts,—for it looks to the truth behind,—and does not walk on the crutches of proof and evidence. It is an intuition,—an intuition not only waiting for experience to justify it, but leading towards experience. If I believe in self-healing, I shall after a time find out the way to heal myself—if I have faith in transformation, I can end by laying my hand on and unravelling the whole process of transformation. But if I begin with doubt and go on with more doubt, how far am I likely to go on the journey?

*

The faith is there, not in your mind, not in your vital, but in your psychic being. It was this faith that flung you out of the world and brought you to Pondicherry; it is this faith that keeps

you to what the soul wills and refuses to go back on what it has decided. Even the mind's questionings have been a groping after some justification by which it can get an excuse for believing in spite of its difficulties. The vital's eagerness and its vairagya are shadows of this faith, forms which it has taken in order to keep the vital from giving up in spite of the pressure of despondency and struggle. Even in the mind and vital of the man of strongest mental and vital faith there are periods when the knowledge in the psychic gets covered up—but it persists behind the veil. In you the eclipse has been strong and long because, owing to certain mental and vital formations, the assent of the mind and vital got clouded over and could only take negative forms. But there is always the knowledge or intuition in the soul that started you on the way. I have been pressing on you the need of faith because the assent has again to take a positive form so as to give free way to the Divine Force; but the persistent drive in the soul (which is a hidden and externally suppressed faith) is itself sufficient to warrant the expectation of the Grace to come.

*

The sense of calm and light and divine guidance can never be an illusion. It is the dark state which is the state of Ignorance, of Maya—if faith fails then, it is because the darkness of the Ignorance shuts the mind to the Truth, obscuring the buddhi. What is thought when the buddhi is obscured cannot be the Truth; it is not darkness but the Light that brings Truth. Therefore you must take what you feel when you are in the light to be true, not what you feel when you are in the darkness.

Chapter Three

Philosophical Thought and Yoga

Metaphysical Thinkers, East and West

European metaphysical thought — even in those thinkers who try to prove or explain the existence and nature of God or of the Absolute — does not in its method and result go beyond the intellect. But the intellect is incapable of knowing the supreme Truth; it can only range about seeking for Truth and catching fragmentary representations of it, not the thing itself, and trying to piece them together. Mind cannot arrive at Truth; it can only make some constructed figure that tries to represent it or a combination of figures. At the end of European thought, therefore, there must always be Agnosticism, declared or implicit. Intellect, if it goes sincerely to its own end, has to return and give this report: “I cannot know; there is or at least it seems to me that there may be or even must be Something beyond, some ultimate Reality, but about its truth I can only speculate; it is either unknowable or cannot be known by me.” Or, if it has received some light on the way from what is beyond it, it can say too: “There is perhaps a consciousness beyond Mind, for I seem to catch glimpses of it and even to get intimations from it. If that is in touch with the Beyond or if it is itself the consciousness of the Beyond and you can find some way to reach it, then this Something can be known but not otherwise.”

Any seeking of the supreme Truth through intellect alone must end either in Agnosticism of this kind or else in some intellectual system or mind-constructed formula. There have been hundreds of these systems and formulas and there can be hundreds more, but none can be definitive. Each may have its value for the mind, and different systems with their contrary conclusions can have an equal appeal to intelligences of equal power and competence. All this labour of speculation has its utility in training the human mind and helping to keep before

it the idea of Something beyond and Ultimate towards which it must turn. But the intellectual Reason can only point vaguely or feel gropingly towards it or try to indicate partial and even conflicting aspects of its manifestation here; it cannot enter into and know it. As long as we remain in the domain of the intellect only, an impartial pondering over all that has been thought and sought after, a constant throwing up of ideas, of all the possible ideas, and the formation of this or that philosophical belief, opinion or conclusion is all that can be done. This kind of disinterested search after Truth would be the only possible attitude for any wide and plastic intelligence. But any conclusion so arrived at would be only speculative; it could have no spiritual value; it would not give the decisive experience or the spiritual certitude for which the soul is seeking. If the intellect is our highest possible instrument and there is no other means of arriving at supraphysical Truth, then a wise and large Agnosticism must be our ultimate attitude. Things in the manifestation may be known to some degree, but the Supreme and all that is beyond the Mind must remain for ever unknowable.

It is only if there is a greater consciousness beyond Mind and that consciousness is accessible to us that we can know and enter into the ultimate Reality. Intellectual speculation, logical reasoning as to whether there is or is not such a greater consciousness cannot carry us very far. What we need is a way to get the experience of it, to reach it, enter into it, live in it. If we can get that, intellectual speculation and reasoning must fall necessarily into a very secondary place and even lose their reason for existence. Philosophy, intellectual expression of the Truth may remain, but mainly as a means of expressing this greater discovery and as much of its contents as can at all be expressed in mental terms to those who still live in the mental intelligence.

This, you will see, answers your point about the Western thinkers, Bradley and others, who have arrived through intellectual thinking at the idea of an “Other beyond Thought” or have even, like Bradley, tried to express their conclusions about it in terms that recall some of the expressions in the *Arya*. The idea in

itself is not new; it is as old as the Vedas. It was repeated in other forms in Buddhism, Christian Gnosticism, Sufism. Originally, it was not discovered by intellectual speculation, but by the mystics following an inner spiritual discipline. When, somewhere between the seventh and fifth centuries B.C., men began both in the East and West to intellectualise knowledge, this Truth survived in the East; in the West, where the intellect began to be accepted as the sole or highest instrument for the discovery of Truth, it began to fade. But still it has there too tried constantly to return; the Neo-Platonists brought it back, and now, it appears, the Neo-Hegelians and others (e.g., the Russian Ouspensky and one or two German thinkers, I believe) seem to be reaching after it. But still there is a difference.

In the East, especially in India, the metaphysical thinkers have tried, as in the West, to determine the nature of the highest Truth by the intellect. But, in the first place, they have not given mental thinking the supreme rank as an instrument in the discovery of Truth, but only a secondary status. The first rank has always been given to spiritual intuition and illumination and spiritual experience; an intellectual conclusion that contradicts this supreme authority is held invalid. Secondly, each philosophy has armed itself with a practical way of reaching to the supreme state of consciousness, so that even when one begins with Thought, the aim is to arrive at a consciousness beyond mental thinking. Each philosophical founder (as also those who continued his work or school) has been a metaphysical thinker doubled with a Yogi. Those who were only philosophic intellectuals were respected for their learning but never took rank as truth discoverers. And the philosophies that lacked a sufficiently powerful means of spiritual experience died out and became things of the past because they were not dynamic for spiritual discovery and realisation.

In the West it was just the opposite that came to pass. Thought, intellect, the logical reason came to be regarded more and more as the highest means and even the highest end; in philosophy, Thought is the be-all and the end-all. It is by intellectual thinking and speculation that the truth is to be discovered; even

spiritual experience has been summoned to pass the tests of the intellect, if it is to be held valid—just the reverse of the Indian position. Even those who see that mental Thought must be overpassed and admit a supramental “Other”, do not seem to escape from the feeling that it must be through mental Thought, sublimating and transmuting itself, that this other Truth must be reached and made to take the place of the mental limitation and ignorance. And again Western thought has ceased to be dynamic; it has sought after a theory of things, not after realisation. It was still dynamic amongst the ancient Greeks, but for moral and aesthetic rather than spiritual ends. Later on, it became yet more purely intellectual and academic; it became intellectual speculation only without any practical ways and means for the attainment of the Truth by spiritual experiment, spiritual discovery, a spiritual transformation. If there were not this difference, there would be no reason for seekers like yourself to turn to the East for guidance; for in the purely intellectual field, the Western thinkers are as competent as any Eastern sage. It is the spiritual way, the road that leads beyond the intellectual levels, the passage from the outer being to the inmost Self, which has been lost by the over-intellectuality of the mind of Europe.

In the extracts you have sent me from Bradley and Joachim, it is still the intellect thinking about what is beyond itself and coming to an intellectual, a reasoned speculative conclusion about it. It is not dynamic for the change which it attempts to describe. If these writers were expressing in mental terms some realisation, even mental, some intuitive experience of this “Other than Thought”, then one ready for it might feel it through the veil of the language they use and himself draw near to the same experience. Or if, having reached the intellectual conclusion, they had passed on to the spiritual realisation, finding the way or following one already found, then in pursuing their thought, one might be preparing oneself for the same transition. But there is nothing of the kind in all this strenuous thinking. It remains in the domain of the intellect and in that domain it is no doubt admirable; but it does not become dynamic for spiritual experience.

It is not by “thinking out” the entire reality, but by a change of consciousness that one can pass from the ignorance to the Knowledge—the Knowledge by which we become what we know. To pass from the external to a direct and intimate inner consciousness; to widen consciousness out of the limits of the ego and the body; to heighten it by an inner will and aspiration and opening to the Light till it passes in its ascent beyond Mind; to bring down a descent of the supramental Divine through self-giving and surrender with a consequent transformation of mind, life and body—this is the *integral* way to the Truth.¹ It is this that we call the Truth here and aim at in our Yoga.

World-Circumstances and the Divine

The whole world knows, spiritual thinker and materialist alike, that this world for the created or naturally evolved being in the ignorance or the inconscience of Nature is neither a bed of roses nor a path of joyous Light. It is a difficult journey, a battle and struggle, an often painful and chequered growth, a life besieged by obscurity, falsehood and suffering. It has its mental, vital, physical joys and pleasures, but these bring only a transient taste—which yet the vital self is unwilling to forego—and they end in distaste, fatigue or disillusionment. What then? To say the Divine does not exist is easy, but it leads nowhere—it leaves you where you are with no prospect or issue—neither Russell nor any materialist can tell you where you are going or even where you ought to go. The Divine does not manifest himself so as to be recognised in the external world-circumstances—admittedly so. These are not the works of an irresponsible autocrat somewhere—they are the circumstances of a working out of Forces according to a certain nature of being, one might say a certain proposition or problem of being into which we have all really consented to enter and cooperate. The work is painful,

¹ I have said that the idea of the Supermind was already in existence from ancient times. There was in India and elsewhere the attempt to reach it by rising to it; but what was missed was the way to make it integral for the life and to bring it down for transformation of the whole nature, even of the physical nature.

dubious, its vicissitudes impossible to forecast? There are either of two possibilities then,—to get out of it into Nirvana by the Buddhist or illusionist way or to get inside oneself and find the Divine there since he is not discoverable on the surface. For those who have made the attempt, and there were not a few but hundreds and thousands, have testified through the ages that he is there and that is why there exists the Yoga. It takes long? The Divine is concealed behind a thick veil of his Maya and does not answer at once or at any early stage to our call? Or he gives only a glimpse uncertain and passing and then withdraws and waits for us to be ready? But if the Divine has any value, is it not worth some trouble, time and labour to follow after him and must we insist on having him without any training or sacrifice or suffering or trouble? It is surely irrational to make a demand of such a nature. It is positive that we have to get inside, behind the veil, to find him,—it is only then that we can see him outside and the intellect be not so much convinced as forced to admit his presence by experience—just as when a man sees what he has denied and can no longer deny it. But for that the means must be accepted and the persistence in the will and patience in the labour.

*

I cannot very well answer the strictures of Russell or Vivekananda (in one of his moods), for the conception of the Divine as an external omnipotent Power who has created the world and governs it like an absolute and arbitrary monarch, the Christian or Semitic conception, the popular religious notion, has never been mine; it contradicts too much my seeing and experience during thirty years of sadhana. When I speak of the Divine Will I mean something different,—something that has descended here into an evolutionary world of Ignorance, standing at the back of things, pressing on the Darkness with its Light, leading things presently towards the best possible in the conditions of a world of Ignorance and leading it eventually towards a descent of a greater Power of the Divine which will be not an omnipotence held back and conditioned by the Law of the world as

it is, but a full action and therefore bringing the reign of light, peace, harmony, joy, love, beauty and Ananda, for these are the Divine Nature. The Divine Grace is there, ready to act at every moment, but it manifests as one grows out of the Law of the Ignorance into the Law of Light and it is meant, not as an arbitrary caprice, however miraculous often its intervention, but as a help in that growth and a Light that leads and eventually delivers. If we take the facts of the world as they are and the facts of spiritual experience as a whole, neither of which can be denied or neglected, then I do not see what other Divine there can be. This Divine may lead us often through darkness, because the darkness is there in us and around us, but it is to the Light he is leading and not to anything else.

Intellectual Expression of Spiritual Experience

In reference to what Prof. Sorley has written on *The Riddle of This World*,² the book of course was not meant as a full or direct statement of my thought and, as it was written to sadhaks mostly, many things were taken for granted there. Most of the major ideas—e.g. Overmind—were left without elucidation. To make the ideas implied clear to the intellect, they must be put with precision in an intellectual form—so far as that is possible with supra-intellectual things. What is written in the book can be clear to those who have gone far enough in experience, but for most it can only be suggestive.

I do not think, however, that the statement of supra-intellectual things necessarily involves a making of distinctions in the terms of the intellect. For, fundamentally, it is not an expression of ideas arrived at by speculative thinking. One has to arrive at spiritual knowledge through experience and a consciousness of things which arises directly out of that experience or else underlies or is involved in it. This kind of knowledge, then, is fundamentally a consciousness and not a

² A small book of letters by Sri Aurobindo in which he discusses various questions of philosophy and spiritual experience. It was first published in 1933.—Ed.

thought or formulated idea. For instance, my first major experience—radical and overwhelming, though not, as it turned out, final and exhaustive—came after and by the exclusion and silencing of all thought—there was, first, what might be called a spiritually substantial or concrete consciousness of stillness and silence, then the awareness of some sole and supreme Reality in whose presence things existed only as forms, but forms not at all substantial or real or concrete; but this was all apparent to a spiritual perception and essential and impersonal sense and there was not the least concept or idea of reality or unreality or any other notion, for all concept or idea was hushed or rather entirely absent in the absolute stillness. These things were known directly through the pure consciousness and not through the mind, so there was no need of concepts or words or names. At the same time this fundamental character of spiritual experience is not absolutely limitative; it can do without thought, but it can do with thought also. Of course, the first idea of the mind would be that the resort to thought brings one back at once to the domain of the intellect—and at first and for a long time it may be so; but it is not my experience that this is unavoidable. It happens so when one tries to make an intellectual statement of what one has experienced; but there is another kind of thought that springs out as if it were a body or form of the experience or of the consciousness involved in it—or of a part of that consciousness—and this does not seem to me to be intellectual in its character. It has another light, another power in it, a sense within the sense. It is very clearly so with those thoughts that come without the need of words to embody them, thoughts that are of the nature of a direct seeing in the consciousness, even a kind of intimate sense or contact formulating itself into a precise expression of its awareness (I hope this is not too mystic or unintelligible); but it might be said that directly the thoughts turn into words they belong to the kingdom of intellect—for words are a coinage of the intellect. But is it so really—or inevitably? It has always seemed to me that words came originally from somewhere else than the thinking mind, although the thinking mind secured hold

of them, turned them to its use and coined them freely for its purposes. But even otherwise, is it not possible to use words for the expression of something that is not intellectual? Housman contends that poetry is perfectly poetical only when it is non-intellectual, when it is nonsense. That is too paradoxical, but I suppose what he means is that if it is put to the strict test of the intellect it appears extravagant because it conveys something that expresses and is real to some other kind of seeing than that which intellectual thought brings to us. Is it not possible that words may spring from, that language may be used to express — at least up to a certain point and in a certain way — the supra-intellectual consciousness which is the essential power of spiritual experience? This however is by the way — when one tries to explain spiritual experience to the intellect itself, then it is a different matter.

The interpenetration of the planes is indeed for me a capital and fundamental part of spiritual experience without which Yoga as I practise it and its aim could not exist. For that aim is to manifest, reach or embody a higher consciousness upon earth and not to get away from earth into a higher world or some supreme Absolute. The old Yogas (not quite all of them) tended the other way — but that was, I think, because they found the earth as it is a rather impossible place for any spiritual being and the resistance to change too obstinate to be borne; earth-nature looked to them in Vivekananda's simile like the dog's tail which every time you straighten it goes back to its original curl. But the fundamental proposition in this matter was proclaimed very definitely in the Upanishads which went so far as to say that the Earth is the foundation and all the worlds are on the earth and to imagine a clean-cut or irreconcilable difference between them is ignorance: here and not elsewhere, not by going to some other world, the divine realisation must come. This statement was used to justify a purely individual realisation, but it can equally be the basis of a wider endeavour.

About polytheism, I certainly accept the truth of the many forms and personalities of the One which since the Vedic times has been the spiritual essence of Indian polytheism —

a secondary aspect in the seeking for the one and only Divine. But the passage referred to by Professor Sorley³ is concerned with something else—the little godlings and Titans spoken of there are supraphysical beings of other planes. It is not meant to be suggested that they are real Godheads and entitled to worship—on the contrary it is indicated that to accept their influence is to move towards error and confusion or a deviation from the true spiritual way. No doubt they have some power to create, they are makers of forms in their own way and in their limited domain, but so are men too creators of outward and of inward things in their own domain and limits—and even man's creative powers can have a repercussion on the supraphysical levels.

I agree that asceticism can be overdone. It has its place as one means—not the only one—of self-mastery; but asceticism that cuts away life is an exaggeration, though one that had many remarkable results which perhaps could hardly have come otherwise. The play of forces in this world is enigmatic, escaping from any rigid rule of the reason, and even an exaggeration like that is often employed to bring about something needed for the full development of human achievement and knowledge and experience. But it was an exaggeration all the same and not, as it claimed to be, the indispensable path to the true goal.

*

I find nothing either to add or to object to in Prof. Sorley's comment on the still, bright and clear mind; it adequately indicates the process by which the mind makes itself ready for the reflection of the higher Truth in its undisturbed surface or substance. But one thing perhaps needs to be kept in view—that this pure stillness of the mind is indeed always the required condition, the desideratum, but for bringing it about there are more ways than one. It is not, for instance, only by an effort of the mind itself to get clear of all intrusive emotion or passion, to quiet its own

³ “for these intermediate planes are full of little Gods or strong Daityas . . .”. The Riddle of This World (1973), p. 38.

characteristic vibrations, to resist the obscuring fumes of a physical inertia which brings about a sleep or a torpor of the mind instead of its wakeful silence, that the thing can be done. This is indeed an ordinary process of the Yogic path of knowledge; but the same end can be brought about or automatically happen by other processes—for instance, by the descent from above of a great spiritual stillness imposing silence on the mind and heart, on the life stimuli, on the physical reflexes. A sudden descent of this kind or a series of descents accumulative in force and efficacy is a well-known phenomenon of spiritual experience. Or again one may start a mental process of one kind or another for the purpose which would normally mean a long labour and yet may pull down or be seized midway, or even at the outset, by an overmind influx, a rapid intervention or manifestation of the higher Silence, with an effect sudden, instantaneous, out of all proportion to the means used at the beginning. One commences with a method, but the work is taken up by a Grace from above, by a response from That to which one aspires or by an irruption of the infinitudes of the Spirit. It was in this last way that I myself came by the mind's absolute silence, unimaginable to me before I had the actual experience.

There is another question of some importance—what is the exact nature of this brightness, clearness, stillness, of what is it constituted, more precisely, is it merely a psychological condition or something more? Professor Sorley says these epithets are after all metaphors and he wants to express and succeeds in expressing—though not without the use of metaphor—the same thing in a more abstract language. But I was not conscious of using metaphors when I wrote the phrase though I am aware that the words could to others have that appearance. I think even that they would seem to one who had gone through the same experience, not only a more vivid, but a more realistic and accurate description of this inner state than any abstract language could give. It is true that metaphors, symbols, images are constant auxiliaries summoned by the mystic for the expression of his vision or his experience. It is inevitable because he has to express in a language made or at least developed and manipulated

by the mind the phenomena of a consciousness other than the mental and at once more complex and more subtly concrete. It is this subtly concrete, this supersensuously sensible reality of the phenomena of the spiritual—or the occult—consciousness to which the mystic arrives that justifies the use of metaphor and image as a more living and accurate transcription than the abstract terms which intellectual reflection employs for its own characteristic process. If the images used are misleading or not descriptively accurate, it is because the writer has a paucity, looseness or vagueness of language inadequate to the intensity of his experience. Apart from that, all new phenomenon, new discovery, new creation calls for the aid of metaphor and image. The scientist speaks of light waves or of sound waves and in doing so he uses a metaphor, but one which corresponds to the physical fact and is perfectly applicable—for there is no reason why there should not be a wave, a limited flowing movement of light or of sound as well as of water.

But still when I speak of the mind's brightness, clearness, stillness, I have no idea of calling metaphor to my aid; it is meant to be a description quite precise and positive—as precise, as positive as if I were describing in the same way an expanse of air or a sheet of water. For the mystic's experience of mind, especially when it falls still, is not that of an abstract condition or impalpable activity of the consciousness; it is rather an experience of a substance—an extended subtle substance in which there can be and are waves, currents, vibrations not physically material but still as definite, as perceptible, as tangible and controllable by an inner sense as any movement of material energy or substance by the physical senses. The stillness of the mind means, first, the falling to rest of the habitual thought movements, thought formations, thought currents which agitate this mind-substance. That repose, vacancy of movement, is for many a sufficient mental silence. But, even in this repose of all thought movements and all movements of feeling, one sees, when one looks more closely at it, that the mind-substance is still in a constant state of very subtle formless but potentially formative vibration—not at first easily observable, but afterwards quite

evident — and that state of constant vibration may be as harmful to the exact reflection or reception of the descending Truth as any formed thought movement or emotional movement; for these vibrations are the source of a mentalisation which can diminish or distort the authenticity of the higher Truth or break it up into mental refractions. When I speak of a still mind, I mean then one in which these subtler disturbances too are no longer there. As they fall quiet one can feel an increasing stillness which is not the lesser quietude of repose and also a resultant clearness as palpable as the stillness and clearness of a physical atmosphere.

This positiveness of experience is my justification for these epithets "still, clear"; but the other epithet, "bright", links itself to a still more sensible phenomenon of the subtly concrete. For in the brightness I describe there is another additional element that is connected with the phenomenon of Light well known and common to mystic experience. That inner Light of which the mystics speak is not a metaphor, as when Goethe called for more light in his last moments; it presents itself as a very positive illumination actually seen and felt by the inner sense. The brightness of the still and clear mind is a reflection of this Light that comes even before the Light itself manifests — and, even without any actual manifestation of the Light, is sufficient for the mind's openness to the greater consciousness beyond mind — just as we can see by the dawn-light before the sunrise; for it brings to the still mind, which might otherwise remain just still and at peace and nothing more, a capacity of penetrability to the Truth it has to receive and harbour. I have emphasised this point at a little length because it helps to bring out the difference between the abstract mental and the concrete mystic perception of supraphysical things which is the source of much misunderstanding between the spiritual seeker and the intellectual thinker. Even when they speak the same language it is a different order of perceptions to which the language refers. The same word in their mouths may denote the products of two different grades of consciousness. This ambiguity in the expression is a cause of much non-understanding and disagreement, while even a surface

agreement may be a thin bridge or crust over a gulf of difference.

*

I come now to the question raised by Professor Sorley, what is the relation—or rather the position—of the intellect in regard to mystic or spiritual experience. Is it true as it is often contended that the mystic must, whether as to the validity of his experience itself or the validity of his expression of it, accept the intellect as the judge? It ought to be very plain that in the search, the discovery, the getting of the experience itself the intellect cannot claim to put its limits or its law on an endeavour whose very aim, first principle, constant method is to go beyond the domain of the ordinary earth-ruled and sense-ruled mental intelligence. It would be as if you were to ask me to climb a mountain with a rope around me attaching me to the terrestrial level—or as if I were permitted to fly but only on condition that I kept my feet on the earth or near enough to the safety of the ground while I do it. It may indeed be the securest thing to walk on earth, to be on the firm ground of terrestrial reason always; to attempt to ascend on wings to the Beyond-Mind ether may be to risk mental confusion and collapse and all possible accidents of error, illusion, extravagance, hallucination or what not—the usual charges of the positive earth-walking intellect against mystic experience; but I have to take the risk if I want to do it at all. The reasoning intellect bases itself on man's normal consciousness, it proceeds by the workings of a mental perception and conception of things; it is at its ease only when founded on a logical basis formed by terrestrial experience and its accumulated data. The mystic goes beyond into a region where the everyday mental basis falls away; the terrestrial data on which the reason finds itself are exceeded, there is even another law and canon of perception and knowledge. His entire business is to break out or upward or widen into a new consciousness which looks at things in a very different way, and if this new consciousness may include, though viewed with quite another vision, the data of the ordinary external intelligence, yet it cannot be limited by them, cannot bind itself to see from the intellectual standpoint or

conform to its manner of conceiving, reasoning, its established interpretation of experience. A mystic entering the domain of the occult or of the spirit with the intellect as his only or his supreme light or guide would risk to see nothing, or see according to his preconceived mental idea of things or else he would arrive only at a subtly "positive" mental realisation of perceptions already laid down for him by the abstract speculations of the intellectual thinker.

There is a strain of spiritual thought in India which compromises with the modern intellectual demand and admits Reason as a supreme judge,—but it must be a Reason which in its turn is prepared to compromise and accept the data of spiritual experience as valid *per se*. That is to do what the Indian philosophers have always done; for they have tried to establish by the light of metaphysical reasoning generalisations drawn from spiritual experience; and it was always on the basis of that experience that they proceeded and with the evidence of the spiritual seekers as a supreme proof ranking higher than intellectual speculation or inference. In that way they preserved the freedom of spiritual and mystic experience and allowed the reasoning intellect to come in only on the second line as a judge of the generalised metaphysical statements drawn from the experience, but not of the experience itself. This is, I presume, something akin to Professor Sorley's own position—for he concedes that the experience itself is of the domain of the ineffable, but he suggests that as soon as I begin to interpret it, to state it, I fall back inevitably into the domain of the thinking mind; I am using its terms and ways of thought and expression and must accept the intellect as judge. If I do not, I knock away the ladder by which I have climbed—through mind to Beyond-Mind—and I am left unsupported in the air. It is not quite clear whether the truth of my experience itself is supposed to be invalidated by this unsustained position, but at any rate it remains something aloof and incommunicable without support or any consequences for thought or life. There are three propositions, I suppose, which I can take as laid down or admitted in this contention and joined together. First, the spiritual experience is itself of the Beyond-Mind, ineffable and,

it should be presumed, unthinkable. Next,—in the expression, the interpretation of the experience, you are obliged to fall back into the domain of the consciousness you have left and so you must abide by its judgments, accept the terms and the canons of its law, submit to its verdict; for you have abandoned the freedom of the Ineffable and are no longer your own master. Last, spiritual truth may be true in itself, in its own self-experience, but any statement of it is liable to error and here the intellect is the sole possible arbiter.

I do not think I am prepared to accept any of these affirmations completely just as they are. It is true that spiritual and mystic experience carries one first into domains of Other-Mind or All-Mind (and also Other-Life and All-Life and I would add Other-Substance and All-Substance) and then emerges into the Beyond-Mind; it is true also that the ultimate Truth has been described as unthinkable, ineffable, unknowable—"speech cannot reach there, mind cannot arrive to it." But I may observe that it is so to human mind, but not to itself, since it is not an abstraction, but a superconscious (not unconscious) Existence,—for it is described as to itself self-evident and self-luminous,—therefore in some direct supramental or at least overmind way knowable and known, eternally self-aware. But here the question is not of an ultimate realisation of the ultimate Ineffable which according to many can only be reached in a supreme trance withdrawn from all outer mental or other awareness; we are speaking rather of an experience in a luminous silence of the mind and any such experience presupposes that before there is any last unspeakable experience of the Ultimate or disappearance into it, there is possible a reflection or descent of at least some Power or Presence of the identical Reality into the mind-substance. Along with it there is a modification of mind-substance, an illumination of it,—and of this experience an expression of some kind, a rendering into thought ought to be possible. Moreover an immense mass of well-established spiritual experience would have been impossible unless we suppose that the Ineffable and Unknowable has truths of itself, aspects, revealing presentations of it to our consciousness which are not utterly unthinkable and ineffable.

If it were not so, indeed, all account of spiritual truth and experience would be impossible. At most one could speculate about it, but that would be an activity very much indeed in the air and even a movement in a void, without support or data. At best, there could be a mere manipulation of all the possible ideas of what conceivably might be the Supreme and Ultimate. For we would have nothing before us to go upon other than the bare fact of a certain unaccountable translation by one way or another from consciousness to an incommunicable Supraconsciousness. That is indeed what much mystical seeking actually held up as the one thing essential both in Europe and India. Many Christian mystics spoke of a total darkness through which one must pass into the Ineffable Light and Rapture, a falling away of all mental lights and all that belongs to the ordinary activity of the nature; they aimed not only at a silence but a darkness of the mind protecting an inexpressible illumination. The Indian Sannyasins sought by silence, by concentration inwards, to shed mind altogether and pass into a thought-free trance from which, if one returns, no communication or expression could be brought back of what was there except a remembrance of ineffable existence and bliss. But still even here there were previous glimpses or contacts and results of contact of That which is Beyond; there were contacts of the Highest or of the occult universal Existence, which were held to be spiritual truths and on the basis of which the seers and mystics did not hesitate to formulate their experience and the thinkers to build on it numberless philosophies, theologies, books of exegesis or of creed and dogma. All then is not ineffable; there is a possibility of communication and expression, and the only question is of the nature of this transmission of the facts of a different order of consciousness to the mind and whether it is feasible for the intellect or must be left for something else than intellect to determine the validity of the expression or, even, of the original experience. If no valid account were possible there could be no question of the judgment of the intellect — only the violent contradiction of mind sitting down to judge a Beyond-Mind of which it can know nothing, starting to speak of the Ineffable,

think of the Unthinkable, comprehend the Incommunicable.

Comments on Thoughts of J. M. E. McTaggart

I have heard of McTaggart as a philosopher but am totally unacquainted with his thought and his writings, so it is a little difficult for me to answer you with any certitude. Isolated thoughts or sentences may easily be misunderstood if they are not read against the background of the thinker's way of looking at things taken as a whole. There is always, too, the difference of standpoint and approach between the spiritual seeker or mystic who (sometimes) philosophises and the intellectual thinker who (sometimes or partly) mysticises. The one starts from a spiritual or mystic experience or at the least an intuitive realisation and tries to express it and its connection with other spiritual or intuitive truth in the inadequate and too abstract language of the mind; he looks behind thought and expression for some spiritual or intuitive experience to which it may point and, if he finds none, he is apt to feel the thought, however intellectually fine, or the expression, however intellectually significant, as something unsubstantial because without spiritual substance. The intellectual thinker starts from ideas and mentalised feelings and other mental or external phenomena and tries to reach the essential truth in or behind them; generally, he stops short at a mental abstraction or only a derivative mental realisation of something that is in its own nature other than mental. But if he has the true mystic somewhere in him, he will sometimes get beyond to at least flashes and glimpses. Is it not the compulsion of this approach (I mean the inadequacy of the method of intellectual philosophy, its fixation to the word and idea, while to the complete mystic word and idea are useful symbols only or significative flashlights) that kept McTaggart, as it keeps many, from the unfolding of the mystic within him? If the reviewer is right, that would be why he is abstract and dry, while what is beautiful and moving in his thought might be some light that shines through in spite of the inadequate means of expression to which philosophical thinking condemns us. However, subject to

this rather lengthy caveat, I will try to deal with the extracted sentences or summarised thoughts you have placed before me in your letter.

"Love the main occupation of the selves in absolute reality." This seems to me a little excessive. If instead of "the main occupation" it were said "an essential power", that might pass. I would myself say that bliss and oneness are the essential condition of the absolute reality and love as the most characteristic dynamic power of bliss and oneness must support fundamentally and colour their activities; but the activities themselves may be not of one main kind but manifold in character.

Benevolence and sympathy. In mental experience benevolence and sympathy have to be distinguished from love; but it seems to me that beyond the dividing mind, where the true sense of oneness begins, these become at a higher intensity of their movement characteristic values of love. Benevolence becomes an intense compulsion imposed by love to seek always the good of the loved, sympathy becomes the feeling out of love to contain, participate in and take as part of one's own existence all the movements of the loved and all that concerns him.

"Love is authentic and justifies itself completely whether its cause be great or trivial." That is not often true in human practice; for there the destiny of love and its justification depend very much as a rule (though not always) on the nature of the cause or object. For if the object of love is trivial in the sense of his being an inadequate instrument for the dynamic realisation of the sense of oneness which McTaggart says is the essence of love, then love is likely to be baulked of its fulfilment. Unless, of course, it is satisfied with existing, with spending itself in its own fundamental way on the loved without expecting any return for its self-expenditure, any mutual unification. Still, of Love in its essence the statement may be true; but then it would point to the fact that Love at its origin is a self-existent force, an absolute, a transcendent (as I have put it), which does not depend upon the objects,— it depends only on itself or only on the Divine,— for it is a self-existent power of the Divine. If it were not self-existent, it would hardly be independent of the nature or reaction of its

object. It is partly what I mean when I speak of transcendent Love — though this is only one aspect of its transcendence. That self-existent transcendent Love spreading itself over all, turning everywhere to contain, embrace, unite, help, upraise towards love and bliss and oneness, becomes cosmic divine Love; intensely fixing itself on one or others to find itself, to achieve a dynamic unification or to reach here towards the union of the soul with the Divine, it becomes the individual divine Love. But there are unhappily its diminutions in the human mind, human vital, human physical; there the divine essence of Love may easily become mixed with counterfeits, dimmed, concealed or lost in the twisted movements born of division and ignorance.

Love and self-reverence. It sounds very high, but also rather dry; this “emotion” in the lover does not seem to be very emotional, it is a hill-top syllogising far above the flow of any emotional urges. Self-reverence in this sense or in a deeper sense can come from Love, but it *can* come equally from a participation in Knowledge, in Power or anything else that one feels to be the highest good or else of the essence of the Highest. But the passion of love, the adoration of love, can bring in a quite different, even an opposite emotion. Especially in love for the Divine or for one whom one feels to be divine, the Bhakta feels an intense reverence for the Loved, a sense of something of immense greatness, beauty or value and for himself a strong impression of his own comparative unworthiness and a passionate desire to *grow* into likeness with that which one adores. What does come very often with the inrush of Love is an exaltation, a feeling of a greatening within, of new powers and high or beautiful possibilities in one’s nature or of an intensification of the nature; but that is not exactly self-reverence. There is a deeper self-reverence possible, a true emotion, a sense of the value and even the sacredness of the soul, even the mind, life, body as an offering or itself the temple for the inner presence of the Beloved.

These reactions are intimately connected with the fact that Love, when it is worthy of the name, is always a seeking for union, for oneness, but also in its secret foundation it is a seeking, if sometimes only a dim groping for the Divine. Love

in its depths is a contact of the Divine Possibility or Reality in oneself with the Divine Possibility or Reality in the loved. It is the inability to affirm or keep this character that makes human love either transient or baulked of its full significance or condemned to sink into a less exalted movement diminished to the capacity of the human receptacle. But there McTaggart brings in his saving clause, "When I love, I see the other not as he is now (and therefore really is not), but as he really is (that is, as he will be)." The rest of it, that "the other with all his faults is somehow infinitely good—at least for his friend", seems to me too mental to convey anything very definite from the standpoint of the spiritual inner values. But the formula quoted also is not overclear. It means, I suppose, something like Vivekananda's distinction between the apparent Man and the real Man; or it coincides up to a point with the saying of one of the early teachers of Vedanta, Yajnavalkya, "Not for the sake of the wife is the wife dear" (or, the friend—for the wife is only the first of a list), "but for the sake of the Self (the greater Self, the Spirit within) is she dear." But Yajnavalkya, a seeker of the one (not the plural) Absolute, would not have accepted the implication in McTaggart's phrase; he would have said that one must go beyond and eventually seek the Self not in the wife or friend—even though sought or glimpsed there for a time, but in its own self-existence. In any case there seems to be here an avowal that it is not the human being (what he now is), but the Divine or a portion of the Divine within (call it God if you will or call it Absolute) that is the object of the love. But the mystic would not be satisfied like McTaggart with that "will be",—would not consent to remain in love with the finite for the sake of an unrealised Infinite. He would insist on pushing on towards full realisation, towards finding the Divine in Itself or the Divine Manifest; he would not rest satisfied with the Divine unconscious of itself, unmanifested or only distantly *in posse*.

There is where the parallel with the Ishta Devata which you suggest would not hold; for the Ishta Devata on whom the seeker concentrates is a *conscious* Personality of the Divine answering to the needs of his own personality and showing to

him as in a representative image what the Divine is or at least pointing him through itself to the Absolute. On the other side, when I spoke of the self-absorption of the Divine Force in its energising, I was trying to explain the possibility in a Divine or cosmic manifestation of this apparently inconscient Matter. I said that in the frontal movement there was something of the Divine that had thrown itself into material form with so much concentration that it became the motion and the form which the motion of Force creates and put all that was not that behind it,—even, but in a greater degree and more permanently, as a man can concentrate and forget his own existence in what he is doing, seeing or making. In man himself, who is not inconscient, this appears in a different way; his frontal being is unaware of what is behind the surface personality and action, like the part of the actor's being which becomes the role and forgets entirely the other more enduring self behind the actor. But in either case there is a larger self behind, "a Conscient in things inconscient", which is aware both of itself and of the self-forgetting frontal form seen as the creature. Does McTaggart recognise this conscious Divine within? He makes too little of this Absolute or Real Self which, as he yet sees, is within the unreal or less real appearance. His denial of the Divine comes from the insistence of his mind and vital temperament on the friend as he is, even though his higher mind may try to escape from that by the idea of what his friend will be; otherwise it is difficult to understand the stupendous exaggeration of his thesis that the love for friends is the *only* real thing in life and his unwillingness to give God a chance, lest that should take away the friend and leave the Divine in his place.

I do not quite seize what is his conception of the Absolute. How can it be said that a society (?) of distinct selves are collectively the Absolute? If it is meant that where there is a union of conscious liberated selves there is the presence of the Divine and a certain manifestation is possible,—that is intelligible. Or if by society is meant only that the sum or totality of all distinct selves is the Divine and these distinct individual selves are portions of the Divine, that would be an intelligible (pantheistic) solution.

Only, it would be a Divine All or some kind of Cosmic Self or Spirit rather than the Absolute. For if there is an Absolute — which intellectually one is not bound to believe, except that something in the higher mind seems imperatively to ask for it or feel that it is there, — it must surely exist in its own absolute right, not constituted, not dependent for its being on a collectivity of distinct selves, but self-existent. To the intellect such an Absolute may seem an indefinable *x* which it cannot grasp; but mystic or spiritual experience pushed far enough ultimately leads to it, and whatever may be the gate of experience through which one gets the first glimpse of it, it is there even though not fully grasped in that opening experience.

Your own experience of it was, you say, that of an irruption of the Infinite into the finite — of a greater Power descending upon you or uplifting you to itself. That indeed is what it is always to the spiritual experience — and that is why I speak of it as the Transcendent. It reveals itself as such a descending and uplifting Power or a descending and uplifting Love — or Light, Peace, Bliss, Consciousness, Presence; it is not limited by its manifestation in the finite, — one feels it, the Peace, the Power, Love, Light or Bliss or the Presence in which all these are, to be a self-existent infinity, not something constituted by or limited to our first sight of it here. McTaggart's love of friends remained the *only* real thing for him; I must suppose that he had not this glimpse. But once this irruption has taken place, this descent and uplifting, that is bound to become in the end the one thing real, for by that alone can the rest find its own lasting greater reality. It is the descent of the Divine Consciousness and the ascent or uplifting into it of which we speak in our Yoga. All else can only hold, make good, fulfil itself if it can lift itself to be a part of this divine realisation or of its manifestation, and, to do that, it must accept a great transformation and perfection. But the central realisation must be the one central aim, and it is that realisation only which will make other things, all that is intended to be made part of it, divinely possible.

Comments on Terms Used by Henri Bergson⁴

I have not read him [Bergson] sufficiently to pronounce. So far as I know, he seems to have some perception of the dynamic creative intuition involved in Life, but none of the truly suprarational intuition above. If so, his Intuition which he takes to be the sole secret of things is only a secondary manifestation of something transcendent which is itself only the “rays of the Sun”.

*

Instinct and intuition as described by him [Bergson] are vital, but it is possible to develop a corresponding mental intuition, and that is probably what he suggests — and which depends not on thought but a sort of mental direct contact with things. This is not exactly mysticism, though it is a first step towards it.

*

No, it [Bergson's élan vital] is not the Supramental. But Bergson's “intuition” seems to be a Life Intuition which is of course the Supramental fragmented and modified to act as a Knowledge in “Life-in-Matter”. I can't say definitively yet, but that is the impression it gave me.

*

[Bergson's élan vital:] Not Sachchidananda but Chit-shakti in the disguise of Pranashakti. Bergson is, I believe, a vitalist (as opposed to a materialist on one side and an idealist on the other) with a strong perception of Time (in Upanishadic times they speculated whether Time was not the Brahman and some schools held that idea). So for him Brahman = Consciousness-Force = Time-Force = Life-Force. But the last two he sees vividly, while the first which is the real thing behind creation he sees very dimly.

*

⁴ The six replies in this group were written to a correspondent who quoted sentences from Bergson's writings, commented on them and then asked Sri Aurobindo for his views.—Ed.

He [Bergson] sees Consciousness (Chit) not in its essential truth but as a creative Force = a sort of transcendent Life-Energy descending into Matter and acting there.

*

I suppose Bergson must already know what the “mystics” say about the matter and has put his own interpretation or value upon it. So he would not at all be impressed by your suggestion.⁵ He would say, “I know all about that already.”

Metaphysics, Science and Spiritual Experience

I do not find it easy to answer the few brief and casual sentences in X's letter,—precisely because they are so brief and casual.⁶ Not knowing him or the turns of his mind, I do not exactly seize what is behind this passage in his letter. It would be easier to reply if I had some notion of the kind of thought or experience on which he takes his stand when he dismisses so cavalierly the statement of spiritual truth put forward in the *Arya*. As it is, I am obliged to answer to what *may* be behind his sentences and, as there is much that possibly stands behind them, the reply becomes long and elaborate and is in danger of seeming long and discursive. I could of course answer easily myself by a few brief and trenchant sentences of the same calibre, but in that kind of discussion there is no profit.

Let me say that he makes an initial mistake—quite natural for him, since he has not read the *Arya*,—when he describes the extract sent to him as a “theological fragment”. I must insist that there is no theology in the *Arya*. Nothing there is written to support or to develop any kind of religious belief or dogma or to confirm or enunciate the credo of any old or new religion. No less does he miss the mark when he describes as a scholastic distinction the substance of the passage. The teaching there is not

⁵ The correspondent asked whether he should write to Bergson in order to explain the true meaning of intuition and how to develop it.—Ed.

⁶ The paragraphs that follow are from the draft of a letter that was not revised or sent in this form to the correspondent.—Ed.

taken from books, nor, although put in philosophic language, is it based upon abstract thought or any formal logic. It expresses a fundamental spiritual experience, dynamic for the growth of the being, confirmed and enlarged and filled with detail by almost thirty years of continuous sadhana, and, as such, it cannot be seriously challenged or invalidated by mere intellectual question or reasoning, but, if at all, then only by a greater and wider spiritual experience. Moreover, it coincides (not in expression, it may be, but in substance) with the experience of hundreds of spiritual seekers in many paths and in all parts of the world since the days of the Upanishads—and of Plotinus and the Gnostics and Sufis—to the present time. It is hardly admissible then to put it aside as the thought of a tyro or beginner in spiritual knowledge making his first clumsy potshots at a solution of the crossword enigma of the universe. That description seems to show that he has missed the point of the passage altogether and that also makes it difficult to reply; for where there is no meeting point of minds, discussion is likely to be sterile.

I was a little surprised at first by this entire lack of understanding, shown still more in his cavil at the two Divines—for I had somehow got the impression that X was a Christian and the recognition of “two Divines”—the Divine Transcendent and the Divine Immanent—is, I have read, perfectly familiar to Christian ideas and to Christian experience. The words themselves in fact—transcendent and cosmic—are taken from the West. I do not know that there is anything exactly corresponding to them in the language of Indian spiritual thinking, although the experiences on which the distinction rests are quite familiar. On another side, Christianity insists not only on a double but a triple Divine. It even strikes me that this triple Godhead or Trinity is not very far off at bottom from my trinity of the individual, cosmic and transcendent Divine—as far at least as one can judge who has not himself followed the Christian discipline. Christ, whether as the human Incarnation or the Christos in men or the Godhead proceeding from the Father, seems to me to be quite my individual Divine. The Father has very much the appearance of the One who overstands and is immanent in the cosmos. And

although this is more obscure, yet if one can be guided by the indications in the Scripture, the Holy Ghost looks very much like a rather mysterious and inexpressible Transcendence and its descent very much like what I would call the descent of Light, Purity, Peace—that passeth all understanding—or Power of the supramental Spirit. In any case these Christian and Western ideas show surely that my affirmation of a double or a triple Divine is not anything new and ought not to be found startling or upsetting and I do not see why it should be treated as (in itself) obscure and unintelligible.

Again, are these or similar distinctions very positively made in the Christian, Sufi or other teachings mere theoretical abstractions, scholastic distinctions, theological cobwebs, or metaphysical puzzles? I had always supposed that they corresponded to very living, very dynamic, almost—for the paths to which they relate—indispensable experiences. No doubt, for those who follow other ways or no way at all or for those who have not yet had the illuminating and vivifying experience, they may seem at first a little difficult or unseizable. But that is true of most spiritual truth—and not of spiritual truth alone. There are many very highly intelligent and cultured people to whom a scientific explanation of even so patent and common a fact as electricity and electric light (this is a reminiscence of an article by Y. Y. in the *New Statesman and Nation*) seems equally difficult to seize by the mind or to fix either in the memory or the intelligence. And yet the distinction between positive and negative electricity, both necessary for the existence of the light,—like that of the passive and active Brahman (another scholastic distinction?) both necessary for the existence of the universe,—cannot be dismissed for that reason as something academic or scholastic, but is a very pertinent statement of things quite dynamic and real. No doubt the non-scientific man does not and perhaps need not trouble about these things and can be content to enjoy the electric light (when he is allowed to do so by the grace of the Pondicherry Municipality), without enquiring into the play of the forces behind it: but for the seeker after scientific truth or for the practical electrician it is a different matter. Now these

distinctions in the spiritual field are a parallel case; they seem theoretical or abstract only so long as experience has not made them concrete, but once experienced they become living stuff of the consciousness and, after a certain stage, even the basis of action and growth in the spiritual life.

Here I am driven to a rather lengthy digression from the main theme—for I am met by X's rather baffling appeal to Whitham's History of Science. What has Whitham or Science to do with spiritual truth or spiritual experience? I can only suppose that he condemns all intrusion of anything like metaphysical thought into the spiritual field—a position excessive but not altogether untenable—and even perhaps proposes to bring the scientific method and the scientific mentality into spiritual experience as the sole true way of arriving at or judging the truth of things. I should like to make my view clear as to that point, because here much confusion has been created about it, and more is possible. And the first thing I would say is that if metaphysics has no right to intervene in spiritual experience, neither has Science. There are here three different domains of knowledge and experience each with its own instrumentation, its own way of approach and seeing, suited for its own task, but not to be imposed or substituted in these other fields of knowledge,—at least unless and until they meet by some kind of supreme reconciling transmutation in something that is at the source of all knowledge. For knowledge may be essentially one, but like the one Divine, it manifests differently in different fields of its play and to abolish their distinctions is not the way to arrive at true understanding of experience.

Science deals effectively with phenomena and process and the apparent play of forces which determine the process. It cannot deal even intellectually in any adequate way with ultimate truths, that is the province of the higher, less external mind—represented up till now by metaphysics, though metaphysics is not its only possible power. If Science tries to fix metaphysical truth by forcing on this domain its own generalisations in the physical field, as people have been doing for almost the last century, it makes a mess of thought by illegitimately extended

conclusions and has in the end to retire from this usurpation as it is now beginning to retire. Its discoveries may be used by philosophy, but on the grounds proper to philosophy and not on the grounds proper to Science. The philosopher must judge the scientific conceptions of relativity or discontinuity or space-time, for instance, by his own processes and standards of evidence. So too, Science has no instrumentation or process of knowledge which can enable it to discover spiritual truth or to judge or determine the results of spiritual experience. There is a field of knowledge of process in the spiritual and the occult domain, in the discovery of a world of inner forces and their way of action and even of their objective dynamisation in the mind and life and the functioning of the body. But the mathematical exactitudes and rigid formulas of physical Science do not apply here and the mentality created by them would hamper spiritual experience.

Chapter Four

Science and Yoga

Science, Yoga and the Agnostic

I do not think anything can be said that would convince one who starts from exactly the opposite viewpoint to the spiritual, the way of looking at things of a Victorian agnostic. His points of doubt about the value — other than subjective and purely individual — of Yoga experience are that it does not aim at scientific truth and cannot be said to achieve ultimate truth because the experiences are coloured by the individuality of the seer. One might ask whether Science itself has arrived at any ultimate truth; on the contrary, ultimate truth even on the physical plane seems to recede as Science advances. Science started on the assumption that the ultimate truth must be physical and objective — and the objective Ultimate (or even less than that) would explain all subjective phenomena. Yoga proceeds on the opposite view that the ultimate Truth is spiritual and subjective and it is in that ultimate Light that we must view objective phenomena. It is the two opposite poles and the gulf is as wide as it can be.

Yoga, however, is scientific to this extent that it proceeds by subjective experiment and bases all its findings on experience; mental intuitions are admitted only as a first step and are not considered as realisation — they must be confirmed by being translated into and justified by experience. As to the value of the experience itself, it is doubted by the physical mind because it is subjective, not objective. But has the distinction much value? Is not all knowledge and experience subjective at bottom? Objective external physical things are seen very much in the same way by human beings because of the construction of the mind and senses; with another construction of mind and sense quite another account of the physical world would be given — Science itself has made that very clear. But your friend's point is that the Yoga experience is individual, coloured by the individuality of

the seer. It may be true to a certain extent of the precise form or transcription given to the experience in certain domains; but even here the difference is superficial. It is a fact that Yogic experience runs everywhere on the same lines. Certainly, there are, not one line, but many; for, admittedly, we are dealing with a many-sided Infinite to which there are and must be many ways of approach; but yet the broad lines are the same everywhere and the intuitions, experiences, phenomena are the same in ages and countries far apart from each other and systems practised quite independently from each other. The experiences of the mediaeval European bhakta or mystic are precisely the same in substance, however differing in names, forms, religious colouring etc., as those of the mediaeval Indian bhakta or mystic — yet these people were not corresponding with one another or aware of each other's experiences and results as are modern scientists from New York to Yokohama. That would seem to show that there is something there identical, universal and presumably true — however the colour of the translation may differ because of the difference of mental language.

As for ultimate Truth, I suppose both the Victorian agnostic and, let us say, the Indian Vedantin may agree that it is veiled but there. Both speak of it as the Unknowable; the only difference is that the Vedantin says it is unknowable by the mind and inexpressible by speech, but still attainable by something deeper or higher than the mental perception, while even mind can reflect and speech express the thousand aspects it presents to the mind's outward and inward experience. The Victorian agnostic would, I suppose, cancel this qualification; he would pronounce for the doubtful existence and, if existent, for the absolute unknowability of this Unknowable.

Science and Spirituality

I do not think the two questions you put are of much importance from the viewpoint of spiritual sadhana.

The question about science and spirituality would have been of some moment some twenty years ago and it filled the minds

of men in the earlier years of the twentieth century, but it is now out of date. Science itself has come to the conclusion that it cannot, as it once hoped, determine what is the truth of things or their real nature or what is behind physical phenomena; it can only deal with the process of physical things and how they come about or on what lines men can deal with and make use of them. In other words, the field of physical science has been now definitely marked off and limited and questions about God or the ultimate reality or other metaphysical or spiritual problems are outside it. This is at least the case all over continental Europe and it is only in England and America that there is still some attempt to reason about these things on the basis of physical science. The so-called sciences which try to deal with the mind and men (psychology etc.) are so much dependent on physical science that they cannot go beyond narrow limits. If science is to turn her face towards the Divine it must be a new science not yet developed which deals directly with the forces of the Life-world and of Mind and so arrives at what is beyond Mind, but present-day science cannot do that.

From the spiritual point of view such temporary phenomena as the turn of educated Hindus towards materialism are of little importance. There have always been periods when the mind of nations, continents, cultures turned towards materialism and away from all spiritual belief. Such periods came in ancient Europe in the first century A.D., in western Europe in the nineteenth century, but they are usually of short duration. Western Europe has already lost its faith in materialism and is seeking for something else, either turning back to old religion or groping for something new. Russia and Asia are now going through the same materialistic wave. These waves come because of a certain necessity in human development—to destroy the bondage of old forms and leave a free field for new truth and new forms of truth and action in life as well as of what is behind life.

*

You ask me whether you have to give up your predilection for testing before accepting and to accept everything in *Yoga a priori*

— and by testing you mean testing by the ordinary reason. The only answer I can give to that is that the experiences of Yoga belong to an inner domain and go according to a law of their own, have their own method of perception, criteria and all the rest of it which are neither those of the domain of the physical senses nor of the domain of rational or scientific enquiry. Just as scientific enquiry passes beyond that of the physical senses and enters the domain of the infinite and the infinitesimal about which the senses can say nothing and test nothing — for one cannot see or touch an electron or know by the evidence of the sense-mind whether it exists or not or decide by that evidence whether the earth really turns round the sun and not rather the sun round the earth as our senses and all our physical experience daily tell us — so the spiritual search passes beyond the domain of scientific or rational enquiry and it is impossible by the aid of the ordinary positive reason to test the data of spiritual experience and decide whether those things exist or not or what is their law and nature. As in science, so here you have to accumulate experience on experience following faithfully the methods laid down by the Guru or by the systems of the past, you have to develop an intuitive discrimination which compares the experiences, see what they mean, how far and in what field each is valid, what is the place of each in the whole, how it can be reconciled or related with others that at first sight seem to contradict it, etc. etc. until you can move with a secure knowledge in the vast field of spiritual phenomena. That is the only way to test spiritual experience. I have myself tried the other method and found it absolutely incapable and inapplicable. On the other hand if you are not prepared to go through all that yourself — as few can do except those of extraordinary spiritual stature — you have to accept the leading of a Master, as in science you accept a teacher instead of going through the whole field of science and its experimentation all by yourself — at least until you have accumulated sufficient experience and knowledge. If that is accepting things *a priori*, well, you have to accept *a priori*. For I am unable to see by what valid tests you propose to make the ordinary reason the judge of what is beyond it.

You quote the sayings of Vivekananda and Kobiraj Gopinath. Is this Kobiraj the disciple of the Jewel Sannyasi or is he another? In any case, I would like to know before assigning a value to these utterances what they actually did for the testing of their spiritual perceptions and experiences. How did Vivekananda test the value of his spiritual experiences—some of them not more credible to the ordinary mind than the translation through the air of Bijoy Goswami's wife to Lake Manas or of Bijoy Goswami himself by a similar method to Benares? I know nothing of Kobiraj Gopinath, but what were his tests and how did he apply them? What were his methods? his criteria? It seems to me that no ordinary mind could accept the apparition of Buddha out of a wall or the half hour's talk with Hayagriva as valid facts by any kind of testing. It would either have to accept them *a priori* or on the sole evidence of Vivekananda which comes to the same thing or to reject them *a priori* as hallucinations or mere mental images accompanied in one case by an auditive hallucination. I fail to see how it could "test" them. Or how was I to test by the ordinary mind my experience of Nirvana? To what conclusion could I come about it by the aid of the ordinary positive reason? How could I test its validity? I am at a loss to imagine. I did the only thing I could—to accept it as a strong and valid truth of experience, let it have its full play and produce its full experiential consequences until I had sufficient Yogic knowledge to put it in its place. Finally, how without inner knowledge or experience can you or anyone else test the inner knowledge and experience of others?

I have often said that discrimination is not only perfectly admissible but indispensable in spiritual experience. But it must be a discrimination founded on knowledge, not a reasoning founded on ignorance. Otherwise you tie up your mind and hamper experience by preconceived ideas which are as much *a priori* as any acceptance of a spiritual truth or experience can be. Your idea that surrender can only come by love is a point in instance. It is perfectly true in Yogic experience that surrender by true love which means psychic and spiritual love is the most powerful, simple and effective of all, but one cannot, putting

that forward as a dictum arrived at by the ordinary reason, shut up the whole of possible experience of true surrender into that formula or announce on its strength that one must wait till one loves perfectly before one can surrender. Yogic experience shows that surrender can also be made by the mind and will, a clear and sincere mind seeing the necessity of surrender and a clear and sincere will enforcing it on the recalcitrant members. Also experience shows that not only can surrender come by love, but love also can come by surrender or grow with it from an imperfect to a perfect love. One starts by an intense idea and will to know or reach the Divine and surrenders more and more one's ordinary personal ideas, desires, attachments, urges to action or habits of action so that the Divine may take up everything. Surrender means that, to give up our little mind and its mental ideas and preferences into a divine Light and a greater knowledge, our petty personal troubled blind stumbling will into a great calm tranquil luminous Will and Force, our little restless tormented feelings into a wide intense divine Love and Ananda, our small suffering personality into the one Person of which it is an obscure outcome. If one insists on one's own ideas and reasonings, the greater Light and Knowledge cannot come or else is marred and obstructed in the coming at every step by a lower interference; if one insists on one's own desires and fancies, that great luminous Will and Force cannot act in its own true power—for you ask it to be the servant of your desires; if one refuses to give up one's petty ways of feeling, eternal Love and supreme Ananda cannot descend or is mixed and is spilt from the effervescent crude emotional vessel. No amount of ordinary reasoning can get rid of that necessity of surmounting the lower in order that the higher may be there.

Science and the Supernormal

Scientific laws only give a schematic account of material processes of Nature—as a valid scheme they can be used for reproducing or extending at will a material process, but obviously they cannot give an account of the thing itself. Water

for instance is not merely so much oxygen and hydrogen put together—the combination is simply a process or device for enabling the materialisation of a new thing called water; what that new thing really is is quite another matter. In fact there are different planes of substance, gross, subtle and more subtle going back to what is called causal (*kāraṇa*) substance. What is more gross can be reduced to the subtle state and the subtle brought into the gross state; that accounts for dematerialisation and materialisation and rematerialisation. These are occult processes and are vulgarly regarded as magic. Ordinarily the magician knows nothing of the why and wherefore of what he is doing, he has simply learned the formula or process or else controls elemental beings of the subtler states (planes or worlds) who do the thing for him. The Tibetans indulge widely in occult processes; if you see the books of Madame David-Neel who has lived in Tibet you will get an idea of their expertness in these things. But also the Tibetan Lamas know something of the laws of occult (mental and vital) energy and how it can be made to act on physical things. That is something which goes beyond mere magic. The direct power of mind-force or life-force upon Matter can be extended to an almost illimitable degree. It must be remembered that Energy is fundamentally one in all the planes, only taking more and more dense forms, so there is nothing *a priori* impossible in mind-energy or life-energy acting directly on material energy and substance; if they do they can make a material object do things or rather can do things with a material object which would be to that object in its ordinary poise or “law” unhabitual and therefore apparently impossible.

I do not see how cosmic rays can explain the origination of Matter; it is like Sir Oliver Lodge's explanation of life on earth that it comes from another planet; it only pushes the problem one step farther back—for how do the cosmic rays come into existence? But it is a fact that Agni is the basis of forms as the Sankhya pointed out long ago, i.e. the fiery principle in its three powers radiant, electric and gaseous (the Vedic trinity of Agni) is the agent in producing liquid and solid forms of what is called matter.

Obviously a layman can't do these things, unless he has a native "psychic" (that is, occult) faculty and even then he will have to learn the law of the thing before he can use it at will. It is always possible to use spiritual force or mind-power or will-power or a certain kind of vital energy to produce effects in men, things and happenings; but knowledge and much practice is needed before this possibility ceases to be occasional and haphazard and can be used quite consciously, at will or to perfection. Even then to have "a control over the whole material world" is too big a proposition; a local and partial control is more possible or, more widely, certain kinds of control over matter.

*

The desire [*of occultists and spiritists*] to satisfy the physical scientists is absurd and illogical. The physical scientists have their own field with its own instruments and standards. To apply the same tests to phenomena of a different kind is as foolish as to apply physical tests to spiritual truth. One can't dissect God or see the soul under a microscope. So also the subjection of disembodied spirits or even of psycho-physical phenomena to tests and standards valid only for material phenomena is a most false and unsatisfactory method. Moreover the physical scientist is for the most part resolved not to admit what cannot be neatly packed and labelled and docketed in his own system and its formulas. Dr. Jules Romains, himself a scientist as well as a great writer, makes experiments to prove that men can see and read with the eyes blindfolded, the scientists refuse even to admit or record the results. Khuda Baksh comes along and proves it patently, indubitably, under all legitimate tests, the scientists are quite unwilling to cede and record the fact even though his results are undeniable. He walks on fire unhurt and disproves all hitherto suggested explanations,—they simply cast about for another and still more silly explanation! What is the use of trying to convince people who are determined not to believe?

*

These theosophic and other modern attempts to square physical

Science with Yoga (Yogis formerly did not bother to differentiate spiritual functions from grey matter and white matter) make me always suspicious. It looks like manufacture of the mind, pseudo-science.

Science and Superstition

It is quite true that the word “superstition” has been habitually used as a convenient club to beat down any belief that does not agree with the ideas of the materialistic reason, that is to say, of the physical mind dealing with the apparent law of physical process and seeing no farther. It has also been used to dismiss ideas and beliefs not in agreement with one’s own idea of what is the rational norm of supraphysical truths as well. For many ages man cherished beliefs that implied a force behind which acted on principles unknown to the physical mind and beyond the witness of the outward reason and the senses. Science came in with a method of knowledge which extended the evidence of this outer field of consciousness and thought that by this method all existence would become explicable. It swept away at once without examination all the ancient beliefs as so many “superstitions”—true, half true or false, all went into the dust-bin in one impartial sweep, because they did not rely on the method of physical Science and lay outside its data or were or seemed incompatible with its standpoint. Even in the field of supraphysical experience only so much was admitted as could give a mentally rational explanation of itself according to a certain range of ideas—all the rest, everything that seemed to demand an occult, mystic or below-the-surface origin to explain it, was put aside as so much superstition. Popular beliefs that were the fruit sometimes of imagination but sometimes also of a traditional empirical knowledge or of a right instinct shared naturally the same fate. That all this was a hasty and illegitimate operation, itself based on the “superstition” of the all-sufficiency of the new method which really applies only to a limited field, is now becoming more and more evident. I agree with you that the word superstition is one which should be used either not at

all or with great caution. It is evidently an anachronism to apply it to beliefs not accepted by the form of religion one happens oneself to follow or favour.

The growing reversal of opinion with regard to many things that were then condemned but are now coming into favour once more, is very striking. In addition to the instances you quote a hundred others might be added. One does not quite know why a belief in graphology should be condemned as irrational or superstitious; it seems to me quite rational to believe that a man's handwriting is the result of or consistent with his temperament and nature and, if so, it may very well prove on examination to be an index of character. It is now a known fact that each man is an individual by himself with his own peculiar formation different from others and made by minute variations in the general human plan,— this is true of small physical characteristics, it is evidently equally true of psychological characteristics; it is not unreasonable to suppose a correlation between the two. On that basis cheiromancy too may very well have a truth in it, for it is a known fact that the lines in an individual hand are different from the lines in others and that this as well as differences of physiognomy may carry in it psychological indications is not impossible. The difficulty for minds trained under rationalistic influences becomes greater when these lines or the data of astrology are interpreted as signs of destiny, because modern rationalism resolutely refused to admit that the future was determined or could be determinable. But this looks more and more like one of the "superstitions" of the modern mind, a belief curiously contradictory of the fundamental notions of Science. For Science has believed, at least until yesterday, that everything is determined in Nature and it attempts to find the law of that determination and to predict future physical happenings on that basis. If so, it is reasonable to suppose that there are unseen connections determining human events in the world and that future events may therefore be predictable. Whether it can be done on the lines of astrology or cheiromancy is a matter for enquiry and one does not get any farther by dismissing the possibility with a summary denial. The case for astrology is fairly

strong; a case seems to exist for cheiromancy also.

On the other hand it is not safe to go too hastily in the other direction. There is the opposite tendency to believe everything in these fields and not keep one's eyes open to the element of limitation or error in these difficult branches of knowledge — it was this excess of belief that helped to discredit them, because their errors were patent. It does not seem to me established that the stars determine the future — though that is possible, but it does look as if they indicate it — or rather some certitudes and many potentialities of the future. Even the astrologers admit that there is another element of determination in man himself which limits the field of astrological prediction and may even alter many of its ascertained results. There is a very tangled and difficult complex of forces making up any determination of things in the world and when we have disentangled one thread of the skein and follow it we may get many striking results, but we cannot rely on it as the one wholly reliable clue. The mind's methods are too rigid and conveniently simple to unravel the true or whole truth whether of the Reality or of its separate phenomena.

I would accept your statement about the possibility of knowing much about a man from an observation of a small part of his being, physical or psychological, but I think it is to go too far to say that one can reconstruct a whole man from one minute particle of a hair. I should say from my knowledge of the complexity and multiplicity of elements in the human being that such a procedure would be hazardous and would leave a large part of the Unknown overshadowing the excessive certitude of this inferential structure.

I suppose we cannot go so far as to deny that there is such a thing as superstition — a fixed blind belief without any ground in something that is quite unsound and does not hang together. The human mind readily claps on such beliefs to things which can be or are in themselves true, and this is a mixture which very badly confuses the search for knowledge. But precisely because of that mixture, because somewhere behind the superstition or not far off from it there is very usually some real truth, one ought to be cautious in using the word or sweeping away with it as a

convenient broom the true, the partly true and the unfounded together and claiming that the bare ground left is the only truth of the matter.

*

When I wrote that sentence [*about a “fixed blind belief”*] I was not thinking really of religious beliefs, but of common popular ideas and beliefs. Your feeling about the matter, in any case, is quite sound. One can and ought to believe and follow one's own path without condemning or looking down on others for having beliefs different from those one thinks or sees to be the best or the largest in truth. The spiritual field is many-sided and full of complexities and there is room for an immense variety of experiences. Besides, all mental egoism,—and spiritual egoism —has to be surmounted and this sense of superiority should therefore not be cherished.

P. S. A sincere, whole-hearted and one-pointed following of this Yoga should lead to a level where these rigid mental divisions do not exist for they are mental walls put round one part of Truth and Knowledge so as to cut it off from the rest, but this view from above the mind is comprehensive and everything falls into its place in the whole.

The Limitations of Science

I think what you write is unexceptionable as a statement of the necessary limitations of physical Science to its own field. It is only in the occult sciences that one can find the necessary connection or bridge between the spiritual and material which X is demanding from the physical sciences. X's attitude is a sort of reaction against the old error of the materialism which used science to discredit not only the mistakes of religion, but all spiritual truth—but that phase is now over and one can be content with recording its passing without trying to reverse the process by using science to support or establish spiritual truth—spiritual truth can exist in itself and needs no such buttressing from outside.

*

I think X bases his ideas on the attempt of Jeans, Eddington and other English scientists to thrust metaphysical conclusions into scientific facts; it is necessary that he should appreciate fully the objections of more austere scientific minds to such a mixture. Moreover, spiritual seeking has its own accumulated knowledge which does not depend in the least on the theories or discoveries of science in the purely physical sphere. X's attempt like that of Jeans and others is a reaction against the illegitimate attempts of some scientific minds in the nineteenth century and of many others who took advantage of the march of scientific discovery to discredit or abolish as far as possible the religious spirit and to discredit also metaphysics as a cloudy verbiage, exalting science as the only clue to the truth of the universe. But I think that attitude is now dead or moribund; the scientists recognise, as you point out, the limits of their sphere. I may observe that the conflict between religion and science never arose in India (until the days of European education) because religion did not interfere with scientific discovery and scientists did not question religious or spiritual truth because the two things were kept on separate but not opposing lines.

*

The defect in what X writes about Science seems to be that he is insisting vehemently on the idea that Science is still materialistic or at least that scientists, Jeans and Eddington excepted, are still fundamentally materialists. This is not the fact. Most continental scientists have now renounced the idea that Science can explain the fundamentals of existence. They hold that Science is only concerned with process and not with fundamentals. They declare that it is not the business of Science nor is it within its means to decide anything about the great questions which concern philosophy and religion. This is the enormous change which the latest developments of Science have brought about. Science itself nowadays is neither materialistic nor idealistic. The rock on which materialism was built and which in the 19th century seemed unshakeable has now been shattered. Materialism has now become a philosophical speculation just like any other

theory; it cannot claim to found itself on a sort of infallible Biblical authority, based on the facts and conclusions of Science. This change can be felt by one like myself who grew up in the heyday of absolute rule of scientific materialism in the 19th century. The way which had been almost entirely barred except by rebellion now lies wide open to spiritual truths, spiritual ideas, spiritual experiences. That is the real revolution. Mentalism is only a halfway house but mentalism and vitalism are now perfectly possible as hypotheses based on the facts of existence, scientific facts as well as any others. The facts of Science do not compel anyone to take any particular philosophical direction. They are now neutral and can even be used on one side or another though most scientists do not consider such a use as admissible. Nobody here ever said that the new discoveries of physics supported the ideas of religion or churches; they merely contended that Science had lost its old materialistic dogmatism and moved away by a revolutionary change from its old moorings.

It is this change which I expected and prophesied in my poems in the first *Ahana* volume, "A Vision of Science" and "In the Moonlight".¹

*

Psychologists of course having to deal with mental movements more easily recognise that there can be no real equation between them and physiological processes and at the most mind and body react on each other as is inevitable since they are lodging together. But even a great physical scientist like Huxley recognised that mind was something quite different from matter and could not possibly be explained in the terms of matter. Only since then physical Science became very arrogant and presumptuous and tried to subject everything to itself and its processes. Now in theory it has begun to recognise its limitations in a general way, but the old mentality is still too habitual in most scientists to shake off yet.

*

¹ These two poems are currently published in Collected Poems, volume 2 of THE COMPLETE WORKS OF SRI AUROBINDO, pp. 204–6 and 237–44.—Ed.

The minds of these people [*scientists*] are too much accustomed to deal with physical things and things measurable by instruments and figures to be much good for any other provinces. Einstein's views outside his domain are crude and childish, a sort of unsubstantial commonplace idealism without grasp on realities. As a man can be a great scholar and yet simple and foolish, so a man can be a great scientist but his mind and ideas negligible in other things.

*

There is nothing superior in the scientist's brain except a faculty of observing and analysing and drawing conclusions. It is the intellectual plane.

*

The scientific mind refuses to leave anything unclassed. Has it not classified the Divine also?

*

How does Sir James Jeans or any other scientist know that it was by a "mere accident" that life came into existence or that there is no life anywhere else in the universe or that life elsewhere must either be exactly the same as life here under the same conditions or not existent at all? These are mere mental speculations without any conclusiveness in them. Life can be an accident only if the whole world also is an accident—a thing created by Chance and governed by Chance. It is not worth while to waste time on this kind of speculation, for it is only the bubble of a moment.

The material universe is only the façade of an immense building which has other structures behind it and it is only if one knows the whole that one can have some knowledge of the truth of the material universe. There are vital, mental and spiritual ranges behind which give the material its significance. If the earth is the only field of the spiritual evolution in Matter —(assuming that)— then it must be as part of the total design. The idea that all the rest must be a waste is a human idea which

would not trouble the vast Cosmic Spirit — whose consciousness and life are everywhere, in the slime and dust as much as in the human intelligence. But this is a speculative question which is quite alien to our practical purpose. For us it is the development of the spiritual consciousness in the human body that matters.

In this development there are stages — the whole truth cannot be known till all are passed and the final stage is there. The stage in which you are is one in which the Self is beginning to be realised, the Self free from all embodiment and not depending on embodiment for its perpetual existence. It is therefore natural that you should feel the embodiment to be something quite subordinate and like the earth-life of Jeans almost accidental. It is because of this stage that the Mayavadins, taking it for final, thought the world to be an illusion. But this is only a stage of the journey. Beyond this Self which is static, separate, formless, there is a greater consciousness in which the Silence and the Cosmic Activity are united but in another knowledge than the walled-in ignorance of the embodied human being. This Self is only one aspect of the Divine Reality. It is when one gets to that greater Consciousness that cosmic existence and form and life and mind no longer appear to be an accident but find their significance. Even there there are two stages, the overmental and the supramental, and it is not till one gets to the last that the full truth of existence can become entirely real to the consciousness. Observe what you experience and know that it has its value and is indispensable as a stage, but do not take the experience as the final knowledge.

Physics and Metaphysics

The difficulty is that you are a non-scientist trying to impose your ideas on the most difficult because most material field of science — physics. It is only if you were a scientist yourself basing your ideas on universally acknowledged scientific facts or else your own discoveries — though even then with much difficulty — that you could get a hearing or your opinion have any weight. Otherwise you open yourself to the accusation of pronouncing in

a field where you have no authority, just as the scientist himself does when he pronounces on the strength of his discoveries that there is no God. When the scientist says that “scientifically speaking God is a hypothesis which is no longer necessary” he is talking arrant nonsense — for the existence of God is not and cannot be and never was a scientific hypothesis or problem at all, it is and always has been a spiritual or a metaphysical problem. You cannot speak scientifically about it at all either pro or con. The metaphysician or the spiritual seeker has a right to point out that it is nonsense; but if you lay down the law to the scientist in the field of science, you run the risk of having the same objection turned against you.

As to the unity of all knowledge, that is a thing *in posse*, not yet *in esse*. The mechanical method of knowledge leads to certain results, the higher method leads to certain others, and they at many points fundamentally disagree. How is the difference to be bridged — for each seems valid in its own field: it is a problem to be solved, but you cannot solve it in the way you propose. Least of all in the field of physics. In psychology one can say that the mechanical or physiological approach takes hold of the thing by the blind end and is the least fruitful of all — for psychology is not primarily a thing of mechanism and measure, it opens to a vast field beyond the physical instrumentalities of the body consciousness. In biology one can get a glimpse of something beyond mechanism, because there is from the beginning a stir of consciousness progressing and organising itself more and more for self-expression. But in physics you are in the very domain of the mechanical law where process is everything and the driving consciousness has chosen to conceal itself with the greatest thoroughness — so that, “scientifically speaking”, it does not exist there. One can discover it there only by occultism and Yoga, but the methods of occult science and of Yoga are not measurable or followable by the means of physical science — so the gulf remains still in existence. It may be bridged one day, but the physicist is not likely to be the bridge builder, so it is no use asking him to try what is beyond his province.

*

The Isha Upanishad passage² is of course a much larger statement of the nature of universal existence than the Einstein theory which is confined to the physical universe. You can deduce too a much larger law of relativity from the statement in the verse. What it means from this point of view — for it contains much more in it — is that the absolute Reality exists but it is immovable and always the same, the universal movement is a motion of consciousness in this Reality of which only the Transcendent itself can seize the truth, which is self-evident to It, while the apprehension of it by the Gods (the mind, senses etc.) must necessarily be imperfect and relative since they can try to follow but none can really overtake (apprehend or seize) that Truth, each being limited by its own view-point,³ lesser instrumentality or capacity of consciousness etc. This is the familiar attitude of the Indian or at least the Vedantic mind which held that our knowledge, perception and experience of things in the world and of the world itself must be *vyāvahārika*, relative, practical or pragmatic only, — so declared Shankara, — it is in fact an illusory knowledge, the real Truth of things lying beyond our mental and sensory consciousness. Einstein's relativity is a scientific, not a metaphysical statement. The form and field of it are different — but, I suppose, if one goes back from it and beyond it to its essential significance, the real reason for its being so, one can connect it with the Vedantic conclusion. But to justify that to the intellect, you would have to go through a whole process to show how the connection comes — it does not self-evidently follow.

As for Jeans, many would say that his conclusions are not at all legitimate. Einstein's law is a scientific generalisation based upon certain relations proper to the domain of physics and, if valid, valid there in the limits of that domain, or, if you like, in the general domain of scientific observation and measurement of physical processes and motions; but how can you transform

² "One unmoving that is swifter than Mind, That the Gods reach not, for It progresses ever in front. That, standing, passes beyond others as they run." Isha Upanishad, verse 4. Sri Aurobindo's translation. See Isha Upanishad, volume 17 of THE COMPLETE WORKS OF SRI AUROBINDO, p. 6.

³ The Gods besides are in and subject to Space and Time, part of the motion in Space and Time, not superior to it.

that at once into a metaphysical generalisation? It is a jump over a considerable gulf—or a forceful transformation of one thing into another, of a limited physical result into an unlimited all-embracing formula. I don't quite know what Einstein's law really amounts to, but does it amount to more than this that our scientific measurements of time and other things are, in the conditions under which they have to be made, relative because subject to the unavoidable drawback of these conditions? What metaphysically follows from that—if anything at all does follow—it is for the metaphysicians, not the scientists to determine. The Vedantic position was that the Mind itself (as well as the senses) is a limited power making its own representations, constructions, formations and imposing them on the Reality. That is a much bigger and more intricate affair shooting down into the very roots of our existence. I think myself there are many positions taken by modern Science which tend to be helpful to that view—though in the nature of things they cannot be sufficient to prove it.

I state the objections only; I myself see certain fundamental truths underlying all the domains and the one Reality everywhere. But there is a great difference in the instruments used and the ways of research followed by the seekers in these different ways (the physical, the occult and the spiritual) and for the intellect at least the bridge between them has still to be built. One can point out analogies but it can be maintained very well that Science cannot be used for yielding or buttressing results of spiritual knowledge. The other side can be maintained also and it is best that both should be stated—so this is not meant to discourage your thesis.

*

The article [*on metaphysics and science*] reads as if it had been written by a professor rather than a philosopher. What you speak of⁴ is, I suppose, a survival of the nineteenth-century scientific contempt for metaphysics; all thinking must be based on

⁴ *The correspondent said that the author of the article assumed that metaphysics is “one among the experimental sciences and has a darkened séance room for its laboratory”.*
—Ed.

scientific facts and the generalisations of science, often so faulty and ephemeral, must be made the basis for any sound metaphysical thinking. That is to make philosophy the handmaid of science, metaphysics the camp-follower of physics and to deny her her sovereign rights in her own city. It ignores the fact that the philosopher has his own domain and his own instruments; he may use scientific discoveries as material just as he may use any other facts of existence, but whatever generalisations science offers he must judge by his own standards—whether they are valid for transference to the metaphysical plane and, if so, how far. Still in the heyday of physical science before it discovered its own limitations and the shakiness of its scheme of things floating precariously in a huge infinity or boundless Finite of the Unknown, there was perhaps some excuse for such an attitude. But spiritualism glorified under the name of psychical research? That is not a science; it is a mass of obscure and ambiguous documents from which you can draw only a few meagre and doubtful generalisations. Moreover, so far as it belongs to the occult, it touches only the inferior regions of the occult—what we would call the lowest vital worlds—where there is as much falsehood and fake and confused error as upon the earth and even more. What is a philosopher to do with all that obscure and troubled matter? I do not catch the point of many of his remarks. Why should a prediction of a future event alter our conception—at least any philosophic conception—of Time? It can alter one's ideas of the relation of events to each other or of the working out of forces or of the possibilities of consciousness, but Time remains the same as before.

The dream⁵ is, of course, the rendering of an attempt at

⁵ A dream in which the correspondent had a long-distance telephone conversation. He commented: "Is there not something very symbolic about the emergence of telephony and cinematography just at an epoch when human behaviour and relationship is breaking down? Owing to falsehood and callousness and self-centred indifference to others, each person is to every other more and more a meaningless shadow and a deceptive voice." He also spoke about the decline of nobility and tenderness in art: "I fail to see any further need for human beings either as creators or enjoyers of such 'art'; perhaps in an Asuric civilisation, men are anyhow superfluous and only 'incarnated Asuras' are required?" —Ed.

communication on the subtle plane. As for the telephone and cinema, there is something of what you say, but it seems to me that these and other modern things could have taken on a different character if they had been accepted and used in a different spirit. Mankind was not ready for these discoveries, in the spiritual sense, nor even, if the present confusions are a sign, intellectually ready. The aesthetic downfall is perhaps due to other causes, a disappointed idealism in its recoil generating its opposite, a dry and cynical intellectualism which refuses to be duped by the ideal, the romantic or the emotional or anything that is higher than the reason walking by the light of the senses. The Asuras of the past were after all often rather big beings; the trouble about the present ones is that they are not really Asuras, but beings of the lower vital world, violent, brutal and ignoble, but above all narrow-minded, ignorant and obscure. But this kind of cynical narrow intellectualism that is rampant now, does not last—it prepares its own end by increasing dryness—men begin to feel the need of new springs of life.

*

I am afraid I have lost all interest in these speculations [*about subjectivism in modern physics*]; things are getting too serious for me to waste time on these inconclusive intellectualities. I do not at all mind your driving your point triumphantly home and replacing a dogmatism from materialistic Science on its throne of half a century ago from which it could victoriously ban all thought surpassing its own narrow bounds as mere wordy metaphysics and mysticism and moonshine. Obviously, if material energies alone can exist in the material world, there can be no possibility of a life divine on the earth. A mere metaphysical “sleight of mind”, as one might call it, could not justify it against the objections of scientific negation and concrete common sense. I had thought that even many scientific minds on the Continent had come to admit that Science could no longer claim to decide what was the reality of things, that it had no means of deciding it and could only discover and describe the how and process of the operations of material Force in the physical front of things.

That left the field open to higher thought and speculation, spiritual experience and even to mysticism, occultism and all those greater things which almost everybody had come to disbelieve as impossible nonsense. That was the condition of things when I was in England. If that is to return or if Russia and her dialectical materialism are to lead the world, well, fate must be obeyed and life divine must remain content to wait perhaps for another millennium. But I do not like the idea of one of our periodicals⁶ being the arena for a wrestle of that kind. That is all. I am writing under the impression of your earlier article on this subject, as I have not gone carefully through the later ones; I dare say these later ones may be entirely convincing and I would find after reading them that my own position was wrong and that only an obstinate mystic could still believe in such a conquest of Matter by the Spirit as I had dared to think possible. But I am just such an obstinate mystic; so, if I allowed your exposition of the matter to be published in one of our own periodicals, I would be under the obligation of returning to the subject in which I have lost interest and therefore the inclination to write, so as to reestablish my position and would have to combat the claim of materialistic Science to pronounce anything on these matters on which it has no means of enquiry nor any possibility of arriving at a valid decision. Perhaps I would have practically to rewrite *The Life Divine* as an answer to the victorious “negation of the materialist”! This is the only explanation which I can give, apart from sheer want of time to tackle the subject, for my long and disappointing silence.

Space and Time

You are reasoning on the analogy of our own very cabined and limited sense-consciousness and its rather clumsy relations with the happenings in material space. What is space after all but an extension of conscious being in which Consciousness-Force builds its own surroundings? In the subtle physical plane there

⁶ Mother India, a journal published in Mumbai at that time.—Ed.

are not one, but many layers of consciousness and each moves in its own being, that is to say, in its own space. I have said that each subtle plane is a conglomeration or series of worlds. Each space may at any point meet, penetrate or coincide with another; accordingly at one point of meeting or coincidence there might be several subtle objects occupying what we might rather arbitrarily call the same space, and yet they may not be in any actual relation with each other. If there is a relation created, it is the multiple consciousness of the seer in which the meeting-place becomes apparent that creates it.

On the other hand, there may be a relation between objects in different regions of space correlated to each other as in the case of the gross physical object and its subtle counterpart. There you can more easily reason of relations between one space and another.

*

The objection⁷ is founded on human three-dimensional ideas of Space and division in spaces, which are again founded upon the limited nature of the human senses. To some beings space is one-dimensional, to others two-dimensional, to others three-dimensional — but there are other dimensions also. It is well recognised in metaphysics that the Infinite can be in a point and not only in extension of space — just as there is an eternity of extension in Time but also an Eternity which is independent of Time so that it can be felt in the moment — one has not to think of millions and millions of years in order to realise it. So too the rigid distinction of One against Many, a One that cannot be many or of an All that is made up by addition and not self-existent are crude mental notions of the outer finite mind that cannot be applied to the Infinite. If the All were of this material and unspiritual character, tied down to a primary arithmetic and geometry, the realisation of the universe in oneself, of the

⁷ The correspondent asked: "How can the Divine, who is All or Omnipresent, incarnate in the small space of a human body? I believe it is because this seems impossible to the mind that the Arya Samajists do not accept the possibility of incarnation." — Ed.

all in each and each in all, of the universe in the Bindu would be impossible. Your Arya Samajists are evidently innocent of the elements of metaphysical thinking or they would not make such objections.

*

Time and Space are not limited, they are infinite — they are the terms of an extension of consciousness in which things take place or are arranged in a certain relation, succession, order. There are again different orders of Time and Space; that too depends on the consciousness. The Eternal is extended in Time and Space, but he is also beyond all Time and Space. Timelessness and Time are two terms of the eternal existence. The Spaceless Eternal is not one indivisible infinity of Space, there is in it no near or far, no here or there — the Timeless Eternal is not measurable by years or hours or aeons, the experience of it has been described as the eternal moment. But for the mind this state cannot be described except by negatives, — one has to go beyond and to realise it.

*

Time is to the Intuition an extension of consciousness in which happenings are arranged and has not the same rigidity that it has to the intellect.

*

The idea of time may be a mental construction, but the sense of it may not be. Savages have the idea of time but it is in connection with the sun and stars and the lapse of day and night and the seasons, not perhaps a separate construction — but one is not sure for they have metaphysical conceptions of their own. Animals are not, I think, so limited in their consciousness — they have not only sensations, but an acute memory of certain things, observation, clear associations, an intelligence that plans, a very accurate sense of place and memory of place, an initial power of reasoning (not reflectively as the human mind does, but practically as any vital mind can do). I have seen a young

kitten observing, arriving at a correct conclusion, proceeding to do what was necessary for her purpose, a necessity imposed by that conclusion, just as a human child might do. We cannot therefore say that animals have no ideas. No clear measure of yesterday and tomorrow, perhaps, but the perception of past and future needs is there and of right times and seasons also—all vital, practical, not reflectively mental in the human way.

But it is true that when one gets beyond the mind, this sense of time changes into timelessness, into the eternal present.

*

No doubt, the physical regulated time consciousness belongs mainly to the waking state but it can be subliminal as well as of the mental waking consciousness. E.g. sometimes one wills at night to get up at a fixed time in the morning and wakes exactly at that hour and minute—it is something in the subliminal being that recorded the time and vigilantly executed it.

*

When one begins to feel the inner being and live in it (the result of the experience of peace and silence) the ordinary time sense disappears or becomes purely external.

*

The present is a convention or only a constant movement out of the past into the future.

Matter

As for what you write about your experience and your ideas, it looks as if it were simply the old thoughts and movements rising, as they often do, to interfere with the straight course of the sadhana. Mental realisations and ideas of this kind are at best only half-truths and not always even that; once one has taken up a sadhana that goes beyond the mind, it is a mistake to give them too much importance. They can easily become by misapplication a fruitful ground for error.

If you examine the ideas that have come to you, you will see that they are quite inadequate. For example:

1. Matter is *jada* only in appearance. As even modern Science admits, Matter is only energy in action, and, as we know in India, energy is force of consciousness in action.

2. Prakriti in the material world seems to be *jada*, but this too is only an appearance. Prakriti is in reality the conscious power of the Spirit.

3. A bringing down of the Spirit into Matter cannot lead to a *laya* in *jada prakṛti*. A descent of the Spirit could only mean a descent of light, consciousness and power, not a growth of unconsciousness and inertia which is what is meant by the *jada laya*.

4. The Spirit is there already in Matter as everywhere else; it is only a surface apparent unconsciousness or involved consciousness which veils its presence. What we have to do is to awake Matter to the spiritual consciousness concealed in it.

5. What we aim at bringing down into the material world is the supramental consciousness, light and energy, because it is this alone that can truly transform it.

If there is at any time a growth of unconsciousness and inertia, it is because of the resistance of the ordinary nature to the spiritual change. But this is usually raised up in order to be dealt with and eliminated. If it is allowed to remain concealed and not raised up, the difficulty will never be grappled with and no real transformation will take place.

*

If there were no creative power in the material energy, there would be no material universe. Matter is not unconscious or without dynamism—only it is an involved Force and Consciousness that work in it. It is what the psychologists call the Inconscient from which all comes—but it is not really Inconscient.

Animals

The satisfaction of their emotions and desires and their bodily needs [*is what animals desire*]—mostly. Animals are predominantly the vital creation on earth—the mind in them also is a vital mind—they act according to the push of the forces and have a vital but not a mental will.

*

Even the animal is more in touch with a certain harmony in things than man. Man's only superiority is a more complex consciousness and capacity (but terribly perverted and twisted by misuse of Mind) and the ability (not much used as yet) of reaching towards higher things.

*

Human life and mind are neither in tune with Nature like the animals nor with Spirit—it [*human nature*] is disturbed, incoherent, conflicting with itself, without harmony and balance. We can then regard it as diseased, if not itself a disease.

*

Yes, it is a more simple and honest consciousness—that of the animal. Of course it expects something, but even if it does not get, the affection remains. Many animals, even if ill-treated, do not lose their love which means a remarkable psychic development in the vital.

*

The emotional being of animals is often much more psychic than that of men who can be very insensitive. There were recently pictures of the tame tigress kept by a family and afterwards given by them to a Zoo. The look of sorrow on the face of the tigress in her cage at once gentle and tragically poignant is so intense as to be heartbreaking.

*

A very strong time sense [*in animals*] — at least some of them — but usually it works only in connection with strong desires or habits, e.g. food.

*

Cats have a very sure vital perception.

*

Most animals do not usually attack unless they are menaced or frightened or somehow made angry — and they can feel the atmosphere of people.

*

There are people who can move the ears without doing Yoga at all or calling upon the resources of the Kundalini. I suppose it is simply a movement that man has lost through disuse, not having had like the animals to prick up his ear at every moment to listen to sounds that might indicate danger. I suppose he could revive the faculty if it were of any use.

*

Yes — to watch the animals with the right perception of their consciousness helps to get out of the human mental limitations and see the Cosmic Consciousness on earth individualising itself in all forms — plant, animal, man and growing towards what is beyond man.

Plants

It is true that the plant world — even the animals if one takes them the right way — can be much better than human beings. It is the mental distortion that makes men worse.

*

The plants are very psychic, but they can express it only by silence and beauty.

*

Form, colour, scent + something else which is indefinable [*constitute the beauty of flowers*].

*

The rose is not the only beautiful flower, there are hundreds of others; most flowers are beautiful. The rose is among the first of flowers because of the richness of its colour, the intensity of sweetness of its scent and the grace and magnificence of its form.

Life on Other Planets

As for the other question, there is no reason to suppose that there is not life in any part of the material cosmic system except earth. No doubt the suns and nebulae cannot harbour material life because there is not the necessary basis, but wherever there is a formed world, Life can exist. It used formerly to be supposed that life could not exist except in conditions identical with the earth, but it is now being discovered that even man and the animals can adapt themselves to atmospheric conditions deficient in oxygen such as exist in the stratosphere — this proves that all depends on adaptation. There are animals that can exist only in the sea, yet sea-animals have become amphibious or turned into land animals — so animals on earth can by habit of the adaptation live only in a certain range of atmosphere and need oxygen, but they could adapt themselves to other conditions — it is a law of habit of Nature, not a law of inevitable necessity of Nature. It is therefore quite possible for life to exist on other planets in our and other systems, though the beings there may not be quite like earthly humanity or life quite the same.

Section Two

Religion, Idealism, Morality and Yoga

Chapter One

Religion and Yoga

Religion and the Truth

The Divine Truth is greater than any religion or creed or scripture or idea or philosophy — so you must not tie yourself to any of these things.

*

I regard the spiritual history of mankind and especially of India as a constant development of a divine purpose, not a book that is closed, the lines of which have to be constantly repeated. Even the Upanishads and the Gita were not final though everything may be there in seed. In this development the recent spiritual history of India is a very important stage and the names I mentioned [*Ramakrishna and Vivekananda*] had a special prominence in my thought at the time — they seemed to me to indicate the lines from which the future spiritual development had most directly to proceed, not staying but passing on. I do not know that I would put my meaning exactly in the language you suggest. I may say that it is far from my purpose to propagate any religion new or old for humanity in the future. A way to be opened that is still blocked, not a religion to be founded, is my conception of the matter.

*

It is news to me that I have excluded Mahomedans from the Yoga. I have not done it any more than I have excluded Europeans or Christians. As for giving up one's past, if that means giving up the outer forms of the old religions, it is done as much by the Hindus here as by the Mahomedans. The Hindus here — even those who were once orthodox Brahmins and have grown old in it, — give up all observance of caste, take food from Pariahs and are served by them, associate and eat with Mahomedans, Christians, Europeans, cease to practise temple worship or

Sandhya (daily prayer and mantras), accept a non-Hindu from Europe as their spiritual director. These are things people who have Hinduism as their aim and object would not do—they do it because they are obliged here to look to a higher ideal in which these things have no value. What is kept of Hinduism is Vedanta and Yoga, in which Hinduism is one with Sufism of Islam and with the Christian mystics. But even here it is not Vedanta and Yoga in their traditional limits (their past), but widened and rid of many ideas that are peculiar to the Hindus. If I have used Sanskrit terms and figures, it is because I know them and do not know Persian and Arabic. I have not the slightest objection to anyone here drawing inspiration from Islamic sources if they agree with the Truth as Sufism agrees with it. On the other hand I have not the slightest objection to Hinduism being broken to pieces and disappearing from the face of the earth, if that is the Divine Will. I have no attachment to past forms; what is Truth will always remain; the Truth alone matters.

Religion in India

Religion is always imperfect because it is a mixture of man's spirituality with the errors that come in trying to sublimate ignorantly his lower nature. Hindu religion appears to me as a cathedral temple half in ruins, noble in the mass, often fantastic in detail, but always fantastic with a significance—crumbled and overgrown in many places, but a cathedral temple in which service is still done to the Unseen and its real presence can be felt by those who enter with the right spirit. The outer social structure which it built for its approach is another matter.

*

If it is meant by the statement [of Mahatma Gandhi]¹ that the

¹ “But religion is not like a house or a cloak, which can be changed at will. It is more an integral part of one's self than of one's body. Religion is the tie that binds one to one's Creator and whilst the body perishes, as it has to, religion persists even after death.” M. K. Gandhi, on a statement by B. R. Ambedkar concerning change of religion, in The Collected Works of Mahatma Gandhi, vol. 62 (New Delhi: The Publications Division, 1975), p. 37.—Ed.

form of religion is something permanent and unchangeable, then that cannot be accepted. But if religion here means one's way of communion with the Divine, then it is true that that is something belonging to the inner being and cannot be changed like a house or a cloak for the sake of some personal, social or worldly convenience. If a change is to be made, it can only be for an inner spiritual reason, because of some development from within. No one can be bound to any form of religion or any particular creed or system, but if he changes the one he has accepted for another, for external reasons, that means he has inwardly no religion at all and both his old and his new religion are only an empty formula. At bottom that is, I suppose, what the statement drives at. Preference for a different approach to the Truth or the desire of inner spiritual self-expression are not the motives of the recommendation of change to which objection is made by the Mahatma here; the object proposed is an enhancement of social status and consideration which is no more a spiritual motive than conversion for the sake of money or marriage. If a man has no religion in himself, he can change his credal profession for any motive; if he has, he cannot; he can only change it in response to an inner spiritual need. If a man has a bhakti for the Divine in the form of Krishna, he can't very well say, "I will swap Krishna for Christ so that I may become socially respectable."

*

You can write to him not to be depressed by his failures but to go on aspiring and trust in the Divine Grace. He should not allow himself to be impeded by narrow caste ideas. Always in India the Brahmins have bowed down before a man of spiritual realisation, who becomes by that very fact of realisation above caste. He should open himself more to the help from here. Man is a mass of imperfections — it is only by the divine Grace that he reaches the Divine.

Religious Ceremonies

It is correct, religions at best modify only the surface of the

nature. Moreover they degenerate very soon into a routine of ceremonial habitual worship and fixed dogmas.

*

If you feel no enthusiasm for the *śrāddha* it is better definitely to stop it. Once on this path there is no meaning in it any longer, — for the reason you yourself give.² The *śrāddha* is, besides, entirely on the vital plane and if help has to be given to those who have passed into other worlds of consciousness, there are better ways of doing it.

*

Replace the *śrāddha* by a long meditation with X on the father praying that he may have all the rest and illumination that the departed can have.

*

I only said what was originally *meant* by the ceremonies — the rites. I was not referring to the feeding of the caste or the Brahmins which is not a rite or ceremony. Whether the *śrāddha* as performed is actually effective is another matter — for those who perform it have not either the knowledge or the occult power.

*

The old traditions [*stotras, homas, aradhanas, recitations, etc.*] are still strong with many — let them satisfy this tendency in this way so long as it does not drop from them.

*

Useless and therefore inadvisable [*to sacrifice animals to Kali*]. External sacrifices of this kind have no longer any meaning — as so many saints have said, sacrifice ego, anger, lust etc. to Kali, not goats or cocks.

² *The correspondent said that a sadhak is expected to forget all conventional family relationships and live only for the Divine. — Ed.*

Religious Fanaticism

There is nothing noble in fanaticism—there is no nobility of motive though there may be a fierce enthusiasm of motive. Religious fanaticism is something psychologically low-born and ignorant—and usually in its action fierce, cruel and base. Religious ardour like that of the martyr who sacrifices himself only is a different thing.

Chapter Two

Idealism and Spirituality

Human Perfection and Spirituality

I would not describe the perfections you describe in your letter, fine though they are, as spiritual in the proper sense of the word — for they lack the essential condition of spirituality. Perfection of all kinds is indeed good, as it is the sign of the pressure of the consciousness in the material world towards full self-expression in this or that limit, on this or that level. In a certain sense it is an urge of the Divine itself hidden in forms that tends in the lesser degrees of consciousness towards its own increasing self-revelation. Perfection of an object or a scene in inanimate Nature, animate perfection of strength, speed, physical beauty, courage or animal fidelity, affection, intelligence, perfection of art, music, poetry, literature,— perfection of the intellect in any kind of mental activity, the perfect statesman, warrior, artist, craftsman,— perfection in vital force and capacity, perfection in ethical qualities, character, temperament,— all have their high value, their place as rungs in the ladder of evolution, the seried steps of the spirit's emergence. If one likes to call that spiritual because of this hidden urge behind it one can do so; it can at least be regarded as a preparation for the secret spirit's emergence. But thought and knowledge can only proceed by making the necessary distinctions. Much confusion is created by neglecting them. This mental idealism, ethical development, religious piety and fervour, occult powers and feats have all been taken as spirituality and the spiritual evolution kept tied to the moorings of the planes of lesser consciousness which do indeed prepare the soul by experience for the spiritual consciousness but are not themselves that. For perfection can only become truly spiritual when it is founded on the awakened spiritual consciousness and takes on its peculiar essence. We are told by Europeans that the lined and ravaged face of the Greek bust of Homer is

far more spiritual than the empty ecstatic smile of the Buddha. We are told often nowadays that to earn for one's family and carry out our domestic duties, to be a good and moral man, a perfect citizen, patriot, worker for the country, is far more spiritual than to sit in idle meditation seeking for a remote and invisible Deity. Philanthropy, altruism, service to mankind are represented as the true spiritual things. Mental idealisms, ethical strivings, aesthetic finesses are put forward by the modern mind as things spiritual. All this is represented as the best and highest we can achieve — though an increasing disillusionment, dissatisfaction, feeling of emptiness in them is also growing at the same time. All this has had its use, for everything has its own value in its own place and those who are satisfied with them are entitled to give them their full value and hold them as the great good and the thing to be done, *kartavyam karma*. But spirituality stands on its own basis and does not depend on these things nor does it even include them so long as they are based on some other than the spiritual consciousness and not transformed on the inner spiritual basis. So also people speak of religious men as spiritual, but one may be a very religious man yet not spiritual. The popular idea confuses great feats of occult power, ascetic feats, miracles, astonishing performances like those of your Jewel Sannyasi as the works of a spiritual achievement and the signs of a great Yogi. But one may be a powerful occultist or do marvels of asceticism and yet be not spiritual at all — for in any true sense of the word, in its proper and native significance it means one who has attained to the spiritual consciousness, the realisation of the inner or higher Self, the contact or union with the Divine or that which is eternal or is striving after and approaching these things. Spiritual perfection can only come by a life based on that search and that achievement.¹

The Collapse of Twentieth-Century Idealism

Tagore, of course, belonged to an age which had faith in its

¹ This is the draft of a letter reproduced in a thoroughly rewritten form on pages 424–27. — Ed.

ideas and whose very denials were creative affirmations. That makes an immense difference. Your strictures on his later development may or may not be correct, but this mixture even was the note of the day and it expressed a tangible hope of a fusion into something new and true—therefore it could create. Now all that idealism has been smashed to pieces by the immense adverse Event and everybody is busy exposing its weakness, but nobody knows what to put in its place. A mixture of scepticism and slogans, "Heil Hitler" and the Fascist salute and Five-Year Plan and the beating of everybody into one amorphous shape, a disabused denial of all ideals on one side and on the other a blind shut-my-eyes and shut-everybody's-eyes plunge into the bog in the hope of finding some firm foundation there, will not carry us very far. And what else is there? Until new spiritual values are discovered, no great enduring creation is possible.

*

It is queer these intellectuals go on talking of creation while all they stand for is collapsing into the *Néant* without their being able to raise a finger to save it. What the devil are they going to create and from what material? and of what use if a Hitler with his cudgel or a Mussolini with his castor oil can come and wash it out or beat it into dust in a moment?

*

If there are such great spiritual men in Europe [*as a book reviewer claimed*], they seem to have the gift of invisibility. Or perhaps he means intellectuals like Romain Rolland or else Roman Catholic priests and cardinals or the Reverend Holmes or pacifists like Lord Robert Cecil or in the past Tolstoy who spent his whole life trying in vain to live according to his ideals. Idealising intellectualism and religionism are all that is left of spirituality in Europe.

Chapter Three

Morality and Yoga

The Spiritual Life and the Ordinary Life

The spiritual life (*adhyātma jīvana*), the religious life (*dharma jīvana*) and the ordinary human life of which morality is a part are three quite different things and one must know which one desires and not confuse the three together. The ordinary life is that of the average human consciousness separated from its own true self and from the Divine and led by the common habits of the mind, life and body which are the laws of the Ignorance. The religious life is a movement of the same ignorant human consciousness, turning or trying to turn away from the earth towards the Divine but as yet without knowledge and led by the dogmatic tenets and rules of some sect or creed which claims to have found the way out of the bonds of the earth-consciousness into some beatific Beyond. The religious life may be the first approach to the spiritual, but very often it is only a turning about in a round of rites, ceremonies and practices or set ideas and forms without any issue. The spiritual life, on the contrary, proceeds directly by a change of consciousness, a change from the ordinary consciousness, ignorant and separated from its true self and from God, to a greater consciousness in which one finds one's true being and comes first into direct and living contact and then into union with the Divine. For the spiritual seeker this change of consciousness is the one thing he seeks and nothing else matters.

Morality is a part of the ordinary life; it is an attempt to govern the outward conduct by certain mental rules or to form the character by these rules in the image of a certain mental ideal. The spiritual life goes beyond the mind; it enters into the deeper consciousness of the Spirit and acts out of the truth of the Spirit. As for the question about the ethical life and the need to realise God, it depends on what is meant by fulfilment of the

objects of life. If an entry into the spiritual consciousness is part of it, then mere morality will not give it to you.

Politics as such has nothing to do with the spiritual life. If the spiritual man does anything for his country, it is in order to do the will of the Divine and as part of a divinely appointed work and not from any other common human motive. In none of his acts does he proceed from the common mental and vital motives which move ordinary men but acts out of the truth of the Spirit and from an inner command of which he knows the source.

The kind of worship (*pūjā*) spoken of in the letter belongs to the religious life. It can, if rightly done in the deepest religious spirit, prepare the mind and heart to some extent but no more. But if worship is done as part of meditation or with a true aspiration to the spiritual reality and the spiritual consciousness and with the yearning for contact and union with the Divine, then it can be spiritually effective.

If you have a sincere aspiration to the spiritual change in your heart and soul, then you will find the way and the Guide. A mere mental seeking and questioning are not enough to open the doors of the Spirit.

*

In the ordinary life, people accept the vital movements, anger, desire, greed, sex etc. as natural, allowable and legitimate things, part of the human nature. Only so far as society discourages them or wishes to keep them within fixed limits or subject to a decent restraint or measure, people try to control them so as to conform to the social standard of morality or rule of conduct. Here on the contrary as in all spiritual life, the conquest and complete mastery of these things is demanded. That is why the struggle is more felt, not because these things rise more strongly in sadhaks than in ordinary men, but because of the intensity of the struggle between the spiritual mind which demands control and the vital movements which rebel and wish to continue in the new as they did in the old life. As for the idea that the sadhana raises up things of the kind, the only truth in that is this that,

first, there are many things in the ordinary man of which he is not conscious because the vital hides them from the mind and gratifies them without the mind realising what is the force that is moving the action — thus things that are done under the plea of altruism, philanthropy, service etc. are largely moved by ego which hides itself behind these justifications; in Yoga the secret motive has to be pulled out from behind the veil, exposed and got rid of. Secondly, some things are suppressed in the ordinary life and remain lying in the nature, suppressed but not eliminated; they may rise up any day or they may express themselves in nervous forms or other disorders of the mind or vital or body without it being evident what is their real cause. This has been recently discovered by European psychologists and much emphasised, even exaggerated in a new science called psycho-analysis. Here again in sadhana one has to become conscious of these suppressed impulses and eliminate them — this may be called raising up, but that does not mean that they have to be raised up into action but only raised up before the consciousness so as to be cleared out of the being.

As for some men being able to control themselves and others being swept away, that is due to difference of temperament. Some men are sattvic and control comes easy to them, up to a certain point at least; others are more rajasic and find control difficult and often impossible. Some have a strong mind and mental will and others are vital men in whom the vital passions are stronger or more on the surface. Some do not think control necessary and let themselves go. In sadhana the mental or moral control has to be replaced by the spiritual mastery — for the mental control is only partial and it controls but does not liberate; it is only the psychic and spiritual that can do that. That is the main difference in this respect between the ordinary and the spiritual life.

*

Everything depends upon the aim you put before you. If for the realisation of one's spiritual aim it is necessary to give up the ordinary life of the Ignorance (*samsara*), it must be done; the

claim of the ordinary life cannot stand against that of the spirit.

If a Yoga of works alone is chosen as the path, then one may remain in the *samsara*, but it will be freely, as a field of action and not from any sense of obligation; for the Yогin must be free inwardly from all ties and attachments. On the other hand there is no necessity to live the family life—one can leave it and take any kind of works as a field of action.

In the Yoga practised here the aim is to rise to a higher consciousness and to live out of the higher consciousness alone, not with the ordinary motives. This means a change of life as well as a change of consciousness. But all are not so circumstanced that they can cut loose from the ordinary life; they accept it therefore as a field of experience and self-training in the earlier stages of the sadhana. But they must take care to look at it as a field of experience only and to get free from the ordinary desires, attachments and ideas which usually go with it; otherwise it becomes a drag and hindrance on their sadhana. When one is not compelled by circumstances there is no necessity to continue the ordinary life.

One becomes tamasic by leaving the ordinary actions and life only if the vital is so accustomed to draw its motives of energy from the ordinary consciousness and its desires and activities that if it loses them, it loses all joy and charm and energy of existence. But if one has a spiritual aim and an inner life and the vital part accepts them, then it draws its energies from within and there is no danger of one's being tamasic.

Morality

The principle of life which I seek to establish is spiritual. Morality is a question of man's mind and vital, it belongs to a lower plane of consciousness. A spiritual life therefore cannot be founded on a moral basis, it must be founded on a spiritual basis. This does not mean that the spiritual man must be immoral—as if there were no other law of conduct than the moral. The law of action of the spiritual consciousness is higher, not lower than the moral—it is founded on union with

the Divine and living in the Divine Consciousness and its action is founded on obedience to the Divine Will.

*

The beliefs you speak of with regard to right and wrong, beauty and ugliness etc. are necessary for the human being and for the guidance of his life. He cannot do without the distinctions they involve. But in a higher consciousness when he enters into the Light or is touched by it, these distinctions disappear, for he is then approaching the eternal and infinite good and right which he reaches perfectly when he is able to enter into the Truth Consciousness or Supermind. The belief in the guidance of God is also justified by spiritual experience and is very necessary for the sadhana; this also rises to its highest and completest truth when one enters into the Light.

*

It [*the reason people remain calm and self-controlled in ordinary life*] is social pressure accompanied by a certain habit of mental control born of the social pressure. It is not from peace at all. Remove the social pressure even partly and as in England and America recently people let themselves go and do according to the vital impulses instead of controlling them — except of course those who stick to the religious and moral ideas of the past even when society drifts away from these ideas.

Vice and Virtue

Vice and virtue have nothing to do with darkness or light, truth and falsehood. The spiritual man rises above vice and virtue, he does not rise above truth and light, unless you mean by truth and light, human truth and mental light. They have to be transcended, just as virtue and vice have to be transcended.

*

Are you in a position to make a judgment as to what will or will not help God's work? You seem to have very elementary

ideas in these matters. What is your idea of divinisation,—to be a virtuous man, a good husband, son, father, a good citizen etc.? In that case I myself am most undivine,—for I have never been these things. Men like X or Y would then be the great Transformed Divine Men.

*

Many sinners are people who are preparing to turn to the Divine and many virtuous people have a long run of lives yet to go through before they will think of it.

*

Vices are simply an overflow of energy in unregulated channels.

The Sattwic Man and the Spiritual Man

The passage through sattwa is the ordinary idea of Yoga, it is the preparation and purification by the yama-niyama of Patanjali or by other means in other Yogas, e.g., saintliness in the bhakti schools, the eightfold path in Buddhism etc., etc. In our Yoga the evolution through sattwa is replaced by the cultivation of equanimity, *samatā*, and by the psychic transformation.

*

It is a very beautiful character that you describe in your letter, a perfect type of the sattwic man, a fine and harmonised ethical nature supported and vivified by a fine and developed psychic being. But still, although it may be regarded as an excellent preparation for the spiritual life, it cannot by itself be called spirituality—unless indeed we reduce the meaning of the word to the connotation ordinarily given to it in the West where mental ideation, ethical striving, a flowering of fine character, altruism, self-sacrifice, self-denial, philanthropy, service to men or mankind are considered the height of spiritual aspiration or spiritual attainment. Obviously if that is to be the last word of earthly achievement, there is no need for anything farther; the close and vivid discovery of soul or self, the straining towards

that which is behind life and above mind, the passion for the Eternal or the Infinite, the hunger for a freedom and wideness of consciousness and existence not limited by the narrow moulds of intellect, character and the past life-aims of humanity, the thirst for union with the Divine or for the pure bliss and beauty of spiritual existence not tied down to mental and vital values must be dismissed as a superfluous dream for which there is neither place nor necessity here. Yet these things have been not only dreamed of and hungered after but reached and tasted by beings born in a mortal and human body. Spirituality lies there; its essence consists in a bursting of the human mental, moral, aesthetic, vital moulds in order to reach beyond them and enter into a consciousness of which these things are the very stuff, to which these experiences are native. Anything less than that, than a striving after it or at least a partial realisation of it is not spirituality. The spiritual man is one who has realised something of it even if only in one aspect out of many; one who is striving after it is the spiritual seeker. All else however magnificently intellectual, ethical, aesthetically beautiful and harmonious, vitally splendid, great and forceful or physically perfect is a valuable achievement on the way, but not yet that, for one has not passed the Rubicon of mind into a new empire.

Owing to the nature of the past evolution of consciousness and of spirituality itself, there has been much confusion on this point and there is still more today because of the present domination of the Western ideal. On one side or another mental idealism, ethical development, altruistic character and action, religious piety and fervour, occult powers, feats of ascetic endurance have been put forward as the essence of spirituality or the test or proof of achievement or the signposts of the journey to spiritual perfection. It is ignored that any of these things may be there and yet there need not be any spiritual life behind it, any rebirth into a new consciousness or any remoulding of either the inner or the outer consciousness no longer in a higher or richer power of mind and life and body only, the instruments, but in the direct light and force of the hitherto veiled user of the instrument, the now revealed and directly active soul, self, spirit or of the

Divine or Eternal whose representatives or aspects they are.

This confusion meets us at every point and in all sorts of forms whose common error is to ignore the essence and core of the matter. The Western intellect presents us with the strivings of the mind, life, emotions, passions, moral will and tells us these are the real spiritual things, man's highest aim and endeavour and all else is vain mysticism, asceticism, evasion of life. It appears that the lined and ravaged face of a Greek bust of Homer is a thousand times more spiritual than the empty calm or the ecstatic smile of the Buddha! We are told by others that to care for the family and carry out our social and domestic duties, to be a good man, a perfect citizen, patriot, worker for the community, to serve mankind are the real things far more spiritual than to sit in idle meditation seeking for some remote and invisible transcendental Reality—or unreality. Philanthropy, altruism, service, selfless labour for humankind, these are the spiritual summits. True selflessness lies there, to sacrifice or offer one's life to the good of others, to the community, to the race. To seek one's own inner spiritual growth, to draw back from ordinary life in order to reach something beyond, to search after the Divine above humanity is mere egoism, not true spirituality, but an aberration, a misdirection of the will and life.

All that might be admirable and true—as certainly all the things thus eulogised have their place in the human evolution, if the premiss on which it were founded were true—that the seeking for something behind, something beyond, something of which the evolution of mind, life and body was only a veil or a preparation is an illusion and a chimaera. But if these things are real, if the seeking is a lasting and major drive in Nature, then all these objections and recommendations are futile. For this drive will fulfil itself, this hidden reality will draw and draw us till we achieve it. Those who feel its call, cannot do otherwise than follow and strive, even if need be leave all else for it, hold all other greatness, splendour, nobility, beauty as cheaper minor things compared with this other Light and Greatness and Beauty of which they have had the vision, the intimation, the formless attraction or else the passing touch or glimpse. Ever since Mind

itself reached a certain development, there has been at first dimly and gropingly, then more and more clearly and intimately this drive in man towards something behind and beyond Man, towards the discovery or the expression of something hidden in his being and a world existence which is more real than his surface self even at its best, greater, fuller, truer, more divine. To arrive at that can come only by a change of consciousness, a reversal of consciousness, a new basis of consciousness which is not the lower instrumental consciousness of mind, life and body.

At each step of evolution we have this change, reversal, new base. Matter is bound in an involved consciousness which is in practice an inconscience; life in the plant in a still involved consciousness struggling for growth, expansion, persistence, seeking after movement and sensation and conscious living without yet reaching them; life in the animal in a vital consciousness possessed of these things, already emotional, possessed of a mind, but a mind still involved in life-movement, not reflective, not subjective and turning upon life to understand, master and control it. Mind is based on a consciousness that has attained this emergence, this reflective and controlling power, this growing understanding, mastery, self-awareness. But mind is still aware only of life and of itself, it is not aware of the person, the reality behind, the user of the instrument; it is seeking for these things and it is this search that constitutes the drive for a new evolution; for mind is a twilight preparing for light, an ignorance seeking after knowledge, a bondage to Nature groping after freedom and mastery over Nature. It is not on mind, on its self-modifying ignorance and bondage or even on its half-light, half-mastery, half-knowledge that the next step can base itself. It must base itself on soul consciousness, consciousness of the spirit and self — for so only can there be the full light, the spontaneous mastery, the intimate and real knowledge.

*

Obviously [*in sadhana*] the rajasic movements are likely to create more trouble than the sattwic ones. The greatest difficulty of the sattwic man is the snare of virtue and self-righteousness, the

ties of philanthropy, mental idealisms, family affections etc., but except the first, these are, though difficult, still not so difficult to overpass or else transform. Sometimes however these things are as sticky as the rajasic difficulties.

Selfishness and Unselfishness

Selfishness and the reaction of unselfishness of which you speak are both of them things that have to be put aside—both are obstacles or movements leading off from the true and straight path. For both these things belong to the mind and vital, they are different forms of the ego. The mind in its attempt to get away from the rajasic selfish ego tries to do just the opposite of what selfishness usually does and serve others, sacrifice itself for others, but in doing so it is only constructing another kind of egoism that prides itself on its own unselfishness and altruism and makes human service its mental ideal instead of spiritual service of the Divine. That it is a misguiding movement you saw yourself; for it wanted to sacrifice your sadhana, that is, your seeking for the Divine to this new ego of altruistic self-righteousness; it was prepared to do things without permission of the Mother or rather avoiding asking for permission. One has to get rid of selfishness and ego, not in this way, but by selfless service of the Divine and by merging the ego in the Divine Consciousness, submitting the personal will to the Divine Will, calling into the being the Divine Peace, Purity, Oneness, Knowledge, Light, Ananda, replacing the ego by the psychic being devoted and surrendered to the Divine. It is the love of the Divine that saves, not a love turned towards human beings. When the Divine Consciousness is there, then there comes based on the love of the Divine a true love and oneness for all beings. But that does not act separately from the Divine but only according to the Divine Mother's will and in her service.

*

Unselfishness is not the only thing to be aimed at—by itself it would be only a moral, not a spiritual attainment.

Humility

A spiritual humility within is very necessary, but I do not think an outward one is very advisable (absence of pride or arrogance or vanity is indispensable of course in one's outer dealings with others) — it often creates pride, becomes formal or becomes ineffective after a time. I have seen people doing it to cure their pride, but I have not found it producing a lasting result.

*

It [*to feel like doing namaskar to everyone*] is a feeling which some have who either want to cultivate humility (X used to do it, but I never saw that it got rid of his innate self-esteem) or who have or are trying to have the realisation of Narayan in all with a Vaishnava turn in it. To feel the One in all is right, but to bow down to the individual who lives still in his ego is good neither for him nor for the one who does it. Especially in this Yoga it tends to diffuse what should be concentrated and turned towards a higher realisation than that of the cosmic feeling which is only a step on the way.

*

It is only this habit of the nature — self-worrying and harping on the sense of deficiency — that prevents you from being quiet. If you threw that out, it would be easy to be quiet. Humility is needful, but constant self-depreciation does not help; excessive self-esteem and self-depreciation are both wrong attitudes. To recognise any defects without exaggerating them is useful but, once recognised, it is no good dwelling on them always; you must have the confidence that the Divine Force can change everything and you must let the Force work.

*

The view taken by the Mahatma in these matters [*of caste*] is Christian rather than Hindu — for the Christian, self-abasement, humility, the acceptance of a low status to serve humanity or the Divine are things which are highly spiritual and the noblest

privilege of the soul. This view does not admit any hierarchy of castes; the Mahatma accepts castes but on the basis that all are equal before the Divine; a Bhangi doing his dharma is as good as the Brahmin doing his, there is division of function but no hierarchy of functions. That is one view of things and the hierarchic view is another, both having a standpoint and logic of their own which the mind takes as wholly valid but which only corresponds to a part of the reality. All kinds of work are equal before the Divine and all men have the same Brahman within them, is one truth, but that development is not equal in all is another. The idea that it needs special punya to be born as a Bhangi is of course one of those forceful exaggerations of an idea which are common with the Mahatma and impress greatly the mind of his hearers. The idea behind is that his function is an indispensable service to the society, quite as much as the Brahmin's, but that being disagreeable it would need a special moral heroism to choose it voluntarily and he thinks as if the soul freely chose it as such a heroic service and as a reward of righteous acts—that is hardly likely. The service of the scavenger is indispensable under certain conditions of society, it is one of those primary necessities without which society can hardly exist and the cultural development of which the Brahmin life is part could not have taken place. But obviously the cultural development is more valuable than the service of the physical needs for the progress of humanity as opposed to its first static condition and that development can even lead to the minimising and perhaps the eventual disappearance by scientific inventions of the need for the functions of the scavenger. But that I suppose the Mahatma would not approve of as it is machinery and a departure from the simple life. In any case it is not true that the Bhangi life is superior to the Brahmin life and the reward of especial righteousness. On the other hand the traditional conception that a man is superior to others because he is born a Brahmin is not rational or justifiable. A spiritual or cultured man of Pariah birth is superior in the divine values to an unspiritual and worldly-minded or a crude and uncultured Brahmin. Birth counts, but the basic value is in the man himself, the soul behind,

and the degree to which it manifests itself in his nature.

*

As for the sense of superiority, that too is a little difficult to avoid when greater horizons open before the consciousness, unless one is already of a saintly and humble disposition. There are men like Nag Mahashoy in whom spiritual experience creates more and more humility, there are others like Vivekananda in whom it erects a giant sense of strength and superiority—European critics have taxed him with it rather severely; there are others in whom it fixes a sense of superiority to men and humility to the Divine. Each position has its value. Take Vivekananda's famous answer to the Madras Pundit who objected to one of his assertions, "But Shankara does not say so." To which Vivekananda replied, "No, Shankara does not say so, but I, Vivekananda, say so", and the Pundit sank back amazed and speechless. That "I, Vivekananda" stands up to the ordinary eye like a Himalaya of self-confident egoism. But there was nothing false or unsound in Vivekananda's spiritual experience. This was not mere egoism, but the sense of what he stood for and the attitude of the fighter who, as the representative of something very great, could not allow himself to be put down or belittled. This is not to deny the necessity of non-egoism and of spiritual humility, but to show that the question is not so easy as it appears at first sight. For if I have to express my spiritual experiences, I must do it with truth—I must record them, their *bhāva*, the thoughts, feelings, extensions of consciousness which accompany them. What can I do with the experience in which one feels the whole world in oneself or the force of the Divine flowing in one's being and nature or the certitude of one's faith against all doubts and doubters or one's oneness with the Divine or the smallness of human thought and life compared with this greater knowledge and existence? And I have to use the word "I"—I cannot take refuge in saying "this body" or "this appearance",—especially as I am not a Mayavadin. Shall I not inevitably fall into expressions which will make X shake his head at my assertions as full of pride and ego? I imagine it would be difficult to avoid it.

Another thing, it seems to me that you identify faith very much with mental belief—but real faith is something spiritual, a knowledge of the soul. The assertions you quote in your letter are the hard assertions of a mental belief leading to a great vehement assertion of one's creed and god because they are one's own and must therefore be greater than those of others—an attitude which is universal in human nature. Even the atheist is not tolerant, but declares his credo of Nature and Matter as the only truth and on all who disbelieve it or believe in other things he pours scorn as unenlightened morons and superstitious half-wits. I bear him no grudge for thinking me that; but I note that this attitude is not confined to religious faith but is equally natural to those who are free from religious faith and do not believe in Gods or Gurus.

*

Perhaps one could say that it [*spiritual humility*] is to be aware of the relativity of what has been done compared with what is still to be done—and also to be conscious of one's being nothing without the Divine Grace.

Sacrifice

Sacrifice has a moral and psychological value always. This value is the same no matter what may be the cause for which the sacrifice is made, provided the one who makes it believes in the truth or justice or other worthiness of his cause. If one makes the sacrifice for a cause one knows to be wrong or unworthy, all depends on the motive and spirit of the sacrifice. Bhishma accepting death in a cause he knew to be unjust, obeyed the call of loyalty to what he felt to be his personal duty. Many have done that in the past, and the moral and psychic value of their act lies, irrespective of the nature of the cause, in the nobility of the motive.

As to the other question, in this sense of the word sacrifice there is none for the man who gives up something which he does not value, except in so far as he undergoes loss, defies social ban

or obloquy or otherwise pays a price for his liberation. I may say, however, that without being cold and unloving a man may be so seized by a spiritual call or the call of a great human cause that the family or other ties count for nothing beside it, and he leaves all joyfully, without a pang, to follow the summoning Voice.

In the spiritual sense, however, sacrifice has a different meaning — it does not so much indicate giving up what is held dear as an offering of oneself, one's being, one's mind, heart, will, body, life, actions to the Divine. It has the original sense of "making sacred" and is used as an equivalent of the word Yajna. When the Gita speaks of the "sacrifice of knowledge", it does not mean a giving up of anything, but a turning of the mind towards the Divine in the search for knowledge and an offering of oneself through it. It is in this sense, too, that one speaks of the offering or sacrifice of works. The Mother has written somewhere that the spiritual sacrifice is joyful and not painful in its nature. On the spiritual path, very commonly, if a seeker still feels the old ties and responsibilities strongly, he is not asked to sever or leave them, but to let the call in him grow till all within is ready. Many, indeed, come away earlier because they feel that to cut loose is their only chance, and these have to go sometimes through a struggle. But the pain, the struggle, is not the essential character of the spiritual self-offering.

*

It [*pain and struggle in offering oneself to the Divine*] simply means that your sacrifice is still mental and has not yet become spiritual in its character. When your vital being consents to give up its desires and enjoyments, when it offers itself to the Divine, then the yajna will have begun. What I meant was that the European sense of the word is not the sense of the word "yajna" or the sense of "sacrifice" in such phrases as "the sacrifice of works". It does not mean that you give up all works for the sake of the Divine — for then there would be no sacrifice of works at all. Similarly the sacrifice of knowledge does not mean that you painfully and resolutely make yourself a fool for the sake of the

Lord. Sacrifice means an inner offering to the Divine and the real spiritual sacrifice is a very joyful thing. Otherwise, one is only trying to make oneself fit and has not yet begun the real yajna. It is because your mind is struggling with your vital, the unwilling animal, and asking it to allow itself to be immolated that there is the pain and struggle. If the spiritual will (or psychic) were more in the front then you would not be lamenting over the loss of the ghee and butter and curds thrown into the Fire or trying to have a last lick at it before casting it. The only difficulty would be about bringing down the gods fully enough (a progressive labour), not about lamentations over the ghee. By the way, do you think that the Mother or myself or others who have taken up the spiritual life had not enjoyed life and that it is therefore that the Mother was able to speak of a joyous sacrifice to the Divine as the true spirit of spiritual sacrifice? Or do you think we spent the preliminary stages in longings for the lost fleshpots of Egypt and that it was only later on we felt the joy of the spiritual sacrifice? Of course we did not; we and many others had no difficulty on the score of giving up anything we thought necessary to give up and no hankerings afterwards. Your rule is as usual a stiff rule that does not at all apply generally.

*

Sacrifice depends on the inner attitude. If one has nothing outward to sacrifice, one has always oneself to give.

Ahimsa, Destruction and Violence

The doctrines of Ahimsa and non-violence and altruism are early steps on the road to spiritual knowledge—but once advanced on the road what is true behind them takes its place, as a thread in the complex weft of spiritual truth and feeling, not as a rigid ethical rule or all-swallowing dogma. The Manifestation here is too complex in its concealed Unity for such mental or emotional formulas to be unerring guides.

*

The impersonal Truth, precisely because it is impersonal, can contain quite opposite things. There is a truth in Ahimsa, there is a truth in Destruction also. I do not teach that you should go on killing everybody every day as a spiritual dharma. I say that destruction can be done when it is part of the Divine work commanded by the Divine. Non-violence is better than violence as a rule, and still sometimes violence may be the right thing. I consider dharma as relative; unity with the Divine and action from the Divine Will the highest way. Buddha did not aim at action in the world, but at cessation from the world-existence. For that he found the eightfold Path a necessary preparatory discipline and so proclaimed it.

It [*Ahimsa*] had nothing to do with the Yuga [*at the time of Buddha*], but with the path towards liberation found by Buddha. There are many paths and all need not be one and the same in their teaching.

*

Destruction in itself is neither good nor evil. It is a fact of Nature, a necessity in the play of forces as things are in this world. The Light destroys the Darkness and the Powers of Darkness, and that is not a movement of Ignorance!

It all depends on the character of the destruction and the forces that enter into it. All dread of fire or other violent forces should be overcome. For dread shows a weakness—the free spirit can stand fearless before even the biggest forces of Nature.

*

This world is so arranged that it is not possible to live without some destruction of life—so for this there need be no remorse. Only one should not destroy life wantonly or inflict needless suffering on animals or any living things.

*

I feel inclined to back out of the arena¹ or take refuge in the

¹ *The correspondent asked whether the violence done to animals by medical researchers was justifiable; their experiments with animals, he said, sometimes led to the saving of human lives.—Ed.*

usual saving formula, "There is much to be said on both sides." Your view is no doubt correct from the common-sense or what might be called the "human" point of view. Krishnaprem takes the standpoint that we must not only consider the temporary good to humanity, but certain inner laws. He thinks the harm, violence or cruelty to other beings is not compensated and cannot be justified by some physical good to a section of humanity or even to humanity as a whole; such methods awake, in his opinion, a sort of Karmic reaction apart from the moral harm to the men who do these things. He is also of the opinion that the cause of disease is psychic, that is to say, subjective and the direction should be towards curing the inner causes much more than patching up by physical means. These are ideas that have their truth also. I fully recognise the psychic law and methods and their preferability, but the ordinary run of humanity is not ready for that rule and, while it is so, doctors and their physical methods will be there. I have also supported justifiable violence on justifiable occasions, e.g., Kurukshetra and the war against Hitler and all he means. The question then, from this middle point of view, about the immediate question is whether this violence is justifiable and the occasion justifiable. I back out.

War and Conquest

War and conquest are part of the economy of vital Nature, it is no use blaming this or that people for doing it—everybody does it who has the power and the chance. China who now complains was herself an imperialist and colonising country through all the centuries in which Japan kept religiously within her own borders. If it were not profitable, I suppose nobody would do it. England has grown rich on the plundered wealth of India. France depends for many things on her African colonies. Japan needs an outlet for her overabundant population and safe economic markets nearby. Each is pushed by forces that use the minds of rulers and peoples to fulfil themselves—unless human nature changes no amount of moralising will prevent it.

*

There has been almost continuous war in the world — it is as in the history of the Roman Republic when the gates of the temple of Janus were closed only once or twice in its many centuries — a sign that the Republic was at peace with all the world. There have been in modern times long intervals between long wars, but small ones have been generally going on somewhere or another. Man is a quarrelling and fighting animal and so long as he is so how can there be peace?

Poverty

It is a world which has emerged from the Inconscient and these things [*poverty and misery*] are results of the imperfect working of the human mind which, being born into the ignorant life and matter, has to learn by effort and experience. Ignorance and ego have to be outgrown before there can be a true utilisation of the resources of Nature.

Natural Calamities

Why should earthquakes occur by some wrong movement of man? When man was not there, did not earthquakes occur? If he were blotted out by poison gas or otherwise, would they cease? Earthquakes are a perturbation in Nature due to some pressure of forces; frequency of earthquakes may coincide with a violence of upheavals in human life but the upheavals of earth and human life are both results of a general clash or pressure of forces, one is not the cause of the other.

Chapter Four

Social Duties and the Divine

Family, Society, Country and the Divine

Family, society, country are a larger ego—they are not the Divine. One can work for them and say that one is working for the Divine only if one is conscious of the Divine Adesh to act for that purpose or of the Divine Force working within one. Otherwise it is only an idea of the mind identifying country etc. with the Divine.

*

I suppose each man makes or tries to make his own organisation of life out of the mass of possibilities the forces present to him. Self (physical self) and family are the building most make—to earn, to create a family and maintain it, perhaps to get some position in the present means of life one chooses, in business, the profession etc., etc. Country or humanity are usually added to that by a minority. A few take up some ideal and follow it as the mainstay of their life. It is only the very religious who try to make God the centre of their life—that too rather imperfectly, except for a few. None of these things are secure or certain, even the last being certain only if it is followed with an absoluteness which only a few are willing to give. The life of the Ignorance is a play of forces through which man seeks his way and all depends on his growth through experience to the point at which he can grow out of it into something else. That something else is in fact a new consciousness—whether a new consciousness beyond the earthly life or a new consciousness within it.

*

I don't remember the context; but I suppose he [*the writer of Yogic Sadhan*] means that when one has to escape from the lower dharma, one has often to break it so as to arrive at a

larger one. E.g. social duties, paying debts, looking after family, helping to serve your country, etc. etc. The man who turns to the spiritual life, has to leave all that behind him often and he is reproached by lots of people for his Adharma. But if he does not do this Adharma, he is bound for ever to the lower life—for there is always some duty there to be done—and cannot take up the spiritual dharma or can do it only when he is old and his faculties impaired.

*

Idealising is a pastime of the mind—except for the few who are passionately determined to make the ideal real. Buddha is in Nirvana and his wife and child are there too perhaps, so it is easy to praise his spiritual greatness and courage—but for living people with living relatives a similar action is monstrous. They ought to be satisfied with praising Buddha and take care not to follow his example.

*

The tendency you speak of, to leave the family and social life for the spiritual life, has been traditional in India for the last 2000 years and more—chiefly among men, it touches only a very small number of women. It must be remembered that Indian social life has subordinated almost entirely the individual to the family. Men and women do not marry according to their free will; their marriages are mostly arranged for them while they are still children. Not only so, but the mould of society has been long of an almost iron fixity putting each individual in his place and expecting him to conform to it. You speak of issues and a courageous solution, but in this life there are no problems and issues and no call for a solution—a courageous solution is only possible where there is freedom of the personal will; but where the only solution (if one remains in this life) is submission to the family will, there can be nothing of that kind. It is a secure life and can be happy if one accommodates oneself to it and has no unusual aspirations beyond it or is fortunate in one's environment; but it has no remedy for or escape from

incompatibilities or any kind of individual frustration; it leaves little room for initiative or free movement or any individualism. The only outlet for the individual is his inner spiritual or religious life and the recognised escape is the abandonment of the *samsāra*, the family life, by some kind of Sannyasa. The Sannyasi, the Vaishnava Vairagi or the Brahmachari are free; they are dead to the family and can live according to the dictates of the inner spirit. Only if they enter into an order or asram, they have to abide by the rules of the order, but that is their own choice, not a responsibility which has been laid on them without their choice. Society recognised this door of escape from itself; religion sanctioned the idea that distaste for the social or worldly life was a legitimate ground for taking up that of the recluse or religious wanderer. But this was mainly for men; women, except in old times among the Buddhists who had their convents and in later times among the Vaishnavas, had little chance of such an escape unless a very strong spiritual impulse drove them which would take no denial. As for the wife and children left behind by the Sannyasi, there was little difficulty, for the joint family was there to take up or rather to continue their maintenance.

At present what has happened is that the old framework remains, but modern ideas have brought a condition of inadaptation, of unrest, the old family system is breaking up and women are seeking in more numbers the same freedom of escape as men have always had in the past. That would account for the cases you have come across—but I don't think the number of such cases can be as yet at all considerable, it is quite a new phenomenon; the admission of women to Asrams is itself a novelty. The extreme unhappiness of a mental and vital growth which does not fit in with the surroundings, of marriages imposed that are unsuitable and where there is no meeting-point between husband and wife, of an environment hostile and intolerant of one's inner life and on the other hand the innate tendency of the Indian mind to seek a refuge in the spiritual or religious escape will sufficiently account for the new development. If society wants to prevent it, it must itself change. As to individuals, each case must be judged on its own merits; there is too much

complexity in the problem and too much variation of nature, position, motives for a general rule.

Philanthropy

Whatever one does must be from the highest spontaneous inner urge in oneself. So long as the urge is towards philanthropy, Gandhism etc., he has to follow that—to follow the way of spiritual endeavour he must have the need, the distinct call in himself—not merely a mental recognition but the soul's call.

*

Perhaps you could write (in Bengali)¹ something to him about the true object of the Yoga—especially on two points:

(1) The object is not philanthropy but to find the Divine, to enter into the Divine Consciousness and find one's true being (which is not the ego) in the Divine. (2) The *ripus* cannot be conquered by *damana*; even if it succeeds to some extent, it only keeps them down but does not destroy them, often compression only increases their force. It is by purification through the Divine Consciousness entering into the egoistic nature and changing it that the thing can be done.

As for accepting him, it depends on his capacity to open himself to the Influence and receive it. If he likes to try, he can, but he will not succeed unless he is entirely in earnest. There is something in him that can turn to the Divine, but there is also much in his nature that may resist. It is only if he gives himself from deep within and is absolutely persevering in the Way that he can succeed.

Give him some idea of the central process of the Yoga, especially opening to the working of the Divine Power and rejection of all that is of the lower nature.

Humanitarianism

The idea of usefulness to humanity is the old confusion due

¹ Sri Aurobindo wrote this reply to his secretary, Nolini Kanta Gupta, who replied to the correspondent.—Ed.

to secondhand ideas imported from the West. Obviously, to be “useful” to humanity there is no need of Yoga; everyone who leads the human life is useful to humanity in one way or another.

Yoga is directed towards God, not towards man. If a divine supramental consciousness and power can be brought down and established in the material world, that obviously would mean an immense change for the earth including humanity and its life. But the effect on humanity would only be one result of the change; it cannot be the object of the sadhana. The object of the sadhana can only be to live in the divine consciousness and to manifest it in life.

*

As to the extract about Vivekananda, the point I make there² does not seem to me humanitarian. You will see that I emphasise there the last sentences of the passage quoted from Vivekananda, not the words about God the poor and sinner and criminal. The point is about the Divine in the World, the All, *sarva-bhūtāni* of the Gita. That is not merely humanity, still less only the poor or the wicked; surely even the rich or the good are part of the All and those also who are neither good nor bad nor rich nor poor. Nor is there any question (I mean in my own remarks) of philanthropic service; so neither *daridra* nor *sevā* is the point. I had formerly not the humanitarian but the humanity view—and something of it may have stuck to my expressions in the *Arya*. But I had already altered my viewpoint from the “Our Yoga for the sake of humanity” to “Our Yoga for the sake of the Divine”. The Divine includes not only the supracosmic but the cosmic and the individual—not only Nirvana or the Beyond but Life and the All. It is that I stress everywhere. But I shall keep the extracts for a day or two and see what there is, if anything, that smacks too much of a too narrow humanistic standpoint. I stop here for today.

*

² In The Synthesis of Yoga Sri Aurobindo wrote: “Often, we see this desire of personal salvation overcome by another attraction which also belongs to the higher turn of our nature and which indicates the essential character of the action the liberated soul

Today a Kanchenjunga of correspondence has fallen on my head, so I could not write about humanity and its progress. Were not the later views of Lowes Dickinson greyed over by the sickly cast of a disappointed idealism? I have not myself an exaggerated respect for humanity and what it is—but to say that there has been no progress is as much an exaggerated pessimism as the rapturous hallelujahs of the nineteenth century to a progressive humanity were an exaggerated optimism.

I shall manage to read through the chapter you sent me, though how I manage to find time for these things is a standing miracle and a signal proof of a Divine Providence.

Yes, the “progress” you are making is of the genuine kind—the signs are recognisable. And after all the best way to make humanity progress is to move on oneself—that may sound either individualistic or egoistic, but it isn’t; it is only common sense.

Yad yad ācarati śreṣṭhas tat tad evetaro janah.³

*

It is no use entertaining these feelings. One has to see what the world is without becoming bitter—for the bitterness comes from one’s own ego and its disappointed expectations. If one wants the victory of the Divine, one must achieve it in oneself first.

must pursue. . . . It is that which inspires a remarkable passage in a letter of Swami Vivekananda. ‘I have lost all wish for my salvation,’ wrote the great Vedantin, ‘may I be born again and again and suffer thousands of miseries so that I may worship the only God that exists, the only God I believe in, the sum-total of all souls,—and above all, my God the wicked, my God the miserable, my God the poor of all races, of all species is the special object of my worship. He who is the high and low, the saint and the sinner, the god and the worm, Him worship, the visible, the knowable, the real, the omnipresent; break all other idols. In whom there is neither past life nor future birth, nor death nor going nor coming, in whom we always have been and always will be one, Him worship; break all other idols.’

“The last two sentences contain indeed the whole gist of the matter.” The Synthesis of Yoga, volume 23 of THE COMPLETE WORKS OF SRI AUROBINDO, pp. 269–70.

³ “Whatsoever the Best doeth, that the lower kind of man puts into practice.” Gita 3.21. Sri Aurobindo’s translation. Essays on the Gita, volume 19 of THE COMPLETE WORKS OF SRI AUROBINDO, p. 135.

Social and Political Activism

All this insistence upon action is absurd if one has not the light by which to act. Yoga must include life and not exclude it does not mean that we are bound to accept life as it is with all its stumbling ignorance and misery and the obscure confusion of human will and reason and impulse and instinct which it expresses. The advocates of action think that by human intellect and energy making an always new rush everything can be put right; the present state of the world after a development of the intellect and a stupendous output of energy for which there is no historical parallel is a signal proof of the illusion under which they labour. Yoga takes the stand that it is only by a change of consciousness that the true basis of life can be discovered; from within outward is indeed the rule. But within does not mean some quarter inch behind the surface. One must go deep and find the soul, the self, the Divine Reality within us and only then can life become a true expression of what we can be instead of a blind and always repeated confused blur of the inadequate and imperfect thing we were. The choice is between remaining in the old jumble and groping about in the hope of stumbling on some discovery or standing back and seeking the Light within till we discover and can build the godhead within and without us.

*

I had never a very great confidence in X's yoga-turn getting the better of his activism—he has two strong ties that prevent it, ambition and need to act and lead in the vital and in the mind a mental idealism—these two things are the great fosterers of illusion. The spiritual path needs a certain amount of realism—one has to see the real value of the things that are—which is very little, except as steps in evolution. Then one can either follow the spiritual static path of rest and release or the spiritual dynamic path of a greater truth to be brought down into life. But otherwise—

Part Five

Questions of
Spiritual and Occult Knowledge

Section One

The Divine and the Hostile Powers

Chapter One

Terminology

The Dynamic Divine, the Gods, the Asuras

The dynamic aspect of the Divine is the Supreme Brahman, not the Gods. The Gods are Personalities and Powers of the dynamic Divine. You speak as if the evolution were the sole creation; the creation or manifestation is very vast and contains many planes and worlds that existed before the evolution, all different in character and with different kinds of beings. The fact of being prior to the evolution does not make them undifferentiated. The world of the Asuras is prior to the evolution, so are the worlds of the mental, vital or subtle physical Devas — but these beings are all different from each other. The great Gods belong to the Overmind plane; in the Supermind they are unified as aspects of the Divine, in the Overmind they appear as separate personalities. Any godhead can descend by emanation to the physical plane and associate himself with the evolution of a human being with whose line of manifestation he is in affinity. But these are things which cannot be very easily understood by the mind, because the mind has too rigid an idea of personality — the difficulty only disappears when one enters into a more flexible consciousness above where one is nearer to the experience of One in all and All in one.

The Soul, the Divine, the Gods, the Asuras

The word soul has various meanings according to the context; it may mean the Purusha supporting the formation of Prakriti which we call a being, though the proper word would be rather a becoming; it may mean on the other hand specifically the psychic being in an evolutionary creature like man; it may mean the spark of the Divine which has been put into Matter by the descent of the Divine into the material world and which upholds

all evolving formations here. There is and can be no psychic being in a non-evolutionary creature like the Asura; there can be none in a God who does not need one for his existence. But what the God has is a Purusha and a Prakriti or Energy of nature of that Purusha. If any being of the typal worlds wants to evolve he has to come down to earth and take a human body and accept to share in the evolution. It is because they do not want to do this that the vital beings try to possess men so that they may enjoy the materialities of physical life without bearing the burden of the evolution or the process of conversion in which it culminates. I hope this is clear and solves the difficulty.

*

The three stages you speak of¹ are stages not of evolution but of the involution of the Divine in Matter. The Devas and Asuras are not evolved in Matter; for the typal being only a Purusha with its Prakriti is necessary—this Purusha may put out a mental and vital Purusha to represent it and according as it is centred in one or another it belongs to the mental or vital world. That is all.

There is no essential difference anywhere, for all is fundamentally the essential Divine; the difference is in the manifestation. Practically, we may say that the Jivatman is one of the divine Many and dependent on the One; the Atman is the One supporting the Many. The psychic being does not merge in the Jivatman, it becomes united with it so that there is no difference between the central being supporting the manifestation from above and the same being supporting the manifestation from within it, because the psychic being has become fully aware of the play of the Divine through it. What is called merging takes place in the Divine Consciousness when the Jivatman feels itself so one with the Divine that there is nothing else.

¹ *The correspondent's letter is not available to determine these stages.—Ed.*

Terms in *The Mother***(1) Falsehood and Ignorance**

Ignorance means Avidya, the separative consciousness and the egoistic mind and life that flows from it and all that is natural to the separative consciousness and the egoistic mind and life. This Ignorance is the result of a movement by which the cosmic Intelligence separated itself from the light of Supermind (the divine Gnosis) and lost the Truth,—truth of being, truth of divine consciousness, truth of force and action, truth of Ananda. As a result instead of a world of integral truth and divine harmony created in the light of the divine Gnosis, we have a world founded on the part truths of an inferior cosmic Intelligence in which all is half truth, half error. It is this that some of the ancient thinkers like Shankara, not perceiving the greater Truth-Force behind, stigmatised as Maya and thought to be the highest creative power of the Divine. All in the consciousness of this creation is either limited or else perverted by separation from the integral Light; even the Truth it perceives is only a half knowledge. Therefore it is called the Ignorance.

Falsehood, on the other hand, is not this Avidya, but an extreme result of it. It is created by an Asuric power which intervenes in this creation and is not only separated from the Truth and therefore limited in knowledge and open to error, but in revolt against the Truth or in the habit of seizing the Truth only to pervert it. This Power, the dark Asuric Shakti or Rakshasic Maya, puts forward its own perverted consciousness as true knowledge and its wilful distortions or reversals of the Truth as the verity of things. It is the powers and personalities of this perverted and perverting consciousness that we call hostile beings, hostile forces. Whenever these perversions created by them out of the stuff of the Ignorance are put forward as the truth of things, that is the Falsehood, in the Yogic sense, *mithyā*, *moha*.

(2) Powers and Appearances

These are the forces and beings that are interested in maintaining the falsehoods they have created in the world of the Ignorance and in putting them forward as the Truth which men must follow. In India they are termed Asuras, Rakshasas, Pisachas (beings respectively of the mentalised vital, middle vital and lower vital planes) who are in opposition to the Gods, the Powers of Light. These too are Powers, for they too have their cosmic field in which they exercise their function and authority and some of them were once divine Powers (the former gods, *pūrve devāḥ*, as they are called somewhere in the Mahabharata) who have fallen towards the Darkness by revolt against the divine Will behind the cosmos. The word “Appearances” refers to the forms they take in order to rule the world, forms often false and always incarnating falsehood, sometimes pseudo-divine.

(3) Powers and Personalities

The use of the word Power has already been explained — it can be applied to whatever or whoever exercises a conscious power in the cosmic field and has authority over the world-movement or some part of it or some movement in it. But the Four of whom you speak are also Shaktis, manifestations of different powers of the supreme Consciousness and Force, the Divine Mother, by which she rules or acts in the universe. And they are at the same time divine Personalities; for each is a being who manifests different qualities and personal consciousness-forms of her Godhead. All the greater Gods are in this way personalities of the Divine — one Consciousness playing in many personalities, *ekam sat bahudhā*. Even in the human being there are many personalities and not only one, as used formerly to be imagined; for all consciousness can be at once one and multiple. “Powers and Personalities” simply describe different aspects of the same being; a Power is not necessarily impersonal and certainly it is not *avyaktam*, as you suggest,—on the contrary it is a manifestation acting in the worlds of the divine manifestation.

(4) Emanations

Emanations correspond to your description of the Matrikas of whom you speak in your letter. An emanation of the Mother is something of her consciousness and power put forth from her, which so long as it is in play is held in close connection with her and, when its play is no longer required, is withdrawn back into its source, but can always be put out and brought into play once more. But also the detaining thread of connection can be severed or loosened and that which came forth as an emanation can proceed on its way as an independent divine being with its own play in the world. All the Gods can put forth such emanations from their being, identical with them in essence of consciousness and power though not commensurate. In a certain sense the universe itself can be said to be an emanation from the Supreme. In the consciousness of the sadhaka an emanation of the Mother will ordinarily wear the appearance, form and characteristics with which he is familiar.

In a sense the four Powers of the Mother may be called, because of their origin, her Emanations, just as the Gods may be called Emanations of the Divine, but they have a more permanent and fixed character; they are at once independent beings allowed their play by the Adyā Shakti and yet portions of the Mother, the Mahashakti, and she can always either manifest through them as separate beings or draw them together as her own various Personalities and hold them in herself, sometimes drawn back, sometimes at play, according to her will. In the supramental plane they are always in her and do not act independently but as intimate portions of the original Mahashakti and in close union and harmony with each other.

(5) Gods

These four Powers are the Mother's cosmic godheads, permanent in the world-play; they stand among the greater cosmic Godheads to whom allusion is made when it is said the Mother as the Mahashakti of this triple world "stands there (in the

Overmind plane) above the Gods".² The Gods, as has been already said, are in origin and essence permanent Emanations of the Divine put forth from the Supreme by the Transcendent Mother, the Adyā Shakti; in their cosmic action they are Powers and Personalities of the Divine each with his independent cosmic standing, function and work in the universe. They are not impersonal entities but cosmic Personalities, although they can and do ordinarily veil themselves behind the movement of impersonal forces. But while in the Overmind and the triple world they appear as independent beings, they return in the Supermind into the One and stand there united in a single harmonious action as multiple personalities of the one Person, the divine Purushottama.

(6) *Presence*

It is intended by the word Presence to indicate the sense and perception of the Divine as a Being, felt as present in one's existence and consciousness or in relation with it, without the necessity of any farther qualification or description. Thus of the "ineffable Presence"³ it can only be said that it is there and nothing more can or need be said about it, although at the same time one knows that all is there, personality and impersonality, Power and Light and Ananda and everything else, and that all these flow from that indescribable Presence. The word may be used sometimes in a less absolute sense, but that is always the fundamental significance,—the essential perception of the essential presence supporting everything else.

² "Determining all that shall be in this universe and in the terrestrial evolution by what she sees and feels and pours from her, she stands there above the Gods and all her Powers and Personalities are put out in front of her for the action. . . ." Sri Aurobindo, *The Mother with Letters on the Mother*, volume 32 of THE COMPLETE WORKS OF SRI AUROBINDO, p. 16.

³ "Alone, she harbours the absolute Power and the ineffable Presence." Sri Aurobindo, *The Mother with Letters on the Mother*, p. 14.

(7) The Transcendent Mother

This is what is termed the Adyā Shakti; she is the supreme Consciousness and Power above the universe and it is by her that all the Gods are manifested, and even the supramental Ishwara comes into manifestation through her — the supramental Purushottama of whom the Gods are Powers and Personalities.

Chapter Two

The Gods

The Gods or Divine Powers

The Gods are Personalities or Powers put forth by the Divine — they are therefore in front limited Emanations, although the full Divine is behind each of them.

*

Of course, the gods exist — that is to say, there are Powers that stand above the world and transmit the divine workings. It is the physical mind which believes only in what is physical that denies them. There are also beings of other worlds — gods and Asuras etc.

*

There are Gods everywhere on all the planes.

*

The Gods are in the universal Self — if identified with the universal Self one can feel their presence there.

*

While the Gods cannot be transformed, for they are typal and not evolutionary beings, they can come for conversion — that is to say, to give up their own ideas and outlook on things and conform themselves to the higher Will and supramental Truth of the Divine.

*

The higher beings are not likely to be in disharmony with each other as they are not subject to the lower ignorance.

*

The Gods have their own enjoyments, though they may not be of a material character.

*

There are no planes of manifestation without forms — for without form creation or manifestation cannot be complete. But the supraphysical planes are not bound to the forms like the physical. The forms there are expressive, not determinative. What is important on the vital plane is the force or feeling and the form expresses it. A vital being has a characteristic form but he can vary it or mask his true form under others. What is primary on the mental plane is the perception, the idea, the mental significance and the form expresses that and these mental forms too can vary — there can be many forms expressing an idea in different ways or on different sides of the idea. Form exists but it is more plastic and variable than in physical nature.

As to the Gods, man can build forms which they will accept; but these forms too are inspired into man's mind from the planes to which the God belongs. All creation has the two sides, the formed and the formless; the Gods too are formless and yet have forms, but a Godhead can take many forms, here Maheshwari, there Pallas Athene. Maheshwari herself has many forms in her lesser manifestations, Durga, Uma, Parvati, Chandi etc. The Gods are not limited to human forms — man also has not always seen them in human forms only.

The Gods and the Overmind

The natives of the Overmind are Gods. Naturally the Gods rule the cosmos.

*

The Overmind is the world of the Gods and the Gods are not merely Powers, but have Forms also.

*

In the Overmind the Gods are still separated existences.

*

Beyond the Overmind (in the supramental nearest the Overmind for instance) the Gods are eternal in their principle, but not in their forms and separate activities; they are there simply aspects of the One. If you meet a Godhead there, it is not as a separate Person; you feel only the Divine having a particular face, as it were, and relation with you for a certain purpose.

*

The Formateurs of the Overmind have shaped nothing evil—it is the lower forces that receive from the Overmind and distort its forces.

Vedic Gods of the Indian Tradition

There are many forms of Agni,—the solar fire, the vaidyuta fire and the nether fire are one Trinity—the fivefold fire is part of the Vedic symbolism of sacrifice.

*

Vayu and Indra are cosmic godheads presiding over the action of cosmic principles—they are not the manomaya purusha or pranamaya purusha in each man. You have a mental being or purusha in you and a vital being or purusha, but you cannot say that you are in your mind Indra or in your vital Vayu. The Purusha is an essential being supporting the play of Prakriti—the Godhead (Indra, Vayu) is a dynamic being manifested in Prakriti for the works of the plane to which he belongs. There is an immense difference.

*

Yes, Mitra is rather a combination of the two powers [*Mahalakshmi and Mahasaraswati*].

*

I indicate the psychological powers which they [*six Vedic Gods*] bring with them:

- Mitra — Harmony.
- Varuna — Wideness.
- Aryaman — Power, Tapasya.
- Brihaspati — Wisdom (Word and Knowledge).
- Vishnu — Cosmic Consciousness.
- Vayu — Life.

Post-Vedic Gods of the Indian Tradition

Brahma, Vishnu, Shiva are only three Powers and Personalities of the One Cosmic Godhead.

*

Brahma is the Power of the Divine that stands behind formation and creation.

*

As for Vishnu being the creator, all the three Gods are often spoken of as creating the universe — even Shiva who is by tradition the Destroyer.

*

There is no particular connection between Shiva and the Overmind — the Overmind is the higher station of all the Gods.

*

Mahashiva means a greater manifestation than that ordinarily worshipped as Shiva — the creative dance of a greater Divine manifesting Power.

*

At X's conscientious hesitations between Krishna and Shakti and Shiva I could not help indulging in a smile. If a man is attracted by one form or two forms only of the Divine, it is all right, — but if he is drawn to several at a time he need not torment himself

over it. A man of some development has necessarily several sides in his nature and it is quite natural that different aspects should draw or govern different personalities in him — he can very well accept them all and harmonise them in the One Divine and the One Adya Shakti of whom all are the manifestations.

*

Shiva is the Lord of Tapas. The power is the power of Tapas.

Krishna as a godhead is the Lord of Ananda, Love and Bhakti; as an incarnation, he manifests the union of wisdom (Jnana) and works and leads the earth-evolution through this towards union with the Divine by Ananda, Love and Bhakti.

The Devi is the Divine Shakti—the Consciousness and Power of the Divine, the Mother and Energy of the worlds. All powers are hers. Sometimes Devi-power may mean the power of the universal World-Force; but this is only one side of the Shakti.

*

Mahakali and Kali are not the same, Kali is a lesser form. Mahakali in the higher planes appears usually with the golden colour.

*

Ganesh is the Power that removes obstacles by the force of Knowledge—Kartikeya represents victory over the hostile Powers. Of course the names given are human, but the Gods exist.

*

Ganesh (among other things) is the devata of spiritual Knowledge—so as you are getting this knowledge, you saw yourself in this form, identified with Ganesh.

Chapter Three

The Hostile Forces and Hostile Beings

The Existence of the Hostile Forces

The hostile forces exist and have been known to Yogic experience ever since the days of the Veda and Zoroaster in Asia (and the mysteries of Egypt and Chaldea and the Cabbala) and in Europe also from old times. These things of course cannot be felt or known so long as one lives in the ordinary mind and its ideas and perceptions — for there there are only two categories of influences recognisable, the ideas and feelings and actions of oneself and others and the play of environment and physical forces. But once one begins to get the inner view of things, it is different. One begins to experience that all is an action of forces, forces of Prakriti psychological as well as physical which play upon our nature — and these are conscious forces or are supported by a consciousness or consciousnesses behind. One is in the midst of a big universal working and it is impossible any longer to explain everything as the result of one's own sole and independent personality. You yourself have at one time written that your crises of despair etc. came upon you as if thrown on you and worked themselves out without your being able to determine or put an end to them. That means an action of universal forces and not merely an independent action of your own personality, though it is something in your nature of which they make use. But you are not conscious, and others also, of this intervention and pressure at its source for the reason I state. Those in the Asram who have developed the inner view of things on the vital plane¹ have plenty of experience of the hostile forces.

¹ One may have the experiences on the mental plane without this knowledge coming — for there Mind and Idea predominate and one does not feel the play of Forces —

However, you need not personally concern yourself with them so long as they remain incognito.

*

It is true that all comes from the Divine and it is true also that a Divine Presence and a Divine Will is behind all that happens and leads the world towards a divine goal.

At the same time it is also taught in the Gita that this world is a world of obscurity and ignorance and to attain to the Divine one must overcome certain forces of Nature, such as Desire, which the Gita calls the enemy difficult to overcome. It is in this sense that we speak of hostile forces—those which stand in the way of coming out of the Ignorance and attaining to the consciousness of the Divine.

It is again true that those who have a complete and living faith in the Divine and a perfect sincerity in their vision of the Divine everywhere and a pure sattvic nature need not trouble themselves about the hostile forces—for from them the forces of the Ignorance fall back and cannot take possession of their nature.

The teaching about the hostile forces (Asuri Rakshasic forces) is necessary for those who have a divided consciousness or a more rajasic temperament—for if they are not on their guard they may fall into the control of undesirable forces of Desire and Ego—

rākṣasīm āsurīm caiva prakṛtiṁ mohinīm śritāḥ²

*

Yes, they [*the hostile forces*] have their own world and, if they kept to it, there could be no objection to their existence. There is a world that is natural to them and has its own rhythm, its own

it is only in the vital that that becomes clear. In the mind plane they manifest at most as mental suggestions and not as concrete Powers. Also if one looks at things with the Mind only (even though it be the Inner Mind), one may see the subtle play of Nature-Forces but without recognising the conscious intention which we call hostile.

² "Dwelling in the deluding Asuric and Rakshasic nature." Gita 9.12.—Ed.

dharma — just as the lesser gods have theirs. But, they want to dominate the evolution and for that purpose they have taken their station in the vital worlds which influence the earth nature and give it its materials for life.

They were created or rather manifested like other orders of being as a type or several types expressing some cosmic stress, some possibility in the Infinite, the expression of a certain kind of consciousness and force. When the work that they are permitted to do on earth, the work of negation, perversion, miscreation is finished they will be destroyed here, but there is no reason to suppose that they may not exist in their own universe, as it were, outside the system here. For here their presence is an Adharma, a disturbance of the true harmony and natural evolution there should be on the earth plane; it is an intrusion and not a natural presence.

How did the Ignorance come into being out of Sachchidananda? Or ego? The Hostile Forces in their own world embody ego self-fulfilled and having its own free play — ego on earth is not self-fulfilled and not meant to be, it is in conflict with a cosmic Force greater than itself and is only a temporary expedient for bringing forth individuality out of the indeterminateness of just conscient life and inconscient Matter.

*

If there were no hostile forces and there were still the evolutionary world, there could be ignorance still but not perversity in the ignorance. All would be a partial truth acting through imperfect instruments but for the best purposes of this or that stage in a progressive manifestation.

The Nature of the Hostile Forces

The mere intensity of the force does not show that it is a bad power; the Divine Force often works with a great intensity. Everything depends on the nature of the force and its working; what does it do, what seems to be its purpose? If it works to purify or open the system, or brings with it light or peace or

prepares the change of the thought, ideas, feelings, character in the sense of a turning towards a higher consciousness, then it is the right force. If it is dark or obscure or perturbs the being with rajasic or egoistic suggestions or excites the lower nature, then it is an adverse Force.

*

The hostiles have themselves bodies though not of a gross physical kind—they see, but with a subtle seeing that includes not only bodies, but movements of forces, thoughts, feelings.

*

Very great [*are the occult powers of the hostile beings*]—it is their occult powers and knowledge of occult processes that make them so strong and effective.

*

The lesser forces of Light are usually too much insistent on seeking for Truth to make effectivity their logic or their rule—the hostiles are too pragmatic to care for Truth, they want only success. As for the greater Forces (e.g. Overmind) they are dynamic and try always to make consciousness effective, but they insist on consciousness, while the hostiles care nothing for that—the more unconscious you are and their automatic tool, the better they are pleased—for it is unconsciousness that gives them their chance.

The Conquest of the Hostile Forces

The universe is certainly or has been up to now in appearance a rough and wasteful game with the dice of chance loaded in favour of the Powers of darkness, the Lords of obscurity, falsehood, death and suffering. But we have to take it as it is and find out—if we reject the way out of the old sages—the way to conquer. Spiritual experience shows that there is behind it all a wide terrain of equality, peace, calm, freedom, and it is only by getting into it that we can have the eye that sees and

hope to gain the power that conquers.

*

It [*the adverse force*] is the Power that keeps up ignorance and darkness in the world — it can only be destroyed when mankind is no longer in love with ignorance and darkness. Each sadhak has to push it out of contact with his being. When it has gone from him, then there will be no longer any serious difficulties in his sadhana.

*

The hostile Forces are Powers of Darkness who are in revolt against the Light and the Truth and want to keep this world under their rule in darkness and ignorance. Whenever anyone wants to reach the Truth, to realise the Divine, they stand in the way as much as possible. But what they are specially against is the work the Mother and myself are doing, to bring down the Light here into the earth and establish the Truth — that would mean their own expulsion. So they always try to destroy the work as a whole and to spoil the sadhana of each sadhak. It is not only you who are attacked: all are attacked more or less — especially when there is a great progress, these forces try to interfere. The only way to avoid it is to be entirely turned towards the Mother and to refuse any opportunity to these Forces.

*

The evil forces are perversions of the Truth by the Ignorance — in any complete transformation they must disappear and the Truth behind them be delivered. In this way they can be said to be transformed by destruction.

Asuras, Rakshasas and Other Vital Beings

The Asuras and Rakshasas etc. do not belong to the earth, but to supraphysical worlds; but they act upon the earth life and dispute the control of human life and character and action with the Gods. They are the Powers of Darkness combating the Powers of Light.

Sometimes they possess men in order to act through them, sometimes they take birth in a human body. When their use in the play is over, they will either change or disappear or no longer seek to intervene in the earth-play.

*

These things [*such as temptation by Apsaras*] are possible but they do not usually happen — because it is difficult for beings of the subtle worlds to materialise to such an extent or for a long time. They prefer to act by influencing human beings, using them as instruments or taking possession of a human mind and body.

*

There are two kinds of Asuras — one kind were divine in their origin but have fallen from their divinity by self-will and opposition to the intention of the Divine: they are spoken of in the Hindu scriptures as the former or earlier gods; these can be converted and their conversion is indeed necessary for the ultimate purposes of the universe. But the ordinary Asura is not of this character, is not an evolutionary but a typal being and represents a fixed principle of the creation which does not evolve or change and is not intended to do so. These Asuras, as also the other hostile beings, Rakshasas, Pisachas and others resemble the devils of the Christian tradition and oppose the divine intention and the evolutionary purpose in the human being; they don't change the purpose in them for which they exist which is evil, but have to be destroyed like the evil. The Asura has no soul, no psychic being which has to evolve to a higher state; he has only an ego and usually a very powerful ego; he has a mind, sometimes even a highly intellectualised mind; but the basis of his thinking and feeling is vital and not mental, at the service of his desire and not of truth. He is a formation assumed by the life-principle for a particular kind of work and not a divine formation or a soul.

*

Yes. Some kinds of Asuras are very religious, very fanatical about

their religion, very strict about rules of ethical conduct. Others of course are just the opposite. There are others who use spiritual ideas without believing in them to give them a perverted twist and delude the sadhaka. It is what Shakespeare described as the Devil quoting Scripture for his own purpose.

At present what they are most doing is to try to raise up the obscurity and weakness of the most physical mind, vital, material parts to prevent the progress or fulfilment of the sadhana.

*

As to Asuras, not many of them have shown signs of repentance or possibility of conversion up to now. It is not surprising that they should be powerful in a world of Ignorance, for they have only to persuade people to follow the established bent of their lower nature, while the Divine calls always for a change of nature. It is not to be wondered at that the Asura has an easier task and more momentary success in his combinations. But that temporary success does not bind the future.

*

It is the movements of the lower nature that get purified. The Asuras themselves are not so easily transformed.

*

The Asuras are really the dark side of the mental, or more strictly, of the vital mind plane. This mind is the very field of the Asuras. Their main characteristic is egoistic strength and struggle, which refuse the higher law. The Asura has self-control, *tapas* and intelligence, but all that for the sake of his ego. On the lower vital plane the corresponding forces we call the Rakshasas which represent violent passions and influences. There are also other kinds of beings on the vital plane which are called the Pisachas and Pramathas. They manifest more or less in the physico-vital.

On the physical plane the corresponding forces are obscure beings, more forces than beings, what the Theosophists call the elementals. They are not strongly individualised beings like the Rakshasas and Asuras, but ignorant and obscure forces

working in the subtle physical plane. What we in Sanskrit call the Bhutas mostly come under this class. But there are two kinds of elementals, the one mischievous and the other not.

There are no Asuras on the higher planes where the Truth prevails, except in the Vedic sense — “the Divine in its strength”. The mental and vital Asuras are only a deviation of that power.

*

The Gandharvas are of the vital plane but they are vital Gods, not Asuras. Many Asuras are beautiful in appearance and can carry even a splendour or light with them. It is the Rakshasas, Pisachas, etc. who are ugly or evil in appearance.

*

Some of the vital beings are very intelligent — but they do not make friends with the Light — they only try to avoid destruction and wait their time.

*

Very few [*vital beings*] come upon earth — they prefer to get hold of human beings and make them their instruments. They do not evolve. They have no evolved or evolving psychic being and they dread to incarnate just because they would then be obliged to progress and evolve the psychic.

*

There is no particular number [*of vital beings that surround a person*] — but sometimes there are particular vital beings that attach themselves to a man if he accepts them.

Section Two

The Avatar and the Vibhuti

Chapter One

The Meaning and Purpose of Avatarhood

The Avatar or Incarnation

Surely for the earth consciousness it is so [*the very fact that the Divine manifests himself is the greatest of all splendours*]. Consider the obscurity here and what it would be if the Divine did not directly intervene and the Light of Lights did not break out of the obscurity — for that is the meaning of the manifestation.

*

An Incarnation is the Divine Consciousness and Being manifesting through a physical body. It is possible from any plane.

*

It is the omnipresent cosmic Divine who supports the action of the universe; if there is an Incarnation, it does not in the least diminish the cosmic Presence and the cosmic action in the three or thirty million universes.

*

The descending Power chooses its own place, body, time for the manifestation; something of that is foreseen by those who have vision but not the whole.

*

An Avatar is supposed to be from birth. Each soul at its birth takes from the cosmic mind, life and matter to shape a new external personality for himself. What prevents the Divine from doing the same? What is continued from birth to birth is the inner being.

*

Each being in a new birth prepares a new mind, life and body—otherwise John Smith would always be John Smith and would have no chance of being Piyush Kanti Ghose. Of course inside there are old personalities contributing to the new lila—but I am speaking of the new visible personality, the outer man, mental, vital, physical. It is the psychic being that keeps the link from birth to birth and makes all the manifestations of the same person. It is therefore to be expected that the Avatar should take on a new personality each time, a personality suited for the new times, work, surroundings. In my own view of things, however, the new personality has a series of non-Avatar births behind him, births in which the intermediate evolution has been followed and assisted from age to age.

*

If they [*the difficulties and struggles of the Avatar*] are shams, they have no value for others or for any true effect. If they have no value for others or for any true effect, they are perfectly irrational and unreal and meaningless. The Divine does not need to suffer or struggle for himself; if he takes on these things it is in order to bear the world-burden and help the world and men; and if the sufferings and struggles are to be of any help, they must be real. A sham or falsehood cannot help. They must be as real as the struggles and sufferings of men themselves—the Divine bears them and at the same time shows the way out of them. Otherwise his assumption of human nature has no meaning and no utility and no value. It is strange that you cannot understand or refuse to admit so simple and crucial a point. What is the use of admitting Avatarhood if you take all the meaning out of it?

The Divine and Human Sides of the Avatar

There are two sides of the phenomenon of Avatarhood, the Divine Consciousness behind and the instrumental personality. The Divine Consciousness is omnipotent but it has put forth the instrumental personality in Nature, under the conditions of Nature, and it uses it according to the rules of the game

—though also sometimes to change the rules of the game. If Avatarhood is only a flashing miracle, then I have no use for it. If it is a coherent part of the arrangement of the omnipresent Divine in Nature, then I can understand and accept it.

*

As for the Divine and human, that also is a mind-made difficulty. The Divine is there in the human, and the human fulfilling and exceeding its highest aspirations and tendencies becomes the Divine. That is what your silly X could not understand—that when the Divine descends, he takes upon himself the burden of humanity in order to exceed it—he becomes human in order to show humanity how to become Divine. But that cannot be if there is only a weakling without any divine Presence within or divine Force behind him—he has to be strong in order to put his strength into all who are willing to receive it. There is therefore in him a double element—human in front, divine behind—and it is that which gives the impression of unfathomableness of which X complained. If you look upon the human alone, looking with the external eye only and are not willing or ready to see anything else, you will see a human being only—if you look for the Divine, you will find the Divine.

*

The Avatar is not supposed to act in a non-human way—he takes up human action and uses human methods with the human consciousness in front and the Divine behind. If he did not his taking a human body would have no meaning and would be of no use to anybody. He could just as well have stayed above and done things from there.

*

What do you mean by lust? Avatars can be married and have children and that is not possible without sex; they can have friendships, enmities, family feelings etc. etc.—these are vital things. I think you are under the impression that an Avatar must be a saint or a Yogi.

*

One can be the head of a spiritual organisation or the Messiah of a religion or an Avatar without in this life reaching the Supermind and beyond.

Human Judgments of the Divine

It is true that it is impossible for the limited human reason to judge the way or purpose of the Divine, which is the way of the Infinite dealing with the finite.

*

It is not by your mind that you can hope to understand the Divine and its action, but by the growth of the true and divine consciousness within you. If the Divine were to unveil and reveal itself in all its glory, the mind might feel a Presence, but it would not understand its action or its nature. It is in the measure of your own realisation and by the birth and growth of that greater consciousness in yourself that you will see the Divine and understand its action even behind its terrestrial disguises.

*

Men's way of doing things is a mental convention; they see things and do things with the mind and what they want is a mental and human perfection. When they think of a manifestation of Divinity, they think it must be an extraordinary perfection in doing the ordinary human things — an extraordinary business faculty, political, poetic or artistic faculty, an accurate memory, not making any mental mistakes, not undergoing any defeat or failure. Or else they think of things which they call superhuman like the people who expected me not to eat food at all or wanted me to know and tell them what will be the value of the cotton shares in Bombay from day to day, or like those who think great Yogis are those who sleep on nails or eat them. All that has nothing to do with manifesting the Divine.

At that rate Rama would be undivine because he followed the Mayamriga as if it were a natural deer and Krishna would be undivine because he was forced by Jarasandha to take refuge

in distant Dwaraka. These human ideas are false.

The Divinity acts according to another consciousness — the consciousness of the Truth above and the Lila below and it acts according to the need of the Lila, not according to men's ideas of what it should or should not do. This is the first thing one must grasp, otherwise one can understand nothing about the manifestation of the Divine.

*

I do not know why you should be suddenly bewildered by what I wrote¹ — it is nothing new and we have been saying it since a whole eternity. I wrote this short answer in reference to a question which supposed that certain "perfections" must be demanded of the Divine Manifestation which seemed to me quite irrelevant to the reality. I put forward two propositions which appear to me indisputable unless we are to revise all spiritual knowledge in favour of modern European ideas about things.

First, the Divine Manifestation even when it manifests in mental and human ways has behind it a consciousness greater than the mind and not bound by the petty mental and moral conventions of this very ignorant human race — so that to impose these standards on the Divine is to try to do what is irrational and impossible. Secondly, this Divine Consciousness behind the apparent personality is concerned with only two things in a fundamental way — the Truth above and here below the Lila and the purpose of the incarnation or manifestation and it does what is necessary for that in the way its greater than human consciousness sees to be the necessary and intended way. I shall try if I can develop that when I write about it — perhaps I shall take your remarks about Rama and Krishna as the starting-point — but that I shall see hereafter.

But I do not understand how all that can prevent me from answering mental questions. On my own showing, if it is necessary for the divine purpose, it has to be done. Ramakrishna himself whom you quote for the futility of asking questions

¹ See the letter beginning "I would not describe" on pages 416–17. — Ed.

answered thousands of questions, I believe. But the answers must be such as Ramakrishna gave and such as I try to give, answers from a higher spiritual experience, from a deeper source of knowledge and not lucubrations of the logical intellect trying to coordinate its ignorance; still less can they be a placing of the Divine or the Divine Truth before the judgment of the intellect to be condemned or acquitted by that authority — for the authority here has no sufficient jurisdiction or competence.

The Work of the Avatar

I have said that the Avatar is one who comes to open the Way for humanity to a higher consciousness — if nobody can follow the Way, then either our conception of the thing, which is also that of Christ and Krishna and Buddha, is all wrong or the whole life and action of the Avatar is quite futile. X seems to say that there is no way and no possibility of following, that the struggles and sufferings of the Avatar are unreal and all humbug, — there is no possibility of struggle for one who represents the Divine. Such a conception makes nonsense of the whole idea of Avatarhood — there is then no reason in it, no necessity for it, no meaning in it. The Divine being all-powerful can lift people up without bothering to come down on earth. It is only if it is part of the world-arrangement that he should take upon himself the burden of humanity and open the Way that Avatarhood has any meaning.

*

If the Divine were not in essence omnipotent, he could not be omnipotent anywhere — whether in the supramental or anywhere else. Because he chooses to limit or determine his action by conditions, it does not make him less omnipotent. His self-limitation is itself an act of omnipotence.

*

Why the immortal Hell should the Divine be tied down to succeed in all his operations? What if failure suits him better and

serves better the ultimate purpose? What if the gentleman in question had to be given his chance as Duryodhan was given his chance when Krishna went to him as ambassador in a last effort to avoid the massacre of Kurukshetra? What rigid primitive notions are these about the Divine! And what about my explanation of how the Divine acts through the Avatar?² It seems all to have gone into water.

By the way about the ass becoming an elephant — what I meant to say was that the only reason why it can't be done is because there is no recognisable process for it. But if a process can be discovered whether by a scientist (let us say transformation or redistribution of the said ass's atoms or molecules — or what not) or by an occultist or by a Yogi, then there is no reason why it should not be done. In other words certain conditions have been established for the game and so long as those conditions remain unchanged certain things are not done — so we say they are impossible, can't be done. If the conditions are changed, then the same things are done or at least become licit — allowable, legal, according to the so-called laws of Nature, — and then we say they can be done. The Divine also acts according to the conditions of the game. He may change them, but he has to change them first, not proceed while maintaining the conditions to act by a series of miracles.

*

If your argument is that the life, actions, struggles of the Avatar (e.g. Rama's, Krishna's) are unreal because the Divine is there and knows it is all a Maya, in man also there is a self, a spirit that is immortal, untouched, divine, you can say that man's sufferings and ignorance are only put on, shams, unreal. But if man feels them as real and if the Avatar feels his work and the difficulties to be serious and real?

If the existence of the Divinity is of no practical effect, what is the use of a theoretical admission? The manifestation of the

² The "explanation" Sri Aurobindo refers to here is probably the one presented in Essays on the Gita, First Series, Chapters XV to XVII. — Ed.

Divinity in the Avatar is of help to man because it helps him to discover his own divinity, find the way to realise it. If the difference is so great that the humanity by its very nature prevents all possibility of following the way opened by the Avatar, it merely means that there is no divinity in man that can respond to the Divinity in the Avatar.

*

I repeat, the Divine when he takes on the burden of terrestrial nature, takes it fully, sincerely and without any conjuring tricks or pretence. If he has something behind him which emerges always out of the coverings, it is the same thing in essence, even if greater in degree, that there is behind others—and it is to awaken that that he is there.

The psychic being does the same for all who are intended for the spiritual way—men need not be extraordinary beings to follow Yoga. That is the mistake you are making—to harp on greatness as if only the great can be spiritual.

*

An Avatar or Vibhuti have the knowledge that is necessary for their work, they need not have more. There was absolutely no reason why Buddha should know what was going on in Rome. An Avatar even does not manifest all the Divine omniscience and omnipotence; he has not come for any such unnecessary display; all that is behind him but not in the front of his consciousness. As for the Vibhuti, the Vibhuti need not even know that he is a power of the Divine. Some Vibhutis, like Julius Caesar for instance, have been atheists. Buddha himself did not believe in a personal God, only in some impersonal and indescribable Permanent.

The Avatar: Historicity and Symbols

Then as to the Avatar and the symbols. There is, it seems to me, a cardinal error in the modern insistence on the biographical and historical, that is to say, the external factuality of the Avatar,

the incidents of his outward life. What matters is the spiritual Reality, the Power, the Influence that came with him or that he brought down by his action and his existence. First of all what matters in a spiritual man's life is not what he did or what he was outside to the view of the men of his time (that is what historicity or biography comes to, does it not?) but what he was and did within; it is only that that gives any value to his outer life at all. It is the inner life that gives to the outer any power it may have, and the inner life of a spiritual man is something vast and full and, at least in the great figures, so crowded and teeming with significant things that no biographer or historian could ever hope to seize it all or tell it. Whatever is significant in the outward life is so because it is a symbol of what has been realised within himself and one may go on and say that the inner life also is only significant as an expression, a living representation of the movement of the Divinity behind it. That is why we need not enquire whether the stories about Krishna were transcripts, however loose, of his acts on earth or are symbol-representations of what Krishna was and is for men, of the Divinity expressing itself in the figure of Krishna. Buddha's renunciation, his temptation by Mara, his enlightenment under the Bo-Tree are such symbols, so too the virgin birth, the temptation in the desert, the crucifixion of Christ are such symbols true by what they signify, even if they are not scrupulously recorded historical events. The outward facts as related of Christ or Buddha come to not much more than what has happened in many other lives — what is it that gives Buddha or Christ their enormous place in the spiritual world? It was because something manifested through them that was more than any outward event or any teaching. The verifiable historicity gives us very little of that, yet it is that only that matters. So it seems to me that Krishnaprem is fundamentally right in what he says of the symbols. To the physical mind only the words and facts and acts of a man matter; to the inner mind it is the spiritual happenings in him that matter. Even the teachings of Christ and Buddha are spiritually true not as mere mental teachings but as the expression of spiritual states or happenings in them which by their life on earth they made possible (or at

any rate more dynamically potential) in others. Also evidently sectarian walls are a mistake, an accretion, a mental limiting of the Truth which may serve a mental, but not a spiritual purpose. The Avatar, the Guru have no meaning if they do not stand for the Eternal; it is that that makes them what they are for the worshipper or the disciple.

It is also a fact that nobody can give you any spiritual revelation which does not come from something in one's own true Self, it is always the Divine who reveals himself and the Divine is within you; so He who reveals must be felt in your own heart. Your query here simply suggests that this is a truth which can be misinterpreted or misused, but so can every spiritual truth if it is taken hold of in the wrong way — and the human mind has a great penchant for taking Truth by the wrong end and arriving at falsehood. All statements about these things are, after all, mental statements and at the mercy of any mind that interprets them. There is a snag in every such statement created not by the Truth that it expresses but by the mind's interpretation. The snag here (what you call the slip) lies not in the statement itself which is quite correct, but in the deflected sense in which it may be taken by ignorant or self-sufficient minds enamoured of their ego. Many have put forward the "own self" gospel without taking the trouble to see whether it is the true Self, have pitted the ignorance of their "own self" — in fact, their ego — against the knowledge of the Guru or made their ego or something that flattered and fostered it the Ishta Devata. The snag in the worship of Guru or Avatar is a sectarian bias which insists on the Representative or the Manifestation but loses sight of the Manifested; the snag in the emphasis on the other side is the ignoring of the need or belittling of the value of the Representative or Manifestation and the substitution not of the true Self one in all but of one's "own self" as the guide and light. How many have done that here and lost the way through the pull of the magnified ego which is one of the great perils on the way! However that does not lessen the truth of the things said by Krishnaprem — only in looking at the many sides of Truth one must put each thing in its place in the harmony of the All which

is for us the expression of the Supreme.

*

The answer to the question [*whether the Krishna of Brindavan and the stories of his lila are literally true or merely symbols of deep spiritual realities*] depends on what value one attaches to spiritual experience and to mystic and occult experience, that is to say, to the data of other planes of consciousness than the physical, as also on the nature of the relations between the cosmic consciousness and the individual and collective consciousness of man. From the point of view of spiritual and occult Truth, what takes shape in the consciousness of man is a reflection and particular kind of formation, in a difficult medium, of things much greater in their light, power and beauty or in their force and range which come to it from the cosmic consciousness of which man is a limited and, in his present state of evolution, a still ignorant part. All this explanation about the genius of the race, of the consciousness of a nation creating the Gods and their forms is a very partial, somewhat superficial and in itself a misleading truth. Man's mind is not an original creator, it is an intermediary; to start creating it must receive an initiating "inspiration", a transmission or a suggestion from the cosmic consciousness, and with that it does what it can. God is, but man's conceptions of God are reflections in his own mentality, sometimes of the Divine, sometimes of other Beings and Powers and they are what his mentality can make of the suggestions that come to him, generally very partial and imperfect so long as they are still mental, so long as he has not arrived at a higher and truer, a spiritual or mystic knowledge. The Gods already exist, they are not created by man even though he does seem to conceive them in his own image; fundamentally, he formulates as best he can what truth about them he receives from the cosmic Reality. An artist or a bhakta may have a vision of the Gods and it may get stabilised and generalised in the consciousness of the race and in that sense it may be true that man gives their forms to the Gods; but he does not invent these forms, he records what he sees; the forms that he gives are given to him. In the

“conventional” form of Krishna men have embodied what they could see of his eternal beauty and what they have seen may be true as well as beautiful, it conveys something of the form, but it is fairly certain that if there is an eternal form of that eternal beauty it is a thousand times more beautiful than what man had as yet been able to see of it. Mother India is not a piece of earth; she is a Power, a Godhead, for all nations have such a Devi supporting their separate existence and keeping it in being. Such Beings are as real and more permanently real than the men they influence, but they belong to a higher plane, are part of the cosmic consciousness and being and act here on earth by shaping the human consciousness on which they exercise their influence. It is natural for man who only sees his own consciousness individual, national or racial at work and does not see what works upon it and shapes it, to think that all is created by him and there is nothing cosmic and greater behind it. The Krishna consciousness is a reality, but if there were no Krishna, there could be no Krishna consciousness: except in arbitrary metaphysical abstractions there can be no consciousness without a Being who is conscious. It is the person who gives value and reality to the personality, he expresses himself in it and is not constituted by it. Krishna is a being, a person and it is as the Divine Person that we meet him, hear his voice, speak with him and feel his presence. To speak of the consciousness of Krishna as something separate from Krishna is an error of the mind, which is always separating the inseparable and which also tends to regard the impersonal, because it is abstract, as greater, more real and more enduring than the person. Such divisions may be useful to the mind for its own purposes, but it is not the real truth; in the real truth the being or person and its impersonality or state of being are one reality.

The historicity of Krishna is of less spiritual importance and is not essential, but it has still a considerable value. It does not seem to me that there can be any reasonable doubt that Krishna the man was not a legend or a poetic invention but actually existed upon earth and played a part in the Indian past. Two facts emerge clearly, that he was regarded as an important

spiritual figure, one whose spiritual illumination was recorded in one of the Upanishads, and that he was traditionally regarded as a divine man, one worshipped after his death as a deity; this is apart from the story in the Mahabharata and the Puranas. There is no reason to suppose that the connection of his name with the development of the Bhagavata religion, an important current in the stream of Indian spirituality, was founded on a mere legend or poetic invention. The Mahabharata is a poem and not history, but it is clearly a poem founded on a great historical event, traditionally preserved in memory; some of the figures connected with it, Dhritarashtra, Parikshit, for instance, certainly existed and the story of the part played by Krishna as leader, warrior and statesman can be accepted as probable in itself and to all appearance founded on a tradition which can be given a historical value and has not the air of a myth or a sheer poetical invention. That is as much as can be positively said from the point of view of the theoretical reason as to the historical figure of the man Krishna; but in my view there is much more than that in it and I have always regarded the incarnation as a fact and accepted the historicity of Krishna as I accept the historicity of Christ.

The story of Brindavan is another matter; it does not enter into the main story of the Mahabharata and has a Puranic origin and it could be maintained that it was intended all along to have a symbolic character. At one time I accepted that explanation, but I had to abandon it afterwards; there is nothing in the Puranas that betrays any such intention. It seems to me that it is related as something that actually occurred or occurs somewhere; the Gopis are to them realities and not symbols. It was for them at the least an occult truth, and occult and symbolic are not the same thing; the symbol may be only a significant mental construction or only a fanciful invention, but the occult is a reality which is actual somewhere, behind the material scene as it were and can have its truth for the terrestrial life and its influence upon it, may even embody itself there. The lila of the Gopis seems to be conceived as something which is always going on in a divine Gokul and which projected itself in

an earthly Brindavan and can always be realised and its meaning made actual in the soul. It is to be presumed that the writers of the Puranas took it as having been actually projected on earth in the life of the incarnate Krishna and it has always been so accepted by the religious mind of India.

These questions and the speculations to which they have given rise have no indispensable connection with the spiritual life. There what matters is the contact with Krishna and the growth towards the Krishna consciousness, the presence, the spiritual relation, the union in the soul and, till that is reached, the aspiration, the growth in bhakti and whatever illumination one can get on the way. To one who has had these things, lived in the presence, heard the voice, known Krishna as Friend or Lover, Guide, Teacher, Master or, still more, has had his whole consciousness changed by the contact, or felt the presence within him, all such questions have only an outer and superficial interest. So also, to one who has had contact with the inner Brindavan and the lila of the Gopis, made the surrender and undergone the spell of the joy and the beauty or even only turned to the sound of the flute, the rest hardly matters. But from another point of view, if one can accept the historical reality of the incarnation, there is this great spiritual gain that one has a *point d'appui* for a more concrete realisation in the conviction that once at least the Divine has visibly touched the earth, made the complete manifestation possible, made it possible for the divine supernature to descend into this evolving but still very imperfect terrestrial nature.

*

What he [Krishnaprem] says³ — the central thing — is very correct as always, the position of all who have any notion of spirituality, though the religionists seem to find it difficult to get to it. But though Christ and Krishna are the same, they are the same in difference; that is indeed the utility of so many manifestations

³ In his letter to the correspondent, Krishnaprem observed that "Christ and Krishna are the same." He also said: "Why is Christianity tottering? Primarily because the Christians have pinned their faith on historical events and a historical person." — Ed.

instead of there being only one as these missionaries would have it. But is it really because the historical Christ has been made too much the foundation-stone of the faith that Christianity is failing? It may be something inadequate in the religion itself—perhaps in religion itself; for all religions are a little off-colour now. The need of a larger opening of the soul into the Light is being felt, an opening through which the expanding human mind and heart can follow.

The Avatar and the Vibhuti

The Avatar is necessary when a special work is to be done and in crises of the evolution. The Avatar is a special manifestation, while for the rest of the time it is the Divine working within the ordinary human limits as a Vibhuti.

*

An Avatar, roughly speaking, is one who is conscious of the presence and power of the Divine born in him or descended into him and governing from within his will and life and action; he feels identified inwardly with this divine power and presence. A Vibhuti is supposed to embody some power of the Divine and is enabled by it to act with great force in the world but that is all that is necessary to make him a Vibhuti: the power may be very great but the consciousness is not that of an inborn or indwelling Divinity. This is the distinction we can gather from the Gita which is the main authority on this subject. If we follow this distinction, we can confidently say from what is related of them that Rama and Krishna can be accepted as Avatars; Buddha figures as such although with a more impersonal consciousness of the Power within him; Ramakrishna voiced the same consciousness when he spoke of him who was Rama and who was Krishna being within him. But Chaitanya's case is peculiar; for according to the accounts he ordinarily felt and declared himself a bhakta of Krishna and nothing more, but in great moments he manifested Krishna, grew luminous in mind and body and was Krishna himself and spoke and

acted as the Lord. His contemporaries saw in him an Avatar of Krishna, a manifestation of the divine love. Shankara and Vivekananda were certainly Vibhutis; they cannot be reckoned as more, though as Vibhutis they were very great.

*

It was not my intention to question in any degree Chaitanya's position as an Avatar of Krishna and the divine love. That character of the manifestation appears very clearly from all the accounts about him and even, if what is related about the appearance of Krishna in him from time to time is accepted, these outbursts of the splendour of the Divine Being are among the most remarkable in the story of the Avatar. As for Ramakrishna, the manifestation in him was not so intense but more many-sided and fortunately there can be no doubt about the authenticity of the details of his talk and actions since they have been recorded from day to day by so competent an observer as Mahendranath Gupta. I would not care to enter into any comparison as between these two great spiritual personalities; both exercised an extraordinary influence and did something supreme in their own sphere.

Chapter Two

Specific Avatars and Vibhutis

The Ten Avatars as a Parable of Evolution

Avatarhood would have little meaning if it were not connected with the evolution. The Hindu procession of the ten Avatars is itself, as it were, a parable of evolution. First the Fish Avatar, then the amphibious animal between land and water, then the land animal, then the Man-Lion Avatar, bridging man and animal, then man as dwarf, small and undeveloped and physical but containing in himself the godhead and taking possession of existence, then the rajasic, sattvic, nirguna Avatars, leading the human development from the vital rajasic to the sattvic mental man and again the overmental superman. Krishna, Buddha and Kalki depict the last three stages, the stages of the spiritual development—Krishna opens the possibility of Overmind, Buddha tries to shoot beyond to the supreme liberation but that liberation is still negative, not returning upon earth to complete positively the evolution; Kalki is to correct this by bringing the Kingdom of the Divine upon earth, destroying the opposing Asura forces. The progression is striking and unmistakable.

As for the lives in between the Avatar lives, it must be remembered that Krishna speaks of many lives in the past, not only a few supreme ones, and secondly that while he speaks of himself as the Divine, in one passage he describes himself as a Vibhuti, *vṛṣṇīnāṁ vāsudevah*. We may therefore fairly assume that in many lives he manifested as the Vibhuti veiling the fuller Divine Consciousness. If we admit that the object of Avatarhood is to lead the evolution, this is quite reasonable, the Divine appearing as Avatar in the great transitional stages and as Vibhutis to aid the lesser transitions.

*

In speaking of supreme liberation [*in the previous letter*] I was

simply taking the Buddhist, Adwaita view for granted and correcting it by saying that this Nirvana view is too negative. Krishna opened the possibility of Overmind with its two sides of realisation, static and dynamic. Buddha tried to shoot from mind to Nirvana in the Supreme, just as Shankara did in another way after him. Both agree in overleaping the other stages and trying to get at a nameless and featureless Absolute. Krishna on the other hand was leading by the normal course of evolution. The next normal step is not a featureless Absolute, but the Supermind. I consider that in trying to overshoot, Buddha like Shankara made a mistake, cutting away the dynamic side of the liberation. Therefore there has to be a correction by Kalki.

I was of course dealing with the Ten Avatars as a “parable of the evolution”, and only explaining the interpretation we can put on it from that point of view. It was not my own view of the thing that I was giving.

*

I only took the Puranic list of Avatars and interpreted it as a parable of evolution, so as to show that the idea of evolution is implicit behind the theory of Avatarhood. As to whether one accepts Buddha as an Avatar or prefers to put others in his place (in some lists Balaram replaces Buddha), is a matter of individual feeling. The Buddhist Jatakas are legends about the past incarnations of the Buddha, often with a teaching implied in them, and are not a part of the Hindu system. To the Buddhists Buddha was not an Avatar at all, he was the soul climbing up the ladder of spiritual evolution till it reached the final stage of emancipation — although Hindu influence did make Buddhism develop the idea of an eternal Buddha above, that was not a universal or fundamental Buddhistic idea. Whether the Divine in manifesting his Avatarhood could choose to follow the line of evolution from the lowest scale, manifesting on each scale as a Vibhuti, is a question again to which the answer is not inevitably in the negative. If we accept the evolutionary idea, such a thing may have its place.

If Buddha taught something different from Krishna, that

does not prevent his advent from being necessary in the spiritual evolution. The only question is whether the attempt to scale the heights of an absolute Nirvana through negation of cosmic existence was a necessary step or not, having a view to the fact that one can make the attempt to reach the Highest on the *neti neti* as well as the *iti iti* line.

*

Too much importance need not be attached to the details about Kalki—they are rather symbolic than an attempt to prophesy details of future history. What is expressed is something that has to come, but it is symbolically indicated, no more.

So too, too much weight need not be put on the exact figures about the Yugas in the Purana. Here again the Kala and the Yugas indicate successive periods in the cyclic wheel of evolution, the perfect state, decline and disintegration of successive ages of humanity followed by a new birth—the mathematical calculations are not the important element. The argument of the end of the Kali Yuga already come or coming and a new Satya Yuga coming is a very familiar one and there have been many who have upheld it.

Rama as an Avatar

I have no intention of entering into a supreme defence of Rama—I only entered into the points about Bali etc. because these are usually employed nowadays to belittle him as a great personality on the usual level. But from the point of view of Avatarhood I would no more think of defending his moral perfection according to modern standards than I would think of defending Napoleon or Caesar against the moralists or the democratic critics or the debunkers in order to prove that they were Vibhutis. Vibhuti, Avatar are terms which have their own meaning and scope, and they are not concerned with morality or immorality, perfection or imperfection according to small human standards or setting an example to men or showing new moral attitudes or giving new spiritual teachings. These things may or may not

be done, but they are not at all the essence of the matter.

Also, I do not consider your method of dealing with Rama's personality to be the right one. It has to be taken as a whole in the setting that Valmiki gave it (not treated as if it were the story of a modern man) and with the significance that he gave to his hero's personality, deeds and works. If it is pulled out of its setting and analysed under the dissecting knife of a modern ethical mind, it loses all its significance at once. Krishna so treated becomes a mere debauchee and trickster who no doubt did great things in politics — but so did Rama in war. Achilles and Odysseus pulled out of their setting become, one a furious egoistic savage, and the other a cruel and cunning savage. I consider myself under an obligation to enter into the spirit, significance, atmosphere of the Mahabharata, Iliad, Ramayana and identify myself with their time-spirit before I can feel what their heroes were in themselves apart from the details of their outer action.

As for the Avatarhood, I accept it for Rama first because he fills a place in the scheme and seems to me to fill it rightly — and because when I read the Ramayana I feel a great afflatus which I recognise and which makes of its story — mere faery-tale though it seems — a parable of a great critical transitional event that happened in the terrestrial evolution and gives to the main character's personality and actions a significance of the large typical cosmic kind which these actions would not have had if they had been done by another man in another scheme of events. The Avatar is not bound to do extraordinary actions, but he is bound to give his acts or his work or what he is — any of these or all — a significance and an effective power that are part of something essential to be done in the history of the earth and its races.

All the same, if anybody does not see as I do and wants to eject Rama from his place, I have no objection — I have no particular partiality for Rama — provided somebody is put in who can more worthily fill up the gap his absence leaves. There *was* somebody there, Valmiki's Rama or another Rama or somebody else not Rama.

Also I do not mean that I admit the validity of your remarks

about Rama, even taken as a piecemeal criticism; but that I have no time for today. I maintain my position about the killing of Bali and the banishment of Sita in spite of Bali's preliminary objection to the procedure, afterwards retracted, and in spite of the opinions of Rama's relatives. Necessarily from the point of view of the antique dharma — not from that of any universal moral standard — which besides does not exist, since the standard changes according to clime or age.

*

No, certainly not — an Avatar is not at all bound to be a spiritual prophet — he is never in fact merely a prophet, he is a realiser, an establisher — not of outward things only, though he does realise something in the outward also, but, as I have said, of something essential and radical needed for the terrestrial evolution which is the evolution of the embodied spirit through successive stages towards the Divine. It was not at all Rama's business to establish the spiritual stage of that evolution — so he did not at all concern himself with that. His business was to destroy Ravana and to establish the Ramarajya — in other words, to fix for the future the possibility of an order proper to the sattwic civilised human being who governs his life by the reason, the finer emotions, morality or at least moral ideals, such as truth, obedience, cooperation and harmony, the sense of humour, the sense of domestic and public order, to establish this in a world still occupied by anarchic forces, the Animal Mind and the powers of the vital Ego making its own satisfaction the rule of life, in other words, the Vanara and the Rakshasa. This is the meaning of Rama and his life-work and it is according as he fulfilled it or not that he must be judged as Avatar or no Avatar. It was not his business to play the comedy of the chivalrous Kshatriya with the formidable brute beast that was Bali, it was his business to kill him and get the Animal Mind under his control. It was his business to be not necessarily a perfect, but a largely representative sattwic Man, a faithful husband and lover, a loving and obedient son, a tender and perfect brother, father, friend — he is friend of all kinds of people, friend of the outcaste Guhaka, friend of the Animal

leaders, Sugriva, Hanuman, friend of the vulture Jatayu, friend even of the Rakshasa Vibhishan. All that he was in a brilliant, striking but above all spontaneous and inevitable way, not with a forcing of this note or that like Harishchandra or Shivi, but with a certain harmonious completeness. But most of all, it was his business to typify and establish the things on which the social idea and its stability depend, truth and honour, the sense of the Dharma, public spirit and the sense of order. To the first, to truth and honour, much more even than to his filial love and obedience to his father — though to that also — he sacrificed his personal rights as the elect of the King and the Assembly and fourteen of the best years of his life and went into exile in the forests. To his public spirit and his sense of public order (the great and supreme civic virtue in the eyes of the ancient Indians, Greeks, Romans, for at that time the maintenance of the ordered community, not the separate development and satisfaction of the individual was the pressing need of human evolution) he sacrificed his own happiness and domestic life and the happiness of Sita. In that he was at one with the moral sense of all the antique races, though at variance with the later romantic individualistic sentimental morality of the modern man who can afford to have that less stern morality just because the ancients sacrificed the individual in order to make the world safe for the spirit of social order. Finally it was Rama's business to make the world safe for the ideal of the sattwic human being by destroying the sovereignty of Ravana, the Rakshasa menace. All this he did with such a divine afflatus in his personality and action that his figure has been stamped for more than two millenniums on the mind of Indian culture and what he stood for has dominated the reason and idealising mind of man in all countries — and in spite of the constant revolt of the human vital is likely to continue to do so until a greater Ideal arises. And you say in spite of all this that he was no Avatar? If you like — but at any rate he stands among the few greatest of the great Vibhutis. You may dethrone him now — for man is no longer satisfied with the sattwic ideal and is seeking for something more — but his work and meaning remain stamped on the past of the earth's evolving race.

When I spoke of the gap that would be left by his absence, I did not mean a gap among the prophets and intellectuals, but a gap in the scheme of Avatarhood — there was somebody who was the Avatar of the sattwic Human as Krishna was the Avatar of the overmental Superhuman — I see no one but Rama who can fill the place. Spiritual teachers and prophets (as also intellectuals, scientists, artists, poets, etc.) — these are at the greatest Vibhutis, but they are not Avatars. For at that rate all religious founders would be Avatars — Joseph Smith (I think that is his name) of the Mormons, St. Francis of Assisi, Calvin, Loyola and a host of others as well as Christ, Chaitanya or Ramakrishna.

For faith, miracles, Bijoy Goswami, another occasion. I wanted to say this much more about Rama — which is still only a hint and is not the thing I was going to write about the general principle of Avatarhood.¹

*

I am rather perplexed by your strictures on Rama. Cowardice is the last thing that can be charged against Valmiki's Rama; he has always been considered as a warrior and it is the "martial races" of India who have made him their god. Valmiki everywhere paints him as a great warrior. His employment of ruse against an infrahuman enemy does not prove the opposite — for that is always how the human (even great warriors and hunters) has dealt with the infrahuman. I think it is Madhusudan who has darkened Valmiki's hero in Bengali eyes and turned him into a poor puppet, but that is not the authentic Rama who, say what one will, was a great epic figure, — Avatar or no Avatar. As

¹ Nor, I may add, is it a complete or supreme defence of Rama. For that I would have to write about what the story of the Ramayana meant, appreciate Valmiki's presentation of his chief characters (they are none of them copy-book examples, but great men and women with the defects and merits of human nature, as all men, even the greatest, are), and show also how the Godhead, which was behind the frontal and instrumental personality we call Rama, worked out every incident of his life as a necessary step in what had to be done. As to the weeping of Rama, I had answered that in my other yet unfinished letter. You are imposing the colder and harder Nordic ideal on the Southern temperament which regarded the expression of emotion, not its suppression, as a virtue. Witness the weeping and lamentations of Achilles, Ulysses and other Greek, Persian and Indian heroes — the latter especially as lovers.

for conventional morality, all morality is a convention—man cannot live without conventions, mental and moral, otherwise he feels himself lost in the rolling sea of the anarchic forces of vital Nature. Even the Russells and Bernard Shaws can only end by setting up another set of conventions in the place of those they have skittled over. Only by rising above mind can one really get beyond conventions—Krishna was able to do it because he was not a mental human being but an overmental godhead acting freely out of a greater consciousness than man's. Rama was not that, he was the Avatar of the sattvic human mind—mental, emotional, moral—and he followed the Dharma of the age and race. That may make him temperamentally congenial to Gandhi and the reverse to you; but just as Gandhi's temperamental recoil from Krishna does not prove Krishna to be no Avatar, so your temperamental recoil from Rama does not establish that he was not an Avatar. However, my main point will be that Avatarhood does not depend upon these questions at all, but has another basis, meaning and purpose.

*

No time for a full answer to your renewed remarks on Rama tonight. You are intrigued only because you stick to the standard modern measuring rods of moral and spiritual perfection (introduced by Seeley and Bankim) for the Avatar—while I start from another standpoint altogether and resolutely refuse these standard human measures. The ancient Avatars except Buddha were *not* either standards of perfection or spiritual teachers—in spite of the Gita which was spoken, says Krishna, in a moment of supernormal consciousness which he lost immediately afterwards. They were, if I may say so, representative cosmic men who were instruments of a divine Intervention for fixing certain things in the evolution of the earth-race. I stick to that and refuse to submit myself in this argument to any other standard whatever.

I did not admit that Rama was a blind Avatar, but offered you two alternatives of which the latter represents my real view founded on the impression made on me by the Ramayana that

Rama knew very well but refused to be talkative about it—his business being not to disclose the Divine, but to fix mental, moral and emotional man (not to originate him for he was there already) on the earth as against the Animal and the Rakshasa forces. My argument from Chaitanya (who was for most of the time, first a pandit and then a bhakta, but only occasionally the Divine himself) is perfectly rational and logical, if you follow my line and don't insist on a high specifically spiritual consciousness for the Avatar. I shall point out what I mean in my next.

By sattwic man I do not mean a moral or an always self-controlled one, but a predominantly mental (as opposed to a vital or merely physical man) who has rajasic emotions and passions, but lives predominantly according to his mind and its will and ideas. There is no such thing, I suppose, as a purely sattwic man—since the three gunas go always together in a state of unstable equilibrium, but a predominantly sattwic man is what I have described. My impression of Rama from Valmiki is such—it is quite different from yours. I am afraid your picture of him is quite out of focus—you efface the main lines of the character, belittle and brush out all the lights to which Valmiki gave so much value and prominence and hammer always at some details and some parts of shadow which you turn into the larger part of Rama. That is what the debunkers do—but a debunked figure is not the true figure.

By the way, a sattwic man can have strong passion and strong anger—and when he lets the latter loose, the normally violent fellow is simply nowhere. Witness the outbursts of anger of Christ, the indignation of Chaitanya—and the general evidence of experience and psychology on that point. All this however by the way—I shall try to develop later.

P.S. The trait of Rama which you give as that of an undeveloped man, viz., his decisive spontaneous action according to the will and the idea that came to him, is a trait of the cosmic man and many Vibhutis, men of action of the large Caesarian or Napoleonic type. That also I hope to develop sometime.

Why should Rama not have *kāma* as well as *prema*? — they were supposed to go together as between husband and wife in ancient India. The performances of Rama in the *viraha* of Sita are due to Valmiki's poetic idea which was also Kalidasa's and everybody else's in those far-off times about how a complete lover should behave in such a quandary. Whether the actual Rama bothered himself to do all that is another matter.

As for the unconscious Avatar, why not? Chaitanya is supposed to be an Avatar by the Vaishnavas, yet he was conscious of the Godhead behind only when that Godhead came in front and possessed him on rare occasions. Christ said "I and my Father are one", but yet he always spoke and behaved as if there were a difference. Ramakrishna's earlier period was that of one seeking God, not aware from the first of his identity. These are the reputed religious Avatars who ought to be more conscious than a man of action like Rama. And supposing the full and permanent consciousness, why should the Avatar proclaim himself except on rare occasions to an Arjuna or to a few bhaktas or disciples? It is for others to find out what he is; though he does not deny when others speak of him as That, he is not always saying and perhaps never may say or only in moments like that of the Gita, "I am He."

*

When I said, "Why not an unconscious Avatar?" I was taking *your* statement (not mine) that Rama was unconscious and how could there be an unconscious Avatar. My own view is that Rama was not blind, not unconscious of his Avatarhood, only uncommunicative about it. But I said that even taking your statement to be correct, the objection was not insuperable. I instanced the case of Chaitanya and the others, because there the facts are hardly disputable. Chaitanya for the first part of his life was simply Nimai Pandit and had no consciousness of being anything else. Then he had his conversion and became the bhakta, Chaitanya. This bhakta at times seemed to be possessed by the presence of Krishna, knew himself to be Krishna, spoke, moved and appeared with the light of the Godhead — none around him

could think of or see him as anything else when he was in this glorified and transfigured condition. But from that he fell back to the ordinary consciousness of the bhakta and, as I have read in his biography, refused then to consider himself as anything more. These, I think, are the facts. Well then, what do they signify? Was he only Nimai Pandit at first? It is quite conceivable that he was so and the descent of the Godhead into him only took place after his conversion and spiritual change. But also afterwards when he was in his normal bhakta-consciousness, was he then no longer the Avatar? An intermittent Avatarhood? Krishna coming down for an afternoon call into Chaitanya and then going up again till the time came for the next visit? I find it difficult to believe in this phenomenon. The rational explanation is that in the phenomenon of Avatarhood there is a Consciousness behind, at first veiled or sometimes perhaps only half-veiled, which is that of the Godhead and a frontal consciousness, human or apparently human or at any rate with all the appearance of terrestriality, which is the instrumental Personality. In that case, it is possible that the secret Consciousness was all along there, but waited to manifest until after the conversion; and it manifested intermittently because the main work of Chaitanya was to establish the type of a spiritual and psychic bhakti and love in the emotional vital part of man, preparing the vital in us in that way to turn towards the Divine — at any rate, to fix that possibility in the earth-nature. It was not that there had not been the emotional type of bhakti before; but the completeness of it, the *élan*, the vital's rapture in it had never manifested as it manifested in Chaitanya. But for that work it would never have done if he had always been in the Krishna consciousness; he would have been the Lord to whom all gave bhakti, but not the supreme example of the divine ecstatic bhakta. At the same time the occasional manifestation showed who he was and at the same time evidenced the mystic law of the Immanence.

Voilà — for Chaitanya. But, if Chaitanya, the frontal consciousness, the instrumental Personality, was all the time the Avatar, yet except in his highest moments was unconscious of it and even denied it, that pushed a little farther would establish the

possibility of what you call an unconscious Avatar—that is to say, of one in which the veiled consciousness might not come in front but always move the instrumental Personality from behind. The frontal consciousness might be aware in the inner parts of its being that it was only an instrument of Something Divine which was its real Self, but outwardly would think, speak and behave as if it were only the human being doing a given work with a peculiar power and splendour. Whether there was such an Avatar or not is another matter, but logically it is quite possible.

*

What is all this obsession of greater or less? In our Yoga we do not strive after greatness.

It is not a question of Sri Krishna's disciples, but of the earth consciousness—Rama was a mental man, there is no touch of the overmind consciousness (direct) in anything he said or did, but what he did was done with the greatness of the Avatar. But there have since been men who did live in touch with the planes above mind—higher mind, illumined mind, Intuition. There is no question of asking whether they were "greater" than Rama; they might have been less "great", but they were able to live from a new plane of consciousness. And Krishna's opening the overmind certainly made it possible for the attempt at bringing Supermind to the earth to be made.

*

About greater and less, one point. Is Captain John Higgins of S.S. *Mauretania* a greater man than Christopher Columbus because he can reach America without trouble in a few days? Is a university graduate in philosophy greater than Plato because he can reason about problems and systems which had never even occurred to Plato? No, only humanity has acquired greater scientific power which any good navigator can use or a wider intellectual knowledge which anyone with a philosophic training can use. You will say greater scientific power and wider knowledge is not a change of consciousness. Very well, but there are Rama and Ramakrishna. Rama spoke always from

the thinking intelligence, the common property of developed men; Ramakrishna spoke constantly from a swift and luminous spiritual intuition. Can you tell me which is the greater? the Avatar recognised by all India? or the saint and Yogi recognised as an Avatar only by his disciples and some others who follow them?

Krishna as an Avatar

Krishna is not the supramental light. The descent of Krishna would mean the descent of the Overmind Godhead preparing, though not itself actually bringing, the descent of Supermind and Ananda. Krishna is the Anandamaya, he supports the evolution through the Overmind leading it towards his Ananda.

*

What Krishna worked for was the Overmind consciousness acting in the mind and vital.

*

What was said² was that Krishna as a manifestation on earth opened the possibility of the Overmind consciousness here to men and stood for that, as Rama was the incarnation in mental Man. If Krishna was *an* overmind “God”, that means he was not an Incarnation, not the Divine, but somebody else who claimed to be the Divine — i.e. he was a god who somehow thought he was God.

*

I suppose very few recognised him [*Krishna*] as an Avatar; certainly it was not at all a general recognition. Among the few those nearest him do not seem to have counted — it was less prominent people like Vidura etc.

*

² *The correspondent asked, “Why is it said that Krishna is an Overmind God?” — Ed.*

Those who were with Krishna were in all appearance men like other men. They spoke and acted with each other as men with men and were not thought of by those around them as gods. Krishna himself was known by most as a man—only a few worshipped him as the Divine.

*

*Yuge yuge*³ may be used in a general sense, as in English “from age to age” and not refer technically to the *yuga* proper according to the Puranic computation. But the *bahūni* has an air of referring to very numerous lives especially when coupled with *tava ca*. In that case all these many births could not be full incarnations,—many may have been merely Vibhuti births carrying on the thread from incarnation to incarnation. About Arjuna’s accompanying him in each and every birth, nothing is said, but it would not be likely—many, of course.

Buddha as an Avatar

He [*Buddha*] affirmed practically something unknowable that was Permanent and Unmanifested. Adwaita does the same. Buddha never said he was an Avatar of a Personal God but that he was the Buddha. It is the Hindus who made him an Avatar. If Buddha had looked upon himself as an Avatar at all, it would have been as an Avatar of the impersonal Truth.

*

If a Divine Consciousness and Force descended and through the personality we call Buddha did a great work for the world, then Buddha can be called an Avatar—the tapasya and arriving at knowledge are only an incident of the manifestation.

If on the other hand Buddha was only a human being like many others who arrived at some knowledge and preached it,

³ In the Gita, Krishna tells Arjuna, “Many are my lives that are past” (4.5) and again, “I am born from age to age.” (4.8) The correspondent asked how Krishna’s past lives could be many (*bahūni*) if he was born only from age to age (*yuge yuge*). —Ed.

then he was not an Avatar — for of that kind there have been thousands and they cannot be all Avatars.

*

I don't know that historically there could have been any other Buddha. It is the Vaishnava Puranas, I think, that settled the list of Avatars, for they are all Avatars of Vishnu according to the Purana. The final acceptance by all may have come later than Shankara, after the Buddhist-Brahminic controversy had ceased to be an actuality. For some time there was a tendency to substitute Balarama's name for Buddha's or to say that Buddha was an Avatar of Vishnu, but that he came to mislead the Asuras. He is evidently aimed at in the story of Mayamoha in the Vishnu Purana.

*

He [*Buddha*] had a more powerful vital than Ramakrishna, a stupendous will and an invincible mind of thought. If he had led the ordinary life, he would have been a great organiser, conqueror and creator.

Mahomed and Christ

Mahomed would himself have rejected the idea of being an Avatara, so we have to regard him only as the prophet, the instrument, the Vibhuti. Christ realised himself as the Son who is one with the Father — he must therefore be an *āṁśa avatāra*, a partial incarnation.

Ramakrishna

He [*Ramakrishna*] never wrote an autobiography. What he said was in conversation with his disciples and others. He was certainly quite as much an Avatar as Christ or Chaitanya.

Augustus Caesar and Leonardo da Vinci

Augustus Caesar organised the life of the Roman Empire and it was this that made the framework of the first transmission of the Graeco-Roman civilisation to Europe—he came for that work and the writings of Virgil and Horace and others helped greatly towards the success of his mission. After the interlude of the Middle Ages, this civilisation was reborn in a new mould in what is called the Renaissance, not in its life-aspects but in its intellectual aspects. It was therefore a supreme intellectual, Leonardo da Vinci, who took up again the work and summarised in himself the seeds of modern Europe.

*

Never heard before of my declaring or anybody declaring such a thing [*that a divine descent was attempted during the Renaissance with Leonardo da Vinci as its centre*]. What Leonardo da Vinci held in himself was all the new age of Europe on its many sides. But there was no question of Avatarhood or consciousness of a descent or pressure of spiritual planes. Mysticism was no part of what he had to manifest.

Napoleon

I don't think it can be said that Napoleon had little of ego. He was exceedingly ego-centric. He made himself a dictator from Brumaire, and as a dictator he should always have acted—but he felt the need of support and made the error of seeking it in the democratic way—a way for which he was utterly unfit. He had the capacities of a ruler but not of a politician—as a politician he would have been an entire failure. His hesitations were due to this defect—if it can be called one. He could not have dealt successfully with parties or a parliamentary assembly.

*

I never heard that Napoleon failed at Waterloo for want of self-confidence. I have always read that he failed because he

was, owing to his recent malady, no longer so quick and self-confident in decision and so supple in mental resource as before. Please don't rewrite history unless you have data for your novel version.

Chapter Three

Human Greatness

Greatness

Why should the Divine not care for the outer greatness? He cares for everything in the universe. All greatness is the Vibhuti of the Divine, says the Gita.

*

Obviously outer greatness is not the aim of Yoga. But that is no reason why one should not recognise the part played by greatness in the order of the universe or the place of great men of action, great poets and artists etc.

*

People have begun to try to prove that great men were not great, which is a very big mistake. If greatness is not appreciated by men, the world will become mean, small, dull, narrow and tamasic.

*

By greatness is meant an exceptional capacity of one kind or another which makes a man eminent among his fellows.

*

That kind of greatness [*scientific, literary, political*] has nothing to do with the psychic. It consists in a special mental capacity (Raman, Tagore) or in a great vital force which enables them to lead men and dominate them. These faculties are often but not always accompanied by something in the personality Daivic or Asuric which supports their action and gives to men an impression of greatness apart even from the special capacity — the sense of a great personality.

*

Most great men know perfectly well that they are great.

*

It is the power in them [*great men*] that is great and that power comes from the Divine—by their actions and greatness they help the world and aid the cosmic purpose. It does not matter whether they have ego or not—they are not doing Yoga.

*

If a man rises to a higher plane of consciousness, it does not necessarily follow that he will be a greater man of action or a greater creator. One may rise to spiritual planes of inspiration undreamed of by Shakespeare and yet not be as great a poetic creator as Shakespeare. “Greatness” is not the object of spiritual realisation any more than fame or success in the world—how are these things the standard of spiritual realisation?

*

Of course you can [*do Yoga without being great*]—there is no need of being great. On the contrary humility is the first necessity, for one who has ego and pride cannot realise the Highest.

*

Each one can be truly great only in the measure in which he feels and opens to the source of all greatness, the Divine.

Greatness and Vices

It is not only the very very very big people who are of importance to the Divine. All energy, strong capacity, power of effectuation are of importance.

As for Napoleon, Caesar and Shakespeare, not one of them was a virtuous man, but they were great men—and that was your contention, that only virtuous men are great men and those who have vices are not great, which is an absurd contention. All of them went after women—two were ambitious, unscrupulous. Napoleon was most arrogant and violent.

Shakespeare stole deer, Napoleon lied freely, Caesar was without scruples.

*

But do you really believe that men like Napoleon, Caesar, Shakespeare were not great men and did nothing for the world or for the cosmic purpose? that God was deterred from using them for His purpose because they had defects of character and vices? What a singular idea!

*

Why should he [*the Divine*] care [*about the vices of great men*]? Is he a policeman? So long as one is in the ordinary nature, one has qualities and defects, virtues and vices. When one goes beyond, there are no virtues and vices,—for these things do not belong to the Divine Nature.

*

Yes, certainly. Many great men even have often very great vices and many of them. Great men are not usually model characters.

*

They [*great men*] have more energy and the energy comes out in what men call vices as well as in what men call virtues.

*

Men with great capacities or a powerful mind or a powerful vital have very often more glaring defects of character than ordinary men—or at least the defects of the latter do not show so much, being like themselves, smaller in scale.

*

Great or dazzling, or small in their field, ambition is ambition and it is necessary for most for an energetic action. What is the use of calling a thing a vice when it is small and glorifying it when it is big?

Section Three

Destiny, Karma, Death and Rebirth

Chapter One

Fate, Free Will and Prediction

Destiny

Each follows in the world his own line of destiny which is determined by his own nature and actions—the meaning and necessity of what happens in a particular life cannot be understood except in the light of the whole course of many lives. But this can be seen by those who can get beyond the ordinary mind and feelings and see things as a whole, that even errors, misfortunes, calamities are steps in the journey, the soul gathering experience as it passes through and beyond them until it is ripe for the transition which will carry it beyond these things to a higher consciousness and higher life. When one comes to that line of crossing one has to leave behind one the old mind and feelings. One looks then on those who are still fixed in the pleasures and sorrows of the ordinary world with sympathy and wherever it is possible with spiritual helpfulness, but no longer with attachment. One learns that they are being led through all their stumbling and trusts to the universal Power that is watching and supporting their existence to do for them whatever for them is the best. But the one thing that is really important for us is to get into the greater Light and the Divine Union—to turn to the Divine alone, to put our trust there alone whether for ourselves or for others.

*

Destiny in the rigid sense applies only to the outer being so long as it lives in the Ignorance. What we call destiny is only in fact the result of the present condition of the being and the nature and energies it has accumulated in the past acting on each other and determining the present attempts and their future results. But as soon as one enters the path of spiritual life, this old predetermined destiny begins to recede. There comes in a new factor, the

Divine Grace, the help of a higher Divine Force other than the force of Karma which can lift the sadhak beyond the present possibilities of his nature. One's spiritual destiny is then the divine election which ensures the future. The only doubt is about the vicissitudes of the path and the time to be taken by the passage. It is here that the hostile forces playing on the weaknesses of the past nature strive to prevent the rapidity of the progress and to postpone the fulfilment. Those who fell, fell not because of the attacks of the vital forces, but because they put themselves on the side of the hostile Force and preferred a vital ambition or desire (ambition, vanity, lust, etc.) to the spiritual siddhi.

*

Each has his own destiny which he brings with him into the world.

*

Each has his own destiny and his entering into a particular family in one life is only an incident.

*

Obviously, neither Nature nor Destiny nor the Divine work in the mental way or by the law of the mind or according to its standards—that is why even to the scientist and the philosopher Nature, Destiny, the way of the Divine, all remain a mystery.

*

Nature is very largely what you make of her—or can make of her.

*

Destiny is not an absolute, it is a relative. One can alter it for the better or the worse.

Free Will and Determinism

It is difficult indeed to make out what Planck means in these

pages¹—what is his conclusion and how he arrives at it; he has probably so condensed his arguments that the necessary explanatory links are missing. The free will affair, I see by glancing through the previous pages, arises only incidentally from his position that the new discoveries grouped round the quantum theory do not make a radical difference in physics. If there is a tendency to regard laws as statistical—in which case there is no “strict causality” and no determinism—still there is nothing to prove that they cannot be treated and may not be advantageously treated as dynamical also—in which case determinism can stand; the uncertainty of individual behaviour (electrons, quanta) does not really undermine determinism, but only brings a new feature into it. That seems from a hasty glance to be his position. Certain scientific thinkers consider this uncertainty of individual behaviour to be a physical factor correspondent to the element of free will in individual human beings. It is here that Planck brings in the question of free will to refute the conclusion that it affects strict causality and the law of determinism. His argument, as far as I can make it out, is this:

(1) The law of strict causality stands because any given action or inner happening of the individual human being is an effect determined completely by two causes, (a) the previous state of his mind taken as a whole, (b) external influences.

(2) The will is a mental process completely determined by these two factors; therefore it is not free, it is part of the chain of strict causality—as are also the results of the free will.

(3) What is important is not the actual freedom of the will, but the man's consciousness of freedom. This creates an inner experience of conscious motive which again creates fresh motives and so on indefinitely. For this reason it is impossible for a man to predict his future action—for at any moment a fresh motive may arise. But when we look back at the past, then the concatenation of cause and effect becomes apparent.

(4) The fact of strict causality (or at least the theory of it)

¹ Max Planck, *The Universe in the Light of Modern Physics* (London: George Allen and Unwin, 1931), pp. 84–87.

stands therefore unshaken by the consciousness of free will of the individual. It is only obscured by the fact that a man cannot predict his own actions or grasp the causes of his present state; but that is because here the subject and object are the same and this subject-object is in a state of constant alterative motion unlike an object outside, which is supposed not to change as a result of the inner movements of the knower.

There is a reference to causal law and ethical law which baffles me. Is the “ethical law” something outside the strict chain of effects and causes? Is there such a thing at all? If “strict causality” rules all, what is such an ethical law doing there?

That is the argument so far as I can follow it, but it does not seem to me very conclusive. If a man’s conduct cannot be predicted by himself, neither can it be predicted by anyone else, though here the subject and object are not the same; if not predictable, then it must be for the same reason, the element of free will and the mobility created by the possible indefinite intrusion of fresh motives. If that is so, strict causality cannot be affirmed, though a plastic causality in which the power of choice called by us free will is an element (either as one among many contributory causes or as an instrument of a cause beyond itself) can still be asserted as possible.

The statement that the action of the individual is strictly determined by his total mental state + external influences is doubtful and does not lead very far. It is possible to undermine the whole idea of inevitable causality by holding that the total existing state before a happening is only the condition under which it happens — there are a mass of antecedents and there is a sequent, if it may be so called, or a mass of sequences, but nothing proves that the latter are inevitable consequences of the mass of antecedents. Possibly this total existing state is a matrix into which some seed of happening is thrown or becomes active, so that there may be many possible results, and in the case of human action it is conceivable that free will is *the* or at least *a* determining factor.

I do not think therefore that these arguments of Planck carry us very far. There is also of course the question raised in the book

itself whether, granting determinism, a local state of things is an independent field of causality or all is so bound together that it is the whole that determines the local result. A man's action then would be determined by universal forces and his state of mind and apparent choice would be only part of the instrumentation of Universal Force.

*

In the case of Socrates and that of the habitual drunkard raised by you, the difference you make is correct. The weak-willed man is governed by his vital and physical impulsions, his mental being is not dynamic enough to make its will prevail over them. His will is not "free" because it is not strong enough to be free, it is the slave of the forces that act on or in his vital and physical nature. In the case of Socrates the will is so far free that it stands above the play of these forces and he determines by his mental idea and resolve what he shall or shall not do. The question remains whether the will of Socrates is only free in this sense, itself being actually determined by something larger than the mentality of Socrates, something of which it is the instrument, whether Universal Force or a Being in him of which his daemon was the voice and which not only gave his mind that decisive awareness of the mental ideal but imposed on it the drive to act in obedience to the awareness. Or it may be subject to a nexus between the inner Purusha and the Universal Force. In the latter case there would be an unstable balance between determinism of Nature and a self-determination from within. If we start from the Sankhya view of things, that Being would be the soul or Purusha and both in the strong-willed Socrates and in the weak-willed slave of vital impulse, the action and its results would be determined by the assent or refusal of the Purusha. In the latter the Purusha gives its assent to and undergoes the play of the forces of Nature, the habit of the vital impulse, through a vital submission while the mind looks on helpless. In Socrates the Purusha has begun to emancipate itself and decide what it shall accept or shall not accept—the conscious being has begun to impose itself on the forces that act on it. This mastery has become

so complete that he can largely determine his own actions and can even within certain limits not only forecast but fix the results — so that what he wants shall happen sooner or later.

As for the Superman, that is the conscious being whose emancipation is complete by his rising to a station beyond the limits of mind. He can determine his action in complete accord with an awareness which perceives all the forces acting in and on and around him and is able, instead of undergoing, to use them and even to determine.

*

After reading Krishnaprem's exposition [*on free will and determinism*], I saw what might be said from the intellectual point of view on this question so as to link the reality of the supreme Freedom with the phenomenon of the determinism of Nature — in a different way from his but to the same purpose. In reality, the freedom and the determination are only two sides of the same thing — for the fundamental truth is self-determination, a self-determination of the cosmos and in it a secret self-determination of the individual. The difficulty arises from the fact that we live in the surface mind of ignorance, do not know what is going on behind and see only the phenomenal process of Nature. There the apparent fact is an overwhelming determinism of Nature and as our surface consciousness is part of that process we are unable to see the other term of the biune reality. For practical purposes, on the surface there is an entire determinism in Matter — though this is now disputed by the latest school of Science. As Life emerges a certain plasticity sets in, so that it is difficult to predict anything exactly as one predicts material things that obey a rigid law. The plasticity increases with the growth of Mind so that man can have at least a sense of free will, of a choice of his action, of a self-movement which at least helps to determine circumstances. But this freedom is dubious because it can be declared to be an illusion, a device of Nature, part of its machinery of determination, only a seeming freedom or at most a restricted, relative and subject independence. It is only when one goes behind away from Prakriti to Purusha and upward

away from Mind to spiritual Self that the side of freedom comes to be first evident and then, by unison with the Will which is above Nature, complete.

*

Well, the determination of human life and events is a mysterious thing. Can't help that, you know. Fate is composed of many things—Cosmic Will + individual self-determination + play of forces + Karma + x + y + z + a + b + c ad infinitum.

Predictions and Prophecy

I am afraid I have no great confidence in Cheiro's ideas and prophecies—some prophecies are fulfilled but most have gone wrong. The idea about the Jews is an old Jewish and Christian belief; not much faith can be put in it. As for the numbers it is true that according to occult science numbers have a mystic meaning. It is also true that there are periods and cycles in life as well as in world-life. But too exact a meaning cannot always be put in these things.

*

Mother says Cheiro has always missed his predictions. They are (at best) half truths which you have to turn this way or that to get something out of them corresponding with the fact.

*

Your extracts taken by themselves are very impressive, but when one reads the book, the impression made diminishes and fades away. You have quoted Cheiro's successes, but what about his failures? I have looked at the book and was rather staggered by the number of prophecies that have failed to come off. You can't deduce from a small number of predictions, however accurate, that all is predestined down to your putting the questions in the letter and my answer. It may be, but the evidence is not sufficient to prove it. What is evident is that there is an element of the predictable, predictable accurately and in detail as well

as in large points, in the course of events. But that was already known; it leaves the question still unsolved whether all is so predictable, whether destiny is the sole factor in existence or there are other factors also that can modify destiny,—or, destiny being given, there are not different sources or powers or planes of destiny and we can modify the one with which we started by calling in another destiny source, power or plane and making it active in our life. Metaphysical questions are not so simple that they can be trenchantly solved either in one sense or in another contradictory to it—that is the popular way of settling things, but it is quite summary and inconclusive. All is free will or else all is destiny—it is not so simple as that. This question of free will or determination is the most knotty of all metaphysical questions and nobody has been able to solve it—for a good reason, that both destiny and will exist and even a free will exists somewhere—the difficulty is only how to get at it and make it effective.

Astrology? Many astrological predictions come true, quite a mass of them, if one takes all together. But it does not follow that the stars rule our destiny; the stars merely record a destiny that has been already formed, they are a hieroglyph, not a Force,—or if their action constitutes a force, it is a transmitting energy, not an originating Power. Someone is there who has determined or something is there which is Fate, let us say; the stars are only indicators. The astrologers themselves say that there are two forces, *daiva* and *puruṣārtha*, fate and individual energy, and the individual energy can modify and even frustrate fate. Moreover the stars often indicate several fate-possibilities; for example that one may die in mid-age, but that if that determination can be overcome, one can live to a predictable old age. Finally, cases are seen in which the predictions of the horoscope fulfil themselves with great accuracy up to a certain age, then apply no more. This often happens when the subject turns away from the ordinary to the spiritual life. If the turn is very radical the cessation of predictability may be immediate; otherwise certain results may still last on for a time, but there is no longer the same inevitability. This would seem to show that there is or

can be a higher-power or higher-plane or higher-source spiritual destiny which can, if its hour has come, override the lower-power, lower-plane or lower-source vital and material fate of which the stars are indicators. I say vital because character can also be indicated from the horoscope much more completely and satisfactorily than the events of the life.

The Indian explanation of fate is Karma. We ourselves are our own fate through our actions, but the fate created by us binds us; for what we have sown, we must reap in this life or another. Still we are creating new fate for the future even while undergoing old fate from the past in the present. That gives a meaning to our will and action and does not, as European critics wrongly believe, constitute a rigid and sterilising fatalism. But again our will and action can often annul or modify even the past Karma, it is only certain strong effects, called *utkaya karma*, that are non-modifiable. Here too the achievement of the spiritual consciousness and life is supposed to annul or give the power to annul Karma. For we enter into union with the Will Divine, cosmic or transcendent, which can annul what it had sanctioned for certain conditions, new-create what it had created; the narrow fixed lines disappear, there is a more plastic freedom and wideness. Neither Karma nor Astrology therefore points to a rigid and for ever immutable fate.

As for prophecy, I have never met or known of a prophet, however reputed, who was infallible. Some of their predictions come true to the letter, others do not,—they half-fulfil or misfire entirely. It does not follow that the power of prophecy is unreal or the accurate predictions can be all explained by probability, chance or coincidence. The nature and number of those that cannot is too great. The variability of fulfilment may be explained either by an imperfect power in the prophet sometimes active, sometimes failing or by the fact that things are predictable in part only, they are determined in part only or else by different factors or lines of power, different series of potentials and actuals. So long as one is in touch with one line, one predicts accurately, otherwise not—or if the line of power changes, one's prophecy also goes off the rails. All the same, one may say, there must be, if

things are predictable at all, some power or plane through which or on which all is foreseeable; if there is a divine Omniscience and Omnipotence it must be so. Even then what is foreseen has to be worked out, actually is worked out by a play of forces,—spiritual, mental, vital, physical forces—and in that plane of forces there is no absolute rigidity discoverable. Personal will or endeavour is one of those forces—Napoleon when asked why he believed in Fate, yet was always planning and acting, answered, “Because it is fated that I should work and plan”—in other words, his planning and acting were part of Fate, contributed to the results Fate had in view. Even if I foresee an adverse result, I must work for the one that I consider should be; for it keeps alive the force, the principle of Truth which I serve and gives it a possibility to triumph hereafter, so that it becomes part of the working of a future favourable Fate, even if the fate of the hour is adverse. Men do not abandon a cause because they have seen it fail or foresee its failure; and they are spiritually right in their stubborn perseverance. Moreover, we do not live for material result alone,—far more the object of life is the growth of the soul, not outward success of the hour or even of the near future. The soul can grow against or even by a material destiny that is adverse.

Finally, even if all is determined, why say that Life is, in Shakespeare's phrase or rather Macbeth's, “a tale told by an idiot, full of sound and fury, signifying nothing”? Life would rather be that if it were all chance and random incertitude. But if it is something foreseen, planned in every detail, does it not rather mean that life does signify something, that there must be a secret Purpose that is being worked up to, powerfully, persistently through the ages, and ourselves are a part of it and fellow-workers in the fulfilment of that invincible Purpose?

*

Well, one of the greatest ecstasies possible is to feel oneself carried by the Divine,—not by the stars or Karma, for the latter is a bad business, dry and uncomfortable—like being turned on a machine, “*yantrārūḍhāni māyayā*”.

Astrology and Yoga

Astrology is an occult science—it is not a part of the Yoga except as anything can be made part of the Yoga—if done in the right spirit.

*

That is not the question.² The question is what influence has the sadhak on the stars at his birth?

² *The correspondent asked, "Can astrological truths have any influence on a sadhak?" —Ed.*

Chapter Two

Karma and Heredity

Karma

Karma is not luck, it is the transmission of past energies into the present with their results.

*

All energies put into activity — thought, speech, feeling, act — go to constitute Karma. These things help to develop the nature in one direction or another, and the nature and its actions and reactions produce their consequences inward and outward: they also act on others and create movements in the general sum of forces which can return upon oneself sooner or later. Thoughts unexpressed can also go out as forces and produce their effects. It is a mistake to think that a thought or will can have effect only when it is expressed in speech or act: the unspoken thought, the unexpressed will are also active energies and can produce their own vibrations, effects or reactions.

*

If it [*the soul*] goes on with its Karma, then it does not get liberation. If it wants only farther experience, it can just stay there in the ordinary nature. The aim of Yoga is to transcend Karma. Karma means subjection to lower Nature; through Yoga the soul goes towards freedom.

*

The bondage to the effects of Karma remains so long as one has not passed out of the ordinary human consciousness which is its field to the higher spiritual consciousness where all bonds are untied. As for peace one can gain it by an entire reliance on the Divine and surrender to the Divine Will.

*

In life all sorts of things offer themselves. One cannot take anything that comes with the idea that it is sent by the Divine. There is a choice and a wrong choice produces its consequence.

Karma and Heredity

Karma and heredity are the two main causes [*of one's temperament*]. According to some heredity is also subject to Karma, but that may be only in a general way, not in all the details.

*

Many things in the body and some in the mind and vital are inherited from the father and mother or other ancestors—that everybody is supposed to know. There are other things that are not inherited, but peculiar to one's own nature or developed by the happenings of this life.

*

You must realise that all human beings are made partly of what is given them by their ancestors (not only father and mother but all the ancestors), partly of what they bring with them. The part they get from the ancestors is called hereditary—it is part (not the whole) of the physical and lower vital consciousness, sometimes a little of the external mind also—it is a small portion of the external being, but although small, it is sometimes very persistent and active. The rest of the being, inner and a great part too of the external, is brought from past lives. This hereditary part has to be got rid of and replaced by the true individuality spreading itself to the whole external nature.

*

A very big stamp in most cases¹—it is in the physical vital and physical material that the stamp chiefly exists—and it is increased by education and upbringing.

*

¹ *The correspondent asked whether the influence of heredity, race, caste and family leaves a stamp on one's lower nature.—Ed.*

There is always a hereditary part of the nature which is a large portion of the outward nature—there is also the educational influence of the father which has put a stamp on you.

*

Hereditary influence² creates an affinity and affinity is a living thing. It is only when the hereditary part is changed that the affinity ceases.

*

It is your own being that seeks for the Divine. The hereditary part is not your true being, but something you have taken up as part of this birth. It can be got rid of or changed.

Evolution, Karma and Ethics

The question as put in your letter seems to me to be too rigidly phrased and not to take into sufficient account the plasticity of the facts and forces of existence. It sounds like the problem which one might raise on the strength of the most recent scientific theories—if all is made up of protons and electrons, all exactly similar to each other (except for the group numbers, and why should a difference of quantity make such an extraordinary difference or any difference of quality?) how does their action result in such stupendous differences of degree, kind, power, everything? But why should we assume that the psychic seeds or sparks all started in a race at the same time, equal in conditions, equal in power and nature? Granted that the One Divine is the source of all and the Self is the same in all; but in manifestation why should not the Infinite throw itself out in infinite variety, why must it be in an innumerable sameness? How many of these psychic seeds started long before others and have a great past of development behind them and how many are young and raw and half-grown only? And even among those who started together,

² The correspondent asked whether the hereditary influence created by his father had come to an end in him.—Ed.

why should not there be some who ran at a great speed and others who loitered and grew with difficulty or went about in circles? And then there is an evolution, and it is only at a certain stage in the evolution that the animal belt is past and there is a human beginning; what constitutes the human beginning, which represents a very considerable revolution or turnover? Up to the animal line it is the vital and physical that have been developing—for the human to begin is it not necessary that there should be the descent of a mental being to take up the vital and physical evolution? And may it not well be that the mental beings who descend are not all of the same power and stature and, besides, do not take up equally developed vital and physical consciousness-material? There is also the occult tradition of a hierarchy of beings who stand above the present manifestation and put themselves into it with results which will obviously be just such a stupendous difference of degrees, and even intervene by descending into the play through the gates of birth in human Nature. There are many complexities and the problem cannot be put with the rigidity of a mathematical formula.

A great part of the difficulty of these problems, I mean especially the appearance of inexplicable contradiction, arises from the problem itself being badly put. Take the popular account of reincarnation and Karma—it is based on the mere mental assumption that the workings of Nature ought to be moral and proceed according to an exact morality of equal justice—a scrupulous, even mathematical law of reward and punishment or, at any rate, of results according to a human idea of right correspondences. But Nature is non-moral—she uses forces and processes moral, immoral and amoral pell-mell for working out her business. Nature in her outward aspect seems to care for nothing except to get things done—or else to make conditions for an ingenious variety of the play of life. Nature in her deeper aspect as a conscious spiritual Power is concerned with the growth, by experience, the spiritual development of the souls she has in her charge—and these souls themselves have a say in the matter. All these good people lament and wonder that unaccountably they and other good people are visited with

such meaningless sufferings and misfortunes. But are they really visited with them by an outside Power or by a mechanical Law of Karma? Is it not possible that the soul itself—not the outward mind, but the spirit within—has accepted and chosen these things as part of its development in order to get through the necessary experience at a rapid rate, to hew through, *durchnauen*, even at the risk or the cost of much damage to the outward life and the body? To the growing soul, to the spirit within us, may not difficulties, obstacles, attacks be a means of growth, added strength, enlarged experience, training for spiritual victory? The arrangement of things may be that and not a mere question of the pounds, shillings and pence of a distribution of rewards and retributory misfortunes!

It is the same with the problem of the taking of animal life under the circumstances put forward by your friend in the letter. It is put on the basis of an invariable ethical right and wrong to be applied to all cases—is it right to take animal life at all, under any circumstances, is it right to allow an animal to suffer under your eyes when you can relieve it by an euthanasia? There can be no indubitable answer to a question put like that, because the answer depends on data which the mind has not before it. In fact there are many other factors which make people incline to this short and merciful way out of the difficulty—the nervous inability to bear the sight and hearing of so much suffering, the unavailing trouble, the disgust and inconvenience—all tend to give force to the idea that the animal itself would want to be out of it. But what does the animal really feel about it—may it not be clinging to life in spite of the pain? Or may not the soul have accepted these things for a quicker evolution into a higher state of life? If so, the mercy dealt out may conceivably interfere with the animal's Karma. In fact the right decision might vary in each case and depend on a knowledge which the human mind has not—and it might very well be said that until it has it, it has not the right to take life. It was some dim perception of this truth that made religion and ethics develop the law of Ahimsa—and yet that too becomes a mental rule which it is found impossible to apply in practice. And perhaps the moral of it all is that we must

act for the best according to our lights in each case, as things are, but that the solution of these problems can only come by pressing forward towards a greater light, a greater consciousness in which the problems themselves, as now stated by the human mind, will not arise because we shall have a vision which will see the world in a different way and a guidance which at present is not ours. The mental or moral rule is a stop-gap which men are obliged to use, very uncertainly and stumblingly, until they can see things whole in the light of the spirit.

Chapter Three

Death

Death and Karma

It [*death*] is a universal force — the happening or change called death is simply one result of the working of the force.

*

Most people die before the vitality of the body is exhausted. It is due to many causes of which one is the destiny prepared by past lives; another the inner purpose or utility of the present life being completed — but these are subtle and secret reasons — others, accident, violence or other causes, are only an exterior machinery.

*

X had reached a stage of her development marked by a predominance of the sattwic nature, but not a strong vital (which works towards a successful or fortunate life) or the opening to a higher light, — her mental upbringing and surroundings stood against that and she herself was not ready. Her early death with much suffering may have been the result of past (prenatal) influences or they may have been chosen by her own psychic being as a passage towards a higher state for which she was not yet prepared but towards which she was moving. This and the non-fulfilment of her capacities would be a final tragedy if there were this life alone. As it is she has passed towards the psychic sleep to prepare for her life to come.

*

You can explain¹ to X that the death of his nephew had nothing

¹ Written by Sri Aurobindo to his secretary, who replied to the enquirer. — Ed.

to do with their [*his family members'*] obscurities and imperfections—it was part of his own Karma—each person has his own destiny and follows its line; to be in a certain family and with certain relations is only a temporary incident in its course. The sadhak should be free from these attachments and regard these happenings as ordeals to be passed through with equality and faith in the Divine—doing his best for those who are in his charge but not disturbed by results.

*

It is a very intricate and difficult question to tackle² and it can hardly be answered in a few words. Moreover it is impossible to give a general rule as to why there are these close inner contacts followed by a physical separation through death—in each case there is a difference and one would have to know the persons and be familiar with their soul history to tell what was behind their meeting and separation. In a general way, a life is only one brief episode in a long history of spiritual evolution in which the soul follows the curve of the line set for the earth, passing through many lives to complete it. It is an evolution out of material unconsciousness to consciousness and on towards the divine Consciousness, from ignorance to divine Knowledge, from darkness through half-lights to Light, from death to Immortality, from suffering to the Divine Bliss. Suffering is due first to the Ignorance, secondly to the separation of the individual consciousness from the Divine Consciousness and Being, a separation created by the Ignorance—when that ceases, when one lives completely in the Divine and no more in one's separated smaller self, then only suffering can altogether cease. Each soul follows its own line and these lines meet, journey together for a space, then part to meet again perhaps hereafter—often they meet to help each other on the journey in one way or another. As for the after-death period, the soul passes into other planes of existence, staying there for a while till it reaches its place of rest where it

² A mother whose sixteen-year-old son had died wrote to ask why his death had taken place. Her letter was referred to Sri Aurobindo.—Ed.

remains until it is ready for another terrestrial existence. This is the general law, but for the connections of embodied soul with embodied soul, that is a matter of personal evolution on which nothing general can be said as it is intimate to the soul stories of the two and needs a personal knowledge. That is all I can say, but I don't know that it will be of much help to her, as these things are helpful usually only when one enters into the consciousness in which they become not mere ideas but realities. Then one grieves no longer because one has entered into the Truth and the Truth brings calm and peace.

Death and Grieving

I can understand the shock your wife's catastrophic death must have been to you. But you are now a seeker and sadhak of the Truth and must set your mind above the normal reactions of the human being and see things in a larger greater light. Regard your lost wife as a soul that was progressing through the vicissitudes of the life of Ignorance — like all others here — in that progress things happen that seem unfortunate to the human mind and a sudden accidental or violent death cutting short prematurely this always brief spell of terrestrial experience we call life seems to it especially painful and unfortunate. But one who gets behind the outward view knows that all that happens in the progress of the soul has its meaning, its necessity, its place in the series of experiences which are leading it towards the turning point where one can pass from the Ignorance to the Light. He knows that whatever happens in the Divine Providence is for the best even though it may seem to the mind otherwise. Look on your wife as a soul that has passed the barrier between two states of existence. Help her journey towards her place of rest by calm thoughts and the call to the Divine Help to aid her upon it. Grief too long continued does not help but delays the journey of the departed soul. Do not brood on your loss, but think only of her spiritual welfare.

*

The telegram announces the passing away of your husband.

All has been done that could be done to keep him in life. What has happened must now be accepted calmly as the thing decreed and best for his soul's progress from life to life though not the best in human eyes which look only at the present and at outside appearance. For the spiritual seeker death is only a passage from one form of life to another, and none is dead but only departed. Look at it as that and shaking from you all reactions of vital grief — they cannot help him in his journey, — pursue steadfastly the path to the Divine.

*

There is nothing to grieve about as death means only passing over to another country — to which you probably go very often when you are asleep.

That is, so long as one has attachment — one ought to look at it like that. But all attachment to past ties should be overcome.

*

Of course, that is the real fact — death is only a shedding of the body, not a cessation of the personal existence. A man is not dead because he goes into another country and changes his clothes to suit that climate.

The After-Death Sojourn

There is after death a period in which one passes through the vital world and lives there for a time. It is only the first part of this transit that can be dangerous or painful; in the rest one works out, under certain surroundings, a remnant of the vital desires and instincts which one had in the body. As soon as one is tired of these and able to go beyond, the vital sheath is dropped and the soul, after a little time needed to get rid of some mental survivals, passes into a state of rest in the psychic world and remains there till the next life on earth.

One can help the departed soul by one's good will or by occult means if one has the knowledge. The one thing that one

should not do is to hold them back by sorrow for them or longings or anything else that would pull them nearer to earth or delay their journey to their place of rest.

*

It may happen to some not to realise for a little time that they are dead, especially if the death has been unforeseen and sudden, but it cannot be said that it happens to all or to most—some may enter into a state of semi-unconsciousness or obsession by a dark inner condition, created by their state of mind at death, in which they realise nothing of where they are etc., others are quite conscious of the passage. It is true that the departing being in the vital body lingers for some time near the body or the scene of life very often for as many as eight days and in the ancient religions mantras and other means were used for the severance. Even after the severance from the body a very earthbound nature or one full of strong physical desires may linger long in the earth-atmosphere up to a maximum period extended to three years. Afterwards it passes to the vital worlds, proceeding on its journey which must sooner or later bring it to the psychic rest till the next life. It is true also that sorrow and mourning for the dead impedes its progress by keeping it tied to the earth-atmosphere and pulling it back from its passage.

*

After death the soul passes in a little while or at once from the earth atmosphere and goes into the vital worlds where it remains for a time until it is ready to leave it. Thus it passes on its way till it is ready to pass into the psychic world where it rests until it is ready for a new birth.

*

After death one passes through various vital and mental planes till the psychic being drops its vital and mental sheaths and enters into rest on the psychic plane till the time comes for rebirth.

*

At the time of death the being goes out of the body through the head; it goes out in the subtle body and goes to different planes of existence for a short time until it has gone through certain experiences which are the result of its earthly existence. Afterwards it reaches the psychic world where it rests in a kind of sleep until it is time for it to start a new life on earth. That is what happens usually—but there are some beings who are more developed and do not follow this course.

*

That is a superstition [*that people have to live in naraka (hell) due to their bad actions*]. People after death pass through certain vital and mental worlds or through certain psychological states which are the results of their nature and action in life, afterwards they go to the psychic world and return to birth at a later time.

*

When the Mother spoke of the continuance of the same trouble after death, she did not mean another life. At death you go out of this physical frame in another kind of body, not physical, and are the same person with the same consciousness. That is why to talk of dying as going to rest is an ignorance and why it is useless. The only real thing is to get rid of the old lower self and be reborn to the new higher one, which can only be done by a change within you. That is what the Mother wants of you.

Chapter Four

Rebirth

The Psychic's Choice at the Time of Death

The psychic being at the time of death chooses what it will work out in the next birth and determines the character and conditions of the new personality. Life is for the evolutionary growth by experience in the conditions of the Ignorance till one is ready for the higher light.

*

The dying wish of the man is only something on the surface — it may be determined by the psychic and so help to shape the future but it does not determine the psychic's choice. That is something behind the veil. It is not the outer consciousness's action that determines the inner process, but the other way round. Sometimes, however, there are signs or fragments of the inner action that come up on the surface, e.g. some people have a vision or remembrance of the circumstances of their past in a panoramic flash at the time of death, that is the psychic's review of the life before departing.

*

The psychic being's choice at the time of death doesn't work out the next formation of personality, it fixes it. When it enters the psychic world, it begins to assimilate the essence of its experience and by that assimilation is formed the future psychic personality in accordance with the fixation already made. When this assimilation is over, it is ready for a new birth — but the less developed beings do not work out the whole thing for themselves, there are beings and forces of the higher world who have that work. Also when it comes to birth, it is not sure that the forces of the physical world will not come across the working out of what it wanted — its own new instrumentation may not be strong enough for

that purpose; for there is the interaction of its own energies and the cosmic forces here. There may be frustration, diversion, a partial working out — many things may happen. All that is not a rigid machinery, it is a working out of complex forces. It may be added however that a developed psychic being is much more conscious in this transition and works much of it out itself. The time depends also on the development and on a certain rhythm of the being — for some there is practically immediate rebirth, for others it takes longer, for some it may take centuries; but here again, once the psychic being is sufficiently developed, it is free to choose its own rhythm and its own intervals. The ordinary theories are too mechanical — and that is the case also with the idea of *punya* and *pāpa* and their results in the next life. There are certainly results of the energies put forth in a past life, but not on that rather infantile principle. A good man's sufferings in this life would be a proof according to the orthodox theory that he had been a very great villain in his past life, a bad man's prospering would be a proof that he had been quite angelic in his last visit to earth and sown a large crop of virtues and meritorious actions to reap this bumper crop of good fortune. Too symmetrical to be true. The object of birth being growth by experience, whatever reactions come to past deeds must be for the being to learn and grow, not as lollipops for the good boys of the class (in the past) and canings for the bad ones. The real sanction for good and ill is not good fortune for the one and bad fortune for the other, but this that good leads us towards a higher nature which is eventually lifted above suffering and ill pulls us towards the lower nature which remains always in the circle of suffering and evil.

Assimilation in the Psychic World

The soul after it leaves the body travels through several states or planes until the psychic being has shed its temporary sheaths, then it reaches the psychic world where it rests in a kind of sleep till it is ready for reincarnation. What it keeps with it of the human experience in the end is only the essence of all

that it has gone through, what it can use for its development. This is the general rule, but it does not apply to exceptional cases or to very developed beings who have achieved a greater consciousness than the ordinary human level.

It is not the soul (the psychic being) that takes a lesser form [*in its next birth*], it is some part of the manifested being, usually some part of the vital that does it, owing to some desire, affinity, need of particular experience. This happens fairly often to the ordinary man.

*

After leaving the body, the soul, after certain experiences in other worlds, throws off its mental and vital personality and goes into rest to assimilate the essence of its past and prepare for a new life. It is this preparation that determines the circumstances of the new birth and guides it in its reconstitution of a new personality and the choice of its materials.

The departed soul retains the memory of its past experiences only in their essence, not in their form or detail. It is only if the soul brings back some past personality or personalities as part of its present manifestation that it is likely to remember the details of the past life. Otherwise, it is only by Yogadrishti that the memory comes.

There may be what seem to be retrograde movements [*in the evolution of the soul*], but these are only like zigzag movements, not a real falling back, but a return on something not worked out so as to go on better afterwards.

The soul does not go back to the animal condition; but part of the vital personality may disjoin itself and join an animal birth to work out its animal propensities there.

There is no truth in the popular belief about the avaricious man becoming a serpent. These are popular romantic superstitions.

*

The soul takes birth each time, and each time a mind, life and body are formed out of the materials of universal Nature,

according to the soul's past evolution and its need for the future.

When the body is dissolved, the vital goes into the vital plane and remains there for a time, but after a time the vital sheath disappears. The last to dissolve is the mental sheath. Finally the soul or psychic being retires into the psychic world to rest there till a new birth is due.

This is the general course for ordinarily developed human beings. There are variations according to the nature of the individual and his development. For example, if the mental is strongly developed, then the mental being can remain; so also can the vital, provided they are organised by and centred around the true psychic being; they share the immortality of the psychic.

The soul gathers the essential element of its experiences in life and makes that its basis of growth in the evolution; when it returns to birth it takes up with its mental, vital, physical sheaths so much of its Karma as is useful to it in the new life for farther experience.

It is really for the vital part of the being that *śrāddha* and rites are done — to help the being to get rid of the vital vibrations which still attach it to the earth or to the vital worlds, so that it may pass quickly to its rest in the psychic peace.

*

The movement of the psychic being dropping its outer, its vital and mental sheaths on its way to the psychic plane, is its normal movement after death. But there can be any number of variations; one can return directly from the vital plane without passing on to farther and higher states, and there are cases of an almost immediate rebirth, sometimes even attended with a detailed memory of the events of the past life.

Hell and heaven are often imaginary states of the soul, or rather of the vital being, which it constructs about it after its passing. What is meant by hell is a painful passage through some vital world or a dolorous lingering there, as for instance in many cases of suicide where one remains surrounded by the forces of suffering and turmoil created by this unnatural and violent exit. There are also, of course, real worlds of mind and vital

worlds which are penetrated with joyful or dark experiences, and one may pass through these as the result of things formed in the nature which create the necessary affinities. But the idea of reward or retribution is a crude and vulgar conception and we can disregard it as a mere popular error.

There is no rule of complete forgetfulness in the return of the soul to rebirth. There are, especially in childhood, many impressions of the past life which can be strong and vivid enough, but a materialising education and the overpowering influences of the environment must often, but not quite always, prevent their true nature from being recognised. There are even a number of people who have definite recollections of a past life. But these things are discouraged by education and the atmosphere and cannot remain or develop; in most cases they are stifled out of existence. At the same time it must be noted that what the psychic being mainly carries away with it and brings back is ordinarily the essence and effect of the experiences it had in former lives, and not the details, so that you cannot expect the same coherent memory as one has of past happenings in the present existence.

A soul can go straight to the psychic world but that depends on the state of consciousness at the time of departure. If the psychic is in front at the time, this immediate transition is possible. It does not depend on the acquisition of a mental and vital as well as a psychic immortality — those who have acquired that would rather have the power to move about in the different planes and even act on the physical world without being bound to it. On the whole it may be said that there is no one rigid rule for these things; manifold variations are possible depending upon the consciousness, its energies, tendencies and formations, although there is a general framework and design into which all fit and take their place.

The Psychic Being and the Progression from Life to Life

It is necessary to understand clearly the difference between the evolving soul (psychic being) and the pure Atman, self or spirit. The pure self is unborn, does not pass through death or birth,

is independent of birth or body, mind or life or this manifested Nature. It is not bound by these things, not limited, not affected, even though it assumes and supports them. The soul, on the contrary, is something that comes down into birth and passes through death — although it does not itself die, for it is immortal — from one state to another, from the earth-plane to other planes and back again to the earth-existence. It goes on with this progression from life to life through an evolution which leads it up to the human state and evolves through it all a being of itself which we call the psychic being. This being supports the evolution and develops a physical, a vital, a mental human consciousness as its instruments of world-experience and of a disguised, imperfect, but growing self-expression. All this it does from behind a veil, showing something of its divine self only in so far as the imperfection of the instrumental being will allow it. But a time comes when it is able to prepare to come out from behind the veil, to take command and turn all the instrumental nature towards a divine fulfilment. This is the beginning of the true spiritual life. The soul is able now to make itself ready for a higher evolution of manifested consciousness than the mental human — it can pass from the mental to the spiritual and through degrees of the spiritual to the supramental state. Till then, till it has reached the spiritual realisation, there is no reason why it should cease from birth, it cannot in fact so cease. If having reached the spiritual state, it wills to pass out of the terrestrial manifestation, it may indeed make such an exit, — but there is also possible a higher manifestation, in the Knowledge and not in the Ignorance.

Your question therefore does not arise. It is not the naked spirit, but the psychic being that goes to the psychic plane to rest till it is called again to another life. There is therefore no need of a Force to compel it to take birth anew. It is in its nature something that is put forth from the Divine to support the evolution and it must do so till the Divine's purpose in its evolution is accomplished. Karma is only a machinery, it is not the fundamental cause of terrestrial existence — it cannot be, for when the soul first entered this existence, it had no Karma.

What again do you mean by “the all-veiling Maya” or by “losing all consciousness”? The soul cannot lose all consciousness, for its very nature is consciousness though not of the mental kind to which we give the name. The consciousness is merely covered, not lost or abolished by the so-called Inconscience of material Nature and then by the half-conscious ignorance of mind, life and body. It manifests, as the individual mind and life and body grow, as much as may be of the consciousness which it holds in potentiality, manifests it in the outward instrumental nature as far as and in the way that is possible through these instruments and through the outer personality that has been prepared for it and by it — for both are true — for the present life.

I know nothing about any terrible suffering endured by the soul in the process of rebirth; popular beliefs even when they have some foundation are seldom enlightened and accurate.

*

1. The psychic being stands behind mind, life and body, supporting them; so also the psychic world is not one world in the scale like the mental, vital or physical worlds, but stands behind all these and it is there that the souls evolving here retire for the time between life and life. If the psychic were only one principle in the rising order of body, life and mind on a par with the others and placed somewhere in the scale on the same footing as the others, it could not be the soul of all the rest, the divine element making the evolution of the others possible and using them as instruments for a growth through cosmic experience towards the Divine. So also the psychic world cannot be one among the other worlds to which the evolutionary being goes for supraphysical experience, it is a plane where it retires into itself for rest, for a spiritual assimilation of what it has experienced and for a replunging into its own fundamental consciousness and psychic nature.

2. For the few who go out of the Ignorance and enter into Nirvana, there is no question of their going straight up into higher worlds of manifestation. Nirvana or Moksha is a liberated condition of the being, not a world — it is a withdrawal

from the worlds and the manifestation. The analogy of Pitriyana and Devayana can hardly be mentioned in this connection.

3. The condition of the souls that retire into the psychic world is entirely static; each withdraws into himself and is not interacting with the others. When they come out of their trance, they are ready to go down into a new life, but meanwhile they do not act upon the earth life. There are other beings, guardians of the psychic world, but they are concerned only with the psychic world itself and the return of the souls to reincarnation, not with the earth.

4. A being of the psychic world cannot get fused into the soul of a human being on earth. What happens sometimes is that a very advanced psychic being sometimes sends down an emanation which resides in a human being and prepares it until it is ready for the psychic being itself to enter into the life. This happens when some special work has to be done and the human vehicle prepared. Such a descent produces a remarkable change of a sudden character in the personality and the nature.

5. Usually, a soul follows continuously the same line of sex. If there are shiftings of sex, it is as a rule a matter of parts of the personality which are not central.

6. As regards the stage at which the soul returning for rebirth enters the new body no rule can be laid down, for the circumstances vary with the individual. Some psychic beings get into relation with the birth-environment and the parents from the time of inception and determine the preparation of the personality and future in the embryo, others join only at the time of delivery, others even later on in the life and in these cases it is some emanation of the psychic being which upholds the life. It should be noted that the conditions of the future birth are determined fundamentally not during the stay in the psychic world but at the time of death — the psychic being then chooses what it should work out in the next terrestrial appearance and the conditions arrange themselves accordingly.

Note that the idea of rebirth and the circumstances of the new life as a reward or punishment for *punya* or *pāpa* is a crude human idea of "justice" which is quite unphilosophical

and unspiritual and distorts the true intention of life. Life here is an evolution and the soul grows by experience, working out by it this or that in the nature, and if there is suffering, it is for the purpose of that working out, not as a judgment inflicted by God or Cosmic Law on the errors or stumblings which are inevitable in the Ignorance.

*

It is difficult to give a positive answer to these questions, because no general rule can be laid down applicable to all. The mind makes rigid rules or one rigid rule, but the Manifestation is in reality very plastic and various and many-sided. My answers therefore must not be taken as exhaustive of the subject or complete.

1. He [*a Jivanmukta*] can go wherever his aim was fixed, into a state of Nirvana or one of the divine worlds and stay there or remain, wherever he may go, in contact with the earth-movement and return to it if his will is to help that movement.

This is doubtful [*whether a Jivanmukta can go direct from the world of the soul's present highest achievement to a still higher world*]. If originally he is not a being of the evolution but of some higher world, he could go back to that world. If he wants to go higher, it is logical that he should return to the field of evolution so long as he has not evolved the consciousness proper to that higher plane. The orthodox idea that even the gods have to come to earth if they want salvation may be applied to this ascension also. If he is originally an evolutionary being (Ramakrishna's distinction of the Jivakoti and Ishwarakoti may be extended to this also), he must proceed by the evolutionary path to either the negative withdrawal through Nirvana or some positive divine fulfilment in the increasing manifestation of Sachchidananda.

As to the impossibility of return [*to the earth*], that is a knotty question. A divine being can always return—as Ramakrishna said, the Ishwarakoti can at will ascend or descend the stair between Birth and Immortality. For the others, it is probable that they may rest for a relative infinity of time, *sāsvatīḥ samāḥ*,

if that is the will in them, but a return cannot be barred out unless they have reached their highest possible status.

No [*a Jivanmukta does not take rest in the psychic world before taking birth again on earth*]. That is part of the evolutionary line only, not obligatory for divine returns.

2. An advanced psychic being may mean here [*in the preceding letter*] one who has arrived at the soul's freedom and is immersed in the Divine — immersed does not mean abolished. Such a being does not sleep in the psychic world, but may remain in his state of blissful immersion or come back for some purpose.

The word "descend" has various meanings according to the context—I used it here in the sense of the psychic being "coming down" into the human consciousness and body ready for it; that descent might be at the time of birth or before or it may come down later and occupy the personality it has prepared for itself. I do not quite understand what are these personalities from above¹ — it is the psychic being itself that takes up a body.

3. No, the psychic being cannot take up more than one body. There is only one psychic being for each human being, but the Beings of the higher planes, e.g. the Gods of the Overmind can manifest in more than one human body at a time by sending different emanations into different bodies. These would be called Vibhutis of these Devatas.

4. These [*guardians of the psychic world*] are not human souls nor is this an office to which they are appointed nor are they functionaries — these are beings of the psychic plane pursuing their own natural activity in that plane. My word "guardians" [*in the preceding letter*] was simply a phrase meant to indicate by an image or metaphor the nature of their action.

The New Birth

When there is a new birth one brings all that is necessary from

¹ *The correspondent asked whether the "personalities" of an advanced being "move about in the higher planes". — Ed.*

past lives but also one gathers what is necessary from the earth consciousness and so too brings in new elements as one develops.

*

It is a little difficult to explain. When one gets a new body, the nature which inhabits it, nature of mind, nature of vital, nature of physical, is made up of many personalities, not one simple personality as is supposed—although there is one central being. This complex personality is formed partly by bringing together personalities of past lives, but also by gathering experiences, tendencies, influences from the earth atmosphere—which are taken up by one of the constituent personalities as suitable to his own nature. Such an influence left behind by Vivekananda or one of his disciples may have been taken up by you without your being an incarnation of either.

*

The being as it passes through the series of its lives takes on personalities of various kinds and passes through various types of experiences, but it does not carry these on to the next life, as a rule. It takes on a new mind, vital and body. The mental capacities, occupations, interests, idiosyncrasies of the past mind and vital are not taken over by the new mind and vital, except to the extent that is useful for the new life. One may have the power of poetic expression in one life, but in the next have no such power nor any interest in poetry. On the other hand tendencies suppressed or missed or imperfectly developed in one life may come out in the next. There would be therefore nothing surprising in the contrast which you noted. The essence of past experiences is kept by the psychic being but the forms of experience or of personality are not, except such as are needed for the new stage in the soul's progress.

The being in its long course of experience may permit for a time the search after sensual pleasure and afterwards discard it and turn to higher things. This can happen even in the course of a lifetime, *a fortiori* in a second life where the old personalities would not be carried over.

Reincarnation and Soul Evolution

You must avoid a common popular blunder about reincarnation. The popular idea is that Titus Balbus is reborn again as John Smith, a man with the same personality, character, attainments as he had in his former life with the sole difference that he wears coat and trousers instead of a toga and speaks in cockney English instead of popular Latin. That is not the case. What would be the earthly use of repeating the same personality or character a million times from the beginning of time till its end! The soul comes into birth for experience, for growth, for evolution till it can bring the Divine into matter. It is the central being that incarnates, not the outer personality — the personality is simply a mould that it creates for its figures of experience in that one life. In another birth it will create for itself a different personality, different capacities, a different life and career. Supposing Virgil is born again, he may take up poetry in one or two other lives, but he will certainly not write an epic but rather perhaps slight but elegant and beautiful lyrics such as he wanted to write, but did not succeed, in Rome. In another birth he is likely to be no poet at all, but a philosopher and a Yogan seeking to attain and to express the highest truth — for that too was an unrealised trend of his consciousness in that life. Perhaps before he had been a warrior or ruler doing deeds like Aeneas or Augustus before he sang them. And so on — on this side or that the central being develops a new character, a new personality, grows, develops, passes through all kinds of terrestrial experience.

As the evolving being develops still more and becomes more rich and complex, it accumulates its personalities, as it were. Sometimes they stand behind the active elements, throwing in some colour, some trait, some capacity here and there, — or they stand in front and there is a multiple personality, a many-sided character or a many-sided, sometimes what looks like a universal capacity. But if a former personality, a former capacity is brought fully forward, it will not be to repeat what was already done, but to cast the same capacity into new forms and new shapes and fuse it into a new harmony of the being which will not be a

reproduction of what it was before. Thus you must not expect to be what the warrior and the poet were—something of the outer characteristics may reappear but very much changed and new-cast in a new combination. It is in a new direction that the energies will be guided to do what was not done before.

Another thing. It is not the personality, the character that is of the first importance in rebirth—it is the psychic being who stands behind the evolution of the nature and evolves with it. The psychic when it departs from the body, shedding even the mental and vital on its way to its resting place, carries with it the heart of its experiences,—not the physical events, not the vital movements, not the mental buildings, not the capacities or characters, but something essential that it gathered from them, what might be called the divine element for the sake of which the rest existed. That is the permanent addition, it is that that helps in the growth towards the Divine. That is why there is usually no memory of the outward events and circumstances of past lives—for this memory there must be a strong development towards unbroken continuance of the mind, the vital, even the subtle physical; for though it all remains in a kind of seed memory, it does not ordinarily emerge. What was the divine element in the magnanimity of the warrior, that which expressed itself in his loyalty, nobility, high courage, what was the divine element behind the harmonious mentality and generous vitality of the poet and expressed itself in them, that remains and in a new harmony of character may find a new expression or, if the life is turned towards the Divine, be taken up as powers for the realisation or for the work that has to be done for the Divine.

What Survives and What Does Not

Nothing in the nature is carried over [*in the next incarnation*] except the essence of the past experiences and energies as much as is necessary for the new life. The rest is held in reserve, but things so held in reserve can be brought forward in a new form and under new conditions.

*

If all is centred consciously around the psychic then they [*the mental and vital parts of the being*] survive, otherwise they separate. The vital for instance survives for a time, then breaks up and dissolves into desires and fragmentary bits of vital personality. The mental is usually more lasting — but that too dissolves. It all depends on the person, how far he has developed his mind or vital or connected them with the psychic.

*

If one has had a strong spiritual development, that makes it easier to retain the developed mental or vital after death. But it is not absolutely necessary that the person should have been a Bhakta or a Jnani. One like Shelley or like Plato for instance could be said to have a developed mental being centred round the psychic — of the vital the same can hardly be said. Napoleon had a strong vital but not one organised round the psychic being.

*

What you suggest [*that certain forces from a past life or lives may “stick” to a person in the present life*] is true — that is to say when it is some past personality which or part of which is strongly carried over into the present life. It is, I believe, true that you were a revolutionary in a past life or if not a revolutionary, engaged in a violent political action. I can't put a name or a precise form on it. But it was not only the sudden angers and violences, but probably also the desire to help, to reform, to purify and other intensities and vehemences that came from there. When a personality is carried over like that it is not only the undesirable sides that are carried over but things that purified and chastened can be useful.

*

There is no such thing as an insuperable difficulty from past lives. There are formations that help and formations that hamper; the latter have to be dismissed and dissolved, not to be allowed to repeat themselves. The Mother told you that to explain the origin of this tendency and the necessity of getting rid of it —

there was no hint of any insuperable difficulty, quite the contrary.

*

For most people [*when they die*] the vital dissolves after a time as it is not sufficiently formed to be immortal. The soul descending makes a new vital formation suitable for the new life.

*

The physical always dissolves and in each new life one gets a new physical formation. To preserve the same physical would mean physical immortality.

*

Not *as* they are.² What remains and to what degree depends on the development in each case. Of course the centres themselves remain — for they are in the subtle body and it is from there that they act on the corresponding physical centres.

*

No, the subconscious is an instrument for the physical life and disappears [*after death*]. It is too incoherent to be an organised enduring existence.

Lines of Force and Consciousness

What is exactly your theory? There is one thing — influences — everybody undergoes influences, absorbs them or rejects, makes them disappear in one's own developed [*poetic*] style or else keeps them as constituent strands. There is another thing — lines of Force. In the universe there are many lines of Force on which various personalities or various achievements and formations spring up — e.g. the line Pericles—Caesar—Napoleon or the line Alexander—Jenghiz—Tamerlane—Napoleon — meeting together there — so it may be too in poetry, lines of poetic force prolonging themselves from one poet to another, meeting and

² *The disciple asked, "Do the centres remain as they are after death?" — Ed.*

diverging. Yours seems to be a third—a daemon or individual Spirit of Poetry migrating from one individual to another, several perhaps meeting together in one poet who gives them all a combined full expression. Is that it? If so, it is an interesting idea and arguable.

*

But after all it is a line of consciousness and not a personality that reincarnates; the personality is only for the one life, so it does not bind though it may influence at certain points the present life.

Beings of the Higher Planes

It is always possible for a being of the higher planes to take birth on earth—in that case they create a mind or vital for themselves or else they join a mind, vital and body which has already been prepared under their influence—there are indeed many ways and not one only in which they can manifest here.

*

As there are many personalities in a man in his various ordinary planes of consciousness, so also several beings can associate themselves with his consciousness as it develops afterwards—descending into his higher mind or other higher planes of being and connecting themselves with his personality. That is for the principle. But as for the particular information [*about a certain person*], it is inaccurate. It has probably reference to the period when Mother was bringing down beings to aid in the work.

Fragments of a Dead Person that Reincarnate

All human incarnations or births have naturally a psychic being. It is only other types like the vital beings that have not, and that is precisely the reason why they want to possess men and enjoy physical life without being themselves born here, for so they escape the psychic law of evolution and spiritual progress

and change. But these formations [*the vital fragments of a dead person*] are different, they are things that do not leave the earth and do not possess but simply attach themselves to some human rebirth (of course with a psychic in it) which has some affinity and therefore does not object to or resist their inclusion.

*

The fragments [*of a dead person*] are not of the inner being (who goes on his way to the psychic world) but of his vital sheath which falls away after death. These can join for birth the vital of some other Jiva who is being born or they can be used by a vital being to enter a body in process of birth and partly possess it for the satisfaction of its propensities. The junction can also take place after birth.

Connections from Life to Life

There is a vital connection generally—the psychic is comparatively rare. It is something in past lives usually that determines these connections in this one, but the connection in this life is seldom the same as that of the past which determined it.

Lines of Sex in Rebirth

As far as I know, the births follow usually one line [*of sex*] or the other and do not alternate—that, I think, is the Indian tradition also, though there are purposeful exceptions like Shikhandi's. If there is a change of sex, it is only part of the being that associates itself with the change, not the central being.

*

Not sex exactly [*is present in the psychic being*], but what might be called the masculine and feminine principle. It is a difficult question [*whether a man can be reborn as a woman or a woman as a man*]. There are certain lines the reincarnation follows and so far as my experience goes and general experience goes, one follows usually a single line. But the alteration of sex cannot

be declared impossible. There may be some who do alternate. The presence of feminine traits in a male does not necessarily indicate a past feminine birth — they may come in the general play of forces and their formations. There are besides qualities common to both sexes. Also a fragment of the psychological personality may have been associated with a birth not one's own. One can say of a certain person of the past, "That was not myself, but a fragment of my psychological personality was present in him." Rebirth is a complex affair and not so simple in its mechanism as in the popular idea.

*

All the instances I have heard of in the popular accounts of rebirth are of man becoming man and woman becoming woman in the next life — except when they become animal, but even then I think the male becomes a male animal and the female a female animal. There are only stray cases quoted like Shikhandi's in the Mahabharata for variations of sex. The Theosophist conception is full of raw imagination, one Theosophist even going so far as to say that if you are a man in this birth you are obliged to be a woman in the next and so on.

Asuric Births

*Āsurīṣu*³ can't possibly mean "animal". The Gita uses precise terms and if it had meant animal it would have said animal and not Asuric. As for the punishment, it is that they [Asuric men] go down in their nature to more depths of Asurism till they touch bottom as it were. But that is a natural result of their uncontrolled tendencies which they freely indulge without any effort to rise out of them while by the cultivation of the higher side of personality one naturally rises and develops towards godhead or the Divine. In the Gita the Divine is regarded as the controller of the whole cosmic action through Nature, so the "I cast" is in

³ Kṣipāmyajasram aśubhān āśurīṣveva yoniṣu. "*I cast down them continually into more and more Asuric births.*" *Gita* 16.19.

harmony with its ideas. The world is a mechanism of Nature, but a mechanism regulated by the presence of the Divine.

Animals and the Process of Rebirth

The soul in the animal evolves its manifestation to a point at which it can pass from the expression in animal to the expression in human consciousness.

*

It is when the vital gets broken up, some strong movements of it, desires, greeds, may precipitate themselves into animal forms, e.g., sexual desire with the part of the vital consciousness under its control into a dog or some habitual movement of excessive greed may carry part of the vital consciousness into a pig. The animals represent the vital consciousness with mind involved in the vital, so that it is naturally there that such things would gravitate for satisfaction.

*

Mūḍhayoniṣu or *adho gacchanti* [*in the Gita*] does not necessarily refer to animal birth, but it is true that there has been a general belief of that kind [*that a man may be born as an animal in his next birth*] not only in India but wherever “transmigration” or “metempsychosis” was believed in. Shakespeare is referring to Pythagoras’ belief in transmigration when he speaks of the passage of somebody’s grandmother into an animal. But the soul, the psychic being, once having reached the human consciousness cannot go back to the inferior animal consciousness any more than it can go back into a tree or an ephemeral insect. What is true is that some part of the vital energy or the formed instrumental consciousness or nature can and very frequently does so, if it is strongly attached to anything in the earth life. This may account for some cases of immediate rebirth with full memory in human forms also. Ordinarily it is only by Yogic development or by clairvoyance that the exact memory of past lives can be brought back.

Remembering Past Lives

Certainly, the subconscious is formed for this life only and is not carried with it by the soul from one life to another. The memory of past lives is not something that is active anywhere in the being — if by memory is meant the memory of details. That memory of details is quiescent and untraceable except in so far as certain constituent personalities taken over from the past retain the memories of the particular life in which they were manifest. E.g. if some personality that was put forth by one in Venice or Rome remembers from time to time a detail or details of what happened then. But usually it is only the essence of past lives that is activised in the being, not any particular memories. So it is impossible to say that the memory is located in a particular part of the consciousness or in a particular plane.

*

These ideas of past lives are not experiences, they are mental formations trying to give a name and form to something that is true, but you must not attach any importance to the forms the mind gives it. The truth is that there was a connection in past lives, but the forms given by the mind are likely to be mistaken.

*

It is not the ego, but the inner being that remembers the past lives — and the inner being as a rule is perfectly detached about them.

*

The different and contrasting phases through which you pass are obviously due to the emergence of different personalities in you created by past lives. One is full of the zest of life and its ardour, the other has the Nirvanic tendency and a certain incapacity for mastery over the physical existence. This is very self-evident and the putting of a name or a frame to the past lives in which these personalities were formed could hardly add anything of importance. If you yourself remembered the essence

of them (not the details), then it might be of some use for your own consciousness in determining the limits of each influence in you and its place — but that can also be done well enough even without that remembrance.

Unimportance of Past-Life Experience in Yoga

These things (events etc.) [*of past lives*] are not known usually unless they come in some concentrated state of vision of themselves. The Mother nowadays seldom has these states because the whole concentration is on bringing down the supramental principle here. When that work is done then these things may come.

*

The Mother only speaks to people about their past births when she sees definitely some scene or memory of their past in concentration; but this happens rarely nowadays.

What is remembered mainly from past lives is the nature of the personality and the subtle results of the life-experience. Names, events, physical details are remembered only under exceptional circumstances and are of a very minor importance. When people try to remember these outward things, they usually build up a number of romantic imaginations which are not true.

I think you should dismiss this idea about the past lives. If the memory of past personalities comes of itself (without a name or mere outward details) that is sometimes important as giving a clue to something in the present development, but to know the nature of that personality and its share in the present constitution of the character is quite enough. The rest is of little use.

*

It is not of course indispensable to know [*about past lives*]. It is sometimes a matter of interest for knowing the lines of one's past development and how one has come to what one is now. But to overpass this outward development is of course the main aim of the Yoga. We are not to be tied by our past lives.

*

Too much importance must not be given to past lives. For the purpose of this Yoga one is what one is and, still more, what one will be. What one was has a minor importance.

Speculating about Past Lives

It is not necessary to attach any entire belief to these ideas of past births. X's idea of Y's rebirth is evidently a mere idea—nothing else.

When there is any truth in these things, it is most often a perception that some Force once represented in a certain person has also some part in one's own nature—not that the same personality is here.

Of course, there is rebirth, but to establish that one is such a one reborn, a deeper experience is necessary, not a mere mental intuition which may easily be an error.

*

Ideas of this kind about Vivekananda and Ramakrishna are ideas of the mind to which the vital strongly attaches itself—the truth of the past lives cannot be discovered in that way. These mental ideas are not true. You must wait for direct knowledge in a liberated nature before you can know who in past lives you were.

*

It is better not to think of past lives just now. The mind and vital would probably become active and weave things that are not true.

*

Seriously, these historical identifications are a perilous game and open a hundred doors to the play of imagination. Some may, in the nature of things must be true; but once people begin, they don't know where to stop. What is important is the lines, rather than the lives, the incarnation of Forces that explain what one now is—and, as for particular lives or rather personalities, those alone matter which are very definite in one

and have powerfully contributed to what one is developing now. But it is not always possible to put a name upon these; for not one hundred-thousandth part of what has been has still a name preserved by human Time.

Traditional Indian Ideas about Rebirth and Other Worlds

The general Divine Will in the universe is for the progressive manifestation in the universe. But that is the general will—it admits the withdrawal of individual souls who are not ready to persevere in the world.

*

The escape from birth was a universal ideal at that time [*the time of the Gita*] except with one or two sects of the Shaivas, I believe. It is not at all consistent with the Divine taking many births, for the Gita speaks of the highest condition not as a *laya*, but as a dwelling in the Divine. If so there seems to be no reason why the *mukta* and *siddha* who has reached that dwelling in the consciousness of the Divine should fear rebirth and its troubles any more than the Divine does.

*

The Pitriyan is supposed to lead to inferior worlds attained by the Fathers who still belong to the evolution in the Ignorance. By the Devayan one gets beyond the Ignorance into the light. The difficulty about the Pitrīs is that in the Puranas they are taken as the Ancestors to whom the tarpan is given—it is an old Ancestor worship such as still exists in Japan, but in the Veda they seem to be the Fathers who have gone before and discovered the supraphysical worlds.

European Resistance to the Idea of Reincarnation

But that [*the idea of reincarnation*] is just what is disputed by the Western scientific mind or was up till yesterday and is still considered as unverifiable today. It is contended that the idea of

self is an illusion — apart from the body. It is the experiences of the body that create the idea of a self and the desire to live prolongs itself illusorily in the notion that the self outlasts the body. The West is accustomed besides to the Christian idea that the self is created with the body — an idea which the Christians took over from the Jews who believed in God but not in immortality — so the Western mind is dead set against any idea of reincarnation. Even the religious used to believe that the soul was born in the body, God first making the body then breathing the soul into it (Prana?). It is difficult for Europeans to get over this past mental inheritance.

Section Four

Occult Knowledge and Powers

Chapter One

Occult Knowledge

Occultism and the Supraphysical

[*Occultism:*] The knowledge and right use of the hidden forces of Nature.

*

What did he himself [*Ramakrishna*] say about it — that it was the sins of his disciples which constituted the cancer. There is a physical aspect to things and there is an occult supraphysical aspect — one need not get in the way of the other. All physical things are the expression of the supraphysical. The existence of a body with physical instruments and processes does not, as the 19th century wrongly imagined, disprove the existence of a soul which uses the body even if it is also conditioned by it. Laws of Nature do not disprove the existence of God. The fact of a material world to which our instruments are accorded does not disprove the existence of less material worlds which certain subtler instruments can show to us.

Occult Forces

[*Occult forces:*] The forces that can only be known by going behind the veil of apparent phenomena — especially the forces of the subtle physical and supraphysical planes.

*

Nature-forces are conscious forces — they can very well combine all that is necessary for an action or a purpose and when one means fails, take another.

*

They [*general forces and impulses in the atmosphere*] are able to act with a greater force if they can make a special formation

than by a general psychological action common to all human nature.

*

The forces are conscious. There are besides individualised beings who represent the forces or use them. The wall between consciousness and force, impersonality and personality becomes much thinner when one goes behind the veil of matter. If one looks at a working from the side of impersonal force one sees a force or energy at work acting for a purpose or with a result, if one looks from the side of being one sees a being possessing, guiding and using or else representative of and used by a conscious force as its instrument of specialised action and expression. You speak of the wave, but in modern science it has been found that if you look at the movement of energy, it appears on one side to be a wave and act as a wave, on the other as a mass of particles and to act as a mass of particles each acting in its own way. It is somewhat the same principle here.

*

The experience you had of something going out from the head like an arrow probably indicates something going out of the mental consciousness towards some aim or object. Sometimes it is a part of the mind-consciousness itself that goes like that either upward to a higher plane or somewhere in the world around—and afterwards returns. Sometimes it is a thought-force or a will-force. Forces are always going out from us without our knowing it even, and often they have some effect there. If we think of a person or a place and things happening there, something can go out like that to that person or place. If we have a will or strong mental desire that something should happen, a will-force may go out and try to make that happen. But also forces can go out from the inner mind without any conscious cause on the surface.

The Play of Forces

My experience shows me that human beings are less deliberate

and responsible for their acts than the moralists, novelists and dramatists make them and I look rather to see what forces drove them than what the man himself may have seemed by inference to have intended or purposed — our inferences are often wrong and even when they are right touch only the surface of the matter.

*

All life is the play of universal forces. The individual gives a personal form to these universal forces. But he can choose whether he shall respond or not to the action of a particular force. Only most people do not really choose — they undergo the play of the forces. Your illnesses, depressions etc. are the repeated play of such forces. It is only when one can make oneself free of them that one can be the true person and have a true life — but one can be free only by living in the Divine.

*

Predestination and chance are words — words that obscure the truth by their extreme rigidity of definition. All is done through a play of forces which seems to be a play of different possibles, but there is Something that looks and selects and uses without being either blindly arbitrary (predestination) or capriciously decisive (chance).

*

There is no question of responsibility.¹ The “Something” does not act arbitrarily, paying no heed to the play of forces or the man’s nature. “Selects” does not mean “selects at random”. If a man puts himself on the side of or into the hands of the hostile influences and says, “This way I will go and no other. I want my ego, my greatness, my field of power and action”, has not the Something the right to say, “I agree. Go and find it — if you can”? On the other hand, if the balance of forces is otherwise,

¹ *The correspondent wrote, in regard to the preceding letter: “If there is Something that looks, selects and uses our actions, then it is not the play of forces that is responsible for any action; the ultimate responsibility lies with this Something.”*

less on one side, the selection may be the other way, the saving element being present, and determine another orientation. But to understand the working of this Cosmic Something one must see not only the few outward factors observed by the human eye, but the whole working with all its multitudinous details—that one cannot do unless one is oneself in the cosmic consciousness and with some opening at least to the Overmind.

There is no such thing as “free” will, but there is the power of the Purusha to say “yes” or “no” to any particular pressure of Prakriti and there is the power of the mind, vital etc. to echo feebly or strongly the Purusha’s “yes” or “no” or to resist it. A constant (not a momentary) Yes or No has its effect in the play of the forces and the selection by the Something.

*

No, of course not [*helpful synchronicities are not just accidents*]. But they seem so to all who live in the outward vision only. “Coincidence the scientists do them call.” But anyone with some intelligence and power of observation who lives more in an inward consciousness can see the play of invisible forces at every step which act on men and bring about events without their knowing about the instrumentation. The difference created by Yoga or by an inner consciousness—for there are people like Socrates who develop or have some inner awareness without Yoga—is that one becomes conscious of these invisible forces and can also consciously profit by them or use and direct them. That is all.

*

I have not said [*in the preceding letter*] that everything is rigidly predetermined. Play of forces does not mean that. What I said was that behind visible events in the world there is always a mass of invisible forces at work unknown to the outward minds of men and by Yoga (by going inward and establishing a conscious connection with the cosmic Self and Force and forces) one can become conscious of these forces, intervene consciously in the play, to some extent at least determine things in the result of the play. All that has nothing to do with predetermination. On the

contrary one watches how things develop and gives a push here and a push there when possible or when needed. There is nothing in all that to contradict the dictum of the great scientist Sir C. V. Raman. Raman said once that all these scientific discoveries are only games of chance. Only, when he says these things are games of chance, he is merely saying that human beings don't know how it works out. It is not a rigid predetermination, but it is not a blind unconscious Chance either. It is a play in which there is a working out of possibilities in Time.

*

What X said is true, the play of the forces is very complex and one has to be conscious of them and, as it were, see and watch how they work before one can really understand why things happen as they do. All action is surrounded by a complexity of forces and if one puts a force for one of them to succeed, one must be careful to do it thoroughly and maintain it and not leave doors open for the other contrary ones to find their way in. I left at least two doors open and the forces that wanted him [*a sadhak*] here pushed in through them. As for what they were, it can only be said that it was probably a mixture. Each man is himself a field of many forces — some were working for his sadhana, some were working for his ego and desires. There are besides powers which seek to make a man an instrument for purposes not his own without his knowing it. All of these may combine to bring about a particular result. These forces work each for the fulfilment of its own drive — they need not be at all what we call hostile forces, — they are simply forces of Nature. It is not a fact however that hostile forces cannot bring a man here — e.g. when Y came back and wanted to enter the Asram, there was clearly a hostile force working that wanted to create trouble, but it was not strong enough to do it.

*

X's new consciousness makes him feel more strongly the opposite forces that one contacts when one moves in the world and has to do affairs and meet with others and he is afraid of

a response in his vital which will upset his sadhana or create difficulties. Evidently he is a man who is psychically sensitive or has become so to that thing which you blindly refuse to recognise even when you are in the midst of it—the play of forces. You can feel your friend's atmosphere through the letter "so beautiful, so strengthening, so refreshing" and it has an immediate effect on you. But your mind stares like an owl and wonders, "What the hell can this be?" — I suppose, because your medical books never told you about it and how can things be true which are not known either to the ordinary mind or science? It is by an incursion of an opposite kind of forces that you fall into the Old Man's clutches, but you can only groan and cry, "What's this?" and when they are swept aside in a moment by other forces blink and mutter, "Well, that's funny!" Your friend can feel and know at once when he is being threatened by the opposite forces—and so he can be on his guard and resist Old Nick, because he can detect at once one of his principal means of attack.

*

It is this play of forces that is trying to bring about your removal to Burdwan and, if it succeeds, you have not to be troubled or shaken or disappointed, but to accept and make use of all that happens for your sadhana and progress. For the play of cosmic forces, the will in the cosmos—as one might say—does not always work apparently in favour of a smooth and direct line for the work or the sadhana, it often brings in what seem to be upheavals, sudden turns which break or deflect the line, opposing or upsetting circumstances or perplexing departures from what had been temporarily settled and established. The one thing is to preserve equanimity and make an opportunity and means of progress out of all that happens in the course of the life and the sadhana. There is a higher secret Will transcendent behind the play and will of the cosmic forces—a play which is always a mixture of things favourable and things adverse—and it is that Will which one must wait upon and have faith in; but you must not expect to be able always to understand its workings. The mind wants this or that to be done, the line once

taken to be maintained, but what the mind wants is not at all always what is intended in a larger purpose. One has to follow indeed a fixed central aim in the sadhana and not deviate from it, but not to build on outward circumstances, conditions etc. as if they were fundamental things.

*

One can not only receive a force, but an impulse, thought or sensation. One may receive it from others, from beings in Nature or from Nature herself if she chooses to give her Force a ready-made form of that kind.

*

The force "created" is not yours—it is Prakriti's—your will sets it in motion, it does not really create it; but once set in motion, it tends to fulfil itself so far as the play of other forces will allow it. So, naturally, if you want to stop it, you have to set a contrary force in motion which will be strong enough to prevail against its momentum.

*

There is one cosmic Force working in all and a vibration of that Force or any one of its movements can awake (it does not always) the same vibration in another.

*

The play of forces can lead to nothing, if the One Force does not take them up and change them.

The Place of Occult Knowledge in Yoga

To know and use the subtle forces of the supraphysical planes is part of the Yoga.

*

You take a very utilitarian view of spiritual things. Whatever develops in the sadhana, provided it is genuine, has its place in

the total experience and knowledge. A knowledge of the occult worlds and occult forces and phenomena has its place also. Visions and voices are only a small part of that vast realm of occult experience. As for utility, for one who has intelligence and discrimination, visions etc. have many uses — but very little use for those who have no discrimination or understanding.

*

Because a great number of people don't know how to use these [*occult*] faculties or misuse them or give them excessive value or nourish their ego by them, does it follow that the faculties themselves have no Yogic use or value?

*

Even by itself it [*the development of the occult faculties*] is a progress in the development of the consciousness though it may not carry with it any spiritualisation of the nature.

*

I do not know what you mean by practical sadhana. If one develops the occult faculty and the occult experience and knowledge, these things can be of great use, therefore practical. In themselves they are a proof of opening of the inner consciousness and also help to open it farther — though they are not indispensable for that.

*

He [Ramana Maharshi] discouraged his disciples [*from having any occult dealings*] because his aim was the realisation of the inner Self and the intuition — in other words the fullness of the spiritual Mind — visions and voices belong to the inner occult sense, therefore he did not want them to lay stress on it. I also discourage some from having any dealing with visions and voices because I see that they are being misled or in danger of being misled by false visions and false voices. That does not mean that visions and voices have no value.

*

People who have the occult faculty always tend to give too large a place to it.

Spiritism

About spiritism I think I can say this much for the present. It is quite possible for the dead or rather the departed—for they are not dead—who are still in regions near the earth to have communication with the living. Sometimes it happens automatically, sometimes by an effort at communication on one side of the curtain or the other. There is no impossibility of such communication by the means used by the spiritists; usually however genuine communications or a contact can only be with those who are yet in a world which is a sort of idealised replica of the earth-consciousness in which the same personality, ideas, memories persist that the person had here. But all that pretends to be communication with departed souls is not genuine,—especially when it is done through a paid professional medium. There is there an enormous amount of mixture of a very undesirable kind—for apart from the great mass of unconscious suggestions from the sitters or the contributions of the medium's subliminal consciousness one gets into contact with a world of beings which is of a very deceptive or self-deceptive illusory nature. Many of these come and claim to be the departed souls of relatives, acquaintances, well-known men, famous personalities etc. There are also beings who pick up the discarded feelings and memories of the dead and masquerade with them. There are a great number of beings who come to such séances only to play with the consciousness of men or exercise their powers through this contact with the earth and who dupe the mediums and sitters with their falsehoods, tricks and illusions. (I am supposing of course the case of mediums who are not themselves tricksters.) A contact with such a plane of spirits can be harmful (most mediums become nervously or morally unbalanced) and spiritually dangerous. Of course, all pretended communications with the famous dead of long-past times are in their very nature deceptive and most of those with

the recent ones also — that is evident from the character of these communications. Through conscientious mediums one may get sound results (in the matter of the dead) but even these are very ignorant of the nature of the forces they are handling and have no discrimination which can guard them against trickery from the other side of the veil. Very little genuine knowledge of the nature of the after-life can be gathered from these séances; a true knowledge is more often gained by the experience of individuals who make serious contact or are able in one way or another to cross the border.

*

They [*mediums and clairvoyants*] are most of them in contact with the vital-physical or subtle physical worlds and do not receive anything higher at all.

*

Not much confidence can be placed in all that [*communications from spirit guides on other planes*]. If examined closely it will be seen that these spirit guides only suggest to their subjects what is in the mind of the sitter or sitters or in the air and it comes to very little. Influences from the other worlds there are of course and any number of them, but the central guidance is not of this kind except in very rare cases.

Séances

Automatic writings and spiritualistic séances are a very mixed affair. Part comes from the subconscious mind of the medium and part from that of the sitters. But it is not true that all can be accounted for by a dramatising imagination and memory. Sometimes there are things none present could know or remember; sometimes even, though that is rare, glimpses of the future. But usually these séances etc. put one into rapport with a very low world of vital beings and forces, themselves obscure, incoherent or tricky and it is dangerous to associate with them or to undergo any influence. Ouspensky and others must have gone

through these experiments with too “mathematical” a mind, which was no doubt their safeguard but prevented them from coming to anything more than a surface intellectual view of their significance.

*

The psychic does not give up the mental and other sheaths (apart from the physical) immediately at death. It is said that it takes three years on the whole to get clear away from the zone of communicability with the earth — though there may be cases of slower or quicker passage. The psychic world does not communicate with earth — at any rate not in that way. And the ghost or spirit who turns up at séances is not the psychic being. What comes through the medium is a mixture of the medium's subconscious mind (using subconscious in the ordinary, not in the Yogic sense), that of the sitters, vital sheaths left by the departed or perhaps occupied or used by some “spirit”, i.e. some vital being, the departed himself in his vital sheath or else something assumed for the occasion (but it is the vital part that communicates), elementals, spirits of the lowest vital physical world near earth, etc. etc. A horrible confusion for the most part — a hotch-potch of all sorts of things coming through a medium of “astral” grey light and shadow. Many communicants seem to be people who have just gone across into some subtle world where they feel surrounded by an improved edition of the earthly life and think that is the real and definitive other world after earth — but it is a mere optimistic prolongation of the ideas and images and associations of the human plane. Hence the next world as depicted by the spiritualist “guides” and other séance communicants.

Ghosts

What do you mean by a ghost? The word “ghost” as used in popular parlance covers an enormous number of distinct phenomena which have no necessary connection with each other. To name a few only —

(1) An actual contact with the soul of a departed human being housed in its subtle body and transcribed to our mind by the appearance of an image or the hearing of a voice.

(2) A mental formation stamped by the thoughts and feelings of a departed human being on the atmosphere of a place or locality, wandering about there or repeating itself—till that formation either exhausts itself or is dissolved by one means or another. This is the explanation of such phenomena as the haunted house in which the scenes attending or surrounding or preceding a murder are repeated over and over again and many similar phenomena.

(3) A being of the lower vital planes who has assumed the discarded vital sheath of a departed human being or a fragment of his vital personality and appears and acts in the form and perhaps with the surface thoughts and memories of that person.

(4) A being of the lower vital plane who by the medium of a living human being or by some other means or agency is able to materialise itself sufficiently so as to appear and act in a visible form or speak with an audible voice or, without so appearing, to move about material things, e.g. furniture or to materialise objects or to shift them from place to place. This accounts for what are called *poltergeists*, phenomena of stone-throwing, tree-inhabiting *bhūtas* and other well-known phenomena.

(5) Apparitions which are the formations of one's own mind but take to the senses an objective appearance.

(6) Temporary possession of people by vital beings who sometimes pretend to be departed relatives etc.

(7) Thought-images of themselves projected, often by people at the moment of death, which appear at that time or a few hours afterwards to their friends or relatives.

You will see that in only one of these cases, the first, can a soul be posited and there no difficulty arises.

Chapter Two

Occult Powers or Siddhis

General Remarks

The *aṣṭasiddhis* as obtained in the ordinary Yoga are vital powers or, as in the Rajayoga, mental siddhis. Usually they are uncertain in their application and precarious depending on the maintenance of the process by which they were attained.

*

It is certainly possible to have consciousness of things going on at a distance and to intervene.

The idea that true Yogins do not or ought not to use such powers, I regard as an ascetic superstition. I believe that all Yogins who have these powers do use them whenever they find that they are called on from within to do so. They may refrain if they think the use in a particular case is contrary to the Divine Will or see that preventing one evil may be opening the door to worse or for any other valid reason, or simply because it is outside the scope of their action, but not from any general prohibitory rule. What is forbidden to anyone with a strong spiritual sense is to be a miracle-monger, performing extraordinary things for show, for gain, for fame, out of vanity or pride. It is forbidden to use powers from mere vital motives, to make an Asuric ostentation of them or to turn them into a support for arrogance, conceit, ambition—or any other of the amiable weaknesses to which human nature is prone. It is because half-baked Yogins so often fall into these traps of the hostile forces that the use of Yogic powers is sometimes discouraged as harmful to the user. But it is mostly people who live much in the vital that so fall; with a strong and free and calm mind and a psychic awake and alive, such perversities are not likely to occur. As for those who can live in the true divine consciousness, certain powers are not “powers” at all in that sense, not, that is to say, supernatural

or abnormal, but rather their normal way of seeing and acting, part of the consciousness—and how can they be forbidden or refuse to act according to their consciousness and its nature?

I suppose I have had myself an even more completely European education than you and I have had too my period of agnostic denial, but from the moment I looked at these things I could never take the attitude of doubt and disbelief which was for so long fashionable in Europe. Abnormal, otherwise supraphysical experiences and powers, occult or Yogic, have always seemed to me something perfectly natural and credible. Consciousness in its very nature could not be limited by the ordinary physical human-animal consciousness; it must have other ranges. Yogic or occult powers are no more supernatural or incredible than is supernatural or incredible the power to write a great poem or compose great music. Few people can do it, as things are,—not even one in a million; for poetry and music come from the inner being and to write or to compose true and great things one has to have the passage clear between the outer mind and something in the inner being. That is why you got the poetic power as soon as you began Yoga—Yoga-force made the passage clear. It is the same with Yogic consciousness and its powers; the thing is to get the passage clear,—for they are already there within you. Of course the first thing is to believe, aspire and, with the true urge within, make the endeavour.

*

It is not possible to put any credence in the stories about this Swami and Mahabhanu. It is possible that he has practised some kind of Tantric Yoga and obtained a few occult powers, but in all that you have said about him and in the printed papers there is no trace of any spiritual realisation or experience. All that he seems to think about is occult powers and feats of thaumaturgy. Those who take their stand on occult powers divorced from spiritual experience are not Yogis of a high plane of achievement. There are Yogis who behave as if they had no control over themselves—the theory is that they separate the spirit from the nature and live in the inner realisation leaving the nature to a disordered

action "like a child, mad man, pisacha or inert object". There are others who deliberately use rough or violent speech to keep people at a distance or to test them. But the outbreak of rage of this Swami which you recount seems to have been simply an outburst of fury due to offended egoism. His judgment about Ramana Maharshi is absurd in the extreme.¹ As to his asking for the nail, hair etc. and his presenting of clothes or jumper, it was probably to establish a physical means of establishing an occult influence on you and your wife possibly by some Tantric or magic kriya — in Tibet such magic processes are well known and in common use.

*

There are many Yogins of the Vedantic school who follow both siddhis and the final emancipation — they would say, I suppose, that they take the siddhis on the way to Nirvana. The harmonisation is in the supermind — the Divine Truth at once static and dynamic, a withdrawal and extinction of the Ignorance, a re-creation in the Divine Knowledge.

*

I am unable to see why you should give up Yoga, because you cannot believe in the action of occult laws and forces or in siddhis. The object of Yoga is realisation of the Divine; these other things are side-matters which need be no part of spiritual experience, nor is belief in them necessary for realisation. Everyone has the right of private judgment in these matters; so you need not worry.

Occult Powers Not the Object of Our Yoga

Yes, the object of our Yoga is to establish direct contact with the Divine above and bring down the divine consciousness from above into all the centres. Occult powers belonging to the

¹ Absurd because the greatness of a Yogi does not depend at all on how long he lives or his state of health, but on the height or the depth of his spiritual realisation and experience.

mental, vital and subtle physical planes are not our object. One can have contact with various Divine Forms and Personalities on the way, but there is no need to establish them in the centres, though sometimes that happens automatically (as with the four Personalities of the Mother) for a time in the course of the sadhana. But it is not a rule to do so. Our Yoga is meant to be plastic and to allow all necessary workings of the Divine Power according to the nature, but these in the details may vary with each individual.

*

All these “experiments” of yours are founded upon the vital nature and the mind in connection with it; working on this foundation, there is no security against falsehood and fundamental error. No amount of powers (small or great) developing can be a surety against wandering from the Truth; and, if you allow pride and arrogance and ostentation of power to creep in and hold you, you will surely fall into error and into the power of rajasic Maya and Avidya. Our object is not to get powers, but to ascend towards the divine Truth-consciousness and bring its Truth down into the lower members. With the Truth all the necessary powers will come, not as one’s own, but as the Divine’s. The contact with the Truth cannot grow through rajasic mental and vital self-assertion, but only through psychic purity and surrender.

*

An activity on the astral plane in contact with the astral Forces attended by a leaving of the body is not a spiritual aim but belongs to the province of occultism. It is not a part of the aim of Yoga. Also fasting is not permissible in the Asram, as its practice is more often harmful than helpful to the spiritual endeavour.

This aim suggested to you seems to be part of a seeking for occult powers; such a seeking is looked on with disfavour for the most part by spiritual teachers in India because it belongs to the inferior planes and usually pushes the seeker on a path which

may lead him very far from the Divine. Especially, a contact with the forces and beings of the astral (or, as we term it, the vital) plane is attended with great dangers. The beings of this plane are often hostile to the true aim of spiritual life and establish contact with the seeker and offer him powers and occult experiences only in order that they may lead him away from the spiritual path or else that they may establish their own control over him or take possession of him for their own purpose. Often, representing themselves as divine powers, they mislead, give erring suggestions and impulsions and pervert the inner life. Many are those who, attracted by these powers and beings of the vital plane, have ended in a definitive spiritual fall or in mental and physical perversion and disorder. One comes inevitably into contact with the vital plane and enters into it in the expansion of consciousness which results from an inner opening, but one ought never to put oneself into the hands of these beings and forces or allow oneself to be led by their suggestions and impulsions. This is one of the chief dangers of the spiritual life and to be on one's guard against it is a necessity for the seeker if he wishes to arrive at his goal. It is true that many supraphysical or supernormal powers come with the expansion of the consciousness in Yoga; to rise out of the body consciousness, to act by subtle means on the supraphysical planes etc. are natural activities for the Yogi. But these powers are not sought after, they come naturally, and they have not the astral character. Also, they have to be used on purely spiritual lines, that is by the Divine Will and the Divine Force, as an instrument, but never as an instrumentation of the forces and beings of the vital plane. To seek their aid for such powers is a great error.

Prolonged fasting may lead to an excitation of the nervous being which often brings vivid imaginations and hallucinations that are taken for true experiences; such fasting is frequently suggested by the vital Entities because it puts the consciousness into an unbalanced state which favours their designs. It is therefore discouraged here. The rule to be followed is that laid down by the Gita which says that "Yoga is not for one who eats too much or who does not eat"; a moderate use of food sufficient

for the maintenance and health and strength of the body.

There is no brotherhood of the kind you describe in India. There are Yogis who seek to acquire and practise occult powers but it is as individuals learning from an individual Master. Occult associations, lodges, brotherhoods for such a purpose as described by European occultists are not known in Asia.

As regards secrecy, a certain discretion or silence about the instructions of the Guru and one's own experiences is always advisable, but an absolute secrecy or making a mystery of these things is not. Once a Guru is chosen, nothing must be concealed from him. The suggestion of absolute secrecy is often a trick of the astral Powers to prevent the seeking for enlightenment and succour.

*

Ordinarily, all the more inward and all the abnormal psychological experiences are called psychic. I use the word psychic for the soul as distinguished from the mind and vital. All movements and experiences of the soul would in that sense be called psychic, those which rise from or directly touch the psychic being; where mind and vital predominate, the experience would be called psychological (surface or occult). "Spiritual" has nothing to do with the Absolute, except that the experience of the Absolute is spiritual. All contacts with self, the higher consciousness, the Divine above are spiritual. There are others that could not be so sharply classified and set off against each other.

The spiritual realisation is of primary importance and indispensable. I would consider it best to have the spiritual and psychic development first and have it with the same fullness before entering the occult regions. Those who enter the latter first may find their spiritual realisation much delayed — others fall into the mazy traps of the occult and do not come out in this life. Some no doubt can carry on both together, the occult and the spiritual, and make them help each other; but the process I suggest is the safer.

The governing factors for us must be the spirit and the psychic being united with the Divine — the occult laws and

phenomena have to be known but only as an instrumentation, not as the governing principles. The occult is a vast field and complicated and not without its dangers. It need not be abandoned but it should not be given the first place.

*

You need not think about the occult Power. Let the Mother's consciousness grow in you and her Force work; occult powers are not indispensable, but if they are needed they will come in their proper time.

*

A sincere heart is worth all the extraordinary powers in the world.

Ethical Rules for the Use of Occult Powers

There are a number of rules, really of an ethical, not a spiritual nature, which are necessary for the very safety of the society itself — those, for instance, against an egoistic use of occult secrets; for if that were disregarded, there would be inevitably a clash with other formations on the same plane and consequent disaster.

Thought Reception and Thought Reading

About X's faculty of receiving the thoughts of others, — if this had been of the nature of thought reading, that is to say looking at the minds of others and seeing what is there, the remedy would have been simple; refusal to look would be enough and even the faculty might disappear by atrophy through long discontinuance. But if the thoughts of others come to her of themselves, it may be the psychic opening in her inner mind which it would be difficult to get rid of. If she could remain indifferent or push away these unwelcome visitors behind her and not think of them again, that would be one remedy; it might even be discouraged from coming after a time by this lack of reception. As for why it comes, it is not something that comes but something that is

there, a faculty or a psychic habit of the nature—I use the word psychic in the popular sense, it has nothing to do with what I call the psychic being. If she practises Yoga and is able to make some considerable progress, then it would be possible for her to bar the door to these visitors. At the same time I might say that this power need not be a mere source of trouble; it can be helpful even: for it can give one who has acquired mastery over his own nature the knowledge of the thoughts and feelings around her and she can then help, guide, change what has to be changed in their minds so that they can become more effective for the divine work. I shall await what further you have to tell me about X's experiences before saying anything further about her entry into the field of Yoga.

Occult Powers and Health

Your generalisation cannot stand because it is contradicted by other numerous instances which go to prove the opposite. In my own experience I have found that those who possessed well developed and well organised "psychic" and occult powers were healthy and well poised; indeed they said that in ill health or physical weakness they could do nothing—it impaired their power. These certainly had no lack or deficiency of the red aura.

The woman you speak of was evidently under a vital Influence. A vital Influence always acts by disorganising the system and by disturbing the mental, vital or physical balance. But such cases of phenomena in the vital mind due to a possession or influence have no relation to the true mastery of psychic or occult powers (clairvoyance, clair-audience etc.).

Visions and experiences need not at all depend upon physical weakness or a pathological taint. It is not safe to judge from individual cases. The majority of those who have developed the faculty do not suffer from these defects. Those on the other hand who cannot keep their psychic experiences when in a robust state of health, lose them because then they get into a very external consciousness and feel at ease in it; but the true psychic does not depend for his experiences on disease.

The Power of Healing

I don't know whether I can throw any positive light on X's mystic experiences. The description, at any rate the latter part, is not very easy to follow as it is very allusive in its expressions and not always precise enough to be clear. The first part of the experience indicates a native power of healing of whose action she herself does not know the process. It seems from her account to come from something in herself which should be, from the terms she uses, a larger and higher and brighter and more powerful consciousness with which she is in occasional communion but in which she does not constantly live. On the other hand another sentence seems to point to a Godhead or Divine Presence and it would then be not so much within as above. The language later on would seem to indicate such a Presence giving commands to her to guide others so that they might grow in consciousness. But she distinctly speaks of it as a greater "me" standing behind a blue diamond force. We must fall back then on the idea of a greater consciousness very high up with a feeling of divinity, a sense of considerable light and spiritual authority — perhaps in one of those higher spiritual mental planes of which I speak in *The Life Divine* and the letters. The diamond light could well be native to these planes; it is usually white, but there it might well be blue: it is a light that dispels or drives away all impure things, especially a demoniac possession or the influence of some evil force. Evidently, the use of a power like this should be carefully guarded from the intrusion of any wrong element such as personal love of power, but that need not cause any apprehension as a keen inlook into oneself would be sufficient to reject it or keep it aloof. I think that is all I can say upon the data given in her letter.

*

It is difficult to say [*why Christ healed people*] — it looks from the Bible account as if he did it as a sign that he was one sent by the Divine with power.

Miracles

What do you mean by a miracle? What people call a miracle is only something done in a striking way by a process unknown to them which their minds cannot follow.

*

I have explained that there is no such thing as a miracle. If a higher consciousness opens a higher power in him, the sadhak has to use it as part of the new consciousness but in the right way, without egoism, selfishness, vanity or pride.

Magic

Jādu (magic) is a special practice which is done by professional magicians or those who learn the art of the magician, but it is no part of Yoga. What happens in Yoga is that sometimes or even very commonly certain powers develop in the sadhak by which he can influence others or make them do things or make things happen that he wants. This and other Yogic powers should never be used by the sadhak for egoistic purposes or to satisfy his vital desires. They can only be used when they become part of the realised divine consciousness by the Mother herself or at her command for good and unselfish purposes. There is no harm in Yogic powers that come naturally as a part of the new consciousness and are not used for a wrong personal purpose. For instance you see something in vision or dream and that happens afterwards in the waking state. Well, that is a Yogic power of prevision, knowing future things which often occurs as the consciousness grows; there is nothing wrong in its happening; it is part of the growth in sadhana. So with other powers. Only one must not get proud or boast or misuse the powers for the sake of desire, pride, power or the satisfaction of the ego.

*

By black magic is meant the occultism of the adverse powers — the occultism of the divine Powers is quite different. One is based on unity, the other on division.

Note on the Texts

Note on the Texts

LETTERS ON YOGA—I, the first of four volumes, contains letters in which Sri Aurobindo speaks about the foundations of his spiritual teaching and method of Yogic practice. The letters have been arranged in five parts dealing with five broad subject areas:

1. The Divine, the Cosmos and the Individual
2. The Parts of the Being and the Planes of Consciousness
3. The Evolutionary Process and the Supermind
4. Problems of Philosophy, Science, Religion and Society
5. Questions of Spiritual and Occult Knowledge

The letters in this volume have been selected from the extensive correspondence Sri Aurobindo carried on with his disciples and others between 1927 and 1950. Letters from this corpus appear in seven volumes of THE COMPLETE WORKS OF SRI AUROBINDO: *Letters on Poetry and Art* (Volume 27), *Letters on Yoga* (Volumes 28–31), *The Mother with Letters on the Mother* (Volume 32), and *Letters on Himself and the Ashram* (Volume 35). The titles of these works specify the nature of the letters included in the volumes, but there is some overlap. For example, a number of letters in the present volume are also published in *Letters on Himself and the Ashram*.

The Writing of the Letters

Between 1927 and 1950, Sri Aurobindo replied to hundreds of correspondents in tens of thousands of letters, some of them many pages in length, others only a few words long. Most of his replies, however, were sent to just a few dozen disciples, almost all of them resident members of his Ashram; of these disciples, about a dozen received more than half the replies. Sri Aurobindo wrote most of these letters between 1931 and 1937, the prime period of his correspondence. Letters before and after this period were written on a more restricted scale and confined

to a few persons for special reasons.

Disciples in the Ashram wrote to Sri Aurobindo on loose sheets or sent him the notebooks in which they kept diaries as a record of their spiritual endeavour and a means of communicating with him. These notebooks and loose sheets reached Sri Aurobindo via an internal “post” once or twice a day. Letters from outside which his secretary thought he might like to see were sent at the same time. Correspondents wrote in English if they knew the language well enough, but a good number wrote in Bengali, Gujarati, Hindi or French, all of which Sri Aurobindo read fluently, or in other languages that were translated into English for him. The disciples usually addressed their letters to the Mother, since Sri Aurobindo had asked them to do so, but most assumed that he would answer them. He generally replied in the notebook or on the sheets sent by the correspondent, writing beneath the correspondent’s remarks or in the margin or between the lines; sometimes, however, he wrote his reply on a separate sheet of paper. In some cases he had his secretary prepare a typed copy of his letter, which he revised before it was sent. For correspondents living outside the Ashram, Sri Aurobindo sometimes addressed his reply not to the correspondent but to his secretary, who quoted, paraphrased or translated the reply and signed the letter himself. In these indirect replies, Sri Aurobindo often referred to himself in the third person.

While going through Sri Aurobindo’s letters, the reader should keep in mind that each letter was written to a specific person at a specific time, in specific circumstances and for a specific purpose. The subjects taken up arose in regard to the needs of the person. Sri Aurobindo varied the style and tone of his replies according to his relationship with the correspondent; to those with whom he was close, he sometimes employed humour, irony and even sarcasm.

Although written to specific recipients, these letters contain much of general interest, which justifies their inclusion in a volume destined for the general public. For the reasons mentioned above, however, the advice in them does not always apply equally to everyone. Aware of this, Sri Aurobindo himself made some cautionary remarks about the proper use of his letters:

I should like to say, in passing, that it is not always safe to

apply practically to oneself what has been written for another. Each sadhak is a case by himself and one cannot always or often take a mental rule and apply it rigidly to all who are practising the Yoga.

The tendency to take what I lay down for one and apply it without discrimination to another is responsible for much misunderstanding. A general statement, too, true in itself, cannot be applied to everyone alike or applied now and immediately without consideration of condition or circumstance or person or time.

It is not a fact that all I write is meant equally for everybody. That assumes that everybody is alike and there is no difference between sadhak and sadhak. If it were so everybody would advance alike and have the same experiences and take the same time to progress by the same steps and stages. It is not so at all.¹

The Typing and Revision of the Letters

Most of the shorter items in this volume, and many of the longer ones, were not typed or revised during Sri Aurobindo's lifetime and are reproduced here directly from his handwritten manuscripts. A good number of the letters, however, as mentioned above, were typed for Sri Aurobindo and revised by him before sending. Other letters were typed by the recipients for their own use or for circulation within the Ashram. At first, circulation of the letters was restricted to members of the Ashram and others whom Sri Aurobindo had accepted as disciples. When these letters were circulated, personal references were removed. Persons mentioned by Sri Aurobindo were indicated by their initials or by the letters X, Y, Z, etc. Copies of these typed letters were kept by Sri Aurobindo's secretary and sometimes presented to Sri Aurobindo for revision before publication. These typed copies sometimes contained errors, most of which were corrected by him while revising.

¹ First and third passages: *Letters on Himself and the Ashram*, volume 35 of THE COMPLETE WORKS OF SRI AUROBINDO, pp. 473 and 475. Second passage: *The Mother with Letters on the Mother*, volume 32, p. 349.

Sri Aurobindo's revision sometimes amounted merely to making minor changes here and there, sometimes to a complete rewriting of the letter. He generally removed personal references if this had not already been done by the typist. When necessary, he also rewrote the openings or other parts of the replies in order to free them from dependence on the correspondent's question. As a result, some of these letters have an impersonal tone and read more like brief essays than personal communications.

The Publication of the Letters

Around 1933, Sri Aurobindo's secretary Nolini Kanta Gupta began to compile selections from the growing body of letters in order to publish them. During Sri Aurobindo's lifetime, four small books of letters were published: *The Riddle of This World* (1933), *Lights on Yoga* (1935), *Bases of Yoga* (1936) and *More Lights on Yoga* (1948). Sri Aurobindo revised the typescripts of most of the letters in these books. During this revision, he continued the process of removing personal references. A letter he wrote in August 1937 alludes to his approach to the revision:

I had no idea of the book being published as a collection of personal letters—if that were done, they would have to be published whole as such without a word of alteration. I understood the book was meant like the others [*i.e.*, *like Bases of Yoga, etc.*] where only what was helpful for an understanding of things Yogic was kept with necessary alterations and modifications. . . . With that idea I have been not only omitting but recasting and adding freely. Otherwise as a book it would be too scrappy and random for public interest. In the other books things too personal were omitted—it seems to me the same rule must hold here—except very sparingly where unavoidable.

A number of letters not included in the four books mentioned above were published in the mid and late 1940s in several journals associated with the Ashram: *Sri Aurobindo Circle*, *Sri Aurobindo Mandir Annual*, *The Advent* and *Mother India*. Many letters in these journals were revised by Sri Aurobindo before publication.

By the mid-1940s a significant body of letters had been collected, typed and revised. In 1945 plans were made, with Sri Aurobindo's approval, to publish a collection of his letters. The work of compiling and editing these letters was done under his guidance. At that time, many typed or printed copies of letters, some revised, some not, were presented to Sri Aurobindo for approval or revision. The resulting material was arranged and published in a four-volume series entitled *Letters of Sri Aurobindo*. Series One appeared in 1947, Series Two and Three in 1949 and Series Four in 1951. The first, second and fourth series contained letters on Yoga, the third letters on poetry and literature. In 1958, most of these letters on Yoga, along with many additional ones, were published under the titles *On Yoga II: Tome One* and *On Yoga II: Tome Two*, as Volumes VI and VII of the Sri Aurobindo International Centre of Education collection. The first tome, with further additions, was reissued in 1969. In 1970 a new edition of the letters was published under the title *Letters on Yoga*; this edition contained many new letters not included in *On Yoga II*. The three volumes of the enlarged edition constituted volumes 22, 23 and 24 of the Sri Aurobindo Birth Centenary Library.

The present edition, also titled *Letters on Yoga*, incorporates the Centenary Library letters, but also contains a large number of letters that have come to light in the four decades between the two editions. One source of new letters is the correspondences of several disciples which were published in books after the Centenary Library edition had been issued. Govindbhai Patel's correspondence was published in 1974 in a book entitled *My Pilgrimage to the Spirit*; an enlarged edition appeared in 1977. Nagin Doshi's correspondence, *Guidance from Sri Aurobindo: Letters to a Young Disciple*, was brought out in three volumes in 1974, 1976 and 1987. Nirodbaran's Correspondence with Sri Aurobindo came out in two volumes in 1983 and 1984. Sahana Devi's correspondence came out in 1985 in a book entitled *At the Feet of Sri Aurobindo and the Mother*. Prithwi Singh's correspondence came out in 1988 as *Sri Aurobindo and the Mother to Prithwi Singh*. Dilip Kumar Roy's correspondence was issued in four volumes in 2003, 2005, 2007 and 2011 under the title *Sri Aurobindo to Dilip*. A second source of new material is individual letters and small collections of letters published in Ashram journals and elsewhere after the Centenary

Library had been issued. A third source is letters transcribed from manuscripts or from early typed copies. Many unpublished letters were discovered while reviewing correspondences long held by the Ashram; some of these had never been assessed to find letters for publication; others had been assessed, but relatively few letters were selected at the time. Additional letters were received by the Ashram upon the passing away of disciples. From the three sources mentioned above, many letters have been found that are worthy of publication. The present edition contains about one-third more letters than appear in the Centenary Library.

The Selection, Arrangement and Editing of the Letters

In compiling the present edition, all known manuscripts, typed copies or photographic copies of manuscripts and printed texts of letters were checked. From these sources, letters that seemed to be of general interest were selected. Electronic texts of the letters were then made and carefully checked at least twice against the handwritten, typed, photocopied, and printed versions of the texts.

The selected letters have been arranged according to subject and placed in the four volumes of the present edition. Each volume is divided and subdivided into parts, sections, chapters and groups with descriptive headings; each group, the lowest unit of division, contains one or more letters devoted to the specific subject of the group.

The present volume consists of about 1150 separate items, an "item" being defined as what is published between one heading or asterisk and another heading or asterisk. Many items correspond exactly to individual letters; a good number, however, contain only part of the individual letters; a small number consist of two or more letters (or parts of them) that were joined together by early typists or editors and then revised in that form by Sri Aurobindo.

Whenever possible, the letters are reproduced to their full extent. In some cases, however, portions of the letters have been omitted because they are not of general interest. A number of letters, for example, begin with personal remarks by Sri Aurobindo unrelated to the more substantial remarks which follow; these personal openings have often been removed. In some letters, Sri Aurobindo marked the transition

from one part of a letter to another with a phrase such as "As to"; these transitional phrases have often been retained and stand at the beginning of abbreviated letters — that is, letters in which the first part of the letter has been omitted or placed elsewhere.

A number of letters, or portions of them, have been published in more than one volume of THE COMPLETE WORKS OF SRI AUROBINDO. Most of this doubling of letters occurs between *Letters on Yoga* and *Letters on Himself and the Ashram*. The form of these letters is not always the same in both places. In *Letters on Himself and the Ashram*, the manuscript version of a given letter has often been used because it contains Sri Aurobindo's remarks on himself or the Mother or members of the Ashram. These personal remarks, as noted above, were usually removed by Sri Aurobindo when he revised the letter for publication as a letter on Yoga. This revised form of the letter has generally been reproduced in *Letters on Yoga*. Thus, a number of letters are available both in their original form and their revised form.

As in previous collections of Sri Aurobindo's letters, the names of Ashram members and others have often been replaced by the letters X, Y, Z, etc. In any given letter, X stands for the first name replaced, Y for the second, Z for the third, A for the fourth, and so on. An X in a given letter has no necessary relation to an X in another letter. Names of Ashram members to whom Sri Aurobindo referred not as sadhaks but as holders of a certain position — notably Nolini Kanta Gupta in his position as Sri Aurobindo's secretary — are given in full. Sometimes the names of people who played a role in the history of the period are also given.

In his letters Sri Aurobindo sometimes wrote Sanskrit words in the devanagari script; these words have been transliterated into roman script in this edition. Words in Bengali script have likewise been transliterated. This policy is in accord with the practice followed in Sri Aurobindo's lifetime.

The reader may note that Sri Aurobindo almost always spelled the word "Asram" without an "h" in his manuscripts. Around 1945, due to failing eyesight, he began dictating most of his writings to his amanuensis Nirodbaran; Nirodbaran sometimes spelled the word without an "h", sometimes with one. In the present edition, the word is always spelled as it occurs in the manuscripts, both those of Sri

Aurobindo and of Nirodbaran. In headings and other editorial matter, the spelling “Ashram” has been used, since this is now the official spelling of the Sri Aurobindo Ashram.

Letters on Yoga — II

Publisher's Note

Letters on Yoga—II comprises letters written by Sri Aurobindo on the practice of the Integral Yoga. It is the second of four volumes of *Letters on Yoga*, arranged by the editors as follows:

- I. Foundations of the Integral Yoga
- II. Practice of the Integral Yoga
- III. Experiences and Realisations in the Integral Yoga
- IV. Transformation of Human Nature in the Integral Yoga

The letters in these volumes have been selected from the large body of letters that Sri Aurobindo wrote to disciples and others between 1927 and 1950. Other letters from this period are published in *Letters on Poetry and Art* and *Letters on Himself and the Ashram*, volumes 27 and 35 of THE COMPLETE WORKS OF SRI AUROBINDO. Letters written before 1927 are reproduced in *Autobiographical Notes and Other Writings of Historical Interest*, volume 36 of THE COMPLETE WORKS.

During Sri Aurobindo's lifetime, relatively few of his letters were published. Three small books of letters on Yoga were brought out in the 1930s. A more substantial collection came out between 1947 and 1951 in a four-volume series entitled *Letters of Sri Aurobindo* (including one volume of letters on poetry and literature). In 1958, many more letters were included in the two large tomes of *On Yoga—II*. A further expanded collection in three volumes entitled *Letters on Yoga* was published in 1970 as part of the Sri Aurobindo Birth Centenary Library. The present collection, also entitled *Letters on Yoga*, constitutes volumes 28–31 of THE COMPLETE WORKS. These volumes incorporate previously published letters and contain many new ones as well. About one-third of the letters in the present volume were not published in the Centenary Library.

The present volume is arranged by subject in three parts:

1. The Path of the Integral Yoga
2. The Synthetic Method of the Integral Yoga
3. The Integral Yoga and Other Spiritual Paths

The texts of all the letters have been checked against the available manuscripts, typescripts and printed versions.

CONTENTS

PART ONE

THE PATH OF THE INTEGRAL YOGA

Section One

The Path and the Goal

Seeking the Divine

The True Object of Spiritual Seeking	5
Motives for Seeking the Divine	8
Dedication to the Spiritual Life	15

The Aim of the Integral Yoga

A Yoga of Divine Life	19
A Yoga Not for Ourselves	20
Not Liberation But Transformation	22
Divinisation and Transformation	23

Section Two

Basic Requisites of the Path

The Call and the Capacity

The Call	27
Turning towards the Divine	29
Spiritual Destiny	30
Capacity for Yoga	31
Fitness for Yoga	32
Capacity of Westerners for Yoga	36

Qualities Needed for Sadhana

Indispensable Qualities	42

Part One

The Path of the Integral Yoga

Section One

The Path and the Goal

Chapter One

Seeking the Divine

The True Object of Spiritual Seeking

To find the Divine is indeed the first reason for seeking the spiritual Truth and the spiritual life; it is the one thing indispensable and all the rest is nothing without it. The Divine once found, to manifest Him,—that is, first of all to transform one's own limited consciousness into the Divine Consciousness, to live in the infinite Peace, Light, Love, Strength, Bliss, to become that in one's essential nature and, as a consequence, to be its vessel, channel, instrument in one's active nature. To bring into activity the principle of oneness on the material plane or to work for humanity is a mental mistranslation of the Truth—these things cannot be the first or true object of spiritual seeking. We must find the Self, the Divine, then only can we know what is the work the Self or the Divine demands from us. Until then our life and action can only be a help or means towards finding the Divine and it ought not to have any other purpose. As we grow in the inner consciousness, or as the spiritual Truth of the Divine grows in us, our life and action must indeed more and more flow from that, be one with that. But to decide beforehand by our limited mental conceptions what they must be is to hamper the growth of the spiritual Truth within. As that grows we shall feel the Divine Light and Truth, the Divine Power and Force, the Divine Purity and Peace working within us, dealing with our actions as well as our consciousness, making use of them to reshape us into the Divine Image, removing the dross, substituting the pure gold of the Spirit. Only when the Divine Presence is there in us always and the consciousness transformed, can we have the right to say that we are ready to manifest the Divine on the material plane. To hold up a mental ideal or principle and impose that on the inner working brings the danger of limiting ourselves to a mental realisation or of impeding or even falsifying by a

half-way formation the true growth into the full communion and union with the Divine and the free and intimate outflowing of His will in our life. This is a mistake of orientation to which the mind of today is especially prone. It is far better to approach the Divine for the Peace or Light or Bliss that the realisation of Him gives than to bring in these minor things which can divert us from the one thing needful. The divinisation of the material life also as well as the inner life is part of what we see as the Divine Plan, but it can only be fulfilled by an outflowing of the inner realisation, something that grows from within outward, not by the working out of a mental principle.

You have asked what is the discipline to be followed in order to convert the mental seeking into a living spiritual experience. The first necessity is the practice of concentration of your consciousness within yourself. The ordinary human mind has an activity on the surface which veils the real self. But there is another, a hidden consciousness within behind the surface one in which we can become aware of the real self and of a larger, deeper truth of nature, can realise the self and liberate and transform the nature. To quiet the surface mind and begin to live within is the object of this concentration. Of this true consciousness other than the superficial there are two main centres, one in the heart (not the physical heart, but the cardiac centre in the middle of the chest), one in the head. The concentration in the heart opens within and by following this inward opening and going deep one becomes aware of the soul or psychic being, the divine element in the individual. This being unveiled begins to come forward, to govern the nature, to turn it and all its movements towards the Truth, towards the Divine, and to call down into it all that is above. It brings the consciousness of the Presence, the dedication of the being to the Highest and invites the descent into our nature of a greater Force and Consciousness which is waiting above us. To concentrate in the heart centre with the offering of oneself to the Divine and the aspiration for this inward opening and for the Presence in the heart is the first way and, if it can be done, the natural beginning; for its result once obtained makes the spiritual path far more easy and safe than if one begins the other way.

That other way is the concentration in the head, in the mental centre. This, if it brings about the silence of the surface mind, opens up an inner, larger, deeper mind within which is more capable of receiving spiritual experience and spiritual knowledge. But once concentrated here one must open the silent mental consciousness upward to all that is above mind. After a time one feels the consciousness rising upward and in the end it rises beyond the lid which has so long kept it tied in the body and finds a centre above the head where it is liberated into the Infinite. There it begins to come into contact with the universal Self, the Divine Peace, Light, Power, Knowledge, Bliss, to enter into that and become that, to feel the descent of these things into the nature. To concentrate in the head with the aspiration for quietude in the mind and the realisation of the Self and Divine above is the second way of concentration. It is important, however, to remember that the concentration of the consciousness in the head is only a preparation for its rising to the centre above; otherwise one may get shut up in one's own mind and its experiences or at best attain only to a reflection of the Truth above instead of rising into the spiritual transcendence to live there. For some the mental concentration is easier, for some the concentration in the heart centre; some are capable of doing both alternately—but to begin with the heart centre, if one can do it, is the more desirable.

The other side of discipline is with regard to the activities of the nature, of the mind, of the life-self or vital, of the physical being. Here the principle is to accord the nature with the inner realisation so that one may not be divided into two discordant parts. There are here several disciplines or processes possible. One is to offer all the activities to the Divine and call for the inner guidance and the taking up of one's nature by a Higher Power. If there is the inward soul-opening, if the psychic being comes forward, then there is no great difficulty—there comes with it a psychic discrimination, a constant intimation, finally a governance which discloses and quietly and patiently removes all imperfections, brings the right mental and vital movements and reshapes the physical consciousness also. Another method

is to stand back detached from the movements of the mind, life, physical being, to regard their activities as only a habitual formation of general Nature in the individual imposed on us by past workings, not as any part of our real being; in proportion as one succeeds in this, becomes detached, sees mind and its activities as not oneself, life and its activities as not oneself, the body and its activities as not oneself, one becomes aware of an inner Being within us — inner mental, inner vital, inner physical — silent, calm, unbound, unattached which reflects the true Self above and can be its direct representative; from this inner silent Being proceeds a rejection of all that is to be rejected, an acceptance only of what can be kept and transformed, an inmost Will to perfection or a call to the Divine Power to do at each step what is necessary for the change of the Nature. It can also open mind, life and body to the inmost psychic entity and its guiding influence or its direct guidance. In most cases these two methods emerge and work together and finally fuse into one. But one can begin with either, the one that one feels most natural and easy to follow.

Finally, in all difficulties where personal effort is hampered, the help of the Teacher can intervene and bring about what is needed for the realisation or for the immediate step that is necessary.

Motives for Seeking the Divine

Obviously to seek the Divine *only* for what one can get out of Him is not the proper attitude; but if it were absolutely forbidden to seek Him for these things, most people in the world would not turn towards Him at all. I suppose therefore it is allowed so that they may make a beginning—if they have faith, they may get what they ask for and think it a good thing to go on and then one day they may suddenly stumble upon the idea that this is after all not quite the one thing to do and that there are better ways and a better spirit in which one can approach the Divine. If they do not get what they want and still come to the Divine and trust in Him, well, that shows they are getting ready.

Let us look on it as a sort of infants' school for the unready. But of course that is not the spiritual life, it is only a sort of elementary religious approach. For the spiritual life to give and not to demand is the rule. The sadhak however can ask for the Divine Force to aid him in keeping his health or recovering it if he does that as part of his sadhana so that his body may be able and fit for the spiritual life and a capable instrument for the Divine Work.

*

First, it is a great exaggeration to deduce from your difficulties any idea of unfitness or of going away or being sent away or giving up the Yoga. I am certainly not going to pronounce you unfit because you want the Ananda; on such grounds I would have to pronounce myself unfit, because I have myself wanted it and many other things besides. And if I were to send you away because you are not entirely disinterested in the approach to the Divine, I should have, to be consistent, to send practically the whole Asram packing. I do not know why you are allowing yourself to indulge in such black and despondent thoughts — there is no ground for them at all, and I do not think I gave any grounds for them in my letter. Whatever your difficulties, the Mother and I have every intention of seeing you through them, and I think that you too, whatever suggestions your vital depression may make to you at the moment, have every intention of going through to the end of the Path. I imagine you have gone too far on it to go back and, if you wanted to, your psychic being which has persistently pushed you towards it, would not allow such a retreat.

Next, it was not my intention to say that it was wrong to aspire for the Ananda. What I wanted to point out was the condition for the permanent possession of the Ananda (intimations, visits, downrushes of it one can have before); the essential condition for it is a change of consciousness, the coming of peace, light, etc., all that brings about the transition from the normal to the spiritualised nature. And that being so, it is better to make this change of consciousness the first object of the sadhana. On

the other hand, to press for the constant Ananda immediately in a consciousness which is not yet able to retain it, still more to substitute for it lesser (vital) joys and pleasures may very well stop the flow of these spiritual experiences which make the continuous ecstasy eventually possible. But I certainly never intended to say that the Ananda was not to be attained or to insist on your moving towards a *nirānanda* (joyless) Brahman. On the contrary, I said that Ananda was the crown of the Yoga, which surely means that it was part of the highest final *siddhi*.

Whatever one wants sincerely and persistently from the Divine, the Divine is sure to give. If then you want Ananda and go on wanting, you will surely have it in the end. The only question is what is to be the chief power in your seeking, a vital demand or a psychic aspiration manifesting through the heart and communicating itself to the mental and vital and physical consciousness. The latter is the greatest power and makes the shortest way — and besides one has to come to that way sooner or later.

*

Let us first put aside the quite foreign consideration of what we would do if the union with the Divine brought eternal joylessness, Nirvana or torture. Such a thing does not exist and to drag it in only clouds the issue. The Divine is Anandamaya and one can seek him for the Ananda he gives; but he has also in him many other things and one may seek him for any of them, for peace, for liberation, for knowledge, for power, for anything else of which one may feel the pull or the impulse. It is quite possible for someone to say: "Let me have Power from the Divine and do His work or His will and I am satisfied, even if the use of Power entails suffering also." It is possible to shun bliss as a thing too tremendous or ecstatic and ask only or rather for peace, for liberation, for Nirvana. You speak of self-fulfilment, — one may regard the Supreme not as the Divine but as one's highest Self and seek fulfilment of one's being in that highest Self; but one need not envisage it as a self of bliss, ecstasy, Ananda — one may envisage it as a self of freedom, vastness, knowledge,

tranquillity, strength, calm, perfection — perhaps too calm for a ripple of anything so disturbing as joy to enter. So even if it is for something to be gained that one approaches the Divine, it is not a fact that one can approach Him or seek union only for the sake of Ananda and nothing else.

That involves something which throws all your reasoning out of gear. For these are aspects of the Divine Nature, powers of it, states of his being, — but the Divine Himself is something absolute, someone self-existent, not limited by his aspects, — wonderful and ineffable, not existing by them, but they existing because of him. It follows that if he attracts by his aspects, all the more he can attract by his very absolute selfness which is sweeter, mightier, profounder than any aspect. His peace, rapture, light, freedom, beauty are marvellous and ineffable, because he is himself magically, mysteriously, transcendently marvellous and ineffable. He can then be sought after for his wonderful and ineffable self and not only for the sake of one aspect or another of him. The only thing needed for that is, first, to arrive at a point when the psychic being feels this pull of the Divine in himself and, secondly, to arrive at the point when the mind, vital and each thing else begins to feel too that that was what it was wanting and the surface hunt after Ananda or what else was only an excuse for drawing the nature towards that supreme magnet.

Your argument that because we know the union with the Divine will bring Ananda, therefore it must be for the Ananda that we seek the union, is not true and has no force. One who loves a queen may know that if she returns his love it will bring him power, position, riches and yet it need not be for the power, position, riches that he seeks her love. He may love her for herself and could love her equally if she were not a queen; he might have no hope of any return whatever and yet love her, adore her, live for her, die for her simply because she is she. That has happened and men have loved women without any hope of enjoyment or result, loved steadily, passionately after age has come and beauty has gone. Patriots do not love their country only when she is rich, powerful, great and has much to give them; their love for country has been most ardent, passionate, absolute when the

country was poor, degraded, miserable, having nothing to give but loss, wounds, torture, imprisonment, death as the wages of her service; yet even knowing that they would never see her free, men have lived, served and died for her—for her own sake, not for what she could give. Men have loved Truth for her own sake and for what they could seek or find of her, accepted poverty, persecution, death itself; they have been content even to seek for her always, not finding, and yet never given up the search. That means what? That men, country, Truth and other things besides can be loved for their own sake and not for anything else, not for any circumstance or attendant quality or resulting enjoyment, but for something absolute that is either in them or behind their appearance and circumstance. The Divine is more than a man or woman, a stretch of land or a creed, opinion, discovery or principle. He is the Person beyond all persons, the Home and Country of all souls, the Truth of which truths are only imperfect figures. And can He then not be loved and sought for his own sake, as and more than these have been by men even in their lesser selves and nature?

What your reasoning ignores is that which is absolute or tends towards the absolute in man and his seeking as well as in the Divine—something not to be explained by mental reasoning or vital motive. A motive, but a motive of the soul, not of vital desire; a reason not of the mind, but of the self and spirit. An asking too, but the asking that is the soul's inherent aspiration, not a vital longing. That is what comes up when there is the sheer self-giving, when "I seek you for this, I seek you for that" changes to a sheer "I seek you for you." It is that marvellous and ineffable absolute in the Divine that Krishnaprem means when he says, "Not knowledge nor this nor that, but Krishna." The pull of that is indeed a categorical imperative, the self in us drawn to the Divine because of the imperative call of its greater Self, the soul ineffably drawn towards the object of its adoration, because it cannot be otherwise, because it is it and He is He. That is all about it.

I have written all that only to explain what we mean when we speak of seeking the Divine for himself and not for anything

else—so far as it is explicable. Explicable or not, it is one of the most dominant facts of spiritual experience. The call to self-giving is only an expression of this fact. But this does not mean that I object to your asking for Ananda. Ask for that by all means, so long as to ask for it is a need of any part of your being—for these are the things that lead on towards the Divine so long as the absolute inner call that is there all the time does not push itself to the surface. But it is really that that has drawn from the beginning and is there behind—it is the categorical spiritual imperative, the absolute need of the soul for the Divine.

I am not saying that there is to be no Ananda. The self-giving itself is a profound Ananda and what it brings, carries in its wake an inexpressible Ananda—and it is brought by this method sooner than by any other, so that one can say almost, “A self-less self-giving is the best policy.” Only one does not do it out of policy. Ananda is the result, but it is done not for the result, but for the self-giving itself and for the Divine himself—a subtle distinction, it may seem to the mind, but very real.

*

No, what you write in your letter was not at all what the Mother was trying to tell you. The question of *ahaitukī bhakti* and its opposite was settled long ago and the Mother did not intend to return upon it; it is understood that whatever the motive immediately pushing the mind or the vital, an asking for Ananda or knowledge or power, yet if there is a true seeking for the Divine in the being, it must lead eventually to the realisation of the Divine. The soul within has always the inherent (*ahaitukī*) yearning for the Divine; the *hetu* or special motive is simply an impulsion used by it to get the mind and the vital to follow the inner urge. If the mind and the vital can feel and accept the soul's sheer love for the Divine for his own sake, then the sadhana gets its full power and many difficulties disappear; but even if they do not, they will get what they seek after in the Divine and through it they will come to realise something, even perhaps to pass beyond the limit of their original desire. I may say that the idea of a joyless God is an absurdity which only the ignorance of

the mind could engender; the Radha love is not based upon any such thing, but means simply that whatever comes on the way to the Divine, pain or joy, *milana* or *viraha*, and however long the sufferings may last, the Radha love is unshaken and keeps its faith and certitude pointing fixedly like a star to the supreme object of Love.

All this, however, has nothing to do with what the Mother wished to say in the morning. What she told you was that you seemed to have a fixed notion about the Divine, as of a rather distant Being somewhere whom you expect to give you an article called Ananda, and, when there is some prospect of his giving it to you, you are on good terms with him, but when he doesn't, you quarrel and revolt and call him names! And she said a notion of the kind was in itself an obstacle,— because it is rather far from the Truth,— in the way of realising the Divine. What is this Ananda that you seek, after all? The mind can see in it nothing but a pleasant psychological condition,— but if it were only that, it would not be the rapture which the bhaktas and the mystics find in it. When the Ananda comes into you, it is the Divine who comes into you; just as when the Peace flows into you, it is the Divine who is invading you, or when you are flooded with Light, it is the flood of the Divine Himself that is around you. Of course, the Divine is something much more; many other things besides and in them all a Presence, a Being, a Divine Person; for the Divine is Krishna, is Shiva, is the Supreme Mother. But through the Ananda you can perceive the Anandamaya Krishna; for the Ananda is the subtle body and being of Krishna; through the Peace you can perceive the Shantimaya Shiva; in the Light, in the delivering Knowledge, the Love, the fulfilling and uplifting Power you can meet the presence of the Divine Mother. It is this perception that makes the experiences of the bhaktas and mystics so rapturous and enables them to pass more easily through the nights of anguish and separation— when there is this soul-perception, it gives to even a little or brief Ananda a force or value it would not otherwise have and the Ananda itself gathers by it a growing power to stay, to return, to increase. This was what the Mother meant

when she said, "Don't ask the Divine to give you Ananda, ask Him to give you Himself"—signifying that in the Ananda and through the Ananda it would be Himself that He would give you. There would then be no cause to say, "I do not know the Divine. I have never felt or met Him"; it would be a gate too for other experiences and make it easier to see the Divine in the material object, in the human form, in the body.

It was not a condition that the Mother was laying down when she said this; it was simply a suggestion which, if something in you could seize and profit by it, would make things less slow and difficult than they actually are.

Dedication to the Spiritual Life

This Yoga demands a total dedication of the life to the aspiration for the discovery and embodiment of the Divine Truth and to nothing else whatever. To divide your life between the Divine and some outward aim and activity that has nothing to do with the search for the Truth is inadmissible. The least thing of that kind would make success in the Yoga impossible.

You must go inside yourself and enter into a complete dedication to the spiritual life. All clinging to mental preferences must fall away from you, all insistence on vital aims and interests and attachments must be put away, all egoistic clinging to family, friends, country must disappear if you want to succeed in Yoga. Whatever has to come as outgoing energy or action, must proceed from the Truth once discovered and not from the lower mental or vital motives, from the Divine Will and not from personal choice or the preferences of the ego.

*

It is a universally accepted principle of the spiritual endeavour that one must be prepared to sacrifice everything without reserve in order to reach the Divine through a spiritualised consciousness. If self-development on the mental, vital and physical plane is his aim that is another matter—that life is the life of the ego with the soul kept behind undeveloped or half developed.

But for the spiritual seeker the only development he seeks is the development of the psychic and spiritual consciousness and that too, only because it is necessary to reach and to serve the Divine, not for its own sake. Whatever mental, vital, physical development or use of faculties can be made part of the spiritual life and an instrumentation for the Divine can be kept on condition of surrender of them for transformation and restatement on the spiritual basis. But they must not be kept for their own sake or for the sake of the ego or considered as one's own possession or used for one's own purpose but only for the sake of the Divine.

As for James' statement¹ it is of course true except in so far as the politician can indulge in other things as hobbies for his leisure hours, but if he wants to succeed as a politician he must give his best energies to politics. Conversely if Shakespeare or Newton had spent part of their energies in politics they would not have been able to reach such heights in poetry and in science or even if they had they would have done much less. The main energies have to be concentrated on one thing; the others can only be minor pursuits at leisure or for distraction or interests rather than pursuits useful for keeping up a general culture.

*

All depends on the aim of the life. To one whose aim is to discover and possess the highest spiritual truth and the divine life, I do not think a University post can count for much, nor do I see that there can be any practical connection between them. It might be different if the aim were the life of a writer and thinker on the intellectual level only without any higher flight or deeper seeking. I do not see that your unwillingness to commit yourself to this kind of work is due to any weakness. It is rather that only a small part of your nature, and that not the deepest or strongest part, would be satisfied with it or with the atmosphere in which it would have to be done.

¹ The correspondent wrote: "Prof. James even says [in *Principles of Psychology*] about the 'social me' and other 'me's, that one has to suppress several of them in order to achieve one or two main aims in life. A politician, in order to concentrate on politics alone, has to let go his tendency for music or painting or social fame or family affections." — Ed.

In these matters it is not the thinking mind but the vital being—the life-force and the desire nature—or some part of it at least, that usually determines men's action and their choice—when it is not some outward necessity or pressure that compels or mainly influences the decision. The mind is only an interpreting, justifying and devising agent. By your taking up the sadhana this part of your vital being has had a pressure put upon it from above and within which has discouraged its old turn of desires and tendencies, its past grooves, those which would have decided its direction before; this vital has, as is often one first result, fallen silent and neutral. It is no longer strongly moved towards the ordinary life; it has not yet received from or through the psychic centre and the higher mental will a sufficient illumination and impulse to take up a new vital movement and run vigorously on the road to a new life. That is the reason for the listlessness of which you speak and the mistiness of the future. Men do not know themselves and have not learned to distinguish these different parts of the being which are usually lumped together as mind; they do not understand their own states and actions, or, if at all, then only on the surface. It is part of the foundation of Yoga to become conscious of the complexity of the nature, see the different forces that move it and get over it a control of directing knowledge.

The remedy can only come from the parts of the being that are already turned towards the Light. To call in the light of the divine consciousness, bring the psychic being to the front and kindle a flame of aspiration which will awaken spiritually the outer mind and set on fire the vital being, is the way out. It is usually a psychic awakening or a series of strong experiences by which the sadhak comes out of this intermediary no man's land of the quiescent vital (few can avoid altogether this passage through a neutral vital indifference) into the full dynamic course of the spiritual movement.

*

It is not absolutely necessary to abandon the ordinary life in order to seek after the Light or to practise Yoga. This is usually

done by those who want to make a clean cut, to live a purely religious or exclusively inner and spiritual life, to renounce the world entirely and to depart from the cosmic existence by cessation of the human birth and a passing away into some higher state or into the transcendental Reality. Otherwise it is only necessary when the pressure of the inner urge becomes so great that the pursuit of the ordinary life is no longer compatible with the pursuit of the dominant spiritual objective. Till then what is necessary is a power to practise an inner isolation, to be able to retire within oneself and concentrate at any time on the necessary spiritual purpose. There must also be a power to deal with the ordinary outer life from a new inner attitude and one can then make the happenings of that life itself a means for the inner change of nature and the growth in spiritual experience.

Chapter Two

The Aim of the Integral Yoga

A Yoga of Divine Life

You have apparently a call and may be fit for Yoga; but there are different paths and each has a different aim and end before it. It is common to all the paths to conquer the desires, to put aside the ordinary relations of life, and to try to pass from uncertainty to everlasting certitude. One may also try to conquer dream and sleep, thirst and hunger etc. But it is no part of my Yoga to have nothing to do with the world or with life or to kill the senses or entirely inhibit their action. It is the object of this Yoga to transform life by bringing down into it the Light, Power and Bliss of the divine Truth and its dynamic certitudes. This Yoga is not a Yoga of world-shunning asceticism, but of divine Life. Your object, on the other hand, can only be gained by entering into Samadhi and ceasing in it from all connection with world-existence.

*

The way of Yoga followed here has a different purpose from others,—for its aim is not only to rise out of the ordinary ignorant world-consciousness into the divine consciousness, but to bring the supramental power of that divine consciousness down into the ignorance of mind, life and body, to transform them, to manifest the Divine here and create a divine life in Matter. This is an exceedingly difficult aim and difficult Yoga; to many or most it will seem impossible. All the established forces of the ordinary ignorant world-consciousness are opposed to it and deny it and try to prevent it, and the sadhak will find his own mind, life and body full of the most obstinate impediments to its realisation. If you can accept the ideal whole-heartedly, face all the difficulties, leave the past and its ties behind you and are ready to give up everything and risk everything for this divine

possibility, then only can you hope to discover by experience the Truth behind it.

The sadhana of this Yoga does not proceed through any set mental teaching or prescribed forms of meditation, mantras or others, but by aspiration, by a self-concentration inwards or upwards, by self-opening to an Influence, to the Divine Power above us and its workings, to the Divine Presence in the heart, and by the rejection of all that is foreign to these things. It is only by faith, aspiration and surrender that this self-opening can come.

*

The aim of the Yoga is to open the consciousness to the Divine, to live in the inner consciousness more and more while acting from it on the external life, to bring the inmost psychic into the front and by the power of the psychic to purify and change the being so that it may become ready for transformation and in union with the Divine Knowledge, Will and Love. Secondly, to develop the Yogic consciousness—i.e. to universalise the being on all the planes, become aware of the cosmic being and cosmic forces and be in union with the Divine on all the planes up to the Overmind. Thirdly, to come into contact with the transcendent Divine, beyond the Overmind, through the supramental consciousness, supramentalise the consciousness and the nature and make oneself an instrument for the realisation of the dynamic Divine Truth and its transforming descent into the earth-nature.

A Yoga Not for Ourselves

Well, I once wrote in my callow days, “Our Yoga is not for ourselves but humanity” — that was in the *Bande Mataram* times. To get out of the hole self-created I had to explain that it was no longer for humanity, but for the Divine. The “not for ourselves” remained intact.

*

Quite possible and practical and a very rapturous thing [*is absolute surrender to the Divine*] as anyone who has done it can tell you. It is also the easiest and most powerful way of “getting the Divine”. So it is the best policy also. The phrase [“*for the Divine*”], however, means that the object of the Yoga is to enter into and be possessed by the Divine Presence and Consciousness, to love the Divine for the Divine’s sake alone, to be turned in our nature into nature of the Divine and in our will and works and life to be the instrument of the Divine. Its object is not to be a great Yogi or a superman (although that may come) or to grab at the Divine for the sake of the ego’s power, pride or pleasure. It is not for salvation though liberation comes by it and all else may come; but these must not be our objects. The Divine alone is our object.

*

To come to this Yoga merely with the idea of being a superman would be an act of vital egoism which would defeat its own object. Those who put this object in the front of their preoccupations invariably come to grief, spiritually and otherwise. The aim of this Yoga is, first, to enter into the divine consciousness by merging into it the separative ego (incidentally, in doing so one finds one’s true individual self which is not the limited, vain and selfish human ego but a portion of the Divine) and, secondly, to bring down the supramental consciousness on earth to transform mind, life and body. All else can be only a result of these two aims, not the primary object of the Yoga.

The extreme difficulty of these two aims has never been concealed from the sadhakas; on the contrary, difficulties and dangers have been overemphasised, rather than minimised. If still they choose and persist in this path, it is supposed that they are ready to risk everything, sacrifice everything, surrender everything in order to achieve this end or help towards its achievement.

*

You must get out of certain wrong ideas that you seem to have

about Yoga, for these are dangerous and ought to be thrown away by every sadhak:

(1) The object of Yoga is not to become “like” Sri Aurobindo or the Mother. Those who cherish this idea easily come to the further idea that they can become their equals and even greater. This is only to feed the ego.

(2) The object of Yoga is not to get power or to be more powerful than others or to have great siddhis or to do great or wonderful or miraculous things.

(3) The object of Yoga is not to be a great Yogi or a superman. This is an egoistic way of taking the Yoga and can lead to no good; avoid it altogether.

(4) To talk about the supramental and think of bringing it down in yourself is the most dangerous of all. It may bring an entire megalomania and loss of balance. What the sadhak has to seek is the full opening to the Divine, the psychic change of his consciousness, the spiritual change. Of that change of consciousness, selflessness, desirelessness, humility, bhakti, surrender, calm, equality, peace, quiet, sincerity are necessary constituents. Until he has the psychic and spiritual change, to think of being supramental is an absurdity and an arrogant absurdity.

All these egoistic ideas, if indulged, can only aggrandise the ego, spoil the sadhana and lead to serious spiritual dangers. They should be rejected altogether.

*

Making fulfilment etc. the aim encourages an ego-centric attitude. Fulfilment, liberation, bliss etc. will come, but as a result of union with the Divine, not as a personal object of the sadhana.

Not Liberation But Transformation

Peace is a necessary basis, but peace is not sufficient. Peace if it is strong and permanent can liberate the inner being which can become a calm and unmoved witness of the external movements. That is the liberation of the Sannyasin. In some cases it can liberate the external also, throwing the old nature out into

the environmental consciousness, but even this is liberation, not transformation.

*

Spiritual liberation means to be free from ego and from the imprisonment in the mind and vital and physical nature and to be conscious of the spiritual Self and live in that consciousness.

Spiritual perfection and fulfilment means that the nature should be spiritualised, new-formed in the consciousness of the free Self and the divine consciousness of infinity, purity, light, power, bliss and knowledge.

*

In the Brahmanic condition one feels the self to be untouched and pure — but the nature remains imperfect. The ordinary Sannyasin does not care about that, because it is not his object to perfect the nature, but to separate himself from it.

*

The negative means [*of sadhana*] are not evil — they are useful for their object which is to get away from life. But from the positive point of view, they are disadvantageous because they get rid of the powers of the being instead of divinising them for the transformation of life.

Divinisation and Transformation

The fundamental difference is in the teaching that there is a dynamic divine Truth (the Supermind) and that into the present world of Ignorance that Truth can descend, create a new Truth-consciousness and divinise Life. The old Yogas go straight from mind to the absolute Divine, regard all dynamic existence as Ignorance, Illusion or Lila: when you enter the static and immutable Divine Truth, they say, you pass out of cosmic existence.

*

They [*the ancient Yogas*] aimed at realisation and did not care

about divinisation, except the Tantric and some others. The aim however even in these was rather to become saints and siddhas than anything else.

*

If your soul always aspires for the transformation, then that is what you have to follow after. To seek the Divine or rather some aspect of the Divine — for one cannot entirely realise the Divine if there is no transformation — may be enough for some, but not for those whose soul's aspiration is for the entire divine change.

*

Unless the external nature is transformed, one may go as high as possible and have the largest experiences — but the external mind remains an instrument of the Ignorance.

*

If the presence of the Divine is established, it means that the being is ready for the transformation which proceeds naturally.

*

The full transformation is the result of union with the divine consciousness.

*

To be in full union with the Divine is the final aim. When one has some kind of constant union, one can be called a Yogi, but the union has to be made complete. There are Yogis who have only the union on the spiritual plane, others who are united in mind and heart, others in the vital also. In our Yoga our aim is to be united too in the physical consciousness and on the supramental plane.

Section Two

Basic Requisites of the Path

Chapter One

The Call and the Capacity

The Call

This Yoga is a special way to a high and difficult spiritual achievement. It is given only when there is sufficient evidence of capacity or an irresistible call. Inner peace is not its object; that is only one of the elementary conditions for it.

*

The goal of Yoga is always hard to reach, but this one is more difficult than any other, and it is only for those who have the call, the capacity, the willingness to face everything and every risk, even the risk of failure, and the will to progress towards an entire selflessness, desirelessness and surrender.

*

This Yoga implies not only the realisation of God, but an entire consecration and change of the inner and outer life till it is fit to manifest a divine consciousness and become part of a divine work. This means an inner discipline far more exacting and difficult than mere ethical and physical austerities. One must not enter on this path, far vaster and more arduous than most ways of Yoga, unless one is sure of the psychic call and of one's readiness to go through to the end.

*

By readiness I did not mean capacity but willingness. If there is the will within to face all difficulties and go through, no matter how long it takes, then the path can be taken.

*

A mere restless dissatisfaction with the ordinary life is not a sufficient preparation for this Yoga. A positive inner call, a

strong will and a great steadiness are necessary for success in the spiritual life.

*

Knowledge of the way is not enough — one must tread it, or if one cannot do that, allow oneself to be carried along it. The human vital and physical external nature resist to the very end, but if the soul has once heard the call, it arrives, sooner or later.

*

What you write [*about the urge of the soul*] is quite accurate about the true soul, the psychic being. But people mean different things when they speak of the soul. Sometimes it is what I have called in the *Arya* the desire soul,—that is the vital with its mixed aspirations, desires, hungers of all kinds good and bad, its emotions, finer and grosser, or sensational urges crossed by the mind's idealisings and psychic stresses. But sometimes it is also the mind and vital under the stress of a psychic urge. The psychic so long as it is veiled must express itself through the mind and vital and its aspirations are mixed and coloured there by the vital and mental stuff. Thus the veiled psychic urge may express itself in the mind by a hunger in the thought for the knowledge of the Divine, what the Europeans call the intellectual love of God. In the vital it may express itself as a hunger or hankering after the Divine. This can bring much suffering because of the nature of the vital, its unquiet passions, desires, ardours, troubled emotions, cloudings, depressions, despairs. The psychic can have a psychic sorrow when things go against its diviner yearnings, but this sorrow has in it no touch of torment, depression or despair. Nevertheless all cannot approach, at least cannot at once approach the Divine in the pure psychic way — the mental and vital approaches are often necessary beginnings and better from the spiritual point of view than an insensitiveness to the Divine. It is in both cases a call of the soul, the soul's urge — it only takes a form or colour due to the stress of the mind or vital nature.

*

For those who have within them a sincere call for the Divine, however the mind or vital may present difficulties or attacks come or the progress be slow and painful,— even if they fall back or fall away from the path for a time, the psychic always prevails in the end and the Divine Help proves effective. Trust in that and persevere — then the goal is sure.

*

There is only one logic in spiritual things: when a demand is there for the Divine, a sincere call, it is bound one day to have its fulfilment. It is only if there is a strong insincerity somewhere, a hankering after something else — power, ambition, etc. — which counterbalances the inner call that the logic is no longer applicable. Supramental realisation is another matter: I am speaking now of the realisation of the Divine, of the contact with the Divine, through whatever lever, heart or mind, or both. In your case it is likely to come through the heart, through increase of bhakti or psychic purification of the heart: that is why I was pressing the psychic way upon you. I do not mean that nothing can come through meditation for you, but probably — barring the unexpected — only after the heart-experience.

Do not allow these wrong ideas and feelings to govern you or your state of depression to dictate your decisions: try to keep a firm central will for the realisation — you can do so if you make up your mind to it — these things are not impossible for you; they are within the scope of your nature which is strong. You will find that the obstinate spiritual difficulty disappears in the end like a mirage. It belongs to the maya and, where the inner call is sincere, cannot hold even the outer consciousness always: its apparent solidity will dissolve.

Turning towards the Divine

An idealistic notion or a religious belief or emotion is something quite different from getting spiritual light. An idealistic notion might turn you towards getting spiritual light, but it is not the light itself.

It is true however that “the spirit bloweth where it listeth”, and that one can get some initial impulse or touch of mental realisation of spiritual things from almost any circumstance, as Bilwamangal got it from the words of his courtesan mistress. Obviously it happens because something is ready somewhere, —if you like, the psychic being waiting for its chance and taking some opportunity in mind, vital or heart to knock open a window somewhere.

*

Mental idealism can only have an effect if one has a strong will in the mind capable of forcing the vital to follow.

*

The push to drown oneself in the Divine is very rare. It is usually a mental idea, a vital fumbling or some quite inadequate reason that starts the thing—or else no reason at all. The only reality is the occult psychic push behind of which the surface consciousness is not aware or else hardly aware.

*

Your influence on him for turning towards the Yoga was good, but it was not able to change his vital nature. No human influence—which can only be mental and moral—can do that. You can see that he is just what he was before. It is only from the sadhak’s own soul turning towards the Divine [*that the change can come*].

*

It is so with everybody. Part of the nature turns to the Divine, another part does not give its consent at all; it either revolts or remains dully discontented or only pretends to acquiesce. It is only by making the whole being turn whole-heartedly to the Divine that one can enter fully into the Yoga.

Spiritual Destiny

When someone is destined for the Path all circumstances,

through all the deviations of mind and life, help in one way or another to lead him to it. It is his own psychic being within him and the Divine Power above that use to that end the vicissitudes both of mind and outward circumstance.

*

A spiritual opportunity is not a thing that should be lightly thrown away with the idea that it will be all right some other time — one cannot be so sure of the other time. Besides, these things leave a mark and at the place of the mark there can be a recurrence.

*

The spiritual destiny always stands — it may be delayed or seem to be lost for a time, but it is never abolished.

Capacity for Yoga

All can do some kind of Yoga according to their nature, if they have the will to it. But there are few of whom it can be said that they have capacity for this Yoga. Only some can develop a capacity, others cannot. What X wants is peace and something to carry her through the trials of life — she is not ready for more.

*

In sadhana it is not by the personal capacity that things are done. It is the Divine Power that works and if one makes oneself its instrument, even what is impossible for the personal capacity can be done.

*

When one once enters into the true (Yogic) consciousness, then you see that everything can be done, even if at present only a slight beginning has been made; but a beginning is enough, once the Force, the Power are there. It is not really on the capacity of the outer nature that success depends, (for the outer nature all self-exceeding seems impossibly difficult), but on the inner being and to the inner being all is possible. One has only to get

into contact with the inner being and change the outer view and consciousness from the inner—that is the work of the sadhana and it is sure to come with sincerity, aspiration and patience.

*

You must realise that these moods are attacks which should be rejected at once—for they repose on nothing but suggestions of self-distrust and incapacity which have no meaning, since it is by the Grace of the Divine and the aid of a Force greater than your own, not by personal capacity and worth that you can attain the goal of the sadhana. You have to remember that and dissociate yourself from these suggestions when they come, never accept or yield to them. No sadhak even if he had the capacity of the ancient Rishis and Tapaswis or the strength of a Vivekananda can hope to keep during the early years of his sadhana a continuous good condition or union with the Divine or an unbroken call or height of aspiration. It takes a long time to spiritualise the whole nature and until that is done, variations must come. A constant trust and patience must be cultivated—must be acquired—not least when things go against—for when they are favourable, trust and patience are easy.

*

Spiritual capacity means simply a natural capacity for true spiritual experience and development. It can be had on any plane, but the natural result is that one gets easily into touch with the Self and the higher planes.

Fitness for Yoga

Nobody is fit for the sadhana — i.e. nobody can do it by his sole capacity. It is a question of preparing oneself to bring in fully the Force not one's own that can do it with one's consent and aspiration.

*

It is useless to raise the question of fitness. No one is fit — for all human beings are full of faults and incapacities — even the greatest sadhaks are not free. It is a question only of aspiration, of believing in the divine Grace and letting the Divine work in you, not making a refusal.

*

It is difficult to say that any particular quality makes one fit or the lack of it unfit. One may have strong sex impulses, doubts, revolts and yet succeed in the end, while another may fail. If one has a fundamental sincerity, a will to go through in spite of all things and a readiness to be guided, that is the best security in the sadhana.

*

Fitness for Yoga is a very relative term — the real fitness comes by the soul's call and the power to open oneself to the Divine. If you have that, you have the fitness, and your past actions cannot stand in the way: the past cannot bind the future. Of course, you have to finish with it, reject it and turn into the new ways — otherwise the past remains the present. But that is the question of the will in you and the soul's call. If you are faithful to your soul's call there is no reason why you should not be able to do Yoga. All that you have to do is to keep your aspiration and not lose the inner connection that has been made — then the Mother's thought and the help will be with you and you will find your way.

*

You speak of your possible unfitness, but it is not a question of fitness or unfitness. There is nobody who can go on in his own strength or by right of his fitness to the goal of the sadhana. It is only by the Divine Grace and reliance on the Divine Grace that it can be done. It is in a strength greater than your own that you must put your first and last reliance. If your faith falters you have to call on that to sustain you; if your force is insufficient against the ill-will and opposition that surround

you, open yourself to receive that force in its place.

*

The Mother's help and mine are always there for you. You have only to turn fully towards it and it will act on you.

What has come across is these wrong ideas about your unfitness, about bad things in you that prevent you from receiving the Mother's grace, about the lack of aspiration which prevents you from having realisation and experience. These thoughts are quite wrong and untrue — they are not even your own thoughts, they are suggestions thrown on you just as they are thrown on the other sadhaks and intended to produce depression. There is no unfitness, no bad thing inside that comes across, no lack of aspiration causing the cessation of experience. It is the depression, the self-distrust, the readiness to despair which are the only cause; there is no other. To all sadhaks, as I wrote to you, even to the best and strongest there come interruptions in the flow of the sadhana; that is not a cause for thinking oneself unfit and wanting to go away with the idea that there is no hope. A little quietude would bring back the flow. You were having the necessary experiences, the necessary progress and it was only a coming forward of some difficulties of the physical consciousness that stopped them for a time. That happens to all and is not particular to you, as I explained to you. These difficulties always come and have to be overcome. Once overcome by the working of the Force, the sadhana goes on as before. But you began to entertain this wrong idea of unfitness and lack of aspiration as the cause and got entirely depressed. You must shake all that off and refuse to believe in the thought-suggestions that come to you. No sadhak ought ever to indulge thoughts of unfitness and hopelessness — they are quite irrelevant because it is not one's personal fitness and worthiness that makes one succeed, but the Mother's grace and power and the consent of the soul to her grace and the workings of her Force.

Turn from these dark thoughts and look to the Mother only, not with impatience for the result and desire, but with trust and confidence and let her workings bring you quietude

and the renewal of the progress towards the psychic opening and realisation. That will bring surely and without doubt the fuller faith and the love which you seek.

*

I repeat what I said before (though your physical mind does not yet believe) that these experiences show at once that your inner being is a Yogi capable of trance, ecstasy, intensest bhakti, fully aware of Yoga and Yoga consciousness, and showing himself the very moment you get inside yourself, even as the outer man is very much the other way round, modernised, externalised, vigorously outward-vital (for the Yogi is inward-vital and psychic) and knowing nothing of Yoga or the world of inner experience. I could see at once when I saw you that there was this inner Yогин and your former experiences here were quite convincing to anyone who knows anything at all about these things. When there is this inner Yогин inside, the coming to the way of Yoga is sure and not even the most externalised surface consciousness — not even a regular *homo Russelicus* outside and you are not that, only a little *Russelicatus* on the surface, — can prevent final success in the Yoga. But the tussle between the inward and the outward man can create a lot of trouble, because the inward man pushes towards the Divine and will not let go and the outward man regrets, repines, pulls back, asks what is this shadowy thing to which he is being brought, this Unknown, this (to him) far-off Ineffable. That, and not merely sex, food or society, is the genesis of the struggle and trouble in you. And yet it is all a misunderstanding — for if the outer gave way entirely to the inner Yogi, he would find that what he lost or thought he was losing would be repaid a hundredfold — though he would get it in another spirit and consciousness, not any longer the transient and deceptive delight of the world for its own sake, but the delight of the Divine in the world, a thousand times more intense, sweet and desirable.

*

The vision of the Light and the vision of the Lord in the form of

Jagannath are both of them indications that he has the capacity for Yoga experience and that there is a call of the Divine on his inner being. But capacity is not enough; there must be also the will to seek after the Divine and courage and persistence in following the path. Fear is the first thing that must be thrown away and, secondly, the inertia of the outer being which has prevented him from responding to the call.

The Light is the light of the Divine Consciousness. The aim of this Yoga is first to come into contact with this consciousness and then to live in its light and allow the light to transform the whole nature, so that the being may live in union with the Divine and the nature become a field for the action of the Divine Knowledge, the Divine Power and the Divine Ananda.

He can succeed in that only if he makes it the supreme object of his life and is prepared to subordinate everything else to this one aim. Otherwise all that can be done is only to make some preparation in this life—a first contact and some preliminary spiritual change in part of the nature.

Capacity of Westerners for Yoga

The best way to answer your letter will be, I think, to take separately the questions implied in it. I will begin with the conclusion you have drawn of the impossibility of the Yoga for a non-Oriental nature.

I cannot see any ground for such a conclusion; it is contrary to all experience. Europeans throughout the centuries have practised with success spiritual disciplines which were akin to Oriental Yogas and have followed too ways of the inner life which came to them from the East. Their non-Oriental nature did not stand in their way. The approach and experiences of Plotinus and the European mystics who derived from him were identical, as has been shown recently, with the approach and experiences of one type of Indian Yoga. Especially, since the introduction of Christianity Europeans have followed its mystic disciplines which were one in essence with those of Asia, however much they may have differed in forms, names and symbols.

If the question be of Indian Yoga itself in its own characteristic forms, here too the supposed inability is contradicted by experience. In early times Greeks and Scythians from the West as well as Chinese and Japanese and Cambodians from the East followed without difficulty Buddhist or Hindu disciplines; at the present day an increasing number of occidentals have taken to Vedantic or Vaishnava or other Indian spiritual practices and this objection of incapacity or unsuitableness has never been made either from the side of the disciples or from the side of the Masters. I do not see, either, *why* there should be any such unbridgeable gulf; for there is no essential difference between spiritual life in the East and spiritual life in the West,—what difference there is has always been of names, forms and symbols or else of the emphasis laid on one special aim or another or on one side or another of psychological experience. Even here differences are often alleged which do not exist or else are not so great as they appear. I have seen it alleged by a Christian writer (who does not seem to have shared your friend X's objection to these scholastic (?) distinctions) that Hindu spiritual thought and life acknowledged or followed after only the Transcendent and neglected the Immanent Divinity while Christianity gave due place to both Aspects; but, in matter of fact, Indian spirituality, even if it laid the final stress on the Highest beyond form and name, yet gave ample recognition and place to the Divine immanent in the world and the Divine immanent in the human being. Indian spirituality has, it is true, a wider and more minute knowledge behind it; it has followed hundreds of different paths, admitted every kind of approach to the Divine and has thus been able to enter into fields which are outside the less ample scope of occidental practice; but that makes no difference to the essentials, and it is the essentials alone that matter.

Your explanation of the ability of many Westerners to practise Indian Yoga seems to be that they have a Hindu temperament in a European or American body. As Gandhi is inwardly a moralistic Westerner and Christian, so, you say, the other non-Oriental members of the Asram are essentially Hindus in outlook. But

what exactly is this Hindu outlook? I have not myself seen anything in them that can be so described nor has the Mother. My own experience contradicts entirely your explanation. I knew very well Sister Nivedita (she was for many years a friend and a comrade in the political field) and met Sister Christine,— the two closest European disciples of Vivekananda. Both were Westerners to the core and had nothing at all of the Hindu outlook; although Sister Nivedita, an Irishwoman, had the power of penetrating by an intense sympathy into the ways of life of the people around her, her own nature remained non-Oriental to the end. Yet she found no difficulty in arriving at realisation on the lines of Vedanta. Here in this Asram I have found the members of it who came from the West (I include especially those who have been here longest) typically occidental with all the quality and also all the difficulties of the Western mind and temperament and they have had to cope with their difficulties, just as the Indian members have been obliged to struggle with the limitations and obstacles created by *their* temperament and training. No doubt, they have accepted in principle the conditions of the Yoga; but they had no Hindu outlook when they came and I do not think they have tried to acquire one. Why should they do so? It is not the Hindu outlook or the Western that fundamentally matters in Yoga, but the psychic turn and the spiritual urge, and these are the same everywhere.

What are the differences after all from the viewpoint of Yoga between the sadhak of Indian and the sadhak of occidental birth? You say the Indian has his Yoga half done for him,— first, because he has his psychic much more directly open to the Transcendent Divine. Leaving out the adjective, (for it is not many who are by nature drawn to the Transcendent, most seek more readily the Personal, the Divine immanent here, especially if they can find it in a human body), there is there no doubt an advantage. It arises simply from the strong survival in India of an atmosphere of spiritual seeking, and a long tradition of practice and experience, while in Europe the atmosphere has been lost, the tradition interrupted and both have to be rebuilt. There is an absence too of the *essential* doubt which so much afflicts

the minds of Europeans or, it may be added, of Europeanised Indians, although that does not prevent a great activity of a practical and very operative kind of doubt in the Indian sadhak. But when you speak of indifference to fellow human beings in any deeper aspect, I am unable to follow your meaning. My own experience is that the attachment to persons — to mother, father, wife, children, friends — not out of sense of duty or social relationship, but through close heart-ties is quite as strong as in Europe and often more intense; it is one of the great stumbling blocks in the way, some succumbing to the pull and many even advanced sadhaks being still unable to get it out of their blood and their vital fibre. The impulse to set up a “spiritual” or a “psychic” relationship with others — very usually covering a vital mixture which distracts them from the one aim — is a persistently common feature. There is no difference here between Western and Eastern human nature. Only the teaching in India is of old standing that all must be turned towards the Divine and everything else either sacrificed or changed into a subordinate and ancillary movement or made by sublimation a first step only towards the seeking for the Divine. This no doubt helps the Indian sadhak if not to become single-hearted at once, yet to orientate himself more completely towards the goal. It is not always for him the Divine alone, though that is considered the highest state, but the Divine chief and first is easily grasped by him as the ideal.

The Indian sadhak has his own difficulties in his approach to the Yoga — at least to this Yoga — which a Westerner has in less measure. Those of the occidental nature are born of the dominant trend of the European mind in the immediate past. A greater readiness of essential doubt and sceptical reserve; a habit of mental activity as a necessity of the nature which makes it more difficult to achieve a complete mental silence; a stronger turn towards outside things born of the plenitude of active life (while the Indian commonly suffers from defects born rather of a depressed or suppressed vital force); a habit of mental and vital self-assertion and sometimes an aggressively vigilant independence which renders difficult any completeness of internal

surrender even to a greater Light and Knowledge, even to the divine Influence — these are frequent obstacles. But these things are not universal in Westerners, and they are on the other hand present in many Indian sadhaks, and they are, like the difficulties of the typical Indian nature, superstructural formations, not the very grain of the being. They cannot permanently stand in the way of the soul, if the soul's aspiration is strong and firm, if the spiritual aim is the chief thing in the life. They are impediments which the fire within can easily burn away if the will to get rid of them is strong, and which it will surely burn away in the end, — though less easily — even if the outer nature clings long to them and justifies them — provided that central will, that deeper impulse is behind all, real and sincere.

This conclusion of yours about the incapacity of the non-Oriental for Indian Yoga is simply born of a too despondently acute sense of your own difficulties, — you have not seen those, equally great, that have long troubled or are still troubling others. Neither to Indian nor to European can the path of Yoga be smooth and easy; their common human nature is there to see to that. To each his own difficulties seem enormous and radical and even incurable by their continuity and persistence and induce long periods of despondency and crises of despair. To have faith enough or enough psychic sight to react at once or almost at once and prevent these attacks is given hardly to two or three in a hundred. But one ought not to settle down into a fixed idea of one's own incapacity or allow it to become an obsession; for such an attitude has no true justification and unnecessarily renders the way harder. Where there is a soul that has once become awake, there is surely a capacity within that can outweigh all surface defects and can in the end conquer.

If your conclusion were true, the whole aim of this Yoga would be a vain thing; for we are not working for a race or a people or a continent or for a realisation of which only Indians or only Orientals are capable. Our aim is not, either, to found a religion or a school of philosophy or a school of Yoga, but to create a ground and a way of spiritual growth and experience which will bring down a greater Truth beyond the mind but not

inaccessible to the human soul and consciousness. All can pass who are drawn to that Truth, whether they are from India or elsewhere, from the East or from the West. All may find great difficulties in their personal or common human nature; but it is not their physical origin or their racial temperament that can be an insuperable obstacle to their deliverance.

*

I am not sure about the last matter.¹ After all India with her mentality and method has done a hundred times more in the spiritual field than Europe with her intellectual doubts and questionings. Even when a European overcomes the doubt and questioning, he does not find it as easy to go as fast and far as an Indian with the same force of personality because the stir of mind is still greater. It is only when he can get beyond that that he arrives, but for him it is not so easy.

On the other hand however your statement is correct. It [*the tendency to doubt and question*] is “natural considering the times” and the occidental mentality prevalent everywhere. It is also probably necessary that this should be faced and overcome before any supramental realisation is possible in the earth-consciousness — for it is the attitude of the physical mind to spiritual things and as it is in the physical that the resistance has to be overcome before the mind can be overpassed in the way required for this Yoga, the strongest possible representation of its difficulties was indispensable.

¹ *The correspondent suggested that in this Yoga a disciple with an occidental mentality might be “even better off” than a disciple with a traditional Indian mentality of humility and respect for the Guru. — Ed.*

Chapter Two

Qualities Needed for Sadhana

Indispensable Qualities

It goes without saying that the qualities you speak of are helpful in the approach to the spiritual path, while the defects you enumerate are each a serious stumbling-block in the way. Sincerity especially is indispensable to the spiritual endeavour, and crookedness a constant obstacle. The sattwic nature has always been held to be the most apt and ready for the spiritual life, while the rajasic nature is encumbered by its desires and passions. At the same time, spirituality is something above the dualities, and what is most needed for it is a true upward aspiration. This may come to the rajasic man as well as to the sattwic. If it does, he can rise by it above his failings and desires and passions, just as the other can rise beyond his virtues, to the Divine Purity and Light and Love. Necessarily this can only happen if he conquers his lower nature and throws it from him; for if he relapses into it, he is likely to fall from the path or at least to be, so long as the relapse lasts, held back by it from inner progress. But for all that the conversion of great sinners into great saints, of men of little or no virtue into spiritual seekers and God-lovers has frequently happened in religious and spiritual history — as in Europe St. Augustine, in India Chaitanya's Jagai and Madhai, Bilwamangal and many others. The house of the Divine is not closed to any who knock sincerely at its gates, whatever their past stumbles and errors. Human virtues and human errors are bright and dark wrappings of a divine element within which once it pierces the veil, can burn through both towards the heights of the Spirit.

Humility before the Divine is also a *sine qua non* of the spiritual life, and spiritual pride, arrogance, or vanity and self-assurance press always downward. But confidence in the Divine and a faith in one's spiritual destiny (i.e. since my heart and

soul seek for the Divine, I cannot fail one day to reach Him) are much needed in view of the difficulties of the Path. A contempt for others is out of place, especially since the Divine is in all. Evidently, the activities and aspirations of men are not trivial and worthless, for all life is a growth of the soul out of the darkness towards the Light. But our attitude is that humanity cannot grow out of its limitations by the ordinary means adopted by the human mind, politics, social reform, philanthropy, etc., — these can only be temporary or local palliatives. The only true escape is a change of consciousness, a change into a greater, wider and purer way of being, and a life and action based upon that change. It is therefore to that that the energies must be turned, once the spiritual orientation is complete. This implies no contempt, but the preference of the only effective means over those which have been found ineffective.

*

Such qualities as faith, sincerity, aspiration, devotion etc. make up the perfection indicated in our language of the flowers.¹ In ordinary language it would mean something else such as purity, love, benevolence, fidelity and a host of other virtues.

Conditions of the Yoga

I have never said that this Yoga was a safe one — no Yoga is. Each has its dangers as has every great attempt in human life. But it can be carried through if one has a central sincerity and a fidelity to the Divine. These are the two necessary conditions.

*

The first conditions of this Yoga are:

(1) A complete sincerity and surrender in the being. The divine life and the transformation of the lower human into the higher divine nature must be made the sole aim of all the life.

¹ The Mother named the Plumeria flower "Psychological perfection" and said that its five elements were faith, sincerity, aspiration, devotion and surrender.—Ed.

No attachments, desires or habits of the mind, heart, vital being or body should be clung to which come in the way of this one aspiration and one object of the life. One must be ready to renounce all these completely as soon as the demand comes from above and from the divine Shakti.

(2) A fundamental calm, peace and purity in the mind, vital being and all the nature.

The hours of meditation should be devoted to the formation of these two conditions in you, by aspiration and by self-observation and rejection of all that disturbs the nature or keeps it troubled, confused and impure. Aspiration if rightly done, quietly, earnestly and sincerely, brings the divine help from above to effect this object.

As to the hours devoted to work, needs, family, etc., they can be made an aid only on the following conditions.

(1) To regard all these things as not belonging to yourself, your inner being, but as things external, work to be done so long as it remains on your shoulders to the best of your ability without desire or attachment of any kind.

(2) To do all work as a sacrifice without any egoistic motive.

(3) To establish and deepen the inner calm and quiet. If that is done, all these things will be felt more and more as external and the falling off of desire and attachment will become possible.

For getting rid of passion the same condition. If you separate yourself from these movements and establish calm and peace inside, the passions may still rise on the surface, but they will be felt to be external movements and you can deal with them or call down the divine aid to get rid of them. So long as the mind does not fall quiet, it is not possible to deal finally with the vital being from which these forces rise.

*

The way to realise is through a quiet mind and a vital free from desires. To reject the desires and demands of the vital and to quiet the excessive activity of the mind, so that a true consciousness and spiritual perception and knowledge may take the place of the mind's activity, are the requisite conditions of the Yoga.

The further method is,— (1) To concentrate in the heart and aspire and (2) to call to the divine Mother to enter there and purify the mind and vital and unveil the psychic being so that her constant guidance and presence in it may be felt always and (3) to concentrate in the quiet mind and (in the head) open oneself first to the divine force and light which is always above the mind and call to it to descend into the body and the whole being— either of these or both, according to the capacity of the sadhaka.

Yoga must be done not for oneself or what one can get but for the sake of the Divine and to be united with the Divine.

If he can do any of these things (not minding how long it takes) in this spirit, then let him do Yoga; if he cannot, then there is no use in doing it.

Chapter Three

Purity

Purification of the Nature

A certain amount of purification is necessary before there can be any realisation of the Divine and that is what has been going on in you. It is after all not a very long time since the real purification began and it is never an easy work. So the impatience may be natural, but it is not exactly reasonable.

*

Purification — rejecting from one's nature all that is egoistic or of the nature of rajasic desire.

Aspiration for peace and calm and a perfect equality.

Purification and a basis of calm are the first necessary steps in the spiritual life.

*

The aspiration must be for entire purification, especially (1) purification from sex, so that no sex imaginations may enter and the sex impulse may cease, (2) purification from desires and demands, (3) purification from depression which is the result of disappointed desires. It is the most important for you. Particularly what you must aspire for is peace in all the being, complete equanimity, samata. The feeling that peace is not enough must go. Peace and purity and equanimity once established, all the rest must be the Mother's free gift, not a result of the demand from the being.

You can mix normally with people keeping as much as possible an inner quietude. In future when the purification is done and a continuous experience possible we can reconsider the matter.

*

Very often the earlier stage of the sadhana is successful, because there is an opening of the mind to first workings of the Force — afterwards the lower vital consciousness and the physical rise up and if these are not ready or inclined for the sadhana, it ceases. The sadhaka has first to purify and open them and call in the Force to work there and make all ready until he can bring the true consciousness and experience there. Yoga implies a long and difficult work and one must be ready to accept the necessity of years of preparation and purification and increasing consecration before the greater results can come.

*

By meditation alone and trying to concentrate you will never succeed. There must be an aspiration from the heart and a giving up of all yourself to Krishna.

In your nature there are many obstacles, chiefly a great activity of the outward-going mind and a thick crust of the impure lower Prakriti that covers the heart and the vital being. Quieting of the mind and purification of the nature are what you must have before you can fulfil your aim. Aspire for these two things first; ask for them constantly from above. You will not be able to achieve them by your own unaided effort.

*

As for the way out of the impasse, I know only of the quieting of the mind which makes meditation effective, purification of the heart which brings the divine touch and in time the divine presence, humility before the Divine which liberates from egoism and the pride of the mind and of the vital, the pride that imposes its own reasonings on the ways of the spirit and the pride that refuses or is unable to surrender, sustained persistence in the call within and reliance on the Grace above. Meditation, japa, prayer or aspiration from the heart can all succeed, if they are attended by these or even some of these things. But I do not know that you can be promised what you always make the condition of any inner endeavour, an immediate or almost immediate realisation or beginning of concrete realisation. I fully

believe on the other hand that one who has the call in him cannot fail to arrive, if he follows patiently the way towards the Divine.

*

I can only hope that the depression and the suggestions it brings will pass away soon. You were making very good progress before it touched you. There is no impossibility in the purification of the heart which was the thing you were trying for and when the heart is purified, other things which seemed impossible before become easy — even the inner surrender which now seems to you impracticable. I at any rate will go on trusting in your spiritual destiny until the performance of the “miracle”.

The Meaning of Purity

Purity is to accept no other influence but only the influence of the Divine.

*

It [*purity*] is more a condition than a substance. Peace helps to purity — since in peace disturbing influences cease and the essence of purity is to respond only to the Divine Influence and not to have an affinity with other movements.

*

Purity means freedom from soil or mixture. The divine Purity is that in which there is no mixture of the turbid ignorant movements of the lower nature. Ordinarily purity is used to mean (in the common language) freedom from vital passion and impulse.

*

The Divine Purity is a more wide and all-embracing experience than the psychic.

*

Purity or impurity depends upon the consciousness; in the divine

consciousness everything is pure, in the ignorance everything is subject to impurity, not the body only or part of the body, but mind and vital and all. Only the self and the psychic being remain always pure.

*

A pure mind means a mind quiet and free from thoughts of a useless or disturbing character.

*

X pretends to be pure and surrendered to the will of God. How can he be pure when his whole trouble has come from the indulgence of impure desires? He pretends to act according to God's will, but his actions are moved by three things, desire, vanity and self-will. The devil makes suggestions supported by one or another of these three motives and persuades him that it is the will of God.

Ignorance is not a state of innocence or purity; that is an old blunder. Only a consciousness full of light can be pure. For instance, when you are conscious, your mind is clear and you have the right ideas about things and people; your mind is pure of ignorance. But when the mind is clouded by some impurity,—say, anger, jealousy or pride or some unreasonable desire,—you at once become ignorant and mistake and misunderstand everything.

Again, when your heart is turned to the Mother and satisfied with her love, when you are full of peace, contentment and happiness, then there is no room for wrong feelings and desires; your heart is pure.

This is what the Mother meant by purity; to be free from false ideas, wrong feelings, desires, demands etc. is to be pure.

*

Purity in the consciousness and purity in the conduct is what is usually meant by these terms [*inner and outer purity*].

Chapter Four

Sincerity

The Meaning of Sincerity

There is one indispensable condition, sincerity.

*

What is meant by “sincere”? Sincerity means to accept the Divine influence only and not that of lower forces.

*

Sincerity means to be turned wholly to the Divine and accept only the Divine impulses—it means also the true and constant will or effort to be like this.

*

Sincere is simply an adjective meaning that the will must be a true will. If you simply think “I aspire” and do things inconsistent with the aspiration, or follow your desires or open yourself to contrary influences, then it is not a sincere will.

*

Sincerity means more than mere honesty. It means that you mean what you say, feel what you profess, are earnest in your will. As the sadhak aspires to be an instrument of the Divine and one with the Divine, sincerity in him means that he is really in earnest in his aspiration and refuses all other will or impulse except the Divine's.

*

[*Sincerity*:] To allow no part of the being to contradict the highest aspiration towards the Divine.

*

All sincere aspiration has its effect; if you are sincere, you will grow into the divine life.

To be entirely sincere means to desire the divine Truth only, to surrender yourself more and more to the Divine Mother, to reject all personal demand and desire other than this one aspiration, to offer every action in life to the Divine and do it as the work given without bringing in the ego. This is the basis of the divine life.

One cannot become altogether this at once, but if one aspires at all times to it and calls in always the aid of the Divine Shakti with a true heart and straightforward will, one grows more and more into this consciousness.

Sincerity in Sadhana

Men are always mixed and there are qualities and defects mingled together almost inextricably in their nature. What a man wants to be or wants others to see in him or what he is sometimes on one side of his nature or in some relations can be very different from what he is in the actual fact or in other relations or on another side of his nature. To be absolutely sincere, straightforward, open, is not an easy achievement for human nature. It is only by spiritual endeavour that one can realise it — and to do it needs a severity of introspective self-vision, an unsparing scrutiny of self-observation of which many sadhaks or Yogins even are not capable and it is only by an illuminating Grace that reveals the sadhak to himself and transforms what is deficient in him that it can be done. And even then only if he himself consents and lends himself wholly to the divine working.

*

It is quite natural that there should be much mixture in the attitude till all is clear — the ordinary nature clings to the action and the transformation in its completeness cannot be sudden. What is necessary is that the basic consciousness should become firmly established in the Divine, then the mixture in the rest can

be seen and steadily weeded out. To have this outwardly as well as inwardly is a great progress.

*

It is true that a central sincerity is not enough except as a beginning and a base; the sincerity must spread as you describe through the whole nature. But still unless there is a double nature (without a central harmonising consciousness) the basis is usually sufficient for that to happen.

*

I do not think there is any reason for anxiety about your sadhana. We feel always a great depth and sincerity of aspiration in you which keeps you in constant and close relation with us, and where there is this depth and sincerity and this closeness the progressive opening of the being is assured; for the openness already exists.

*

You speak of insincerity in your nature. If insincerity means the unwillingness of some part of the being to live according to the highest light one has or to equate the outer with the inner man, then this part is always insincere in all. The only way is to lay stress on the inner being and develop in it the psychic and spiritual consciousness till that comes down in it which pushes out the darkness from the outer man also.

*

It is not sincerity to express only what the adverse forces suggest or what you feel when you are in a bad condition full of obscurity and a wrong outlook. When you are in the Truth, you feel quite the opposite and it is not insincerity to cling to that and recall it. It is only by bringing it back that the Truth can grow in you.

The trouble in your chest comes only from a vital resistance and it continues because you identify yourself with that resistance. It is only by quietude and opening to the Mother that these things can disappear. There is no other way to progress.

If you have not got quietude, you can always aspire first and a sincere aspiration will bring it back.

*

All need vital sincerity, it is the most difficult to have and the most needful.

*

To perceive one's own weaknesses is one result of sincerity.

*

One cannot be perfect in discrimination at once or in rejection either. The one indispensable thing is to go on trying sincerely till there comes the full success. So long as there is complete sincerity, the Divine Grace will be there and assist at every moment on the way.

*

If he [*the sadhak*] is sincere, there is bound to be devotion. Sincerity in Yoga means to respond to the Divine alone and if he has no devotion he cannot do it.

*

It is difficult for the ordinary Christian to be of a piece, because the teachings of Christ are on quite another plane from the consciousness of the intellectual and vital man trained by the education and society of Europe—the latter, even as a minister or priest, has never been called upon to practise what he preached in entire earnest. But it is difficult for the human nature anywhere to think, feel and act from one centre of true faith, belief or vision. The average Hindu considers the spiritual life the highest, reveres the Sannyasi, is moved by the Bhakta; but if one of the family circle leaves the world for spiritual life, what tears, arguments, remonstrances, lamentations! It is almost worse than if he had died a natural death. It is not conscious mental insincerity—they will argue like Pandits and go to Shastra to prove you in the wrong; it is unconsciousness, a vital insincerity which

they are not aware of and which uses the reasoning mind as an accomplice.

That is why we insist so much on sincerity in the Yoga—and that means to have all the being consciously turned towards the one Truth, the one Divine. But that for human nature is one of the most difficult of tasks, much more difficult than a rigid asceticism or a fervent piety. Religion itself does not give this complete harmonised sincerity—it is only the psychic being and the one-souled spiritual aspiration that can give it.

Earnestness and Straightforwardness

In the major part of your being you are very much in earnest. But of course there are always parts or rather parts of parts that are not equally ready to change. But that is not hypocrisy. It is so with everybody, otherwise there would be no difficulty in the transformation.

*

Straightforwardness means simply to be honest with oneself and with the Divine and not to be crooked in one's ways.

Self-justification is unwillingness to recognise a mistake and an attempt to prove oneself right even against the censure of the Mother.

Chapter Five

Aspiration

The Value of Aspiration

What you say is quite true. A simple, straight and sincere call and aspiration from the heart is the one important thing and more essential and effective than capacities. Also to get the consciousness to turn inwards, not remain outward-going is of great importance — to arrive at the inner call, the inner experience, the inner Presence.

The help you ask will be with you. Let the aspiration grow and open the inner consciousness altogether.

*

One has only to aspire sincerely and keep oneself as open as possible to the Mother's Force. Then whatever difficulties come, they will be overcome — it may take some time, but the result is sure.

*

One has to suppose that [*the Mother's*] force everywhere around and call it in — if one feels it, so much the better, but even otherwise if there is faith and power in the call, it can flow in.

*

One must rely on the Divine and yet do some enabling sadhana — the Divine gives the fruits, not by the measure of the sadhana but by the measure of the soul and its aspiration. Also worrying does no good — “I shall be this, I shall be that, what shall I be?” Say “I am ready to be not what I want, but what the Divine wants me to be” — all the rest should go on that base.

*

I mean by the measure of the soul's sincerity a yearning after the

Divine and its aspiration towards the higher life.

*

But why allow *anything* to come in the way between you and the Divine, any idea, any incident; when you are in full aspiration and joy, let nothing count, nothing be of any importance except the Divine and your aspiration. If one wants the Divine quickly, absolutely, entirely, that must be the spirit of approach, absolute, all-engrossing, making that the one point with which nothing else must interfere.

What value have mental ideas about the Divine, ideas about what he should be, how he should act, how he should not act—they can only come in the way. Only the Divine Himself matters. When your consciousness embraces the Divine, then you can know what the Divine is, not before. Krishna is Krishna, one does not care what he did or did not do; only to see Him, meet Him, feel the Light, the Presence, the Love, the Ananda is what matters. So it is always for the spiritual aspiration—it is the law of the spiritual life.

Don't waste time any longer in these ideas of the mind or in any starts of the vital—blow these clouds away. Keep fixed on the one thing indispensable.

The Meaning of Aspiration

There is no deep meaning [*of aspiration*]—the meaning is plain. It is the call of the being for higher things—for the Divine, for all that belongs to the higher or Divine Consciousness.

*

It [*aspiration*] is the call in the being for the Divine or for the higher things that belong to the Divine Consciousness. (To “aspire” always means to call for higher things.)

*

Aspiration is a turning upward of the inner being with a call, yearning, prayer for the Divine, for the Truth, for the

Consciousness, Peace, Ananda, Knowledge, descent of Divine Force or whatever else is the aim of one's endeavour.

*

Aspiration is to call the forces. When the forces have answered, there is a natural state of quiet receptivity concentrated but spontaneous.

*

Aspiration is a call to the Divine,—will is the pressure of a conscious force on Nature.

*

Aspiration is a call in the being, it is not opening.

The Object of Aspiration

The aspiration should be for the full descent of the Truth and the victory over falsehood in the world.

*

Aspire for the constant contact and the light. It is in the Light that the being will get organised in the Truth.

*

Aspire for your will to be one with the Divine will, concentrate in the heart and be plastic to whatever experience comes, neither forcing nor resisting any spiritual experience.

*

The aspiration for the supramental would be premature. What you have to aspire for is for the psychic change and the spiritual change of the whole being — which is the necessary condition before one can even think of the supramental.

*

To want to be a superman is a mistake, it only swells the ego.

One can aspire for the Divine to bring about the supramental transformation, but that also should not be done till the being has become psychic and spiritualised by the descent of the Mother's peace, force, light and purity.

No Need of Words in Aspiration

There is no need of words in aspiration. It can be expressed or unexpressed in words.

*

The aspiration need not be in the form of thought — it can be a feeling within that remains even when the mind is attending to the work.

The Necessity of Aspiration

It depends on the stage which one has reached. Personal aspiration is necessary until there is the condition in which all comes automatically and only a certain knowledge and assent is necessary for the development.

*

Even if there is no rising up, the aspiration connects you with the higher consciousness and helps or prepares to bring down something from it.

*

It [*the higher consciousness*] may not come exactly according to the aspiration, but the aspiration is not ineffective. It keeps the consciousness open, prevents an inert state of acquiescence in all that comes and exercises a sort of pull on the sources of the higher consciousness.

*

Aspiration during the period of experience is not so necessary.

It is in the intervals that it should be there.

*

Why do you write “If I get” [*aspiration*] — one can always aspire. It is your mistake to think that everything must come of itself and nothing is within your own power to do. This kind of belief in the necessity of passivity to all movements should be thrown aside. Will, aspiration, surrender are things that you must do yourself — although even in doing them you must call in the Divine Power to help your will, aspiration and surrender and make them effective.

*

Why “getting” aspiration? Aspiration is an act of the will and one can always aspire.

*

Activity in aspiration, tapasya, rejection of the wrong forces, passivity to the true working, the working of the Mother’s force are the right things in sadhana.

*

One has to aspire to the Divine and surrender and leave it to the Divine to do what is true and right with the Adhar once it is perfected.

Intensity of Aspiration and Vital Impatience

Intense aspiration is always good, but let there also be calm and peace and joy in the mind and heart, and a confidence that all will be done in its due time.

*

There can be an intense but quiet aspiration which does not disturb the harmony of the inner being.

*

Yes — that is the way. The intensity of the aspiration brings

the intensity of the experience and by repeated intensity of the experience the change.

*

The impatience and restless disquietude come from the vital which brings that even into the aspiration. The aspiration must be intense, calm and strong (that is the nature of the true vital also) and not restless and impatient,—then alone it can be stable.

*

It is the psychic that gives the true aspiration—if the vital is purified and subjected to the psychic, then the vital gives intensity—but if it is unpurified it brings in a rajasic intensity with impatience and reactions of depression and disappointment. As for the calm and equality needed, it must come down from above through the mind.

*

That [*fiery aspiration*] is all right, that is the psychic aspiration, the psychic fire. Where the vital comes in is in the impatience for result and dissatisfaction if the result is not immediate. That must cease.

Aspiration and Desire

One should be satisfied with what one gets and still aspire quietly, without struggle, for more—till all has come. No desire, no struggle—aspiration, faith, openness—and the grace.

*

There is no doubt the mixture of desire in what you do, even in your endeavour of sadhana, that is the difficulty. The desire brings a movement of impatient effort and a reaction of disappointment and revolt when difficulty is felt and the immediate result is not there and other confusing and disturbing feelings. Aspiration should be not a form of desire, but the feeling of an

inner soul's need, and a quiet settled will to turn towards the Divine and seek the Divine. It is certainly not easy to get rid of this mixture of desire entirely — not easy for anyone; but when one has the will to do it, this also can be effected by the help of the sustaining Force.

*

If there are good desires, bad desires will come also. There is a place for will and aspiration, not for desire.

If there is desire there will be attachment, demand, craving, loss of equanimity, sorrow at not getting, all that is unyogic.

Aspiration and Pulling

Pulling comes usually from a desire to get things for oneself — in aspiration there is a self-giving for the higher consciousness to descend and take possession — the more intense the call, the greater the self-giving.

*

It is certainly a mistake to bring down the light by force — to pull it down. The supramental cannot be taken by storm. When the time is ready it will open of itself — but first there is a great deal to be done and that must be done patiently and without haste.

Lack of Aspiration

Naturally the more one-pointed the aspiration the swifter the progress. The difficulty comes when either the vital with its desires or the physical with its past habitual movements comes in — as they do with almost everyone. It is then that the dryness and difficulty of spontaneous aspiration come. This dryness is a well-known obstacle in all sadhana. But one has to persist and not be discouraged. If one keeps the will fixed even in these barren periods, they pass and after their passage a greater force of aspiration and experience becomes possible.

*

You are finding it still difficult to bear the interval periods when all is quiet and nothing being done on the surface. But such interval periods come to all and cannot be avoided. You must not cherish the suggestion that it is because of your want of aspiration or any other unfitness that it is so and, if you had the constant ardent aspiration, then there would be no such periods and there would be an uninterrupted stream of experiences. It is not so. Even if the aspiration were there, the interval periods would come. If even in them one can aspire, so much the better—but the main thing is to meet them with quietude and not become restless, depressed or despondent. A constant fire can be there only when a certain stage has been reached, that is when one is always inside consciously living in the psychic being, but for that all this preparation of the mind, vital, physical is necessary. For this fire belongs to the psychic and one cannot command it always merely by the mind's effort. The psychic has to be fully liberated and that is what the Force is working to make fully possible.

*

No doubt the true and strong aspiration is needed, but it is not a fact that the true thing is not there in you. If it had not been, the Force could not have worked in you. But this true thing was seated in the psychic and in the heart and whenever these were active in the meditation it showed itself. But for the sake of completeness the working had to come down into the physical consciousness and establish the quietude and the openness there. The physical consciousness is always in everybody in its own nature a little inert and in it a constant strong aspiration is not natural, it has to be created. But first there must be the opening, a purification, a fixed quietude, otherwise the physical vital will turn the strong aspiration into over-eagerness and impatience or rather it will try to give it that turn. Do not therefore be troubled if the state of the nature seems to you to be too neutral and quiet, not enough aspiration and movement in it. This is a passage necessary for the progress and the rest will come.

Aspiration and Conversion

Those who come here have an aspiration and a possibility—something in their psychic being pushes and if they follow it, they will arrive; but that is not conversion. Conversion is a definite turning of the being away from lower things towards the Divine.

*

Aspiration can lead hereafter to conversion; but aspiration is not conversion.

*

Conversion is a spontaneous movement of the consciousness, a turning of it away from external things towards the Divine. It comes usually as the result of a touch from within and above. Self-consecration may help to open one to the touch or the touch may come of itself. But conversion may also come as the culmination of a long process of aspiration and tapasya. There is no fixed rule in these things.

If the psychic being comes to the front, then conversion becomes easy or may come instantaneously or the conversion may bring the psychic being to the front. Here again there is no rule.

Chapter Six

Rejection

Rejection of the Lower Impulses

It is no part of the sadhana to accept the uglinesses of the lower nature on the ground that they exist—if that is what is meant by realism. Our object is not to accept or enjoy these things but to get rid of them and create a life of spiritual beauty and perfection. So long as we accept these things, that cannot be done. To observe that these things are there and reject them, refusing to allow them to touch you, is one thing; to accept and acquiesce in them is quite another.

*

Who is able to reject the lower nature fully? All one can do is to aspire and reject the lower impulses and call in the Divine to do the rest.

*

There are no right positive vibrations of devious impulses—these are wrong vibrations of the mind or vital. The right vibrations I speak of are those that come from the psychic or from the spiritual above or take place in the mind or vital under the influence of the psychic or spiritual. If one aspires sincerely and rejects what has to be rejected, as far as one can, then the psychic and spiritual influences will more and more work, bring more and more true discrimination, support, stimulate and create the right vibrations, detect, discourage and eliminate the wrong ones. That is the method the Mother and I advise to all.

*

Rejection is a principle element in this sadhana. But what I say is that one can reject best by bringing in the positive psychic

and spiritual forces through the pursuit of positive things like brahmacharya and the rest.

*

I do not know what you mean by dissolution [of *desires*]. The principle of the Yoga is rejection — throwing out of the being. It is true that rejected from the mind it often goes to the vital, rejected by the vital, to the physical, rejected by the physical to the subconscious. Rejected from the subconscious also, it can still linger in the environmental consciousness — but there it has no longer any possession of the being and can be thrown away altogether.

*

That is a known fact that everything comes from outside, from universal Nature. But the individual is not bound to accept everything that comes; he can accept and he can reject. The rejection may not succeed at once, if there is a strong habit of past acceptance; but if it is steadily persisted in, the rejection will succeed in the end.

What you should do, is always to reject the lower experiences and concentrate on a fixed and quiet aspiration towards the one thing needed, the Light, the Calm, the Peace, the Devotion that you felt for two or three days. It is because you get interested in the lower vital experiences and in observing and thinking about them that they take hold, and then comes the absence of the Contact and the confusion. You have surely had enough of this kind of experience already and should make up your mind to steadily reject it when it comes.

*

The effort should be to reject the restlessness and its suggestions altogether. These things come to everybody in the early stages of the sadhana and are sometimes very persistent, even later on they continue — but the sadhak rejects them and regards them as no part of his true consciousness or worthy to determine his action and life, but as untrue suggestions which he has to overcome. If

that is always done, they begin after a time to lose their force of invasion and become superficial things; finally they disappear.

*

The peace and the equality are there above you, you have to call them down into the mind and the vital and the body. And whenever something disturbs you have to reject the thing that disturbs and the disturbance.

*

What do you mean by active means [*to overcome inertia*]? The power to refuse, to reject is always there in the being and to go on rejecting till the rejection is effective. Nothing can obstruct a quiet aspiration except one's own acquiescence in the inertia.

*

The practice of rejection prevails in the end; but with personal effort only, it may take a long time. If you can feel the Divine Power working in you, then it should become easier.

There should be nothing inert or tamasic in the self-giving to the guidance and it should not be made by any part of the vital into a plea for not rejecting the suggestions of lower impulse and desire.

Chapter Seven

Surrender

The Meaning of Surrender

The Divine gives itself to those who give themselves without reserve and in all their parts to the Divine. For them the calm, the light, the power, the bliss, the freedom, the wideness, the heights of knowledge, the seas of Ananda.

*

Surrender is giving oneself to the Divine — to give everything one is or has to the Divine and regard nothing as one's own, to obey only the Divine will and no other, to live for the Divine and not for the ego.

*

Self-surrender is to give up yourself and all that is yours, mind and everything else to the Divine, so that the Divine Force may take everything and change it.

*

Surrender means to consecrate everything in oneself to the Divine, to offer all one is and has, not to insist on one's ideas, desires, habits etc., but to allow the divine Truth to replace them by its knowledge, will and action everywhere.

*

Surrender means to be entirely in the Mother's hands and not to resist in any way by egoism or otherwise her Light, Knowledge, Will, the working of her Force etc.

*

The essence of surrender is not to ask the Mother before doing anything — but to accept whole-heartedly the influence and the

guidance, when the joy and peace come down to accept them without question or cavil and let them grow, when the Force is felt at work to let it work without opposition, when the Knowledge is given to receive and follow it, when the Will is revealed to make oneself its instrument.

*

To believe that one is being constantly guided by the Divine in the heart is not necessarily surrender. It is necessary to be detached, to see what are the divine forces and undivine and to reject the undivine forces. It is only by this discrimination that one can make a true surrender to the Divine in the heart.

*

It [*true surrender*] begins when there is the true self-offering.

A Free Surrender

The Divine can lead, he does not drive. There is an internal freedom permitted to every mental being called man to assent or not to assent to the Divine leading — how else can any real spiritual evolution be done?

*

All the play in this world is based on a certain relative free will in the individual being. Even in the sadhana it remains and his consent is necessary at each step — even though it is by surrender to the Divine that he escapes from ignorance and separateness and ego, it must be at every step a free surrender.

*

Each person has his own freedom of choice up to a certain point — unless he makes the full surrender — and as he uses the freedom, has to take the spiritual or other consequences. The help can only be offered, not imposed. Silence, absence of frank confession, means a desire in the vital to go its own way. When there is no longer concealment, when there is the physical

self-opening to the Divine, then the Divine can intervene.

The Will to Surrender

All can be done by the Divine, the heart and nature purified, the inner consciousness awakened, the veils removed, if one gives oneself to the Divine with trust and confidence—and even if one cannot do so fully at once, yet the more one does so, the more the inner help and guidance comes and the contact and the experience of the Divine grows within. If the questioning mind becomes less active and humility and the will to surrender grow in you, this ought to be perfectly possible. No other strength and tapasya are then needed, but this alone.

*

Surrender cannot be made at once—it is not so easy; for there is much in the being that resists. But one must have the will to surrender. It is the same with becoming an instrument. If one has the will and calls on the Mother and opens oneself as much as possible to her, then gradually these things develop in the nature.

*

If the difficulties that arise are in the nature itself, it is inevitable that they should rise and manifest themselves. Surrender is not easy, it is resisted by a large part of the nature. If the mind forms the will to surrender, all these inner obstacles are bound to show themselves; the sadhak has then to observe them and detach himself from them, reject them from his nature and overcome. This may take a very long time but it has to be done.

Outer obstacles cannot prevent the inner surrender unless they are supported by a resistance in the nature itself.

The Inner Surrender

It was never my intention to suggest that there was only a faint hope of your sadhana depending on the *if* of surrender. I have always said the contrary, that since your soul wants the Divine

truly, you are sure to reach him; only if you give up — and that is why I strongly object to these despondencies apart from the suffering they inflict, because they try to drive you to that — can it be frustrated or rather postponed to a far future.

What I wrote was in answer to your statement about your former idea of the Yoga that if one wanted the Divine, the Divine himself would take up the purifying of the heart and develop the sadhana and give the necessary experiences. I meant to say that it can and does happen in that way if one has trust and confidence in the Divine and the will to surrender. For such a taking up involves one's putting oneself in the hands of the Divine rather than trusting to one's own efforts alone and it implies one's putting one's trust and confidence in the Divine and a progressive self-giving. It is in fact the principle of sadhana that I myself followed and it is the central part of the Yoga as I envisage it. It is, I suppose, what Ramakrishna meant by the method of the baby cat in his image. But all cannot follow that at once; it takes time for them to arrive at it — it grows most when the mind and vital fall quiet.

What I meant by surrender was this inner surrender of the mind and vital. There is of course the outer surrender also, the giving up of all that is found to conflict with the spirit or need of the sadhana, the offering, the obedience to the guidance of the Divine, whether directly, if one has reached that stage, or through the psychic or to the guidance of the Guru. I may say that *prāyopaveśana* does not seem to me to have anything to do with surrender; it is a form of tapasya of a very austere and in my opinion very excessive kind, often dangerous. But what I was speaking of in my letter was the inner surrender.

The core of this inner surrender is trust and confidence in the Divine. One takes the attitude, "I want the Divine and nothing else." I do not know why you should think that you can be asked to give up that — if there is not that, then the Yoga cannot be done. "I want to give myself entirely to him and since my soul wants that, it cannot be but that I shall meet him and realise him. I ask nothing but that and his action in me to bring me to him, his action secret or open, veiled or manifest. I do not insist

on my own time and way; let him do all in his own time and way, I shall believe in him, accept his will, aspire steadily for his light and presence and joy, go through all difficulties and delays relying on him and never giving up. Let my mind be quiet and turn to him and let him open it to his light; let my vital be quiet and turn to him alone and let him open it to his calm and joy. All for him and myself for him. Whatever happens, I will keep to this aspiration and self-giving and go on in perfect reliance that it will be done." That is the attitude into which one must grow; for, certainly, it cannot be made perfect at once; mental and vital movements come across; but if one keeps the will to it, it will grow in the being. The rest is a matter of obedience to the guidance when it makes itself manifest — not allowing one's mental or vital movements to interfere.

It was not my intention to say that this way is the only way and sadhana cannot be done otherwise — there are so many others by which one can approach the Divine. But this is the only one I know by which the taking up of the sadhana by the Divine becomes a sensible fact before the preparation of the nature is done. In other methods the Divine action and help may be felt from time to time, but it remains mostly behind the veil till all is ready. In some sadhanas the Divine action is not recognised; all must be done by tapasya. In most there is a mixing of the two, the tapasya finally calling the direct help and intervention. The idea and experience of the Divine doing all belongs to the Yogas based on surrender.

But whatever way is followed, the one thing to be done is to be faithful and go to the end. You have so often taken that decision — stand by it, do not let the storms of the vital quench the aspiration of your soul.

*

It depends on the sadhak [*whether the surrender should begin from within*]. Some may find it necessary to surrender the external activities first so as to bring the inner surrender.

The Central Surrender

I have said that if one has the principle of surrender and union in the mind and heart there is no difficulty in extending it to the obscurer parts of the physical and the subconscious. As you have this central surrender and union, you can easily complete it everywhere. A quiet aspiration for complete consciousness is all that is needed. Then the material and subconscious will become penetrated by the light like the rest and there will come in a quietude, wideness, harmony free from all reactions that will be the basis of the final change.

*

When the psychic being and the heart and the thinking mind have surrendered, the rest is a matter of time and process—and there is no reason for disturbance. The central and effective surrender has been made.

Complete or Absolute Surrender

If you are surrendered only in the higher consciousness, with no peace or purity in the lower, certainly that is not enough and you have to aspire for the peace and purity everywhere.

*

It [*surrender*] cannot be absolutely complete in the beginning, but it can be true—if the central will is sincere and there is the faith and the Bhakti. There may be contrary movements, but these will be unable to stand for long and the imperfection of the surrender in the lower part will not seriously interfere with the power and pervasiveness of the inner attitude.

*

A complete surrender is not possible in so short a time,—for a complete surrender means to cut the knot of the ego in each part of the being and offer it, free and whole, to the Divine. The mind, the vital, the physical consciousness (and even each

part of these in all its movements) have one after the other to surrender separately, to give up their own way and to accept the way of the Divine. But what one can do is to make from the beginning a central resolve and self-dedication and to implement it in whatever way one finds open, at each step, taking advantage of each occasion that offers itself to make the self-giving complete. A surrender in one direction makes others easier, more inevitable; but it does not of itself cut or loosen the other knots, and especially those which are very intimately bound up with the present personality and its most cherished formations may often present great difficulties, even after the central will has been fixed and the first seals put on its resolve in practice.

*

You can get the full surrender only by degrees. Meanwhile you have to go on the straight path not regarding the suggestions that are put into you through the vital or physical parts.

*

It is on that consciousness of complete surrender that the psychic foundation of sadhana can be made. If once it fixes itself, then, whatever difficulties remain to be overcome, the course of the sadhana becomes perfectly easy, sunlit, natural like the opening of a flower. The feeling you have is an indication of what can and must develop in you.

*

It depends on what is meant by absolute surrender — the experience of it in some part of the being or the fact of it in all parts of the being. The former may easily come at any time; it is the latter that takes time to complete.

*

The absolute surrender must be not only an experience in meditation, but a fact governing all the life, all the thoughts, feelings, actions. Till then the use of one's own will and effort is necessary, but an effort in which also there is the spirit of surrender, calling

in the Force to support the will and effort and undisturbed by success or failure. When the Force takes up the sadhana, then indeed effort may cease, but still there will be the necessity of the constant assent of the being and a vigilance so that one may not admit a false Force at any point.

*

It is never too early to make the complete surrender. Some things may need to wait, but not that.

The Surrender of the Vital

The surrender of the vital is always difficult, because of the unwillingness of the forces of the universal vital Ignorance. But that does not mean a fundamental incapacity.

*

The ordinary vital is never willing to surrender. The true inmost vital is different—surrender to the Divine is as necessary to it as to the psychic.

*

If there is any identification with the vital demands or outcries, that necessarily diminishes the surrender for the time.

*

What is this surrender to which there is no response? Surrender and demands don't go together. Evidently the vital is not afraid of thinking illogical and self-contradictory nonsense. So long as the vital keeps up its demand, these things will come.

*

It was from your description of the reaction that I said there was a vital demand. In the pure psychic or spiritual self-giving there are no reactions of this kind, no despondency or despair, no saying, "What have I gained by seeking the Divine?", no anger, revolt, abhiman, wish to go away — such as you describe

here—but an absolute confidence and a persistence in clinging to the Divine under all conditions. That is what I wanted you to have; it is the only basis in which one is free from troubles and reactions and goes steadily forward.

*

Not to impose one's mind and vital will on the Divine but to receive the Divine's will and follow it, is the true attitude of sadhana. Not to say, "This is my right, want, claim, need, requirement, why do I not get it?" but to give oneself, to surrender and to receive with joy whatever the Divine gives, not grieving or revolting, is the better way. Then what you receive will be the right thing for you.

*

The Divine is not bound to do that [*supply all one's real needs*], He can give or not give; whether He gives or does not give makes no difference to the one who is surrendered to Him. Otherwise, there is an arrière-pensée in the surrender which is not then complete.

*

Most of the sadhaks have similar thoughts [*of hostility and ingratitude*]—or had them at one time or another. They rise from the vital ego which either does not want the Divine or wants It for its own purpose and not for the Divine's purpose. It gets furious when it is pressed to change or when its desires are not satisfied—that is at the root of all these things. That is why we insist on surrender in this Yoga—because it is only by the surrender (especially of the vital ego) that these things can go—to accept the Divine for the Divine's sake and for no other motive and in the Divine's way and not in one's own way or on one's own conditions.

*

Difficult? It is the first principle of our sadhana that surrender is the means of fulfilment and so long as ego or vital demand

and desire are cherished, complete surrender is impossible — the self-giving is incomplete. We have never concealed that. It may be difficult and it is; but it is the very principle of the sadhana. Because it is difficult it has to be done steadily and patiently till the work is complete.

*

Your mind and psychic being are concentrated on the spiritual aim and open to the Divine — that is why the Influence comes down into the head and as far as the heart. But the vital being and nature and the physical consciousness are under the influence of the lower nature. As long as the vital and physical being are not surrendered or do not on their own account call for the higher life, this struggle is likely to continue.

Surrender everything, reject all other desires or interests, call on the divine Shakti to open the vital nature and bring down calm, peace, light, Ananda into all the centres. Aspire, await with faith and patience the result. All depends on a complete sincerity and an integral consecration and aspiration.

The world will trouble you so long as any part of you belongs to the world. It is only if you belong entirely to the Divine that you can become free.

Surrender and the Psychic

For surrender it is necessary not to insist on the mind's opinions, ideas and preferences, the vital's desires and impulses, the physical's habitual actions, the life of the ego — all such insistence is contrary to surrender. All egoism and self-will has to be abandoned and one must seek to be governed only by the Divine Shakti. No complete surrender is possible without the psychic opening.

*

It is impossible to become like a child giving oneself entirely until the psychic is in control and stronger than the vital.

*

It is the psychic coming forward that brings the force of surrender.

*

The power of experience is not gone—but what is most important now is to develop the psychic condition of surrender, devotion, love and cheerful confidence in the Mother, an unshaken faith and a constant inner closeness, and also to bring down from above the peace, wideness, purity etc. of the higher Self which is that of the Mother's consciousness. It is these things that are the basis of the siddhi in this Yoga — other experiences are only a help, not the basis.

*

It is the psychic surrender in the physical that you have begun to experience.

All the parts are essentially offered, but the surrender has to be made complete by the growth of the psychic self-offering in all of them and in all their movements separately and together.

To be enjoyed by the Divine is to be entirely surrendered so that one feels the Divine Presence, Power, Light, Ananda possessing the whole being rather than oneself possessing these things for one's own satisfaction. It is a much greater ecstasy to be thus surrendered and possessed by the Divine than oneself to be the possessor. At the same time by this surrender there comes also a calm and happy mastery of self and nature.

*

No surrender to the psychic being is demanded, the surrender is to the Divine. One approaches the Divine through faith; concrete experience comes as a result of sadhana. One cannot demand a direct experience without doing anything to prepare the consciousness for it. If one feels the call, one follows it—if there is no call, then there is no need to seek the Divine. Faith is sufficient to start with—the idea that one must first understand and realise before one can seek is a mental error and if it were true would make all sadhana impossible—realisation can come

only as a result of sadhana, not as its preliminary.

*

There is no need of all this complication. If the psychic manifests, it will not ask you to surrender to it, but to surrender to the Mother.

*

The surrender must be to the Mother — not even to the Force, but to the Mother herself.

Surrender and Bhakti

Surrender and love-bhakti are not contrary things — they go together. It is true that at first surrender can be made through knowledge by the mind, but it implies a mental bhakti and, as soon as the surrender reaches the heart, the bhakti manifests as a feeling and with the feeling of bhakti love comes.

*

Self-surrender at first comes through love and bhakti, more than through Atmajnana. But it is true that with Atmajnana the complete surrender becomes more possible.

Surrender and the Brahmic Condition

There can be [*devotion and surrender on the higher spiritual planes*], but it is not inevitable as in the psychic. In the higher mind one may be too conscious of identity with the “Brahman” to have devotion or surrender.

*

The Brahmic condition brings a negative peace of shanti and mukti in the soul. Self-giving brings a positive freedom which can become also a dynamic force of action in the nature.

*

One can have the Brahmic condition without self-giving, because it is the impersonal Brahman to which one turns. Renunciation of desires and of all identification with Nature is its condition. One can have self-giving of the nature to the Divine as well as of the soul and reach by it the Brahmic condition which is not only negative but positive, a release of the nature itself and not only a release from the nature.

Surrender and Transformation

If there is no surrender, there can be no transformation of the whole being.

*

A surrender by any means is good, but obviously the impersonal is not enough—for surrender to that may be limited in result to the inner experience without any transformation of the outer nature.

Passive or Tamasic Surrender

Active surrender is when you associate your will with the Divine Will, reject what is not the Divine, assent to what is the Divine. Passive surrender is when everything is left entirely to the Divine—that few can really do, because in practice it turns out that you surrender to the lower nature under pretext of surrendering to the Divine.

*

I wanted to stress two things, that is why I have written so much about them.

(1) There must be no tamasic (inert, passive) surrender to the Mother—for that will bring as its reaction a passive inert helplessness before the lower or hostile forces or suggestions, an unresisting or helplessly resisting acquiescence or sufferance of these inroads. A passive condition can bring much peace, quietude, joy even, but it disperses the being instead of concentrating it in wideness and the will becomes atrophied. Surrender

must be luminous, active, a willed offering to the Mother and reception of her Force and support to its workings, at the same time a strong vigilant will to reject all that is not hers. Too many sadhaks cry before the attacks of their lower nature, "I am helpless, I cannot react, it comes and makes me do what it wants." This is a wrong passivity.

(2) One must not get into the habit of a state in which one is always in a struggle with suggestions and forces. People very easily fall into this and make it a habit—the vital part takes a sort of glowing satisfaction in crying out, "I am attacked, overborne, suffering, miserable! How tragic is my fate! Why do you not help, O Divine? There is no help, nor divine Grace? I am left to my misery and downfall etc. etc. etc." I do not want one more sadhak to fall into this condition—that is why I am calling Halt! before you get entangled in this kind of habit of constant struggle. It is what these forces want—to make you feel helpless, defeated, overborne. You must not allow it.

*

You are always expecting the Mother to do it [*remove vital dissatisfaction and revolt*]—and here again the laziness and tamas come in—it is the spirit of tamasic surrender. If the Mother puts you back into a good condition, your vital pulls you down again. How is that to stop so long as you say Yes to the vital and accept its discouragement and restlessness and anguish and the rest of it as your own? Detachment is absolutely necessary.

*

Talk of surrender or a mere idea or tepid wish for integral consecration will not do; there must be the push for a radical and total change.

It is not by taking a mere mental attitude that this can be done or even by any number of inner experiences which leave the outer man as he was. It is this outer man who has to open, to surrender and to change. His every least movement, habit, action has to be surrendered, seen, held up and exposed to the divine Light, offered to the divine Force for its old forms and

motives to be destroyed and the divine Truth and the action of the transforming consciousness of the Divine Mother to take their place.

*

It [*the idea that the sadhana is done by the Divine rather than by oneself*] is a truth but a truth that does not become effective for the consciousness until or in proportion as it is realised. The people who stagnate because of it are those who accept the idea but do not realise—so they have neither the force of tapasya nor that of the Divine Grace. On the other hand those who can realise it feel even behind their tapasya and in it the action of the Divine Force.

Surrender and Tapasya

Yoga is an endeavour, a tapasya—it can cease to be so only when one surrenders sincerely to a higher Action and keeps the surrender and makes it complete. It is not a fantasia, devoid of all reason and coherence or a mere miracle. It has its laws and conditions and I do not see how you can demand of the Divine to do everything by a violent miracle.

*

When the will and energy are concentrated and used to control the mind, vital and physical and change them or to bring down the higher consciousness or for any other Yogic purpose or high purpose, that is called Tapasya.

*

Tapasya has predominated in your sadhana, for you have a fervour and active energy which predisposes you to that. No way is entirely easy, and in that of surrender the difficulty is to make a true and complete surrender. Once it is made, it certainly makes things easier—not that things are all done in no time or that there are no difficulties, but there is an assurance, a support, an absence of tension which gives the consciousness rest as well

as strength and freedom from the worst forms of resistance.

*

Yes, of course you are right. The process of surrender is itself a Tapasya. Not only so, but in fact a double process of Tapasya and increasing surrender persists for a long time even when the surrender has fairly well begun. But a time comes when one feels the Presence and the Force constantly and more and more feels that that is doing everything — so that the worst difficulties cannot disturb this sense and personal effort is no longer necessary, hardly even possible. That is the sign of the full surrender of the nature into the hands of the Divine. There are some who take this position in faith even before there is this experience and if the Bhakti and the faith are strong it carries them through till the experience is there. But all cannot take this position from the beginning — and for some it would be dangerous since they might put themselves into the hand of a wrong Force thinking it to be the Divine. For most it is necessary to grow through Tapasya into surrender.

*

Yes, if there is the sense of the Divine Will behind all the Tapasya and receiving it and bestowing the fruit — it is at least a first form of surrender.

Surrender and Personal Effort

There are always two ways of doing the Yoga — one by the action of a vigilant mind and vital seeing, observing, thinking and deciding what is or is not to be done. Of course it acts with the Divine Force behind it, drawing or calling in that Force — for otherwise nothing much can be done. But still it is the personal effort that is prominent and assumes most of the burden.

The other way is that of the psychic being, the consciousness opening to the Divine, not only opening the psychic and bringing it forward, but opening the mind, the vital and the physical, receiving the Light, perceiving what is to be done, feeling and

seeing it done by the Divine Force itself and helping constantly by its own vigilant and conscious assent to and call for the Divine working.

Usually there cannot but be a mixture of these two ways until the consciousness is ready to be entirely open, entirely submitted to the Divine's origination of all its action. It is then that all responsibility disappears and there is no personal burden on the shoulders of the sadhak.

*

There are two possibilities, one of purification by personal effort, which takes a long time, another by a direct intervention of the Divine Grace which is usually rapid in its action. For the latter there must be a complete surrender and self-giving and for that again usually it is necessary to have a mind that can remain quite quiet and allow the Divine Force to act supporting it with its complete adhesion at every step, but otherwise remaining still and quiet. This last condition which resembles the baby cat attitude spoken of by Ramakrishna, is difficult to have. Those who are accustomed to a very active movement of their thought and will in all they do, find it difficult to still the activity and adopt the quietude of mental self-giving. This does not mean that they cannot do the Yoga or cannot arrive at self-giving — only the purification and the self-giving take a long time to accomplish and one must have the patience and steady perseverance and resolution to go through.

*

If there is not a complete surrender, then it is not possible to adopt the baby cat attitude, — it becomes mere tamasic passivity calling itself surrender. If a complete surrender is not possible in the beginning, it follows that personal effort is necessary.

*

In the early part of the sadhana — and by early I do not mean a short part — effort is indispensable. Surrender of course, but surrender is not a thing that is done in a day. The mind has its

ideas and it clings to them; the human vital resists surrender, for what it calls surrender in the early stages is a doubtful kind of self-giving with a demand in it; the physical consciousness is like a stone and what it calls surrender is often no more than inertia. It is only the psychic that knows how to surrender and the psychic is usually very much veiled in the beginning. When the psychic awakes, it can bring a sudden and true surrender of the whole being, for the difficulty of the rest is rapidly dealt with and disappears. But till then effort is indispensable. Or else it is necessary till the Force comes flooding down into the being from above and takes up the sadhana, does it for one more and more and leaves less and less to individual effort—but even then, if not effort, at least aspiration and vigilance are needed till the possession of mind, will, life and body by the Divine Power is complete. I have dealt with this subject, I think, in one of the chapters of *The Mother*.

On the other hand, there are some people who start with a genuine and dynamic will for a total surrender. It is those who are governed by the psychic or are governed by a clear and enlightened mental will which having once accepted surrender as the law of the sadhana will stand no nonsense about it and insists on the other parts of the being following its direction. Here there is still effort, but it is so ready and spontaneous and has so much the sense of a greater Force behind it that the sadhak hardly feels that he is making an effort at all. In the contrary case of a will in mind or vital to retain self-will, a reluctance to give up your independent movement, there must be struggle and endeavour until the wall between the instrument in front and the Divinity behind or above is broken. No rule can be laid down which applies without distinction to everybody—the variations in human nature are too great to be covered by a single trenchant rule.

*

It is not possible to get rid of the stress on personal effort at once—and not always desirable; for personal effort is better than tamasic inertia.

The personal effort has to be transformed progressively into

a movement of the Divine Force. If you feel conscious of the Divine Force, then call it in more and more to govern your effort, to take it up, to transform it into something not yours, but the Mother's. There will be a sort of transfer, a taking up of the forces at work in the personal adhar—a transfer not suddenly complete but progressive.

But the psychic poise is necessary: the discrimination must develop which sees accurately what is the Divine Force, what is the element of personal effort, and what is brought in as a mixture from the lower cosmic forces. And until the transfer is complete, which always takes time, there must always be as a personal contribution, a constant consent to the true Force, a constant rejection of any lower mixture—that is very important.

At present to give up personal effort is not what is wanted, but to call in more and more the Divine Power and govern and guide by it the personal endeavour.

*

It is not advisable in the early stages of the sadhana to leave everything to the Divine or expect everything from it without the need of one's own endeavour. That is only possible when the psychic being is in front and influencing the whole action (and even then vigilance and a constant assent are necessary) or else, later on in the ultimate stages of the Yoga when a direct or almost direct supramental force is taking up the consciousness; but this stage is very far away as yet. Under other conditions this attitude is likely to lead to stagnation and inertia. (See *The Mother*, Part I.)

It is only the more mechanical parts of the being that can truly say they are helpless: the physical (material) consciousness, especially, is inert in its nature and moved either by the mental and vital or by the higher forces. But one has always the power to put the mental will or vital push at the service of the Divine. One cannot be sure of the immediate result, for the obstruction of the lower Nature or the pressure of the adverse forces can often act successfully for a time, even for a long time, against

the necessary change. One has then to persist, to put always the will on the side of the Divine, rejecting what has to be rejected, opening oneself to the true Light and the true Force, calling it down quietly, steadfastly, without tiring, without depression or impatience, until one feels the Divine Force at work and the obstacles beginning to give way.

You say you are conscious of your ignorance and obscurity. If it is only a general consciousness, that is not enough. But if you are conscious of it in the details, in its actual working, then that is sufficient to start with; you have to reject steadfastly the wrong workings of which you are conscious and make your mind and vital a quiet and clear field for the action of the Divine Force.

*

Certainly one ought not to fret [*about whether one will achieve one's end*]—and certainly one ought to dedicate [*one's desire to achieve it*] to the Divine. But our experience is that merely leaving the Divine to do everything (to fulfil) does not carry one very far. There must be a cooperation, a consent, an aspiration, a will to change.

*

If there were no conditions at all [*in Yoga*], then there would be no need of sadhana; all would be done automatically by the Force or help without any need of effort by the sadhak. The help is always there and it has pulled you out of many difficulties and attacks. It is, I suppose, because of the feeling “I do not want to do anything” that you have not been able to receive the help, but that is a temporary inertia of the physical mind and will. I do not see the use of your going back for a few months to a life which could not now satisfy you. The only course is to shake off the inertia of the will and persevere.

*

So long as there is not the full presence and conscious working of the higher Force, some amount of personal effort is

indispensable. To do the sadhana for the sake of the Divine and not for one's own sake is of course the true attitude.

*

Faith, reliance upon God, surrender and self-giving to the Divine Power are necessary and indispensable. But reliance upon God must not be made an excuse for indolence, weakness and surrender to the impulses of the lower nature; it must go along with untiring aspiration and a persistent rejection of all that comes in the way of the Divine Truth. The surrender to the Divine must not be turned into an excuse, a cloak or an occasion for surrender to one's own desires and lower movements or to one's ego or to some Force of the ignorance and darkness that puts on a false appearance of the Divine.

*

It is always better to make an effort in the right direction; even if one fails the effort bears some result and is never lost.

*

For those who do not make any effort,—that absence of effort is itself a difficulty — they do not progress.

Chapter Eight

Faith

Faith, Belief, Confidence, Trust

Faith is a general word = *śraddhā*—the soul's belief in the Divine's existence, wisdom, power, love and grace—confidence and trust are aspects of faith and results of it.

Confidence is a feeling of sureness that the Divine will hear when sincerely called and help and that all the Divine does is for the best.

Trust is the mind's and heart's complete reliance on the Divine and its guidance and protection.

*

Faith—a dynamic entire belief and acceptance.

Belief—intellectual acceptance only.

Conviction—intellectual belief held on what seem to be good reasons.

Reliance—dependence on another for something, based on trust.

Trust—the feeling of sure expectation of another's help and reliance on his word, character etc.

Confidence—the sense of security that goes with trust.

*

Faith is a feeling in the whole being, belief is mental; confidence means trust in a person or in the Divine or a feeling of surety about the result of one's seeking or endeavour.

*

You have seized the right principle again, to be all for the Mother and to have full confidence that one has only to go on quietly in that confidence and all will come that needs to come and all be done that the Divine wills to be done. The workings of the

world are too subtle and strange and complex for the human mind to understand it—it is only when the knowledge comes from above and one is taken into the higher consciousness that the understanding can come. Meanwhile what one has to follow is the dictates of the deeper psychic heart within based on that faith and love which is the only sure guiding star.

*

Faith in its essence is a light in the soul which turns towards the truth even when the mind doubts or the vital revolts or the physical consciousness denies it. When this extends itself to the instruments, it becomes a fixed belief in the mind, a sort of inner knowledge which resists all apparent denial by circumstances or appearances, a complete confidence, trust, adhesion in the vital and in the physical consciousness, an invariable clinging to the truth in which one has faith even when all is dark around and no cause of hope seems to be there.

*

Faith in the spiritual sense is not a mental belief which can waver and change. It can wear that form in the mind, but that belief is not the faith itself, it is only its external form. Just as the body, the external form, can change but the spirit remains the same, so it is here. Faith is a certitude in the soul which does not depend on reasoning, on this or that mental idea, on circumstances, on this or that passing condition of the mind or the vital or the body. It may be hidden, eclipsed, may even seem to be quenched, but it reappears again after the storm or the eclipse; it is seen burning still in the soul when one has thought that it was extinguished for ever. The mind may be a shifting sea of doubts and yet that faith may be there within and, if so, it will keep even the doubt-racked mind in the way so that it goes on in spite of itself towards its destined goal. Faith is a spiritual certitude of the spiritual, the divine, the soul's ideal, something that clings to that even when it is not fulfilled in life, even when the immediate facts or the persistent circumstances seem to deny it. This is a common experience in the life of the human being; if

it were not so, man would be the plaything of a changing mind or a sport of circumstance.

A Problem of Faith

How to conciliate these two notions:

- (1) that the Divine's Will is behind all movements and happenings,
- (2) that the Divine Will is distorted in the manifestation.

There are two kinds of faith:

The faith that calls down the equanimity and the faith that calls down the realisation.

These two faiths correspond to two different aspects of the Divine.

There is the Transcendent Divine and there is the Cosmic Divine.

The Will of realisation is that of the Transcendent Divine.

The Cosmic Divine is what is concerned with the actual working out of things under the present circumstances. It is the Will of that Cosmic Divine which is manifested in each circumstance, each movement of this world.

The Cosmic Will is not, to our ordinary consciousness, something that acts as an independent power doing whatever it chooses; it works through all these beings, through the forces at play in the world and the law of these forces and their results. It is only when we open ourselves and get out of the ordinary consciousness that we can feel it intervening as an independent power and overriding the ordinary play of the forces.

Then too we can see that even in the play of the forces and in spite of their distortions the Cosmic Will is working towards the eventual realisation of the Will of the Transcendent Divine.

The supramental realisation is the Will of the Transcendent Divine which we have to work out. The circumstances under which we have to work it out are those of an inferior consciousness in which things can be distorted by our own ignorance, weaknesses and mistakes, and by the clash of conflicting forces. That is why faith and equanimity are indispensable.

We have to have the faith that in spite of our ignorance and errors and weaknesses and in spite of the attacks of hostile forces and in spite of any immediate appearance of failure the Divine Will is leading us, through every circumstance, towards the final realisation. This faith will give us equanimity; it is a faith that accepts what happens not definitively but as something that has to be gone through on the way. Once equanimity is established there can be established too another kind of faith, supported by it, which can be made dynamic with something from the supramental consciousness and can overcome the present circumstances and determine what will happen and help to bring down the realisation of the Will of the Transcendent Divine.

The faith that goes to the Cosmic Divine is limited in the power of its action by the necessities of the play.

To get entirely free from these limitations one must reach the Transcendent Divine.

Faith and Knowledge

Faith is a thing that precedes knowledge, not comes after knowledge. It is a glimpse of a truth which the mind has not yet seized as knowledge.

*

Until we know the Truth (not mentally but by experience, by change of consciousness) we need the soul's faith to sustain us and hold on to the Truth — but when we live in the knowledge, this faith is changed into knowledge.

Of course I am speaking of direct spiritual knowledge. Mental knowledge cannot replace faith; so long as there is only mental knowledge, faith is still needed.

*

The phrase [“*blind faith*”] has no real meaning. I suppose they mean they will not believe without proof — but the conclusion formed after proof is not faith, it is knowledge or it is a mental opinion. Faith is something which one has before proof or

knowledge and it helps you to arrive at knowledge or experience. There is no proof that God exists, but if I have faith in God, then I can arrive at the experience of the Divine.

Faith and Experience

Mental theories are of no fundamental importance, for the mind forms or accepts the theories that support the turn of the being. What is important is that turn and the call within you.

The knowledge that there is a Supreme Existence, Consciousness and Bliss which is not merely a negative Nirvana or a static and featureless Absolute, but dynamic, the perception that this Divine Consciousness can be realised not only beyond but here, and the consequent acceptance of a divine life as the aim of Yoga, do not belong to the mind. It is not a question of mental theory — even though mentally this outlook can be as well supported as any other, if not better, — but of experience and, before the experience comes, of the soul's faith bringing with it the mind's and the life's adhesion. One who is in contact with the higher Light and has the experience can follow this way, however difficult it may be for the lower members to follow; one who is touched by it, without having the experience, but having the call, the conviction, the compulsion of the soul's adherence, can also follow it.

*

There is much in your letter that would need long explanation for an adequate reply — but I want to say something about the faith which you say you don't have and can't have in the absence of experience. First of all, faith does not depend upon experience; it is something that is there before experience. When one starts the Yoga, it is not usually on the strength of experience, but on the strength of faith. It is so not only in Yoga and the spiritual life, but in ordinary life also. All men of action, discoverers, inventors, creators of knowledge proceed by faith and, until the proof is made or the thing done, they go on in spite of disappointment, failure, disproof, denial, because of something

in them that tells them that this *is* the truth, the thing that must be followed and done. Ramakrishna even went so far as to say, when asked whether blind faith was not wrong, that blind faith was the only kind to have, for faith is either blind or it is not faith but something else — reasoned inference, proved conviction or ascertained knowledge.

Faith is the soul's witness to something not yet manifested, achieved or realised, but which yet the Knower within us, even in the absence of all indications, feels to be true or supremely worth following or achieving. This thing within us can last even when there is no fixed belief in the mind, even when the vital struggles and revolts and refuses. Who is there that practises the Yoga and has not his periods, long periods of disappointment and failure and disbelief and darkness — but there is something that sustains him and even goes on in spite of himself, because it feels that what it followed after was yet true and it more than feels, it knows. The fundamental faith in Yoga is this, inherent in the soul, that the Divine exists and the Divine is the one thing to be followed after — nothing else in life is worth having in comparison with that. It was this faith growing in you that made you come for Yoga and this faith has not died or diminished — to judge from what you say in your letters, it has become more insistent and abiding. So long as a man has that, he is marked for the spiritual life and I will say that, even if his nature is full of obstacles and crammed with denials and difficulties, and even if he has many years of struggle, he is marked out for success in the spiritual life.

What you really have not yet a fixed faith in is the guidance of the Divine, his will to manifest to you or your capacity to receive him. It is this that the adverse attacks which began when you were on the threshold of the inner experience — as so often happens in the Yoga — try constantly to fix in your brain. They want to have a fixed mental formation there, so that whenever you make the attempt there will be in the physical mind an expectation of difficulty, a dwelling on the idea of difficulty and unsuccess and incapacity, if not always in the front of the mind, yet at the back and by that they hope to prevent the experience

from coming. It is these mental formations that you must reject, for they are a much greater obstacle than the vital failings to which you give such an exaggerated importance. It is not a fact that you have not had experiences — you had them but you did not give them their full value, because you were expecting something else. Otherwise the sense of the Divine Guidance and the faith in attainment would have formed in spite of difficulties and relapses such as everyone has in the Yoga. It is this faith that you need to develop, — a faith which is in accordance with reason and common sense — that if the Divine exists and has called you to the Path, as is evident, then there must be a Divine Guidance behind and that through and in spite of all difficulties you will arrive. Not to listen to the hostile voices that suggest failure or to the voices of impatient vital haste that echo them, not to believe that because great difficulties are there, there can be no success or that because the Divine has not yet shown himself he will never show himself, but to take the position that everyone takes when he fixes his mind on a great and difficult goal, "I will go on till I succeed and I will succeed — all difficulties notwithstanding." To which the believer in the Divine adds, "The Divine exists, he is there, and since he exists, my following after the Divine cannot fail. I will go on through everything till I find him."

*

I am rather surprised at Krishnaprem's surprise about my statement of faith. I thought he had said once you should not hanker after experiences. As for experience being necessary for faith and no faith possible without it, that contradicts human psychology altogether. Thousands of people have faith before they have experience and it is the faith that helps them to the experience. The doctrine "No belief without proof" applies to physical science, it would be disastrous in the field of spirituality — or for that matter in the field of human action. The saints or bhaktas have the faith in God long before they get the experience of God — the man of action has the faith in his cause long before his cause is crowned with success — otherwise they would not have been able to struggle persistently towards their end in spite of defeat,

failure and deadly peril. I don't know what Krishnaprem means by true faith. For me faith is not intellectual belief but a function of the soul; when my belief has faltered, failed, gone out the soul has remained steadfast, obstinately insisting, "This path and no other; the Truth I have felt is the Truth whatever the mind may believe or not believe." On the other hand experiences do not necessarily lead to faith. One sadhak writes to me, "I feel the grace of the Mother descending into me, but I cannot believe it because it may be a vital imagination." Another has experiences for years together, then falls down because he has, he says, "lost faith". All these things are not my imagination, they are facts and tell their own tale.

All that, however, is by the way. I have no objection to you or anybody having experiences. I am not a fool. Let everybody have as many experiences as possible. What I say is that the hankering for experiences should not be there in such a way as to replace the true attitude and bring disappointment and revolt. Bhakti is not an experience, it is a state of the heart and soul. It is a state which comes when the psychic being is awake and prominent. It is for that reason that I asked you to cleave to the psychic way and not go back to that of vital desire. I have not said that your psychic being was "in front" in such a way as to be proof against all attack. What I said was that it was becoming awake and active, giving you the right attitude and helping you towards the change of your nature. I certainly did not mean a moral but a spiritual change. Freedom from ego is not a moral but a spiritual change—a moral man may be chock full of ego, an ego increased by his sense of goodness and rectitude. Freedom from ego is spiritually valuable because then one can be centred, no longer in one's personal self, but in the Divine, and that too is the condition of bhakti.

The Gospel of Faith

I spoke of a strong central and if possible complete faith because your attitude seemed to be that you only cared for the full response—that is, realisation, the Presence, regarding all else as

quite unsatisfactory, and your prayer was not bringing you that. But prayer by itself does not usually bring that at once — only if there is a burning faith at the centre or a complete faith in all the parts of the being. That does not mean that those whose faith is not so strong or surrender complete cannot arrive, but usually they have to go at first by small steps and to face the difficulties of their nature until by perseverance or tapasya they make a sufficient opening. Even a faltering faith and a slow and partial surrender have their force and their result, otherwise only the rare few could do sadhana at all. What I mean by the central faith is a faith in the soul or the central being behind, a faith which is there even when the mind doubts and the vital despairs and the physical wants to collapse, and after the attack is over, reappears and pushes on the path again. It may be strong and bright, it may be pale and in appearance weak, but if it persists each time in going on, it is the real thing. Fits of despair and darkness are a tradition in the path of sadhana — in all Yogas oriental and occidental they seem to have been the rule. I know all about them myself — but my experience has led me to the perception that they are an unnecessary tradition and could be dispensed with if one chose. That is why whenever they come in you or others I try to lift up before them the gospel of faith. If still they come, one has only to get through them as soon as possible and get back into the sun. Your dream of the sea was a perfectly true one — in the end the storm and swell do not prevent the arrival of the state of Grace in the sadhak and with it the arrival of the Grace itself. That I suppose is what something in you is always asking for — the suprarational miracle of Grace, something that is impatient of the demand for tapasya and self-perfection and long labour. Well, it can come, it has come to several here after years upon years of blank failure and difficulty or terrible internal struggles. But it comes usually in that way — as opposed to a slowly developing Grace — after much difficulty and not at once. If you go on asking for it in spite of the apparent failure of response, it is sure to come.

Faith and Doubt

I see you have let the demons of self-doubt and doubt in general and melancholy get inside again and sit down at your table. There is no other reason for your troubles than this readiness to listen to their knock and open the door. You speak of X, but that is why X gets on because when they knock, he turns them out at once. If you resolutely do that, you will arrive also at security and perfect ease — for there are only two things that create insecurity — doubt and desire. If you desire only the Divine, there is an absolute certitude that you will reach the Divine. But all these questionings and repinings at each moment because you have not yet reached, only delay and keep an impeding curtain before the heart and the eyes. For at every step when one makes an advance, the opposite forces will throw this doubt like a rope between the legs and stop one short with a stumble — it is their *métier* to do that. One must not give them that advantage. Instead of saying, “I want only the Divine, why is the Divine not already here?”, one must say, “Since I want only the Divine, my success is sure, I have only to walk forward in all confidence and his own hand will be there secretly leading me to him by his own way and at his own time.” That is what you must keep as your constant mantra and it is besides the only logical and reasonable thing to do — for anything else is an irrational self-contradiction of the most glaring kind. Anything else one may doubt — whether the supermind will come down, whether this world can ever be anything but a field of struggle for the mass of men, — these can be rational doubts — but that he who desires only the Divine shall reach the Divine is a certitude much more certain than that two and two make four. That is the faith every sadhak must have in the bottom of his heart, supporting him through every stumble and blow and ordeal. It is only false ideas still casting their shadow on your mind that prevent you from having it. Push them aside for good and see this simple inner truth in a simple and straightforward way — the back of the difficulty will be broken.

*

As for the doubts, such occurrences happen to almost all sadhaks from time to time so long as there is not such a fixity of continuous experience as makes any fundamental doubt impossible, although there may still be questionings about this or that until the knowledge and experience are made complete.

The nature of the doubts and misbeliefs were such as are always suggested to everybody when this kind of Influence envelops—the part of the mind which responds to them is the physical mind—for the other parts are covered over at such times and the physical mind left to itself naturally doubts everything supraphysical and believes only in its own domain.

Mental faith is very helpful, but it is a thing that can always be temporarily shaken or quite clouded—until the higher consciousness and experience get fixed for good. What endures even if concealed is the inner being's aspiration or need for something higher which is the soul's faith. That too may be concealed for a time but it reasserts itself—it undergoes eclipse but not extinction.

*

It is quite sufficient if there is the firm and constant will towards faith and self-offering. It is understood that it is not possible for the human nature to be always without movements of doubt, obscurity or things not yet offered until the inner consciousness has sufficiently grown to make these impossible. It is because it is so that the will is necessary so that the Force may work to remove these things with full consent and will of the mind and heart of the sadhak. To try to reject these things and make the will permanent is sufficient,—for it is this effort that brings eventually the permanence.

*

It is possible for anyone to attain to a complete and living faith in the Divine if he has the sincere will to do so, even though he may not be sattvic in his nature; but, if he is sattvic, it will be easier for him—he will not be hampered by doubts and revolts such as afflict the rajasic man on his way.

Types of Faith

Mental faith combats doubt and helps to open to the true knowledge; vital faith prevents the attacks of the hostile forces or defeats them and helps to open to the true spiritual will and action; physical faith keeps one firm through all physical obscurity, inertia or suffering and helps to open to the foundation of the true consciousness; psychic faith opens to the direct touch of the Divine and helps to bring union and surrender.

*

Faith can be tamasic and ineffective, e.g. "I believe the Mother will do everything, so I will do nothing. When she wants, she will transform me." That is not a dynamic but a static and inert faith.

Faithfulness

When I spoke of being faithful to the light of the soul and the divine Call, I was not referring to anything in the past or to any lapse on your part. I was simply affirming the great need in all crises and attacks,—to refuse to listen to any suggestions, impulses, lures and to oppose to them all the call of the Truth, the imperative beckoning of the Light. In all doubt and depression, to say "I belong to the Divine, I cannot fail"; to all suggestions of impurity and unfitness, to reply "I am a child of Immortality chosen by the Divine; I have but to be true to myself and to Him — the victory is sure; even if I fell, I would be sure to rise again"; to all impulses to depart and serve some smaller ideal, to reply "This is the greatest, this is the Truth that alone can satisfy the soul within me; I will endure through all tests and tribulations to the very end of the divine journey." This is what I mean by faithfulness to the Light and the Call.

*

I do not see how the method of faith in the cells can be likened to eating a slice of the moon. Nobody ever got a slice of the

moon, but the healing by faith in the cells is an actual fact and a law of Nature and has been demonstrated often enough even apart from Yoga. The way to get faith and everything else is to insist on having them and refuse to flag or despair or give up until one has them — it is the way by which everything has been got since this difficult world began to have thinking and aspiring creatures upon it. It is to open always, always to the Light and turn one's back on the darkness. It is to refuse the voices that cry persistently, "You cannot, you shall not, you are incapable, you are the puppet of a dream" — for these are the enemy voices, they cut one off from the result that was coming by their strident clamour and then triumphantly point to the barrenness of result as a proof of their thesis. The difficulty of the endeavour is a known thing, but the difficult is not the impossible — it is the difficult that has always been accomplished and the conquest of difficulties makes up all that is valuable in the earth's history. In the spiritual endeavour also it shall be so.

*

For the sadhana, your strong distaste (to say the least) for the methods which we find most useful but you find grim and repellent, makes a great obstacle. But I maintain my idea that if you remain faithful to the seeking for the Divine, the day of grace and opening will come. Nobody will be more pleased than ourselves if it comes over there in the Himalayas, or for that matter anywhere. The place does not matter — the thing itself is all.

*

I ask you to have faith in the Divine, in the Divine Grace, in the truth of the sadhana, in the eventual triumph of the spirit over its mental and vital and physical difficulties, in the Path and the Guru, in the existence of things other than are written in the philosophy of Haeckel or Huxley or Bertrand Russell, because if these things are not true, there is no meaning in the Yoga.

*

If his faith depends on the perfection of the sadhaks, obviously it must be a rather shaky thing! Sadhaks and sadhikas are not supposed to be perfect. It is only siddhas for whom one can claim perfection and even then not according to a mental standard.

Keep Firm Faith

Do not allow any discouragement to come upon you and have no distrust of the Divine Grace. Whatever difficulties are outside you, whatever weaknesses are inside you, if you keep firm hold on your faith and your aspiration, the secret Power will carry you through and bring you back here. Even if you are oppressed with opposition and difficulties, even if you stumble, even if the way seems closed to you, keep hold on your aspiration; if faith is clouded for a time, turn always in mind and heart to us and it will be removed. As for outer help in the way of letters we are perfectly ready to give it to you. But keep firm on the way—then in the end things open out of themselves and circumstances yield to the inner spirit.

*

Whatever adverse things present themselves you must meet them with courage and they will disappear and the help come. Faith and courage are the true attitude to keep in life and work always and in the spiritual experience also.

*

In moments of trial faith in the Divine protection and the call for that protection; at all times the faith that what the Divine wills is the best.

It is what turns you towards the Divine that must be accepted as good for you—all is bad for you that turns you away from the Divine.

*

That is the true resolution. Keep it firm inside you even if waves of other consciousness cover on the surface. If one plants a faith

or resolution like that firmly in oneself, then it remains and even if the mind for a time gets clouded or the resolution dimmed, yet one finds it reemerging automatically like a ship out of a covering wave, and goes invincibly on with the journey through all vicissitudes till it reaches the harbour.

*

They [*faith, surrender and samata*] have to be put into every part and atom of the being so that there may be no possibility of a contrary vibration anywhere.

*

You must keep the faith always that however the lower nature may rise or hostile forces attack, victory will be yours and the transformation is sure.

*

Keep firm faith in the victory of the Light and face with calm equanimity the resistances of Matter and human personality to their own transformation.

*

Even if there is much darkness — and this world is full of it and the physical nature of man also — yet a ray of the true Light can prevail eventually against a tenfold darkness. Believe that and cleave to it always.

Chapter Nine

Consecration and Offering

Consecration

Consecration is a process by which one trains the consciousness to give itself to the Divine.

*

The general principle of self-consecration and self-giving is the same for all in this Yoga, but each has his own way of consecration and self-giving. The way that X takes is good for X, just as the way that you take is the right one for you because it is in consonance with your nature. If there were not this plasticity and variety, if all had to be cut in the same pattern, Yoga would be a rigid mental machinery, not a living power.

When you can sing out of your inner consciousness in which you feel the Mother moving all your actions, there is no reason why you should not do it. The development of capacities is not only permissible but right, when it can be made part of the Yoga; one can give not only one's soul, but all one's powers to the Divine.

*

It is very evident that X has had a sudden opening to spiritual experience — a surprisingly sudden opening, one would think, but it happens often in that way, especially if there is a sceptical mind outside and a soul ready for experience within. In such cases also it comes often after a blow such as his brother's illness, but I think there was already a turning of the mind which prepared it. This sudden and persistent visualisation also shows that there is a faculty within that has broken the gates which shut it in — the faculty of supraphysical vision. The coming up of the word "consecration" is also a familiar phenomenon of these experiences — it is what I call the voice of the psychic, an intimation from his own soul to the mind as to what it wants

him to do. Now he has to accept it, for the assent of the nature, of the outward man to the inner voice, is necessary so that it may be effective. He is standing at the turning point and has been given an indication of the new road his inner being, the Antaratman, wants him to follow—but, as I say, the assent of his mind and vital is necessary. If he can decide to consecrate, he must make the *sankalpa* of consecration, offer himself to the Divine and call for the help and the guidance. If he is not able to do that at once let him wait and see, but keeping himself open, as it were, to the continuation and development of the experience that has begun till it becomes definitely imperative to his own feeling. He will receive help and, if he becomes conscious of it, then there can be no further question—it will be easy for him to proceed on the way.

Offering

One offers to the Divine in order to get rid of the illusion of separation—the very act of offering implies that all belongs to the Divine.

*

Have attachment to nothing [*in order to offer all to the Divine*]—aspire until you get the consciousness of the Divine—call on the Divine to control and take up all you are and have.

*

(1) Offer yourself more and more—all the consciousness, all that happens in it, all your work and action.

(2) If you have faults and weaknesses, hold them up before the Divine to be changed or abolished.

(3) Try to do what I told you, concentrate in the heart till you constantly feel the Presence there.

*

Remain quiet, put your will always on the side of the Truth, offer yourself entirely to the Divine.

Chapter Ten

Opening

The Meaning of Opening

Opening is a change of the consciousness by which it becomes receptive to the Divine.

*

Opening means that the consciousness becomes opened to the Truth or the Divine to which it is now shut — it indicates a state of receptivity.

*

Opening is a thing that happens of itself by sincerity of will and aspiration. It means to be able to receive the higher forces that come from the Mother.

*

Opening means only to be able to receive the Mother's force. Whether one is open or not is shown by two things. If one is conscious of the force working in one, then one is open. But even if one is not conscious, yet if results of the working happen, then that also means that in the inner being some opening has been made. Aspiration, sincerity and the quietude of the mind are the three best conditions for opening.

*

These [*calling the Mother, praying to her*] are acts of the mind, openness is a *state* of consciousness which keeps it turned to the Mother, free from other movements, expecting and able to receive what may come from the Divine.

*

There is a state in which the sadhak is conscious of the Divine Force working in him or of its results at least and does not

obstruct its descent or its action by his own mental activities, vital restlessness or physical obscurity and inertia. That is openness to the Divine. Surrender is the best way of opening; but aspiration and quietness can do it up to a certain point so long as there is not the surrender.

*

The object of the self-opening is to allow the force of the Divine to flow in bringing light, peace, Ananda etc. and to do the work of transformation. When the being so receives the Divine Shakti and it works in him, produces its results (whether he is entirely conscious of the process or not), then he is said to be open.

Opening to the Divine

In this Yoga the whole principle is to open oneself to the Divine Influence. It is there above you and, if you can once become conscious of it, you have then to call it down into you. It descends into the mind and into the body as Peace, as a Light, as a Force that works, as the Presence of the Divine with or without form, as Ananda. Before one has this consciousness, one has to have faith and aspire for the opening. Aspiration, call, prayer are forms of one and the same thing and are all effective; you can take the form that comes to you or is easiest to you. The other way is concentration; you concentrate your consciousness in the heart (some do it in the head or above the head) and meditate on the Mother in the heart and call her in there. One can do either and both at different times — whatever comes naturally to you or you are moved to do at the moment. Especially in the beginning the one great necessity is to get the mind quiet, reject at the time of meditation all thoughts and movements that are foreign to the sadhana. In the quiet mind there will be a progressive preparation for the experience. But you must not become impatient if all is not done at once; it takes time to bring entire quiet into the mind; you have to go on till the consciousness is ready.

*

In this Yoga all depends on whether one can open to the Influence or not. If there is a sincerity in the aspiration and a patient will to arrive at the higher consciousness in spite of all obstacles, then the opening in one form or another is sure to arrive. But it may take a long or a short time according to the prepared or unprepared condition of the mind, heart and body; so if one has not the necessary patience, the effort may be abandoned owing to the difficulty of the beginning. There is no method in this Yoga except to concentrate, preferably in the heart, and call the presence and power of the Mother to take up the being and by the workings of her force transform the consciousness; one can concentrate also in the head or between the eyebrows, but for many this is a too difficult opening. When the mind falls quiet and the concentration becomes strong and the aspiration intense, then there is a beginning of experience. The more the faith, the more rapid the result is likely to be. For the rest one must not depend on one's own efforts only, but succeed in establishing a contact with the Divine and a receptivity to the Mother's Power and Presence.

*

A Fire in the heart is usually the psychic fire and that should rather grow and be fed by the tendency or aspiration to the personal sadhana. The main principle of the personal sadhana is the surrender, the aspiration to the Divine touch, presence, control in the heart—the opening of the psychic being from within and its coming in front to govern and change mind, vital, physical consciousness. There are two openings that are necessary, one from above, the other from within. The one from above which can come by the impersonal Path or by the personal and impersonal together, seems to have come to you. Your feeling about the Personal probably comes from the push from within for the psychic to emerge fully. It is this aspiration therefore that should be the beginning of the personal path and a reliance on the Inner Power to guide and do what is needed.

*

Well, that is the idea in Yoga—that by a right passivity one opens oneself to something greater than one's limited self, and effort is only useful for getting that condition. There is also a notion that even in the ordinary life the individual is only an instrument in the hands of a Universal Energy though his ego takes the credit of all he does.

*

It is the law of the sadhana to open to the influences of the higher worlds.

*

It is true that through whatever is strongest in him a sadhak can most easily open to the Divine.

*

In the practice of Yoga, what you aim at can only come by the opening of the being to the Mother's force and the persistent rejection of all egoism and demand and desire, all motives except the aspiration for the Divine Truth. If this is rightly done, the Divine Power and Light will begin to work and bring in the peace and equanimity, the inner strength, the purified devotion and the increasing consciousness and self-knowledge which are the necessary foundation for the siddhi of the Yoga.

*

Open with sincerity. That means to open integrally and without reservation: not to give one part of you to the divine working and keep back the rest; not to make a partial offering and keep for yourself the other movements of your nature. All must be opened wide; it is insincerity to hold back any part of you or keep it shut to the Divine.

Open with faithfulness. That means to be open constantly and always; not to open one day and withdraw the next.

*

The opening is the same for all. It begins with an opening of the

mind and heart, then of the vital proper — when it reaches the lower vital and physical the opening is complete. But with the opening there must be the full self-giving to what comes down, which is the condition of the complete change. It is this last stage that is the real difficulty and it is there that everyone stumbles about till it is overcome.

*

It takes time to open all the parts fully. Let the mind and heart remain open and the rest will follow. Clouds that pass and coverings that come cannot prevent it.

*

It is certainly not by merely repeating “to will” and “to open” (with the mental idea), that the will or the opening will come. It is by using the will that the will becomes effective, it is by using the aspiration and the will also that the opening comes. The first thing is to call down the calm into the mind and the vital; with the calm established or in course of preparation to invite more and more the Mother’s workings and grow conscious of them within you and give your assent to them and refuse all else. All the rest then comes in its time and by the proper process.

*

It is by confidence in the Mother that the opening needed will come when your consciousness is ready. There is no harm in arranging your present work so that there will be time and energy for some meditation, but it is not by meditation alone that what is needed will come. It is by faith and openness to the Mother.

*

Keep yourself open to the Mother, remember her always and let her Force work in you, rejecting all other influences — that is the rule for Yoga.

Chapter Eleven

Patience and Perseverance

Patience

It is certain that an ardent aspiration for the Divine helps to progress, but patience is also needed. For it is a very big change that has to be made and, although there can be moments of great rapidity, it is never all the time like that. Old things try to stick as much as possible; the new that come have to develop and the consciousness takes time to assimilate them and make them normal to the nature.

Keep this firm faith in your mind that the thing needed is being done and will be done fully. There can be no doubt about that.

*

There are always difficulties and a hampered progress in the early stages and a delay in the opening of the inner doors until the being is ready. If you feel whenever you meditate the quiescence and the flashes of the inner Light and if the inward urge is growing so strong that the external hold is decreasing and the vital disturbances are losing their force, that is already a great progress. The road of Yoga is long, every inch of ground has to be won against much resistance and no quality is more needed by the sadhak than patience and single-minded perseverance with a faith that remains firm through all difficulties, delays and apparent failures.

*

Determination is needed and a firm patience, not to be discouraged by this or that failure. It is a change in the habit of the physical nature and that needs a long patient work of detail.

*

One who has not the courage to face patiently and firmly life and its difficulties will never be able to go through the still greater inner difficulties of the sadhana. The very first lesson in this Yoga is to face life and its trials with a quiet mind, a firm courage and an entire reliance on the Divine Shakti.

*

It is true that a great patience and steadfastness is needed. Be then firm and patient and fixed on the aims of the sadhana, but not over-eager to have them at once. A work has to be done in you and is being done; help it to be done by keeping an attitude of firm faith and confidence. Doubts rise in all, they are natural to the human physical mind — reject them. Impatience and over-eagerness for the result at once are natural to the human vital; it is by firm confidence in the Mother that they will disappear. The love, the belief in her as the Divine to whom your life is given, — oppose with that every contrary feeling and then those contrary feelings will after a time no longer be able to come to you.

*

It is an impatience and restlessness in the vital which makes it feel as if it were no use staying here because things are not moving forward. Sadhana is a thing which takes time and needs patience. There are often periods of quiescence in which a working is going on behind of which the mind is not aware — all seems then to be inert and dull; but if one has patience and confidence, the consciousness passes through these periods to new openings and things which seemed to be impossible to effect at that time, get done. The impulse to rush away is always a mistake — perseverance in the path is the one rule to cling to and with that finally all obstacles are overcome.

*

Impatience is always a mistake, it does not help but hinders. A quiet happy faith and confidence is the best foundation for sadhana; for the rest a constant opening wide of oneself to receive with an aspiration which may be intense, but must always be

calm and steady. Full Yogic realisation does not come all at once, it comes after a long preparation of the Adhara which may take a long time.

*

In a more deep and spiritual sense a concrete realisation is that which makes the thing realised more real, dynamic, intimately present to the consciousness than any physical thing can be. Such a realisation of the personal Divine or of the impersonal Brahman or of the Self does not usually come at the beginning of a sadhana or in the first years or for many years. It comes so to a very few; mine came fifteen years after my first pre-Yogic experience in London and in the fifth year after I started Yoga. That I consider extraordinarily quick, an express train speed almost—though there may no doubt have been several quicker achievements. But to expect and demand it so soon and get fed up because it does not come and declare Yoga impossible except for two or three in the ages would betoken in the eyes of any experienced Yogi or sadhaka a rather rash and abnormal impatience. Most would say that a slow development is the best one can hope for in the first years and only when the nature is ready and fully concentrated towards the Divine can the definitive experience come. To some rapid preparatory experiences can come at a comparatively early stage, but even they cannot escape the labour of the consciousness which will make these experiences culminate in the realisation that is enduring and complete. It is not a question of my liking or disliking your demand or attitude. It is a matter of fact and truth and experience, not of liking or disliking, two things which do not usually sway me. It is the fact that people who are grateful and cheerful and ready to go step by step, even by slow steps, if need be, do actually march faster and more surely than those who are impatient and in haste and at each step despair or murmur. It is what I have always seen—there may be instances to the contrary and I have no objection to your being one,—none at all. I only say that if you could maintain “hope and fervour and faith”, there would be a much bigger chance—that is all.

This is just a personal explanation — a long explanation but which seemed to be called for by your enhancement of my glory — and is dictated by a hope that after all in the long run an accumulation of explanations may persuade you to prefer the sunny path to the grey one. My faith again perhaps? But, sunny path or grey one, the one thing wanted is that you should push through and arrive.

*

You say after several years you have not changed your nature. I only wish the external nature were so easy to transform that it could be done in a few years. You forget also that the real problem — to get rid of the pervading ego in this nature — is a task you have seriously tackled only a short time ago. And it is not in a few months that that can be done. Even the best sadhaks find after many experiences and large changes on the higher planes that here much remains to be done. How do you expect to get rid of it at once unlike everybody else? A Yoga like this needs patience, because it means a change both of the radical motives and of each part and detail of the nature. It will not do to say — “Yesterday I determined this time to give myself entirely to the Mother, and look it is not done, on the contrary all the old opposite things turn up once more; so there is nothing to do but to proclaim myself unfit and give up the Yoga.” Of course when you come to the point where you make a resolution of that kind, immediately all that stands in the way does rise up — it invariably happens. The thing to be done is to stand back, observe and reject, not to allow these things to get hold of you, to keep your central will separate from them and call in the Mother’s Force to meet them. If one does get involved as often happens, then to get disinvolved as soon as possible and go forward again. That is what everybody, every Yогин does — to be depressed because one cannot do everything in a rush is quite contrary to the truth of the matter. A stumble does not mean that one is unfit, nor does prolonged difficulty mean that for oneself the thing is impossible.

The fact that you have to give up your ordinary work when

you get depressed does not mean that you have not gained in steadiness—it only means that the steadiness you have gained is not a personal virtue but depends on your keeping the contact with the Mother—for it is her Force that is behind it and behind all the progress you can make. Learn to rely on that Force more, to open to it more completely and to seek spiritual progress even not for your own sake but for the sake of the Divine—then you will go on more smoothly. Get the full psychic opening in the most external physical consciousness. That and not despondency is the lesson you ought to draw from your present adverse experience.

*

They [*patience and peace*] go together. By having patience under all kinds of pressure you lay the foundations of peace.

Persistence

Your attitude towards the change needed and new life is the right one. A quiet, vigilant but undistressed persistence is the best way to get it done.

For the intimacy within to be reestablished the quietude must deepen so that the psychic may come out in the physical as it had done in the higher parts.

*

Things that have long acted on the nature take some time to go altogether, but they are bound to go since you have the sincere desire and your psychic being is growing in your nature. Our help is there always with you. You have to persist in faith and quietude and let the psychic grow more and more, then all will come right and you will no longer have this trouble.

*

It is so with all things in the path of sadhana—one must persist however long it takes, so only one can achieve.

*

What I want of you besides aspiring for faith? Well, just a little thoroughness and persistence in the method! Don't aspire for two days and then sink into the dumps, evolving a gospel of earthquake and Schopenhauer plus the jackal and all the rest of it. Give the Divine a full sporting chance. When he lights something in you or is preparing a light, don't come in with a wet blanket of despondency and throw it on the poor flame. You will say it is a mere candle that is lit — nothing at all? But in these matters, when the darkness of human mind and life and body has to be dissipated, a candle is always a beginning — a lamp can follow and afterwards a sun — but the beginning must be allowed to have a sequel — not get cut off from its natural *sequelae* by chinks of sadness and doubt and despair. At the beginning and for a long time the experiences do usually come in little quanta with empty spaces between — but, if allowed their way, the spaces will diminish and the quantum theory give way to the Newtonian continuity of the spirit. But you have never yet given it a real chance. The empty spaces have become peopled with doubts and denials and so the quanta have become rare, the beginnings remain beginnings. Other difficulties you have faced and rejected, but this difficulty you dangled too much for a long time and it has become strong — it must be dealt with by a persevering effort. I do not say that all doubts must disappear before anything comes — that would be to make sadhana impossible, for doubt is the mind's persistent assailant. All I say is, don't allow the assailant to become a companion, don't give him the open door and the fireside seat. Above all don't drive away the incoming Divine with that dispiriting wet blanket of sadness and despair!

To put it more soberly, — accept once for all that this thing has to be done, that it is the only thing left for yourself or the earth. Outside are earthquakes and Hitlers and a collapsing civilisation and — generally speaking — the jackal in the flood? All the more reason to tend towards the one thing to be done, the thing you have been sent to aid in getting done. It is difficult and the way long and the encouragement given meagre? What then? Why should you expect so great a thing to be easy or that

there must be either a swift success or none? The difficulties have to be faced and the more cheerfully they are faced, the sooner they will be overcome. The one thing to do is to keep the mantra of success, the determination of victory, the fixed resolve, "Have it I must and have it I will." Impossible? There is no such thing as an impossibility — there are difficulties and things of *longue haleine*, but no impossibles. What one is determined fixedly to do, will get done now or later — it becomes possible.

There — that is my counterblast to your variations on Schopenhauer. I conclude — drive out dark despair and go bravely on with your poetry, your novels — and your Yoga. As the darkness disappears, the inner doors too will open.

Perseverance

Whatever method is used, persistence and perseverance are essential. For whatever method is used, the complexity of the natural resistance will be there to combat it.

*

One who fears monotony and wants something new would not be able to do Yoga or at least this Yoga which needs an inexhaustible perseverance and patience. The fear of death shows a vital weakness which is also contrary to a capacity for Yoga. Equally, one who is under the domination of his passions, would find the Yoga difficult and, unless supported by a true inner call and a sincere and strong aspiration for the spiritual consciousness and union with the Divine, might very easily fall fatally and his effort come to nothing.

*

There can be no doubt about the Divine Grace. It is perfectly true also that if a man is sincere, he will reach the Divine. But it does not follow that he will reach immediately, easily and without delay. Your error is there, to fix for God a term, five years, six years, and doubt because the effect is not yet there. A man may be centrally sincere and yet there may be many things

that have to be changed in him before realisation can begin. His sincerity must enable him to persevere always—for it is a longing for the Divine that nothing can quench, neither delay nor disappointment nor difficulty nor anything else.

You have got troubled again because you have allowed your mind to become active again in its ignorance, questioning, trying to refute the simplest and most established spiritual truths, trying to decide without waiting for the inner knowledge. Throw all that away and go on in quietude, not minding if it takes short or long for things to open up. That was what you had undertaken to do. Keep to it and, however slowly, the consciousness will open and light come.

*

Keep quietude, persevere. These are the clouds that cover the growing Light; but the true consciousness is there increasing behind the clouds.

*

There is no such impossibility of your victory over the harder parts of your nature as you imagine. There is only needed the perseverance to go on till this resistance breaks down and the psychic which is not absent nor unmanifest is able to dominate the others. That has to be done whether you stay here or not and to go is likely only to increase the difficulty and imperil the final result—it cannot help you. It is here that the struggle however acute has, because of the immediate presence of the Mother, the best chance and certitude of a solution and successful ending.

Endurance

[*Endurance:*] The power to go through effort, difficulty or trouble without getting fatigued, depressed, discouraged or impatient and without breaking off the effort or giving up one's aim or resolution.

Resolution

A resolution means the will to try to get a thing done by the given time. It is not a binding “promise” that the thing will be done by that time. Even if it is not, the endeavour will have to continue, just as if no date had been fixed.

Firmness

Whether by tapasya or surrender does not matter, the one thing is to be firm in setting one's face to the goal. Once one has set one's feet on the way, how can one draw back from it to something inferior? If one keeps firm, falls do not matter, one rises up again and goes forward. If one is firm towards the goal, there can be on the way to the Divine no eventual failure. And if there is something within you that drives, as surely there is, falterings or falls or failures of faith make no eventual difference. One has to go on till the struggle is over and there is the straight and open and thornless way before us.

*

One cannot say whether the conquest is near or not — one has to go on steadily with the process of the sadhana without thinking of near and far, fixed on the aim, not elated if it seems to come close, not depressed if it still seems to be far.

*

You have only to remain quiet and firm in your following of the path and your will to go to the end. If you do that, circumstances will in the end be obliged to shape themselves to your will, because it will be the Divine Will in you.

Chapter Twelve

Vigilance

Vigilance, Discrimination, Control

Yes, the vigilance is very necessary — to remain *jāgrat* and *apramatta* was always considered as a main requisite by the Yogins.

*

Openness and, whenever needed, passivity, but to the highest consciousness, not to anything that comes.

Therefore, there must be a certain quiet vigilance even in the passivity. Otherwise there may be either wrong movements or inertia.

*

Yes; vigilance should not be relaxed. In fact, it is only as the automatic knowledge and action are established in the being that the constant vigilance ceases to be needed — even then it cannot be given up absolutely until there is the full Light.

*

To give up restraint would be to give free play to the vital and that would mean leave for all kinds of forces to enter in. So long as there is not the supramental consciousness controlling and penetrating everything, in all the being from the overmind downwards, there is an ambiguous play of forces, and each force, however divine in origin, may be used by the Powers of light or intercepted as it passes through the mind and the vital by the Powers of darkness. Vigilance, discrimination, control cannot be abandoned till the complete victory has been won and the consciousness transmuted.

*

Grace is all right, but there should also be care and vigilance.

In putting the cycle, you should first observe and be sure that it will stand steady before you withdraw your hand from it or loosen too much your hold.

*

If you want the divine life, you must remain absolutely *unexcited and quiet*. Not careless, but always on your guard, sober, vigilant. “Madcaps” cannot contain the Power of the Mother, only those who are calm, poised, balanced. So do not be “something of a madcap”.

Section Three

The Foundation of the Sadhana

Chapter One

Peace—The Basis of the Sadhana

Peace Is the First Condition

Peace and purity of the consciousness are the very foundation of the necessary change in the nature.

*

Peace is necessary for all; without peace and an increasing purity, even if one opens, one cannot receive perfectly all that comes down through the opening. Light too is necessary for all — without light one cannot take full advantage of all that comes down.

*

Peace is necessary for the higher states to develop.

*

Equanimity and peace in all conditions in all parts of the being is the first foundation of the Yogic status. Either Light (bringing with it knowledge) or Force (bringing strength and dynamism of many kinds) or Ananda (bringing love and joy of existence) can come next according to the trend of the nature. But peace is the first condition without which nothing else can be stable.

*

The first thing that you have to bring down is a positive, complete and enduring peace from above — that is the only foundation on which the rest can be done, i.e. the development of the higher consciousness, force, knowledge, love, Ananda.

*

What you are doing is entirely the right thing and nothing more is needed. The peace you feel is the basis, the foundation for

the transformation, all the rest will be built on it. To open to the Divine Forces with a quiet and strong aspiration, to become conscious of their working, to allow quietly that working and calmly to contain it, seconding it with one's aspiration, getting more and more knowledge and understanding of what is being done as one goes on — this is the sound and natural way of the Yoga.

*

A quiet aspiration can be as effective as an intense call. Peace is the basis of the sadhana.

*

The meditation experience seems to be developing in the right direction. Before it was only an opening; but to get something settled, there must be this assimilation and the growth in stability, in peace. Peace is the basis of the spiritual change — all the rest falls into the peace and is sustained on it as on a sure foundation.

*

Stability is indeed a great — the first necessity, like the foundations of a house. I am so glad to hear that you feel it growing in you.

Peace, Calm, Wideness

At last you have the true foundation of the sadhana. This calm, peace and surrender are the right atmosphere for all the rest to come, knowledge, strength, Ananda. Let it become complete.

It does not remain when engaged in work because it is still confined to the mind proper which has only just received the gift of silence. When the new consciousness is fully formed and has taken entire possession of the vital nature and the physical being (the vital as yet is only touched or dominated by the silence, not possessed by it), then this defect will disappear.

The quiet consciousness of peace you now have in the mind

must become not only calm but wide. You must feel it everywhere, yourself in it and all in it. This also will help to bring the calm as a basis into the action.

The wider your consciousness becomes, the more you will be able to receive from above. The Shakti will be able to descend and bring strength and light as well as peace into the system. What you feel as narrow and limited in you is the physical mind; it can only widen if this wider consciousness and the light come down and possess the nature.

The physical inertia from which you suffer is likely to lessen and disappear only when strength from above descends into the system.

Remain quiet, open yourself and call the divine Shakti to confirm the calm and peace, to widen the consciousness and to bring into it as much light and power as it can at present receive and assimilate.

Take care not to be over-eager, as this may disturb again such quiet and balance as has been already established in the vital nature.

Have confidence in the final result and give time for the Power to do its work.

*

Wideness and calmness are the foundation of the Yogic consciousness and the best condition for inner growth and experience. If a wide calm can be established in the physical consciousness, occupying and filling the very body and all its cells, that can become the basis for its transformation; in fact, without this wideness and calmness the transformation is hardly possible.

Difficulties, Disturbances and Peace

Aspire, concentrate in the right spirit and, whatever the difficulties, you are sure to attain the aim you have put before you.

It is in the peace behind and that "something truer" in you that you must learn to live and feel it to be yourself. You must

regard the rest as not your real self, but only a flux of changing or recurring movements on the surface which are sure to go as the true self emerges.

Peace is the true remedy; distraction by hard work is only a temporary relief—although a certain amount of work is necessary for the proper balance of the different parts of the being. To feel the peace above or about your head is a first step; you have to get connected with it and it must descend into you and fill your mind and life and body and surround you so that you live in it—for this peace is one sign of the Divine's presence with you, and once you have it all the rest will begin to come.

Truth in speech and truth in thought are very important. The more you can feel falsehood as being not part of yourself, as coming on you from outside, the easier it will be to reject and refuse it.

Persevere and what is still crooked will be made straight and you will know and feel concretely the truth of the Divine's presence and your faith will be justified by direct experience.

*

So long as the mind is restless, it is not possible to get at the inner Truth. Calm, peace, quietude—that is the first necessary condition.

*

To be calm, undisturbed and quiet is not the first condition for sadhana but for siddhi. It is only a few people (very few, one, two, three, four in a hundred sadhaks) who can get it from the first. Most have to go through a long preparation before they can get anywhere near it. Even afterwards when they begin to feel the peace and calm, it takes time to establish it—they swing between peace and disturbance for a fairly long time until all parts of the nature have accepted the truth and the peace. So there is no reason for you to suppose you cannot progress or arrive. You are finding a great difficulty with one part of your nature which has been accustomed to open itself to these feelings, separation from the Mother and attachment to relatives,

and is not willing to give them up—that is all. But everybody finds such obstinate difficulties in that part of the nature, even the most successful sadhaks here. One has to persevere until the light conquers there.

*

It is the quietness in which the Force can act and an entire reliance on that Force to do for you what is necessary—and for the rest a quiet vigilance not to consent to the confusion and restlessness—that you must achieve. It has been evident throughout since the working in you began that this is the only possible foundation for your sadhana.

*

That is the right way—to keep the peace of the higher consciousness, then even if there is vital disturbance, it will be only on the surface. The foundation will remain till the Force can release the true vital.

*

Detachment, silence, inner peace are certainly indispensable for the spiritual progress—a quiet peace-filled detachment. In that peace the Force must do its work. Attacks of confusion, pains etc.—the one thing to arrive at is to be able to stand back from them, to feel detachment from them, separate and call down the Force to act. Whenever one can do that, the attack, the difficulty after a time retires—or even if it lasts a little cannot disturb what has been gained.

*

The depression and vital struggle must have been due to some defect of over-eagerness and straining for a result in your former effort—so that when a fall in the consciousness came it was a depressed, disappointed and confused vital that came to the surface giving full entry to the suggestions of doubt, despair and inertia from the adverse side of Nature. You have to move towards a firm basis of calm and equality in the vital and

physical no less than in the mental consciousness; let there be the full downflow of Power and Ananda, but into a firm adhara capable of containing it—it is a complete equality that gives that capacity and firmness.

*

When the peace of the higher consciousness descends, it brings always with it this tendency towards equality, samata, because without samata peace is always liable to be attacked by the waves of the lower nature.

Chapter Two

Equality — The Chief Support

Equality or Samata

There can be no firm foundation in sadhana without equality, *samatā*. Whatever the unpleasantness of circumstances, however disagreeable the conduct of others, you must learn to receive them with a perfect calm and without any disturbing reaction. These things are the test of equality. It is easy to be calm and equal when things go well and people and circumstances are pleasant; it is when they are the opposite that the completeness of the calm, peace, equality can be tested, reinforced, made perfect.

*

Yogic Samata is equality of soul, equanimity founded on the sense of the one Self, the one Divine everywhere—seeing the One in spite of all differences, degrees, disparities in the manifestation. The mental principle of equality tries to ignore or else to destroy the differences, degrees and disparities, to act as if all were equal there or to try and make all equal. It is like Hriday, the nephew of Ramakrishna, who when he got the touch from Ramakrishna began to shout, “Ramakrishna, you are the Brahman and I too am the Brahman; there is no difference between us”, till Ramakrishna, as he refused to be quiet, had to withdraw the power. Or like the disciple who refused to listen to the Mahout and stood before the elephant, saying, “I am Brahman”, until the elephant took him up in his trunk and put him aside. When he complained to his Guru, the Guru said, “Yes, but why didn’t you listen to the Mahout Brahman? That was why the elephant Brahman had to lift you up and put you out of harm’s way.” In the manifestation there are two sides to the Truth and you cannot ignore either.

*

Samata means a wide universal peace, calm, equanimity, an equal feeling of all in the Divine.

*

Equality is to remain unmoved within in all conditions.

*

Equality is the chief support of the true spiritual consciousness and it is this from which the sadhak deviates when he allows a vital movement to carry him away in feeling or speech or action. Equality is not the same thing as forbearance,—though undoubtedly a settled equality immensely extends, even illimitably, a man's power of endurance and forbearance.

Equality means a quiet and unmoved mind and vital; it means not to be touched or disturbed by things that happen or things said or done to you but to look at them with a straight look, free from the distortions created by personal feeling, and to try to understand what is behind them, why they happen, what is to be learnt from them, what is it in oneself which they are cast against and what inner profit or progress one can make out of them; it means self-mastery over the vital movements, anger and sensitiveness and pride as well as desire and the rest, not to let them get hold of the emotional being and disturb the inner peace, not to speak and act in the rush and impulsion of these things, always to act and speak out of a calm inner poise of the spirit. It is not easy to have this equality in any full and perfect measure, but one should always try more and more to make it the basis of one's inner state and outer movements.

Equality means another thing—to have an equal view of men and their nature and acts and the forces that move them; it helps one to see the truth about them by pushing away from the mind all personal feeling in one's seeing and judgment and even all mental bias. Personal feeling always distorts and makes one see in men's actions, not only the actions themselves, but things behind them which, more often than not, are not there. Misunderstanding and misjudgment which could have been avoided are the result; things of small consequence assume

large proportions. I have seen that more than half of the untoward happenings of this kind in life are due to this cause. But in ordinary life personal feeling and sensitiveness are a constant part of human nature and may be needed there for self-defence, although, I think, even there, a strong, large and equal attitude towards men and things would be a much better line of defence. But, for a sadhak, to surmount them and live rather in the calm strength of the spirit is an essential part of his progress.

The first condition of inner progress is to recognise whatever is or has been a wrong movement in any part of the nature,— wrong idea, wrong feeling, wrong speech, wrong action,— and by wrong is meant what departs from the Truth, from the higher consciousness and higher self, from the way of the Divine. Once recognised it is admitted,— not glossed over or defended,— and it is offered to the Divine for the Light and Grace to descend and substitute for it the right movement of the true consciousness.

*

Complete samata takes long to establish and it is dependent on three things—the soul's self-giving to the Divine by an inner surrender, the descent of the spiritual calm and peace from above and the steady, long and persistent rejection of all egoistic, rajasic and other feelings that contradict samata.

The first thing to do is to make the full consecration and offering in the heart—the increase of the spiritual calm and the surrender are the condition for making the rejection of ego, rajoguna etc. effective.

Samata and Loyalty to Truth

No doubt hatred and cursing are not the proper attitude. It is true also that to look upon all things and all people with a calm and clear vision, to be uninvolved and impartial in one's judgments is a quite proper Yogic attitude. A condition of perfect samata can be established in which one sees all as equal, friends and enemies included, and is not disturbed by what men do or by what happens. The question is whether this is all that is

demanded from us. If so, then the general attitude will be one of a neutral indifference to everything. But the Gita, which strongly insists on a perfect and absolute samata, goes on to say, "Fight, destroy the adversary, conquer." If there is no kind of general action wanted, no loyalty to Truth as against Falsehood except for one's personal sadhana, no will for the Truth to conquer, then the samata of indifference will suffice. But here there is a work to be done, a Truth to be established against which immense forces are arranged, invisible forces which use visible things and persons and actions for their instruments. If one is among the disciples, the seekers of this Truth, one has to take sides for the Truth, to stand against the Forces that attack it and seek to stifle it. Arjuna wanted not to stand for either side, to refuse any action of hostility even against assailants; Sri Krishna, who insisted so much on samata, strongly rebuked his attitude and insisted equally on his fighting the adversary. "Have samata," he said, "and seeing clearly the Truth, fight." Therefore to take sides with the Truth and to refuse to concede anything to the Falsehood that attacks, to be unflinchingly loyal and against the hostiles and the attackers, is not inconsistent with equality. It is personal and egoistic feeling that has to be thrown away; hatred and vital ill-will have to be rejected. But loyalty and refusal to compromise with the assailants and the hostiles or to dally with their ideas and demands and say, "After all we can compromise with what they ask from us", or to accept them as companions and our own people—these things have a great importance. If the attack were a physical menace to the work and the leaders and doers of the work, one would see this at once. But because the attack is of a subtler kind, can a passive attitude be right? It is a spiritual battle inward and outward; by neutrality and compromise or even passivity one may allow the enemy Forces to pass and crush down the Truth and its children. If you look at it from this point you will see that if the inner spiritual equality is right, the active loyalty and firm taking of sides is as right, and the two cannot be incompatible.

I have of course treated it as a general question apart from all particular cases or personal questions. It is a principle of

action that has to be seen in its right light and proportions.

*

It [*samata*] is to face it [*an attack*] without being disturbed and to reject it calmly. Whether one tries to remedy or not remedy should make no difference. Only when one acts against it, one must do it calmly, without anger, excitement, grief or any other disturbing movement.

Samata and Ego

Samata does not mean the absence of ego, but the absence of desire and attachment.

*

I have said “samata” shows absence of desire and attachment — the ego-sense may disappear or it may remain in a subtilised and widened form — it depends on the person.

Equality and Detachment

As for the detachment of which you speak, it comes by attaining the poise of the Spirit, the equality of which the Gita speaks always, but also by sight, by knowledge. For instance, looking at what happened in 1914 — or for that matter at all that is and has been happening in human history — the eye of the Yогin sees not only outward events and persons and causes, but the enormous forces which precipitate them into action. If the men who fought were instruments in the hands of rulers and financiers etc., these in turn were mere puppets in the clutch of these forces. When one is habituated to see the things behind, one is no longer prone to be touched by the outward aspects — or to expect any remedy from political, institutional or social changes; the only way out is through the descent of a consciousness which is not the puppet of these forces but is greater than they are and can force them either to change or disappear.

*

The Yogic attitude consists in calm, detachment, equality, universality — added to this the psychic element, bhakti, love, devotion to the Divine.

Equality in Times of Trouble and Difficulty

Equality is a very important part of this Yoga; it is necessary to keep equality under pain and suffering — and that means to endure firmly and calmly, not to be restless or troubled or depressed or despondent, to go on in a steady faith in the Divine Will. But equality does not include inert acceptance. If, for instance, there is temporary failure of some endeavour in the sadhana, one has to keep equality, not to be troubled or despondent, but one has not to accept the failure as an indication of the Divine Will and give up the endeavour. You ought rather to find out the reason and meaning of the failure and go forward in faith towards victory. So with illness — you have not to be troubled, shaken or restless, but you have not to accept illness as the Divine Will, but rather look upon it as an imperfection of the body to be got rid of as you try to get rid of vital imperfections or mental errors.

*

To be free from all preference and receive joyfully whatever comes from the Divine Will is not possible at first for any human being. What one should have at first is the constant idea that what the Divine wills is always for the best even when the mind does not see how it is so, to accept with resignation what one cannot yet accept with gladness and so to arrive at a calm equality which is not shaken even when on the surface there may be passing movements of a momentary reaction to outward happenings. If that is once firmly founded, the rest can come.

*

It is very good that you have had this experience; for this kind of consciousness full of equality (samata) is just the thing that

has to be acquired and the very basis on which a sound Yogic consciousness full of the Mother can be built up. If it can be fixed, then most of the trouble and difficulty of sadhana disappears — all necessary changes can proceed quietly without these disturbances and upsettings which break and hamper the progress. Also in it there can grow a right and clear understanding of people and things and how to deal with them without friction which can make work and action much more easy. Once this consciousness has come, it is bound to return and increase.

*

Through an equality gained by strong mental control [*the worldly man is able to bear all kinds of difficulty*] — but that is not *samatā*, it is *titikṣā*, the power to bear which is only a first step or a first element of *samatā*.

*

It is not enough to have that equality and silence and freedom only when you are in communion with the sky and sea. It is at all times that you must be able to receive it from above — then there will be a true foundation of the sadhana.

*

You must establish a basis of equanimity within — the peace of the inner being which these surface movements cannot touch, — then if they come on the surface, there will be no violent reaction and they can be rejected with more ease.

*

The sadhak has to keep his quietude and faith and equanimity in all conditions — even when the higher consciousness and experience are not there.

*

One has to proceed on a basis of firm quietude and equanimity with a steady aspiration. It is only if there is a vital excitement that progress becomes a strain and relaxation is needed; for this

demand for relaxation is the vital's counterpart of excitement and its way of relief from it.

*

A perfect spiritual equanimity throughout the being is a sure defence against all the perturbations that might come through the environmental nature.

*

The difficulty of getting the perfect equanimity is a fact, but not for you alone—it has been so for all of us—it is too universal for you to make it a legitimate ground of discouragement. Nothing is more necessary, but nothing is more difficult. So there is no reason why you should discount my encouragement. My encouragement is given in spite of difficulties and not because I think there are none. Never mind these momentary mishaps—shake off the mood and once more *en avant*.

Chapter Three

Quiet and Calm

Quiet, Calm, Peace, Silence

The words “peace, calm, quiet, silence” have each their own shade of meaning, but it is not easy to define them.

Peace — *sānti*.

Calm — *sthiratā*.

Quiet — *acañcalatā*.

Silence — *niścala-nīravatā*.

Quiet is a condition in which there is no restlessness or disturbance.

Calm is a still, unmoved condition which no disturbance can affect — it is a less negative condition than quiet.

Peace is a still more positive condition; it carries with it a sense of settled and harmonious rest and deliverance.

Silence is a state in which either there is no movement of the mind or vital or else a great stillness which no surface movement can pierce or alter.

*

Quiet is rather negative — it is the absence of disturbance.

Calm is a positive tranquillity which can exist in spite of superficial disturbances.

Peace is a calm deepened into something that is very positive amounting almost to a tranquil waveless Ananda.

Silence is the absence of all motion of thought or other vibration of activity.

*

Quietness is when the mind or vital is not troubled, restless, drawn about by or crowded with thoughts and feelings. Especially when either is detached and looks at these as a surface movement, we say that the mind or vital is quiet.

Calmness is a more positive condition, not merely an absence of restlessness, over-activity or trouble. When there is a clear sense of great or strong tranquillity which nothing troubles or can trouble, then we say that calm is established.

*

Calm is a strong and positive quietude, firm and solid—ordinary quietude is mere negation, simply the absence of disturbance.

Peace is a deep quietude where no disturbance can come—a quietude with a sense of established security and release.

In complete silence there are either no thoughts or, if they come, they are felt as something coming from outside and not disturbing the silence.

Silence of the mind, peace or calm in the mind are three things that are very close together and bring each other.

*

These [*tranquillity and stillness*] are general words, of a general and not a special Yogic significance. Quiet, calm and peace can all be described as tranquillity, silence is akin to what is meant by stillness.

Quietude

Quiet means to keep the inner quietude and keep turned to the Mother with the aspiration towards or call for the return of the right condition.

*

Remember first that an inner quietude, caused by the purification of the restless mind and vital, is the first condition of a secure sadhana. Remember, next, that to feel the Mother's presence while in external action is already a great step and one that cannot be attained without a considerable inner progress. Probably, what you feel you need so much but cannot define is a constant and vivid sense of the Mother's force working in you, descending

from above and taking possession of the different planes of your being. That is often a prior condition for the twofold movement of ascent and descent; it will surely come in time. These things can take a long time to begin visibly, especially when the mind is accustomed to be very active and has not the habit of mental silence. When that veiling activity is there, much work has to be carried on behind the mobile screen of the mind and the sadhak thinks nothing is happening when really much preparation is being done. If you want a more swift and visible progress, it can only be by bringing your psychic to the front through a constant self-offering. Aspire intensely, but without impatience.

*

Your mind is too full of demands and desires. If you want to be able to practise the Yoga here, you must throw them from you and learn quietude, desirelessness, simplicity and surrender. It is these you must get first; other things can come afterwards — for this is the only true foundation of the sadhana.

*

Always get back to quietude. It is through the quietude that the right attitude and understanding and movements come back. It is natural for the lower vital to be made up of feelings, impulses and desires and to be attached to outer things — but that is only a part of you. There is also the psychic and the higher mind and higher vital which only need quietude and the help of the Force and Peace behind them to come forward more strongly and dominate over the lower vital and help to change it.

*

You are too easily invaded by these things [*from outside*]. You must call for a calm quietness in the vital and physical and a Force in you and around you which will repel all foreign forces the moment they appear. If there is entire quietude and strength in the nerves, these outside forces will not easily be able to touch you.

*

You should realise that while quiet surroundings are desirable, the true quiet is within and no other will give you the condition you want.

*

The inner spiritual progress does not depend on outer conditions so much as on the way we react to them from within—that has always been the ultimate verdict of spiritual experience. It is why we insist on taking the right attitude and persisting in it, on an inner state not dependent on outer circumstances, a state of equality and calm, if it cannot be at once of inner happiness, on going more and more within and looking from within outwards instead of living in the surface mind which is always at the mercy of the shocks and blows of life. It is only from that inner state that one can be stronger than life and its disturbing forces and hope to conquer.

To remain quiet within, firm in the will to go through, refusing to be disturbed or discouraged by difficulties or fluctuations, that is one of the first things to be learned on the Path. To do otherwise is to encourage the instability of consciousness, the difficulty of keeping experience of which you complain. It is only if you keep quiet and steady within that the lines of experience can go on with some steadiness—though they are never without periods of interruption and fluctuation; but these, if properly treated, can then become periods of assimilation and exhaustion of difficulty rather than denials of sadhana.

A spiritual atmosphere is more important than outer conditions; if one can get that and also create one's own spiritual air to breathe in and live in it, that is the true condition of progress.

*

If you can achieve quietude followed by an upward openness, it is better than the effort which sways between strong experiences and strong adverse reactions.

*

Even to have the quietude and calm somewhere behind or in

a passive way is more important and helpful than it seems. It provides a sort of permanent ground on which ultimately a lasting peace, power and joy can be built. If one can feel one part of the being always quiet in spite of the disturbances in another part, then one has made the first firm step towards a permanent change.

*

This state of emptiness and quietude and absence of reactions is regarded by Yogins as a great step in advance, especially the equality and indifference to what is said or done. For the moment it is a neutral condition only, but that it is usually at first. Afterwards it changes into peace or even into an equal Ananda undisturbed by anything that can happen.

*

The quiet and calm have to be increased so as to be a firm basis for the love and Ananda.

Quiet Mind

A quiet mind is a mind that does not get disturbed, is not restless and always vibrating with the need of mental action.

*

It is not possible to make a foundation in Yoga if the mind is restless. The first thing needed is quiet in the mind. Also, to merge the personal consciousness is not the first aim of the Yoga; the first aim is to open it to a higher spiritual consciousness and for this also a quiet mind is the first need.

*

The first step is a quiet mind — silence is a farther step, but quietude must be there, and by a quiet mind I mean a mental consciousness within which sees thoughts arrive to it and move about, but does not itself feel that it is thinking or identify itself with the thoughts or call them its own. Thoughts, mental

movements may pass through it as wayfarers appear and pass from elsewhere through a silent country—the quiet mind observes them or does not care to observe them but in either case does not become active or lose its quietude. Silence is more than quietude; it can be gained by banishing thought altogether from the inner mind keeping it voiceless or quite outside; but more easily it is established by a descent from above—one feels it coming down, entering and occupying, or surrounding the personal consciousness which then tends to merge itself in the vast impersonal silence.

*

To get rid of the random thoughts of the surface physical mind is not easy. It is sometimes done by a sudden miracle as in my own case, but that is rare. Some get it done by a slow process of concentration, but that may take a very long time. It is easier to have a quiet mind with things that come in passing on the surface, as people pass in the street, and one is free to attend to them or not—that is to say, there develops a sort of double mind, one inner silent and concentrated when it pleases to be so, a quiet witness when it chooses to see thoughts and things,—the other meant for surface dynamism. It is probable in your case that this will come as soon as these descents of peace, intensity or Ananda get strong enough to occupy the whole system.

*

How can you throw away the mind unless you want to disappear from manifested existence? It has first to be made quiet and open to the higher consciousness and transformed by the descent of the higher consciousness.

*

First aspire and pray to the Mother for quiet in the mind, purity, calm and peace, an awakened consciousness, intensity of devotion, strength and spiritual capacity to face all inner and outer difficulties and go through to the end of the Yoga. If the consciousness awakens and there is devotion and intensity of

aspiration, it will be possible for the mind, provided it learns quietude and peace, to grow in knowledge.

*

It is in the quiet mind that the true observation and knowledge come.

*

You have to become conscious [*in writing poetry*] as in Yoga. The mind has to be silent and you have to become aware of the inspiration as it comes and its source and of the mixture that comes on the way. The more the mind becomes quiet, the more all this is possible.

*

All quietude of the mind makes good conditions for the receptivity to act.

*

As I have said already, in all matters, work and study as well as in the inner progress in the Yoga, the same thing is needed if you want perfection—quietude of mind, becoming aware of the Force, opening to it, allowing it to work in you. To aim at perfection is all right, but restlessness of mind is not the way towards it. To dwell upon your imperfections and be always thinking how to do and what to do, is not the way either. Remain quiet, open yourself, allow the consciousness to grow—call the Force to work. As it grows and as the Force works, you will become aware not only of what is imperfect, but of the movement which will take you (not at one step, but progressively) out of the imperfection and you will then only have to follow that movement.

If you overstrain yourself by too prolonged work or a restless working, that disturbs or weakens the nervous system, the vital-physical, and lays one open to the action of the wrong forces. To work but quietly so as to have a steady progress is the right way.

*

1. A quiet mind makes consciousness easier.

2. If you keep a quiet mind and a constant contact with myself and the Mother and the true Light and Force, then things will become easy and straight — it is the *only* way to get to the realisation.

3. It is a mistake to think that this method will not lead you to the supramental realisation. It is the only way to advance towards the supramental change.

4. It is because you become doubtful and begin to follow after other ways and other (lower) experiences that you get again confused and full of incertitudes.

5. Keep to *one* way, the way shown to you by me. It is by following this way that you can reach the wideness you want — if you run about on many ways, that will bring not wideness but confusion.

6. Here in the lower nature there are many things, but they are in a state of disharmony, so to follow them all together means disharmony, confusion, want of organisation, fight. In the higher (supramental) nature there is a greater wideness and much more is there than in the lower nature; but all is harmony, organisation, peace. Follow therefore the one way that leads to the higher supramental nature.

7. Do not be impatient, because full knowledge does not come to you at once. In quietude of mind keep the contact, let the true Light and Force work and with time all knowledge will come and the Truth will grow in you.

*

Do you imagine that a quiet mind cannot reject anything and it is only the unquiet mind that can do it? It is the quiet mind that can best do it. Quiet does not mean inert and tamasic.

*

That is absurd. Doing nothing with the mind is not quiet or silence. It is inactivity that keeps the mind thinking mechanically and discursively instead of concentrating on an object — that is all.

*

Keeping the mind without occupation is not the same thing as peace or silence.

Vacant Mind

Keep the quietude and do not mind if it is for a time an empty quietude; the consciousness is often like a vessel which has to be emptied of its mixed or undesirable contents; it has to be kept vacant for a while till it can be filled with things new and true, right and pure. The one thing to be avoided is the refilling of the cup with the old turbid contents. Meanwhile wait, open yourself upwards, call very quietly and steadily, not with a too restless eagerness, for the peace to come into the silence and, once the peace is there, for the joy and the presence.

*

The difference between a vacant mind and a calm mind is this, that when the mind is vacant, there is no thought, no conception, no mental action of any kind, except an essential perception of things without the formed idea; but in the calm mind, it is the substance of the mental being that is still, so still that nothing disturbs it. If thoughts or activities come, they do not rise at all out of the mind, but they come from outside and cross the mind as a flight of birds crosses the sky in a windless air. It passes, disturbs nothing, leaving no trace. Even if a thousand images or the most violent events pass across it, the calm stillness remains as if the very texture of the mind were a substance of eternal and indestructible peace. A mind that has achieved this calmness can begin to act, even incessantly and powerfully, but it will keep its fundamental stillness—originating nothing from itself but receiving from Above and giving it a mental form without adding anything of its own, calmly, dispassionately, though with the joy of the Truth and the happy power and light of its passage.

Calm

It is the first secret of Yoga, to maintain the inner calm always

and from that calm to meet everything.

*

It is not necessary [*in a calm mind*] that there should be no thought. When there is no thought, it is silence. But the mind is said to be calm when thoughts, feelings, etc. may pass through it, but it is not disturbed. It feels that the thoughts are not its own; it observes them perhaps; but it is not perturbed by anything.

*

What you have written about your condition seems to be correct as a whole. There is certainly a greater calm within and a freedom of the inner being which was not there once. It is this which gives you the equality you feel there and the capacity to escape from the more serious disturbances. When one has this basis of inner calm, the difficulties and imperfections of the surface can be dealt with without upsets, depressions, etc. The power to go among others without any invasion is also due to the same cause.

*

Do not attach so much importance to mistakes or insist on your non-receptiveness and unconsciousness. You have only to turn always to the Force that gives you calmness and in the calmness you will become progressively more and more conscious and receptive.

*

Calm, even if it seems at first only a negative thing, is so difficult to attain that to have it at all must be regarded as a great step in advance.

In reality, calm is not a negative thing; it is the very nature of the Sat-Purusha and the positive foundation of the divine consciousness. Whatever else is aspired for and gained, this must be kept. Even Knowledge, Power, Ananda, if they come and do not find this foundation, are unable to remain and have to withdraw until the divine purity and peace of the Sat-Purusha are permanently there.

Aspire for the rest of the divine consciousness, but with a calm and deep aspiration. It can be ardent as well as calm, but not impatient, restless or full of rajasic eagerness.

Only in the quiet mind and being can the supramental Truth build its true creation.

*

The calm from above came to you and established your connection with the Above,—and if you hold firmly to it, you will be able to remain calm. But to be rid of these vital disturbances from outside, you have to get down the Power and Will that is also there above—or at least so to be connected with it that it will act whenever you call upon it against the forces of the Ignorance.

*

It is the calm that has come down from above, only you are feeling it from there (mind and heart) and not from above the mind. But you have to find it below the heart and not only from the heart above,—the calm has to spread lower down.

*

The first [*calmness with disturbances on the surface*] is the ordinary fundamental calm of the individual Adhar—the second [*perfect stillness in the body and in the surrounding atmosphere*] is the fundamental limitless calm of the cosmic consciousness, a calm which abides whether separated from all movements or supporting them.

This [*limitless stillness*] is the calm of the Atman, the Self above, silent, immutable and infinite.

Chapter Four

Peace

Peace Is Something Positive

Peace is more positive than calm — there can be a negative calm which is merely an absence of disturbance or trouble, but peace is always something positive bringing not merely a release as calm does but a certain happiness or Ananda of itself. There is also a positive calm, something that stands firm against all things that seek to trouble, not thin and neutral like the negative calm, but strong and massive. Very often the two words are used in the same sense, but one can distinguish them in their true sense as above.

*

In peace there is besides the sense of stillness a harmony that gives a feeling of liberation and full satisfaction.

*

It is very good news. The peace settling in the system and with it a happy activity — that is the basis for your Yoga which I always wanted you to have — a sunny condition in which what has to come in will come in and expand like a bud into flower and what has to fall off will fall off in its time like a slough discarded.

*

The quietude and silence which you feel and the sense of happiness in it are indeed the very basis of successful sadhana. When one has got that, then one may be sure that the sadhana is placing itself on a sound footing. You are also right in thinking that if this quietude is fully established all that is concealed within will come out. It is true also that the happiness of this peace is far greater than anything outer objects can bring — there can be no comparison. To become indifferent to the attraction of outer

objects is one of the first rules of Yoga, for this non-attachment liberates the inner being into peace and the true consciousness. It is only when one sees the Divine in all things that objects get a value for the Yoga, but even then not for their own sake or as objects of desire, but for the sake of the Divine within and as a means of the divine work and manifestation.

Peace Comes Little by Little

To nobody does the divine calm and peace come uninterruptedly in the early stages of the Yoga — it comes little by little — it is sometimes absent for long periods together, or there are strong attacks which cloud it over. It is by long sadhana that one gets the permanent peace.

*

In the beginning the peace and calmness comes like that only for a short time. The Adhar cannot keep it, its own natural condition being different. But afterwards the power of holding increases until in some part of the being at least it is constant.

A Settled or Established Peace

It is very good indeed. The peace and silence must settle deep in, so deep that whatever comes from outside can only pass over the surface without troubling the settled calm within — it is good also that the meditation comes of itself. It means that the Yoga-Force is beginning to take up the sadhana.

*

Yes, a settled peace and strength supporting the intensity and from which everything foreign falls off, is the true basis.

*

The first thing to do in the sadhana is to get a settled peace and silence in the mind. Otherwise you may have experiences, but nothing will be permanent. It is in the silent mind that the true

consciousness can be built.

A quiet mind does not mean that there will be no thoughts or mental movements at all, but that these will be on the surface and you will feel your true being within separate from them, observing but not carried away, able to watch and judge them and reject all that has to be rejected and to accept and keep to all that is true consciousness and true experience.

Passivity of the mind is good, but take care to be passive only to the Truth and to the touch of the Divine Shakti. If you are passive to the suggestions and influences of the lower nature, you will not be able to progress or else you will expose yourself to adverse forces which may take you far away from the true path of Yoga.

Aspire to the Mother for this settled quietness and calm of the mind and this constant sense of the inner being in you standing back from the external nature and turned to the Light and Truth.

The forces that stand in the way of sadhana are the forces of the lower mental, vital and physical nature. Behind them are adverse powers of the mental, vital and subtle physical worlds. These can be dealt with only after the mind and heart have become one-pointed and concentrated in the single aspiration to the Divine.

*

If the peace or silence is once absolutely established, no amount of movements on the surface can impair or abolish it. It can bear all the movements of the universe and yet be the same.

*

When the peace is fully established everywhere in the being, these things [*reactions in the lower vital*] will not be able to shake it. They may come first as ripples on the surface, then only as suggestions which one looks at or does not care to look at, but in either case they don't get inside, affect or disturb at all.

It is difficult to explain, but it is something like a mountain at which one throws stones — if conscious all through the

mountain may feel the touch of the stones, but the thing would be so slight and superficial that it would not be in the least affected. In the end even that reaction disappears.

*

The peace liberates from all dependence on outer contacts — it brings what the Gita calls the *ātmarati*. But at first there is a difficulty in keeping it intact when there is the contact with others because the consciousness has the habit of running outwards in speech or external interchange or else of coming down to the normal level. One must therefore be very careful until it is fixed; once fixed it usually defends itself, for all outer contacts become surface things to a consciousness full of the higher peace.

*

Even when there is the peace and the wideness, these things [*imaginings about old enjoyments*] can float on the surface and try to come in — only then they do not occupy the consciousness but touch it merely. It is what was regarded by the old Yogis as a mechanical remnant of Prakriti, a continuation of its blind habit which remained after the essential liberation of the self. It was treated lightly as of no importance — but that view is not tenable in our sadhana which aims not only at a liberation of the Purusha but at a *complete* transformation of the Prakriti also.

*

That is of course how it should be. It should go so far indeed that you will feel this peace and vastness as your very self, the abiding stuff of your consciousness — unchangeably there.

Peace in the Mind, Vital and Physical

Yes, certainly, there is a mental peace, a vital peace, a peace of the physical Nature. It is the peace of a higher consciousness that descends from above.

*

The silence and peace are there waiting to manifest. Let the mind and vital give all themselves and they will pour in and reveal themselves.

*

There can be peace in the mind even when the vital is not quite at rest or peace in the inner being even if the surface is disturbed. Consciousness cannot feel at rest and free, if there is no peace.

*

If you get peace, then to clean the vital becomes easy. If you simply clean and clean and do nothing else, you go very slowly — for the vital gets dirty again and has to be cleaned a hundred times. The peace is something that is clean in itself — so to get it is a positive way of securing your object. To look for dirt only and clean is the negative way.

*

When the light and peace are full in the vital and physical consciousness, it is this that remains always as a basis for the right movement of the whole nature.

*

It is the same peace [*in the physical as in the vital*] — but is felt materially in the material substance, concretely in the physical mind and nervous being, as well as psychologically in the mind and vital or subtly in the subtle body.

*

I presume that [*feeling peace concretely between the lobes of the brain*] would mean that the peace had become or was becoming very material and solid and physically tangible — “peace in the cells”. Everything is a “substance” — even peace, consciousness, ananda, — only there are different orders of substance.

*

Certainly, peace, purity and silence can be felt in all material

things — for the Divine Self is there in all.

*

Nature by itself is always full of peace — a peace which is fundamental and even the perturbations of mind and life cannot break.

Peace in the Inner Being

It is quite usual to feel an established peace in the inner being even if there is disturbance on the surface. In fact that is the usual condition of the Yogi before he has attained the absolute samata in all the being.

*

When the peace is deep or wide, it is usually in the inner being. The outer parts do not ordinarily go beyond a certain measure of quietude — they get deep peace only when they are flooded with it from the inner being.

*

The peace starts in the inner being — it is spiritual and psychic but it overflows the outer being — when it is there in the activity, it means either that the ordinary restless mind, vital, physical has been submerged by the flood of the inner peace or, at a more advanced stage, that they have been partially or wholly changed into thoughts, forces, emotions, sensations which have in their very stuff an essence of inner silence and peace.

*

If peace becomes permanent in the inner being, then the sub-nature becomes an external and superficial thing — one part of the consciousness is then free; unmoved by anything that happens, it regards the surface turmoil as something not belonging to itself. If the peace extends in the same way into the external parts also, then the whole being becomes free and the inferior nature is felt only as something moving about in the atmosphere, trying to enter but unable to do so. But this of course happens

only when the descents of Peace have turned into a massive stability of Peace.

*

Yes, the inward move is the right one. To live within in the peace and silence is the first necessity. I spoke of the wideness because in the wideness of silence and peace (which the Yogins recognise as the realisation of self at once individual and universal) is the basis for harmonising the inward and the outward. It will come.

*

Peace is never easy to get in the life of the world and never constant, unless one lives deep within and bears the external activities as only a surface front of our being.

Passive Peace

Passive peace is not supposed to do anything. It is by the complete solid presence of peace alone that all disturbance is pushed out to the surface or outside the consciousness.

*

It is not the innate character of passive peace that it can only concentrate in inaction. It can be there and concentrate in or behind action also.

Peace and Inertia

The Peace is not of the nature of inertia, but the inertia (*tamas*) is a degradation of peace or rest as *rajas* is a degradation of divine Force. So when the physical is invited to peace and cannot receive it, it brings up inertia instead.

*

Rest of the being from effort, disturbance etc.¹ The Spirit is

¹ *The correspondent wrote to Sri Aurobindo, “You have said, ‘The inertia (*tamas*) is a degradation of peace or rest.’ What sort of rest do you mean?” — Ed.*

eternally at rest even in the midst of action — peace gives this spiritual rest. Tamas is a degradation of it and leads to inaction.

Peace and Force

The peace is the condition of the right play of the Force. Force and Peace are two different powers of the Divine.

*

Peace is the first condition, but peace of itself does not bring Force — it is a receptacle of Force, not a bringer of Force.

*

A peaceful state is the basis of the Yogic consciousness. It is only when that is complete and fully established that the true intensity and energy can come.

*

The greater the quietude, the greater the energy that can be received.

Peace, Love and Joy

It is the Vaishnava feeling that the Vedantic peace is not enough, the love and joy of the Divine is more precious. But unless the two things go together, the love and joy felt is perhaps intense, but impermanent, and it is also true that it gets easily mixed, misdirected or turns to something that is not the true thing at all. Peace and purity must be got as the foundation of the consciousness, otherwise there is no firm standing ground for the divine play.

*

Active experience of the joy, peace, love, etc. when the direct contact is there; but even when it is not there, a quiet mind, heart and vital waiting and aspiring for the contact and the Presence — this should always be the condition.

No disturbance or confusion due to mere vital-physical impressions and experiences. To throw these away always, not to want them or get interested when they come—this is what is very much needed in you.

Always either the contact and the true experience *or* the quiet peace and aspiration.

Peace, Happiness, Joy, Delight, Ananda

To be full of peace, the heart quiet, not troubled by grief, not excited by joy is a very good condition. As for Ananda, it can come not only with its fullest intensity but with a more enduring persistence when the mind is at peace and the heart delivered from ordinary joy and sorrow. If the mind and heart are restless, changeful, unquiet, Ananda of a kind may come, but it is mixed with vital excitement and cannot abide. One must get peace and calm fixed in the consciousness first, then there is a solid basis on which the Ananda can spread itself and in its turn become an enduring part of the consciousness and the nature.

*

The peace need not be grave or joyless—there should be nothing grey in it—but the gladness or joy or sense of lightness that comes in the peace must be necessarily something internal, self-existent or due to a deepening of experience—it cannot, like the laughter of which you speak, be conveyed by an external cause or dependent upon it, e.g. something amusing, exhilarating etc.

*

It is when one is full of peace that one laughs most gladly. It is an inner condition, not something external like being silent or not laughing. It is a condition of serenity and stillness within in which there is no disturbance even if things go wrong or people are unpleasant or the body feels unwell—the state of serene inner gladness remains the same. It is self-existent.

*

Happiness is a condition of gladness, sense of inner ease and welfare, contentment, a sunlit life — it is more quiet in its nature than joy and delight.

Joy (*harsa*) is more intense. It is a strong movement of great gladness with an exultation, a leaping up of the vital to take some happiness, good fortune or other thing pleasant to the being.

Delight is an intense joy or an intense pleasure in something or an intensely joyful condition. At its most intense it becomes what is called rapture or ecstasy when one is “carried away” or “lifted out of” oneself by the intensity of the delight.

*

Joy is a vital movement, exciting, restless and transient.

In Ananda there is no excitement, it is a calm and happy and intense spiritual state or spiritual movement.

*

The joy also should be deep within, then it will not conflict with the deeps of peace and inner consciousness.

*

Shanti is peace or calm — it is not Ananda. There can of course be a calm Ananda.

*

Peace is a sign of mukti — Ananda moves towards siddhi.

*

There are two conditions, one of Ananda, another of great calm and equality in which there is no joy or grief. If one attains the latter, afterwards a greater more permanent Ananda becomes possible.

*

The active Ananda can culminate in the shanta Ananda. Also when the shanta Ananda is established, it is the base from which active Ananda arises without disturbing its calmness.

Chapter Five

Silence

Freedom from Thoughts

Silence means freedom from thoughts and vital movements — when the whole consciousness is quite still.

*

It is the silence of the mind and vital — silence implying here not only cessation of thoughts but a stillness of the mental and vital substance. There are varying degrees of depth of this stillness.

*

It is not possible to establish a deep silence all at once unless you can separate yourself from the thoughts, feel them as coming from outside and reject them before they enter. But everybody cannot do that at once.

*

It is quite possible for thoughts to pass without disturbing the silence — but for that you must be perfectly detached from the thoughts and indifferent to them.

*

If there is absolute silence within it is quite natural that the thoughts on entering and touching it should fall off. It is the way in which silence of the outer mind usually comes.

*

In the entirely silent mind there is usually the static sense of the Divine without any active movement. But there can come into it all higher thought and aspiration and movements. There is then no absolute silence but one feels a fundamental silence behind which is not disturbed by any movement.

Silence and True Knowledge

A silent mind is the first step towards true knowledge and the experience of the Divine.

*

I have read again the message of the Yogi quoted in X's letter but apart from the context nothing much or very definite can be made out of it. There are two statements which are clear enough—

"In Silence is wisdom"—it is in the inner silence of the mind that true knowledge can come; for the ordinary activity of the mind only creates surface ideas and representations which are not true knowledge. Speech is usually only the expression of the superficial nature—therefore to throw oneself out too much in such speech wastes the energy and prevents the inward listening which brings the word of true knowledge.

"In listening you will win what you are thinking of" means probably that in the silence will come the true dynamic thought formations which can effectuate or realise themselves. Thought can be a force which realises itself, but the ordinary surface thinking is not of that kind, there is in it more waste of energy than anything else. It is in the thought that comes in a quiet or silent mind that there is power.

"Talk less and gain power" has essentially the same meaning. Not only a truer knowledge, but a greater power comes to one in the quietude and silence of a mind that instead of bubbling on the surface can go into its own depths and listen for what comes from a higher consciousness.

It is probably this that is meant—these are things known to all who have some experience of Yoga.

Silence and Quietness of Mind

Silence is a state of the consciousness which comes of itself from above when you open to the Divine Consciousness—you need not trouble about that now.

A quiet mind, receiving things and looking at them without effervescence or haste, not rushing about or throwing up random ideas, is what is necessary.

*

It is not an undesirable thing for the mind to fall silent, to be free from thoughts and still—for it is oftenest when the mind falls silent that there is the full descent of a wide peace from above and in that wide tranquillity the realisation of the silent Self above the mind spread out in its vastnesses everywhere. Only, when there is the peace and the mental silence, the vital mind tries to rush in and occupy the place or else the mechanical mind tries to raise up for the same purpose its round of trivial habitual thoughts. What the sadhaka has to do is to be careful to reject and hush these outsiders, so that during the meditation at least the peace and quietude of the mind and vital may be complete. This can be done best if you keep a strong and silent will. That will is the will of the Purusha behind the mind; when the mind is at peace, when it is silent one can become aware of the Purusha, silent also, separate from the action of the nature.

To be calm, steady, fixed in the spirit, *dhīra, sthira*, this quietude of the mind, this separation of the inner Purusha from the outer Prakriti is very helpful, almost indispensable. So long as the being is subject to the whirl of thoughts or the turmoil of the vital movements one cannot be thus calm and fixed in the spirit. To detach oneself, to stand back from them, to feel them separate from oneself is indispensable.

For the discovery of the true individuality and building up of it in the nature, two things are necessary, first, to be conscious of one's psychic being behind the heart and, next, this separation of the Purusha from the Prakriti. For the true individual is behind veiled by the activities of the outer nature.

*

Silence is always good; but I do not mean by quietness of mind entire silence. I mean a mind free from disturbance and trouble,

steady, light and glad so as to be open to the Force that will change the nature. The important thing is to get rid of the habit of the invasion of troubling thoughts, wrong feelings, confusion of ideas, unhappy movements. These disturb the nature and cloud it and make it more difficult for the Force to work; when the mind is quiet and at peace, the Force can work more easily. It should be possible to see things that have to be changed in you without being upset or depressed; the change is the more easily done.

*

Let us not exaggerate anything. It is not so much getting rid of mental activity as converting it into the right thing. Krishnaprem has mental activity, but it is a mind that has gone inside and sees things from there, an intuitive mind; I have mental activity (in the midst of silence) whenever necessary, but it is a mind that has gone up and sees things from above, an overmind action. What has to be surpassed and changed is the intellectual reason which sees things from outside only by analysis and inference — when it does not do it rather by taking a hasty look and saying "So it is" or "So it is not". But you can't get the inner or upper mind unless the old mental activity becomes a little quiet. A quiet mind does not involve itself in its thoughts or get run away with by them; it stands back, detaches itself, lets them pass, without identifying itself, without making them its own. It becomes the witness mind watching the thoughts when necessary, but able to turn away from them and receive from within and from above. Silence is good, but absolute silence is not indispensable, at least at this stage. I do not know that to wrestle with the mind to make it quiet is of much use; usually the mind gets the better of that game. It is this standing back, detaching oneself, getting the power to listen to something else other than the thoughts of the external mind that is the easier way. At the same time one can look up, as it were, imaging to oneself the Force as there just above and calling it down or quietly expecting its help. That is how most people do it till the mind falls gradually quiet or silent of itself or else silence begins

to descend from above. But it is important not to allow the depression or despair to come in because there is no immediate success; that can only make things difficult and stop any progress that is preparing.

Silence, Peace and Calm

The silence and peace are themselves part of the higher consciousness — the rest comes in the silence and peace.

*

When the mind is silent, there is peace and in peace all things that are divine can come. When there is not the mind, there is the Self which is greater than the mind.

*

You have attained the silent inner consciousness, but that can be covered over by disturbance — the next step is for calm and silence to be established as the basis in the more and more outer consciousness — probably these [*higher*] forces are working for that. Then the play of the ordinary forces will be only on the surface and can be more easily dealt with.

Silence and True Activity

The silence is the silence of the inner consciousness and it is in that silence unmoved by outward things that the true activity of the consciousness can come without disturbing the silence — true perceptions, will, feelings, action. There also one can feel more easily the Mother's working. As for the heat, it must be the heat of Agni, the fire of purification and tapasya; it often feels like that when the inner work is going on.

*

It is not possible for the spontaneous silent condition to last always at once, but that is what must grow in one till there is a constant inner silence — a silence which cannot be disturbed

by any outward activity or even by any attempt at attack or disturbance.

The condition you describe shows precisely the growth of this inner silence. It has to fix itself eventually as the basis of all spiritual experience and activity. It does not matter if one does not know what is going on within behind the silence. For there are two conditions in the Yoga, one in which all is silent and there is no thought, feeling or movement even though one is acting outwardly as others do — another in which a new consciousness becomes active bringing knowledge, joy, love and other spiritual feelings and inner activities, but yet at the same time there is a fundamental silence or quietude. Both are necessary in the development of the inner being. The absolutely silent state, which is one of lightness, voidness and release, prepares the other and supports it when it comes.

*

The passive silence is that in which the inner consciousness remains void and at rest, not making any reaction on outer things and forces.

The active silence is that in which there is a great force that goes out on things and forces without disturbing the silence.

*

It is on the Silence behind the cosmos that all the movement of the universe is supported.

It is from the Silence that the peace comes; when the peace deepens and deepens, it becomes more and more the Silence.

In a more outward sense the word silence is applied to the condition in which there is no movement of thought or feeling etc., only a great stillness of the mind.

But there can be an action in the Silence, undisturbed even as the universal action goes on in the cosmic Silence.

Section Four

The Divine Response

Chapter One

The Divine Grace and Guidance

The Divine Grace

The Divine Will works in all things — it may work out anything whatever. The Divine Grace comes in to help and save.

*

If you would know what is the Divine Grace, it is necessary first to realise that it is something which contradicts the law of the world, for it is outside its normal rule and not of its nature. There is here something which does not seem to govern at all the cosmic action, but only to intervene, and yet it is always there; an element without which this universe would be either a tremendous machine or a fortuitously and yet inexorably ordered chance. For to our observation all here is a process, a mechanism of Ignorance and Inconscience manifesting a precarious consciousness distressed by a nostalgia of Truth that exists somewhere and yet seems to be unseizable and unrealisable, — a mechanism of Law that controls a frightening whirl of Forces, a mechanism of implacable justice measuring things by a mysterious and to us unintelligible balance, a mechanism of evolution with matter and inconscience as its starting point, a precarious and groping life and consciousness as its highest realised term and as its final uncertain poise some possibility of the Divine. Our senses can discover no visible presence of the Divine, our intellect can do without any idea of its intervention — but it is another experience than that of the intellect and the senses which once it is there will no longer let us escape from the Presence or refuse to see the intervening Will or Grace.

This world is a world of Ignorance and by Ignorance a world of strife, seeking, error and suffering. We start by knowing nothing and have to learn everything; because our knowledge is a mixture of truth and falsehood and our will constantly

mistaken when not perverted, we stumble at every step and pay the price of experience in pain and grief and sorrow. It would seem as if nothing could save us but thought and knowledge translated into right will and action and it is that for which man by his intellect is seeking and yet by his intellect he has never found it and it looks as if by his intellect he would never find it. Then there is probably something else beyond the intellect which alone can give him the Light—something beyond his mind and greater than himself—a Grace that intervenes, the law of a supernormal Light and Will, a help, an opening from above.

*

I should like to say something about the Divine Grace—for you seem to think it should be something like a Divine Reason acting upon lines not very different from those of human intelligence. But it is not that. Also it is not a universal Divine Compassion either, acting impartially on all who approach it and acceding to all prayers. It does not select the righteous and reject the sinner. The Divine Grace came to aid the persecutor (Saul of Tarsus), it came to St. Augustine the profligate, to Jagai and Madhai of infamous fame, to Bilwamangal and many others whose conversion might well scandalise the puritanism of the human moral intelligence; but it can come to the righteous also—curing them of their self-righteousness and leading to a purer consciousness beyond these things. It is a power that is superior to any rule, even to the Cosmic Law—for all spiritual seers have distinguished between the Law and Grace. Yet it is not indiscriminate—only it has a discrimination of its own which sees things and persons and the right times and seasons with another vision than that of the Mind or any other normal Power. A state of Grace is prepared in the individual often behind thick veils by means not calculable by the mind and when the state of Grace comes then the Grace itself acts. There are these three powers: (1) the Cosmic Law, of Karma or what else; (2) the Divine Compassion acting on as many as it can reach through the nets of the Law and giving them their chance; and (3) the Divine Grace which

acts more incalculably but also more irresistibly than the others. The only question is whether there is something behind all the anomalies of life which can respond to the call and open itself with whatever difficulty till it is ready for the illumination of the Divine Grace — and that something must be not a mental and vital movement but an inner somewhat which can well be seen by the inner eye. If it is there and when it becomes active in front, then the Compassion can act, though the full action of the Grace may still wait attending the decisive decision or change; for this may be postponed to a future hour, because some portion or element of the being may still come between, something that is not yet ready to receive.

*

Each mind can have its own way of approaching the supreme Truth and there is an entrance for each as well as a thousand ways for the journey to it. It is not necessary to believe in the Grace or to recognise a Godhead different from one's highest Self — there are ways of Yoga that do not accept these things. Also for many no form of Yoga is necessary — they arrive at some realisation by a sort of pressure of the mind or the heart or the will breaking the screen between it and what is at once beyond it and its own source. What happens after the breaking of the screen depends on the play of the Truth on the consciousness and the turn of the nature. There is no reason therefore why X's realisation of his being should not come in its own way by growth from within, not by the Divine Grace if his mind objects to that description, but let us say by the spontaneous movement of the Self within him.

For, as to this "Grace", we describe it in that way because we feel in the infinite Spirit or Self of existence a Presence or a Being, a Consciousness that determines — that is what we speak of as the Divine, — not a separate Person, but the one Being of whom our individual self is a portion or a vessel. But it is not necessary for everybody to regard it in that way. Supposing it is the impersonal Self of all only, yet the Upanishad says of the Self and its realisation, "This understanding is not to be gained by

reasoning nor by tapasya nor by much learning, but whom this Self chooses, to him it reveals its own body.” Well, that is the same thing as what we call the Divine Grace,—it is an action from above or from within independent of mental causes which decides its own movement. We can call it the Divine Grace; we can call it the Self within choosing its own hour and way to manifest to the mental instrument on the surface; we can call it the flowering of the inner being or inner nature into self-realisation and self-knowledge. As something in us approaches it or as it presents itself to us, so the mind sees it. But in reality, it is the same thing and the same process of the being in Nature.

I could illustrate my meaning more concretely from my own first experience of the Self, long before I knew even what Yoga was or that there was such a thing, at a time when I had no religious feeling, no wish for spiritual knowledge, no aspiration beyond the mind, only a contented agnosticism and the impulse towards poetry and politics. But it would be too long a story, so I do not tell it here.

*

It is not indispensable that the Grace should work in a way that the human mind can understand, it generally doesn’t: it works in its own “mysterious” way. At first usually it works behind the veil, preparing things, not manifesting. Afterwards it may manifest, but the sadhak does not understand very well what is happening. Finally, when he is capable of it, he both feels and understands or at least begins to do so. Some feel and understand from the first or very early; but that is not the ordinary case.

*

“The ordinary action of the Divine is a constant intervention within the actual law of things”—that may or may not be but is not usually called the Divine Grace. The Divine Grace is something not calculable, not bound by anything the intellect can fix as a condition — though ordinarily some call, aspiration, intensity of the psychic being can awaken it, yet it acts sometimes without any apparent cause even of that kind.

The Grace and Personal Effort

Without the Grace of the Divine nothing can be done, but for the full Grace to manifest the sadhak must make himself ready. If everything depends on the Divine intervention, then man is only a puppet and there is no use of sadhana, and there are no conditions, no law of things — therefore no universe, but only the Divine rolling things about at his pleasure. No doubt in the last resort all can be said to be the Divine cosmic working, but it is through persons, through forces that it works — under the conditions of Nature. Special intervention there can be and is, but all cannot be special intervention.

*

The Divine Grace and Power can do everything, but with the full assent of the sadhak. To learn to give that full assent is the whole meaning of the sadhana. It may take time either because of ideas in the mind, desires in the vital or inertia in the physical consciousness, but these things have to be and can be removed with the aid or by calling in the action of the Divine Force.

*

There are three main possibilities for the sadhak — (1) To wait on the Grace and rely on the Divine. (2) To do everything himself like the full Adwaitin and the Buddhist. (3) To take the middle path, go forward by aspiration and rejection etc. helped by the Force.

*

Everything should be for the sake of the Divine, this [*aspiration for the Divine's Presence*] also. As for leaving the result to the Divine, it depends on what you mean by the phrase. If it implies dependence on the Divine Grace and equanimity and patience in the persistent aspiration, then it is all right. But it must not be extended to cover slackness and indifference in the aspiration and endeavour.

Strength and Grace

There is nothing unintelligible in what I say about strength and Grace. Strength has a value for spiritual realisation, but to say that it can be done by strength only and by no other means is a violent exaggeration. Grace is not an invention, it is a fact of spiritual experience. Many who would be considered as mere nothings by the wise and strong have attained by Grace; illiterate, without mental power or training, without “strength” of character or will, they have yet aspired and suddenly or rapidly grown into spiritual realisation, because they had faith or because they were sincere. I do not see why these facts which are facts of spiritual history and of quite ordinary spiritual experience should be discussed and denied and argued as if they were mere matters of speculation. Strength, if it is spiritual, is a power for spiritual realisation; a greater power is sincerity; the greatest power of all is Grace. I have said times without number that if a man is sincere, he will go through in spite of long delay and overwhelming difficulties. I have repeatedly spoken of the Divine Grace. I have referred any number of times to the line of the Gita:

Aham tvā sarvapāpebhyo mokṣayisyāmi mā śucah
“I will deliver thee from all sin and evil, do not grieve.”

Grace and Tapasya

Your experience about the meditation is common enough—I used to have it or analogous things hundreds of times. I suppose it is to teach us first that grace is more effective than tapasya and, secondly, that either equanimity or a cheerful spontaneous happy self-opening is as effective, to say the least, as the grimdest wrestling for a result. But it would be dangerous to assume from that that no tapasya and no endeavour is needful—for that might very well mean inertia. I have seen too that very often a long tapasya with doubtful results prepares the moment of grace and the spontaneous downflow. All which seem to be contradictions, but are not in a whole view of things.

*

What X says about tapasya is of course true. If one is not prepared for labour and tapasya, control of the mind and vital, one cannot demand big spiritual gains — for the mind and vital will always find tricks and excuses for prolonging their own reign, imposing their likes and dislikes and staving off the day when they will have to become obedient instruments and open channels of the soul and spirit. Grace may sometimes bring undeserved or apparently undeserved fruits, but one can't demand Grace as a right and privilege — for then it would not be Grace. As you have seen one can't claim that one has only to shout and the answer must come. Besides I have always seen that there has been really a long unobserved preparation before the Grace intervenes and, also, after it has intervened one has still to put in a good deal of work to keep and develop what one has got — as it is in all other things — until there is the complete siddhi. Then of course labour finishes and one is in assured possession. So tapasya of one kind or another is not avoidable.

You are right again about the imaginary obstacles. Good Lord! what mountains of them you have piled up on the way — a regular Abyssinia. It is why we always express depreciation of mental constructions and vital formations — because they are the defence works mind and vital throw up against their capture by the Divine. However the first thing is to become conscious of all that as you have now become, — the next thing is to be firm in knocking it all down and making a *tabula rasa*, a foundation of calm, peace, happy openness for the true building.

No Insistence on the Grace

I have surely never said that you should not want the Divine Response. One does Yoga for that. What I have said is that you should not expect or insist on it at once or within an early time. It can come early or it can come late, but come it will if one is faithful in one's call — for one has not only to be sincere but to be faithful through all. If I deprecate insistence, it is because I have always found it creates difficulties and delays — owing to a strain and restlessness which is created in the nature and

despondencies and revolts of the vital when the insistence is not satisfied. The Divine knows best and one has to have trust in His wisdom and attune oneself with His will. Length of time is no proof of an ultimate incapacity to arrive—it is only a sign that there is something in oneself which has to be overcome and if there is the will to reach the Divine it can be overcome.

Suicide solves nothing—it only brings one back to life with the same difficulties to be faced in worse conditions. If one wishes to escape from life altogether, it can only be by the way of complete inner renunciation and merging oneself in the Silence of the Absolute or by a bhakti that becomes absolute or by a karmayoga that gives up one's own will and desires to the will of the Divine.

I have said also that the Grace *can* at any moment act suddenly, but over that one has no control, because it comes by an incalculable Will which sees things that the mind cannot see. It is precisely the reason why one should never despair,—that and also because no sincere aspiration to the Divine can fail in the end.

Trust in the Divine Grace

Face all these things [*inner disturbances*] quietly and firmly with perseverance in the endeavour of the sadhana. Trust firmly in the Divine Grace and the Divine Grace will not fail you.

*

The best possible way [*to “repay” the Divine Grace*] is to allow the Divine Grace to work in you, never to oppose it, never to be ungrateful and turn against it—but to follow it always to the goal of Light and Peace and unity and Ananda.

Withdrawal of Grace

As for withdrawal of Grace, it might be said that few are those from whom the Grace withdraws, but many are those who withdraw from the Grace.

*

If the will of the individual is towards perdition, if his ego becomes hostile to the Divine, then the Divine is not bound to show him a Grace he does not want at all and kicks at.

The First Responses of the Divine

What you describe in your letter as the response of the Divine would not be called that in the language of Yogic experience — this feeling of greater peace, light, ease, trust, difficulties lessening, certitude would rather be called a response of your own nature to the Divine. There is a Peace or a Light which is the response of the Divine, but that is a wide Peace, a great Light which is felt as a presence other than one's personal self, not part of one's personal nature, but something that comes from above, though in the end it possesses the nature — or there is the Presence itself which carries with it indeed the absolute liberation, happiness, certitude. But the first responses of the Divine are not often like that — they come rather as a touch, a pressure one must be in a condition to recognise and to accept, or it is a voice of assurance, sometimes a very "still small voice", a momentary Image or Presence; a whisper of Guidance sometimes, — there are many forms it may take. Then it withdraws and the preparation of the nature goes on till it is possible for the touch to come again and again, to last longer, to change into something more pressing and near and intimate. The Divine in the beginning does not impose himself — he asks for recognition, for acceptance. That is one reason why the mind must fall silent, not put tests, not make claims — there must be room for the true intuition which recognises at once the true touch and accepts it.

The Divine Guidance

The question you have put¹ raises one of the most difficult and complicated of all problems and to deal with it at all adequately

¹ *The correspondent said that this unhappy world seems doomed to falsehood and suffering, for it is filled with selfishness, pettiness and heartless greed. Why should one embrace such a world, he asked, "where the divine guidance seems so accidental, almost out of place"? — Ed.*

would need an answer as long as the longest chapter of *The Life Divine*. I can only state my own knowledge founded not on reasoning but on experience that there is such a guidance and that nothing is in vain in this universe.

If we look only at outward facts in their surface appearance or if we regard what we see happening around us as definitive, not as processes of a moment in a developing whole, the guidance is not apparent; at most we may see interventions occasional or sometimes frequent. The guidance can become evident only if we go behind appearances and begin to understand the forces at work and the way of their working and their secret significance. After all, real knowledge — even scientific knowledge — comes by going behind the surface phenomena to their hidden process and causes. It is quite obvious that this world is full of suffering and afflicted with transience to a degree that seems to justify the Gita's description of it as "this unhappy and transient world", *anityam asukham*. The question is whether it is a mere creation of Chance or governed by a mechanic inconscient Law or whether there is a meaning in it and something beyond its present appearance towards which we move. If there is a meaning and if there is something towards which things are evolving, then inevitably there must be a guidance — and that means that a supporting Consciousness and Will is there with which we can come into inner contact. If there is such a Consciousness and Will, it is not likely that it would stultify itself by annulling the world's meaning or turning it into a perpetual or eventual failure.

This world has a double aspect. It seems to be based on a material Inconscience and an ignorant mind and life full of that Inconscience; error and sorrow, death and suffering are the necessary consequence. But there is evidently too a partially successful endeavour and an imperfect growth towards Light, Knowledge, Truth, Good, Happiness, Harmony, Beauty,— at least a partial flowering of these things. The meaning of this world must evidently lie in this opposition; it must be an evolution which is leading or struggling towards higher things out of a first darker appearance. Whatever guidance there is must be given under these conditions of opposition and struggle and

must be leading towards that higher state of things. It is leading the individual, certainly, and the world, presumably, towards the higher state, but through the double terms of knowledge and ignorance, light and darkness, death and life, pain and pleasure, happiness and suffering; none of the terms can be excluded until the higher status is reached and established. It is not and cannot be, ordinarily, a guidance which at once rejects the darker terms or still less a guidance which brings us solely and always nothing but happiness, success and good fortune. Its main concern is with the growth of our being and consciousness, the growth towards a higher self, towards the Divine, eventually towards a highest Light, Truth and Bliss; the rest is secondary, sometimes a means, sometimes a result, not a primary purpose.

The true sense of the guidance becomes clearer when we can go deep within and see from there more intimately the play of the forces and receive intimations of the Will behind them. The surface mind can get only an imperfect glimpse. When we are in contact with the Divine or in contact with an inner knowledge and vision, we begin to see all the circumstances of our life in a new light and can observe how they all tended without our knowing it towards the growth of our being and consciousness, towards the work we had to do, towards some development that had to be made,—not only what seemed good, fortunate or successful but the struggles, failures, difficulties, upheavals. But with each person the guidance works differently according to his nature, the conditions of his life, his cast of consciousness, his stage of development, his need of farther experience. We are not automata but conscious beings and our mentality, our will and its decisions, our attitude to life and demand on it, our motives and movements help to determine our course; they may lead to much suffering and evil, but through it all, the guidance makes use of them for our growth in experience and consequently the development of our being and consciousness. All advance by however devious ways, even in spite of what seems a going backwards or going astray, gathering whatever experience is necessary for the soul's destiny. When we are in close contact with the Divine, a protection can come in which

helps or directly guides or moves us; it does not throw aside all difficulties, sufferings or dangers, but it carries us through them and out of them — except where for a special purpose there is need of the opposite.

It is the same thing though on a larger scale and in a more complex way with the guidance of the world-movement. That seems to move according to the conditions and laws or forces of the moment through constant vicissitudes, but still there is something in it that drives towards the evolutionary purpose, although it is more difficult to see, understand and follow than in the smaller and more intimate field of the individual consciousness and life. What happens in a particular juncture of the world-action or the life of humanity, however catastrophic, is not ultimately determinative. Here too one has to see not only the outward play of forces in a particular case or at a particular time but also the inner and secret play, the far-off outcome, the event that lies beyond and the Will at work behind it all. Falsehood and Darkness are strong everywhere on the earth and have always been so and at times they seem to dominate; but there have also been not only gleams but outbursts of the Light. In the mass of things and the long course of Time, whatever may be the appearances of this or that epoch or moment, the growth of Light is there and the struggle towards better things does not cease. At the present time Falsehood and Darkness have gathered their forces and are extremely powerful; but even if we reject the assertion of the mystics and prophets since early times that such a condition of things must precede the Manifestation and is even a sign of its approach, yet it does not necessarily indicate the victory — even temporary — of the Falsehood. It merely means that the struggle between the Forces is at its acme. The result may very well be the stronger emergence of the best that can be; for the world-movement often works in that way. I leave it at that and say nothing more.

Chapter Two

The Divine Force

The Nature of Spiritual Force

All the world, according to Science, is nothing but a play of Energy — a material Energy it used to be called, but it is now doubted whether Matter, scientifically speaking, exists except as a phenomenon of Energy. All the world, according to Vedanta, is a play of a power of a spiritual entity, the power of an original consciousness, whether it be Maya or Shakti, and the result an illusion or real. In the world so far as man is concerned we are aware only of mind energy, life energy, energy in matter; but it is supposed that there is a spiritual energy or force also behind them from which they originate. All things, in either case, are the results of a Shakti, energy or force. There is no action without a Force or Energy doing the action and bringing about its consequence. Farther, anything that has no Force in it is either something dead or something unreal or something inert and without consequence. If there is no such thing as spiritual consciousness, there can be no reality of Yoga, and if there is no Yoga force, spiritual force, Yoga Shakti, then also there can be no effectivity in Yoga. A Yoga consciousness or spiritual consciousness which has no power or force in it, may not be dead or unreal but it is evidently something inert and without effect or consequence. Equally a man who sets out to be a Yogi or Guru and has no spiritual consciousness or no power in his spiritual consciousness — a Yoga force or spiritual force — is making a false claim and is either a charlatan or a self-deluded imbecile; still more is he so if having no spiritual force he claims to have made a path others can follow. If Yoga is a reality, if spirituality is anything better than a delusion, there must be such a thing as Yoga force or spiritual force.

It is evident that if spiritual force exists, it must be able to produce spiritual results — therefore there is no irrationality in

the claim of those sadhaks who say that they feel the force of the Guru or the force of the Divine working in them and leading towards spiritual fulfilment and experience. Whether it is so or not in a particular case is a personal question, but the statement cannot be denounced as *per se* incredible and manifestly false because such things cannot be. Farther, if it be true that spiritual force is the original one and the others are derivative from it, then there is no irrationality in supposing that spiritual force can produce mental results, vital results, physical results. It may act through mental, vital or physical energies and through the means which these energies use, or it may act directly on mind, life or matter as the field of its own special and immediate action. Either way is *prima facie* possible. In a case of cure of illness, someone is lying ill for two days, weak, suffering from pains and fever; he takes no medicine but finally asks for cure from his Guru; the next morning he rises well, strong and energetic. He has at least some justification for thinking that a force has been used on him and put into him and that it was a spiritual power that acted. But in another case medicines may be used, while at the same time the invisible force may be called for to aid the material means, for it is a known fact that medicines may or may not succeed — there is no certitude. Here for the reason of an outside observer (one who is neither the user of the force nor the doctor nor the patient) it remains uncertain whether the patient was cured by the medicines only or by the spiritual force with the medicines as an instrument. Either is possible, and it cannot be said that because medicines were used, therefore the working of a spiritual force is *per se* incredible and demonstrably false. On the other hand it is possible for the doctor to have felt a force working in him and guiding him or he may see the patient improving with a rapidity which, according to medical science, is incredible. The patient may feel the force working in himself bringing health, energy, rapid cure. The user of the force may watch the results, see the symptoms he works on diminishing, those he did not work upon increasing till he does work on them and then immediately diminishing, the doctor working according to his unspoken suggestions, etc. etc. until the cure is

done. (On the other hand he may see forces working against the cure and conclude that the spiritual force has to be contented with a withdrawal or an imperfect success.) In all that the doctor, the patient or the user of force is justified in believing that the cure is at least partly or even fundamentally due to the spiritual force. Their experience is valid of course for themselves only, not for the outside rationalising observer. But the latter is not logically entitled to say that their experience is incredible and must be false.

Another point. It does not follow that a spiritual force must either succeed in all cases or, if it does not, that proves its non-existence. Of no force can that be said. The force of fire is to burn, but there are things it does not burn; under certain circumstances it does not burn even the feet of the man who walks barefoot on red-hot coals. That does not prove that fire cannot burn or that there is no such thing as force of fire, Agni-shakti.

I have no time to write more; it is not necessary either. My object was not to show that spiritual force must be believed in, but that the belief in it is not necessarily a delusion and that this belief can be rational as well as possible.

*

The invisible Force producing tangible results both inward and outward is the whole meaning of the Yogic consciousness. Your question about Yoga bringing merely a feeling of Power without any result was really very strange. Who would be satisfied with such a meaningless hallucination and call it Power? If we had not had thousands of experiences showing that the Power within could alter the mind, develop its powers, add new ones, bring in new ranges of knowledge, master the vital movements, change the character, influence men and things, control the conditions and functionings of the body, work as a concrete dynamic Force on other forces, modify events, etc. etc., we would not speak of it as we do. Moreover, it is not only in its results but in its movements that the Force is tangible and concrete. When I speak of feeling Force or Power, I do not mean simply having a vague sense of it, but feeling it concretely and consequently being able

to direct it, manipulate it, watch its movement, be conscious of its mass and intensity and in the same way of that of other perhaps opposing forces; all these things are possible and usual by the development of Yoga.

It is not, unless it is supramental Force, a Power that acts without conditions and limits. The conditions and limits under which Yoga or sadhana has to be worked out are not arbitrary or capricious; they arise from the nature of things. These including the will, receptivity, assent, self-opening and surrender of the sadhak have to be respected by the Yoga-force—unless it receives a sanction from the Supreme to override everything and get something done—but that sanction is sparingly given. It is only if the supramental Power came fully down, not merely sent its influences through the Overmind, that things could be very radically altered in this respect—and that is why my main effort is directed towards that object—for then the sanction would not be rare! For the Law of the Truth would be at work not constantly balanced by the law of the Ignorance.

Still the Yoga-force is always tangible and concrete in the way I have described and has tangible results. But it is invisible—not like a blow given or the rush of a motor car knocking somebody down which the physical senses can at once perceive. How is the mere physical mind to know that it is there and working? By its results? but how can it know that the results were that of the Yoga-force and not of something else? One of two things it must do. Either it must allow the consciousness to go inside, to become aware of inner things, to believe in and experience the invisible and the supraphysical, and then by experience, by the opening of new capacities it becomes conscious of these forces and can see, follow and use their workings just as the scientist uses the unseen forces of Nature. Or one must have faith and watch and open oneself and then it will begin to see how things happen; it will notice that when the Force was called in, there began after a time to be a result,—then repetitions, more repetitions, more clear and tangible results, increasing frequency, increasing consistency of results, a feeling and awareness of the Force at work—until the experience

becomes daily, regular, normal, complete. These are the two main methods, one internal, working from in outward, the other external, working from outside and calling the inner force out till it penetrates and is sensible in the exterior consciousness. But neither can be done if one insists always on the extrovert attitude, the external concrete only and refuses to join to it the internal concrete — or if the physical Mind at every step raises a dance of doubts which refuses to allow the nascent experience to develop. Even the scientist carrying out a new experiment would never succeed if he allowed his mind to behave in that way.

*

Concrete? what do you mean by “concrete”?¹ It [*spiritual force*] has its own concreteness; it can take a form (like a stream for instance) of which one is aware and can send it quite concretely in whatever “direction” or on whatever object one chooses.

This is a statement of fact about the power inherent in spiritual consciousness. What I was speaking of was a willed use of any subtle force (it may be spiritual or mental or vital) to secure a particular result at some point in the world. Just as there are waves of unseen physical forces (cosmic waves etc.) or currents of electricity, so there are mind waves, thought currents, waves of emotion, e.g. anger, sorrow, etc., which go out and affect others without their knowing whence they come or that they come at all — they only feel the result. One who has the occult or inner senses awake can feel them coming and invading him. Influences good or bad can propagate themselves in that way; that can happen without intention, automatically, but also a deliberate use can be made of them. There can also be a purposeful generation of force, spiritual or other. There can be too the use of the effective will or idea acting directly without the aid of any outward action, speech or other instrumentation which is not concrete in that sense, but is all the same effective.

*

¹ *The correspondent asked whether the spiritual force Sri Aurobindo put on him was “concrete”. — Ed.*

Leave aside the question of Divine or undivine, no spiritual man who acts dynamically is limited to physical contact—the idea that physical contact through writing, speech, meeting is indispensable to the action of the spiritual force is self-contradictory, for then it would not be a spiritual force. The spirit is not limited by physical things or by the body. If you have the spiritual force, it can act on people thousands of miles away who do not know and never will know that you are acting on them or that they are being acted upon—they only feel that there is a force enabling them to do things and may very well suppose it is their own great energy and genius.

*

The fact that you don't feel a force does not prove that it is not there. The steam-engine does not feel a force moving it, but the force is there. A man is not a steam-engine? He is very little better, for he is conscious only of some bubbling on the surface which he calls himself and is absolutely unconscious of all the subconscious, subliminal, superconscious forces moving him. (This is a fact which is being more and more established by modern psychology though it has got hold only of the lower forces and not the higher, so you need not turn up your rational nose at it.) He twitters intellectually (= foolishly) about the surface results and attributes them all to his "noble self", ignoring the fact that his noble self is hidden far away from his own vision behind the veil of his dimly sparkling intellect and the reeking fog of his vital feelings, emotions, impulses, sensations and impressions. So your argument is utterly absurd and futile. Our aim is to bring the secret forces out and unwalled into the open so that instead of getting some shadows or lightnings of themselves out through the veil or being wholly obstructed, they may "pour down" and "flow in a river". But to expect that all at once is a presumptuous demand which shows an impatient ignorance and inexperience. If they begin to trickle at first, that is sufficient to justify the faith in a future downpour. You admit that you once or twice felt "a force coming down and delivering a poem out of me" (your opinion about its worth or worthlessness is not

worth a cent, that is for others to pronounce). That is sufficient to blow the rest of your Jeremiad into smithereens; it proves that the force was and is there and at work and it is only your sweating Herculean labour that prevents you feeling it. Also it is the trickle that gives assurance of the possibility of the downpour. One has only to go on and by one's patience deserve the downpour or else, without deserving, stick on till one gets it. In Yoga itself the experience that is a promise and foretaste but gets shut off till the nature is ready for the fulfilment is a phenomenon familiar to every Yогин when he looks back on his past experience. Such were the brief visitations of Ananda you had some time before. It does not matter if you have not a leechlike tenacity — leeches are not the only type of Yogins. If you can stick anyhow or get stuck that is sufficient. The fact that you are not Sri Aurobindo (who said you were?) is an inept irrelevance. One needs only to be oneself in a reasonable way and shake off the hump when it is there or allow it to be shaken off without clinging to it with a "leechlike tenacity" worthy of a better cause.

The Divine Force Works under Conditions

The Divine Force, not using the supramental Power, can certainly throw back the forces of Death and that has been done many times. But the Divine Force works here under conditions imposed by the Divine Will and Law; it has to take up an immense mass of conflicting forces, conditions, habits and movements of Nature and out of it arrive at the result of a higher consciousness on earth and a higher state. If it were to act otherwise, then all would be done by a miracle or magic, no sadhana would be needed, no way beaten out for the process of spiritual evolution to follow; there would be no real transformation of consciousness, but only a temporary feat of force which having no basis in the substance of creation here would vanish as it came. Therefore conditions have to be satisfied, the work to be done has to be wrought out step by step. The powers that held the field up to now have to be given their chance to oppose, so that the problem

may be solved and not evaded or turned into a sham fight or unreal game without significance. Therefore there is a sadhana to be done, there is a resistance to be overcome, a choice made between the higher and the lower state. The Divine Power does the work, gives a protection and a guidance; but it is not here to use an absolute force — except when that is sanctioned by the Divine Wisdom and in the light of that Wisdom justifiable. Then the decisive Power acts of itself and does what it has to do.

Writing about Spiritual Force

If I write about these questions [*of spiritual force*] from the Yogic point of view, even though on a logical basis, there is bound to be much that is in conflict with your own settled and perhaps cherished opinions, e.g. about "miracles", persons, the limits of judgment by sense data etc. I have avoided as much as possible writing about these subjects because I would have to propound things that cannot be understood except by reference to other data than those of the physical senses or of reason founded on these alone. I might have to speak of laws and forces not recognised by physical reason or science. In my public writings and my writings to sadhaks I have not dwelt on these because they go out of the range of ordinary knowledge and the understanding founded on it. These things are known to some, but they do not usually speak about it, while the public view of such of them as are known is either credulous or incredulous, but in both cases without experience or knowledge. So if the views founded on them are likely to upset, shock or bewilder, the better way is silence.

*

If I was annoyed, it was with myself for speaking of things which ought to be kept under a cover. I put the whole thing in a light form, no doubt, but the substance was perfectly serious, the intention being to point out that even in ordinary non-spiritual things the action of invisible or of subjective forces was open to doubt and discussion in which there could be no material

certitude — while the spiritual force is invisible in itself and also invisible in its action. So it is idle to try to prove that such and such a result was the effect of spiritual force. Each must form his own idea about that — for if it is accepted it cannot be as a result of proof and argument, but only as a result of experience, of faith or of that insight in the heart or the deeper intelligence which looks behind appearances and sees what is behind them. Moreover it would not be seemly for me to appear to be making a claim for myself and pleading for recognition or acceptance — for the spiritual consciousness does not claim in that way, it can state the truth about itself but not fight for a personal acceptance. A general and impersonal statement about spiritual force is another matter, but I doubt whether the time has come for it or whether it could be understood by the mere reasoning intelligence.

Use and Misuse of the Divine Force

All power comes from the Divine but it is more usually misused than used spiritually or rightly.

*

The Divine Forces are meant to be used — the mistake of man individualised in the Ignorance is to use it for the ego and not for the Divine. It is that that has to be set right by the union with the Divine Consciousness and also by the widening of the individual being so that it can live consciously in the universal. Difficult it is owing to the fixed ego-habit, but it is not impossible.

The Action of the Divine Force

The action of the Force does not exclude tapasya, concentration and the need of sadhana. Its action rather comes as an answer or a help to these things. It is true that it sometimes acts without them; it very often wakes a response in those who have not prepared themselves and do not seem to be ready. But it does not always or usually act like that, nor is it a sort of magic that

acts in the void or without any process. Nor is it a machine which acts in the same way on everybody or in all conditions and circumstances; it is not a physical but a spiritual Force and its action cannot be reduced to rules.

*

It [*the higher Force*] acts by awakening the inner consciousness gradually or swiftly, by replacing the principle of ego-service by the principle of service of the Divine, by making him watch his actions and see his own defects and pushing him to rectify them, by establishing a connection between his consciousness and the Mother's consciousness, by preparing his nature to be taken up more and more by the Mother's consciousness and force, by giving him experiences which make him ready for the major experiences of Yoga, by stimulating the growth of his psychic being, by opening him to the Mother as the Universal Being, etc. etc. Naturally it acts differently in different persons.

Allow the Divine Force to Act

It is quite true that, left to yourself, you can do nothing; that is why you have to be in contact with the Force which is there to do for you what you cannot do for yourself. The only thing *you* have to do is to allow the Force to act and put yourself on its side, which means to have faith in it, to rely upon it, not to trouble and harass yourself, to remember it quietly, to call upon it quietly, to let it act quietly. If you do that, all else will be done for you—not all at once, because there is much to clear away, but still it will be done steadily and more and more.

*

Passivity can be only to the Divine Force when it is felt at work,—there can be no passivity to other forces, for that would be dangerous in the extreme. Passivity does *not* mean a blank mind—it means allowing the Divine Force to work without interference of the mental preferences, vital desires or physical disinclinations. As for freedom from ego or desire, that is the

general law of all Yoga, but it cannot be acquired by merely giving up work. The majority of Sannyasins are not at all free from desire or ego.

*

Always keep in touch with the Divine Force. The best thing for you is to do that simply and allow it to do its own work; wherever necessary, it will take hold of the inferior energies and purify them; at other times it will empty you of them and fill you with itself. But if you let your mind take the lead and discuss and decide what is to be done, you will lose touch with the Divine Force and the lower energies will begin to act for themselves and all go into confusion and a wrong movement.

*

One feels the Force only when one is in conscious contact with it.

*

It is a great progress, a decisive advance if, at the time the Force is acting behind the screen, you feel that it is there, that the help and support, the more enlightened consciousness is there still. This is the second stage in the sadhana. There is a third when there is no screen and the Force and all else are always felt whether actively working or pausing during a transition.

*

Remind yourself always that the Divine Force is there, that you have felt it and that, even if you seem to lose consciousness of it for a time or it seems something distant, still it is there and is sure to prevail. For those whom the Force has touched and taken up, belong thenceforth to the Divine.

Chapter Three

The Guru

Acceptance of the Guru

The Guru should be accepted in all ways — transcendent, impersonal, personal.

*

It has always been held in Indian yoga that the relation between Guru and disciple must be one of full confidence and full acceptance of the Guru by the Shishya. The latter was supposed to accept unquestioningly the guidance and to follow the instructions of the Guru without criticism or questioning; he was not supposed to criticise, to blame or to refuse adhesion or to follow in a questioning or grudging spirit: for that would stand in the way of his advance. The Indian disciple of those days would not have expected the Guru to suit his directions or instructions or ways of leading to the mental demands or vital ideas of the [*incomplete*]

*

There are three conditions for a disciple for profiting fully from his relation to a spiritual guide.

1st: He must accept him entirely and him alone without submitting himself to any contrary or second influence.

2nd: He must accept the indications given by the Guru and follow them firmly and with full faith and perseverance to the best of his own spiritual capacity.

3rd: He must make himself open and receptive to the Guru for even more than what the Guru teaches to the mind of the disciple, it is what he spiritually is, the spiritual consciousness, the knowledge, the light, the power, the Divinity in him that helps the disciple to grow by his receiving that into himself and its being used within himself for the growth of his consciousness

and nature into its own divine possibility.

*

What the Guru can do for the sadhak depends upon the latter's receptivity—not upon any method or rule of sadhana. Certain psychological conditions or attitudes of the consciousness tend to increase the receptivity—e.g., humility towards the Guru, devotion, obedience, trust, a certain receptive passivity to his influence. The opposite things—indifference, a critical attitude, questionings—go the other way and make it necessary for the Guru to help only indirectly or behind the veil. But the main thing is a kind of psychological openness in the consciousness which comes or increases of itself with the help of the will to receive and the right attitude. If there is that then it is not necessary to pull anything from the Guru, only to receive quietly. Pulling from him often draws untruly or things for which the consciousness is not ready to assimilate.

*

It is a deficiency of psychic perception and spiritual discrimination that makes people speak like that [*in a depreciatory way*] and ignore the importance of obedience. It is the mind wanting to follow its own way of thinking and the vital seeking freedom for its desires which argue in this manner. If you do not follow the rules laid down by the spiritual guide or obey one who is leading you to the Divine, then what or whom are you to follow? Only the ideas of the individual mind and the desires of the vital: but these things never lead to siddhi in Yoga. The rules are laid down in order to guard against certain influences and their dangers and to keep a right atmosphere in the Asram favourable to spiritual development; the obedience is necessary so as to get away from one's own mind and vital and learn to follow the Truth.

*

Yes, it [*obedience*] is difficult, but once achieved it is immensely fruitful.

*

You are putting the cart before the horse. It is not the right way to make the condition that if you get what you want you will be obedient and cheerful. But be always obedient and cheerful and then what you want will have a chance of coming to you.

*

Up to now no liberated man has objected to the Guruvada; it is usually only people who live in the mind or vital and have the pride of the mind or the arrogance of the vital that find it below their dignity to recognise a Guru.

*

One has to learn from the master and act according to his instructions because the master knows the subject and how it is to be learnt — just as in spiritual things one has to follow the Guru who has the knowledge and knows the way. If one learns all by oneself, the chances are that one will learn all wrong. What is the use of a freedom to learn wrongly? Of course if the pupil is more intelligent than the master, he will learn more than the master, just as a great spiritual capacity may arrive at realisations which the Guru has not — but even so, the control and discipline in the early stages is indispensable.

The Guru in the Supramental Yoga

The Guru is the Guide in the Yoga. When the Divine is accepted as the Guide, He is accepted as the Guru.

*

It is not usual to use the word Guru in the supramental Yoga, here everything comes from the Divine himself. But if anybody wants it he can use it for the time being.

*

The relation of Guru and disciple is only one of many relations which one can have with the Divine, and in this Yoga which aims at a supramental realisation, it is not usual to give it this

name; rather, the Divine is regarded as the Source, the living Sun of Light and Knowledge and Consciousness and spiritual realisation and all that one receives is felt as coming from there and the whole being remoulded by the Divine Hand. This is a greater and more intimate relation than that of the human Guru and disciple, which is more of a limited mental ideal. Nevertheless, if the mind still needs the more familiar mental conception, it can be kept so long as it is needed; only do not let the soul be bound by it and do not let it limit the inflow of other relations with the Divine and larger forms of experience.

Surrender to the Guru

Because through it [*surrender to the Guru*]¹ you surrender not only to the impersonal but to the personal, not only to the Divine in yourself but to the Divine outside you; you get a chance for the surpassing of ego not only by retreat into the Self where ego does not exist, but in the personal nature where it is the ruler. It is the sign of the will to complete surrender to the total Divine, *samagraṁ mām mānuṣīm tanum āśritam*. Of course it must be a genuine spiritual surrender for all this to be true.

*

When one takes sincerely to surrender, nothing must be concealed that is of any importance for the life of the sadhana. Confession helps to purge the consciousness of hampering elements and it clears the inner air and makes for a closer and more intimate and effective relation between the Guru and the disciple.

*

No [*surrender to the Divine and surrender to the Guru are not two different things*]. In surrendering to the Guru, it is to the Divine in him that one surrenders—if it were only to a human

¹ *The correspondent asked, "What makes the surrender to the Guru so grand and glorious as to be called the surrender beyond all surrenders?" — Ed.*

entity it would be ineffective. But it is the consciousness of the Divine Presence that makes the Guru a real Guru, so that even if the disciple surrenders to him thinking of the human being to whom he surrenders, that Presence would still make it effective.

*

Yes [*surrender to the formless Divine would leave parts of the being subject to the gunas and ego*]—because only the static parts would be free in formlessness, the active nature would be still in the play of the gunas. Many think they are free from ego because they get the sense of the formless Existence, they do not see that the egoistic element remains in their action just as before.

Other Gurus

All true Gurus are the same, the one Guru, because all are the one Divine. That is a fundamental and universal truth. But there is also a truth of difference; the Divine dwells in different personalities with different minds, teachings, influences so that He may lead different disciples with their special need, character, destiny by different ways to the realisation. Because all Gurus are the same Divine, it does not follow that the disciple does well if he leaves the one meant for him to follow another. Fidelity to the Guru is demanded of every disciple, according to the Indian tradition. “All are the same” is a spiritual truth, but you cannot convert it indiscriminately into action; you cannot deal with all persons in the same way because they are the one Brahman: if one did, the result pragmatically would be an awful mess. It is a rigid mental logic that makes the difficulty but in spiritual matters mental logic easily blunders; intuition, faith, a plastic spiritual reason are here the only guides.

*

To respect the spiritual attainment of X [*another spiritual teacher*] is all right, but it is a rule of this Yoga not to mix influences (and what he [*a sadhak*] has described is very much

like undergoing an influence). Otherwise there may be harm done by two different methods getting mixed together—e.g. the vital being awakened to a Bhakti-Ananda influence on that plane before it is purified and ready.

The Guru's Help in Difficulty

I think this saying of Ramakrishna's² expresses a certain characteristic happening in sadhana and cannot be interpreted in a general and absolute sense; for in that sense it is hard for it to be true. All difficulties disappearing in a minute? Well, Vivekananda had the grace of Ramakrishna from the beginning, but I think his difficulty of doubt lasted for some time and to the end of his life the difficulty of the control of anger was there — making him say that all that was good in him was his Guru's gift but these things (anger etc.) were his own property. But what could be true is that the central difficulty may disappear by a certain touch between the Guru and the disciple. But what is meant by the *kṛpā*? If it is the general compassion and grace of the Guru, that, one would think, is always there on the disciple; his acceptance itself is an act of grace and the help is there for the disciple to receive. But the touch of grace, divine grace coming directly or through the Guru is a special phenomenon having two sides to it, — the grace of the Guru or the Divine, in fact both together, on one side and a "state of grace" in the disciple on the other. This "state of grace" is often prepared by a long tapasya or purification in which nothing decisive seems to happen, only touches or glimpses or passing experiences at the most, and it comes suddenly without warning. If this is what is spoken of in Ramakrishna's saying, then it is true that when it comes, the fundamental difficulties can in a moment and generally do disappear. Or at the very least something happens which makes the rest of the sadhana — however long it may take — sure and secure.

This decisive touch comes most easily to the "baby cat" people, those who have at some point between the psychic and

² "With the Guru's grace all difficulties can disappear in a flash, even as a glimmering darkness does the moment you strike a match." — Ed.

the emotional vital a quick and decisive movement of surrender to the Guru or the Divine. I have seen that when that is there and there is the conscious central dependence compelling the mind also and the rest of the vital, then the fundamental difficulty disappears. If others remain they are not felt as difficulties, but simply as things that have just to be done and need cause no worry. Sometimes no tapasya is necessary—one just refers things to the Power that one feels guiding or doing the sadhana and assents to its action, rejecting all that is contrary to it, and the Power removes what has to be removed or changes what has to be changed, quickly or slowly—but the quickness or slowness does not seem to matter since one is sure that it will be done. If tapasya is necessary, it is done with so much feeling of a strong support that there is nothing hard or austere in the tapasya.

For the others, the “baby monkey” type or those who are still more independent, following their own ideas, doing their own sadhana, asking only for some instruction or help, the grace of the Guru is there, but it acts according to the nature of the sadhak and waits upon his effort to a greater or less degree; it helps, succours in difficulty, saves in the time of danger, but the disciple is not always, is perhaps hardly at all aware of what is being done as he is absorbed in himself and his endeavour. In such cases the decisive psychological movement, the touch that makes all clear, may take longer to come.

But with all the *kṛpā* is there working in one way or another and it can only abandon the disciple if the disciple himself abandons or rejects it—by decisive and definitive revolt, by rejection of the Guru, by cutting the painter and declaring his independence, or by an act or course of betrayal that severs him from his own psychic being. Even then, except perhaps in the last case if it goes to an extreme, a return to grace is not impossible.

That is my own knowledge and experience of the matter. But as to what lay behind Ramakrishna’s saying and whether he himself meant it to be a general and absolute statement—I do not pronounce.

All that is popular Yoga.³ The Guru's touch or grace may open something, but the difficulties have always to be worked out still. What is true is that if there is complete surrender which implies the prominence of the psychic, these difficulties are no longer felt as a burden or obstacle but only as superficial imperfections which the working of the grace will remove.

*

It has always been said that to take disciples means to take upon yourself the difficulties of the disciples as well as your own. Of course, if the Guru does not identify himself with the disciple, does not take him into his own consciousness, keeps him outside and only gives him *upadeśa*, leaving him to do the rest himself, then the chance of these effects is much diminished, made practically nil.

The Knowledge Given by the Guru

I do not know what you mean by indirect knowledge. The knowledge given by the Guru, if that is what you mean, is in the nature of experience and becomes part and parcel of the experience. Mere instruction is not knowledge but only an intellectual indication of what must be realised by experience.

According to Yoga, as it is known in India, the mediation of the Guru is almost indispensable. It is not a crutch. It is a direct action of the Divine who is realised by the Guru. It is an opening of the consciousness to spiritual experience without which few can open at all or go very far. If they advance by themselves, they can fall into all sorts of perils and errors of which they have no knowledge and no idea how to guide themselves among these things.

All experience is direct — there is no such thing as an indirect spiritual experience. But after the consciousness is sufficiently opened and matured, a knowledge and guidance can

³ *The correspondent wrote, "It is said that if a disciple receives his Guru's touch or grace, his main difficulties very often disappear." — Ed.*

come from within and above and the sadhana proceeds by Divine working within. But the sadhak has to be very careful, for he may easily mistake the guiding of his own mind, ego or vital or the guiding of some inferior Power that flatters his ego for the Divine guidance. It is by the inner experience and consciousness that one knows a spiritual result—one feels and sees it happening.

There are two kinds of knowledge—mental knowledge such as you describe here which is usually necessary as a mental preparation or for guidance and the real knowledge which is spiritual. One receives the mental knowledge from the Guru in the shape of instruction and guidance, but that is only a part of what he gives—for the man who gives only mental or what you call indirect knowledge is not a Guru but only a teacher, Acharya.

As for spiritual knowledge, it consists of two elements, experience and a direct knowledge which is not mental but is of the nature of a light showing the deeper truth of things, a direct vision and perception of the Truth.

The ordinary consciousness is not capable of receiving it as knowledge except in a fragmentary way because it belongs to a deeper consciousness within or a higher consciousness above the mind. The ordinary consciousness has therefore to open to the deeper and the higher consciousness. It has to receive the knowledge from within and above. It cannot do this if it does not open. There must, therefore, first necessarily be an opening, however small, before any direct knowledge can come. As the knowledge comes the opening also can widen and so admit a greater and greater direct knowledge and experience. In some, however, the opening comes first very wide and then the knowledge comes afterwards in a great stream, some light of the Truth and many experiences.

If one has merely a mental idea about the Divine, that is not knowledge. It is with the experiences and the inner light of knowledge that the realisation of the Divine begins. As for example, one may have the mental idea of the Divine Peace but that is nothing, only a mental conception. It is only when one

has the feeling of the Divine Peace descending from above or in oneself or surrounding one that one begins to know what it is. That is what is called experience. Afterwards one begins to have a direct vision in knowledge of what the Peace is and what is its place in regard to the Divine Realisation; that is direct knowledge.

The Capacity of the Guru

One can have a guru inferior in spiritual capacity (to oneself or to other gurus) carrying in him many human imperfections, and yet, if you have the faith, the bhakti, the right spiritual stuff, contact the Divine through him, attain to spiritual experiences, to spiritual realisation, even before the guru himself. Mark the "if", — for that proviso is necessary; it isn't every disciple who can do that with every guru. From a humbug you can acquire nothing but humbuggery. The guru must have something in him which makes the contact with the Divine possible, something which works even if he is not himself in his outer mind quite conscious of its action. If there is nothing at all spiritual in him he is not a guru — only a pseudo. Undoubtedly, there can be considerable differences of spiritual realisation between one guru and the other; but much depends on the inner relation between guru and shishya. One can go to a very great spiritual man and get nothing or only a little from him; one can go to a man of less spiritual capacity and get all he has to give — and more. The causes of this disparity are various and subtle; I need not expand on them here. It differs with each man. I believe the guru is always ready to give what can be given, if the disciple can receive, or it may be when he is ready to receive. If he refuses to receive or behaves inwardly or outwardly in such a way as to make reception impossible or if he is not sincere or takes up the wrong attitude, then things become difficult. But if one is sincere and faithful and has the right attitude and if the guru is a true guru, then, after whatever time, it *will* come.

*

What X quotes about the limitation of the power of the Guru to that of a teacher who shows the way but cannot help or guide is the conception of certain paths of Yoga such as the pure Adwaitin and the Buddhist which say that you must rely upon yourself and no one can help you; but even the pure Adwaitin does in fact rely upon the Guru and the chief mantra of Buddhism insists on *śaranam* to Buddha. For other paths of sadhana, especially those which like the Gita accept the reality of the individual soul as an “eternal portion” of the Divine or which believe that Bhagavan and the bhakta are both real, the help of the Guru has always been relied upon as an indispensable aid.

I don't understand the objection to the validity of Vivekananda's experience; it was exactly the realisation which is described in the Upanishads as a supreme experience of the Self. It is not a fact that an experience gained in samadhi cannot be prolonged into the waking state.

*

Ramakrishna had the siddhi himself before he began giving to others—so had Buddha. I don't know about the others [Vivekananda, Ramatirtha, Ramdas, Mahavir, Shankara]. By perfection of course is meant siddhi in one's own path—realisation. Ramakrishna always put that as a rule that one should not become a teacher to others until one has the full authority.

The Bhakta and the Disciple

It does not strike me that Krishnaprem's letters are admirable as an *aperçu* of current thoughts and general tendencies; it was rather his power to withdraw so completely from these thoughts and tendencies and look from a (for him) new and an abiding source of knowledge that impressed me as admirable. If he had remained interested and in touch with these current human movements, I don't suppose he would have done better with them than Romain Rolland or another. But he has gone to the Yoga-view of them, the summit-view, and it is the readiness with which he has been able to do it that struck me.

I would explain his progressing so far not entirely by his own superiority in the sense of a general fitness for Yoga but by the quickness and completeness with which he has taken inwardly the attitude of the Bhakta and the disciple. That is a rare achievement for a modern mind, be he European or "educated" Indian; for the modern mind is analytic, dubitative, instinctively "independent" even when it wants to be otherwise; it holds itself back and hesitates in front of the Light and Influence that comes to it; it does not plunge into it with a simple directness, crying, "Here I am, ready to throw from me all that was myself or seemed to be, if so I can enter into Thee; remake my consciousness into the Truth in thy way, the way of the Divine." There is something in us that is ready for it, but there is this element that intervenes and makes a curtain of non-receptivity; I know by my own experience with myself and others how long it can make a road that could never perhaps, for us who seek the entire truth, have been short and easy, but still we might have been spared many wanderings and stand-stills and recoils and detours. All the more I admire the ease with which Krishnaprem seems to have surmounted this formidable obstacle.

I do not know if his Guru falls far short in any respect, but with the attitude he has taken, her deficiencies, if any, do not matter. It is not the human defects of the Guru that can stand in the way when there is the psychic opening, confidence and surrender. The Guru is the channel or the representative or the manifestation of the Divine, according to the measure of his personality or his attainment; but whatever he is, it is to the Divine that one opens in opening to him, and if something is determined by the power of the channel, more is determined by the inherent and intrinsic attitude of the receiving consciousness, an element that comes out in the surface mind as simple trust or direct unconditional self-giving, and once that is there, the essential things can be gained even from one who seems to others than the disciple an inferior spiritual source and the rest will grow up in the sadhak of itself by the Grace of the Divine, even if the human being in the Guru cannot give it. It is this that Krishnaprem appears to have done perhaps from the first; but in

most nowadays this attitude seems to come with difficulty after much hesitation and delay and trouble. In my own case I owe the first decisive turn of my inner life to one who was infinitely inferior to me in intellect, education and capacity and by no means spiritually perfect or supreme; but, having seen a Power behind him and decided to turn there for help, I gave myself entirely into his hands and followed with an automatic passivity the guidance. He himself was astonished and said to others that he had never met anyone before who could surrender himself so absolutely and without reserve or question to the guidance of the helper. The result was a series of transmuting experiences of such a radical character that he was unable to follow and had to tell me to give myself up in future to the Guide within with the same completeness of surrender as I had shown to the human channel. I give this example to show how these things work; it is not in the calculated way the human reason wants to lay down, but by a more mysterious and greater law.

Part Two

The Synthetic Method
of the Integral Yoga

Section One

A Yoga of Knowledge, Works,
Bhakti and Self-Perfection

Chapter One

The Central Processes of the Sadhana

Four Necessary Processes

As regards X's question — this is not a Yoga of Bhakti alone; it is or at least it claims to be an integral Yoga, that is, a turning of all the being in all its parts to the Divine. It follows that there must be knowledge and works as well as Bhakti and, in addition, it includes a total change of the nature, a seeking for perfection, so that the nature also may become one with the nature of the Divine. It is not only the heart that has to turn to the Divine and change, but the mind also — so knowledge is necessary, and the will and power of action and creation also — so works too are necessary. In this Yoga the methods of other Yogas are taken up — like this of Purusha-Prakriti, but with a difference in the final object. Purusha separates from Prakriti, not in order to abandon her, but in order to know himself and her and to be no longer her plaything, but the knower, lord and upholder of the nature; but having become so or even in becoming so, one offers all that to the Divine. One may begin with knowledge or with works or with Bhakti or with Tapasya of self-purification for perfection (change of nature) and develop the rest as a subsequent movement or one may combine all in one movement. There is no single rule for all, it depends on the personality and the nature. Surrender is the main power of the Yoga, but the surrender is bound to be progressive; a complete surrender is not possible in the beginning, but only a will in the being for that completeness, — in fact it takes time; yet it is only when the surrender is complete that the full flood of the sadhana is possible. Till then there must be the personal effort with an increasing reality of surrender. One calls in the power of the Divine Shakti and once that begins to come into the being, it at

first supports the personal endeavour, then progressively takes up the whole action, although the consent of the sadhak continues to be always necessary. As the Force works, it brings in the different processes that are necessary for the sadhak, processes of knowledge, of Bhakti, of spiritualised action, of transformation of the nature. The idea that they cannot be combined is an error.

*

The object of the sadhana is opening of the consciousness to the Divine and the change of the nature. Meditation or contemplation is one means to this but only one means; bhakti is another; work is another. Chittashuddhi was practised by the Yogis as a first means towards realisation and they got by it the saintliness of the saint and the quietude of the sage. But the transformation of the nature of which we speak is something more than that, and this transformation does not come by contemplation alone; works are necessary, Yoga in action is indispensable.

The Need for Plasticity

One must not treat human nature like a machine to be handled according to rigid mental rules — a great plasticity is needed in dealing with its complex motives.

*

Fundamentally the nature in all is the same and the methods of sadhana have the same principle — but the differences in detail and arrangement are very great.

*

You forget that men differ in nature and therefore each will approach the sadhana in his own way — one through work, one through bhakti, one through meditation and knowledge — and those who are capable of it through all together. You are perfectly justified in following your own way, whatever may be the theories of others — but let them follow theirs. In the end all can converge together towards the same goal.

Work, Meditation and Bhakti

There is no opposition between work and sadhana. Work itself done in the right spirit is sadhana. Meditation is not the only means of sadhana. Work is one means; love and worship and surrender are another.

*

It [*the value of work in sadhana*] depends more on the intensity of the spirit put into it than on the intensity of the work itself. As for the line on which most stress is laid, it depends on the nature. There are some people who are not cut out for meditation and it is only by work that they can prepare themselves; there are also those who are the opposite. As for the enormous development of egoism, that can come whatever one follows. I have seen it blossom in the *dhyāni* as well as in the worker; Krishnaprem says it does so in the bhakta. So it is evident that all soils are favourable to this Narcissus flower. As for “no need of sadhana”, obviously one who does not do any sadhana cannot change or progress. Work, meditation, bhakti, all must be done as sadhana.

*

I have always said that work done as sadhana—done, that is to say, as an outflow of energy from the Divine offered to the Divine or work done for the sake of the Divine or work done in a spirit of devotion—is a powerful means of sadhana and that such work is especially necessary in this Yoga. Work, bhakti and meditation are three supports of Yoga. One can do with all three, or two or one. There are people who can't meditate in the set way that one calls meditation, but they progress through work or through bhakti or through the two together. By work and bhakti one can develop a consciousness in which eventually a natural meditation and realisation become possible.

*

The growth out of the ordinary mind into the spiritual consciousness can be effected either by meditation, dedicated work

or bhakti for the Divine. In our Yoga, which seeks not only a static peace or absorption but a dynamic spiritual action, work is indispensable. As for the Supramental Truth, that is a different matter; it depends only on the descent of the Divine and the action of the Supreme Force and is not bound by any method or rule.

*

There are very few among the sadhaks here who at all concern themselves with the supermind or know anything about it except as something which the Mother and I will bring down some day and establish here. Most are seeking realisation through meditation, through love and worship or through activity and work. Meditation and silence are not necessary for everyone; there are some, even among those spoken of by you and others as the most advanced sadhaks, who do their sadhana not through meditation, for which they have no turn, but through activity, work or creation supported or founded on love and bhakti. It is not the credo but the person who matters. We impose no credo; it is sufficient if there is an established and heart-felt relation between ourselves and the disciple.

*

I was quite in earnest in speaking of the progress you had made by the psychic movement and the endeavour to detect and remove the ego. I had already written to you strongly approving of that way. It is in our Yoga the way to devotion and surrender — for it is the psychic movement that brings the constant and pure devotion and the removal of ego that makes it possible to surrender. The two things indeed go together.

The other way, which is the way to knowledge, is the meditation in the head by which there comes the opening above, the quietude or silence of the mind and the descent of peace etc. of the higher consciousness generally till it envelops the being and fills the body and begins to take up all the movements. But this involves a passage through silence, a certain emptiness of the ordinary activities — they being pushed out and done as a

purely superficial action — and you strongly dislike silence and emptiness.

The third way which is one of the two ways towards Yoga by works is the separation of the Purusha from the Prakriti, the inner silent being from the outer active one, so that one has two consciousnesses or a double consciousness, one behind watching and observing and finally controlling and changing the other which is active in front. But this also means living in an inner peace and silence and dealing with the activities as if they were a thing of the surface. (The other way of beginning the Yoga of works is by doing them for the Divine, for the Mother, and not for oneself, consecrating and dedicating them till one concretely feels the Divine Force taking up the activities and doing them for one.)

If there is any secret or key of my Yoga which you say you have not found, it lies in these methods — and, in reality, there is nothing so mysterious, impossible or even new about them in themselves. It is only the farther development at a later stage and the aim of the Yoga that are new. But that one need not concern oneself with in the earlier stages unless one wishes to do so as a matter of mental knowledge.

*

Poetry by itself does not bring to the goal, but it can help as a means to express and deepen one's aspiration while it gives the vital an activity which can keep it from rusting and maintains its energy. Otherwise it may droop or go dry or sulk or non-cooperate. What will bring towards the goal is the growth of the psychic being, the increase in bhakti, psychic clarity of vision with regard to one's inner movements and the will to get rid of the vital ego, increase in pure self-giving. Meditation and the rest can bring only partial results or often no results until there has been a sufficient psychic preparation. Even with those who begin with a flood of experiences because of some mental or vital preparation in past lives whose results happen to be near the surface, these lead to nothing definite till the psychic preparation is made; they often have all their struggle

still to go through and some sink with their bag of experiences on their head and a magnified ego on their back. It was this psychic growth that suddenly began in you. Don't let it stop; for through that lies your way. Once that is done, you can meditate and do everything else that may be needful.

*

Meditation is one means of the approach to the Divine and a great way, but it cannot be called a short cut—for most it is a long and difficult though very high ascent. It can by no means be short unless it brings a descent and even then it is only a foundation that is quickly laid—afterwards meditation has to build laboriously a big superstructure on that foundation. It is very indispensable, but there is nothing of the short cut about it.

Karma is a much simpler road—provided one's mind is not fixed on the karma to the exclusion of the Divine. The aim must be the Divine and the work can only be a means. The use of poetry etc. is to keep one in contact with one's inner being and that helps to prepare for the direct contact with the inmost, but one must not stop with that, one must go on to the real thing. If one thinks of being a "literary man", a poet, a painter as things worthwhile for their own sake, then it is no longer the Yogic spirit. That is why I have sometimes to say that our business is to be Yogis, not merely poets, painters etc.

Love, bhakti, surrender, the psychic opening are the only short cut to the Divine—or can be; for if the love and bhakti are too vital, then there is likely to be a seesaw between ecstatic expectation and *viraha, abhimāna*, despair, which will make it not a short cut but a long one, a zigzag, not a straight flight, a whirling round one's own ego instead of a running towards the Divine.

Surrender and Self-Giving

I may stress one point, however, that there need not be only one way to realisation of the Divine. If one does not succeed or has not yet succeeded in reaching him, feeling him or seeing him

by the established process of meditation or by other processes like japa, yet one may have made progress towards it by the frequent welling up of bhakti in the heart or a constantly greater enlargement of it in the consciousness or by work for the Divine and dedication in service. You have certainly progressed in these two directions, increased in devotion and shown your capacity for service. You have also tried to get rid of obstacles in your vital nature and so effect a purification, not without success, in several difficult directions. The path of surrender is indeed difficult, but if one perseveres in it with sincerity, there is bound to be some success and a partial overcoming or diminution of the ego which may help greatly a farther advance upon the way. I can see no sufficient reason for the discouragement which so often overtakes you and sometimes makes you think that you are not cut out for the path; to indulge such a thought is always a mistake. A too ready proneness to discouragement and a consequent despondency is one of the weaknesses of your vital nature and to get rid of it would be a great help. One must learn to go forward on the path of Yoga, as the Gita insists, with a consciousness free from despondency — *anirvijnacetasā*. Even if one slips, one must rectify the posture; even if one falls, one has to rise and go undiscouraged on the divine way. The attitude must be, "The Divine has promised himself to me if I cleave to him always; that I will never cease to do whatever may come."

*

It is altogether unprofitable to enquire who or what class will arrive first or last at the goal. The spiritual path is not a field of competition or a race that this should matter. What matters is one's own aspiration for the Divine, one's own faith, surrender, selfless self-giving. Others can be left to the Divine who will lead each according to his nature. Meditation, work, bhakti are each means of preparative help towards fulfilment; all are included in this path. If one can dedicate oneself through work, that is one of the most powerful means towards the self-giving which is itself the most powerful and indispensable element of the sadhana.

To cleave to the path means to follow it without leaving it

or turning aside. It is a path of self-offering of the whole being in all its parts, the offering of the thinking mind and the heart, the will and actions, the inner and the outer instruments so that one may arrive at the experience of the Divine, the Presence within, the psychic and spiritual change. The more one gives of oneself in all ways, the better for the sadhana. But all cannot do it to the same extent, with the same rapidity, in the same way. How others do it or fail to do it should not be one's concern—how to do it faithfully oneself is the one thing important.

Aspiration and Will of Consecration

I have never put any ban on bhakti. Also I am not conscious of having banned meditation either at any time. I have stressed both bhakti and knowledge in my Yoga as well as works, even if I have not given any of them an exclusive importance like Shankara or Chaitanya.

The difficulty you feel or any sadhak feels about sadhana is not really a question of meditation versus bhakti versus works. It is a difficulty of the attitude to be taken, the approach or whatever you may like to call it.

If you can't as yet remember the Divine all the time you are working, it does not greatly matter. To remember and dedicate at the beginning and give thanks at the end ought to be enough for the present. Or at the most to remember too when there is a pause. Your method seems to me rather painful and difficult,—you seem to be trying to remember and work with one and the same part of the mind. I don't know if that is possible. When people remember all the time during work (it can be done), it is usually with the back of their minds or else there is created gradually a faculty of double thought or else a double consciousness—one in front that works, and one within that witnesses and remembers. There is also another way which was mine for a long time—a condition in which the work takes place automatically and without intervention of personal thought or mental action, while the consciousness remains silent in the Divine. The thing, however, does not come so much by trying as by a very

simple constant aspiration and will of consecration — or else by a movement of the consciousness separating the inner from the instrumental being. Aspiration and will of consecration calling down a greater Force to do the work is a method which brings great results, even if in some it takes a long time about it. That is a great secret of sadhana, to know how to get things done by the Power behind or above instead of doing all by the mind's effort. I don't mean to say that the mind's effort is unnecessary or has no result — only if it tries to do everything by itself, that becomes a laborious effort for all except the spiritual athletes. Nor do I mean that the other method is the longed-for short cut; the result may, as I have said, take a long time. Patience and firm resolution are necessary in every method of sadhana.

Strength is all right for the strong — but aspiration and the Grace answering to it are not altogether myths; they are great realities of the spiritual life.

Sadhana, Tapasya, Aradhana, Dhyana

Sadhana is the practice of Yoga. Tapasya is the concentration of the will to get the results of sadhana and to conquer the lower nature. Aradhana is worship of the Divine, love, self-surrender, aspiration to the Divine, calling the name, prayer. Dhyana is inner concentration of the consciousness, meditation, going inside in Samadhi. Dhyana, tapasya and aradhana are all parts of sadhana.

Chapter Two

Combining Work, Meditation and Bhakti

The Place of Work in Sadhana

There is no stage of the sadhana in which works are impossible, no passage in the path where there is no foothold and action has to be renounced as incompatible with concentration on the Divine. The foothold is there always; the foothold is the reliance on the Divine, the opening of the being, the will, the energies to the Divine, the surrender to the Divine. All work done in that spirit can be made a means for the sadhana. It may be necessary for an individual here and there to plunge into meditation for a time and suspend work for that time or make it subordinate; but that can only be an individual case and a temporary retirement. Moreover, a complete cessation of work and entire withdrawal into oneself is seldom advisable; it may encourage a too one-sided and visionary condition in which one lives in a sort of midworld of purely subjective experiences without a firm hold on either external reality or on the highest Reality and without the right use of the subjective experience to create a firm link and then a unification between the highest Reality and the external realisation in life.

Work can be of two kinds — the work that is a field of experience used for the sadhana, for a progressive harmonisation and transformation of the being and its activities, and work that is a realised expression of the Divine. But the time for the latter can be only when the Realisation has been fully brought down into the earth-consciousness; till then all work must be a field of endeavour and a school of experience.

*

I do not mean by work action done in the ego and the ignorance,

for the satisfaction of the ego and in the drive of rajasic desire. There can be no Karmayoga without the will to get rid of ego, rajas and desire, which are the seals of ignorance.

I do not mean philanthropy or the service of humanity or all the rest of the things — moral or idealistic — which the mind of man substitutes for the deeper truth of works.

I mean by work action done for the Divine and more and more in union with the Divine — for the Divine alone and nothing else. Naturally that is not easy at the beginning, any more than deep meditation and luminous knowledge are easy or even true love and bhakti are easy. But like the others it has to be begun in the right spirit and attitude, with the right will in you, then all the rest will come.

Works done in this spirit are quite as effective as bhakti or contemplation. One gets by the rejection of desire, rajas and ego a quietude and purity into which the Peace ineffable can descend; one gets by the dedication of one's will to the Divine, by the merging of one's will in the Divine Will the death of ego and the enlarging into the cosmic consciousness or else the uplifting into what is above the cosmic; one experiences the separation of Purusha from Prakriti and is liberated from the shackles of the outer nature; one becomes aware of one's inner being and feels the outer as an instrument; one feels the universal Force doing one's works and the Self or Purusha watching or witness but free; one feels all one's works taken from one and done by the universal or the supreme Mother or by the Divine Power controlling and acting from behind the heart. By constant reference of all one's will and works to the Divine, love and adoration grow, the psychic being comes forward. By the reference to the Power above we can come to feel it above and its descent and the opening to an increasing consciousness and knowledge. Finally works, bhakti and knowledge join together and self-perfection becomes possible — what we call the transformation of the nature.

These results certainly do not come all at once; they come more or less slowly, more or less completely according to the condition and growth of the being. There is no royal road to

the divine realisation.

This is the Karmayoga as it is laid down in the Gita as I have developed it for the integral spiritual life. It is founded not on speculation and reasoning but on experience. It does not exclude meditation and it certainly does not exclude bhakti, for the self-offering to the Divine, the consecration of all oneself to the Divine which is the essence of this Karmayoga are essentially a movement of bhakti. Only it does exclude a life-fleeing exclusive meditation or an emotional bhakti shut up in its own inner dream taken as the whole movement of the Yoga. One may have hours of pure absorbed meditation or of the inner motionless adoration and ecstasy, but they are not the whole of the integral Yoga.

*

To say that one enters the stream of sadhana through work only is to say too much. One can enter it through meditation or bhakti also, but work is necessary to get into full stream and not drift away to one side and go circling there. Of course all work helps provided it is done in the right spirit.

*

Why argue from your personal experience great or little and turn it into a generalisation? A great many people (the majority perhaps) find it [*sadhana through work*] the easiest of all. Many find it easy to think of the Mother when working; but when they read or write, their mind goes off to the thing read or written and they forget everything else. I think that is the case with most. Physical work on the other hand can be done with the most external part of the mind, leaving the rest free to remember or to experience.

A Defence of Works

In spite of your disclaimer you practically come to the conclusion that all my nonsense about integral Yoga and karma being as much a way to realisation as jnana and bhakti is either

a gleaming chimaera or practicable only by Avatars or else a sheer laborious superfluity — since one can bump straight into the Divine through the open door of Bhakti or sweep majestically in on him by the easy high road of meditation; so why this scramble through the jungle of karma by which nobody ever reached anywhere? The old Yogas are true, are they not? Then why a new-fangled, more difficult Yoga with unheard talk about the supramental and God knows what else? There can be no answer to that; for I can only answer by a repetition of the statement of my own knowledge and experience — that is what I have done in today's answer to X — and that amounts only to a perverse obstinacy in riding my gleaming and dazzling chimaera and forcing my nuisance of a superfluity on a world weary of itself and anxious to get a short easy cut to the Divine. Unfortunately, I don't believe in short cuts — at any rate none ever led me where I wanted to go. However, let it rest there.

I have never disputed the truth of the old Yogas — I have myself had the experience of Vaishnava Bhakti and of Nirvana in the Brahman; I recognise their truth in their own field and for their own purpose — the truth of their experience so far as it goes — though I am in no way bound to accept the truth of the mental philosophies founded on the experience. I similarly find that my Yoga is true in its own field — a larger field, as I think — and for its own purpose. The purpose of the old is to get away from life to the Divine — so, obviously, let us drop karma. The purpose of the new is to reach the Divine and bring the fullness of what is gained into life — for that, Yoga by works is indispensable. It seems to me that there is no mystery about that or anything to perplex anybody — it is rational and inevitable. Only you say that the thing is impossible; but that is what is said about everything before it is done.

I may point out that Karmayoga is not a new but a very old Yoga: the Gita was not written yesterday and Karmayoga existed before the Gita. Your idea that the only justification in the Gita for works is that it is an unavoidable nuisance, so better make the best of it, is rather summary and crude. If that were all, the Gita would be the production of an imbecile and I would

hardly have been justified in writing two volumes on it or the world in admiring it as one of the greatest scriptures, especially for its treatment of the problem of the place of works in spiritual endeavour. There is surely more in it than that. Anyhow your doubt whether works can lead to realisation or rather your flat and sweeping denial of the possibility contradicts the experience of those who have achieved this supposed impossibility. You say that work lowers the consciousness, brings you out of the inner into the outer — yes, if you consent to externalise yourself in it instead of doing works from within; but that is just what one has to learn not to do. Thought and feeling can also externalise one in the same way; but it is a question of linking thought, feeling and act firmly to the inner consciousness by living there and making the rest an instrument. Difficult? Even bhakti is not easy and Nirvana is for most men more difficult than all.

You again try to floor me with Ramakrishna. But one thing puzzles me, as Shankara's stupendous activity of karma puzzles me in the apostle of inaction — you see you are not the only puzzled person in the world. Ramakrishna also gave the image of the jar which ceased gurgling when it was full. Well, but Ramakrishna spent the last years of his life in talking about the Divine and receiving disciples — that was not action, not work? Did Ramakrishna become a half-full jar after being a full one or was he never full? Did he get far away from God and so begin a work? Or had he reached a condition in which he was bound neither to rajasic work and mental prattling nor to inactivity and silence, but could do from the divine realisation the divine work and speak from the inner consciousness the divine word? If the last, perhaps in spite of his dictum, his example at least is rather in my favour.

I do not know why you drag in humanitarianism, activism, philanthropical *sevā* etc. None of these are part of my Yoga or in harmony with my definition of works, so they don't touch me. I never thought that politics or feeding the poor or writing beautiful poems would lead straight to Vaikuntha or the Absolute. If it were so, Romesh Dutt on one side and Baudelaire on the other would be the first to attain the Highest and welcome us

there. It is not the form of the work itself or mere activity but the consciousness and Godward will behind it that are the essence of Karmayoga; the work is only the necessary instrumentation for the union with the Master of works, the transit to the pure Will and power of Light from the will and power of the Ignorance.

Finally, why suppose that I am against meditation or bhakti? I have not the slightest objection to your taking either or both as the means of approach to the Divine. Only I saw no reason why anyone should fall foul of works and deny the truth of those who have reached, as the Gita says, through works perfect realisation and oneness of nature with the Divine, *samsiddhim*, *sadharanyam*, as did "Janaka and others", simply because he himself cannot find or has not yet found their deeper secret—hence my defence of works.

Work and Meditation

Work by itself is only a preparation [for spiritual life], so is meditation by itself, but work done in the increasing Yogic consciousness is a means of realisation as much as meditation is.

I have not said, I hope, that work *only* prepares. Meditation also prepares for the direct contact. If we are to do work only as a preparation and then become motionless meditative ascetics, then all my spiritual teaching is false and there is no use for supramental realisation or anything else that has not been done in the past.

*

The including of the outer consciousness in the transformation is of supreme importance in this Yoga—meditation cannot do it. Meditation can deal only with the inner being. So work is of primary importance—only it must be done with the right attitude and in the right consciousness, then it is as fruitful as any meditation can be.

*

You need not have qualms about the time you give to action and

creative work. Those who have an expansive creative vital or a vital made for action are usually at their best when the vital is not held back from its movement and they can develop faster by it than by introspective meditation. All that is needed is that the action should be dedicated, so that they may grow by it more and more prepared to feel and follow the Divine Force when it moves them. It is a mistake to think that to live in introspective meditation all the time is invariably the best or the only way of Yoga.

*

It is not meditation (thinking with the mind) but a concentration or turning of the consciousness that is important,— and that can happen in work, in writing, in any kind of action as well as in sitting down to contemplate.

*

It does not depend on sitting [*to meditate*]. Many don't sit. They become conscious by working.

*

There are some who cannot meditate and progress through work only. Each has his own nature. But to extend one method to all is always an error.

*

Meditation is best when it comes spontaneously. But there should be full concentration in the work if it is to take the place of meditation.

No Competition between Work and Meditation

There are several sadhaks who have advanced very far by work alone, work consecrated to the Mother or else by work mainly with very little time for meditation. Others have advanced far by meditation mainly, but work also. Those who tried to do meditation alone and became impatient of work (because they could not consecrate it to the Mother) have generally been failures like

X and Y. But one or two may succeed by meditation alone—if it is in their nature or if they have an intense and unshakable faith and bhakti. All depends on the nature of the sadhak.

As for the *purātana mānuṣa* I do not see that the workers have their external being less changed than others. There are some who are where they were or only a little progressive, there are others who have changed a good deal—none is transformed altogether, though some have found a sure and sound spiritual and psychic basis. But that applies equally to workers who do not spend time in meditation and to those who spend a long time in meditation.

Each sadhak must be left to himself and the Mother to find his right way which need not be that of his neighbour. There is in the Asram too much observation of each other by the sadhaks, criticism, discussion of persons, even baseless gossip about each other's character, ideas, sadhana, actions along sometimes with theories and (usually mistaken) advice. All that is not very consistent with the atmosphere of Yoga. People should keep all their energy for their own sadhana—unless of course they are commissioned by the Mother to speak or state anything about the Yoga.

*

The ignorance underlying this attitude [*that meditation is greater than work*] is in the assumption that one must necessarily do only work or only meditation. Either work is the means or meditation is the means, but both cannot be! I have never said, so far as I know, that meditation should not be done. To set up an open competition or a closed one between works and meditation is a trick of the dividing mind and belongs to the old Yoga. Please remember that I have been declaring all along an integral Yoga in which Knowledge, Bhakti, works—light of consciousness, Ananda and love, will and power in works—meditation, adoration, service of the Divine have all their place. Have I written seven volumes of the *Arya* all in vain? Meditation is not greater than Yoga of works nor works greater than Yoga by knowledge—both are equal.

Another thing—it is a mistake to argue from one's own very limited experience, ignoring that of others, and build on it large generalisations about Yoga. This is what many do, but the method has obvious demerits. You have no experience of major realisations through work, and you conclude that such realisations are impossible. But what of the many who have had them—elsewhere and here too in the Asram? That has no value? You kindly hint to me that I have failed to get anything by works? How do you know? I have not written the history of my sadhana—if I had, you would have seen that if I had not made action and work one of my chief means of realisation—well, there would have been no sadhana and no realisation except that, perhaps, of Nirvana.

I shall perhaps add something hereafter as to what works can do, but no time tonight.

Do not conclude however that I am exalting works as the sole means of realisation. I am only giving it its due place.

The Time Given to Work and Meditation

The work should not be diminished for that purpose [*meditation and japa*]. On the other hand it is not necessary for you to work all the time. If the work assigned to you is finished earlier, it does not matter about your not keeping the full office hours.

*

If this arrangement [*in work*] gives no time for meditation—no time for going inside and establishing there the peace, wideness and joy in which you can meet the Divine inside and in work—it seems defective. What I meant is that it is not necessary either to work all the time or to intoxicate the brain by unrelieved meditation as some do. The result of meditation can be obtained by work, but then you must be able or learn to live inwardly even in the work and to do all from within.

*

Half an hour's meditation in the day ought to be possible—if

only to bring a concentrated habit into the consciousness which will help it, first to be less outward in work and, secondly, to develop a receptive tendency which can bear its fruits even in the work.

*

I have not suggested that you are to progress by *dhyāna* alone; but you have a great capacity for that and you cannot progress fully without it. In this Yoga some kind of action is necessary for all—though it need not take the form of some set labour. But for the moment progress through concentration and inner experience is the first necessity for you.

This [*stream of thoughts*] is what we call the activity of the mind, which always comes in the way of the concentration and tries to create doubt and dispersion of the energies. It can be got rid of in two ways, by rejecting it and pushing it out, till it remains as an outside force only—by bringing down the higher peace and light into the physical mind.

Concentration, Meditation and Prayer

What you felt before was in your mental being and consciousness; after coming here you have evidently come out into your external and physical consciousness, that is why you feel as if all you had before was gone. It is only covered over by the obscurity of the physical consciousness and not gone.

As for sadhana, I presume you mean by that some kind of exercise of concentration etc. For work also is sadhana, if done in the right attitude and spirit. The sadhana of inner concentration consists in:

(1) Fixing the consciousness in the heart and concentrating there on the idea, image or name of the Divine Mother, whichever comes easiest to you.

(2) A gradual and progressive quieting of the mind by this concentration in the heart.

(3) An aspiration for the Mother's presence in the heart and the control by her of mind, life and action.

But to quiet the mind and get the spiritual experience it is necessary first to purify and prepare the nature. This sometimes takes many years. Work done with the right attitude is the easiest means for that—i.e. work done without desire or ego, rejecting all movements of desire, demand or ego when they come, done as an offering to the Divine Mother, with the remembrance of her and prayer to her to manifest her force and take up the action so that there too and not only in inner silence you can feel her presence and working.

*

I don't think you understood very well what Mother was trying to tell you. First of all she did not say that prayers or meditation either were no good—how could she when both count for so much in Yoga? What she said was that the prayer must well up from the heart on a crest of emotion or aspiration, the Japa or meditation come in a live push carrying the joy or the light of the thing in it. If done mechanically and merely as a thing that ought to be done (stern grim duty!), it must tend towards want of interest and dryness and so be ineffective. It was what I meant when I said I thought you were doing Japa too much as a means for bringing about a result—I meant too much as a device, a process laid down for getting the thing done. That again was why I wanted the psychological conditions in you to develop, the psychic, the mental—for when the psychic is forward, there is no lack of life and joy in the prayer, the aspiration, the seeking, no difficulty in having the constant stream of bhakti and when the mind is quiet and inturned and upturned there is no difficulty or want of interest in meditation. Meditation by the way is a process leading towards knowledge and through knowledge, it is a thing of the head and not of the heart; so if you want dhyana, you can't have an aversion to knowledge. Concentration in the heart is not meditation, it is a call on the Divine, on the Beloved. This Yoga too is not a Yoga of knowledge alone—knowledge is one of its means, but its base being self-offering, surrender, bhakti, it is based on the heart and nothing can be eventually done without this base. There are plenty of people here who

do or have done Japa and base themselves on bhakti, very few comparatively who have done the “head” meditation; love and bhakti and works are usually the base — how many can proceed by knowledge? Only the few.

Bhakti and Knowledge

To know about the sadhana with the mind is not indispensable. If one has bhakti and aspires in the heart’s silence, if there is the true love for the Divine, then the nature will open of itself, there will be the true experience and the Mother’s power working within you, and the necessary knowledge will come.

Section Two

Sadhana through Work

Chapter One

Work and Yoga

Work as Part of Sadhana

Work alone is not the object; work is a means of sadhana.

*

Certainly; work done in the right way and with the consciousness open to the Force is sadhana.

*

Without sadhana the object of Yoga cannot be attained. Work itself must be taken as part of sadhana. But naturally when you are working, you must think of the work, which you will learn to do from the Yogic consciousness as an instrument and with the memory of the Divine.

*

Sadhana and work done disinterestedly as part of the sadhana cannot be incompatible with each other — provided the work is attended to, sadhana can go on very well at the same time.

*

By disinterested work is usually meant work done for the sake of the work or for the sake of others without asking for return, reward or personal fruit or recompense; but in Yoga it means desireless work done for the Divine as an offering without condition or claim — only because it is the Divine's Will or out of love for the Divine.

*

Your object is not only to practise Yoga for your own internal progress and perfection, but also to do a work for the Divine.

*

This is not an Asram like others — the members are not Sannyasis; it is not *mokṣa* that is the sole aim of the Yoga here. What is being done here is a preparation for a work — a work which will be founded on Yogic consciousness and Yoga-Shakti, and can have no other foundation. Meanwhile every member here is expected to do some work in the Asram as part of his spiritual preparation.

*

Recommendation to X not to take you away but to let you realise the Divine first has no meaning. Must one realise the Divine before one can serve him or is not service of the Divine a step on the way to realisation and a help towards it? In any case, the service and the realisation are both necessary for a complete Yoga and one cannot fix an unalterable rule of precedence between the two.

*

X has to learn to consecrate his work and feel the Mother's power working through it. A purely sedentary subjective realisation is only a half realisation.

Work without Personal Motives

The only work that spiritually purifies is that which is done without personal motives, without desire for fame or public recognition or worldly greatness, without insistence on one's own mental motives or vital lusts and demands or physical preferences, without vanity or crude self-assertion or claim for position or prestige, done for the sake of the Divine alone and at the command of the Divine. All work done in an egoistic spirit, however good for people in the world of the Ignorance, is of no avail to the seeker of the Yoga.

*

It is the spirit and the consciousness in which it is done that makes an action Yogic — it is not the action itself.

*

To do anything for a reward is contrary to the rule of Yoga. One must do a thing because it is right or else do it for the Divine, not for a reward.

*

The difficulties will disappear when you have succeeded in consecrating yourself and your work and business entirely and without any internal division to the Divine.

Men usually work and carry on their affairs from the ordinary motives of the vital being, need, desire of wealth or success or position or power or fame or the push to activity and the pleasure of manifesting their capacities, and they succeed or fail according to their capability, power of work and the good or bad fortune which is the result of their nature and their Karma. When one takes up the Yoga and wishes to consecrate one's life to the Divine, these ordinary motives of the vital being have no longer their full and free play; they have to be replaced by another, a mainly psychic and spiritual motive, which will enable the sadhak to work with the same force as before, no longer for himself, but for the Divine. If the ordinary vital motives or vital force can no longer act freely and yet are not replaced by something else, then the push or force put into the work may decline or the power to command success may no longer be there. For the sincere sadhak the difficulty can only be temporary; but he has to see the defect in his consecration or his attitude and to remove it. Then the divine Power itself will act through him and use his capacity and vital force for its ends. In your case it is the psychic being and a part of the mind that have drawn you to the Yoga and were predisposed to it, but the vital nature or at least a large part of it has not yet put itself into line with the psychic movement. There is not as yet the full and undivided consecration of the active vital nature.

The signs of the consecration of the vital in action are these among others:

The feeling (not merely the idea or the aspiration) that all the life and the work are the Mother's and a strong joy of the vital nature in this consecration and surrender. A consequent

calm content and disappearance of egoistic attachment to the work and its personal results, but at the same time a great joy in the work and in the use of the capacities for the divine purpose.

The feeling that the Divine Force is working behind one's actions and leading at every moment.

A persistent faith which no circumstance or event can break. If difficulties occur, they raise not mental doubts or an inert acquiescence, but the firm belief that, with sincere consecration, the Divine Shakti will remove the difficulties, and with this belief a greater turning to her and dependence on her for that purpose. When there is full faith and consecration, there comes also a receptivity to the Force which makes one do the right thing and take the right means and then circumstances adapt themselves and the result is visible.

To arrive at this condition the important thing is a persistent aspiration, call and self-offering, and a will to reject all in oneself or around that stands in the way. Difficulties there will always be at the beginning and for as long a time as is necessary for the change; but they are bound to disappear if they are met by a settled faith, will and patience.

The Karmayoga of the Gita

I do not usually undertake the guidance of any except those who accept my own way of Yoga and show some signs of having a special call to it.

All I can suggest to him is to practise some kind of Karmayoga — remembering the Supreme in all his actions from the smallest to the greatest, doing them with a quiet mind and without ego-sense or attachment and offering them to Him as a sacrifice. He may also try or aspire to feel the presence of the Divine Shakti behind the world and its forces, distinguish between the lower nature of the Ignorance and the higher divine nature whose character is absolute calm, peace, power, Light and Bliss and aspire to be raised and led gradually from the lower to the higher.

If he can do this, he will become fit in time to dedicate

himself to the Divine and lead a wholly spiritual life.

*

The line that seems to be natural to him is the Karmayoga and he is therefore right in trying to live according to the teaching of the Gita; for the Gita is the great guide on this path. Purification from egoistic movements and from personal desire and the faithful following of the best light one has are a preliminary training for this path, and so far as he has followed these things he has been on the right way, but to ask for strength and light in one's action must not be regarded as an egoistic movement, for they are necessary in one's inner development.

Obviously, a more systematic and intensive sadhana is desirable or, in any case, a steady aspiration and a more constant preoccupation with the central aim could bring an established detachment even in the midst of outer things and outer activity and a continuous guidance. The completeness, the Siddhi of this way of Yoga — I speak of the separate path of Karma or spiritual action — begins when one is luminously aware of the Guide and the guidance and when one feels the Power working with oneself as the instrument and the participator in the divine work.

*

I gather from X's letter to you that he has been following a very sound method in his practice and has attained some good results. The first step in Karmayoga of this kind is to diminish and finally get rid of the ego-centric position in works, the lower vital reactions and the principle of desire. He must certainly go on on this road until he reaches something like its end. I would not wish to deflect him from that in any way.

What I had in view when I spoke [*in the preceding letter*] of a systematic sadhana was the adoption of a method which would generalise the whole attitude of the consciousness so as to embrace all its movements at a time instead of working only upon details — although that working is always necessary. I may cite as an example the practice of the separation of the Prakriti and the Purusha, the conscious being standing back detached

from all the movements of Nature and observing them as witness and knower and finally as the giver (or refuser) of the sanction and at the highest stage of development, the Ishwara, the pure will, master of the whole nature.

By intensive sadhana I meant the endeavour to arrive at one of the great positive realisations which would be a firm base for the whole movement. I observe that he speaks of sometimes getting a glimpse of some wide calm when he feels the leading of Vyasa. A descent of this wide calm permanently into the consciousness is one of the realisations of which I was thinking. That he feels it at such times seems to indicate that he may have the capacity of receiving and retaining it. If that happened or if the Prakriti-Purusha realisation came, the whole sadhana would proceed on a strong permanent base with a new and entirely Yogic consciousness instead of the purely mental endeavour which is always difficult and slow. I do not however want to press these things upon him; they come in their own time and to press towards them prematurely does not always hasten their coming. Let him continue with his primary task of self-purification and self-preparation; I shall always be ready to give him what silent help I can.

*

I do not know that it is possible for me to give any guidance on the path you have chosen—it is at any rate difficult for me to say anything definite without more precise data than those contained in your letter.

There is no need for you to change the line of life and work you have chosen so long as you feel that to be the way of your nature (*svabhāva*) or dictated to you by your inner being or, for some reason, it is seen to be your proper dharma. These are the three tests and apart from that I do not know if there is any fixed line of conduct or way of work or life that can be laid down for the yoga of the Gita. It is the spirit or consciousness in which the work is done that matters most; the outer form can vary greatly for different natures. This, so long as one does not get the settled experience of the Divine Power taking up one's works and doing

them; afterwards it is the Power which determines what is to be done or not done.

The overcoming of all attachments must necessarily be difficult and cannot come except as the fruit of a long *sādhanā* — unless there is a rapid general growth in the inner spiritual experience which is the substance of the Gita's teaching. The cessation of desire of the fruit, of the attachment to the work itself, the growth of equality to all beings, to all happenings, to good repute or ill repute, praise or blame, to good fortune or ill fortune, the dropping of the ego which are necessary for the loss of all attachments can come completely only when all work becomes a spontaneous sacrifice to the Divine, the heart is offered up to Him and one has the settled experience of the Divine in all things and all beings. This consciousness or experience must come in all parts and movements of the being, *sarvabhāvena*, not only in the mind and idea; then the falling away of all attachments becomes easy. I speak of the Gita's way of yoga, for in the ascetic life one obtains the same object differently, by cutting away from the objects of attachment and the consequent atrophy of the attachment itself through rejection and disuse.

*

If I have not written to you, it is because I could not add anything to what I had already written before to you. I cannot promise that within a given time you will have a result which will enable you either to go out into the world with a stronger spirit or succeed in the Yoga. For the Yoga you yourself say that you have not yet the whole mind for it and without the whole mind success is hardly possible in sadhana. For the other it is hardly the function of sadhana to prepare a man for ordinary life in the world. There is one thing only that could work in a direction which would help you to something which is not that, but still not the whole Yoga for which you intimate that you are not wholly ready. It is if you get the spirit of the Yoga of works as it is indicated in the Gita — forget yourself and your miseries in the aspiration to a larger consciousness, feel the greater Force working in the world and make yourself an instrument for a

work to be done, however small it may be. But, whatever the way may be, you must accept it wholly and put your whole will into it—with a divided and wavering will you cannot hope for success in anything, neither in life nor in Yoga.

*

That is the ordinary Karmayoga in which the sadhak chooses his own work but offers it to the Divine—it is given to him in the sense that he is moved to it through some impulsion of his mind or heart or vital and feels that there is some cosmic power or *the* cosmic Power behind the impulsion and he tries to train himself to see the One Force behind all actions working out in him and others the cosmic Purpose.

Once he has the ideal of the direct surrender he has to find the direct moving or Guidance—that is why he rejects all that he sees to be merely mental, vital or physical impulsions coming from his own or universal Nature. Of course the full significance of the surrender comes out only when he is ready.

*

Any work can be done as a field for the practice of the spirit of the Gita.

*

The ordinary life consists in work for personal aim and satisfaction of desire under some mental or moral control, touched sometimes by a mental ideal. The Gita's Yoga consists in the offering of one's work as a sacrifice to the Divine, the conquest of desire, egoless and desireless action, bhakti for the Divine, an entering into the cosmic consciousness, the sense of unity with all creatures, oneness with the Divine. This Yoga adds the bringing down of the supramental Light and Force (its ultimate aim) and the transformation of the nature.

No Vital Demand in Work

The Mother had spoken to X, after receiving your letter, for

arranging for the increase of your work. But now as you say you do not want the work and have given it up, there is nothing to be done. It is indeed unprofitable to do any work in this spirit of vital demand and unrest and impatience. I may add that the frown in Mother's eyes and her serious face existed only in the imagination of your restless and excited vital mind; the Mother's eyes and face could not have expressed something quite absent from her feelings or intention.

It is because you showed an intention of doing the sadhana in full earnest that we considered it necessary to point out to you that it could not be done without work or by mere solitary meditation, for that is the nature of this sadhana. We did not impose any work on you, but left it to you to choose. You yourself suggested the kitchen work and afterwards asked for an increase of it.

It is not possible to get peace of mind if you indulge in vital ego and the turbulent play of the vital mind, revolt, demand and impatience. Abhiman, revolt, violent insistence on the satisfaction of claims and wishes are foreign to the spirit of the Yoga, they can only bring disturbance and trouble. If you want peace of mind and true sadhana, the first thing you have to do is to cease regarding all these things as justified or justifiable or insisting on them. You must recognise that in allowing all this to rise in you, it is you yourself who have created your own trouble and you must resolutely separate yourself from these things and clear them out of you. Till you are firm in doing that, nothing can be done,— till then no spiritual progress or achievement is possible.

*

That is the most important thing to get over — ego, anger, personal dislikes, self-regarding sensitiveness etc. Work is not only for work's sake, but as a field of sadhana, for getting rid of the lower personality and its reactions and acquiring a full surrender to the Divine. As for the work itself it must be done according to the organisation arranged or sanctioned by the Mother. You must always remember that it is her work and not personally yours.

The Utility of Work

To keep up work helps to keep up the balance between the internal experience and the external development; otherwise one-sidedness and want of measure and balance may develop. Moreover, it is necessary to keep the sadhana of work for the Divine, because in the end that enables the sadhak to bring out the inner progress into the external nature and life and helps the integrality of the sadhana.

*

It is not at all a question of usefulness — although your work is very useful when you put yourself into it. Work is part of the sadhana, and in sadhana the question of usefulness does not arise, that is an outward practical measure of things, though even in the outward ordinary life utility is not the only measure. The question is of aspiration to the Divine, whether that is your central aim in life, your inner need or not. Sadhana for oneself is another matter — one can take it up or leave it. The real sadhana is for the Divine — it is the soul's need and one cannot give it up even if in moments of despondency one thinks one can.

*

Work here and work done in the world are of course not the same thing. The work there is not in any way a divine work in special — it is ordinary work in the world. But still one must take it as a training and do it in the spirit of karmayoga — what matters there is not the nature of the work in itself but the spirit in which it is done. It must be in the spirit of the Gita, without desire, with detachment, without repulsion, but doing it as perfectly as possible, not for the sake of the family or promotion or to please the superiors, but simply because it is the thing that has been given in the hand to do. It is a field of inner training, nothing more. One has to learn in it three things, equality, desirelessness, dedication. It is not the work as a thing for its own sake, but one's doing of it and one's way of doing it that one has to dedicate to the Divine. Done in that spirit it does not matter what the work is. If one trains oneself spiritually

like that, then one will be ready to do in the true way whatever special work directly for the Divine (such as the Asram work) one may any day be given to do.

*

Yes, obviously, that is one great utility of work that it tests the nature and puts the sadhak in front of the defects of his outer being which might otherwise escape him.

*

It will be better to do the work as a sadhana for getting rid of the defects rather than accept the defects as a reason for not doing the work. Instead of accepting these reactions as if they were an unchangeable law of your nature, you should make up your mind that they must come no longer — calling down the aid of the Mother's force to purify the vital and eliminate them altogether. If you believe that the trouble in the body must come, naturally it will come; rather fix in your mind the idea and will that it must not come and will not come. If it tries to come reject it and throw it away from you.

*

The actions are of importance only as expressing what is in the nature. You have to be conscious of whatever in your actions is not in harmony with the Yoga and to get rid of it. But for that what is needed is your own consciousness, the psychic, observing from within and throwing off what is seen to be undesirable.

*

For the sadhak outward struggles, troubles, calamities are only a means of surmounting ego and rajasic desire and attaining to complete surrender. So long as one insists on success, one is doing the work partly at least for the ego; difficulties and outward failures come to warn one that it is so and to bring complete equality. This does not mean that the power of victory is not to be acquired; but it is not success in the immediate work that is all-important; it is the power to receive and transmit

a greater and greater correct vision and inner Force that has to be developed and this must be done quite coolly and patiently without being elated or disturbed by immediate victory or failure.

Right Attitude in Work

The spiritual effectivity of work of course depends on the inner attitude. What is important is the spirit of offering put into the work. If one can in addition remember the Mother in the work or through a certain concentration feel the Mother's presence or force sustaining or doing the work, that carries the spiritual effectivity still farther. But even if one cannot in moments of clouding, depression or struggle do these things, yet there can be behind a love or bhakti which was the original motive power of the work and that can remain behind the cloud and reemerge like the sun after dark periods. All sadhana is like that and it is why one should not be discouraged by the dark moments, but realise that the original urge is there and that therefore the dark moments are only an episode in the journey which will lead to greater progress when they are once over.

*

As for the work, it is a means of preparation, it can also be a means of growing into the inner consciousness. But then it must be done not as work only but as an offering to the Mother, without insisting on the ego, with an aspiration to feel her Force working in one, her Presence presiding over the work, seeking to give all to her, not claiming anything for oneself. That is the spirit of work offered as a sacrifice; done like that, work becomes a sadhana and a Yoga.

*

What you have to realise is that your success or failure depends, first and always, on your keeping in the right attitude and in the true psychic and spiritual atmosphere and allowing the Mother's force to act through you.

If I can judge from your letters, you take its support too much for granted and lay the first stress on your own ideas and plans and words about the work; but these whether good or bad, right or mistaken, are bound to fail if they are not instruments of the true Force. You have to be always concentrated, always referring all difficulties for solution to the force that is being sent from here, always letting it act and not substituting your own mind and separate vital will or impulse.

Proceed with your work, never forgetting the condition of success. Do not lose yourself in the work or in your ideas or plans or forget to keep yourself in constant touch with the true source. Do not allow anybody's mind or vital influence or the influence of the surrounding atmosphere or the ordinary human mentality to come between you and the power and presence of the Mother.

*

You know what is the right thing to do—to take and keep the necessary inner attitude—when there is the openness to the Force and the strength, courage and power in action coming from it, outward circumstances can be met and turned in the right direction.

Equanimity in Work

Helpless acceptance [*of difficulties*] is no part of the Yoga of works—what is necessary is a calm equanimity in the face both of helpful and adverse, fortunate or unfortunate happenings, good or evil fortune, success or failure of effort. One must learn to bear without flinching and disturbance, without rajasic joy or grief, doing all that is necessary, but not dejected if difficulties or failure come—one still goes on doing what can be done, not sinking under the burden of life.

*

To keep this equanimity and absence of reactions and from that calm ground to direct the Yoga-force on things and persons (not

for egoistic aims but for the work to be done) is the position of the Yogi.

*

This is the right inner attitude, of equality — to remain unmoved whatever may outwardly happen. But what is needed for success in the outward field (if you do not use human means, diplomacy or tactics) is the power to transmit calmly a Force that can change men's attitude and the circumstances and make any outward action taken at once the right thing to do and effective.

*

You have to make yourself an instrument of the invisible Force — to be able in a way to direct it to the required point and for the required purpose. But for that samata must be entire — for a calm and luminous use of the Force is necessary. Otherwise the use of the Force, if accompanied by ego-reactions, may raise a corresponding ego-resistance and a struggle.

*

The increase of samata is only a first condition [*for attacks by adverse forces to become impossible in one's work*]. It is when on the basis of samata an understanding Force can be used to make their attacks nugatory that the attacks will become impossible.

The Impersonal Worker

To be impersonal, generally, is not to be ego-centric, not to regard things from the point of view of how they affect oneself, — but to see what things are in themselves, to judge impartially, to do what is demanded by the purpose of things or by the will of the Master of things, not by one's own personal point of view or egoistic interest or ego-formed idea or feeling. In work it is to do what is best for the work, without regard to one's own prestige or convenience, not to regard the work as one's own but as the Mother's, to do it according to rule, discipline, impersonal arrangement, even if conditions are not favourable to do the

best according to the conditions etc. etc. The impersonal worker puts his best capacity, zeal, industry into the work, but not his personal ambitions, vanity, passions. He has always something in view that is greater than his little personality and his devotion or obedience to that dictates his conduct.

*

Your difficulty in work is that you regard it too much as your work and from your personal point of view. So questions of personal convenience, ideas, way of doing things, prestige, demands take a big place — and the result is quarrels. You have to learn to be impersonal. Even in the world work cannot be well done without that. How much more necessary is it for a sadhak of Yoga!

Service of the Divine

There should be no straining after power, no ambition, no egoism of power. The power or powers that come should be considered not as one's own, but as gifts of the Divine for the Divine's purpose. Care should be taken that there should be no ambitious or selfish misuse, no pride or vanity, no sense of superiority, no claim or egoism of the instrument, only a simple and pure psychic instrumentation of the nature in any way in which it is fit for the service of the Divine.

*

To be free from all egoistic motive, careful of truth in speech and action, void of self-will and self-assertion, watchful in all things is the condition for being a flawless servant.

*

Yes, the use to which you have turned your vital capacities in Bengal and Bombay,— to turn them into instruments of service and the Divine Work, is certainly the best possible. Through such action and such use of the vital power, one can certainly progress in Yoga. Vital power is necessary for work and you

have an exceptional amount of it. Of course, to make a full Yogic use of it and of its force for action, the ego must gradually fade out and vital attachments and impulses be replaced by the spiritual motive. Bhakti, devotion to the Divine, and the spirit of service to the Divine are among the most powerful means for this change.

*

Reading and study though they can be useful for preparing the mind, are not themselves the best means of entering the Yoga. It is self-dedication from within that is the means. It is with the consciousness of the Mother that you must unite, a sincere self-consecration in the mind and heart and the Will is the means for it. The work given by the Mother is always meant as field for that self-consecration, it has to be done as an offering to her so that through the self-offering one may come to feel her force acting and her presence.

*

If one went to the Himalayas, the likelihood is that one would make oneself fit for inactive meditation and quite unfit for life and the Mother's service—so in the next life the character would be like that. This is simply the influence of old ideas that have no application in this Yoga. It is here in the life near the Mother, in the work itself that one must become fit to be a perfect instrument of the Mother.

*

All acts are included in action,—work is action regulated towards a fixed end and methodically and constantly done, service is work done for the Mother's purpose and under her direction.

All Work Equal in the Eyes of the Spirit

Self-dedication does not depend on the particular work you do, but on the spirit in which all work, of whatever kind it may be, is done. Any work, done well and carefully as a sacrifice

to the Divine, without desire or egoism, with equality of mind and calm tranquillity in good or bad fortune, for the sake of the Divine and not for the sake of any personal gain, reward or result, with the consciousness that it is the Divine Power to which all work belongs, is a means of self-dedication through Karma.

*

Like the vital disturbance the physical inertia with all its symptoms is an attack of the hostile forces intended to cut short and prevent the higher opening. The ideas that arise to justify it are of no value — it is not true that physical work is of an inferior value to mental culture, it is the arrogance of the intellect that makes the claim. All work done for the Divine is equally divine; manual labour done for the Divine is more divine than mental culture done for one's own development, fame or mental satisfaction.

This inertia, numbness, pain should be thrown off with the same resolution as the vital disturbances. The only peculiarity of it in your case is the persistent violence of the attack as in the case of the vital — otherwise it is what others get also; but each time they reject, call on the Mother and get free, after a little time if the attack is violent, at once if it is of a lesser character.

If there is temporary physical inability, one can take rest but solely for the purpose of recovering the physical energy. The idea of giving up physical work for mental self-development is a creation of the mental ego.

*

Of course the idea of bigness and smallness is quite foreign to the spiritual truth. Spiritually there is nothing big or small. Such ideas are like those of the literary people who think writing a poem is a high work and making shoes or cooking the dinner is a small and low one. But all is equal in the eyes of the Spirit — and it is only the spirit within with which it is done that matters. It is the same with a particular kind of work, there is nothing big or small.

*

In the wider consciousness one can deal with the small as well as the high things, but one comes to deal with them with a larger as well as a profounder, subtler and more accurate view coming from a more and more understanding and luminous consciousness so that the thoughts about small things also cease to be themselves small or trivial, being more and more part of a higher knowledge.

*

One must be able to do the same work always with enthusiasm and at the same time be ready to do something else or enlarge one's scope at a moment's notice.

*

The sadhak ought to be ready to do any work that is needed, not only the work he prefers.

*

It is not that you have to do what you dislike, but that you have to cease to dislike. To do only what you like is to indulge the vital and maintain its domination over the nature—for that is the very principle of the untransformed nature, to be governed by its likes and dislikes. To be able to do anything with equanimity is the principle of karmayoga and to do it with joy because it is done for the Mother is the true psychic and vital condition in this Yoga.

*

There are those who have done the lawyer's work with the Mother's force working in them and grown by it in inward consciousness. On the other hand religious work can be merely external and vital in its nature or influence.

*

I may say however that I do not regard business as something evil or tainted, any more than it was so regarded in ancient spiritual India. If I did, I would not be able to receive money

from X or from those of our disciples who in Bombay trade with East Africa; nor could we then encourage them to go on with their work but would have to tell them to throw it up and attend to their spiritual progress alone. How are we to reconcile X's seeking after spiritual light and his mill? Ought I not to tell him to leave his mill to itself and to the devil and go into some Ashram to meditate? Even if I myself had had the command to do business as I had the command to do politics I would have done it without the least spiritual or moral compunction. All depends on the spirit in which a thing is done, the principle on which it is built and use to which it is turned. I have done politics and the most violent kind of revolutionary politics, *ghoram karma*, and I have supported war and sent men to it, even though politics is not always or often a very clean occupation nor can war be called a spiritual line of action. But Krishna calls upon Arjuna to carry on war of the most terrible kind and by his example encourage men to do every kind of human work, *sarvakarmāṇi*. Do you contend that Krishna was an unspiritual man and that his advice to Arjuna was mistaken or wrong in principle? Krishna goes farther and declares that a man by doing in the right way and in the right spirit the work dictated to him by his fundamental nature, temperament and capacity and according to his and its dharma can move towards the Divine. He validates the function and dharma of the Vaishya as well as of the Brahmin and Kshatriya. It is in his view quite possible for a man to do business and make money and earn profits and yet be a spiritual man, practise Yoga, have an inner life. The Gita is constantly justifying works as a means of spiritual salvation and enjoining a Yoga of works as well as of Bhakti and Knowledge. Krishna, however, superimposes a higher law also that work must be done without desire, without attachment to any fruit or reward, without any egoistic attitude or motive, as an offering or sacrifice to the Divine. This is the traditional Indian attitude towards these things, that all work can be done if it is done according to the dharma and, if it is rightly done, it does not prevent the approach to the Divine or the access to spiritual knowledge and the spiritual life.

There is of course also the ascetic ideal which is necessary for many and has its place in the spiritual order. I would myself say that no man can be spiritually complete if he cannot live ascetically or follow a life as bare as the barest anchorite's. Obviously, greed for wealth and money-making has to be absent from his nature as much as greed for food or any other greed and all attachment to these things must be renounced from his consciousness. But I do not regard the ascetic way of living as indispensable to spiritual perfection or as identical with it. There is the way of spiritual self-mastery and the way of spiritual self-giving and surrender to the Divine, abandoning ego and desire even in the midst of action or of any kind of work or all kinds of work demanded from us by the Divine. If it were not so, there would not have been great spiritual men like Janaka or Vidura in India and even there would have been no Krishna or else Krishna would have been not the Lord of Brindavan and Mathura and Dwarka or a prince and warrior or the charioteer of Kurukshetra, but only one more great anchorite. The Indian scriptures and Indian tradition, in the Mahabharata and elsewhere, make room both for the spirituality of the renunciation of life and for the spiritual life of action. One cannot say that one only is the Indian tradition and that the acceptance of life and works of all kinds, *sarvakarmāṇi*, is un-Indian, European or Western and unspiritual.

Interest in Work

It [*absorption in work*] depends on a certain extension and intensifying of the consciousness by which all activity becomes interesting not for itself but because of the consciousness put into it and, through the intensity of the energy, there is a pleasure in the exercise of the energy, and in the perfect doing of the work, whatever the work may be.

*

As a rule, I mean in their unchanged condition, the lower parts get interested and enthusiastic [*about work*] when the ego mixes

with the interest. But the pure enthusiasm can come into them as they get more and more converted and purified and they then become very indispensable forces for the realisation.

*

It is natural for the vital or even the mind to feel energised by something new—but for the physical plane the work always repeated is the foundation—so one has to be able at least to take a steady calm interest in it always.

*

There must be the rasa [*in the work*], but it comes when there is the dynamic descent of the Power.

Joy in Work

Part of the physical cannot do without work, another part (more material) finds it an infliction. What gives the force and joy of the work is however not physical but vital.

*

The vital delight in the work is a necessary element for the work itself. Work done without it is much less easy to do and much less easy to offer.

*

Most people do things because they have to, not out of the happiness they find in the things. It is only its hobbies and penchants that the nature finds some happiness in, not usually in work—unless of course the work itself is one's hobby or penchant and can be indulged in or dropped as one likes.

*

Joy and enthusiasm and buoyancy are good things, but it must be on a basis of calm and with the head clear for work.

*

The reason of the difference of result between the two moods in work is that the first mood is that of a vital joy, while the other is that of a psychic quiet. Vital joy, though it is a very helpful thing for the ordinary human life, is something excited, eager, mobile without a settled basis—that is why it soon gets tired and cannot continue. Vital joy has to be replaced by a quiet settled psychic gladness with the mind and vital very clear and very peaceful. When one works on this basis, then everything becomes glad and easy, in touch with the Mother's force and fatigue or depression do not come.

Loss of Inspiration in Work

What you find happening [*a loss of inspiration*] is a common experience in all work. Mother says it is due to the fact that in beginning the work there is an inspiration of what to do and the mind at first acts as a channel for it and all goes well. Afterwards the mind begins to be acting on its own account, without one's noticing it usually unless one is very conscious and accustomed to scrutinise oneself—and do the thing without the original inspiration by its ordinary means. This is felt very clearly in work like poetry and music—for there one feels the inspiration coming and feels it failing and getting mixed up with the ordinary mind. So long as it goes on, everything is done easily and well, but as soon as the mind begins to interfere or to work in its place, then the work is less well done. In work like cooking one does not directly and vividly feel the inspiration, only a brightness and perceptiveness and confidence perhaps—so also one does not notice when the physical mind becomes active. In a thing like poetry one can break off till the inspiration comes again, but in cooking one can't do that, the work has to be finished there and then. I suppose this can be remedied only by one's becoming more conscious within as one does in sadhana, till one can see and counteract the wrong movement of inferior mental activity by bringing down of one's will again the right inspiration and perception.

Thoughts of Sadhana during Work

Thoughts of sadhana can go on very well along with work. To combine the inner spiritual consciousness and its growth with a consecrated outer activity is part of the Yoga.

*

I don't think any attempt should be made [*to turn inwards or revert to thoughts of sadhana during work*]. If the thoughts of sadhana come of themselves or the turning inwards or a silent aspiration to sadhana, that is all right.

Chapter Two

Becoming Conscious in Work

Working from Within

You must learn to act always from within — from your inner being which is in contact with the Divine. The outer should be a mere instrument and should not be allowed at all to compel or dictate your speech, thought or action.

*

All should be done quietly from within — working, speaking, reading, writing as part of the real consciousness — not with the dispersed and unquiet movement of the ordinary consciousness.

*

One can work and remain quiet within. Quietude does not mean having an empty mind or doing no action at all.

*

When one is concentrated within, the body can go on doing its work by the Force acting within it. Even the external consciousness can work separately under the motion of the Force while the rest of the consciousness is in concentration.

*

It is a little difficult at first to combine the inward condition with the attention to the outward work and mingling with others, but a time comes when it is possible for the inner being to be in full union with the Mother while the action comes out of that concentrated union and is consciously guided in all its details so that some part of the consciousness can attend to everything outside, even be concentrated upon it and yet feel the inward concentration in the Mother.

*

It is a very good sign that even in spite of full work the inner working was felt behind and succeeded in establishing the silence. A time comes for the sadhak in the end when the consciousness and the deeper experience go on happening even in full work or in sleep, while speaking or in any kind of activity.

*

It is probably because at the time of the work the tendency of the consciousness to externalise itself is greater (that is always the case), so the pressure grows stronger in order to produce a contrary inward tendency. This produces some tendency to go inside in the way of a complete internalisation (going into a sort of samadhi); but what should happen during work is a going inside in a wakeful condition and becoming aware of the psychic within as you used to do under the pressure while the outer mind does the work. This is the condition that must eventually come.

*

The stress of the Power is all right, but there is really nothing incompatible between the inner silence and action. It is to that combination that the sadhana must move.

*

It [*concentration of the inner consciousness*] can happen in several forms. It can become concentrated in silence as the witness — it can become concentrated in the feeling of the Divine Force flowing through it, the work being a result — it can become concentrated in the feeling of the presence of the Divine or the Ananda or love of the Divine while the working goes on separately in front. All this becomes so habitual that it goes on of itself without the need of call or effort or even of the mind's attention — it simply *is* there. There are other possibilities besides those mentioned above, but these are perhaps the most common.

*

It is perfectly possible to do work in an entire emptiness

without any interference or activity of the lower parts of the consciousness.

Working with a Double Consciousness

One can both aspire and attend to the work and do many other things at the same time when the consciousness is developed by Yoga.

*

It [*peace and contact in work, but no aspiration*] is because the energy is put outward in the work. But as the peace and contact grow a double consciousness can develop — one engaged in the work, another behind silent and observing or turned towards the Divine — in this consciousness the aspiration can be maintained even while the external consciousness is turned towards the work.

*

That is how the consciousness must work when it lives in the Divine. One part of the Force in it works and offers the work to the Mother, another part lives in the experience of the Mother, the third hears what the others say and answers without losing the inner consciousness.

*

No — it is only if it [*turning inwards during work*] is an inner absorption that it would come in the way. But what I mean is a sort of stepping backward into something silent and observant within which is not involved in the action, yet sees and can shed its light upon it. There are then two parts of the being, one inner looking at and witnessing and knowing, the other executive and instrumental and doing. This gives not only freedom but power — and in this inner being one can get into touch with the Divine not through mental activity but through the substance of the being, by a certain inward touch, perception, reception, receiving also the right inspiration or intuition of the work.

*

If one feels a consciousness not limited by the work, a consciousness behind supporting that which works, then it is easier [*to keep higher thoughts during work*]. That usually comes either by the wideness and silence fixing and extending itself or by the consciousness of a Force not oneself working through the worker.

*

Before things become pucca in the consciousness, the doing of work does carry the consciousness outward unless one has made it a sadhana to feel the “Force greater than oneself” working through one. That I suppose is why the Shankarites considered work to be in its own nature an operation of the Ignorance and incompatible with a condition of realisation. But as a matter of fact there are three stages there: (I) in which the work brings you to a lower as well as outer consciousness so that you have afterwards to recover the realisation; (II) in which the work brings you out, but the realisation remains behind (or above), not felt while you work, but as soon as the work ceases you find it there just as it was; (III) in which the work makes no difference, for the realisation or spiritual condition remains through the work itself. You seem this time to have experienced No. II.

*

In action it is always more difficult [*to keep a higher state of consciousness*] because the consciousness goes out towards the work or else is at least not wholly held within — it is therefore difficult to remain in an inward state. There is no other obstacle. But if the inward state is strong and habitual, then it gains upon the action also and at first one always feels it behind and afterwards it occupies the whole consciousness, outer included, and the action takes place in it. This is for static states like peace, self-realisation etc. If one has the realisation of the dynamic Force, there is no difficulty — because that can take up the action at once.

Absorption in Work

It is the external mind that gets absorbed in the work and

covers what is behind. There must be a double consciousness, one acting, one behind observing, separate, free to continue the sadhana.

*

The absorption in work is not undesirable—but the difficulty in turning inwards can only be temporary. A certain plasticity in the physical consciousness which is sure to come makes it easy to turn from one concentration to another.

*

It [*meditative absorption during work*] depends on the plasticity of the consciousness. Some are like that, they get so absorbed they don't want to come out or do anything else. One has to keep a certain balance by which the fundamental consciousness remains able to turn from one concentration to another with ease.

*

This tendency [*to be possessed by work*] has its advantage and disadvantage. It gets things done, but it prevents plasticity in the work. One must get free from the “possession” by the urge of the energy, but keep the drive and be able to distribute it at will.

*

Absorption in work is inevitable. It is enough to offer it when beginning and ending and to encourage the attitude to grow = for You and by You.

*

It is a certain inertia in the physical consciousness which shuts it up in the groove of what it is doing so that it is fixed in that and not free to remember [*the Mother*].

Remembering the Presence in Work

It is not at first easy to remember the presence in work; but if one revives the sense of the presence immediately after the work is

over it is all right. In time the sense of the presence will become automatic even in work.

*

All the difficulties you describe are quite natural things common to most people. It is easy for one, comparatively, to remember and be conscious when one sits quiet in meditation; it is difficult when one has to be busy with work. The remembrance and consciousness in work have to come by degrees, you must not expect to have it all at once; nobody can get it all at once. It comes in two ways,—first, if one practises remembering the Mother and offering the work to her each time one does something (not all the time one is doing, but at the beginning or whenever one can remember), then that slowly becomes easy and habitual to the nature. Secondly, by the meditation an inner consciousness begins to develop which, after a time, not at once or suddenly, becomes more and more automatically permanent. One feels this as a separate consciousness from that outer one which works. At first this separate consciousness is not felt when one is working, but as soon as the work stops one feels it was there all the time watching from behind; afterwards it begins to be felt during the work itself, as if there were two parts of oneself — one watching and supporting from behind and remembering the Mother and offering to her and the other doing the work. When this happens, then to work with the true consciousness becomes more and more easy.

It is the same with all the rest. It is by the development of the inner consciousness that all the things you speak of will be set right. For instance it is a part of the being that has *utsāha* for the work, another that feels the pressure of quietude and is not so disposed to work. Your mood depends on which comes up at the time—it is so with all people. To combine the two is difficult, but a time comes when they do get reconciled— one remains poised in an inner concentration while the other is supported by it in its push towards work. The transformation of the nature, the harmonising of all these discordant things in the being are the work of sadhana. Therefore you need not be discouraged by

observing these things in you. There is hardly anybody who has not found these things in himself. All this can be arranged by the action of the inner Force with the constant consent and call of the sadhak. By himself he might not be able to do it, but with the Divine Force working within all can be done.

*

The resistance you speak of and the insufficient receptivity and the inability to continue in communion while doing work, must all be due to some part of the physical consciousness that is still not open to the Light — probably something in the vital physical and the material subconscious which stands in the way of the physical mind being in its mass free and responsive.

There is no harm in raising the aspiration from below to meet the power from above. All that you have to be careful about is not to raise up the difficulty from below before the descending Power is ready to remove it.

There is no necessity of losing consciousness when you meditate. It is the widening and change of the consciousness that is essential. If you mean going inside, you can do that without losing consciousness.

Inner Guidance about Work

It is good that you were able to observe yourself all the time and see the movements and that the intervention of the new consciousness was frequent and automatic. At a later stage you will no doubt get a guidance in the mind also as to how to do the things you want to get done. Evidently your mind was too active — as well as the minds of others also — and so you missed your objective, owing to the excessive multitude of witnesses! However —

*

If you want that [*to become conscious of whether an action is right or not*] very much and aspire for it, it may come in one of several ways —

(1) You may get the habit or faculty of watching your movements in such a way that you see the impulse to action coming and can see too its nature,

(2) a consciousness may come which feels uneasy at once if a wrong thought or impulse to action or feeling is there,

(3) something within you may warn and stop you when you are going to do the wrong action.

*

As for the feeling from within, it depends on being able to go inside. Sometimes it comes of itself with the deepening of the consciousness by bhakti or otherwise; sometimes it comes by practice—a sort of referring the matter and listening for the answer—listening is of course a metaphor but it is difficult to express it otherwise—it doesn't mean that the answer comes necessarily in the shape of words, spoken or unspoken, though it does sometimes or for some; it can take any shape. The main difficulty for many is *to be sure of the right answer*. For that it is necessary to be able to contact the consciousness of the Guru inwardly—that comes best by bhakti. Otherwise it may become a delicate and ticklish job. Obstacles, (1) normal habit of relying on outward means for everything, (2) ego, substituting its suggestions for the right answer, (3) mental activity, (4) intruder nuisances. I think you need not be eager for this, but rely on the growth of the inner consciousness. The above is only by way of general explanation.

*

A constant aspiration for that [*to be constantly governed by the Divine*] is the first thing—next a sort of stillness within and a drawing back from the outward action into the stillness and a sort of listening expectancy, not for a sound but for the spiritual feeling or direction of the consciousness that comes through the psychic.

*

Your difficulty is that you worry yourself and think you have

made mistakes when you have made none. If you want to get the right guidance, you must have more confidence and not always think that what comes to you is wrong and your work is bad and ugly. You generally get things right. If you do make a mistake here and there, it does not matter; everybody makes some mistakes; but by making them one can learn better.

Another thing is that, as I have told you, a thing can be done in several ways, all of which are good — but your mind seems to go on the feeling that one thing is good or true and all the rest is bad or false and, as it were, is seeking for the one only good way and then in everything it does it feels dissatisfied. When you have found a way of doing the work, it is better to do it and not always be worrying yourself for something better.

*

It is always the restlessness that makes you lose touch. If you are not sure about the work, remain quiet and you will get in time the idea of what to do; if you worry and are restless, you get confused and disturbed and can no longer feel connection with the Force, though it is always there above you and supporting you. As to blind selfish feelings, they are still more confusing and disturbing; but here too the only thing is to remain quiet, detach yourself, disown and throw away the feeling. To get upset, disturbed and in despair, is no use; it only prolongs the confusion and unrest and prevents you from feeling the connection.

*

Openness in work means the same thing as openness in the consciousness. The same Force that works in your consciousness in meditation and clears away the cloud and confusion whenever you open to it, can also take up your action and not only make you aware of the defects in it but keep you conscious of what is to be done and guide your mind and hands to do it. If you open to it in your work, you will begin to feel this guidance more and more until behind all your activities you will be aware of the Force of the Mother.

*

Why should you try the same things as the others? What one feels inspired to do, is the best thing for one.

Knowing the Divine Will

There is a consciousness other than mind and vital—if there were not, there would be no use in doing sadhana. The true will belongs to that consciousness.

*

When the mind is pure and the psychic prominent, then one feels what is according to the Divine Will and what is against it.

*

For the actions to be psychic, the psychic must be in front. The observing Purusha can separate himself, but cannot change the Prakriti. But to be the observing Purusha is a first step. Afterwards there must be the action of the Purusha Will as an instrument of the Mother's force. This Will must be founded on a right consciousness which sees what is wrong, ignorant, selfish, egoistic, moved by desire in the nature and puts it right.

*

It needs a quiet mind [*to know the Divine Will*]. In the quiet mind turned towards the Divine the intuition (higher mind) comes of the Divine's Will and the right way to do it.

*

Once the mental silence is attained, then in that the mental thoughts can be replaced by some vision and intuition regarding the work.

*

The transcendental Will for us is the supramental Will. For that to act in you directly, it is necessary to grow upward into the consciousness above the ordinary mind and to bring down these higher ranges into the mind, life and body. Indirectly through

the higher Mind and intuition the supramental Will is already acting on you, but naturally this indirect action does not bring the full power.

*

The true automatic action (full of consciousness and light) begins only when one gets into touch with the supermind. Till then aspiration and tapasya (concentration) are needed; otherwise there is a wrong automatism due to inert passivity in which wrong forces can act.

Freedom in Work

Do? why should he [*a certain Yogi*] want to do anything if he was in the eternal peace or Ananda or union with the Divine? If a man is spiritual and has gone beyond the vital and mind, he does not need to be always “doing” something. The self or spirit has the joy of its own existence. It is free to do nothing and free to do everything — but not because it is bound to action and unable to exist without it.

*

The passage¹ describes the state of consciousness when one is aloof from all things even when in their midst and all is felt to be unreal, an illusion. There are then no preferences or desires, because things are too unreal to desire or to prefer one to another. But at the same time one feels no necessity to flee the world or not to do any action, because being free from the illusion, action or living in the world does not weigh upon one, one is not bound or involved. Those who flee from the world or shun action (the Sannyasis) do so because they would be involved or bound; they believe the world to be unreal, but in fact it weighs on them as a reality so long as they are in it. When one is perfectly free from the illusion of the reality of things, then they cannot weigh on one or bind at all.

*

¹ This passage is not available. —Ed.

But the Jivanmukta feels no bondage [*in work*]. In all work and action, he feels perfectly free, because the work is not done by him personally (there is no sense of limited ego) but by the cosmic Force. The limitations of the work are those put by the cosmic Force itself on its own action. He himself lives in communion of oneness with the Transcendent which is above the cosmos and feels no limitation. That is at least how it is felt in the Overmind.

Chapter Three

The Divine Force in Work

Receiving the Divine Power or Force

To be able to receive the Divine Power and let it act through you in the things of the outward life, there are three necessary conditions:

1. Quietude, equality — not to be disturbed by anything that happens, to keep the mind still and firm, seeing the play of forces, but itself tranquil.
2. Absolute faith — faith that what is for the best will happen, but also that if one can make oneself a true instrument, the fruit will be that which one's will guided by the Divine Light sees as the thing to be done — *kartavyam karma*.
3. Receptivity — the power to receive the Divine Force and to feel its presence and the presence of the Mother in it and allow it to work, guiding one's sight and will and action. If this power and presence can be felt and this plasticity made the habit of the consciousness in action, — but plasticity to the Divine Force alone without bringing in any foreign element, — the eventual result is sure.

*

What happened to you shows what are the conditions of that state in which the Divine Power takes the place of the ego and directs the action, making the mind, life and body an instrument. A receptive silence of the mind, an effacement of the mental ego and the reduction of the mental being to the position of a witness, a close contact with the Divine Power and an openness of the being to that one Influence and no other are the conditions for becoming an instrument of the Divine, moved by that and that only.

That there was no mental expectation was all to the good; if there had been an expectation, the mind might have been active

and interfered and either prevented the experience or else stood in the way of its being pure and complete.

The silence of the mind does not of itself bring in the supramental consciousness; there are many states or planes or levels of consciousness between the human mind and the Supermind. The silence opens the mind and the rest of the being to greater things, sometimes to the cosmic consciousness, sometimes to the experience of the silent Self, sometimes to the presence or power of the Divine, sometimes to a higher consciousness than that of the human mind; the mind's silence is the most favourable condition for any of these things to happen. In this Yoga it is the most favourable condition (not the only one) for the Divine Power to descend first upon and then into the individual consciousness and there do its work to transform that consciousness, giving it the necessary experiences, altering all its outlook and movements, leading it from stage to stage till it is ready for the last (supramental) change.

*

What happened is a thing that often happens and — taking your account of it — it reproduced in your case the usual stages. First you sat down in prayer — that means a call to the Above, if I may so express it. Next came the necessary condition for the answer to the prayer to be effective — “little by little a sort of restfulness came”, in other words, the quietude of the consciousness which is necessary before the Power that has to act can act. Then the rush of the Force or Power, “a flood of energy and sense of power and glow” and the natural concentration of the being in inspiration and expression, the action of the Power. This is the thing that used to happen daily to the physical workers in the Asram. Working with immense energy and enthusiasm, with a passion for the work they might after a time feel tired — then they would call the Mother and a sense of rest came into them and with or after it a flood of energy so that twice the amount of work could be done without the least fatigue or reaction. In many there was a spontaneous call of the vital for the Force, so that they felt the flood of energy as soon as they began the work

and it continued so long as the work had to be done.

The vital is the means of effectuation on the physical plane, so its action and energy are necessary for all work — without it, if the mind only drives without the cooperation and instrumentation of the vital, there is hard and disagreeable labour and effort with results which are usually not at all of the best kind. The ideal state for work is when there is a natural concentration of the consciousness in the special energy, supported by an easeful rest and quiescence of the consciousness as a whole. Distraction of the mind by other activities disturbs this balance of ease and concentrated energy, — fatigue also disturbs or destroys it. The first thing therefore that has to be done is to bring back the supporting restfulness and this is ordinarily done by cessation of work and repose. In the experience you had that was replaced by a restfulness that came from above in answer to your station of prayer and an energy that also came from above. It is the same principle as in sadhana — the reason why we want people to make the consciousness quiet so that the higher peace may come in and on the basis of that peace a new Force from above.

It is not effort that brought the inspiration. Inspiration comes from above in answer to a state of concentration which is itself a call to it. Effort on the contrary fatigues the consciousness and therefore is not favourable to the best work; the only thing is that sometimes — by no means always — effort culminates in a pull for the inspiration which brings some answer, but it is not usually so good and effective an inspiration as that which comes when there is the easy and intense concentration of the energy in its work. Effort and expenditure of energy are not necessarily the same thing; the best expenditure of energy is that which flows easily without effort at all — when the Inspiration or Force (any Force) works of itself and the mind and vital and even body are glowing instruments and the Force flows out in an intense and happy working — an almost labourless labour.

The Working of the Force

When you have opened yourself to a higher Force, when you

have made yourself a channel for the energy of its work, it is quite natural that the Force should flow and act in the way that is wanted or the way that is needed and for the effect that is needed. Once the channel is made, the Force that acts is not necessarily bound by the personal limitations or disabilities of the instrument; it can disregard them and act in its own power. In doing so it may use the instrument simply as a medium and, as soon as the work is finished, leave him just what he was before, incapable in his ordinary moments of doing such good work, capable only when he is seized and used and illumined. But also it may by its power of transforming action set the instrument right, accustom it to the necessary intuitive knowledge and movement so that this living perfected instrument can at will call for and receive the action of the Force. In technique, there are two different things,—there is the intellectual knowledge which one has acquired and applies or thinks one is applying—there is the intuitive cognition which acts in its own right, even if it is not actually possessed by the worker so that he cannot give an adequate account of the modes of working or elements of what he has done. Many poets have a very summary theoretic knowledge of metrical or linguistic technique; they have its use but they would not be able to explain how they write or what are the qualities and constituent methods of their successful art, but they achieve all the same things that are perfect in the weaving of sounds and the skill of words, consummate in rhythm and language. Intellectual knowledge of technique is a help but a minor help; it can become a mere device or a rigid fetter. It is an intuitive divination of the right process that is more frequent and a more powerful action—or even it is an inspiration that puts the right sounds or right words without need of even any intuitive choice. This is especially true of poetry, for there are arts—those that work in a more material substance—where perfect work cannot be done without full technical knowledge,—painting, sculpture, architecture.

What the higher Force writes through you is your own in the sense that you have been an instrument of manifestation—as is indeed every artist or worker. When you put your name to

it, it is the name of the instrumental creator; but for sadhana it is necessary to recognise that the real Power, the true Creator was not your surface self, you were simply the living harp on which the Musician played his tune.

The true Ananda of creation is not the pleasure of the ego in having personally done well and in being somebody, that is an extraneous element which attaches itself to the true joy of work and creation. The Ananda comes by the inrush of a larger Might and Delight, *āveśa*; there is the thrill of being possessed and used by a superpersonal Power, the exultation and exaltation of the uplifting of the consciousness, the joy of its illumination and its greatened and heightened action and the joy of the beauty, power or perfection that is being created. How far, how intensely one feels these things, depends on the condition of the consciousness at the time, the temperament, the activity of the vital, the mind's receptivity and response. The Yogi (or even certain strong and calm minds) is not carried away, as the mind and the vital often are, by the Ananda, — he holds and watches it and there is no mere excitement mixed with the divine flow of it through the conscious instrument and the body. There is a greater Ananda of *samarpana*, of spiritual realisation or divine love, but in the spiritual consciousness and life the Ananda of creation has its place.

*

To observe whether it [*one's work*] is really well done or not and feel the Ananda of work done for the Mother [*is the right attitude*]. Get rid of the "I". If it is well done, it is the Force that did it and your only part was to be a good or a bad instrument.

*

It is a Force that comes and pushes to work and is as legitimately a part of the spiritual life as others. It is a special Energy that takes hold of the worker in the being and fulfils itself through him. To work with a full energy like this in one is quite salutary. The only thing is not to overdo it — that is to avoid any exhaustion or recoil to a fatigued inertia.

As for the dedication make the *sankalpa* always of offering it, remember and pray when you can (I mean in connection with the work). This is to fix a certain attitude. Afterwards, the Force can take advantage of this key to open the deeper dedication within.

*

I was not [*in using the phrase “allow the Force to work through you”*] speaking of the Force coming down from above, but of the Force from behind doing action through the mind and body as instruments. Very often when the mind and body are inert, their actions still go on by this push from behind.

*

You used the Force for the work, and it supported you so long as you preferred to stick to that work. What is of first importance is not the religious or non-religious character of the work done, but the inner attitude in which it is done. If the attitude is vital and not psychic, then one throws oneself out in the work and loses the inner contact. If it is psychic, the inner contact remains, the Force is felt supporting or doing the work and the sadhana progresses.

*

The Force from above is the Force of the Higher Consciousness. That from behind works as a mental, vital or physical force according to need. When the being is open to it and there is a certain passivity to its working, it takes the place of the personal activity and the Person is a witness of its action.

The Force and the Peace in Action

The dynamic action when it comes acts without disturbing the silence and peace. There is the vast peace and silence and in that the Force or the Will works to do what is necessary—in that also is the action of Agni or the psychic.

*

It is this quiet and spontaneous action that is the characteristic divine action. The aggressive action is only, as you say, when there is resistance and struggle. This does not mean that the quiet force cannot be intense. It can be more intense than the aggressive, but its intensity only increases the intensity of the peace.

*

When you feel the better condition, the peace and force at work, it is better to allow the force to work, keeping yourself still and quiet, and not try to do things by the mind.

When there is the confusion or wrong condition, then you have to call down the quiet, to try to get back to the true position, not listening to the wrong thoughts but rejecting them. If you cannot do that at once, still remain as quiet as possible and aspire and offer yourself. The Divine Force can always do more than the personal effort; so the one thing is to get quiet and call it down or back to the front—for it is always there behind or above you.

Drawing upon the Force for Energy

During the course of the sadhana one can learn to draw upon the universal Life-Force and replenish the energies from it. But usually the best way is to learn to open oneself to the Mother's Force and become conscious of it supporting and moving or pouring into the system and giving the energy needed for the work whether it be mental, vital or physical.

There is naturally a higher Energy above the present universal forces and it is that which will transform the nature and take up the mental, vital, physical energies and change them into its own likeness.

*

If you mean by failure the weakness of the body, it is due probably to your having unduly strained it in obedience to rajasic vital impulses, an effect which was increased by vital relapses

into tamas and the struggle of the vital attacks you had. But also it often happens even in the ordinary course of Yoga that physical strength is replaced by a Yogic strength or Yogic life force which keeps up the body and makes it work, but in the absence of this force the body is denuded of power, inert and tamasic. This can only be remedied by the whole being opening to Yoga shakti in each of its planes — Yogic mind force, Yogic life force, Yogic body force.

*

When doing this work you had the Force in you and the right consciousness filling the vital and physical — afterwards with relaxation the ordinary physical consciousness came up and brought back the ordinary reactions — fatigue, sciatica etc.

*

With the right consciousness always there, there would be no fatigue.

*

It [*the cause of fatigue*] is probably some desire or vital preference — likes and dislikes in the vital. All work given you must be felt as the Mother's and done with joy, opening yourself for the Mother's force to work through you.

*

If there is the full surrender in the work and you feel it is the Mother's and that the Mother's force is working in you, then fatigue does not come.

*

The pain, burning, restlessness, weeping and inability to work which you feel, come when there is some difficulty or resistance in some part of the nature. When it comes call on the Mother and reject these things; turn to her for the peace and quietude to return to your mind and settle in the heart, so that there shall be no place for these other things.

Avoiding Overstrain

Yes, it is a mistake to overstrain as there is a reaction afterwards. If there is energy, all must not be spent, some must be stored up so as to increase the permanent strength of the system.

*

Overstraining brings inertia up. Everybody has inertia in his nature: the question is of its greater or lesser operation.

*

When you feel tired, don't overstrain yourself but rest — doing only your ordinary work; restlessly doing something or other all the time is not the way to cure it. To be quiet without and within is what is needed when there is this sense of fatigue. There is always a strength near you which you can call in and it will remove these things, but you must learn to be quiet in order to receive it.

*

If the physical is in this condition and the work creates such reactions in it, it is no use forcing it violently and putting an overstrain upon it. It is better to educate and train the external material being slowly by bringing calm and peace and light and strength persistently into the nervous system and cells of the body. A violent compulsion on the body may well defeat its own object. Probably your sadhana has been too exclusively internal and subjective; but if it is so, this cannot be remedied in a moment. It is better therefore for you not to do heavy physical work like the Bakery's at present.

*

Idleness must of course go — but sometimes I think you have pulled too much the other way. To be able to work with full energy is necessary — but to be able not to work is also necessary.

*

As for working, it depends on what you mean by the word. Desire often leads either to excess of effort, meaning often much labour and a limited fruit, with strain, exhaustion and in case of difficulty or failure despondence, disbelief or revolt; or else it leads to pulling down the force. That can be done, but except for the Yogoically strong and experienced, it is not always safe, though it may be often very effective; not safe, first, because it may lead to violent reactions or bring down contrary or wrong or mixed forces which the sadhak is not experienced enough to distinguish from the true ones. Or else it may substitute the sadhak's own limited power of experience or mental and vital constructions for the free gift and the true leading of the Divine. Cases differ, each has his own way of sadhana. But for you what I would recommend is constant openness, a quiet steady aspiration, no over-eagerness, a cheerful trust and patience.

*

To work all the time is excessive, unless there is need — but the impulse to work in itself is good.

*

If too much work is done, the quality of the work often deteriorates in spite of the zest of the workers.

Chapter Four

Practical Concerns in Work

Order and Rhythm

There can be no physical life without an order and rhythm. When this order is changed it must be in obedience to an inner growth and not for the sake of external novelty. It is only a certain part of the surface lower vital nature which seeks always external change and novelty for its own sake.

It is by a constant inner growth that one can find a constant newness and unfailing interest in life. There is no other satisfying way.

*

In the most physical things you have to fix a programme in order to deal with them, otherwise all becomes a sea of confusion and haphazard. Fixed rules have also to be made for the management of material things so long as people are not sufficiently developed to deal with them in the right way without rules. But in matters of the inner development and the sadhana it is impossible to map out a plan fixed in every detail and say, "Every time you shall stop here, there, in this way, on that line and no other." Things would become so tied up and rigid that nothing could be done; there could be no true and effective movement.

*

Order, harmony and organisation in physical things is a necessary part of efficiency and perfection and make the instrument more fit for whatever work is given to it.

*

The impatience of things going wrong is the defect of a quality — an insistence on accuracy and order. The thing is to keep the quality and get rid of the defect.

Rules, Discipline, Regularity, Thoroughness

Rules are indispensable for the orderly management of work; for without order and arrangement nothing can be properly done, all becomes clash, confusion and disorder.

*

A rule that can be varied by everyone at his pleasure is no rule. In all countries in which organised work is successfully done, (India is not one of them), rules exist and nobody thinks of breaking them, for it is realised that work (or life either) without discipline would soon become a confusion and an anarchic failure. In the great days of India everything was put under rule, even art and poetry, even Yoga. Here in fact rules are much less rigid than in any European organisation. Personal discretion can even in a frame of rules have plenty of play—but discretion must be discreetly used, otherwise it becomes something arbitrary or chaotic.

*

In work there must be a rule and discipline and as much punctuality as possible in regard to time.

*

To be able to be regular is a great force, one becomes master of one's time and one's movements.

*

That is quite necessary for work; efficiency and discipline are indispensable. They can however only partly be maintained by outward means—it really depends, in ordinary life, on the personality of the superior, his influence on the subordinates, his firmness, tact, kindness in dealing with them. But the sadhak depends on a deeper force, that of his inner consciousness and the Force working through him.

*

[*Discipline*:] To act according to a standard of Truth or a rule or law of action (*dharma*) or in obedience to a superior authority or to the highest principles discovered by the reason and intelligent will and not according to one's own fancy, vital impulses and desires. In Yoga obedience to the Guru or to the Divine and the law of the Truth as declared by the Guru is the foundation of discipline.

*

What most want is that things should be done according to their desire without check or reference. The talk of perfection is humbug. Perfection does not consist in everybody being a law to himself. Perfection comes by renunciation of desires and surrender to a higher Will.

*

Thoroughness means to do whatever you do completely, thoroughly, so that it may be entire and perfect, not carelessly or partially done. It refers to internal things as well as to external.

Harmony

When all is in agreement with one Truth or an expression of it, that is harmony.

*

Wherever there is excessive sensitiveness or quickness of temper, occasions of clash and quarrel will arise, no matter with whom one works—and especially where there is the pressure of the *sadhana*, which requires that all such weaknesses should be overcome, occasions are likely to arise which will bring them to the surface. The only way is not to indulge them or act under their influence, but to face them and overcome.

*

The difficulty rises from a certain excess of sensitiveness in the vital nature which feels strongly any want of harmony or

opposition in the work or any untoward happening and, when that comes, one is apt to feel it as if a personal opposition and on the other side also a similar feeling arises and so the difficulty becomes prolonged and leads to conflict. As a matter of fact the difficulty often arises from circumstances, e.g. the B. S. [*Building Service*] with its much reduced staff and a rush of work using up all its men may find it more difficult to accommodate you than before. Or it may arise from people acting according to their view of a matter which does not accord with yours. Or again it may come from the person following his own ideas, view of what is convenient and effective and thus coming up against yours. There need be no personal feeling in all that and it is best not to look for any and not to see it from that point of view. What is needed is always to take a calm view of the thing and a clear vision — not only from one's own standpoint which may be eventually right and yet need modification in detail, but with a vision that sees also the standpoint of others. This broad seeing, quiet and impersonal, is needed in the full Yogic consciousness. Having it one can insist on what has to be insisted on with firmness but at the same time with a consideration and understanding of the other that removes the chance of any clash of personal feeling. Naturally if the other is unreasonable, he may still resent, but then it will be his own fault entirely and it will fall back on him only. It is here that we see the necessity of some change. Loyalty, fidelity, capacity, strength of will and other qualities in the work you have in plenty — a full calm and equality not only in the inner being where it can exist already, but in the outer nervous parts is a thing you have to get completely.

Avoiding Harshness, Severity, Anger

There are always defects on both sides which lead to this disharmony. On your side you have a tendency to too harsh a judgment of others, a readiness to see and stress the faults, defects, weak side of others and not to see enough their good side. This prevents the kindness of outlook which should be there and gives an impression of harshness and critical severity and creates a

tendency to contrariety and revolt which even when it is not there in the minds of the others, acts through their subconscious and creates all these discordant movements. To take advantage of what is good in others, keeping one's eye always on that, and to deal tactfully with their mistakes, faults and defects is the best way; it does not exclude firmness and maintenance of discipline, even severity when severity is due; but the latter should be rare and the others should not feel it as if it were a permanent attitude.

*

The one thing you must try to do in your relations with your fellow-workers is to master your nerves and irritability and take care not to speak roughly, angrily or peevishly to them. It is that that is creating most of the difficulty now. If you have to be firm, you can be firm, but at the same time quiet and even gentle. If you take care on this point, things are likely to improve soon.

If you put yourself in the Mother's hand and reject these vital movements in her strength, there is no reason why you should not pass through all ordeals and progress in the Yoga.

*

In all such dealings with others,¹ you should see not only your own side of the question but the other side also. There should be no anger, vehement reproach or menace, for these things only raise anger and retort on the other side. I write this because you are trying to rise above yourself and dominate your vital and when one wants to do that, one cannot be too strict with oneself in these things. It is best even to be severe to one's own mistakes and charitable to the mistakes of others.

*

The experience of the difference between your inner feelings and your surface reactions shows that you are becoming aware of different parts of your nature which each have their own

¹ In this case the correspondent became angry when his request for help in his work was not promptly met.—Ed.

character. In fact each human being is composed of different personalities that feel and behave in a different way and his action is determined by the one that happens to be prominent at the time. The one that has no feelings against anyone is either the psychic being or the emotional being in the heart, the one that feels anger and is severe is a part of the external vital nature on the surface. This anger and severity is a wrong form of something that in itself has a value, a certain strength of will and force of action and control in the vital being, without which work cannot be done. What is necessary is to get rid of the anger and to keep the force and firm will along with a developed judgment as to what is the right thing to do in any circumstances. For instance, people can be allowed to do things in their own way when that does not spoil the work, when it is only their way of doing what is necessary to be done; when their way is opposed to the discipline of the work, then they have to be controlled, but it should be done quietly and kindly, not with anger. Very often, if one has developed a silent power of putting the Mother's force on the work with one's own will as instrument, that by itself may be sufficient without having to say anything as the person changes his way of himself as if by his own initiative.

*

To discourage anybody is wrong, but to give false encouragement or encouragement of anything wrong is not right. Severity has sometimes to be used (though not overused), when without it an obstinate persistence in what is wrong cannot be set right. Very often, if an inner communication has been established, a silent pressure is more effective than anything else. No absolute rule can be laid down; one has to judge and act for the best in each case.

Working with Subordinates and Superiors

It [*disciplining subordinates*] has to be done in the right spirit and the subordinates generally must be able to feel that it is so, that they are being dealt with in all uprightness and justice and

by a man who has sympathy and insight and not only severity and energy. It is a question of vital tact and a strong and large vital finding always the right way to deal with the others.

*

To be able to see the viewpoint of others and make allowance for their nature — neither being too harsh, authoritative or exacting, nor too weak and accommodating or indulgent, but still, even when firm, combining firmness with tact and sympathy, — is very necessary for one who has to deal with others as his inferiors in position and subject to his authority. It is also necessary when the position is reversed so that there may not be unnecessary clash or friction with official superiors.

*

The root of the difficulty has been in the readiness of the superior officers to accept without examination the things that are said against you. A double action is needed, to destroy the ill-will of the inferiors and to change the mind of the superiors — an invisible action, for in the visible they seem to be too much under the control of the Forces of the Ignorance.

Overcoming the Instinct of Domination

We have been very glad to get your letters with the details which prove how great and rapid a progress you have made in sadhana. All that you write shows a clear consciousness and a new orientation in the lower vital. To have seen clearly the instinct of domination and the pride of the instrument there means that that part of the being is on the right way to change — these defects must now be replaced by their true counterparts — the power to act selflessly on others for the Truth and the Right and the power to be a strong and confident but egoless instrument of the Divine. It is clear also that the physical is effectively opening, but the instinctive physical and vital-physical motions in it, fear in the body, weakness, disposition to ill-health must go also. As to diet, a light quantity of food sufficient for strength and

sustenance is the best for you — meat is not advisable.

Let the wide opening that has come in you develop and your whole being down to the material fill with the true consciousness and the true power.

*

That is true.² As things are, the vital falsehood seems to take a temporary advantage over the superior sattvic nature.

Avoiding Disturbance

Whenever anything untoward happens, it is essential not to allow any vibrations of disturbance or unrest in either the physical mind or the nerves. One must remain calm and open to the Light and Force, then one will be able to act in the right way.

*

From the point of view of sadhana — you must not allow yourself to be in the least disturbed by these things [*lack of sympathy and support in one's work*]. What you have to do, what is right to be done, should be done in perfect calmness with the support of the Divine Force. All that is necessary for a successful result, can be done — including the securing of the support of those who are able to help you. But if this outer support is not forthcoming, you have not to be disturbed but to proceed calmly on your way. If there is any difficulty or unsuccess anywhere not due to your own fault, you have not to be troubled. Strength, unmoved calm, quiet, straight and right dealing with all things you have to deal with must be the rule of your action.

*

Keep unmoved, unoffended, do your work without being discouraged, call on the Force to act for you. It is a field of trial for you — the inward result is more important than the outward.

*

² *The correspondent remarked that people full of vital ego often override, deceive and even injure people with less egoistic push but greater capacity. — Ed.*

As for the work, I have already told you that it is not by your going away that there will be harmony and peace. Wherever there are human beings working together, differences and disagreements and incompatibilities of temper will always be there. It is only if the human nature changes that it will be otherwise, but that cannot be done at once. One has to go on quietly and patiently doing the work for the Mother's sake until the change can be made in yourself and others.

Avoiding Restlessness, Worry and Anxiety

As for quietude and work, quietude is the proper basis for work — not restlessness. You speak as if quietude and being alive and working were not compatible! The Mother and myself do plenty of work, I suppose, and we are quite alive, but it is out of quietude that we do it. To worry and be restless and think always "I am not doing well my work" is not the way; you have to be quiet, conscious more and more of a greater Force than your own working in you: that Force will hereafter take up your work and do it for you.

*

The difficulty you find results very much from your always worrying with your mind about things, thinking "This is wrong, that is wrong in me or my work" and, as a result, "I am incompetent, I am bad, nothing can be done with me." Your embroidery work, your lampshades etc. have always been very good, and yet you are always thinking "This is bad work, that is wrong" and by doing so, confuse yourself and get into a muddle. Naturally, you make a mistake now and then, but more when you worry like that than when you do things simply and confidently.

It is better whether with work or with sadhana to go on quietly, allowing the Force to act and doing your best to let it work rightly, but without this self-tormenting and constant restless questioning at every point. Whatever defects there are would go much sooner, if you did not harp on them too much; for by dwelling on them so much you lose confidence in yourself

and in your power of openness to the Force—which is there all the same—and put unnecessary difficulties in the way of its working.

*

There is nothing really wrong with your work; it is very well done. It is only your imagination that makes you always think it is defective here and defective there. There may be slight mistakes sometimes, but that is the case with everybody. You have only to work quietly, getting the best inspiration you can and, if there is any difficulty, to be quiet and the right thing will come. To be true to the inner feeling, remaining turned towards us for help is absolutely the right way; to trouble and doubt and fret is quite the wrong way.

*

Do not worry about mistakes in work. Often you imagine that things are badly done by you when really you have done them very well; but even if there are mistakes, it is nothing to be sad about. Let the consciousness grow—only in the divine consciousness is there an entire perfection. The more you surrender to the Divine, the more will there be the possibility of perfection in you.

*

Do not attach too much importance to such mistakes or get upset about them. It is the nature of the mind to make such mistakes. It is only a higher consciousness that can set them right—the mind can be sure only after a very long training in each particular action and even then it has only to be off-guard for something untoward to occur. Do as well as you can, and for the rest let the higher consciousness grow till it can enlighten all the movements of the physical mind.

*

Skill in works will come when there is the opening in the physical mind and the body. There is no need to be anxious about that now. Do your best and do not be anxious about it.

Compliments and Criticism

That is a great error of the human vital — to want compliments for their own sake and to be depressed by their absence and imagine that it means there is no capacity. In this world one starts with ignorance and imperfection in whatever one does — one has to find out one's mistakes and to learn, one has to commit errors and find out by correcting them the right way to do things. Nobody in the world has ever escaped from this law. So what one has to expect from others is not compliments all the time, but praise of what is right or well done and criticism of errors and mistakes. The more one can bear criticism and see one's mistakes, the more likely one is to arrive at the fullness of one's capacity. Especially when one is very young — before the age of maturity — one cannot easily do perfect work. What is called the juvenile work of poets and painters — work done in their early years — is always imperfect, it is a promise and has qualities — but the real perfection and full use of their powers comes afterwards. They themselves know that very well, but they go on writing or painting because they know also that by doing so they will develop their powers.

As for comparison with others, one ought not to do that. Each one has his own lesson to learn, his own work to do and he must concern himself with that, not with the superior or inferior progress of others in comparison with himself. If he is behind today, he can be in full capacity hereafter and it is for that future perfection of his powers that he must labour. You are young and have everything yet to learn — your capacities are yet only in bud, you must wait and work for them to be in full bloom — and you must not mind if it takes months and years even to arrive at something satisfying and perfect. It will come in its proper time, and the work you do now is always a step towards it.

But learn to welcome criticism and the pointing out of imperfections — the more you do so, the more rapidly you will advance.

*

Someone who is learning to paint or play music or write and does not like to have his mistakes pointed out by those who already know — how is he to learn at all or reach any perfection of technique?

Thinking about Work

Think of your work only when it is being done, not before and not after.

Do not let your mind go back on a work that is finished. It belongs to the past and all rehandling of it is a waste of power.

Do not let your mind labour in anticipation on a work that has to be done. The Power that acts in you will see to it at its own time.

These two habits of the mind belong to a past functioning that the transforming Force is pressing to remove and the physical mind's persistence in them is the cause of your strain and fatigue. If you can remember to let your mind work only when its action is needed, the strain will lessen and disappear. This is indeed the transitional movement before the supramental working takes possession of the physical mind and brings into it the spontaneous action of the Light.

Dealing with Physical Things

Material things are not to be despised — without them there can be no manifestation in the material world.

*

Physical things have a life and value of their own which does not depend upon their price. To respect physical things and make a careful and scrupulous use of them is a part of the Yoga, for without that the mastery over matter cannot come.

*

What you feel about physical things is true — there is a consciousness in them, a life which is not the life and consciousness

of man and animal which we know, but still secret and real. That is why we must have a respect for physical things and use them rightly, not misuse and waste, ill-treat or handle with a careless roughness. This feeling of all being conscious or alive comes when our own physical consciousness—and not the mind only—awakes out of its obscurity and becomes aware of the One in all things, the Divine everywhere.

*

It is very true that physical things have a consciousness within them which feels and responds to care and is sensitive to careless touch and rough handling. To know or feel that and learn to be careful of them is a great progress in consciousness.

*

There is a consciousness in each physical thing with which one can communicate. Everything has an individuality of a certain kind, houses, cars, furniture etc. The ancient peoples knew that and so they saw a spirit or “genius” in every physical thing.

*

The rough handling and careless breaking or waste and misuse of physical things is a denial of the Yogic Consciousness and a great hindrance to the bringing down of the Divine Truth to the material plane.

*

Wanton waste, careless spoiling of physical things in an incredibly short time, loose disorder, misuse of service and materials due either to vital grasping or to tamasic inertia are baneful to prosperity and tend to drive away or discourage the Wealth-Power. These things have long been rampant in the society and, if that continues, an increase in our means might well mean a proportionate increase in the wastage and disorder and neutralise the material advantage. This must be remedied if there is to be any sound progress.

Asceticism for its own sake is not the ideal of this Yoga, but

self-control in the vital and right order in the material are a very important part of it — and even an ascetic discipline is better for our purpose than a loose absence of true control. Mastery of the material does not mean having plenty and profusely throwing it out or spoiling it as fast as it comes or faster. Mastery implies in it the right and careful utilisation of things and also a self-control in their use.

Chapter Five

Creative Activity

The Arts and the Spiritual Life

There is no incompatibility between spirituality and creative activity—they can be united.

*

Any activity can be taken as part of the sadhana if it is offered to the Divine or done with the consciousness or faith that it is done by the Divine Power. That is the important point.

*

Literature, poetry, science and other studies can be a preparation of the consciousness for life. When one does Yoga they can become part of the sadhana only if done for the Divine or taken up by the Divine Force, but then one should not want to be a poet for the sake of being a poet only, or for fame, applause, etc.

*

The spiritual life and one's own inner psychic and spiritual change should be the first preoccupation of a sadhak—poetry or painting is something quite subordinate and even then it should be done not to be a great poet or artist but as a help to the inner sadhana. It is time that everyone got away from the vital view of things to the psychic and spiritual on which alone can stand Yoga and the spiritual life.

*

Every artist almost (there are rare exceptions) has got something of the “public” man in him, in his vital physical parts, the need of the stimulus of an audience, social applause, satisfied vanity or fame. That must go absolutely if he wants to be a Yogi and

his art a service not of man or of his own ego but of the Divine.

*

Well, that [*acting as a great musician etc.*] is an almost universal human weakness, especially with artists, poets, musicians and the whole splendid tribe—I have known even great Yogis suffer from just a touch of it! If one can see mentally the humour of it, it will fall off in the end.

Literature

To be a literary man is not a spiritual aim; but to use literature as a means of spiritual expression is another matter. Even to make expression a vehicle of a superior power helps to open the consciousness. The harmonising rests on that principle.

*

A “literary man” is one who loves literature and literary activity for their own separate sake. A Yogi who writes is not a literary man for he writes only what the inner Will and Word wants him to express. He is a channel and an instrument of something greater than his own literary personality.

*

The use of your writing is to keep you in touch with the inner source of inspiration and intuition, so as to wear thin the crude external crust in the consciousness and encourage the growth of the inner being.

*

Mother does not disapprove of your writing the book — what she does not like is your being so lost in it that you can do nothing else. You must be master of what you do and not possessed by it. She quite agrees to your finishing and offering the book on your birthday if that can be done. But you must not be carried away — you must keep your full contact with higher things.

*

I repeat that we do not object to your writing — whether it be poetry or short stories or novels. What we felt was that this kind of total absorption and possession by it was not good for your spiritual condition and that it put a lesser thing in front, even occupying the *whole* front of the consciousness for most of the time instead of putting it in its proper place in a sound spiritual harmony.

*

You can try [*writing a novel*], if you like. The difficulty is that the subject matter of a novel belongs mostly to the outer consciousness, so that a lowering or externalising can easily come. This apart from the difficulty of keeping the inner poise when putting the mind into outer work. If you could get an established poise within, then it would be possible to do any work without disturbing or lowering the consciousness.

*

As for the French writing, you should not think so much of expressing things — it does not matter whether others have written the same things and done it better. What you should aim at is simply to learn to write French perfectly, to get full use of the French language as an instrument. If the Force wants to express anything through you hereafter or not, is a thing you should leave to the Divine Will; once you give yourself into its hands in the true consciousness, it will know what to do or not to do through you and will make full use of whatever instrumentation you can put at its disposal.

Painting

Painting also is sadhana; so it is perfectly possible to make them one. It is a matter of dedicating the painting and feeling the force that makes you paint as the Mother's force.

*

Of course everybody is here for Yoga and not for painting.

Painting or any other activity has to be made here a part of Yoga and cannot be pursued for its own sake. If it stands insuperably in the way, then it has to be given up; but there is no reason why it should if it be pursued in the proper spirit, as a field or aid for spiritual growth, or as a work done for the Mother.

*

You have painting and music in you and if you apply yourself they will develop in you. Only it is best to do it as an instrument of the Mother and as an offering to her, and not allow any personal desire for fame or appreciation by others or any personal pride to be the motives—for it is that that gives trouble. All work done as an offering is a great help and does not give trouble.

*

What do you mean by vital excitement [*while painting*]? There is an intensity and enthusiasm of the vital without which it would be difficult to do any poem, picture or music of a creative kind. That intensity is not harmful.

*

You have been progressing of course, but what Mother told you and tells everyone is true that to be a real artist needs hard work for years together. But your mistake is to put stress on these things and get discouraged by any check or difficulty in them. The one thing to be done is to open your consciousness to what is coming down, to let the change operate so that the consciousness becomes a consciousness of peace and light and power and joy full of the Divine Presence. When that is there, then what the Divine wants to get done through you or developed in you will be done or developed with a rapidity and perfection which at present is impossible. The one thing needful first, all the rest is only now a field of exercise for the development of the one thing needful.

Singing

What you write about the singing is perfectly correct. You sing your best only when you forget yourself and let it come out from within without thinking of the need of excellence or the impression it may make. The famous singer should indeed disappear into the past,—it is only so that the inner singer can take her place.

*

I meant exactly the same thing as when I wrote to you that the “famous singer” must disappear and the “inner singer” take her place. “The old psychological lines” means the mental and vital aesthetic source of the singing, the desire of fame or success, singing for an audience — the singing must come from the soul within and it must be for the Divine. . . .

As for your singing, I was not speaking of any new creation from the aesthetic point of view, but of the spiritual change — what form it takes must depend on what you find *within* you when the deeper basis is there.

I do not see any necessity for giving up singing altogether; I only meant,—it is the logical conclusion from what I have written to you not now only but before,—that the inner change must be the first consideration and the rest must arise out of that. If singing to an audience pulls you out of the inner condition, then you could postpone that and sing for yourself and the Divine until you are able, even in facing an audience, to forget the audience. If you are troubled by failure or exalted by success, that also you must overcome.

Section Three

Sadhana through Concentration, Meditation and Japa

Chapter One

Concentration and Meditation

The Meaning of Concentration and Meditation

Concentration, for our Yoga, means when the consciousness is fixed in a particular state (e.g. peace) or movement (e.g. aspiration, will, coming into contact with the Mother, taking the Mother's name); meditation is when the inner mind is looking at things to get the right knowledge.

*

Concentration means fixing the consciousness in one place or on one object and in a single condition. Meditation can be diffusive, e.g. thinking about the Divine, receiving impressions and discriminating, watching what goes on in the nature and acting upon it etc.

*

Concentration is a gathering together of the consciousness and either centralising at one point or turning on a single object, e.g. the Divine — there can also be a gathered condition throughout the whole being, not at a point. In meditation it is not indispensable to gather like this, one can simply remain with a quiet mind thinking of one subject or observing what comes in the consciousness and dealing with it.

*

Meditation means thinking on one subject in a concentrated way. In concentration proper there is not a series of thoughts, but the mind is silently fixed on one object, name, idea, place etc.

There are other kinds of concentration, e.g. concentrating the whole consciousness in one place, as between the eyebrows, in the heart, etc. One can also concentrate to get rid of thought altogether and remain in a complete silence.

**The Role of Concentration and Meditation
(Dhyana) in Sadhana**

In the beginning for a long time concentration is necessary even by effort because the nature, the consciousness are not ready. Even then the more quiet and natural the concentration, the better. But when the consciousness and nature are ready, then concentration must become spontaneous and easily possible without effort at all times. Even at last it becomes the natural and permanent condition of the being—it is then no longer concentration, but the settled poise of the soul in the Divine.

It is true that to be concentrated and do an outward action at the same time is not at first possible. But that too becomes possible. Either the consciousness divides into two parts, one the inner poised in the Divine, the other the outer doing the outer work—or else the whole is so poised and the force does the work through the passive instrument.

*

Concentration is necessary. By dhyana you awake the inner being; by concentration in life, in work, in the outer consciousness you make the outer being also fit to receive the Divine Light and Force.

*

It is in the waking consciousness that all has to be realised. But that cannot be done without a full preparation in the inner being and it is this preparation that is being done for you in *dhyāna*.

*

You have not to remain in dhyana all the time, but to bring into the waking state the consciousness you get there and you have to live in that all the time.

*

It is very good, and by regular meditation you are sure to make much progress. But I do not think to spend all the night in

meditation would be good. The body needs sleep also. One hour meditation daily is already a very good result and it can be increased slowly to two.

*

Certainly, if all one's life one did nothing but meditate, it would be a one-sided affair. But at times to give the first place or a lion's share to meditation may be necessary. It is especially when things are coming down and have to be fixed.

*

The ease and peace are felt very deep and far within because they are in the psychic and the psychic is very deep within us, covered over by the mind and vital. When you meditate you open to the psychic, become aware of your psychic consciousness deep within and feel these things. In order that this ease and peace and happiness may become strong and stable and felt in all the being and in the body, you have to go still deeper within and bring out the full force of the psychic into the physical. This can most easily be done by regular concentration and meditation with the aspiration for this true consciousness. It can be done by work also, by dedication, by doing the work for the Divine only without thought of self and keeping the idea of consecration to the Mother always in the heart. But this is not easy to do perfectly.

*

Sir, is the Presence [*of the Divine*] of a physical nature or a spiritual fact? And is the physical sense accustomed or able to see or feel spiritual things—a spiritual Presence, a non-material Form? To see the Brahman everywhere is not possible unless you develop the inner vision—so to do that you have to concentrate. To see non-material forms is indeed possible for a few, because they have the gift by nature, but most can't do it without developing the subtle sight. It is absurd to expect the Divine to manifest his Presence without your taking any trouble to see it, — you have to concentrate.

The Object of Meditation

What do you call meditation? Shutting the eyes and concentrating? It is only one method for calling down the true consciousness. To join with the true consciousness or feel its descent is the only thing important and if it comes without the orthodox method, as it always did with me, so much the better. Meditation is only a means or device, the true movement is when even walking, working or speaking one is still in sadhana.

*

What is most important [*in meditation*] is the change of consciousness of which this feeling of oneness is a part. The going deep in meditation is only a means and it is not always necessary if the great experiences come easily without it.

*

The best help for concentration is to receive the Mother's calm and peace into your mind. It is there above you — only the mind and its centres have to open to it. It is what the Mother is pushing upon you in the evening meditation.

*

The object of meditation is to open to the Mother and grow through many progressive experiences into a higher consciousness in union with the Divine.

*

To enter into a deeper or higher consciousness or for that deeper or higher consciousness to descend into you — that is the true success of meditation.

Meditation Not Necessary for All

One can have no fixed hours of meditation and yet be doing sadhana.

*

Meditation is not indispensable. There are some who do not meditate and yet progress.

*

Then how is it [*meditation*] necessary for all, if some are asked not to do it? Much meditation is for those who can meditate much. It does not follow that because such meditation is good, therefore nobody should do anything else.

Methods of Meditation and Concentration

The attitude of spiritual meditation is to concentrate so as to receive or attain the spiritual truth—what means one takes depends upon the way, the path, the person.

*

If the difficulty in meditation is that thoughts of all kinds come in, that is not due to hostile forces but to the ordinary nature of the human mind. All sadhaks have this difficulty and with many it lasts for a very long time. There are several ways of getting rid of it. One of them is to look at the thoughts and observe what is the nature of the human mind as they show it but not to give any sanction and to let them run down till they come to a standstill—this is a way recommended by Vivekananda in his *Rajayoga*. Another is to look at the thoughts as not one's own, to stand back as the witness Purusha and refuse the sanction—the thoughts are regarded as things coming from outside, from Prakriti, and they must be felt as if they were passers-by crossing the mind-space with whom one has no connection and in whom one takes no interest. In this way it usually happens that after a time the mind divides into two, a part which is the mental witness watching and perfectly undisturbed and quiet and a part which is the object of observation, the Prakriti part in which the thoughts cross or wander. Afterwards one can proceed to silence or quiet the Prakriti part also. There is a third, an active method by which one looks to see where the thoughts come from and finds they come not from oneself, but from outside the head as

it were; if one can detect them coming, then, *before they enter*, they have to be thrown away altogether. This is perhaps the most difficult way and not all can do it, but if it can be done it is the shortest and most powerful road to silence.

*

If you try to apply everything you read, there will be no end to your new beginnings. One can stop thinking by rejecting the thoughts and in the silence discover oneself. One can do it by letting the thoughts run down while one detaches oneself from them. There are a number of other ways. This one related in Brunton's book seems to me the Adwaita-jnani method of separating oneself from body, vital, mind, by *viveka*, discrimination, "I am not the body, I am not the life, I am not the mind" till he gets to the self, separate from mind, life and body. That also is one way of doing it. There is also the separation of Purusha from Prakriti till one becomes the witness only and feels separate from all the activities as the Witness Consciousness. There are other methods also.

*

The method of gathering of the mind is not an easy one. It is better to watch and separate oneself from the thoughts till one becomes aware of a quiet space within into which they come from outside.

*

All thoughts really come from outside, but one is not conscious of their coming. You have become conscious of this movement. There are different ways of getting rid of them; one is to reject them one by one before they can come in; another is to look at them with detachment till they fade away.

*

It is of course because of the old habit of the mental consciousness that it goes on receiving the thoughts from outside in spite of its being a fatigue—not that it wants them, but that they

are accustomed to come and the mind mechanically lets them in and attends to them by force of habit. This is always one of the chief difficulties in Yoga when the experiences have begun and the mind wants to be always either concentrated or quiet. Some do what you propose [*direct rejection of thoughts*] and after a time succeed in quieting the mind altogether or the silence comes down from above and does it. But often when one tries this, the thoughts become very active and resist the silencing process and that is very troublesome. Therefore many prefer to go on slowly letting the mind quiet down little by little, the quietness spreading and remaining for longer periods until the unwanted thoughts fall away or recede and the mind is left free for knowledge from within and above.

What you might do is to try and see what results — if the thoughts attack too much and trouble, you could stop — if the mind quiets down quickly or more and more, then continue.

*

The mind is always in activity, but we do not observe fully what it is doing, but allow ourselves to be carried away in the stream of continual thinking. When we try to concentrate, this stream of self-moved mechanical thinking becomes prominent to our observation. It is the first normal obstacle (the other is sleep during meditation) to the effort towards Yoga.

The first thing to do is to realise that this thought-flow is not yourself, it is not you who are thinking, but thought that is going on in the mind. It is Prakriti with its thought-energy that is raising all this whirl of thought in you, imposing it on the Purusha. You as the Purusha must stand back as the witness observing the action, but refusing to identify yourself with it. The next thing is to exercise a control and reject the thoughts — though sometimes by the very act of detachment the thought-habit falls away or diminishes during the meditation and there is a sufficient silence or at any rate a quietude which makes it easy to reject the thoughts that come and fix oneself on the object of meditation. If one becomes aware of the thoughts as coming from outside, from the universal Nature, then one can throw

them away before they reach the mind; in that way the mind finally falls silent. If neither of these things happens, a persistent practice of rejection becomes necessary — there should be no struggle or wrestling with the thoughts, but only a quiet self-separation and refusal. Success does not come at first, but if consent is constantly withheld, the mechanical whirl eventually lessens and begins to die away and one can then have at will an inner quietude or silence.

It should be noted that the result of the Yogic processes is not, except in rare cases, immediate and one must apply them with patience till they give a result which is sometimes long in coming if there is much resistance in the outer nature.

How can you fix the mind on the higher Self so long as you have no consciousness or experience of it? You can only concentrate on the idea of the Self. Or else one can concentrate on the idea of the Divine or the Divine Mother or on an image or on the feeling of devotion, calling the presence in the heart or the Force to work in the mind and heart and body and liberate the consciousness and give the self-realisation. If you concentrate on the idea of the Self, it must be with the conception of the Self as something different from mind and its thoughts, the vital and its feelings, the body and its actions — something standing back from all these, something that you can come to feel concretely as an Existence or Consciousness, separate from all that yet freely pervading all without being involved in these things.

*

You have to separate yourself from the mind also. You have to feel yourself even in the mental, vital, physical levels (not only above) a consciousness that is neither mind, life, nor body.

*

For the buzz of the physical mind, reject it quietly, without getting disturbed, till it feels discouraged and retires shaking its head and saying, "This fellow is too calm and strong for me." There are always two things that can rise up and assail the silence, — vital suggestions, the physical mind's mechanical

recurrences. Calm rejection for both is the cure. There is a Purusha within who can dictate to the nature what it shall admit or exclude, but its will is a strong, quiet will; if one gets perturbed or agitated over the difficulties, then the will of the Purusha cannot act effectively as it would otherwise.

The dynamic realisation will probably take place when the higher consciousness comes fully down into the vital. When it comes into the mental it brings the peace of the Purusha and liberation and it may bring also knowledge. It is when it comes into the vital that the dynamic realisation becomes present and living.

Concentration on the Idea

If one concentrates on a thought or a word, one has to dwell on the essential idea contained in the word with the aspiration to feel the thing which it expresses.

*

I have not the original chapter before me just now; but from the sentences quoted¹ it seems to be the essential mental Idea. As for instance in the method of Vedantic knowledge one concentrates on the idea of Brahman omnipresent — one looks at a tree or other surrounding objects with the idea that Brahman is there and the tree or object is only a form. After a time if the concentration is of the right kind, one begins to become aware of a presence, an existence, the physical tree form becomes a shell and that presence or existence is felt to be the only reality. The idea then drops, it is a direct vision of the thing that takes its place — there is no longer any necessity of concentrating on the

¹ *The correspondent sent to Sri Aurobindo a passage from The Synthesis of Yoga: "This concentration proceeds by the Idea . . . ; for it is through the Idea that the mental being rises beyond all expression to that which is expressed, to that of which the Idea itself is only the instrument. By concentration upon the Idea the mental existence which at present we are breaks open the barrier of our mentality and arrives at the state of consciousness, the state of being, the state of power of conscious-being and bliss of conscious-being to which the Idea corresponds and of which it is the symbol, movement and rhythm."* THE COMPLETE WORKS OF SRI AUROBINDO, vol. 23, p. 321.

idea, one sees with a deeper consciousness, *sa paśyati*. It should be noted that this concentration on the idea is not mere thinking, *mananam* — it is an inner dwelling on the essence of the Idea.

Centres for Concentration

The nature of the meditation depends on the part of the being in which one is centred at the time. In the body (rather the subtle body than the physical, but connected with the corresponding parts in the gross physical body also) there are centres proper to each level of the being. There is a centre at the top of the head and above it which is that of the above-mind or higher consciousness; a centre in the forehead between the eyebrows which is that of the thinking mind, mental will, mental vision; a centre in the throat which is that of the expressive or externalising mind: these are the mental centres. Below comes the vital — the heart (emotional), the navel (the dynamic life-centre), another below the navel in the abdomen which is the lower or sensational vital centre. Finally, at the bottom of the spine is the Muladhara or physical centre. Behind the heart is the psychic centre. If one concentrates in the head as many do it is a mental-spiritual meditation one seeks for, if in the heart it is a psychic meditation; these are the usual places where one concentrates. But what rises up first or opens first may not be the mental or psychic, but the emotional or the vital; that depends on the nature — for whatever is easiest to open in it, is likely to open first. If it is in the vital, then the meditation tends to project the consciousness into the vital plane and its experiences. But from that one can get to the psychic by drawing more and more inwards, not getting absorbed into the vital experiences but separating oneself and looking at them with detachment as if one were deep inside and observing things outside oneself. Similarly one can get the mental experiences by concentrating in the thought and by it bringing a corresponding experience, e.g. the thought of all being the Brahman, or one can draw back from the thought also and observe one's own thoughts as outside

things until one enters into the silence and the pure spiritual experience.

*

One can concentrate in any of the three centres which is easiest to the sadhak or gives most result. The power of the concentration in the heart-centre is to open that centre and by the power of aspiration, love, bhakti, surrender remove the veil which covers and conceals the soul and bring forward the soul or psychic being to govern the mind, life and body and turn and open them all—fully—to the Divine, removing all that is opposed to that turning and opening.

This is what is called in this Yoga the psychic transformation. The power of concentration above the head is to bring peace, silence, liberation from the body sense, the identification with mind and life and open the way for the lower (mental-vital-physical) consciousness to rise up to meet the higher Consciousness above and for the powers of the higher (spiritual or divine) Consciousness to descend into mind, life and body. This is what is called in this Yoga the spiritual transformation. If one begins with this movement, then the Power from above has in its descent to open all the centres (including the lowest centre) and to bring out the psychic being; for until that is done there is likely to be much difficulty and struggle of the lower consciousness obstructing, mixing with or even refusing the Divine Action from above. If the psychic being is once active this struggle and these difficulties can be greatly minimised.

The power of concentration in the eyebrows is to open the centre there, liberate the inner mind and vision and the inner or Yogic consciousness and its experiences and powers. From here also one can open upwards and act also in the lower centres; but the danger of this process is that one may get shut up in one's mental spiritual formations and not come out of them into the free and integral spiritual experience and knowledge and integral change of the being and nature.

*

I was very glad to get your letter and especially to know that you are more at peace. That is what is first needed, the settling down of a natural peace and quiet in the nature — the spiritual peace is a bigger thing that can come afterwards.

Then as to concentration. Ordinarily the consciousness is spread out everywhere, dispersed, running in this or that direction, after this subject and that object in multitude. When anything has to be done of a sustained nature, the first thing one does is to draw back all this dispersed consciousness and concentrate. It is then, if one looks closely, found to be concentrated in one place and on one occupation, subject or object — as when you are composing a poem or a botanist is studying a flower. The place is usually somewhere in the brain, if it is the thought, in the heart if it is the feeling in which one is concentrated. The Yogic concentration is simply an extension and intensification of the same thing. It may be on an object as when one does tratak on a shining point — then one has to concentrate so that one sees only that point and has no other thought but that. It may be on an idea or a word or a name, the idea of the Divine, the word OM, the name Krishna, or a combination of idea and word or idea and name. But, farther, in Yoga one also concentrates in a particular place. There is the famous rule of concentrating between the eyebrows — the centre of the inner mind, of occult vision, of the will is there. What you do is to think firmly from there on whatever you make the object of your concentration or else try to see the image of it from there. If you succeed in this, then after a time you feel that your whole consciousness is centred there in that place — of course for the time being. After doing it for some time and often, it becomes easy and normal.

I hope this is clear. Well, in this Yoga, you do the same, not necessarily at that particular spot between the eyebrows, but anywhere in the head or at the centre of the chest where the physiologists have fixed the cardiac centre. Instead of concentrating on an object, you concentrate in the head in a will, a call for the descent of the peace from above or, as some do, an opening of the unseen lid and an ascent of the consciousness above. In the heart-centre one concentrates in an aspiration, for

an opening, for the presence or living image of the Divine there or whatever else is the object. There may be japa of a name but, if so, there must also be a concentration on it and the name must repeat itself there in the heart-centre.

It may be asked what becomes of the rest of the consciousness when there is this local concentration? Well, it either falls silent as in any concentration or, if it does not, then thoughts or other things may move about, as if outside, but the concentrated part does not attend to them or notice. That is when the concentration is reasonably successful.

One has not to fatigue oneself at first by long concentration if one is not accustomed, for then in a jaded mind it loses its power or value. One can "relax" and meditate instead of concentrating. It is only as the concentration becomes normal that one can go on for a longer and longer time.

*

There is no harm in concentrating sometimes in the heart and sometimes above the head. But concentration in either place does not mean keeping the attention fixed on a particular spot; you have to take your station of consciousness in either place and concentrate there not on the place, but on the Divine. This can be done with eyes shut or with eyes open, according as it best suits you.

You can concentrate on the sun, but to concentrate on the Divine is better than to concentrate on the sun.

*

You can concentrate the consciousness anywhere in any centre. You have only to think of yourself as centrally there and try to fix and keep that. A strain or any effort to do so is not necessary but a quiet and steady dwelling in the idea.

Most people associate consciousness with the brain or mind because that is the centre for intellectual thought and mental vision, but consciousness is not limited to that kind of thought or vision. It is everywhere in the system and there are several centres of it, e.g., the centre for inner concentration is not in the

brain but in the heart,—the originating centre of vital desire is still lower down.

The two main places where one can centre the consciousness for Yoga are in the head and in the heart—the mind-centre and the soul-centre.

*

One has to open through concentration in the heart centre or above the head, in the former case to the psychic, in the latter to the higher Truth. But without the psychic preparation or at least a thorough purification of the being, the latter course is not safe.

*

It may be better to concentrate in the heart rather than in the mind, offer yourself from there and call the Mother into the heart leaving the thoughts to fall silent of themselves. Otherwise with the present method you have simply to persevere till the present brief and imperfect stillings of the mind become longer and deeper.

*

The concentration in the heart is what brings about the opening of the psychic which is your principal need. If the concentration has brought about a feeling which makes you judge clearly all the other movements and see their nature, then the psychic is already in action. For this is the psychic feeling which brings with it a clear insight into the nature of all movements that come and makes it easy to reject what has to be rejected and keep the right attitude and perception. It does not matter about the image of the Mother. It is her presence whether in form or not that has to be felt always and this the psychic opening will surely bring.

*

It [*concentration in the heart*] is the best to “start with”—but as you have already started with success on the two higher centres, there is no reason why you should discontinue that. The

other you may try from time to time when you find a sufficient quietude. Concentration there leads—or should lead—to the psychic opening.

*

Concentration in the heart is best aided if possible by the power and light descending from above the head.

*

At the top of the head or above it is the right place for Yogic concentration in reading or thinking.

*

Brain concentration is always a tapasya and necessarily brings a strain. It is only if one is lifted out of the brain mind altogether that the strain of mental concentration disappears.

Postures for Concentration or Meditation

The sitting motionless posture is the natural posture for concentrated meditation—walking and standing are active conditions suited for the dispense of energy and the activity of the mind. It is only when one has gained the enduring rest and passivity of the consciousness that it is easy to concentrate and receive when walking or doing anything. A fundamental passive condition of the consciousness gathered into itself is the proper poise for concentration and a seated gathered immobility in the body is the best for that. It can be done also lying down, but that position is too passive, tending to be inert rather than gathered. This is the reason why Yogis always sit in an asana. One can accustom oneself to meditate walking, standing, lying, but sitting is the first natural position.

*

One can meditate very well when walking.

*

It is as each finds convenient. Some meditate better walking, some sitting.

*

The rigidity [*of the body during meditation*] comes very often when there is the descent of the higher consciousness into the body.

Regularity, Length and Other Conditions

If it is possible to keep a fixed period for meditation and stick to it, it would certainly be desirable.

*

To keep the consciousness awake you must set apart a certain time every day for concentration and remembering the Mother and keeping yourself in contact with us. What is gained is not lost by interruption, but it goes behind and may take time to come out again — so the thread should not be cut.

*

It is not the length of the meditations that makes the difference [*in making one vitally and physically strong*]. It is a concentration of the will that is needed.

*

It is better to make the deeper concentration when you are alone or quiet. Outward sounds ought not to disturb you.

*

In external things all men of action have to do that [*shift their concentration quickly from one thing to another*] — otherwise they would not be able to cope with their work. In respect to inner concentration, it is not so easy because people bring other vibrations which interfere with the poise of the consciousness — a mere mental interruption ought not to be difficult to recover from; but if the consciousness itself gets invaded or else drawn

out, it takes time to get back. In the end a condition develops in which the inner consciousness is always concentrated and in a poise, *samāhitah*, and outside things take place only on the outermost surface. Then it becomes easy.

*

It is quite natural that at first there should be the condition of calm and peace only when you sit for concentration. What is important is that there should be this condition whenever you sit and the pressure for it always there. But at other times the result is at first only a certain mental quiet and freedom from thoughts. Afterwards when the condition of peace is quite settled in the inner being—for it is the inner into which you enter whenever you concentrate—then it begins to come out and control the outer, so that the calm and peace remain even when working, mixing with others, talking or other occupations. For then whatever the outer consciousness is doing, one feels the inner being calm within—indeed one feels the inner being as one's real self while the outer is something superficial through which the inner acts on life.

*

The gaze should not be fixed for a long time as it overstrains the eyes (unless one has a long practice in Tratak). The fixing of the eyes is not necessary—a natural gaze is sufficient and it should be varied by meditation with closed eyes.

*

When the meditation is done with the photo, it is better done with open eyes.

Coming out of Concentration or Meditation

You enter into a condition of deep inwardness and quiet. But if one comes too suddenly out of it into the ordinary consciousness, then there may be a slight nervous shock or a beating of the heart such as you describe, for a short time. It is always best to remain

quiet for a few moments before opening the eyes and coming out of this inwardness.

*

It is certainly much better to remain silent and collected for a time after the meditation. It is a mistake to take the meditation lightly — by doing that one fails to receive or spills what is received or most of it.

*

Your meditation is all right, as Mother saw — but when you came out of it, you fell into the ordinary consciousness, that is the difficulty. You must try to keep the true consciousness always, even in activity — then the sadhana will begin to be there all the time and your difficulty will disappear.

The Difficulty of the Mechanical Mind

That [*the constant recurrence of trivial thoughts*] is the nature of the mechanical mind — it is not due to any sensitiveness in it. Only as the other parts of the mind are more silent and under control, this activity looks more prominent and takes more space. It usually wears itself out, if one goes on rejecting it.

*

It was rather that the active mind became more quiet so that the movements of the mechanical mind became more evident — that is what often happens. What has to be done in that case is to detach oneself from these movements and concentrate without farther attention to them. They are then likely to sink into quietude or fall away.

*

To be able to detach oneself from the action of the mechanical mind is the first necessity so that it may be like a noise in the street which passes and which one can ignore. It is easier then

for the quiet and peace of the mind to remain undisturbed by this action even if it occurs.

If the peace and silence continue to come down, they usually become so intense as to seize the physical mind also after a time.

*

You are probably paying too much attention to them [*mechanical thoughts*]. It is quite possible to concentrate and let the mechanical activity pass unnoticed.

*

The more the psychic spreads in the outer being, the more all these things [*the mechanical activities of the subconscious mind*] fall quiet. That is the best way. Direct efforts to still the mind are a difficult method.

Surface Thoughts and Imaginations

That [*a state in which the outer being responds to surface thoughts while the inner being is “engrossed in meditation”*] is not called meditation—it is a divided state of consciousness. Unless the consciousness is really engrossed and the surface thoughts are only things that come across and touch and pass, it can hardly be called meditation (dhyana). I don't see how the inner being can be “engrossed” while thoughts and imaginations of another kind are rampaging about in the consciousness. One can remain separate and see the thoughts and imaginations pass without being affected, but that is not being plunged or engrossed in meditation.

Straining and Concentration

Straining and concentration are not the same thing. Straining implies an over-eagerness and violence of effort, while concentration is in its nature quiet and steady. If there is restlessness or over-eagerness, then that is not concentration.

*

Effort means straining endeavour. There can be an action with a will in it in which there is no strain of effort.

*

It was by your personal efforts without guidance that you got into difficulties and into a heated condition in which you could not meditate etc. I asked you to drop the effort and remain quiet and you did so. My intention was that by your remaining quiet, it would be possible for the Mother's Force to work in you and establish a better starting-point and a course of initial experiences. It was what was beginning to come; but if your mind again becomes active and tries to arrange the sadhana for itself, then disturbances are likely to come. The Divine Guidance works best when the psychic is open and in front (yours was beginning to open), but it can also work even when the sadhak is either not conscious of it or else knows it only by its results. As for Nirvikalpa Samadhi, even if one wants it, it is only the result of a long sadhana in a consciousness prepared for it—it is no use thinking of it when the inner consciousness is only just beginning to open to Yogic experience.

Relaxation and Concentration

There are two different states, that which the consciousness takes in concentration and that which it takes in relaxation—the latter is the ordinary consciousness (ordinary for the sadhak, though not perhaps the ordinary consciousness of the average man), the former is what he is attaining to by tapas of concentration in sadhana. To go into the Akshara and witness experiences from there is easy for the sadhak who has got so far. He can also concentrate and maintain the unification of the main aspects of his being, although with more difficulty—but a relaxation there brings him back to the relaxed “ordinary” consciousness. It is only when what is gained by sadhana becomes normal to the ordinary consciousness that this can be avoided. In proportion as this is done, it becomes possible not only to experience the truth subjectively, but make it manifest in action.

Passive Meditation and Concentration

What happened in the beginning of his sadhana must have been that he made the mistake of entering into a passive meditation instead of into a concentration proper. This kind of passive meditation can bring a great peace and quiet and joy. The Light also may come and other spiritual experiences. But it leaves the vital and body passive and without defence against inertia, illness etc. instead of bringing it either a dynamic force or a strong self-contained peace. The consciousness instead of being concentrated gets widely diffused and loosely extended. From the passivity came the weakness and disinclination for the worldly duties; from the diffusion the play of activity in the mind which prevented sleep and could not be controlled in a tendency also for the subtle being to go out of the body in the waking condition instead of through sleep as it ordinarily does, whence the beating of the heart and the cold feet. Concentration must in the earlier stages be active and dynamic with the consciousness gathered and capable of turning the will in any direction.

The concentration in this Yoga must be in the head or in the heart-centre, not in the centre at the base of the spinal cord—that can only come afterwards when all the other centres have been opened.

It is sometimes a little difficult to correct the effects of a wrong start. At any rate he may try the effects of an active concentration in either the head (forehead centre) or heart. The latter may be safer so as to avoid the return of the heating of the head which came from that first concentration. If there are any disturbing results, the concentration should not be continued and all should be turned towards a purification of the being such as he speaks of having practised and only when this is sufficiently advanced, should the concentration be resumed.

Inertia, Laziness, Tiredness in Meditation

It is not a fact that when there is obscurity or inertia, one cannot concentrate or meditate. If one has in the inner being the steady

will to do it, it can be done.

*

It is quite natural to want to meditate while reading Yogic literature — that is not the laziness.

The laziness of the mind consists in not meditating when the consciousness wants to do so.

*

Ego, I suppose, or inertia [*binders the feeling of satisfied peace or quiet release in meditation*]. If higher meditation or being above keeps you dull and without any kind of satisfaction or peace in sadhana, these are the only two reasons I can think of.

*

If the mind gets tired, naturally it is difficult to concentrate — unless you have become separated from the mind.

*

Naturally one does not get tired if the meditation has become natural. But if the capacity is not there yet, then many cannot go on without a strain which brings fatigue.

*

Concentration is very helpful and necessary — the more one concentrates (of course in the limits of the body's capacity without straining it), the more the force of the Yoga grows. But you must be prepared for the meditation being sometimes not successful and not get upset by it — for that variability of the meditations happens to everybody. There are different causes for it. But it is mostly something physical that interferes, either the need of the body to take time to assimilate what has come or been done or sometimes inertia or dullness due to causes such as those you mention or others. The best thing is to remain quiet and not get nervous or dejected — till the force acts again.

Meditation, Sleep and Samadhi

When one tries to meditate, there is a pressure to go inside, lose the waking consciousness and wake inside, in a deep inner consciousness. But at first the mind takes it for a pressure to go to sleep, since sleep is the only kind of inner consciousness to which it has been accustomed. In Yoga by meditation sleep is therefore often the first difficulty—but if one perseveres then gradually the sleep changes to an inner conscious state.

*

I think the sleepiness is a stage which everybody goes through—a sort of mechanical reaction of the physical to the pressure for including it in the concentration of the sadhana. It is best not to mind it; it will go of itself as the consciousness increases and takes the physical into its poise. It is better to let us know about any physical troubles.

*

The sleep does come like that when one tries to meditate. It has to be dealt with, where that is possible, by turning it into a conscious inner and indrawn state and, where not, by remaining in a quietly concentrated wakefulness open (without effort) to receive.

*

This tendency to sit and be perfectly quiet and this pressure of sleep are not at all due to laziness. You must put that idea out of your head. It is due to the tendency to quiet, peace, going inside; when the sadhana begins with some intensity, it is most often like that for a time. Afterwards there is a more even balance between the inner and the outer consciousness or rather the outer begins to change and become of one piece with the inner. So do not let this trouble you.

*

When the pressure gives a tendency to insideness (samadhi), the

physical being, not being accustomed to go inside except in the way of sleep, translates this into a sense of sleepiness.

*

It [*the tendency to fall asleep during meditation*] is a common obstacle with all who practise Yoga at the beginning. This sleep disappears gradually in two ways—(1) by the intensifying of the force of concentration—(2) by the sleep itself becoming a kind of *swapna samadhi* in which one is conscious of inner experiences that are not dreams (i.e. the waking consciousness is lost for the time, but it is replaced not by sleep but by an inward conscious state in which one moves in the supraphysical of the mental or vital being).

*

The Yogic sleep is good only when it is Yogic enough to contain something, to be an inner consciousness or an experience of other planes. The *jāgarti* is important—to be conscious in the sleep, an inner waking. But when the mind is not accustomed, it tends to respond to the impulse towards this “going inside” into an inner consciousness caused by meditation by simply falling into the usual sleep to which it is accustomed. *Nidrā* is one of the recognised difficulties of Yoga—*nidrā* refusing to turn into *samadhi*, whether *svapna-samādhi* or *susupti*. So the force is necessary and I will try to send it. I only wish people would give me more time for this inner work both for myself and them! but that seems past hoping for.

*

It is probably that [*in meditation*] you go inside into a sort of *samadhi* but are not yet conscious there (hence the idea of sleep). X is not asleep, but he has when he goes inside no control of his body. Many Yogis have this difficulty and use a contrivance which is put under the chin to hold up the head and with it the body during this inward-going concentration.

*

There is no harm in the deep sleep that comes — as I have told you, it is the tendency to go deep inside that brings it and it is necessary to go deep inside in order to establish the full connection between the psychic and the rest of the nature.

Chapter Two

Mantra and Japa

The Word

The word is a sound expressive of the idea. In the supra-physical plane when an idea has to be realised, one can by repeating the word-expression of it, produce vibrations which prepare the mind for the realisation of the idea. That is the principle of the Mantra and of japa. One repeats the name of the Divine and the vibrations created in the consciousness prepare the realisation of the Divine. It is the same idea that is expressed in the Bible, "God said, Let there be Light, and there was Light." It is creation by the Word.

*

The Word has power—even the ordinary written word has a power. If it is an inspired word it has still more power. What kind of power or power for what depends on the nature of the inspiration and the theme and the part of the being it touches. If it is the Word itself,—as in certain utterances of the great Scriptures—Veda, Upanishads, Gita,—it may well have a power to awaken a spiritual impulse, an uplifting, even certain kinds of realisation. To say that it cannot contradict spiritual experience.

The Vedic poets regarded their poetry as *mantras*, they were the vehicles of their own realisations and could become vehicles of realisation for others. Naturally, these mostly would be illuminations, not the settled and permanent realisation that is the goal of Yoga—but they could be steps on the way or at least lights on the way. Many have such illuminations, even initial realisations while meditating on verses of the Upanishads or the Gita. Anything that carries the Word, the Light in it, spoken or written, can light this fire within, open a sky, as it were, bring the effective vision of which the Word is the body. In all ages spiritual seekers have expressed their aspirations or their experiences in

poetry or inspired language and it has helped themselves and others. Therefore there is nothing absurd in my assigning to such poetry a spiritual or psychic value and effectiveness to poetry of a psychic or spiritual character.

Mantras

Mantras come to many people in meditation. The Rishis say in the Veda that they had the Truth by vision and inspiration, “truth-hearing seers”, *kavayaḥ satyaśrutas*—Veda is śruti got by inner hearing.

*

When one repeats a mantra regularly, very often it begins to repeat itself within, which means that it is taken up by the inner being. In that way it is more effective.

*

It [*the effect of japa*] depends on the way in which the japa is done.

If rightly done, the mantra is a means of opening to the light and knowledge etc. from above and it ceases as soon as that is done.

*

I do not believe a mantra can change the physical consciousness. What it does, if it is effective, is to open the consciousness and to bring into it the power of that which the mantra represents.

*

There is such a thing as mantra-shakti; but it acts only on certain conditions.

The Mantra OM

OM is the mantra, the expressive sound-symbol of the Brahman Consciousness in its four domains from the Turiya to the external or material plane. The function of a mantra is to create

vibrations in the inner consciousness that will prepare it for the realisation of what the mantra symbolises and is supposed indeed to carry within itself. The mantra OM should therefore lead towards the opening of the consciousness to the sight and feeling of the One Consciousness in all material things, in the inner being and in the supraphysical worlds, in the causal plane above now superconscious to us and, finally, the supreme liberated transcendence above all cosmic existence. The last is usually the main preoccupation with those who use the mantra.

In this Yoga there is no fixed mantra, no stress is laid on mantras, although sadhaks can use one if they find it helpful or so long as they find it helpful. The stress is rather on an aspiration in the consciousness and a concentration of the mind, heart, will, all the being. If a mantra is found helpful for that, one uses it. OM if rightly used (not mechanically) might very well help the opening upwards and outwards (cosmic consciousness) as well as the descent.

*

It [*Pranava japa*] is supposed to have a force of its own although that force cannot fully work without the meditation on the meaning. But my experience is that in these things there is no invariable rule and that most depends on the consciousness or the power of response in the sadhak. With some it has no effect, with some it has a rapid and powerful effect even without meditation — for others the meditation is necessary for any effect to come.

The Mantra *So'ham*

A divine Name or a Mantra (like the *So'ham*) can enter the adhara and move in the breathing as in your experience. When it does so, that is not the opening of which I speak in the sentence you quote, but it may come to make the aspiration effective by helping in the opening — by removing something that prevents the opening and by leading to the experience it carries in it.

The experience to which the *So'ham* mantra leads is the

realisation of one Being everywhere, all as the Divine, oneself and all as essentially one with that Divine. It is an experience in which one's separate personal existence shut up in the body ceases to be the normal thing; one feels the body as a point or small thing in a vast existence, consciousness or Ananda that is the Divine and oneself as spread out in that vast consciousness — as if the world were within us and not we inside the world or as if the world were one with us and one with the Divine. It is the "cosmic consciousness" that comes by this mantra. For our Yoga this is a beginning only, not the end as it is in the ordinary Yoga, — a liberation, not the Siddhi.

The Gayatri Mantra

The power of the Gayatri is the Light of the divine Truth. It is a mantra of Knowledge.

*

The Gayatri mantra is the mantra for bringing the light of Truth into all the planes of the being. The other [*Sri Aurobindo Mira*] has a general power.

*

It is not necessary to give up Gayatri Japa or the process which you are following at present. Concentration in the heart is one method, concentration in the head (or above) is another; both are included in this Yoga and one has to do whichever one finds easiest and most natural. The object of the concentration in the heart is to open the centre there (heart-lotus), to feel the presence of the Divine Mother in the heart and to become aware of one's soul or psychic being which is a portion of the Divine. The object of the concentration in the head is to rise to the Divine Consciousness and bring down the Light of the Mother or her Force or Ananda into all the centres. This movement of ascent and descent is implied in the process of your japa and it is not therefore necessary to renounce it.

There is a level corresponding to the Satya Loka in the head

but the consciousness has at a certain stage to rise above the head freely to meet the same level in the universal Consciousness above.

Mantras in the Integral Yoga

The idea of your friend that it is necessary to receive a mantra from here and for that he must come is altogether wrong. There is no mantra given in this Yoga. It is the opening of the consciousness to the Mother from within that is the true initiation and that can only come by aspiration and rejection of restlessness in the mind and vital.

*

We do not usually give any mantra. Those who repeat something in meditation call on the Mother.

*

As a rule the only mantra used in this sadhana is that of the Mother or of my name and the Mother. The concentration in the heart and the concentration in the head can both be used — each has its own result. The first opens up the psychic being and brings bhakti, love and union with the Mother, her presence within the heart and the action of her Force in the nature. The other opens the mind to self-realisation, to the consciousness of what is above mind, to the ascent of the consciousness out of the body and the descent of the higher consciousness into the body.

*

There is not necessarily any difference of Force.¹ Usually the Mother's name has the full power in it; but in certain states of consciousness the double Name may have a special effect.

¹ *The correspondent asked whether there is any difference of Force when one repeats only the Mother's name and when one repeats both the names of Sri Aurobindo and the Mother together.—Ed.*

Namajapa or Repetition of the Name

The name of the Divine is usually called in for protection, for adoration, for increase of bhakti, for the opening up of the inner consciousness, for the realisation of the Divine in that aspect. As far as it is necessary to work in the subconscious for that, the Name must be effective there.

*

It [*the effectiveness of namajapa*] depends on the person and how he does it. The Name of the Divine is in itself a power, if it is taken with the right faith and in the right attitude.

*

Namajapa has a great power in it.

*

Namochcharana has power but only if it comes from the heart and the soul; mere repetition with the mind is not enough.

*

Whatever name is called the Power that answers is the Mother. Each name indicates a certain aspect of the Divine and is limited by that aspect; the Mother's Power is universal.

*

Naturally, whatever name one concentrates on [*while awake*] will repeat itself [*in sleep*], if any does. But the calling of Mother in sleep is not necessarily a repetition — it is the inner being that often calls to her in difficulty or in need.

*

I did not encourage the name with the breathing because that seemed like pranayam. Pranayam is a very powerful thing, but if done haphazardly it may lead to the raising of obstructions and even in extreme cases illness in the body.

Verses of the Gita Used as Japa

Verses of the Gita can be used as japa, if the object is to realise the Truth that the verses contain in them. If X's father has taken the salient verses containing the heart of the teaching for that purpose, then it is all right. Everything depends on the selection of the verses. A coherent summary of the Gita's teaching cannot easily be put together by putting together some verses, but that is not necessary for a purpose of this kind which could only be to put the key truths together—not for intellectual exposition but for grasping in realisation which is the object of japa.

Success in Japa

I am sorry the old reaction to the japa has recurred. Perhaps the mind is doing it too much as a means for a result. The japa is usually successful only on one of two conditions,—if it is repeated with a sense of its significance, a dwelling of something in the mind on the nature, power, beauty, attraction of the Godhead it signifies and is to bring into the consciousness, that is the mental way,—or if it comes up from the heart or rings in it with a certain sense or feeling of bhakti making it alive, that is the emotional way. Either the mind or the vital has to give it support or sustenance. But if it makes the mind dry and the vital restless, it must be missing that support and sustenance. There is of course a third way, the reliance on the power of the mantra or name in itself, but then one has to go on till that power has sufficiently impressed its vibrations on the inner being to make it at a given moment suddenly open to the Presence or the Touch. But if there is a struggling or insistence for the result, then this effect which needs a quiet receptivity in the mind is impeded. That is why I insisted so much on mental quietude and on not too much straining or effort—to give time to allow the psychic and the mind to develop the necessary condition of receptivity—a receptivity as natural as when one receives an inspiration for poetry and music. It is also why I do not want you to discontinue your poetry—it helps and does not

hinder the preparation because it is a means of developing the right position of receptivity and bringing out the bhakti which is there in the inner being. To spend all the energy on japa or meditation is a strain which even those who are accustomed to successful meditation find it difficult to do — unless in periods when there is an uninterrupted flow of experiences from above.

*

It is very good news that you got rid of the attack and it was the japa that helped you to do it. This and past experience also shows that if you can overcome the old association of the japa with sterility and sorrow, it can do its natural function of creating the right consciousness — for that is what the japa is intended to do. It first changes the vibrations of the consciousness, brings into it the right state and the right responses and then brings in the power or the presence of the Deity. Several times before you wrote to me that by doing japa you got rid of the old impulse and recovered calm and the right turn of the consciousness and now it has helped you to get rid of the invasion of sorrow and despondency. Let us hope that this last will also soon lose its strength like the impulse and calm and serenity begin to establish itself in the whole nature.

Section Four

Sadhana through Love and Devotion

Chapter One

Divine Love, Psychic Love and Human Love

Divine Love and Its Manifestation

To bring the Divine Love and Beauty and Ananda into the world is, indeed, the whole crown and essence of our Yoga. But it has always seemed to me impossible unless there comes as its support and foundation and guard the Divine Truth—what I call the Supramental—and its Divine Power. Otherwise Love itself blinded by the confusions of this present consciousness may stumble in its human receptacles and, even otherwise, may find itself unrecognised, rejected or rapidly degenerating and lost in the frailty of man's inferior nature. But when it comes in the Divine Truth and Power, Divine Love descends first as something transcendent and universal and out of that transcendence and universality it applies itself to persons according to the Divine Truth and Will, creating a vaster, greater, purer personal love than any the human mind or heart can now imagine. It is when one has felt this descent that one can be really an instrument for the birth and action of the Divine Love in the world.

*

It [*the Divine Truth*] can come solely as knowledge or as knowledge + calm and peace or knowledge with power. It is not always accompanied by Ananda.

What was meant [*in the preceding letter*] was that it is possible to have some kind of Ananda on all the planes, vital, mental, physical; but if one wants to live securely in the highest divine Ananda it can only be done by bringing down the (supramental) Truth and living first in the supramental Light. But this is the eventual aim of the Yoga; it does not debar one from accepting whatever Ananda comes on the way. Only, mere pleasure or vital

excitement and gratification must not be mistaken for Ananda.

*

The human form is naturally unable to bear the Divine Love or contain it, because it is itself a creation of the ignorance, weak and impure. It must be transformed in order to be capable of that; it must become strong and pure. First of all, it must have the strength to love the Divine alone and turn away from all other ties. But besides that a new consciousness must be created in it—first a consciousness of pure and purifying Divine Peace from above which must take hold of all down to the most physical—then in that peace an increasing inner strength pure and unegoistic—then the Divine Light and Knowledge transforming all the consciousness and movements. When this has been done, then the human form can contain the Divine Love and Ananda. Till then the touches of the Divine Love and Ananda are usually momentary or brief, they cannot remain. In an impure consciousness the Divine Love if it came in would create a perturbation and possibly be attacked by a mixture which would make it impossible for it to stay. It is therefore that touches only can come.

*

I understand that it is the physical consciousness which has come up forcibly with the old vital human movements and feelings and this has clouded for the moment the sense of higher things and the aspiration for Truth and Purity that is their atmosphere. The Divine Love may not be able yet to manifest on the physical plane, humanity being what it is, as fully and freely as it would otherwise do, but that does not make it less close or intense than the human. It is there waiting to be understood and accepted and meanwhile giving all the help you can receive to raise and widen you into the consciousness in which it will be no longer possible for these difficulties and these misunderstandings to recur—the state in which there is possible the full and perfect union.

*

It [*the Divine Love*] exists in itself and does not depend on outer contact or outer expression. Whether it shall express itself outwardly or how it will express itself outwardly depends on the spiritual truth that has to be manifested.

*

There is the one divine Love secret in all things, but the manifestation [*of it in matter and in forms of life*] depends upon the state of consciousness and its organisation.

*

I do not exactly know what you mean by the Divine Love being established down to the subconscious. What love? the soul's love for the Divine? or the principle of the Divine Love and Ananda which is the highest thing that can be reached? To establish the latter down to the subconscious is a thing which would mean the entire transformation of the whole being and it cannot be done except as the result of the supramental change which is as yet far away. The other may be established even now in principle, but to make it living and complete in the whole being would mean the psychic transformation completed with the spiritual also well under way already.

*

The Intuitive or Overmind are more open to the truth of Divine Love and more capable of universalising love than the mind ordinarily is — love there is also more calm in its intensity, less ego-bound than in the mental parts. But the mind can also approach their quality of love, if the love in it grows psychic and spiritual.

*

By becoming divine in nature [*one can love divinely*]; there is no other way.

Divine Love and Psychic Love

The Divine's love is that which comes from above poured down from the Divine Oneness and its Ananda on the being — psychic love is a form taken by divine love in the human being according to the needs and possibilities of the human consciousness.

*

If love is psychic in its nature, it always brings the sense of oneness or at least of an inner intimate closeness of being. The Divine Love is based upon oneness and the psychic derives from the Divine Love.

*

The psychic love is pure and full of self-giving without egoistic demand, but it is human and can err and suffer. The Divine Love is something much vaster and deeper and full of light and ananda.

Psychic Love

When there is no demand or desire, only love and self-giving, that is the psychic love.

*

Psychic love is quite satisfying, and it can change even the vital love into something great and beautiful.

*

Why do you want something remarkable? The love of the soul is the true thing, simple and absolute — the rest is good only if it is a means of manifestation of the soul's love.

*

The soul's love and joy come from within from the psychic being. What comes from above is the Ananda of the higher consciousness.

*

The love that belongs to the spiritual planes is of a different kind — the psychic has its own more personal love, bhakti, surrender. Love in the higher or spiritual mind is more universal and impersonal. The two must join together to make the highest divine love.

*

The psychic realisation is one of diversity in unity (the portion and the whole); it is not one of dissolving like a drop of water in the sea — for then no love or devotion is possible unless it is love of oneself, devotion to oneself.

Universal Love and Psychic Love

Universal love is always universal — psychic love can individualise itself.

*

Cosmic love depends on the realisation of oneness of self with all. Psychic love or feeling for all can exist without this realisation.

*

The oneness with all in its basis is something self-existent and self-content which does not *need* expression. When it does express itself as love, it is something wide and universal, untroubled and firm even when it is intense. This is in the basic cosmic oneness. There is also the surface cosmic consciousness which is an awareness of the play of cosmic forces — here anything may rise, sex also. It is this part that needs the perfect psychisation, otherwise one cannot even hold, contain and deal with it in the proper way.

*

I do not quite understand X's question. Does he mean to ask whether one can become conscious of the Divine's Love for all creatures before one is oneself filled with the universal love for others? If that is the meaning, then one can certainly become

conscious of the Divine's Love before one has oneself the universal love — one can become conscious of it by contact with the Divine in oneself. Naturally the consciousness of it should lead to the development of a universal love for all. But if he means a love that is divine, not tainted by the lower movements, then it is true that until there comes the peace, purity, freedom from ego, wideness, light of the universal consciousness which is the basis of the universal love, it is difficult to have a love that is free from all the defects, limitations, taints of ordinary human love. The more one has of the universality the more one tends to be freed from these things.

Love for the Divine

The love which is turned towards the Divine ought not to be the usual vital feeling which men call by that name; for that is not love, but only a vital desire, an instinct of appropriation, the impulse to possess and monopolise. Not only is this not the divine Love, but it ought not to be allowed to mix in the least degree in the Yoga. The true love for the Divine is a self-giving, free of demand, full of submission and surrender; it makes no claim, imposes no condition, strikes no bargain, indulges in no violences of jealousy or pride or anger — for these things are not in its composition. In return the Divine Mother also gives herself, but freely — and this represents itself in an inner giving — her presence in your mind, your vital, your physical consciousness, her power re-creating you in the divine nature, taking up all the movements of your being and directing them towards perfection and fulfilment, her love enveloping you and carrying you in its arms Godwards. It is this that you must aspire to feel and possess in all your parts down to the very material, and here there is no limitation either of time or of completeness. If one truly aspires and gets it, there ought to be no room for any other claim or for any disappointed desire. And if one truly aspires, one does unfailingly get it, more and more as the purification proceeds and the nature undergoes its needed change.

Keep your love pure of all selfish claim and desire; you will

find that you are getting all the love that you can bear and absorb in answer.

Realise also that the Realisation must come first, the work to be done, not the satisfaction of claim and desire. It is only when the Divine Consciousness in its supramental Light and Power has descended and transformed the physical that other things can be given a prominent place — and then too it will not be the satisfaction of desire, but the fulfilment of the Divine Truth in each and all and in the new life that is to express it. In the divine life all is for the sake of the Divine and not for the sake of the ego.

I should perhaps add one or two things to avoid misapprehensions. First, the love for the Divine of which I speak is not a psychic love only; it is the love of all the being, the vital and vital-physical included, — all are capable of the same self-giving. It is a mistake to believe that if the vital loves, it must be a love that demands and imposes the satisfaction of its desire; it is a mistake to think that it must be either that or else the vital, in order to escape from its “attachment”, must draw away altogether from the object of its love. The vital can be as absolute in its unquestioning self-giving as any other part of the nature; nothing can be more generous than its movement when it forgets self for the Beloved. The vital and physical should both give themselves in the true way — the way of true love, not of ego-desire.

*

I suppose “love” expresses something more intense than *bhālobāshā* which can include mere liking or affection. But whether love or *bhālobāshā*, the human feeling is always either based on or strongly mixed with ego, — that is why it cannot be pure. It is said in the Upanishad, “One does not love the wife for the sake of the wife” or the child or friend etc. as the case may be “but for one’s self’s sake one loves the wife”. There is usually a hope of return, of benefit or advantage of some kind, or of certain pleasures and satisfactions, mental, vital or physical, that the person loved can give. Remove these things and the love very

soon sinks, diminishes or disappears or turns into anger, reproach, indifference or even hatred. But there is also an element of habit, something that makes the presence of the person loved a sort of necessity because it has always been there—and this is sometimes so strong that even in spite of entire incompatibility of temper, fierce antagonism, something like hatred, it lasts and even these gulfs of discord are not enough to make the persons part; in other cases this feeling is more tepid and after a time one gets accustomed to separation or accepts a substitute. There is again often the element of some kind of spontaneous attraction or affinity, mental, vital or physical, which gives a stronger cohesion to the love. Lastly, there is in the highest or deepest kind of love the psychic element, which comes from the inmost heart and soul, a kind of inner union or self-giving or at least a seeking for that, a tie or an urge independent of other conditions or elements, existing for its own sake and not for any mental, vital or physical pleasure, satisfaction, interest or habit. But usually the psychic element in human love, even where it is present, is so much mixed, overloaded and hidden under the others that it has little chance of fulfilling itself or achieving its own natural purity and fullness. What is called love is therefore sometimes one thing, sometimes another, most often a confused mixture, and it is impossible to give a general answer to the questions you put as to what is meant by love in such and such a phrase. It depends on the persons and the circumstances.

When the love goes towards the Divine, there is still this ordinary human element in it. There is the call for a return and if the return does not seem to come, the love may sink; there is the self-interest, the demand for the Divine as a giver of all that the human being wants and, if the demands are not acceded to, abhimana against the Divine, loss of faith, loss of fervour. Etc. etc. But the true love for the Divine is in its fundamental nature not of this kind, but psychic and spiritual. The psychic element is the need of the inmost being for self-giving, love, adoration, union which can only be fully satisfied by the Divine. The spiritual element is the need of the being for contact, merging, union with its own highest and whole self and source of being and

consciousness and bliss, the Divine. These two are two sides of the same thing. The mind, vital, physical can be the supports and recipients of this love, but they can be fully that only when they become remoulded into harmony with the psychic and spiritual elements of the being and no longer bring in the lower insistences of the ego.

*

Love for the Divine must be there in all the being—not only in the spirit and the psychic heart, but in the vital and the physical consciousness also.

*

The influence of the love for the Divine when it takes hold of any part is to turn it towards the Divine—as you describe it “concentration on the Mother”—and in the end all is gathered and harmonised around this central turn of the being. The difficulty is with the mechanical parts of the being in which the old thoughts go on recurring by habit. If the concentration continues to grow, this becomes a thing of little importance at the circumference of the mind and in the end drops away to be replaced by things that belong to the new consciousness.

Human Love in the Sadhana

And first about human love in the sadhana. The soul's turning through love to the Divine must be through a love that is essentially divine, but as the instrument of expression at first is a human nature, it takes the forms of human love and bhakti. It is only as the consciousness deepens, heightens and changes that that greater eternal love can grow in it and openly transform the human into the divine. But in human love itself there are several kinds of motive-forces. There is a psychic human love which rises from deep within and is the result of the meeting of the inner being with that which calls it towards a divine joy and union; it is, once it becomes aware of itself, something lasting, self-existent, not dependent upon external satisfactions,

not capable of diminution by external causes, not self-regarding, not prone to demand or bargain but giving itself simply and spontaneously, not moved to or broken by misunderstandings, disappointments, strife and anger, but pressing always straight towards the inner union. It is this psychic love that is closest to the divine and it is therefore the right and best way of love and bhakti. But that does not mean that the other parts of the being, the vital and physical included, are not to be used as means of expression or that they are not to share in the full play and the whole meaning of love, even of divine love. On the contrary, they are a means and can be a great part of the complete expression of divine love,— provided they have the right and not the wrong movement. There are in the vital itself two kinds of love,— one full of joy and confidence and abandon, generous, unbargaining, ungrudging and very absolute in its dedication and this is akin to the psychic and well-fitted to be its complement and a means of expression of the divine love. And neither does the psychic love or the divine love despise a physical means of expression wherever that is pure and right and possible: it does not depend upon that, it does not diminish, revolt or go out like a snuffed candle when it is deprived of any such means; but when it can use it, it does so with joy and gratitude. Physical means can be and are used in the approach to divine love and worship; they have not been allowed merely as a concession to human weakness, nor is it the fact that in the psychic way there is no place for such things. On the contrary they are one means of approaching the Divine and receiving the Light and materialising the psychic contact, and so long as it is done in the right spirit and they are used for the true purpose they have their place. It is only if they are misused or the approach is not right because tainted by indifference and inertia, or revolt or hostility, or some gross desire, that they are out of place and can have a contrary effect.

But there is another way of vital love which is more usually the way of human nature and that is a way of ego and desire. It is full of vital craving, desire and demand; its continuance depends upon the satisfaction of its demands; if it does not get what it

craves, or even imagines that it is not being treated as it deserves — for it is full of imaginations, misunderstandings, jealousies, misinterpretations — it at once turns to sorrow, wounded feeling, revolt, pride, anger, all kinds of disorder, finally cessation and departure. A love of this kind is in its very nature ephemeral and unreliable and it cannot be made a foundation for divine love. There has been too much of this kind in the relations of the sadhaks with the Mother — approaching her, I suppose, as a human mother with all the reactions of the lower vital nature. For a long time it was perforce tolerated — and this was the concession made to human weakness — even accepted in the beginning as a thing too prominent in the human being not to be there to some extent but to be transformed by degrees; but too often, it has refused to transform itself and has made itself a source of confusion, disorder, *asiddhi*, sometimes complete disaster. It is for this reason that we discourage this lower vital way of human love and would like people to reject and eliminate these elements as soon as may be from their nature. Love should be a flowering of joy and union and confidence and self-giving and Ananda, — but this lower vital way is only a source of suffering, trouble, disappointment, disillusion and disunion. Even a slight element of it shakes the foundations of peace and replaces the movement towards Ananda by a fall towards sorrow, discontent and Nirananda.

In your own case you often write in your wrong moods as if human love, even with some of these lower ingredients, were the only thing possible to you. But that is not so at all, for it contradicts your own deepest experiences. Always what your inner being has asked is Love, Bhakti, Ananda and whenever it comes to the surface it is, even if only in a first elementary form, the divine love which it brings with it. A basis of deep and intense calm and stillness, a great intensity of emotion and Bhakti, an inrush of Ananda, this is in these moments your repeated experience. On the other hand when you insist too much on the love which exists by external cravings, what comes is the other movement — fits of despondency, sorrow, Nirananda. In stressing on the psychic basis, in wishing you to conquer this

other movement, I am only pointing you to the true way of your own nature—of which the psychic bhakti, the true vital love are the real moving forces, and the other is only a superficial immixture.

Human Love and Divine Love

May I put in a plea for my poor Supramental against which you seem to have something like a grudge? I should like to say that the Supramental is not something cold, distant and remote; on the contrary, when it descends into the physical, it will mean the full outflow and full completeness and expression of love on the vital and physical as well as on every other plane. And it is because I know it means this and many other desirable things that I am so insistent on bringing it down as soon as possible.

And let me say also that, as regards human love and divine love, I admitted the first as that from which we have to proceed and to arrive at the other, intensifying and transforming into it, not eliminating, human love. Divine Love, in my view of it, is again not something ethereal, cold and far, but a love absolutely intense, intimate and full of unity, closeness and rapture using all the nature for its expression. Certainly, it is without the confusions and disorders of the present lower vital nature which it will change into something entirely warm, deep and intense; but that is no reason for supposing that it will lose anything that is true and happy in the elements of love.

*

Love cannot be cold—for there is no such thing as cold love, but the love of which the Mother speaks in that passage¹ is something very pure, fixed and constant; it does not leap like fire and sink for want of fuel, but is steady and all-embracing

¹ “It [the being] knows that this active state of love should be constant and impersonal, that is, absolutely independent of circumstances and persons, since it cannot and must not be concentrated upon any one thing in particular. . . .” *The Mother, Prayers and Meditations*, (Pondicherry: Sri Aurobindo Ashram, 2003), *Collected Works of the Mother (second edition)*, vol. 1, p. 335.

and self-existent like the light of the sun. There is also a divine love that is personal, but it is not like the ordinary personal human love dependent on any return from the person—it is personal but not egoistic,—it goes from the real being in the one to the real being in the other. But to find that, liberation from the ordinary human way of approach is necessary.

*

The Divine Love, unlike the human, is deep and vast and silent; one must become quiet and wide to be aware of it and reply to it. X must make it his whole object to be surrendered so that he may become a vessel and instrument—leaving it to the Divine Wisdom and Love to fill him with what is needed. Let him also fix this in the mind not to insist that in a given time he must progress, develop, get realisation; whatever time it takes, he must be prepared to wait and persevere and make his whole life an aspiration and an opening for the one thing only, the Divine. To give oneself is the secret of sadhana, not to demand and acquire. The more one gives oneself, the more the power to receive will grow. But for that all impatience and revolt must go; all suggestions of not getting, not being helped, not being loved, going away, of abandoning life or the spiritual endeavour must be rejected.

*

The Mother did not tell you that love is not an emotion, but that Divine Love is not an emotion,—a very different thing to say. Human love is made up of emotion, passion and desire,—all of them vital movements, therefore bound to the disabilities of the human vital nature. Emotion is an excellent and indispensable thing in human nature, in spite of all its shortcomings and dangers,—just as mental ideas are excellent and indispensable things in their own field in the human stage. But our aim is to go beyond mental ideas into the light of the supramental Truth, which exists not by ideative thought but by direct vision and identity. In the same way our aim is to go beyond emotion to the height and depth and intensity of the Divine Love and there feel

through the inner psychic heart an inexhaustible oneness with the Divine which the spasmodic leapings of the vital emotions cannot reach or experience.

As supramental Truth is not merely a sublimation of our mental ideas, so Divine Love is not merely a sublimation of human emotions; it is a different consciousness, with a different quality, movement and substance.

*

Human love is mostly vital and physical with a mental support — it can take an unselfish, noble and pure form and expression only if it is touched by the psychic. It is true, as you say, that it is more usually a mixture of ignorance, attachment, passion and desire. But whatever it may be, one who wishes to reach the Divine must not burden himself with human loves and attachments, for they form so many fetters and hamper his steps, turning him away besides from the concentration of his emotions on the one supreme object of love.

There is such a thing as psychic love, pure, without demand, sincere in self-giving, but it is not usually left pure in the attraction of human beings to one another. One must also be on one's guard against the profession of psychic love when one is doing sadhana,— for that is most often a cloak and justification for yielding to a vital attraction or attachment.

Universal love is the spiritual founded on the sense of the One and the Divine everywhere and the change of the personal into a wide universal consciousness, free from attachment and ignorance.

Divine love is of two kinds — the Divine love for the creation and the souls that are part of itself and the love of the seeker and love for the Divine Beloved; it has both a personal and impersonal element, but the personal is free here from all lower elements or bondage to the vital and physical instincts.

*

If I am to take some expressions in one of your letters at their face value you seem to put forward — at least as a poet

—three notions about spiritual seeking which are somewhat extraordinary.

1. “It is the *same* love which is addressed towards a ‘carnal prize’ and towards the Divine.” I should imagine that one who approached the Divine with a “carnal” or an untransformed vital love would embrace something of the vital world but certainly get nowhere near the Divine.

2. The Divine in itself is something cold and empty and dark—only human love gives it some warmth and attraction. I always thought that the Divine was the supreme ineffable Ananda of which human love and delight is only a clouded and fallen ray—most often hardly even that—compared with the empyrean of ethereal fire. How can the luminous eternal Ananda be something cold and dark, I should like to know?

3. Or perhaps you only mean that the Divine Infinite which the calm sages seek is by the very fact of their calm and wisdom something cold, dark, empty, gloomy. Has it not occurred to you that if they really sought for something cold, dark and gloomy as the supreme good, they would not be sages but asses? The sages sought after the Divine as the supreme existence, consciousness and Bliss, the Light beyond lights by which all this shineth, the joy beyond all other joys. Even the seekers of the Absolute Indefinable find in it the peace that passeth all understanding and that is nothing cold, dark or gloomy. The Nihilistic Buddhists? But they did not believe in the Divine or in Eternity, only in Non-existence and what they sought was not the supreme good, but self-extinction and the end of suffering—an intelligible aim, but something quite different from the stress towards the Eternal.

The Vital and Love for the Divine

When the vital joins in the love for the Divine, it brings into it heroism, enthusiasm, intensity, absoluteness, exclusiveness, the spirit of self-sacrifice, the total and passionate self-giving of all the nature. It is the vital passion for the Divine that creates the spiritual heroes, conquerors or martyrs.

*

I have never said that the vital is to have no part in the love for the Divine, only that it must purify and ennoble itself in the light of the psychic being. The results of self-loving love between human beings are so poor and contrary in the end — that is what I mean by the ordinary vital love — that I want something purer and nobler and higher in the vital also for the movement towards the Divine.

*

The outer being has to learn to love in the psychic way without ego. If it loves in the egoistic vital way, then it only creates difficulties for itself and for the sadhana and for the Mother.

*

Yes, that is the nature of vital love. It is based on desire and the sense of claim or sense of possession; psychic love is based on self-giving.

*

If the love is absolute and complete and there has never been any vital demand connected with it, then suggestions of revolt cannot come.

*

Formerly whenever the opening of the heart came you began to associate it with vital enjoyment and turned it upon others instead of turning the love towards the Divine and keeping its essential purity — so also the higher consciousness when it came down was being dispersed in mental movements. This time they were both coming in a purer form, but the danger of the mental and vital forces catching hold of them is still there and then both are likely to stop or break down. So you must be careful to allow no vital deviation this time.

*

Your difficulty is that the vital has not yet arrived at the secret of the self-existent Ananda of love, the Ananda of love's own pure

truth, the inner beauty of it for its own sake, the secret of the inner abiding ecstasy; it cannot yet believe that the thing exists. But it is travelling towards it and this feeling was probably a stage — a groping after a purer vital emotion on the way to the purest of all which is one with the Divine.

*

What he describes² is a vital demand of the ego for emotional self-satisfaction; it is Maya. It is not true love, for true love seeks for union and self-giving and that is the love one must bring to the Divine. This vital (so-called) love brings only suffering and disappointment; it does not bring happiness; it never gets satisfied and, even if it is granted something that it asks for, it is never satisfied with it.

It is perfectly possible to get rid of this Maya of the vital demand, if one wishes to do it, — but the will to do it must be sincere. If he is sincere in his will, he will certainly get help and protection.

*

Generally when people speak of vital intimacy they mean something very external which does not need to be brought down since it is common in human life. If it is the inner vital intimacy with the Divine, then of course that makes the union more complete, provided it is based on the psychic.

² The correspondent wrote, "I want a heart that can respond to all my moods, that can understand me, that can do me justice, that can love me intensely and exclusively." Sri Aurobindo's reply was written to his secretary, who answered the enquirer. — Ed.

Chapter Two

Bhakti, Devotion, Worship

Turning the Emotions towards the Divine

It is no part of this Yoga to dry up the heart; but the emotions must be turned towards the Divine. There may be short periods in which the heart is quiescent, turned away from the ordinary feelings and waiting for the inflow from above; but such states are not states of dryness but of silence and peace. The heart in this Yoga should in fact be the main centre of concentration until the consciousness rises above.

*

Emotion is a good element in Yoga; but emotional *desire* becomes easily a cause of perturbation and an obstacle.

Turn your emotions towards the Divine, aspire for their purification; they will then become a help on the way and no longer a cause of suffering.

Not to kill emotion, but to turn it towards the Divine is the right way of the Yoga.

But it must become pure, founded upon spiritual peace and joy, capable of being transmuted into Ananda. Equality and calm in the mind and vital parts, an intense psychic emotion in the heart can perfectly go together.

Awake by your aspiration the psychic fire in the heart that burns steadily towards the Divine—that is the one way to liberate and fulfil the emotional nature.

*

Emotion is necessary in the Yoga and it is only the excessive emotional sensitiveness which makes one enter into despondency over small things that has to be overcome. The very basis of this Yoga is bhakti and if one kills one's emotional being there can be no bhakti. So there can be no possibility of emotion

being excluded from the Yoga.

*

It is only the ordinary vital emotions, which waste the energy and disturb the concentration and peace, that have to be discouraged. Emotion itself is not a bad thing; it is a necessary part of the nature, and psychic emotion is one of the most powerful helps to the sadhana. Psychic emotion, bringing tears of love for the Divine or tears of ananda, ought not to be suppressed: it is only a vital mixture that brings disturbance in the sadhana.

*

It is quite true that by going above one can get out of all problems, for they no longer exist, but the problems are there below and it is difficult to be always above with so much unsolved and calling for solution. But just as one can go high above, so one can go deep within and it is this going deep within that is needed. What happened was at the surface of the emotional being and if one simply stays there the difficulties of the emotional can come, but what has to be done is not to stay on the surface but go deep within. For the psychic is there behind the emotional surface, deep behind the heart centre. Once one reaches it, these things can no longer touch; what will be there is the inner peace and happiness, the untroubled aspiration, the presence or nearness of the Mother.

*

To indulge in the emotions, love, grief, sorrow, despair, emotional joy etc. for their own sake with a sort of mental-vital over-emphasis on them is what is called sentimentalism. There should be even in deep feeling a calm, a control, a purifying restraint and measure. One should not be at the mercy of one's feelings and sentiments, but master of oneself always.

*

When the consciousness indulges in these things [*joy and sorrow*] and wallows in the excitement of emotional joy or

suffering, that is called sentimentalism. There is another kind in which the mind enjoys its perceptions of emotion, love and suffering etc. and plays with them, but that is a less violent and more superficial sentimentalism.

Bhakti or Devotion

Bhakti is not an experience, it is a state of the heart and soul. It is a state which comes when the psychic being is awake and prominent.

*

The very object of Yoga is a change of consciousness—it is by getting a new consciousness or by unveiling the hidden consciousness of the true being within and progressively manifesting and perfecting it that one gets first the contact and then the union with the Divine. Ananda and bhakti are part of that deeper consciousness, and it is only when one lives in it and grows in it that ananda and bhakti can be permanent. Till then, one can only get experiences of ananda and bhakti, but not the constant and permanent state. But the state of bhakti and constantly growing surrender does not come to all at an early stage of the sadhana; many, most indeed, have a long journey of purification and tapasya to go through before it opens, and experiences of this kind, at first rare and interspaced, afterwards frequent, are the landmarks of their progress. It depends on certain conditions, which have nothing to do with superior or inferior Yoga capacity, but rather with a predisposition in the heart to open, as you say, to the Sun of the divine Influence.

*

You are no doubt right about asking for the bhakti, for I suppose it is the master-claim of your nature: for that matter, it is the strongest motive force that sadhana can have and the best means for all else that has to come. It is why I said that it is through the heart that spiritual experience must come to you. The loyalty and the rest that you have for me and the Mother

may not, as you say, be part of the bhakti itself, but they could not be there were not the bhakti deep inside. It is its coming out in full force into the surface consciousness that is to be brought about and it seems to me that it is inevitable that it should come as the outer coverings fall off. What is within must surely make its way to the surface.

*

You believe in traditional ideas of Yoga — well, according to traditional ideas also, the one easiest method is that of bhakti, reliance, self-giving, *bhakti, nirbhara, samarpāna*. What still stands in your way — for it was and is growing towards that in you, is an old confusion in mind and vital. The heart says, “I want bhakti”, the mind says, “No, no, let us reason”, the vital says, “Nonsense, I can’t surrender.” What you need is to quiet down that confusion created by the mind’s past sanskaras and either fix on the one thing or harmonise. Bhakti as the basic force, knowledge, strength and joy in the Divine as the result — that is the harmony proposed in this Yoga. But in either way, if either is done, then peace becomes easily possible.

*

What I meant by the change was the great improvement in your mental and vital attitude and reactions to outward things and to life which was very evident in your letters and account of happenings and gave them quite a new atmosphere warm and clear and psychic. Naturally the change is not yet absolute and integral, but it does seem to be fundamental. Moreover, it is certainly due to a growing bhakti within, especially an acceptance of bhakti as your path and of the implications of that acceptance. The mind has taken a new poise less intellectual and more psychic. What prevents you from seeing the growth of bhakti (sometimes you have seen it and written about it) is a continuance of the physical mind which sets going with a constant repetitionary whirl of its fixed ideas whenever there is any touch of depression. One of these ideas is that you don’t progress, will not progress and can never progress, the old thing

that used to say, "Yoga is not for the likes of me" etc. The activity of the physical mind (next to the wrong activity of the vital) is what most keeps one's consciousness on the surface and prevents it from being conscious within and of what goes on within; it can see something of what happens on the surface of the nature, the results of the inner movement but not the cause of the happenings, which is the inner movement itself. That is one reason why I like to see the physical mind occupied in poetry and music etc. and other salubrious activities which help the inner growth and in which the inner bhakti can express itself, for that keeps the physical mind busy, unoccupied with the mechanical rotatory movement and allows and helps the inner growth. The rotatory movement is less than it was before and I expect it one of these days to get tired of itself and give up altogether.

*

What you felt about replacement is quite true. The transformation proceeds to a large extent by a taking away or throwing out of the old superficial self and its movements and replacing them by a new deeper self and its true action.

It does not matter if the higher feelings, devotion etc. seem to you sometimes like an influence or colouring. It looks like that when you feel yourself in the external physical or outer vital or outer mind. These feelings really are those of your inmost self, your soul, the psychic in you and when you are in the psychic consciousness, they become normal and natural. But when your consciousness shifts and becomes more external, then these workings of the soul or of the divine consciousness are felt as themselves external, as merely an influence. All the same, you have to open yourself to them constantly and they will then more and more either soak in steadily or come in successive waves or floods and go on till they have filled the mind, the vital, the body. You will then feel them always as not only normal but as part of your very self and the true substance of your nature.

*

The flow of devotion and love is a thing which the more it repeats

or awakens is bound to overflow to all the parts of being and have its effect on them.

*

If it is the way of *ahaitukī bhakti* that you want to follow, that can be no obstacle; for there can be none better. For in that way everything can be made a means—poetry and music for instance become not merely poetry and music and not merely even an expression of bhakti, but themselves a means of bringing the experience of love and bhakti. Meditation itself becomes not an effort of mental concentration, but a flow of love and adoration and worship. If simply and sincerely followed, the way of *ahaitukī bhakti* can lead as far as any other.

*

There can be no such thing as a mechanical and artificial devotion—there is either devotion or there is not. Devotion may be intense or not intense, complete or incomplete, sometimes manifest and sometimes veiled, but mechanical or artificial devotion is a contradiction in terms.

*

These [*arguments against external bhakti*] are the exaggerations made by the mind taking one side of Truth and ignoring the other sides.¹ The inner bhakti is the main thing and without it the external becomes a form and mere ritual, but the external has its place and use when it is straightforward and sincere.

*

Bhakti should be for the Divine only—the sadhaks are sadhaks, trying to reach the Divine, but still full of faults and struggles.

*

A “bhakti” which claims everything from the Divine and does not give itself is not real bhakti.

¹ *The correspondent had been asked by a fellow-sadhak, “Why do you want to meditate on a photograph of Sri Aurobindo? If you can meditate within, this external form of bhakti is not necessary.” — Ed.*

Bhakti and Love

The nature of bhakti is adoration, worship, self-offering to what is greater than oneself—the nature of love is a feeling or seeking for closeness and union. Self-giving is the character of both; both are necessary in the Yoga and each gets its full force when supported by the other.

*

Love is not a name of the Divine, it is a power of his consciousness and being. Bhakti and love are not quite the same thing, but love is one of the elements of bhakti. There are different kinds of bhakti and that which is of the nature of love is the strongest and is considered the highest, most intense and ecstatic of all. Also in love itself that form of it which is made of self-giving; surrender, absolute adoration, urge towards a selfless union is the true kind of bhakti that is love. “Conquering love” or “Love the victor”² means love prevailing over all that stands in the way of its reign, over ignorance, falsehood, selfishness, ego, passion and lust, outward or self-regarding desires and all else till it reigns alone and victorious, bringing down all the other gifts of the Divine Consciousness. It is by force of love and selflessness and self-giving that the sadhak can help Love to conquer.

*

I suppose it [*premabhakti*] is bhakti with love as its basis; there can be bhakti of worship, submission, reverence, obedience etc. but without love.

*

Selflessness, self-giving, entire faith and confidence, absence of demand and desire, surrender to the Divine Will, love concentrated on the Divine—are some of the main signs [of *true love and bhakti*].

² These are probably the names of two roses named by the Mother according to their significance.—Ed.

Emotional Bhakti

It is a misunderstanding to suppose that I am against Bhakti or against emotional Bhakti—which comes to the same thing, since without emotion there can be no Bhakti. It is rather the fact that in my writings on Yoga I have given Bhakti the highest place. All that I have said at any time which could account for this misunderstanding was against an *unpurified* emotionalism which, according to my experience, leads to want of balance, agitated and disharmonious expression or even contrary reactions and, at its extreme, nervous disorder. But the insistence on purification does not mean that I condemn true feeling and emotion any more than the insistence on a purified mind or will means that I condemn thought and will. On the contrary, the deeper the emotion, the more intense the Bhakti, the greater is the force for realisation and transformation. It is oftenest through intensity of emotion that the psychic being awakes and there is an opening of the inner doors to the Divine.

*

If one does not encourage the devotion of the emotional being merely because the lower vital is not yet under control and acts differently, then how is the devotion to grow and how is the lower vital to change? Until the final clarification and harmonising of the nature there are always contradictions in the being, but that is not a reason for in any way suppressing the play of the better movements—on the contrary it is these that should be cultivated and made to increase.

*

It [*emotion*] has its place, only it must not be always thrown outward but pressed inward so as to open fully the psychic doors.

*

The emotional [*devotion*] is more outward than the psychic [*devotion*]—it tends towards outward expression. The psychic is

inward and gives the direction to the whole inner and outer life. The emotional can be intense, but is neither so sure in its basis nor powerful enough to change the whole direction of the life.

Vital Bhakti

Vital bhakti is usually full of desires and demands,—it expects a return for what it gives; it loves the Divine more for its own sake than for the sake of the Divine. If it does not get what it wants, it is capable of revolting or turning elsewhere. It is often pursued by jealousy, misunderstanding, unfaithfulness, anger etc.,—the usual imperfections of human love, and can turn these against its object of bhakti. On the other hand, if there is vital bhakti governed by the psychic, these defects disappear and the vital gives an ardour and enthusiasm to the love and bhakti which gives it a greater push for effectuation in action and life. The vital should always be the instrument of the soul for self-expression in life and not act on its own account (ego, desire) or on its own separate impulse.

*

The vital bhakti is egoistic, usually full of claims and demands on the Divine and revolting when they are not satisfied. The mental is simply a worship in the thought and idea without love in the heart.

*

It [*an inner state of dryness*] is because it is the analysing mind that is active — that always brings a certain dryness; the higher mind or the intuition bring a much more spontaneous and complete knowledge — the beginning of the real Jnana without this effect. The bhakti which you feel is psychic, but with a strong vital tinge; and it is the mind and the vital between them that bring in the opposition between the bhakti and the Jnana. The vital concerned only with emotion finds the mental knowledge dry and without rasa, the mind finds the bhakti to be a blind emotion fully interesting only when its character has been analysed and understood. There is no such opposition when the psychic

and the higher plane knowledge act together predominantly—the psychic welcomes knowledge that supports its emotion, the higher thought consciousness rejoices in the bhakti.

*

It is a mistake to think that a constant absence of *vyākulatā* is a sign that the aspiration or will for the Divine is not true. It is only in certain exclusive forms of Bhakti Yoga that a constant *vyākulatā* or weeping or *hāhākāra* (the latter is more often vital than psychic) is the rule. Here though the psychic yearning may come sometimes or often in intense waves, what comes as the basis is a quietude of the being and in that quietude a more and more steady perception of the truth and seeking for the Divine and need of the Divine so that all is turned towards that more and more. It is into this that the experience and growing realisation come. Because the opening is growing in you, you are getting this *ābhāsa* of the presence (beyond form) of the Mother. It is as the inner realisation grows that the presence in the physical form takes its full value.

Viraha or Pangs of Separation

Viraha is a transitional experience on the plane of the vital seeking for the Spirit—there is no reason why it should not be possible at a quite early stage. It is the realisations without any uneasiness, realisations in pure Ananda that belong to the more developed sadhana.

*

The pure feeling of *viraha* is psychic—but if rajasic or tamasic movements come in (such as depression, complaint, revolt etc.) then it becomes tamasic or rajasic.

*

Pangs of separation belong to the vital, not to the psychic; the psychic having no pangs need not express them. The psychic is always turned towards the Divine in faith, joy and confidence

—whatever aspiration it has is full of trust and hope.

Enmity to the Divine

I have not had time yet to write about the enmity theory. I will do so more fully in two or three days. But I may say at once that the idea does not seem to me at all true that by enmity to the Divine one can reach the Divine and that too more quickly than by bhakti. The idea is contrary to the spiritual truth of things, to reason, to nature and to experience.

*

As regards your defence of X, they sound like X's own ideas and very queer ideas they are. If they are right, we should have to come to the following conclusions —

1. Sattwa is not the best passage towards realisation, Rajas is the best way to become spiritual. It is the rajasic man with his fierce ego and violent passions who is the true sadhak of the Divine.

2. The Asura is the best bhakta. The Gita is quite wrong in holding up the Deva nature as the condition of realisation and the Asura nature as contrary to it. It is the other way round.

3. Ravana, Hiranyakashipu, Shishupala were the greatest devotees of the Divine because they were capable of hostility to the Divine and so were liberated in a few lives — compared with them the great Rishis and Bhaktas were very poor spiritual vessels. I am aware of the paradox about Ravana in the Purana, but let me point out that these Asuras and Rakshasas did not pretend to be disciples or worshippers of Rama or Krishna or Vishnu or use their position as disciples to get moksha by revolt — they got it by being enemies and getting killed and absorbed into the Godhead.

4. Obedience to the Guru, worship of the Divine are all tommy rot and fit only for sheep, not men. To turn round furiously on the Guru or the Divine, abuse him, express contempt, challenge his sincerity, declare his actions to be wrong, foolish or a trick — to assert oneself as right at every point and his

judgment as mistaken, prejudiced, absurd, false, a support of devils etc. etc. is the best way of devotion and the true relation between Guru and Shishya. Disobedience is the highest respect to the Guru, anger and revolt are the noblest worship one can give to the Divine.

5. One who takes the blows of Mahakali with joy as a means of discovering his faults and increasing in light and strength and purity is a sheep and unworthy of disciplehood — one who responds to the quietest pressure to change by revolt and persisting in his errors is a strong man and a mighty adhar and a noble disciple on the way to perfection.

I could go on multiplying the consequences, but I have no time. Do you really believe all these things? They are the natural consequences of X's theory or of this theory of revolt as the way to perfection. If you accept the premiss, you have to accept the logical consequences. That is what X did — only he called his errors Truth and the way prescribed by me was falsehood explicable only by the fact that I was a "Master who had forgotten his higher self". And the consequences led to his departure, not willed by us, but by his own choice — and under such circumstances that he has made it a practical impossibility for me to let him come back unless he undergoes a change which the experience of the past does not warrant me in thinking possible.

Contact with the Divine

Aspiration and devotion are the natural and easy means for getting the contact. The other way by effort is laborious, slow and not sure. The mind must open, but it will open best by the power of devotion and aspiration.

*

The more the calm, peace, joy and happiness descend and take possession, the stronger the foundation. It is the sign of the contact.

The other thing needed is the descent of the consciousness which you felt in the heart and breast. That will come of itself,

if this devotion and sole dependence on the Light continues.

*

The psychic contact does not bring mental knowledge, but it brings true perception and true feeling and it can bring down also, if you aspire from the psychic centre, a knowledge higher and truer than intellectual knowledge.

*

Quietude and surrender are the first things to be established. In that must come the full contact. By that contact, if well established, will come a steady progressive sadhana, not the old confused sadhana.

*

When you fall from the contact, the first and only thing you have to do is to reestablish it—to remain quiet and open yourself. Everything else you must detach yourself from and reject. It is because you listen to ideas and suggestions of all kinds and still attach value to the old kind of “experiences”, that you cannot reestablish the contact.

*

As for not having it [*contact*] always, it is because there are parts of the being that are still unconscious or perhaps states of unconsciousness come. For instance, people write letters to each other, but they are quite unconscious that they are exchanging forces in doing so. You have become conscious of it, because of the development of your inner consciousness by Yoga—and yet there are likely to be times when you still write from the external awareness only, and then you will see the words only without being aware of what is behind. So owing to the development of the inner consciousness, you are able to understand what contacts are and get the true contact, but at times the external consciousness may be stronger than the inner one, then you are no longer (for the time being) able to get the contact.

*

The photograph is a vehicle only³ — but if you have the right consciousness, then you can bring something of the living being into it or become aware of the being for which it stands and can make it a means of contact. It is like the *prāṇapratisthā* in the image in the temple.

Contact and Union with the Divine

Seeing is of many kinds. There is a superficial seeing which only erects or receives momentarily or for some time an image of the Being seen; that brings no change, unless the inner bhakti makes it a means for change. There is also the reception of the *living* image of the Divine in one of his forms into oneself, — say, in the heart, — that can have an immediate effect or initiate a period of spiritual growth. There is also the seeing outside oneself in a more or less objective and subtle physical or physical way.

As for *milana*, the abiding union is within and that can be there at all times; the outer *milana* or contact is not usually abiding. There are some who often or almost invariably have the contact whenever they worship; the Deity may become living to them in the picture or other image they worship, may move and act through it; others may *feel* him always present, outwardly, subtle-physically, abiding with them where they live or in the very room; but sometimes this is only for a period. Or they may feel the Presence with them, see it frequently in a body (but not materially except sometimes), feel its touch or embrace, converse with it constantly, — that is also one kind of *milana*. The greatest *milana* is one in which one is constantly aware of the Deity constantly abiding in oneself, in everything in the world, holding all the world in him, identical with existence and yet supremely beyond the world — but in the world too one sees, hears, feels nothing but him, so that the very senses bear witness to him alone — and this does *not* exclude such specific personal manifestations as those vouchsafed to Krishnaprem

³ While looking at a photograph of Sri Aurobindo, the correspondent felt that he was looking at a living being with eyes “as living as real eyes”. — Ed.

and his guru. The more ways there are of the union, the better.

*

Adesh and darshan are elements of a stage of sadhana in which there is still much distance from the closer state of union. The mind and vital seek the contact through darshan and the guidance through Adesh. What we aim at in our Yoga is the constant union and presence and control of the Divine at every moment. But on the mental and vital level this usually remains imperfect and there is much chance of error. It is by the supramentalisation that the perfect Truth of this Divine Union in action can come.

Outer Worship

There is no restriction in this Yoga to inward worship and meditation only. As it is a Yoga for the whole being, not for the inner being only, no such restriction could be intended. Old forms of the different religions may fall away, but absence of all forms is not the rule of the sadhana.

*

I was thinking [*in writing “Old forms . . . may fall away”*] not of Pranam etc. which have a living value, but of old forms which persist although they have no longer any value—e.g. Sraddha for the dead. Also here forms which have no relation to this Yoga—for instance Christians who cling to the Christian forms or Mahomedans to the Namaz or Hindus to the Sandhyavandana in the old way may soon find them either falling off or else an obstacle to the free development of their sadhana.

*

What is meant by *bāhyapūjā*? If it is purely external, then of course it is the lowest form; but if done with the true consciousness inside, it can bring the greatest completeness of the adoration by allowing the body and the most external consciousness to share in the spirit and act of worship.

*

What you say is no doubt true, but it is better not to take away the support that may still be there for the faith of those who need such supports. These visions and images and ceremonies are meant for that. It is a spiritual principle not to take away any faith or support of faith unless the persons who have it are able to replace it by something larger and more complete.

If the *prāṇapratīṣṭhā* brings down a powerful Presence [*into an image*], that may remain there long after the one who has brought it has left his body. Usually it is maintained by the bhakti of the officiant and the sincerity of belief and worship of those who come to the temple for adoration. If these fail there is likely to be a withdrawal of the Presence.

*

The “scientific” explanation [*for the disappearance of food offered to a deity in a temple*] would be that somebody, a servant perhaps, disregarding prohibitions got secretly in and polished off the food of offering when there was nobody to see! That however assumes that occult manifestations are impossible, which is not the case; it is besides only a probable inference or theory. Occultists, or some of them, hold that the food offered to unseen beings is sometimes (but not by any means always) taken in its subtle elements, leaving the outward body of the food as it was. The actual taking of the food, physically, is rare, but instances are believed to have happened where the bhakti was very strong.

Prayer

Prayer and aspiration are a part of the spiritual life and do not conflict with surrender, provided one is not disturbed in either way by the fulfilment or unfulfilment of the prayer and keeps one’s faith and quietude all the same. In the ordinary life prayer is one of the chief elements of human relation with the Divine and is often but not always answered; when it is not answered the religious man keeps his faith in the Divine and either understands that to answer was not the Divine Will or else he prays

more fervently till his prayer is heard—that depends on the man and the circumstances. A sadhak can intercede internally for others in their affairs, provided he remains unattached and equal-minded, but he is not bound to intervene.

*

Of course all prayer is not heard—the world would be a still more disastrous affair than it is, if everybody's prayers were heard, however sincere. Even the Godward prayer is not always heard—at once, even as faith is not always justified at once. Both prayer and faith are powers towards realisation which have been given to man to aid him in his struggle—without them, without aspiration and will and faith (for aspiration is a prayer) it would be difficult for him to get anywhere. But all these things are merely means for setting the Divine Force in action—and it sometimes takes long, very long even, before the forces come into action or at least before they are seen to be in action or bear their result. The ecstasist is not altogether wrong even when he overstates his case. Even the overstatements sometimes help to convince the Cosmic Power, so that it says "Oh well, if it is like that all right—".

*

As for prayer, no hard and fast rule can be laid down. Some prayers are answered, all are not. You may ask, why should not then all prayers be answered? But why should they be? It is not a machinery: put a prayer in the slot and get your asking. Besides, considering all the contradictory things mankind is praying for at the same moment, God would be in a rather awkward hole if he had to grant all of them; it wouldn't do.

*

If one lives in the world one can offer such prayers [*for help in resolving worldly problems*]; but one must not expect that the Divine shall fulfil all those prayers or think that he is bound to do so. When one is a sadhak the prayer should be for the inner things belonging to the sadhana and for outer things only so far

as they are necessary for that and for the divine work.

*

What you say about prayer is correct. That [*impersonal prayer*] is the highest kind of prayer, but the other kind also (i.e. the more personal) is permissible and even desirable. All prayer rightly offered brings us closer to the Divine and establishes a right relation with Him.

*

As for the prayers, the fact of praying and the attitude it brings, especially unselfish prayer for others, itself opens you to the higher Power, even if there is no corresponding result in the person prayed for. Nothing can be positively said about that, for the result must necessarily depend on the persons, whether they are open or receptive or something in them can respond to any Force the prayer brings down.

*

Prayers should be full of confidence and without sorrow or lamenting.

Part Three

The Integral Yoga and Other Spiritual Paths

Section One

A Yoga of Transformation

Chapter One

Distinctive Features of the Integral Yoga

The Meaning of Purna Yoga

Purna Yoga means (1) that instead of approaching the Divine through the mind alone (Jnana) or the heart alone (Bhakti) or through will and works alone (Karma Yoga), one seeks the Divine with all the parts and powers of the consciousness and the being, uniting these three ways and many others in a single Yoga (way of union with the Divine) and receives the Divine in His presence, consciousness, force, light and bliss in all the consciousness and the being.

(2) That one seeks not only the realisation of the Divine in the soul and self but also in the whole nature (that means the transformation of this lower human into the Divine spiritual nature).

(3) That one seeks the Divine not only beyond life (by the cessation of birth) but for life, so that life also may become a realisation of the Divine and a manifestation of the Divine Nature.

*

As for the book itself,¹ I am unfortunately ignorant of the Telugu language and cannot read the original, but from the account given in English I have formed some idea of the substance. I gather that it is in the main a statement and justification of the Purna Yoga and of my message; I believe you have rightly stated the two main elements of it,—first, the acceptance of the world as a manifestation of the Divine Power, not its rejection as a mistake or an illusion, and, secondly, the character of this manifestation as a spiritual evolution with Yoga as a means for

¹ A book by a disciple living outside the Ashram. — Ed.

the transformation of mind, life and body into the instruments of a spiritual and supramental perfection. The universe is not only a material but a spiritual fact, life not only a play of forces or a mental experience, but a field for the evolution of the concealed spirit. Human life will receive its fulfilment and transformation into something beyond itself only when this truth is seized and made the motive force of our existence and the means of its effective realisation discovered. The means of realisation is to be found in an integral Yoga, a union in all the parts of our being with the Divine and a consequent transmutation of all their now jarring elements into the harmony of a higher divine consciousness and existence.

This-Worldliness and Other-Worldliness

One thing I feel I must say in connection with your remark about the soul of India and X's observation about "this stress on this-worldliness to the exclusion of other-worldliness". I do not quite understand in what connection his remark was made or what he meant by this-worldliness, but I feel it necessary to state my own position in the matter. My own life and my Yoga have always been, since my coming to India, both this-worldly and other-worldly without any exclusiveness on either side. All human interests are, I suppose, this-worldly and most of them have entered into my mental field and some, like politics, into my life, but at the same time, since I set foot on Indian soil on the Apollo Bunder in Bombay, I began to have spiritual experiences, but these were not divorced from this world but had an inner and intimate bearing on it, such as a feeling of the Infinite pervading material space and the Immanent inhabiting material objects and bodies. At the same time I found myself entering supraphysical worlds and planes with influences and an effect from them upon the material plane, so I could make no sharp divorce or irreconcilable opposition between what I have called the two ends of existence and all that lies between them. For me all is the Brahman and I find the Divine everywhere. Everyone has the right to throw away this-worldliness and choose other-worldliness

only and if he finds peace by that choice he is greatly blessed. I, personally, have not found it necessary to do this in order to have peace. In my Yoga also I found myself moved to include both worlds in my purview, the spiritual and the material, and to try to establish the divine Consciousness and the divine Power in men's hearts and in earthly life, not for personal salvation only but for a life divine here. This seems to me as spiritual an aim as any and the fact of this life taking up earthly pursuits and earthly things into its scope cannot, I believe, tarnish its spirituality or alter its Indian character. This at least has always been my view and experience of the reality and nature of the world and things and the Divine: it seemed to me as nearly as possible the integral truth about them and I have therefore spoken of the pursuit of it as the integral Yoga. Everyone is, of course, free to reject and disbelieve in this kind of integrality or to believe in the spiritual necessity of an entire other-worldliness excluding any kind of this-worldliness altogether, but that would make the exercise of my Yoga impossible. My Yoga can include indeed a full experience of the other worlds, the plane of the supreme Spirit and the other planes in between and their possible effects upon our life and material world; but it will be quite possible to insist only on the realisation of the supreme Being or Ishwara even in one aspect, Shiva, Krishna as Lord of the world and Master of ourselves and our works or else the universal Sachchidananda, and attain to the essential results of this Yoga and afterwards to proceed from them to the integral results if one accepted the ideal of the divine life and this material world conquered by the Spirit. It is this view and experience of things and of the truth of existence that enabled me to write *The Life Divine* and *Savitri*. The realisation of the Supreme, the Ishwara, is certainly the essential thing; but to approach him with love and devotion and bhakti, to serve him with one's works and to know him, not necessarily by the intellectual cognition, but in a spiritual experience, is also essential in the path of the integral Yoga.

The Importance of Descent in the Yoga

I meant by it [*the phrase “a far greater Truth”*] the descent of the supramental Consciousness upon earth; all truths below the supramental (even that of the highest spiritual on the mental plane, which is the highest that has yet manifested) are either partial or relative or otherwise deficient and unable to transform the earthly life, they can only at most modify and influence it. The supermind is the vast Truth-consciousness of which the ancient seers spoke; there have been glimpses of it till now, sometimes an indirect influence or pressure, but it has not been brought down into the consciousness of the earth and fixed there. To so bring it down is the aim of our Yoga.

But it is better not to enter into sterile intellectual discussions. The intellectual mind cannot even realise what the supermind is; what use, then, can there be in allowing it to discuss what it does not know? It is not by reasoning, but by constant experience, growth of consciousness and widening into the Light that one can reach those higher levels of consciousness above the intellect from which one can begin to look up to the Divine Gnosis. Those levels are not yet the supermind, but they can receive something of its knowledge.

The Vedic Rishis never attained to the supermind for the earth or perhaps did not even make the attempt. They tried to rise individually to the supramental plane, but they did not bring it down and make it a permanent part of the earth-consciousness. Even there are verses of the Upanishad in which it is hinted that it is impossible to pass through the gates of the Sun (the symbol of the supermind) and yet retain an earthly body. It was because of this failure that the spiritual effort of India culminated in Mayavada. Our Yoga is a double movement of ascent and descent; one rises to higher and higher levels of consciousness, but at the same time one brings down their power not only into mind and life, but in the end even into the body. And the highest of these levels, the one at which it aims is the supermind. Only when that can be brought down is a divine transformation possible in the earth-consciousness.

*

I never heard of silence descending in other Yogas — the mind goes into silence. Since however I have been writing of ascent and descent, I have been told from several quarters that there is nothing new in this Yoga — so I am wondering whether people were not getting ascents and descents without knowing it! or at least without noticing the process. It is like the rising above the head and taking the station there — which I and others have experienced in this Yoga. When I spoke of it first, people stared and thought I was talking nonsense. Wideness must have been felt in the old Yogas because otherwise one could not feel the universe in oneself or be free from the body consciousness or unite with the Anantam Brahman. But generally as in Tantrik Yoga one spoke of the consciousness rising to the Brahmarandhra, top of the head, as the summit. Rajayoga of course lays stress on Samadhi as the means of the highest experience. But obviously if one has not the Brahmi sthiti in the waking state, there is no completeness in the realisation. The Gita distinctly speaks of being *samāhita* (which is equivalent to being in samadhi) and the Brahmi sthiti as a waking state in which one lives and does all actions.

*

It happens that people may get the descent without noticing that it is a descent because they feel the result only. The ordinary Yoga does not go beyond the spiritual mind — people feel at the top of the head the joining with the Brahman, but they are not aware of a consciousness above the head. In the same way in the ordinary Yoga one feels the ascent of the awakened inner consciousness (Kundalini) to the *brahmarandhra* where the Prakriti joins the Brahman-consciousness, but they do not feel the descent. Some may have had these things, but I don't know that they understood their nature, principle or place in a complete sadhana. At least I never heard of these things from others before I found them out in my own experience. The reason is that the old Yogins when they went above the spiritual mind passed into samadhi, which means that they did not attempt to be conscious in these higher planes — their aim being to pass away into the

Superconscient and not to bring the Superconscient into the waking consciousness, which is that of my Yoga.

*

I explain this absence of the descent experiences myself by the old Yogas having been mainly confined to the psycho-spiritual-occult range of experience—in which the higher experiences come into the still mind or the concentrated heart by a sort of filtration or reflection—the field of this experience being from the Brahmarandhra downward. People went above this only in samadhi or in a condition of static mukti without any dynamic descent. All that was dynamic took place in the region of the spiritualised mental and vital-physical consciousness. In this Yoga the consciousness (after the lower field has been prepared by a certain amount of psycho-spiritual-occult experience) is drawn upwards above the Brahmarandhra to ranges above belonging to the spiritual consciousness proper and instead of merely receiving from there has to live there and from there change the lower consciousness altogether. For there is a dynamism proper to the spiritual consciousness whose nature is Light, Power, Ananda, Peace, Knowledge, infinite Wideness and that must be possessed and descend into the whole being. Otherwise one can get mukti but not perfection or transformation (except a relative psycho-spiritual change). But if I say that, there will be a general howl against the unpardonable presumption of claiming to have a knowledge not possessed by the ancient saints and sages and pretending to transcend them. In that connection I may say that in the Upanishads (notably the Taittiriya) there are some indications of these higher planes and their nature and the possibility of gathering up the whole consciousness and rising into them. But this was forgotten afterwards and people spoke only of the buddhi as the highest thing with the Purusha or Self just above, but there was no clear idea of these higher planes. Ergo, ascent possibly to unknown and ineffable heavenly regions in samadhi, but no descent possible—therefore no resource, no possibility of transformation here, only escape

from life and mukti in Goloka, Brahmaloka, Shivaloka or the Absolute.

*

Perhaps you are of the opinion of Ramana Maharshi, "The Divine is here, how can he descend from anywhere?" The Divine may be here, but if he has covered here his Light with darkness of Ignorance and his Ananda with suffering, that, I should think, makes a big difference to the plane and, even if one enters into that sealed Light etc., it makes a difference to the Consciousness but very little to the Energy at work in this plane which remains of a dark or mixed character.

The Inclusiveness of the Yoga

I don't know why it [*a comparison between Sri Aurobindo's Yoga and someone else's*] should be disparaging to my Yoga. My Yoga takes up all the Yoga of the past and goes beyond.

*

One can feel the experiences of any sadhana as a part of this one.

Chapter Two

Asceticism and the Integral Yoga

Not an Ascetic Path

It is not indispensable to be an ascetic—it is enough if one can learn to live within in the inner being instead of on the surface, discover the soul or true individuality which is veiled by the surface mind and life forces and open the being to the superconscious Reality. But in this one cannot succeed unless one is wholly sincere and one-pointed in the effort.

As to the second question, participation in Sri Aurobindo's¹ mission depends on capacity to do a difficult Yoga or on a call to devote oneself to that ideal without thought of the claims of the ego or the vital desires. Otherwise it is better not to think of it.

*

It is good that you have decided to concentrate on the true object of your coming here, but while absorption in mental work and social contacts is not favourable for Yoga, excessive seclusion has also its spiritual disadvantage. An inner concentration supported by a limitation of external contacts is sufficient. Some kind of activity and service to the Divine is also a very necessary element in the integral spiritual life.

*

To be by oneself very much needs a certain force of inner life. It may be better to vary solitude with some sort of its opposite. But each has its advantages and disadvantages and it is only by being vigilant and keeping an inner poise that one can avoid the latter.

*

¹ In this letter to an enquirer living outside the Ashram, Sri Aurobindo refers to himself in the third person.—Ed.

I think there is still a misunderstanding in your mind about the demands of the Yoga. The Divine does *not* demand a complete solitude, aloof and lonely — it is only a few whose nature needs such concentration within to find themselves who have to do that and even for them a complete segregation is not likely to be helpful except perhaps for a time. All that is necessary is a total turning of the life to the Divine and it can be done by degrees without too much forcing of the nature. Literature, poetry, music can be as much a part of Yoga as anything else.

One can meet the Divine in speaking as well as in silence, in action as well as in physical solitude and quietude. An entire retirement can only be a personal case — and as a condition for an inward or outward work, but it is no general rule indispensable for the sadhana. In many cases, most indeed, it would do more harm than good as has been seen in many cases where it has been unduly attempted. A cheerful and sunny life is as good an atmosphere for Yoga as any the Himalayas can give.

Why then this depression and despair?

*

I may say that I am not responsible for your loss of zest in the vital. This vairagya, or loss of zest, as you have yourself said, began before you came here. I have indeed laid some stress on the conquest of sex, for obvious reasons; but I have hardly laid a compulsory stress on anything else. Certainly, I have not encouraged you to lose joy in vital creativeness; I have only held up the ideal of turning it towards the Divine and away from the ego. To keep the vital full of life and energy and to trust mainly to the inner growth and the descent of a higher consciousness for a change, using the will too but for self-mastery, not for suppression, but for subordination of the lower to the higher, has been my teaching. The turn to vairagya, to tapasya of an ascetic kind was the impulse of something in your own nature; it insisted on its necessity just as a part of the vital insisted on its opposite: even it condemned my suggestion of something less grim and strenuous as an easy-going absence of aspiration etc. I do not say that vairagya and tapasya are not ways to reach

the Divine, but done like that they are painful ways and long; if one takes them, one must be determined and go through. For one part to push all zest out of the vital and for the other to regret and say, why did I ever do it, will never do. And it is in this kind of tapasya that perfection or at least perfect purification is demanded before there can be any realisation. I have never said that for my Yoga; the only thing I insist upon is some faith, inner surrender and opening of oneself to receive, —not absolute, but just sufficient. Experience has to begin long before perfect purification and from experience to experience one comes to realisation and through realisation to more and more perfection; anything that can be called real perfection can only come at the end. But there is something in you that is impatient of gradualness, of small mercies; its motto seems to be all or nothing.

*

I am rather aghast as I stare at the detailed proposals made by you! Fastings? I don't believe in them, though I have done them myself. You would only eat like an ogre afterwards. Shaved head! Great heavens! have you realised the consequences? I pass over the aesthetic shock to myself from which I might not recover—but the row that would arise from Cape Comorin to the Himalayas! You would be famous in a new way which would cast all your previous Glories into the shade. And just when you are turning away from fame and all the things of the ego! No, no—too dangerous by half. Sleep without the mosquito net? That would mean no sleep which is as bad as no eating. Not only your eyes would become weak, but yourself also—and to boot gloomy, grey and gruesome, more gruesome than the Supramental of your worst apprehensions. No and no again. As for the rest, I placed some of them before the Mother and she eyed them without favour.

After all real asceticism is hardly possible except in a hut or on the Himalayas. The heart of asceticism, besides, is having no desires or attachment, being indifferent, able to do without things, satisfied with whatever comes. If you asceticise outwardly

it becomes a rule of life and you keep it up because it is a rule, for the principle of the thing or for the *kudos* of it or as a point of honour. But I have noticed about the ascetics by rule that when you remove the curb they become just like others—with a few exceptions, of course,—which proves that the transformation was not real. A more subtle method used by some is to give up for a time, then try the object of desire again and so go on till you have thoroughly tested yourself! E.g. you give up your potatoes and eat only Asram food for a time—if a call comes for the potatoes or from them, then you are not cured; if no call comes, still you cannot be sure till you have tried the potatoes again and seen whether the desire, attachment or sense of need revives. If it does not and the potatoes fall away from you of themselves, then there is some hope that the thing is done!

However, all this will make you think that I am hardly fit to be a guru in the path of asceticism and you will probably be right. You see, I have such a strong penchant for the inner working and am so persuaded that if you give the psychic a chance, it will get rid of the vital bonds without all this sternness and trouble.

*

Rules like these [*not reading newspapers, eating a fixed diet, keeping only a few things*] are intended to help the vital and physical to come under the discipline of sadhana and not get dispersed in fancies, impulses, self-indulgences; but they must be done simply, not with any sense of superiority or ascetic pride, but as a mere matter of course. It is true also that they can be made the occasion of a too great mental rigidity—as if they were things of supreme importance *in themselves* and not only a means. Put in their right place and done in the right spirit, they can be very helpful for their purpose.

Asceticism and Detachment

This is a feeling (the unimportance of things in Time) that the ascetic discipline sometimes uses in order to get rid of attachment

to the world—but it is not good for any positive or dynamic spiritual purpose.

*

Sannyasa does not take away attachment—it amounts only to running away from the object of attachment which may help but cannot by itself alone be the radical cure.

*

After realisation whatever the Higher Will demands is the best—but first detachment is the rule. To reach the Freedom without the discipline and detachment is given to few.

Two Methods of Living in the Supreme

There are always two methods of living in the Supreme. One is to draw away the participation of the consciousness from things altogether and go so much inwards as to be separated from existence and live in contact with that which is beyond it. The other is to get to that which is the true Essence of all things, not allowing oneself to be absorbed and entangled by the external forms. Desire, attachment, slavery to the attractions of the external sense are the chief obstacles to this movement—so in either way they have to be got rid of. But it is quite possible to see the Supreme before the attraction of external sense is gone—only one cannot live securely in It if there is desire and external attachment because that is always taking one away from the inner poise.

*

This Yoga does not mean a rejection of the powers of Life, but an inner transformation and a change of the spirit in the life and the use of the powers. These powers are now used in an egoistic spirit and for undivine ends; they have to be used in a spirit of surrender to the Divine and for the purposes of the divine Work. That is what is meant by conquering them back for the Mother. If anyone feels himself too weak to resist the clutch of the egoistic money-force he need not make the endeavour.

The Human Approach to the Divine

I send you the promised letter today;² you will see that it is less a reply to the exact terms of your letter than a “Defence of the gospel of divinisation of life” against the strictures and the incomprehensions of the mentality (or more often the vitality) that either misunderstands or shrinks from it—or perhaps misunderstands because it shrinks, and shrinks too because it misunderstands both my method and my object. It is not a complete defence, but only raises or answers a main point here and there. The rest will come hereafter.

But all language is open to misunderstanding; so I had better in sending on the letter make or try to make certain things clear.

1. Although I have laid stress on things divine in answer to an excessive (because contrary) insistence on things human, it must not be understood that I reject everything human,—human love or worship or any helpful form of human approach as part of the Yoga. I have never done so, otherwise the Asram could not be in existence. The sadhaks who enter the Yoga are human beings, and if they were not allowed a human approach at the beginning and long after, they would not be able to start the Yoga or would not be able to continue it. The discussion arises only because the word “human” is used in practice, not only as identical with the human vital (and the outward mind), but with certain forms of the human vital ego-nature. But the human vital has many other things in it and is full of excellent material. All that is asked by the Yoga is that this material should be utilised in the right way and with the right spiritual attitude and, also, that the human approach to the Divine should not be constantly turned into a human revolt and reproach against it. And that too we ask only for the sake of the success of the approach itself and of the human being who is making it.

2. Divinisation itself does not mean the destruction of the human elements; it means taking them up, showing them the way to their own perfection, raising them by purification and

² See the letter beginning “Even if things” on pages 475–83.—Ed.

perfection to their full power and Ananda. And that means the raising of the whole of earthly life to its full power and Ananda.

3. If there were not a resistance in vital human nature, a pressure of forces adverse to the change, forces which delight in imperfection and even in perversion, this change would effect itself without difficulty by a natural and painless flowering—as, for example, your own powers of poetry and music have flowered out here with rapidity and ease under the light and rain of a spiritual and psychic influence—because everything in you desired that change and your vital was willing to recognise imperfections, to throw away any wrong attitude—e.g., the desire for mere fame—and to be dedicated and perfect. Divinisation of life means, in fact, a greater art of life; for the present art of life produced by ego and ignorance is something comparatively mean, crude and imperfect (like the lower forms of art, music and literature which are yet more attractive to the ordinary human mind and vital), and it is by a spiritual and psychic opening and refinement that it has to reach its true perfection. This can only be done by its being steeped in the divine Light and Flame in which its material will be stripped of all heavy dross and turned into the true metal.

4. Unfortunately, there *is* the resistance, a very obscure and obstinate resistance. That necessitates a “negative” element in the Yoga, an element of rejection of things that stand in the way and of pressure upon those forms that are crude and useless to disappear, on those that are useful but imperfect or have been perverted to attain or to recover their true movement. To the vital this pressure is very painful, first, because it is obscure and does not understand and, secondly, because there are parts of it that want to be left to their crude motions and not to change. That is why the intervention of a psychic attitude is so helpful. For the psychic has the happy confidence, the ready understanding and response, the spontaneous surrender; it knows that the touch of the Guru is meant to help and not to hurt, or, like Radha in the poem, that whatever the Beloved does is meant to lead to the Divine Rapture.

5. At the same time, it is not from the negative part of the

movement that you have to judge the Yoga, but from its positive side; for the negative part is temporary and transitional and will disappear, the positive alone counts for the ideal and for the future. If you take conditions which belong to the negative side and to a transitional movement as the law of the future and the indication of the character of the Yoga, you will commit a serious misjudgment, a grave mistake. This Yoga is not a rejection of life or of closeness and intimacy between the Divine and the sadhaks. Its ideal aims at the greatest closeness and unity on the physical as well as the other planes, at the most divine largeness and fullness and joy of life.

Vairagya

Vairagya means a positive detachment from things of this life — but it does not *immediately* carry with it a luminous aspiration except for a few fortunate people. For the positive detachment is often a pulling away by the soul while the vital clings and is gloomy and reluctant.

*

Vairagya is certainly one way of progressing towards the goal — the traditional way and a drastic if painful one. To lose the desire for human vital enjoyments, to lose the passion for literary or other success, praise, fame, to lose even the insistence on spiritual success, the inner bhoga of Yoga, have always been recognised as steps towards the goal — provided one keeps the one insistence on the Divine. I prefer myself the calmer way of equality, the way pointed out by Krishna, than the more painful one of Vairagya. But if the compulsion in one's nature — or the compulsion of one's inner being forcing its way by that means through the difficulties of the nature — is on that line, it must be recognised as a valid line. What has to be got rid of in that case is the note of despair in the vital which responds to the cry you speak of — that it will never gain the Divine because it has not yet got the Divine or that there has been no progress. There has certainly been a progress, the greater push of the psychic, this

very detachment itself always growing somewhere in you. The thing is to hold on, not to cut the cord which is pulling you up because it hurts the hands. To keep the one insistence if all the others fall away from you.

It is evident that something in you, perhaps continuing the unfinished curve of a past life, is pushing you on this path of vairagya and the more stormy way of bhakti—in spite of our preference for a less painful one and yours also—something that is determined to be drastic with the outer nature so as to make itself free to fulfil its secret aspiration. But do not listen to these suggestions of the voice that says, “You shall not succeed and it is no use trying.” That is a thing that need never be said in the Way of the Spirit, however difficult it may seem at the moment to be. Keep through all the aspiration which you express so beautifully in your poem; for it is certainly there and comes out from the depths, and if it is the cause of suffering—as great aspirations usually are in a world and nature where there is so much to oppose them—it is also the promise and surety of emergence and victory in the future.

*

I quite acknowledge the utility of a temporary state of vairagya as an antidote to the too strong pull of the vital. But vairagya always tends to a turning away from life and a tamasic element in vairagya, despair, depression etc., often dilapidates the force of the being and may even lead in some cases to falling between two stools so that one loses earth and misses heaven. I therefore prefer to replace vairagya by a firm and quiet rejection of what has to be rejected, sex, vanity, ego-centrism, attachment, etc. etc.; but that does not include rejection of the activities and powers that can be made instruments of the sadhana and the divine work, such as art, music, poetry etc.—Yoga can be done without the rejection of life, without killing or impairing the life-joy and the vital force.

*

I have objected in the past to vairagya of the ascetic kind and the

tamasic kind — and by the tamasic kind I mean that spirit which comes defeated from life, not because it is really disgusted with life but because it could not cope with it or conquer its prizes; for it comes to Yoga as a kind of asylum for the maimed or weak and to the Divine as a consolation prize for the failed boys in the world-class. The vairagya of one who has tasted the world's gifts or prizes but found them insufficient or, finally, tasteless and turns away towards a higher and more beautiful ideal or the vairagya of one who has done his part in life's battles but seen that something greater is demanded of the soul, is perfectly helpful and a good gate to the Yoga. Also the sattwic vairagya which has learned what life is and turns to what is above and behind life. By the ascetic vairagya I mean that which denies life and world altogether and wants to disappear into the Indefinite — and I object to it for those who come to this Yoga because it is incompatible with my aim which is to bring the Divine into life. But if one is satisfied with life as it is, then there is no reason to seek to bring the Divine into life, — so vairagya in the sense of dissatisfaction with life as it is is perfectly admissible and even in a certain sense indispensable for my Yoga.

*

There is the sattwic vairagya — but many people have the rajasic or tamasic kind. The rajasic is carried by a revolt against the conditions of one's own life, the tamasic arises from dissatisfaction, disappointment, a feeling of inability to succeed or face life, a crushing under the grips and pains of life. These bring a sense of the vanity of existence, a desire to seek something less miserable, more sure and happy or else to seek a liberation from existence here, but they do not bring immediately a luminous aspiration or pure aspiration with peace and joy for the spiritual attainment.

*

No, I didn't say that you chose the rajasic or tamasic vairagya. I only explained how it came, of itself, as a result of a movement of the vital in place of the sattwic vairagya which is supposed to precede and cause or accompany or result from a turning away

from the world to seek the Divine. The tamasic vairagya comes from the recoil of the vital when it feels that it has to give up the joy of life and becomes listless and joyless; the rajasic comes when the vital begins to lose the joy of life but complains that it is getting nothing in its place. Nobody chooses such movements; they come independently of the mind as habitual reactions of the human nature. To replace these things by detachment, an increasing quiet aspiration, a pure bhakti, an ardent surrender to the Divine, was what I suggested as the true forward movement.

Chapter Three

A Realistic Adwaita

The World Not an Illusion

I do not agree with the view that the world is an illusion, *mithyā*. The Brahman is here as well as in the supracosmic Absolute. The thing to be overcome is the Ignorance which makes us blind and prevents us from realising Brahman in the world as well as beyond it and the true nature of existence.

Shankara, Buddhism, Evolution

I don't know that I can help you very much with an answer to your friend's questions. I can only state my own position with regard to these matters.

1. Shankara's explanation of the universe.

It is rather difficult to say nowadays what really was Shankara's philosophy: there are numberless exponents and none of them agrees with any of the others. I have read accounts given by some scores of his exegetes and each followed his own line. We are even told by some that he was no Mayavadin at all although he has always been famed as the greatest exponent of the theory of Maya, but rather, the greatest Realist in philosophical history. One eminent follower of Shankara even declared that my philosophy and Shankara's were identical, a statement which rather took my breath away. One used to think that Shankara's philosophy was this that the Supreme Reality is a spaceless and timeless Absolute (Parabrahman) which is beyond all feature or quality, beyond all action or creation, and that the world is a creation of Maya, not absolutely unreal but real only in time and while one lives in time; once we get into a knowledge of the Reality we perceive that Maya and world and all in it have no abiding or true existence. It is, if not non-existent, yet false, *jagan mithyā*; it is a mistake of the consciousness, it is

and it is not; it is an irrational and inexplicable mystery in its origin, though we can see its process or at least how it keeps itself imposed on the consciousness. Brahman is seen in Maya as Ishwara upholding the works of Maya and the apparently individual soul is really nothing but Brahman itself. In the end, however, all this seems to be a myth of Maya, *mithyā*, and not anything really true. If that is Shankara's philosophy, it is to me unacceptable and incredible, however brilliantly ingenious it may be and however boldly and incisively reasoned; it does not satisfy my reason and it does not agree with my experience.

I don't know exactly what is meant by this *yuktivāda*. If it is meant that it is merely for the sake of arguing down opponents, then this part of the philosophy has no fundamental validity; Shankara's theory destroys itself. Either he meant it as a sufficient explanation of the universe or he did not. If he did, it is no use dismissing it as *yuktivāda*. I can understand that thoroughgoing Mayavadin's declaration that the whole question is illegitimate, because Maya and the world do not really exist; in fact the problem how the world came into existence is only a part of Maya, is like Maya unreal and does not truly arise; but if an explanation is to be given it must be a real and valid satisfying explanation. If there are two planes and in putting the question we are confusing the two planes, that argument can only be of value if both planes have some kind of existence and the reasoning and explanation are true in the lower plane but cease to have any meaning for a consciousness which has passed out of it.

2. Adwaita.

People are apt to speak of the Adwaita as if it were identical with Mayavada monism, just as they speak of Vedanta as if it were identical with Adwaita only; that is not the case. There are several forms of Indian philosophy which base themselves upon the One Reality, but they admit also the reality of the world, the reality of the Many, the reality of the differences of the Many as well as the sameness of the One (*bhedābheda*). But the Many exist in the One and by the One, the differences are variations in manifestation of that which is fundamentally ever the same. This

we actually see as the universal law of existence where oneness is always the basis with an endless multiplicity and difference in the oneness; as for instance there is one mankind but many kinds of man, one thing called leaf or flower but many forms, patterns, colours of leaf and flower. Through this we can look back into one of the fundamental secrets of existence, the secret which is contained in the one Reality itself. The oneness of the Infinite is not something limited, fettered to its unity; it is capable of an infinite multiplicity. The Supreme Reality is an Absolute not limited by either oneness or multiplicity but simultaneously capable of both; for both are its aspects, although the oneness is fundamental and the multiplicity depends upon the oneness.

There is possible a realistic as well as an illusionist Adwaita. The philosophy of *The Life Divine* is such a realistic Adwaita. The world is a manifestation of the Real and therefore is itself real. The reality is the infinite and eternal Divine, infinite and eternal Being, Consciousness-Force and Bliss. This Divine by his power has created the world or rather manifested it in his own infinite Being. But here in the material world or at its basis he has hidden himself in what seem to be his opposites, Non-Being, Inconscience and Insentience. This is what we nowadays call the Inconscient which seems to have created the material universe by its inconscient Energy; but this is only an appearance, for we find in the end that all the dispositions of the world can only have been arranged by the working of a supreme secret intelligence. The Being which is hidden in what seems to be an inconscient void emerges in the world first in Matter, then in Life, then in Mind and finally as the Spirit. The apparently inconscient Energy which creates is in fact the Consciousness-Force of the Divine and its aspect of consciousness, secret in Matter, begins to emerge in Life, finds something more of itself in Mind and finds its true self in a spiritual consciousness and finally a supramental consciousness through which we become aware of the Reality, enter into it and unite ourselves with it. This is what we call evolution which is an evolution of consciousness and an evolution of the Spirit in things and only outwardly an evolution of species. Thus also, the delight of existence emerges from the

original insentience first in the contrary forms of pleasure and pain and then has to find itself in the bliss of the Spirit or as it is called in the Upanishads, the bliss of the Brahman. That is the central idea in the explanation of the universe put forward in *The Life Divine*.

3. Nirguna and Saguna.

In a realistic Adwaita there is no need to regard the Saguna as a creation from the Nirguna or even secondary or subordinate to it: both are equal aspects of the one Reality, its position of silent status and rest and its position of action and dynamic force; a silence of eternal rest and peace supports an eternal action and movement. The one Reality, the Divine Being is bound by neither since it is in no way limited; it possesses both. There is no incompatibility between the two, as there is none between the Many and the One, the sameness and the difference. They are all eternal aspects of the universe which could not exist if either of them were eliminated, and it is reasonable to suppose that they both came from the Reality which has manifested the universe and are both real. We can only get rid of the apparent contradiction—which is not really a contradiction but only a natural concomitance—by treating one or the other as an illusion. But it is hardly reasonable to suppose that the eternal Reality allows the existence of an eternal illusion with which it has nothing to do or that it supports and enforces on being a vain cosmic illusion and has no power for any other and real action. The force of the Divine is always there in silence as in action, inactive in silence, active in the manifestation. It is hardly possible to suppose that the Divine Reality has no power or force or that its only power is to create a universal falsehood, a cosmic lie—*mithyā*.

4. Compounds and Disintegration.

No doubt all compounds, being not integral things in themselves but integrations, can disintegrate. Also it is true of life, though not a physical compound, that it has a curve of birth or integration and, after it reaches a certain point, of disintegration, decay and death. But these ideas or this rule of existence cannot be safely applied to things in themselves. The soul is not

a compound but an integer, a thing in itself; it does not disintegrate, but at most enters into manifestation and goes out of manifestation. That is true even of forms other than constructed physical or constructed life-forms; they do not disintegrate but appear and disappear or at most fade out of manifestation. Mind itself as opposed to particular thoughts is something essential and permanent; it is a power of the Divine Consciousness. So is life, as opposed to constructed living bodies; so I think is what we call material energy which is really the force of essential substance in motion, a power of the Spirit. Thoughts, lives, material objects are formations of these energies, constructed or simply manifested according to the habit of the play of the particular energy. As for the elements, what is the pure natural condition of an element? According to modern Science what used to be called elements turn out to be compounds and the pure natural condition, if any, must be a condition of pure energy; it is that pure condition into which compounds including what we call elements must go when they pass by disintegration into Nirvana.

5. Nirvana.

What then is Nirvana? In orthodox Buddhism it does mean a disintegration, not of the soul — for that does not exist — but of a mental compound or stream of associations or *samskāras* which we mistake for ourself. In illusionist Vedanta it means not a disintegration but a disappearance of a false and unreal individual self into the one real self or Brahman; it is the idea and experience of individuality that so disappears and ceases, — we may say a false light that is extinguished (*nirvāna*) in the true Light. In spiritual experience it is sometimes the loss of all sense of individuality in a boundless cosmic consciousness; what was the individual remains only as a centre or a channel for the flow of a cosmic consciousness and a cosmic force and action. Or it may be the experience of the loss of individuality in a transcendent being and consciousness in which the sense of cosmos as well as the individual disappears. Or again, it may be in a transcendence which is aware of and supports the cosmic action. But what do we mean by the individual? What we usually call by that name is a natural ego, a device of Nature which holds

together her action in the mind and body. This ego has to be extinguished, otherwise there is no complete liberation possible; but the individual self or soul is not this ego. The individual soul is the spiritual being which is sometimes described as an eternal portion of the Divine but can also be described as the Divine himself supporting his manifestation as the Many. This is the true spiritual individual which appears in its complete truth when we get rid of the ego and our false separative sense of individuality, realise our oneness with the transcendent and cosmic Divine and with all beings. It is this which makes possible the Divine Life. Nirvana is a step towards it; the disappearance of the false separative individuality is a necessary condition for our realising and living in our true eternal being, living divinely in the Divine. But this we can do in the world and in life.

6. Rebirth.

If evolution is a truth and is not only a physical evolution of species, but an evolution of consciousness, it must be a spiritual and not only a physical fact. In that case, it is the individual who evolves and grows into a more and more developed and perfect consciousness and obviously that cannot be done in the course of a brief single human life. If there is the evolution of a conscious individual, then there must be rebirth. Rebirth is a logical necessity and a spiritual fact of which we can have the experience. Proofs of rebirth, sometimes of an overwhelmingly convincing nature, are not lacking, but as yet they have not been carefully registered and brought together.

7. Evolution.

In my explanation of the universe I have put forward this cardinal fact of a spiritual evolution as the meaning of our existence here. It is a series of ascents from the physical being and consciousness to the vital, the being dominated by the life-self, thence to the mental being realised in the fully developed man and thence into the perfect consciousness which is beyond the mental, into the Supramental consciousness and the Supramental being, the Truth-Consciousness which is the integral consciousness of the spiritual being. Mind cannot be our last conscious expression because mind is fundamentally

an ignorance seeking for knowledge; it is only the Supramental Truth-Consciousness that can bring us the true and whole Self-Knowledge and world-Knowledge; it is through that only that we can get to our true being and the fulfilment of our spiritual evolution.

Chapter Four

Transformation in the Integral Yoga

The Meaning of Transformation

By transformation I do not mean some change of the nature—I do not mean for instance sainthood or ethical perfection or Yogic siddhis (like the Tantrik's) or a transcendental (*cin-maya*) body. I use transformation in a special sense, a change of consciousness radical and complete and of a certain specific kind which is so conceived as to bring about a strong and assured step forward in the spiritual evolution of the being, an advance of a greater and higher kind and of a larger sweep and completeness than that smaller though decisive achievement of the emerging Consciousness when a mentalised being first appeared in a vital and material animal world. If anything short of that takes place or at least if a real beginning is not made on that basis, a fundamental progress towards this fulfilment, then my object is not accomplished. A partial realisation, something mixed and inconclusive, does not meet the demand I make on life and Yoga.

Light of realisation is not the same thing as Descent. Realisation by itself does not necessarily transform the being as a whole; it may bring only an opening or heightening or widening of the consciousness at the top so as to realise something in the Purusha part without any radical change in the parts of Prakriti. One may have some light of realisation at the spiritual summit of the consciousness but the parts below remain what they were. I have seen any number of instances of that. There must be a descent of the light not merely into the mind or part of it but into all the being down to the physical and below before a real and total transformation can take place. A light in the mind may spiritualise or otherwise change the mind or part of it in one way or another, but it need not change the vital nature; a light in the vital may purify and enlarge the vital movements or else silence and immobilise the vital being, but leave the body

and the physical consciousness as it was, or even leave it inert or shake its balance. And the descent of Light is not enough, it must be the descent of the whole higher consciousness, its Peace, Power, Knowledge, Love, Ananda. Moreover, the descent may be enough to liberate, but not to perfect, or it may be enough to make a great change in the inner being, while the outer remains an imperfect instrument, clumsy, sick or unexpressive. Finally, the transformation effected by the sadhana cannot be complete unless it is a supramentalisation of the being. Psychisation is not enough, it is only a beginning; spiritualisation and the descent of the higher consciousness is not enough, it is only a middle term; the ultimate achievement needs the action of the supramental Consciousness and Force. Something less than that may very well be considered enough by the individual, but it is not enough for the earth-consciousness to take the definitive stride forward it must take at one time or another.

I have never said that my Yoga was something brand new in all its elements. I have called it the integral Yoga and that means that it takes up the essence and many processes of the old Yogas — its newness is in its aim, standpoint and the totality of its method. In the earlier stages which is all I deal with in books like the *Riddle* or the *Lights*¹ there is nothing in it that distinguishes it from the old Yogas except the aim underlying its comprehensiveness, the spirit in its movements and the ultimate significance it keeps before it — also the scheme of its psychology and its working, but as that was not and could not be developed systematically or schematically in these letters, it has not been grasped by those who are not already acquainted with it by mental familiarity or some amount of practice. The detail or method of the later stages of the Yoga which go into little known or untrodden regions, I have not made public and I do not at present intend to do so.

I know very well also that there have been seemingly allied ideals and anticipations — the perfectibility of the race, certain

¹ The Riddle of This World and Lights on Yoga, two small books of letters published in 1933 and 1935 respectively. A third such book, Bases of Yoga, was published in 1936.
— Ed.

Tantric sadhanas, the effort after a complete physical siddhi by certain schools of Yoga, etc. etc. I have alluded to these things myself and have put forth the view that the spiritual past of the race has been a preparation of Nature not merely for attaining to the Divine beyond this world, but also for this very step forward which the evolution of the earth-consciousness has still to make. I do not therefore care in the least,—even though these ideals were, up to some extent parallel, yet not identical with mine,—whether this Yoga and its aim and method are accepted as new or not; that is in itself a trifling matter. That it should be recognised as true in itself by those who can accept or practise it and should make itself true by achievement, is the one thing important; it does not matter if it is called new or a repetition or revival of the old which was forgotten. I laid emphasis on it as new in a letter to certain sadhaks so as to explain to them that a repetition of the aim and idea of the old Yogas was not enough in my eyes, that I was putting forward a thing to be achieved that has not yet been achieved, not yet clearly visualised, even though it is one natural but still secret destined outcome of all the past spiritual endeavour.

It is new as compared with the old Yogas:

(1) Because it aims not at a departure out of world and life into a Heaven or a Nirvana, but at a change of life and existence, not as something subordinate or incidental, but as a distinct and central object. If there is a descent in other Yogas, yet it is only an incident on the way or resulting from the ascent—the ascent is the real thing. Here the ascent is indispensable, but what is decisive, what is finally aimed at is the resulting descent. It is the descent of the new consciousness attained by the ascent that is the stamp and seal of the sadhana. Even Tantra and Vaishnavism end in the release from life; here the object is the divine fulfilment of life.

(2) Because the object sought after is not an individual achievement of divine realisation for the sole sake of the individual, but something to be gained for the earth-consciousness here, a cosmic, not solely a supra-cosmic achievement. The thing to be gained also is the bringing in of a Power of consciousness

(the supramental) not yet organised or active directly in earth-nature, even in the spiritual life, but yet to be organised and made directly active.

(3) Because a method has been preconised for achieving this purpose which is as total and integral as the aim set before it, viz. the total and integral change of the consciousness and nature, taking up old methods but only as a part action and passing on to others that are distinctive. I have not found this method (as a whole) or anything like it in its totality proposed or realised in the old Yogas. If I had I should not have wasted my time in hewing out a road and in thirty years of search and inner creation when I could have hastened home safely to my goal in an easy canter over paths already blazed out, laid down, perfectly mapped, macadamised, made secure and public. Our Yoga is not a retreading of old walks, but a spiritual adventure.

Towards a Transformation of Earth Life

I believe Krishnaprem's comment was on a passage in which I wrote that this Yoga was not like the old ones in that it aimed not at an ascent or passing beyond life but at a descent of the divine consciousness into life. Its aim is double—two movements fusing themselves into one—an ascending into divine consciousness and a transformation of earth life by the divine consciousness coming down here. All the old Yogas put the emphasis on going to Nirvana or to heaven, Vaikuntha, Goloka, Brahmaloka etc. for good and so getting rid of rebirth. My emphasis is on life here and its transformation and I put that as the aim at once of my Yoga and of the terrestrial manifestation. I am quite unaware that any of the old Yogas hold this as the aim before them. Even Vaishnavism and Tantra are in the end other-worldly; mukti is the aim of their efforts and anything else could be only incidental and secondary or a result on the way. If my view is correct, then my statement was not an error.

I have not denied that the ideal of a change on earth is of old standing. It is there vaguely in the human mind perhaps since the beginning, though more often perfection is put in some golden

age of the past and deterioration and a cataclysm is the law of the future. Christianity foresees a descent of Christ and his rule on earth, but this is figured as an outward event, not as a change produced by an inward power and process or by Yoga. A reign of the saints is also foreshadowed in some Hindu scriptures, but that equally is something different from my conception. As for sainthood itself or the siddhis of Yoga including a siddha body, that too is not what I mean by transformation—it is a radical change of consciousness and nature itself that I envisage. I do not know also that these things were sought by the process of descent—the Tamil Shaiva saints for instance sought for the siddha body by tremendous austerities; the siddhis they sought were all there in the sukshma mental and vital worlds and by a stupendous effort and mastery of the body they brought them down into the physical instrument. I have always said that these things and these methods are out of my scope and eschewed by me in my Yoga. I tried some of these but after achieving some initial results I saw it was a bypath and I left it.

To get rid of or mastery over *kāma-krodha* is not the transformation, it is at best a preliminary step towards it provided it is done not in the moral way by mental self-control but in the spiritual way. Sainthood is not my object. I do not know how far Ramakrishna had gone towards the transformation as I conceive it; the metaphors you quote contain nothing precise with which I can compare my own experience or my own intuitions about the change. According to certain accounts there was a descent of Kali into his body which made it luminous, but he repressed it as something contrary to what he was seeking after. If there is something anywhere in the past which coincides with the aim and conceived process of my Yoga I shall be glad to know of it; for that would certainly be an aid to me. I put no value on the newness of what I am doing or trying to do. If the path was already there open and complete, it is a great pity that I should have wasted all my life clearing it out anew with much difficulty and peril when I could just have walked on a clear and safe avenue towards the goal of my endeavour. But the nearest I could get to it were some things in the Veda and Upanishads (secret

words, veiled hints) which seemed to coincide with or point towards certain things in my own knowledge and experience. But after incorporating certain parts of the Vedic method as far as I could interpret or recover it, I found it was insufficient and I had to seek farther.

*

Transformation is a word that I have brought in myself (like supermind) to express certain spiritual concepts and spiritual facts of the integral Yoga. People are now taking them up and using them in senses which have nothing to do with the significance which I put into them. Purification of the nature by the "influence" of the Spirit is not what I mean by transformation; purification is only part of a psychic change or a psycho-spiritual change—the word besides has many senses and is very often given a moral or ethical meaning which is foreign to my purpose. What I mean by the spiritual transformation is something dynamic (not merely liberation of the self, or realisation of the One which can very well be attained without any descent). It is a putting on of the spiritual consciousness dynamic as well as static in every part of the being down to the subconscious. That cannot be done by the influence of the Self leaving the consciousness fundamentally as it is with only purification, enlightenment of the mind and heart and quiescence of the vital. It means a bringing down of Divine Consciousness static and dynamic into all these parts and the entire replacement of the present consciousness by that. This we find unveiled and unmixed above mind, life and body and not in mind, life and body. It is a matter of the undeniable experience of many that this can descend and it is my experience that nothing short of its *full* descent can thoroughly remove the veil and mixture and effect the full spiritual transformation. No metaphysical or logical reasoning in the void as to what the Atman "must" do or can do or needs or needs not to do is relevant here or of any value. I may add that transformation is not the central object of other paths as it is of this Yoga — only so much purification and change is demanded by them as will lead to liberation and the

beyond-life. The influence of the Atman can no doubt do that — a full descent of a new Consciousness into the whole nature from top to bottom to transform life here is not needed at all for the spiritual escape from life.

*

It is not a hope but a certitude that the complete transformation of the nature will take place.

Spiritualisation and Transformation

Spiritualisation means the descent of the higher peace, force, light, knowledge, purity, Ananda etc. which belong to any of the higher planes from Higher Mind to Overmind, for in any of these the Self can be realised. It brings about a subjective transformation; the instrumental Nature is only so far transformed that it becomes an instrument for the Cosmic Divine to get some work done while the self within remains calm and free and united to the Divine. But this is an incomplete individual transformation — the full transformation of the instrumental Nature can only come when the Supramental change takes place. Till then the nature remains full of many imperfections, but the self in the higher planes does not mind them, as it is itself free and unaffected. The inner being down to the inner physical can also become free and unaffected. The Overmind is subject to limitations in the working of the effective Knowledge, limitations in the working of the Power, subjection to a partial and limited Truth, etc. It is only in the supermind that the full Truth consciousness comes into being.

*

There are many planes above man's mind — the supramental is not the only one, and on all of them the self can be realised, — for they are all spiritual planes.

Mind, vital and physical are inextricably mixed together only in the surface consciousness — the inner mind, inner vital, inner physical are separate from each other. Those who seek

the self by the old Yogas separate themselves from mind, life and body and realise the self apart from these things. It is perfectly easy to separate mind, vital and physical from each other without the need of supermind. It is done by the ordinary Yogas.

The difference between this and the old Yogas is not that they are incompetent and cannot do these things — they can do them perfectly well — but that they proceed from realisation of self to Nirvana or some Heaven and abandon life, while this does not abandon life. The supramental is necessary for the transformation of terrestrial life and being, not for reaching the self. One must realise self first — only afterwards can one realise the supermind.

*

In the former Yogas it was the experience of the spirit which is always free and one with the Divine that was sought. The nature had to change only enough to prevent its being an obstacle to that knowledge and experience. The complete change down to the physical was only sought for by a few and then more as a “siddhi” than anything else, not as the manifestation of a new Nature in the earth consciousness.

*

I do not know that any except a very few great Yogis have really changed their outer nature. In all the Asrams I have seen people were just as others except for certain specific moral controls put on certain kinds of outer action (food, sex etc.), but the general nature was the human nature (as in the story of Narad and Janaka). It is even a theory of the old Yogas that the *prārabdha karma* and therefore necessarily the permanent elements of external character do not change — only one gets the inner realisation and separates oneself from it so that it drops off at death like a soiled robe and leaves the spirit free to enter into Nirvana. Our object is a spiritual change and not merely an ethical control, but this can only come first by a spiritual rejection from within and then by a supramental descent from above.

*

Sri Aurobindo² has no remarks to make on Huxley's comments with which he is in entire agreement. But in the phrase "to its heights we can always reach" very obviously "we" does not refer to humanity in general but to those who have a sufficiently developed inner spiritual life.³ It is probable that Sri Aurobindo was thinking of his own experience. After three years of spiritual effort with only minor results he was shown by a Yogi the way to silence his mind. This he succeeded in doing entirely in two or three days by following the method shown. There was an entire silence of thought and feeling and all the ordinary movements of consciousness except the perception and recognition of things around without any accompanying concept or other reaction. The sense of ego disappeared and the movements of the ordinary life as well as speech and action were carried on by some habitual activity of Prakriti alone which was not felt as belonging to oneself. But the perception which remained saw all things as utterly unreal; this sense of unreality was overwhelming and universal. Only some undefinable Reality was perceived as true which was beyond space and time and unconnected with any cosmic activity but yet was met wherever one turned. This condition remained unimpaired for several months and even when the sense of unreality disappeared and there was a return to participation in the world-consciousness, the inner peace and freedom which resulted from this realisation remained permanently behind all surface movements and the essence of the realisation itself was not lost. At the same time an experience intervened; something else than himself took up his dynamic activity and spoke and acted through him but without any personal

² In this letter to a disciple living outside the Ashram, Sri Aurobindo refers to himself in the third person.—Ed.

³ In his book *The Perennial Philosophy* (London: Chatto and Windus, 1946, p. 74), Aldous Huxley quoted and commented on the following passage by Sri Aurobindo: "The touch of Earth is always reinvigorating to the son of Earth, even when he seeks a supraphysical Knowledge. It may even be said that the supraphysical can only be really mastered in its fullness—to its heights we can always reach—when we keep our feet firmly on the physical. 'Earth is His footing,' says the Upanishad whenever it images the Self that manifests in the universe." *The Life Divine*, volume 21 of THE COMPLETE WORKS OF SRI AUROBINDO, pp. 13–14.—Ed.

thought or initiative. What this was remained unknown until Sri Aurobindo came to realise the dynamic side of the Brahman, the Ishwara, and felt himself moved by that in all his sadhana and action. These realisations and others which followed upon them, such as that of the Self in all and all in the Self and all as the Self, the Divine in all and all in the Divine, are the heights to which Sri Aurobindo refers and to which he says we can always rise; for they presented to him no long or obstinate difficulty. The only real difficulty which took decades of spiritual effort to carry out towards completeness was to apply the spiritual knowledge utterly to the world and to the surface psychological and outer life and to effect its transformation both on the higher levels of Nature and on the ordinary mental, vital and physical levels down to the subconscious and the basic Inconscience and up to the supreme Truth-consciousness or Supermind in which alone the dynamic transformation could be entirely integral and absolute.

The Attempt at Physical Transformation

Sri Krishna never set out to arrive at any physical transformation, so anything of the kind could not be expected in his case.

Neither Buddha nor Shankara nor Ramakrishna had any idea of transforming the body. Their aim was spiritual mukti and nothing else. Krishna taught Arjuna to do liberated works, but he never spoke of any physical transformation.

I do not know that we can take this [*Yudhisthira's entry into the heavenly kingdom in his mortal body*] as a historical fact. Swarga is not somewhere in the Himalayas, it is another world in another plane of consciousness and substance. Whatever the story may mean, therefore, it has nothing to do with the question of physical transformation on earth.

*

Ramakrishna himself never thought of transformation or tried for it. All he wanted was bhakti for the Mother and along with that he received whatever knowledge she gave him and did whatever she made him do. He was intuitive and psychic from the

beginning and only became more and more so as he went on. There was no need in him for the transformation which we seek; for although he spoke of the divine man (Ishwarakoti) coming down the stairs as well as ascending, he had not the idea of a new consciousness and a new race and the divine manifestation in the earth-nature.

*

Whatever may have happened to Chaitanya or Ramalingam, whatever physical transformation they may have gone through is quite irrelevant to the aim of the supramentalisation of the body. Their new body was either a non-physical or subtle physical body not adapted for life on the earth. If it were not so, they would not have disappeared. The object of supramentalisation is a body fitted to embody and express the physical consciousness on earth so long as one remains in the physical life. It is a step in the spiritual evolution on the earth, not a step in the passage towards a supraphysical world. The supramentalisation is the most difficult part of the change arrived at by the supramental Yoga, and all depends on whether a sufficient change can be achieved in the consciousness at present to make such a step possible, but the nature of the step is different from that aimed at by other Yogas. There is not therefore much utility in these discussions — one has first of all to supramentalise sufficiently the mind and vital and physical consciousness generally — afterwards one can think of supramentalisation of the body. The psychic and spiritual transformation must come first, only afterwards would it be practical or useful to discuss the supramentalisation of the whole being down to the body.

Section Two

Other Spiritual Paths and the Integral Yoga

Chapter One

The Newness of the Integral Yoga

Old and New Truth

Well, I don't suppose the new race can be created by or according to logic or that any race has been. But why should the idea of the creation of a new race be illogical? It is not only my ideas that baffle reason, but Adhar Das's also! he must really be a superman,— self-made of course, outside the laboratory. As for the past seers, they don't trouble me. If going beyond the experiences of the past seers and sages is so shocking, each new seer and sage in turn has done that shocking thing— Buddha, Shankara, Chaitanya etc. all did that wicked act. If not, what was the necessity of their starting new philosophies, religions, schools of Yoga? If they were merely verifying and meekly repeating the lives and experiences of past seers and sages without bringing the world some new thing, why all that stir and bother? Of course, you may say they were simply explaining the old truth but in the right way — but this would mean that nobody had explained or understood it rightly before — which is again "giving the lie etc." Or you may say that all the new sages (they were not among X's cherished past ones in their day), e.g. Shankara, Ramanuja, Madhwa, were each merely repeating the same blessed thing as all the past seers and sages had repeated with an unwearyed monotony before them. Well, well, but why repeat it in such a way that each "gives the lie" to the others? Truly, this shocked reverence for the past is a wonderful and fearful thing! After all, the Divine is infinite and the unrolling of the Truth may be an infinite process or at least, if not quite so much, yet with some room for new discovery and new statement, even perhaps new achievement, not a thing in a nutshell cracked and its contents exhausted once for all by the first seer or sage, while the others must religiously crack the same nutshell all over again, each tremblingly careful not to give the lie to the "past" seers and sages.

Spiritual Realisation and the Supramental Transformation

This Yoga aims at the conscious union with the Divine in the supermind and the transformation of the nature. The ordinary Yogas go straight from Mind into some featureless condition of the cosmic Silence and through it try to disappear upward into the Highest. The object of this Yoga is to transcend mind and enter into the Divine Truth of Sachchidananda which is not only static but dynamic and raise the whole being into that Truth.

*

The Divine can be realised on any plane according to the capacity of that plane, as the Divine is everywhere. The Yogis and saints realise the Divine on the spiritualised mind plane, that does not mean they become supramental.

*

But why should they [*Yogis of the traditional schools*] feel any pressure [*of the supramental descent*] when they are satisfied with the realisation they have? They live in the spiritual mind and the nature of the mind is to separate — here to separate some high aspect or state of the Divine and seek that to the exclusion of all else. All the spiritual philosophies and schools of Yoga do that. If they go beyond, it is to the Absolute and mind cannot conceive of the Absolute except as something inconceivable, *neti neti*. Moreover for getting samadhi they concentrate on one single idea and what they reach is that which is represented by that idea — the samadhi is in its nature an exclusive concentration on that. So why should it open them to anything else? There are only a few who are sufficiently plastic to escape from this self-limitation of the sadhana — what they experience is that there is no end to the realisation, when you get to one peak, you find another beyond it. In order to see more than this one has to get into conscious waking touch with the supramental or at least get a glimpse of it — and that means passing beyond spiritual mind.

*

Certainly, the realisation of the Spirit comes long before the development of Overmind or Supermind; hundreds of sadhaks in all times have had the realisation of the Atman on the higher mental plane, *buddheḥ parataḥ*, but the supramental realisation was not theirs. One can get *partial* realisations of the Self or Spirit or the Divine on any plane, mental, vital, physical even, and when one rises above the ordinary mental plane of man into a higher and larger mind, the Self begins to appear in all its conscious wideness. It is by full entry into this wideness of the Self that cessation of mental activity becomes possible; one gets the inner Silence. After that this inner Silence can remain even when there is activity of any kind; the being remains silent within, the action goes on in the instruments and one receives all the necessary indications and execution of action whether mental, vital or physical from a higher source without the fundamental peace and calm of the Spirit being troubled.

The Overmind and Supermind states are something yet higher than this; but before one can understand them, one must first have the self-realisation, the full action of the spiritualised mind and heart, the psychic awakening, the liberation of the imprisoned consciousness, the purification and entire opening of the *ādhāra*. Do not think now of those ultimate things (Overmind, Supermind), but get first these foundations in the liberated nature.

*

By divine realisation is meant the spiritual realisation — the realisation of Self, Bhagavan or Brahman on the mental-spiritual plane or else the overmental plane. That is a thing (at any rate the mental-spiritual) which thousands have done. So it is obviously easier to do than the supramental. Also nobody can have the supramental realisation who has not had the spiritual.

It is true that neither can be got in any effective way unless the whole being is turned towards it — unless there is a real and very serious spirit and dynamic reality of sadhana.

It is true that I want the supramental not for myself but for the earth and souls born on the earth, and certainly therefore

I cannot object if anybody wants the supramental. But there are the conditions. He must want the Divine Will first and the soul's surrender and spiritual realisation (through works, bhakti, knowledge, self-perfection) on the way.

The central sincerity is the first thing and sufficient for an aspiration to be entertained—a total sincerity is needed for the aspiration to be fulfilled.

*

There are different statuses (*avasthā*) of the Divine Consciousness. There are also different statuses of transformation. First is the psychic transformation, in which all is in contact with the Divine through the psychic consciousness. Next is the spiritual transformation in which all is merged in the Divine in the cosmic consciousness. Third is the supramental transformation in which all becomes supramentalised in the divine gnostic consciousness. It is only with the last that there can begin the *complete* transformation of mind, life and body—in my sense of completeness.

*

You are mistaken in two respects. First, the endeavour towards this achievement [*the transformation of mind, life and body*] is not new and some Yogis have achieved it, I believe—but not in the way I want it. They achieved it as a personal siddhi maintained by Yoga-siddhi—not a dharma of the nature. Secondly, the supramental transformation is not the same as the spiritual-mental. It is a change of mind, life and body which the mental or overmental-spiritual cannot achieve. All whom you mention were spirituals, but in different ways. Krishna's mind, for instance, was overmentalised, Ramakrishna's intuitive, Chaitanya's spiritual-psychic, Buddha's illumined higher mental. I don't know about B.G. [Bijoy Goswami]—he seems to have been brilliant but rather chaotic. All that is different from the supramental. Then take the vital of the Paramhansas. It is said their vital behaves either like a child (Ramakrishna) or like a madman or like a demon or like something inert (cf.

Jadabharata). Well, there is nothing supramental in all that. So?

One can be a fit instrument for the Divine in any of the transformations. The question is, an instrument for what?

*

Your Guru's teaching and that of this Yoga are essentially the same; what he called *cittasuddhi* is what we mean by the psychic change. The teaching here is more developed because it includes the Supramental means of creating a divine life. Also the getting of the truth is different, since here it is put in such a way as to initiate men of all castes, races, creeds and cultures without distinction to share in the Truth and the Divine Life. But it is no use trying to draw those who received the earlier teaching, for their sight is still circumscribed by past forms and feelings and cannot extend itself beyond them. It is good that you have freed yourself from the desire to do so and taken an impersonal position—if any have to come they will come. Our concentration must be on all preparing themselves so that what was foreseen by your Guru may be fulfilled this time and here.

Depreciation of the Old Yogas

As for the depreciation of all the old Yogas as something quite easy, unimportant and worthless, and the consequent depreciation of Buddha and Yajnavalkya and other great spiritual figures of the past, is it not evidently absurd on the face of it?

*

It [*self-realisation*] is not a long process? The whole life and several lives more are often not enough to achieve it. Ramakrishna's guru took 30 years to arrive and even then he was not satisfied that he had realised it.

*

Wonderful! The realisation of the Self which includes the liberation from ego, the consciousness of the One in all, the established and consummated transcendence out of the universal

Ignorance, the fixity of the consciousness in the union with the Highest, the Infinite and Eternal is not anything worth doing or recommending to anybody — is “not a very difficult stage”!

Nothing new? Why should there be anything new? The object of spiritual seeking is to find out what is eternally true, not what is new in Time.

From where did you get this singular attitude towards the old Yogas and Yogis? Is the wisdom of the Vedanta and Tantra a small and trifling thing? Have then the sadhaks of this Asram attained to self-realisation and are they liberated Jivan-muktas, free from ego and ignorance? If not, why then do you say, “it is not a very difficult stage”, “their goal is not high”, “is it such a long process?”

I have said that this Yoga was “new” because it aims at the integrality of the Divine in this world and not only beyond it and at a supramental realisation. But how does that justify a superior contempt for the spiritual realisation which is as much the aim of this Yoga as of any other?

The Old Lines and This Line

Plenty of people, I suppose, would go on with the old lines¹ — for it is not likely that all would be able to take this line. As for the Darshanas most of them have fallen into disuse already except as a battlefield for Pandits. It is only the Vedanta and Patanjali and the later Bhakti Yoga that are still alive, not so much as darshanas but as traditional systems of Yoga.

¹ *The correspondent asked, “Is it not likely that the Darshanas and Upanishads will be forgotten in the next hundred years as the New Yoga establishes itself in the world? If it is possible to get the necessary things from your writings and the Mother’s, who would care to read the enigmatic sutras and concealed formulas of the Darshanas, Upanishads and Vedas?” — Ed.*

Chapter Two

The Veda and the Upanishads

The Vedic Rishis

It is not I only who have done what the Vedic Rishis did not do. Chaitanya and others developed an intensity of Bhakti which is absent in the Veda and many other instances can be given. Why should the past be the limit of spiritual experience?

*

I can't say whether any of them [*the Vedic Rishis*] attained the supramental plane, but the ascent to it was their object. Swar is evidently the illumined regions of Mind, between the supramental and the human intelligence formed by the rays of the Sun. According to the Upanishads those who ascend into the rays of the Sun return, but those who ascend into the Sun itself do not come back. That is because the ascent to supermind was envisaged, but the descent and organisation of the supermind here (as apart from the descent of the Rays) was not. We need not bother about the rebirth of the Rishis — they will come along if they are needed, I suppose.

*

I don't know of any [*Vedic Rishis*] that have taken birth this time. According to the Puranic stories there must have been many Rishis who were far from being *jitendriya, jitakrodha*. But also there are many Yogis who are satisfied with having the inner experience of the Self but allow movements of a rajasic or tamasic nature on the surface, holding that these will fall off with the body.

*

The Vedic Rishis were mystics of the ancient type who everywhere, in India, Greece, Egypt and elsewhere, held the secret

truths and methods of which they were in possession as very sacred and secret things not to be disclosed to the unfit who would misunderstand, misapply, misuse and degrade the knowledge. Their writings were therefore so couched as only to be intelligible in their secret meaning to the initiated, *nīnyā vacāṁsi nivacanāni kavaye*—secret words that carry their significance only to the seer. They were equipped with an apparent meaning exoteric and religious for the people, esoteric, occult and spiritual for the initiates. That the people should not find out the real Truth was their intention; they wanted them only to know the outward truths for which they were fit.

*

This picture of Vedic society [*a completely pastoral life, without priests or warriors*] could easily be challenged. The householder may have lit daily the fire on the household altar, but when he wanted to offer a sacrifice he did it with the aid of sacrificial priests who knew the ritual. Sometimes the Rishi himself performed the sacrifice for the householder. He was not a priest by profession, however, for he might have any occupation in the society. Besides, in a large sacrifice there were many versed in the Vedic rites who performed different functions. In the very first verse of the Rig Veda Agni is described as being himself the Purohit, the priest representative of the householder sacrificer, Yajamana, as the Ritwik, the one who saw to the arrangement of the rites, the Hota who invoked the Gods and gave the offering, and in other hymns he is spoken of as the priest of the purification, the priest of the lustration etc. All this has obviously an esoteric sense but it testifies to the habitual presence of a number of priests at any large sacrifice. So we cannot say that there were no priests in the Vedic age. There does not seem to have been any priestly caste until later times when the four castes came definitely into being. But the Brahmins were not predominantly priests but rather scholars and intellectuals with a religious authority derived from birth and from knowledge of the scriptures and the books of the social law, Shastra. The function of priesthood has never been highly honoured in India

and it would therefore be incorrect to speak of priestcraft or any rule by priests or ecclesiastics at any time in Indian history.

As for the warriors, there are in the Rig Veda two or three hymns describing a great battle which the scholars declare to have been the fight of one king against ten allied kings, and besides that, the hymns are full of images of war and battle. These too have an esoteric meaning, but they indicate a state of things in which war and battle must have been frequent; so we cannot say that there were no warriors.

Again, your description seems to indicate that all the householders were initiated in the knowledge held by the Rishis. But this was a secret knowledge imparted by the Rishi to his family and to disciples whom he found to be fit, it was not given to everyone. The language of the Veda was also veiled and mystic, "secret words of seer-wisdom which yielded their meaning to the seer" as one of the Rishis described them, but understood in an outward sense by the ordinary uninitiated man. This principle of secrecy was common to all the mysteries in every country and it was maintained also in ancient India. The religious worship practised by the common man and any communion it might bring with the gods was only a preliminary preparation and not the deeper knowledge.

It was always held in ancient India that religion, life and society should be so arranged that every man should have the opportunity to grow spiritually by whatever means is suitable to his capacity, *adhikāra*. Everywhere there was a system of gradations by which this purpose could be served. It provided for a continual contact of man at every step with what was behind and beyond the material life. In Vedic times meditation, worship and sacrifice were the means by which this connection with the Unseen was sought to be established and maintained. The sacrifice was symbolic in its ritual and the symbols were supposed to have an occult power to create a relation between the unseen powers worshipped and the worshipper; by it they were called in to preside over and help all the action and life of the human being. Worship was for establishing a more inner relation and meditation the means of spiritual experience,

development and knowledge. The institutions which grew up in later Vedic times, such as the four Asramas and the four Varṇas, the fourfold arrangement of society originally had the same intention and are so recognised in the Gita. So trained a man could develop until he was ready for a deeper knowledge and receive the initiation. In the Vedic times this deeper knowledge was the mystic doctrine and practice of the Vedic Rishis; it was that that afterwards developed on a hundred branching lines into the later systems of Yoga.

The Veda and the Greeks

As to the Eleusinian mysteries, about which he has asked an explanation, they were connected with the same mystic knowledge as was held in India by the Vedic Rishis. Demeter and Persephone were goddesses worshipped by the Greeks; Demeter is the Earth-Mother and Persephone was the goddess of the Harvest, but in the mystic symbols Persephone represented the earth consciousness buried in the Ignorance and emerging into the Divine Light. The Eleusinian mysteries were instituted as an outward symbol of this secret knowledge.

*

The Soma wine was the symbol of the divine or spiritual Ananda. This wine was however symbolic and cannot be exactly equated with the nectar or ambrosia of the Greeks which were the food and drink of the gods and sustained their immortality; but outwardly there is some resemblance.

No Incarnation of the Vedic Gods

In the Veda there is no idea or experience of a personal emanation or incarnation of any of the Vedic gods. When the Rishis speak of Indra or Agni or Soma in men, they are speaking of the god in his cosmic presence, power or function. This is evident from the very language when they speak of Agni as the immortal in mortals, the immortal Light in man, the inner Warrior, the

Guest in human beings. It is the same with Indra or Soma. The building of the gods in man means a creation of the divine Powers, Indra the Power of the Light, Soma the Power of the Ananda in the human nature.

No doubt, the Rishis felt the actual presence of the gods above, near, around or in them, but this was a common experience of all, not special and personal, not an emanation or incarnation. One may see or feel the presence of the Divine or a divine Power above the head or in the heart or in any or all of the centres, feel the presence, see the form living there; one may be governed in all one's actions, thoughts and feelings by it; one may lose one's separate personality in it, may identify and merge. But all that does not constitute an incarnation or emanation of the Divine or of the Power. These things are universal experiences to which any Yogin may arrive; to reach this condition with relation to the Divine is indeed a common object of Yoga.

An incarnation is something more, something special and individual to the individual being. It is the substitution of the Person of a divine being for the human person and an infiltration of it into all the movements so that there is a dynamic personal change in all of them and in the whole nature; not merely a change of the character of the consciousness or a general surrender into its hands, but a subtle intimate personal change. Even when there is an incarnation from the birth, the human elements have to be taken up, but when there is a descent, there is a total conscious substitution.

This is a long, subtle and persistent process. The incarnating Person first overshadows as an influence, then enters into the centres one after the other, sometimes in the same form, sometimes in different forms, then takes up all the nature and its actions. What you describe does not correspond to this process; it seems to be an endeavour to build the gods in yourself in the Vedic sense and the Vedic manner. That can bring, if it succeeds, their powers and a sense of their presence; it cannot bring about an incarnation. An incarnation is destined, is chosen for you; the human person cannot choose or create an incarnation for

himself by his own personal will. To attempt it is to invite a spiritual disaster.

One thing must be said—that an incarnation is not the object of this Yoga; it is only a condition or means towards the object. The one and only aim we have before us is to bring down the supramental consciousness and the supramental Truth into the world; the Truth and nothing but the Truth is our aim, and if we cannot embody this Truth, a hundred incarnations do not matter. But to bring down the true supramental and nothing but the true supramental, to escape from all mental mixture is not an easy matter. The mere descent of the suns into the centres, even of all the seven suns into all the seven centres is only the seed; it is not the thing itself done and finished. One may feel the descent of suns, one may have the attempt, the beginning of an incarnation, and yet in the end one may fail if there is a flaw in the nature or a failure to pass through all the ordeals and satisfy all the hard conditions of the perfect spiritual success. Not only the whole mental, vital and physical nature of the ignorant human being has to be overcome and transformed, but also the three states of mental consciousness which intervene between the human and the supramental and like all mind are capable of admitting great and capital errors. Till then there may be descents of supramental influence, light, power, Ananda, but the supramental Truth cannot be possessed, organised, put in possession of the whole nature. One must not think before that that one possesses the supermind; for that is a delusion which would prevent the fulfilment.

One thing more. The more intense the experiences that come, the higher the forces that descend, the greater become the possibilities of deviation and error. For the very intensity and the very height of the force excites and aggrandises the movements of the lower nature and raises up in it all the opposing elements in their full force, but often in the disguise of truth, wearing a mask of plausible justification. There is needed a great patience, calm, sobriety, balance, an impersonal detachment and sincerity free from all taint of ego or personal human desire. There must be no attachment to any idea of one's own, to any experience, to any

kind of imagination, mental building or vital demand; the light of discrimination must always play to detect these things, however fair or plausible they may seem. Otherwise the Truth will have no chance of establishing itself in its purity in the nature.

Terms and Verses of the Upanishads

It is quite impossible to say to what they [*the seers of the Upanishads*] were referring in those days.¹ We have no longer a clue to their symbolism. But it is meant that the lower worlds are in the higher worlds even as the higher worlds are in the lower worlds — they penetrate each other. E.g. in our system there is a vital mental, several layers of the vital itself, a physical vital and so on in each realm. Everything contains everything else, as it were.

*

It is quite probable that the sloka [*Katha Upanishad 2.3.4*] refers to a going up into higher worlds of felicity and light and this can be called a liberation or release. In later times the idea grew strong that from all these higher worlds return is inevitable and it is only release from all cosmic existence that gives mukti. The Vedic Rishis seem to have looked to an ascent into a divine luminous world or state above the falsehood and ignorance. In the Upanishad the sun is the symbol of the supramental Truth and it is said that those who pass into it may return but those who pass through the gates of the Sun itself do not; possibly this means that an ascent into the supermind itself above the golden lid of overmind was the definitive liberation. The Veda speaks of the Truth hidden by a Truth where the Sun looses his horses from his car and there all the myriad rays are drawn together into One and that was considered the goal. The Isha Upanishad also speaks of the golden lid hiding the face of the Truth by removing which the Law of the Truth is seen and the highest

¹ *The correspondent asked for an explanation of certain terms in a passage (3.6.1) from the Brihadaranyaka Upanishad. — Ed.*

knowledge in which the One Purusha is known (*so'ham asmi*) is described as the *kalyānatama* form of the Sun. All this seems to refer to the supramental states of which the Sun is the symbol.

*

The mental realisation [*of the one self*] does not bring this result [*the ending of delusion (moha) and grief (śoka)*], the spiritual does.² In the Vedantic experience “seeing” means also becoming, one is that one self, identified,—all action of Nature seems to one a movement in that one self which is itself not touched by it. Therefore there is no *moha* or *śoka*. That is, when one can keep the experience and when it is complete. Even if one has the experience only as something within while the movements of the vital continue on the surface, yet these movements are felt as external and superficial, not really belonging to oneself—the self within remains untouched, calm, griefless, at peace. If the vital also is transformed into this consciousness, then even on the surface grief becomes impossible.

*

Perception is not enough to transform the nature. *Pasyataḥ*³ in the spiritual language does not mean only perception. Perception is of the mind and a mental perception is not enough—a substantial and dynamic realisation in all the being is necessary. Otherwise one of three things may happen. (1) The mind perceives oneness but the vital is not affected, it goes on with its impulses, for the vital is governed not by thought or reason but by tendency, impulse, desire-force—it uses reason only as a justification for its tendencies. Or even the vital may say, “All is one so it does not matter what I do. Why should not I seek oneness with others in my own way?” (2) If the mind has a realisation, but the vital does not share in it or distorts it, then also the vital can insist on its own way or even carry the mind

² The correspondent asked for a clarification of verse 7 of the Isha Upanishad, which ends, “... how shall he be deluded, whence shall he have grief who sees everywhere oneness?”—Ed.

³ This term appears in verse 7 of the Isha Upanishad.—Ed.

along with it. As the Gita says, the senses (vital) carry away the mind even of the sage who sees, as the wind carries away a ship on a stormy sea. (3) The inner being may have the realisation strongly and live in the oneness, calm, peace, but the interior parts of the outer may feel the reactions of desire etc. In this case the reactions are more superficial; but even so rejection is needed till they cease. When all the being lives in the solid realisation of calm, peace, liberation, oneness, then the desires fall away and the necessity of rejection ceases, because there is nothing to reject any longer.

*

It [*the identification of buddhi with the vijnānamaya kosa*] is the error that came with the excessive intellectualism of the philosophers and commentators. I don't think *buddhi* includes intuition as something separate in kind from intellect — the intellectualists considered intuition to be only a rapid process of intellectual thought — and they still think that. In the Taittiriya Upanishad the sense of *vijnāna* is very clear — its essence is *ṛtam*, the spiritual Truth; but afterwards the identification with *buddhi* became general.

*

I do not suppose they [*the commentators*] mean expressly intuition [by *buddhi*]; they regard *buddhi* as the means of knowledge, so they include all knowledge in it, and as the *vijnānamaya kosa* is the Knowledge sheath, they think it must mean *buddhi*. Obviously it doesn't. The description you have quoted⁴ evidently means something much higher than *buddhi*. It is the *satyam ṛtam bṛhat* of the Upanishad — the truth-consciousness of the Veda.

The Vedantin

No, certainly I did not mean that the Vedantin who sees a greater working behind the appearances of the world is living

⁴ From the Taittiriya Upanishad 2.4.1.—Ed.

in a different world from this material one—if I had meant that, all that I had written would be without point or sense. I meant a Vedantin who lives in this world with all its suffering and ignorance and ugliness and evil and has had a full measure of these things, betrayal and abandonment by friends, failure of outward objects and desires in life, attack and persecution, accumulated illnesses, constant difficulty, struggles, stumbling in his Yoga. It is not that he lives in a different world, but he has a different way of meeting its ordeals, blows and dangers. He takes them as the nature of this world and the result of the ego-consciousness in which it lives. He tries therefore to grow into another consciousness in which he feels what is behind the outward appearance, and as he grows into that larger consciousness he begins to feel more and more a working behind which is helping him to grow in the spirit and leading him toward mastery and freedom from ego and ignorance and he sees that all has been used for that purpose. Till he reaches this consciousness with its larger knowledge of things, he has to walk by faith and his faith may sometimes fail him, but it returns and carries him through all the difficulties. Everybody is not bound to accept this faith and this consciousness, but there is something great and true behind it for the spiritual life.

*

I doubt whether the condition of which you speak is that of the realised Vedantin⁵—except of course the loss of the sense of personality and the non-identification with desire and the movements of Prakriti. Still perhaps the condition of the *jadavat* Paramhansa (like Jada Bharata) may resemble it. The theory of *prārabdha karma* goes farther than that—it assumes that even if there are vital movements, that is also only the continuance of the machine of Prakriti and will drop off at death. They may, perhaps. I don't base the gospel of the transformation of Nature

⁵ The correspondent wrote that he felt dull, sleepy and mechanical, with no sense of desire or personality; therefore he could easily imagine why the realised Vedantin could say that with the static realisation of Brahman one's past karma would fall off at death.
—Ed.

on an impossibility of taking a static release as final — the static release is necessary, but I don't consider that to take it as final is the object of coming into world-existence. I hold that the static release is only a beginning, a first step in the Divine. If anyone is satisfied with the first step as all that is possible for him, I have no objection to his taking it like that.

Chapter Three

Jainism and Buddhism

Jainism

The Jain philosophy is concerned with individual perfection. Our effort is quite different. We want to bring down the Supermind as a new faculty. Just as the mind is now a permanent state of consciousness in humanity, so also we want to create a race in which the Supermind will be a permanent state of consciousness.

*

Why cannot one love or experience [*the Cosmic Divine or the Transcendent Divine*] concretely? many have done it. And why assume that He is immobile, silent and aloof? The Cosmic Divine can be as close to one as one's own self and the Transcendent as intimate as the closest friend or lover. It is only in the physical consciousness that there is some difficulty in realising it.

The Jain realisation of an individual godhead is all right so far as it goes — its defect is that it is too individual and isolated.

Buddhism

Buddhist teaching does not recognise any inner self or soul — there is only a stream of consciousness from moment to moment — the consciousness itself is only a bundle of associations — it is kept moving by the wheel of Karma. If the associations are untied and thrown away (they are called sanskaras), then it dissolves; the idea of self or a persistent person ceases; the stream flows no longer, the wheel stops. There is left, according to some, Sunya, a mysterious Nothing from which all comes; according to others a mysterious Permanent in which there is no individual existence. This is Nirvana. Buddha himself always refused to say what there was beyond cosmic existence; he spoke neither of God nor Self nor Brahman. He said there was no utility in

discussing that — all that was necessary was to know the causes of this unhappy temporal existence and the way to dissolve it.

*

Buddha, it must be remembered, refused always to discuss what was beyond the world. But from the little he said it would appear that he was aware of a Permanent beyond equivalent to the Vedantic Para-Brahman, but which he was quite unwilling to describe. The denial of anything beyond the world except a negative state of Nirvana was a later teaching, not Buddha's.

*

If Buddha really combated and denied all Vedantic conceptions of the Self then it can be no longer true that Buddha refrained from all metaphysical speculations or distinct pronouncements as to the nature of the ultimate Reality. The view you take of his conception of Nirvana seems to concur with the Mahayanist interpretation and its conception of the Permanent, *dhruvam*, which could be objected to as a later development like the opposite Nihilistic conception of the Shunyam. What Buddha very certainly taught was that the world is not-Self and that the individual has no true existence since what does exist in the world is a stream of impermanent consciousness from moment to moment and the individual person is fictitiously constituted by a bundle of sanskaras and can be dissolved by dissolving the bundle. This is in conformity with the Vedantic Monistic view that there is no true individual. As to the other Vedantic view of the one Self, impersonal and universal and transcendent, it does not seem that Buddha made any distinct and unmistakable pronouncements on abstract metaphysical questions; but if the world or all in the world is not-Self, *anātman*, there can be no more room for a universal Self, only at most for a transcendent Real Being. His conception of Nirvana was of something transcendent of the universe, but he did not define what it was because he was not concerned with any abstract metaphysical speculations about the Reality; he must have thought them unnecessary and irrelevant and any indulgence in them likely to divert from the

true object. His explanation of things was psychological and not metaphysical and his methods were all psychological, the breaking up of the false associations of consciousness which cause the continuance of desire and suffering, so getting rid of the stream of birth and death in a purely phenomenal (not an unreal) world; the method of life by which this liberation could be effected was also a psychological method, the eightfold path developing right understanding and right action. His object was pragmatic and severely practical and so were his methods; metaphysical speculations would only draw the mind away from the one thing needful.

As to Buddha's attitude towards life, I do not quite see how service to mankind or any ideal of improvement of the world-existence can have been part of his aim, since to pass out of life into a transcendence was his object. His eightfold path was the means towards that end and not an aim in itself or indeed in any way an aim. Obviously if right understanding and right action became the common rule of life, there would be a great improvement in the world, but for Buddha's purpose that could be an incidental result and not at all part of his central object. You say, "Buddha himself urged the necessity to serve mankind: his ideal was to achieve a consciousness of inner eternity and then be a source of radiant influence and action." But where and when did Buddha say these things, use these terms or express these ideas? "The service of mankind" sounds like a very modern and European conception; it reminds me of some European interpretations of the Gita as merely teaching the disinterested performance of duty or the pronouncement that the whole idea of the Gita is service. The exclusive stress or overstress on mankind or humanity is also European. Mahayanist Buddhism laid stress on compassion, fellow-feeling with all, *vasudhaiva kutumbakam*, just as the Gita speaks of the feeling of oneness with all beings and preoccupation with the good of all beings, *sarvabhūtahite ratāḥ*, but this does not mean humanity only but all beings and *vasudhā* means all earth-life. Are there any sayings of Buddha which would justify the statement that the object or one object of attaining to Nirvana was to become a

source of radiant influence and action? The consciousness of inner eternity may have that result, but can we really say that that was Buddha's ideal, the object which he held in view or for which he came?

*

Buddhism is the turning away from *duḥkha* and its causes to the peace of Nirvana. The *duḥkhavāda* did not exist in India, except in the theory of the Vaishnava *viraha*; otherwise it was not considered as a means or even a stage in the sadhana. But that does not mean that *duḥkha* does not come in the sadhana — it comes and has to be rejected and overcome, overpassed — excepting the psychic sorrow which does not disturb or depress but rather liberates the vital. To make a *vāda* or gospel of sorrow is dangerous because sorrow if indulged becomes a habit, sticks and few things, if once they stick, can be more sticky.

Buddhist Nirvana

The Buddhist Nirvana and the Adwaitin's Moksha are the same thing. It corresponds to a realisation in which one does not feel oneself any longer as an individual with such a name or such a form, but an infinite eternal Self spaceless (even when in space), timeless (even when in time). Note that one can perfectly well do actions in that condition and it is not to be gained only by Samadhi.

*

It [*the Nirvana of Buddha*] is the same [*as the Nirvana of the Gita*]. Only the Gita describes it as Nirvana in the Brahman while Buddha preferred not to give any name or say anything about that into which the nirvana took place. Some later schools of Buddhists described it as Sunya, the equivalent of the Chinese Tao, described as the Nothing which is everything.

*

The feeling of the Self as a vast peaceful Void, a liberation from

existence as we know it, is one that one can always have, Buddhist or no Buddhist. It is the negative aspect of Nirvana — it is quite natural for the mind, if it follows the negative movement of withdrawal, to get that first, and if you lay hold on that and refuse to go farther, being satisfied with this liberated Non-Existence, then you will naturally philosophise like the Buddhists that Sunya is the eternal truth. Lao Tse was more perspicacious when he spoke of it as the Nothing that is All. Many of course have the positive experience of the Atman first, not as a void but as pure unrelated Existence like the Adwaitins (Shankara) or as the one Existent.

*

They [*those who have had the experience of Nirvana*] do not feel as if they had any existence at all. In the Buddhistic Nirvana they feel as if there were no such thing at all, only an infinite zero without form. In the Adwaita Nirvana there is felt only one vast existence, no separate being is discernible anywhere. There are forms of course but they are only forms, not separate beings. Mind is silent, thought has ceased, — desires, passions, vital movements there are none. There is consciousness but only a formless elemental consciousness without limits. The body moves and acts, but the sense of body is not there. Sometimes there is only the consciousness of pure existence, sometimes only pure consciousness, sometimes all that exists is only a ceaseless limitless Ananda. Whether all else is really dissolved or only covered up is a debatable point, but at any rate it is an experience as if of their dissolution.

*

I don't think I have written, but I said once that souls which have passed into Nirvana may (not "must") return to complete the larger upward curve. I have written somewhere, I think, that for this Yoga (it might also be added, in the natural complete order of the manifestation) the experience of Nirvana can only be a stage or passage to the complete realisation. I have said also that there are many doors by which one can pass into the

realisation of the Absolute (Parabrahman) and Nirvana is one of them, but by no means the only one. You may remember Ramakrishna's saying that the Jivakoti can ascend the stairs, but not return, while the Ishwarakoti can ascend and descend at will. If that is so, the Jivakoti might be those who describe only the curve from Matter through Mind into the silent Brahman and the Ishwarakoti those who get to the integral Reality and can therefore combine the Ascent with the Descent and contain the "two ends" of existence in their single being.

*

The realisation of this Yoga is not lower but higher than Nirvana or Nirvikalpa Samadhi.

*

In our Yoga the Nirvana is the beginning of the higher Truth, as it is the passage from the Ignorance to the higher Truth. The Ignorance has to be extinguished in order that the Truth may manifest.

Different Kinds of Buddhism

Buddhism is of many kinds and the entirely nihilistic kind is only one variety. Most Buddhism admits a Permanent as beyond the creation of Karma and Sanskaras. Even the Sunya of the Sunyapanthis is described like the Tao of Lao Tse as a Nothing which is All. So as a higher "above mental" state is admitted which one tries to reach by a strong discipline of the consciousness, it may be called spirituality.

*

There are elements in most Yogas which enter into this one, so it is not surprising if there is something in Buddhism also. But such notions as a Higher Evolution beyond Nirvana seem to me not genuinely Buddhistic, unless of course there is some offshoot of Buddhism which developed something so interpreted by the author. I never heard of it as part of Buddha's teachings

— he always spoke of Nirvana as the goal and refused to discuss metaphysically what it might be.

*

About the One [*of the Buddhists*] there are different versions. I just read somewhere that the Buddhist One is a Superbuddha from whom all Buddhas come — but it seemed to me a rehash of Buddhism in Vedantic terms born of a modern mind. The Permanent of Buddhism has always been supposed to be Supracosmic and Ineffable — that is why Buddha never tried to explain what it was; for, logically, how can one talk about the Ineffable? It has really nothing to do with the Cosmos which is a thing of sanskaras and Karma.

*

There is no reason why the passage about Buddhism [*in an essay of the correspondent*] should be omitted. It gives one side of the Buddhistic teaching which is not much known or is usually ignored, for that teaching is by most rendered as Nirvana (Sunyavada) and a spiritualised humanitarianism. The difficulty is that it is these sides that have been stressed especially in the modern interpretations of Buddhism and any strictures I may have passed were in view of these interpretations and that one-sided stress. I am aware of course of the opposite tendencies in the Mahayana and the Japanese cult of Amitabha Buddha which is a cult of bhakti. It is now being said even of Shankara that there was another side of his doctrine — but his followers have made him stand solely for the Great Illusion, the inferiority of bhakti, the uselessness of Karma — *jagan mithyā*.

Buddhism and Vedanta

The impressions in the approach to Infinity or the entry into it are not always quite the same; much depends on the way in which the mind approaches it. It is felt first by some as an infinity above, by others as an infinity around into which the mind disappears (as an energy) by losing its limits. Some feel

not the absorption of the mind energy into the infinite, but a falling entirely inactive; others feel it as a lapse or disappearance of energy into pure Existence. Some first feel the infinity as a vast existence into which all sinks or disappears, others, as you describe it, as an infinite ocean of Light above, others as an infinite ocean of Power above. A certain school of Buddhists felt it in their experience as a limitless Sunya, the Vedantists on the contrary see it as a positive Self-Existence featureless and absolute. No doubt the various experiences were erected into various philosophies, each putting its conception as definitive; but behind each conception there was such an experience. What you describe as a completely emptied mind substance devoid of energy or light, completely inert, is the condition of neutral peace and empty stillness which is or can be a stage of the liberation. But it can afterwards feel itself filled with infinite existence, consciousness (carrying energy in it) and finally Ananda.

*

The universe is only a partial manifestation and Brahman as its foundation is the Sat. But there is also that which is not manifested and beyond manifestation and is not contained in the basis of manifestation. The Buddhists and others get from that the conception of Asat as the ultimate thing.

Another meaning given is: Sat = the Eternal, Asat = the Temporary and Unreal.

*

The ego and its continuity, they [*the Buddhists*] say, are an illusion, the result of the continuous flowing of energies and ideas in a determined current. There is no real formation of an ego. As to the liberation, it is in order to get free from *duhkha* etc., — it is a painful flow of energies and to get free from the pain they must break up their continuity. That is all right, but how it started, why it should end at all and how anybody is benefited by the liberation, since there is nobody there, only a mass of idea and action — these things are insoluble mysteries. But is there not the same difficulty with the Mayavadin also, since there is

no Jiva really, only Brahman and Brahman is by nature free and unbound for ever? So how did the whole absurd affair of Maya come into existence and who is liberated? That is what the old sages said at last: "There is none bound, none freed, none seeking to be free." It was all a mistake (a rather long-standing one though). The Buddhists, I suppose, could say that also.

Chapter Four

Sankhya and Yoga

Sankhya

In the spiritual thought of India during the time of the Rishis and even before, the Sankhya and Vedanta elements were always combined. The Sankhya account of the constitution of the being (Purusha, Prakriti, the elements, Indriyas, Buddhi etc.) was universally accepted and Kapila was mentioned with veneration everywhere. In the Gita he is mentioned among the great Vibhutis; Krishna says, “I am Kapila among the sages.”

Patanjali's Yoga

Divine union [*was the aim of Yoga in Patanjali's day*], yes — but for the ascetic schools it was union with the featureless Brahman, the Unknowable beyond existence or, if with the Ishwara, still it was the Ishwara in a supracosmic consciousness. From that point of view Patanjali's aphorism¹ is sound enough. When he says Yoga, he means the process of Yoga, the object which has to be kept in view in the process — for by the cessation of *cittavṛtti* one gets into *samādhi* and *samādhi* is the only way of uniting solely and completely with the Brahman beyond existence.

*

Stopping the movements of the chitta [*is what is meant by cittavṛttinirodha*]. In our Yoga it is more necessary to transform these movements than to stop them altogether, but the power to stop them is necessary — it is usually done by the mind falling into silence and then imposing the same silence on the vital nature.

*

¹ *Yogaścittavṛttinirodhaḥ* (*Yogasūtra 1.2*). — *Ed.*

Chit is the pure consciousness—as in Sat Chit Ananda.

Chitta is the stuff of mixed mental-vital-physical consciousness out of which arise the movements of thought, emotion, sensation, impulse etc. It is these that in Patanjali's system have to be stilled altogether so that the consciousness may be immobile and go into samadhi.

It [*stopping the movements of the chitta*] has a different function [*in this Yoga*]. The movements of the ordinary consciousness have to be quieted and into the quietude there has to be brought down a higher consciousness and its powers which will transform the nature.

*

If you suppress [*the cittavṛttis*], you will have no movements of the chitta at all; all will be immobile until you remove the suppression or will be so immobile that there cannot be anything else than immobility.

If you still, the chitta will be quiet; whatever movements there are will not disturb the quietude.

If you control or master, then the chitta will be immobile when you want, active when you want, and its action will be such that what you wish to get rid of will go, only what you accept as true and useful will come.

*

Some people do get disgusted with the body for its uncleanness, but I should say it is very few.

The suggestion of Patanjali² supposes that the mind is everything, so if I get the idea that the body is an unclean thing, all my feelings will harmonise with that idea. But it is not so—there are other parts which do not care for the idea or knowledge in the mind and are not affected by it but are led by their own instincts and desires. It is only those who have already the turn to vairagya who can make use of Patanjali's suggestion to help

² *The suggestion that disgust for one's body arises from the idea of cleanliness. In his letter the correspondent quoted Patanjali's aphorism, Śaucāt svāṅga-jugupsā (Yogasūtra 2.40).—Ed.*

their already existing vairagya. The medical man for instance holds his knowledge of the composition of the body as a matter of fact of science, he keeps it separate there in the scientific compartment of his mind and it does not in the least affect his other ideas, feelings or activities.

The Yoga-Vasishtha

I have not myself read the Yoga-Vasishtha, but from what I have read about it, it must be a book written by somebody with a remarkable occult knowledge.

Asanas and Pranayama

No use doing asanas and pranayam. It is not necessary to burn with passion. What is needed is a patient increasing of the power of concentration and steady aspiration so that the silence you speak of may fix in the heart and spread to the other members. Then the physical mind and subconscious can be cleared and quieted.

*

The asanas are one means for control of the body, as is Pranayam for the life-forces, but neither is indispensable.

*

Mother thinks that the shirhasan is not safe for your eyes. While some of these asanas are simple and safe, others are not so; they require a training of the body or practice under the eye of an expert. It might not be prudent for you to take them up in an amateur fashion.

*

Pranayam is safe only if one knows how to do it and is on guard against its possible dangers: (1) danger to health by mistakes in the method, (2) rising of the vital forces, especially lust, egoism and wrongly directed strength and force, (3) the awakening of

concealed sanskaras of the physical nature or latent karma from past lives.

*

Tell him it is not safe to do Pranayam without guidance by one who is expert in Rajayoga or Hathayoga. Pranayam is not a part of the sadhana here.

*

You can write to him that it is not safe to do Pranayam except under the directions of a guru who is siddha in either Rajayoga or Hathayoga. Gasping is obviously a sign of something wrong — for the breathing in Pranayam must be perfectly unimpeded and regular. It is better either to stop the Pranayam or to find out somebody who is practised in the method and take instructions from him what to do.

*

Your experience is correct. The true breathing is not merely the inspiration and expiration from the lungs which is merely the mechanism of it, but a drawing in of the universal energy of Prana into every cell of the body.

Chapter Five

The Yoga of the Bhagavad Gita

The Teaching of the Gita

This world *is* as the Gita describes it, *anityam asukham*, so long as we live in the present world-consciousness; it is only by turning from that to the Divine and entering into the Divine Consciousness that one can possess, through the world also, the Eternal.

*

The Gita cannot be described as exclusively a gospel of love. What it sets forth is a Yoga of knowledge, devotion and works based on a spiritual consciousness and realisation of oneness with the Divine and of the oneness of all beings in the Divine. Bhakti, devotion and love of God carrying with it unity with all beings and love for all beings is given a high place but always in connection with knowledge and works.

Apparent Contradictions in the Gita

The language of the Gita in many matters seems sometimes contradictory because it admits two apparently opposite truths and tries to reconcile them. It admits the ideal of departure from sansara into the Brahman as one possibility; also it affirms the possibility of living free in the Divine (in Me, it says) and acting in the world as the Jivanmukta. It is this latter kind of salvation on which it lays the greatest emphasis. So Ramakrishna put the “divine souls” (Ishwarakoti) who can descend the ladder as well as ascend it higher than the ordinary Jivas (Jivakoti) who, once having ascended, have not the strength to descend again for divine work. The full truth lies in the supramental consciousness and the power to work from there on life and matter.

*

There is no real contradiction; the two passages¹ indicate in the Gita's system two different movements of its Yoga, the complete surrender being the crowning movement. One has first to conquer the lower nature, deliver the self involved in the lower movement by means of the higher Self which rises into the divine nature; at the same time one offers all one's actions including the inner action of the Yoga as a sacrifice to the Purushottama, the transcendent and immanent Divine. When one has risen into the higher Self, has the knowledge and is free, one makes the complete surrender to the Divine, abandoning all other dharmas, living only by the divine Consciousness, the divine Will and Force, the divine Ananda.

Our Yoga is not identical with the Yoga of the Gita although it contains all that is essential in the Gita's Yoga. In our Yoga we begin with the idea, the will, the aspiration of the complete surrender; but at the same time we have to reject the lower nature, deliver our consciousness from it, deliver the self involved in the lower nature by the self rising to freedom in the higher nature. If we do not do this double movement, we are in danger of making a tamasic and therefore unreal surrender, making no effort, no tapas and therefore no progress; or else we may make a rajasic surrender not to the Divine but to some self-made false idea or image of the Divine which masks our rajasic ego or something still worse.

*

It was not your account of the inconsistencies of the Gita, but those that have been urged against the combining of sadhanas of which the Gita is the finest example that I was speaking of. Your objection to Krishna's pouring contradictory sadhanas on Arjuna was, I said, akin to these and not more sustainable.

All the other side questions I consider irrelevant and of no importance. The setting of the Gita is poetic and legendary and I consider it an admirable setting, but if you consider it a bad

¹ The correspondent asked how to reconcile two passages in the Gita: "Deliver the self by means of the Self" and "Abandon all dharmas, take refuge in Me alone" (Gita 6.5 and 18.66). — Ed.

one, that does not matter. It makes no difference, even if you are right, to the spiritual excellence of the Gita. I care nothing whether Sanjaya and Krishna and Arjuna of the Mahabharat were myths or real persons. The only thing that is important is that the sadhana of the Gita is a real thing and can be lived and that if spiritually lived, its so-called inconsistencies are no inconsistencies but many well-related aspects of a single Divine Truth — the vision seen by Arjuna included. The rest is a matter of opinion and, as I say, of no spiritual importance.

*

The Gita was *not* meant by the writer to be an allegory — you can say, if you like, that now we should dismiss the ancient war element by interpreting it as if it were an allegory. The Gita is Yoga, spiritual truth applied to external life and action — but it may be *any* action and not necessarily an action *resembling* that of the Gita. The *principle* of the spiritual consciousness applied to action has to be kept; the particular example used by the Gita may be treated as a thing belonging to a past world.

The Gita, the Divine Mother and the Purushottama

The Gita does not speak expressly of the Divine Mother; it speaks always of surrender to the Purushottama — it mentions her only as the Para Prakriti who becomes the Jiva, i.e., who manifests the Divine in the multiplicity and through whom all these worlds are created by the Supreme and he himself descends as the Avatar. The Gita follows the Vedantic tradition which leans entirely on the Ishwara aspect of the Divine and speaks little of the Divine Mother because its object is to draw back from world-nature and arrive at the supreme realisation beyond it; the Tantrik tradition leans on the Shakti or Ishwari aspect and makes all depend on the Divine Mother, because its object is to possess and dominate the world-nature and arrive at the supreme realisation through it. This Yoga insists on both the aspects; the surrender to the Divine Mother is essential, for without it there is no fulfilment of the object of the Yoga.

In regard to the Purushottama the Divine Mother is the supreme divine Consciousness and Power above the worlds, Adya Shakti; she carries the Supreme in herself and manifests the Divine in the worlds through the Akshara and the Kshara. In regard to the Akshara she is the same Para Shakti holding the Purusha immobile in herself and also herself immobile in him at the back of all creation. In regard to the Kshara she is the mobile cosmic Energy manifesting all beings and forces.

*

I do not know that there is anything like a Purushottama consciousness which the human being can attain or realise *for himself*,—for, in the Gita, the Purushottama is the Supreme Lord, the Supreme Being who is beyond the Immutable and the Mutable and contains both the One and the Many. Man, says the Gita, can attain the Brahmic consciousness, realise himself as an eternal portion of the Purushottama and live in the Purushottama. The Purushottama consciousness is the consciousness of the Supreme Being and man by loss of ego and realisation of his true essence can *live in it*.

The Gita and the Integral Yoga

It is not a fact that the Gita gives the whole base of Sri Aurobindo's message; for the Gita seems to admit the cessation of birth in the world as the ultimate aim or at least the ultimate culmination of Yoga; it does not bring forward the idea of spiritual evolution or the idea of the higher planes and the supramental Truth-Consciousness and the bringing down of that consciousness as the means of the complete transformation of earthly life.

The idea of the supermind, the Truth-Consciousness is there in the Rig Veda according to Sri Aurobindo's interpretation and in one or two passages of the Upanishads, but in the Upanishads it is there only in seed in the conception of the being of knowledge, *vijnānamaya puruṣa*, exceeding the mental, vital and physical being; in the Rig Veda the idea is there but in

principle only, it is not developed and even the principle of it has disappeared from the Hindu tradition.

It is these things among others that constitute the novelty of Sri Aurobindo's message as compared with the Hindu tradition,—the idea that the world is not either a creation of Maya or only a play, *lilā*, of the Divine, or a cycle of births in the ignorance from which we have to escape, but a field of manifestation in which there is a progressive evolution of the soul and the nature in Matter and from Matter through Life and Mind to what is beyond Mind till it reaches the complete revelation of Sachchidananda in life. It is this that is the basis of the Yoga and gives a new sense to life.

*

To the question in your last letter there can be no reply except that it is only either a single-minded faith or a fixed will that can give you the open road to the Yoga. It is because your ideas and your will are in a constant state of flux or of oscillation that you do not succeed. Even with a deficient faith, a fixed mind and will can carry one on and bring the experiences by which an uncertain faith is changed into certitude.

It is the reason why it is difficult for me to answer your questions about the different alternatives. I may say that the way of the Gita is itself a part of the Yoga here and those who have followed it, to begin with or as a first stage, have a stronger basis than others for this Yoga. To look down on it therefore as something separate and inferior is not a right standpoint. But whatever it is, you must yourself choose, nobody can do it for you. Those who go and come, can do so profitably only if or because they have made the decision and keep to it; when they are here, it is for the Yoga that they come, when they are elsewhere, the will for the Yoga remains with them there. You have to get rid of your constant reasonings and see whether you can do without the impulse towards Yoga or not—if you cannot, then it is useless thinking of the ordinary life without Yoga—your nature will compel you to seek after it even if you have to seek all your life with a small result. But the small result

is mainly due to the mind which always came in the way and the vital weakness which gives it its support for its reasonings. If you fixed your will irrevocably, that would give you a chance — and whether you followed it here or elsewhere would make only a minor difference.

I suggested the Gita method for you because the opening which is necessary for the Yoga here seems to be too difficult for you. If you made a less strenuous demand upon yourself, there might be a greater chance. In any case, if you cannot return to the ordinary life, it seems, in the absence of an opening to the Power that is here, the only course for you.

Chapter Six

The Adwaita of Shankaracharya

Shankara's Mayavada

If Shankara's conception of the undifferentiated pure Consciousness as the Brahman is your view of it, then it is not the path of this Yoga that you should choose; for here the realisation of pure Consciousness and Being is only a first step and not the goal. But an inner creative urge from within can have no place in an undifferentiated Consciousness — all action and creation must necessarily be foreign to it.

I do not base my Yoga on the insufficient ground that the Self (not soul) is eternally free. That affirmation leads to nothing beyond itself, or, if used as a starting-point, it could equally well lead to the conclusion that action and creation have no significance or value. The question is not that but of the meaning of creation, whether there is a Supreme who is not merely a pure undifferentiated Consciousness and Being, but the source and support also of the dynamic energy of creation and whether the cosmic existence has for It a significance and a value. That is a question which cannot be settled by metaphysical logic which deals in words and ideas, but by a spiritual experience which goes beyond Mind and enters into spiritual realities. Each mind is satisfied with its own reasoning, but for spiritual purposes that satisfaction has no validity, except as an indication of how far and on what line each one is prepared to go in the field of spiritual experience. If your reasoning leads you towards the Shankara idea of the Supreme, that might be an indication that the Vedanta Adwaita (Mayavada) is your way of advance.

This Yoga accepts the value of cosmic existence and holds it to be a reality; its object is to enter into a higher Truth-Consciousness or Divine Supramental Consciousness in which action and creation are the expression not of ignorance and imperfection, but of the Truth, the Light, the Divine Ananda.

But for that, surrender of the mortal mind, life and body to that Higher Consciousness is indispensable, since it is too difficult for the mortal human being to pass by its own effort beyond mind to a supramental consciousness in which the dynamism is no longer mental but of quite another power. Only those who can accept the call to such a change should enter into this Yoga.

*

The Shankara knowledge is, as your Guru pointed out, only one side of the Truth; it is the knowledge of the Supreme as realised by the spiritual Mind through the static silence of the pure Existence. It was because he went by this side only that Shankara was unable to accept or explain the origin of the universe except as illusion, a creation of Maya. Unless one realises the Supreme on the dynamic as well as the static side, one cannot experience the true origin of things and the equal reality of the active Brahman. The Shakti or Power of the Eternal becomes then a power of illusion only and the world becomes incomprehensible, a mystery of cosmic madness, an eternal delirium of the Eternal. Whatever verbal or ideative logic one may bring to support it, this way of seeing the universe explains nothing; it only erects a mental formula of the inexplicable. It is only if you approach the Supreme through his double aspect of Sat and Chit-Shakti, double but inseparable, that the total truth of things can become manifest to the inner experience. The other side was developed by the Shakta Tantrics. The two together, the Vedantic and the Tantric truth unified, can arrive at the integral knowledge.

But philosophically this is what your Guru's teaching comes to and it is obviously a completer truth and a wider knowledge than that given by the Shankara formula. It is already indicated in the Gita's teaching of the Purushottama and the Parashakti (Adya Shakti) who becomes the Jiva and upholds the universe. It is evident that Purushottama and Parashakti are both eternal and are inseparable and one in being; the Parashakti manifests the universe, manifests too the Divine in the universe as the Ishwara and herself appears at his side as the Ishwari Shakti. Or, one may say, it is the Supreme Consciousness-Power of the

Supreme that manifests or puts forth itself as Ishwara Ishwari, Atma Atmashakti, Purusha Prakriti, Jiva Jagat. That is the truth in its completeness as far as the mind can formulate it. In the Supermind these questions do not even arise — for it is the mind that creates the problem by erecting oppositions between aspects of the Divine which are not really opposed to each other but are one and inseparable.

This supramental knowledge has not yet been attained, because the supermind itself has not been attained, but the reflection of it in intuitive spiritual consciousness is there and that was what was evidently realised in experience by your Guru and what he was expressing in mental terms in the quoted passage. It is possible to go towards this knowledge by beginning with the experience of dissolution in the One, but on condition that you do not stop there, taking it as the highest Truth, but proceed to realise the same One as the supreme Mother, the Consciousness Force of the Eternal. If on the other hand you approach through the supreme Mother, she will give you the liberation in the silent One also as well as the realisation of the dynamic One and from that it is easier to arrive at the Truth in which both are one and inseparable. At the same time the gulf created by Mind between the Supreme and his Manifestation is bridged and there is no longer a fissure in the truth which makes all incomprehensible. If in the light of this you examine what your Guru taught, you will see that it is the same thing in less metaphysical language.

*

They [*two philosophers*] want to show that Shankara was not so savagely illusionist as he is represented — that he gave a certain temporary reality to the world, admitted Shakti etc. But these (supposing he made them) are concessions inconsistent with the logic of his own philosophy which is that only the Brahman exists and the rest is ignorance and illusion. The rest has only a temporary and therefore an illusory reality in Maya. He farther maintained that Brahman could not be reached by works. If that was not his philosophy, I should like to know what was his philosophy. At any rate that was how his philosophy has been

understood by people. Now that the general turn is away from the rigorous Illusionism, many of the Adwaitins seem to want to hedge and make Shankara hedge with them.

Vivekananda accepted Shankara's philosophy with modifications, the chief of them being Daridra-Narayan-seva which is a mixture of Buddhist compassion and modern philanthropy.

*

I believe according to the Adwaitins God is only the reflection of Brahman in Maya — just as Brahman is seen outwardly as the world which has only a practical not a real reality, so subjectively Brahman is seen as God, Bhagavan, Ishwara, and that also would be a practical not a real reality — which is and can be only the relationless Brahman all by itself in a worldless eternity. At least that is what I have read — I don't know whether Shankara himself says that. One is always being told by modern Adwaitins that Shankara did not mean what people say he meant — so one has to be careful in attributing any opinion to him.

*

Of course Shankara must have meant Mayavada. It is hardly possible that everybody should have misunderstood his ideas (which were not in the least veiled or enigmatic) till his modern apologists discovered what they really were.

*

Shankara surely stands or falls by the Mayavada. Even the *Bhaja Govindam* poem is Mayavadic in spirit. I am not well-acquainted with these other writings¹ — so it is difficult for me to say anything about that side of the question.

*

Chittashuddhi belongs to Rajayoga. In the pure Adwaita the method is rather to detach oneself by vichara and viveka and

¹ Writings attributed to Shankara such as Prabodhasudhākara. The correspondent asked whether Shankara changed his view from Mayavada to Lilavada later in his life. — Ed.

realise “I am not the mind, not the life, etc. etc.” In that case, no shuddhi would be necessary — the self would separate from the nature good or bad and regard it as a machinery which having no more the support of the egoless man would fall away of itself along with the body. Of course chittashuddhi can be resorted to also, but for cessation of the chittavrittis, not for their better dynamism as an instrument of the Divine. Shankara insists that all karma must fall off before one can be liberated — the soul must realise itself as *akartā*, there is no salvation in or by works in the pure Yoga of knowledge. So how could Shankara recognise dynamism? Even if he recognises chittashuddhi as necessary, it must be as a preparation for getting rid of karma, not for anything else.

Mayavada and Nirvana

About Nirvana:

When I wrote in the *Arya*, I was setting forth an overmind view of things to the mind and putting it in mental terms, that was why I had sometimes to use logic. For in such a work — mediating between the intellect and the supra-intellectual — logic has a place, though it cannot have the chief place it occupies in purely mental philosophies. The Mayavadin himself labours to establish his point of view or his experience by a rigorous logical reasoning. Only, when it comes to an explanation of Maya he, like the scientist dealing with Nature, can do no more than arrange and organise his ideas of the process of this universal mystification; he cannot explain how or why his illusionary mystifying Maya came into existence. He can only say, “Well, but it is there.”

Of course, it is there. But the question is, first, “What is it? is it really an illusionary Power and nothing else, or is the Mayavadin’s idea of it a mistaken first view, a mental imperfect reading, even perhaps itself an illusion?” And next, “Is illusion the sole or the highest Power which the Divine Consciousness or Superconsciousness possesses?” The Absolute is an absolute Truth free from Maya, otherwise liberation would not be

possible. Has then the supreme and absolute Truth no other active Power than a power of falsehood and with it, no doubt, for the two go together, a power of dissolving or disowning the falsehood,—which is yet there for ever? I suggested that this sounded a little queer. But queer or not, if it is so, it is so—for as you point out, the Ineffable cannot be subjected to the laws of logic.

But who is to decide whether it is so? You will say, those who get there. But get where? To the Perfect and the Highest, *pūrṇam param*. Is the Mayavadin's featureless Brahman that Perfect, that Complete—is it the very Highest? Is there not or can there not be a higher than that highest, *parātparam*? That is not a question of logic, it is a question of spiritual fact, of a supreme and complete experience. The solution of the matter must rest not upon logic, but upon a growing, ever heightening, widening spiritual experience—an experience which must of course include or have passed through that of Nirvana and Maya, otherwise it would not be complete and would have no decisive value.

Now to reach Nirvana was the first radical result of my own Yoga. It threw me suddenly into a condition above and without thought, unstained by any mental or vital movement; there was no ego, no real world—only when one looked through the immobile senses, something perceived or bore upon its sheer silence a world of empty forms, materialised shadows without true substance. There was no One or many even, only just absolutely That, featureless, relationless, sheer, indescribable, unthinkable, absolute, yet supremely real and solely real. This was no mental realisation nor something glimpsed somewhere above,—no abstraction—it was positive, the only positive reality—although not a spatial physical world, pervading, occupying or rather flooding and drowning this semblance of a physical world, leaving no room or space for any reality but itself, allowing nothing else to seem at all actual, positive or substantial. I cannot say there was anything exhilarating or rapturous in the experience, as it then came to me,—the ineffable Ananda I had years afterwards,—but what it brought was an inexpressible Peace, a

stupendous silence, an infinity of release and freedom. I lived in that Nirvana day and night before it began to admit other things into itself or modify itself at all, and the inner heart of experience, a constant memory of it and its power to return remained until in the end it began to disappear into a greater Superconsciousness from above. But meanwhile realisation added itself to realisation and fused itself with this original experience. At an early stage the aspect of an illusionary world gave place to one in which illusion² is only a small surface phenomenon with an immense Divine Reality behind it and a supreme Divine Reality above it and an intense Divine Reality in the heart of everything that had seemed at first only a cinematic shape or shadow. And this was no reimprisonment in the senses, no diminution or fall from supreme experience, it came rather as a constant heightening and widening of the Truth; it was the spirit that saw objects, not the senses, and the Peace, the Silence, the freedom in Infinity remained always with the world or all worlds only as a continuous incident in the timeless eternity of the Divine.

Now that is the whole trouble in my approach to Mayavada. Nirvana in my liberated consciousness turned out to be the beginning of my realisation, a first step towards the complete thing, not the sole true attainment possible or even a culminating finale. It came unasked, unsought for, though quite welcome. I had no least idea about it before, no aspiration towards it, in fact my aspiration was towards just the opposite, spiritual power to help the world and do my work in it, yet it came—without even a “May I come in” or a “By your leave”. It just happened and settled in as if for all eternity or as if it had been really there always. And then it slowly grew into something not less but greater than its first self! How then could I accept Mayavada or persuade myself to pit against the Truth imposed on me from above the logic of Shankara?

But I do not insist on everybody passing through my experience or following the Truth that is its consequence. I have

² In fact it is not an illusion in the sense of an imposition of something baseless and unreal on the consciousness, but a misinterpretation by the conscious mind and sense and a falsifying misuse of manifested existence.

no objection to anybody accepting Mayavada as his soul's truth or his mind's truth or their way out of the cosmic difficulty. I object to it only if somebody tries to push it down my throat or the world's throat as the sole possible, satisfying and all-comprehensive explanation of things. For it is not that at all. There are many other possible explanations; it is not at all satisfactory, for in the end it explains nothing; and it is—and must be unless it departs from its own logic—all-exclusive, not in the least all-comprehensive. But that does not matter. A theory may be wrong or at least one-sided and imperfect and yet extremely practical and useful. That has been amply shown by the history of science. In fact a theory whether philosophical or scientific is nothing else than a support for the mind, a practical device to help it to deal with its object, a staff to uphold it and make it walk more confidently and get along on its difficult journey. The very exclusiveness and one-sidedness of the Mayavada make it a strong staff or a forceful stimulus for a spiritual endeavour which means to be one-sided, radical and exclusive. It supports the effort of the Mind to get away from itself and from Life by a short cut into superconsciousness. Or rather it is the Purusha in Mind that wants to get away from the limitations of Mind and Life into the superconscious Infinite. Theoretically, the most radical way for that is for the mind to deny all its perceptions and all the preoccupations of the vital and see and treat them as illusions. Practically, when the mind draws back from itself, it enters easily into a relationless peace in which nothing matters—for in its absoluteness there are no mental or vital values—and from which the mind can rapidly move towards that great short cut to the Superconscious, mindless trance, *susupti*. In proportion to the thoroughness of that movement all the perceptions it had once accepted become unreal to it—illusion, Maya. It is on its road towards immergence.

Mayavada, therefore, with its sole stress on Nirvana, quite apart from its defects as a mental theory of things, serves a great spiritual end and, as a path, can lead very high and far. Even, if the Mind were the last word and there were nothing beyond it except the pure Spirit, I would not be averse to accepting it as

the only way out. For what the mind with its perceptions and the vital with its desires have made of life in this world, is a very bad mess, and if there were nothing better to be hoped for, the shortest cut to an exit would be the best. But my experience is that there is something beyond Mind; Mind is not the last word here of the Spirit. Mind is an ignorance-consciousness and its perceptions cannot be anything else than either false, mixed or imperfect—even when “true”, a partial reflection of the Truth and not the very body of Truth herself. But there is a Truth-Consciousness, not static only and self-introspective, but also dynamic and creative, and I prefer to get at that and see what it says about things and can do rather than take the short cut away from things offered as its own end by the Ignorance.

Still, I would have no objection, if your attraction towards Nirvana were not merely a mood of the mind and vital but an indication of the mind’s true road and the soul’s issue. But it seems to me that it is only the vital recoiling from its own disappointed desires in an extreme dissatisfaction, not the soul leaping gladly to its true path. This vairagya is itself a vital movement; vital vairagya is the reverse side of vital desire—though the mind of course is there to give reasons and say ditto. Even this vairagya, if it is one-pointed and exclusive, can lead or can point towards Nirvana. But you have many sides to your personality or rather many personalities in you; it is indeed their discordant movements each getting in the way of the other, as happens when they are expressed through the external mind, that have stood much in the way of your sadhana. There is the vital personality which was turned towards success and enjoyment and got it and wanted to go on with it but could not get the rest of the being to follow. There is the vital personality that wanted enjoyment of a deeper kind and suggested to the other that it could very well give up these unsatisfactory things if it got an equivalent in some faeryland of a higher joy. There is the psycho-vital personality that is the Vaishnava within you and wanted the Divine Krishna and bhakti and Ananda. There is the personality which is the poet and musician and a seeker of beauty through these things. There is the mental-vital personality which when it saw the vital

standing in the way insisted on a grim struggle of Tapasya, and it is no doubt that also which approves vairagya and Nirvana. There is the physical-mental personality which is the Russellite, extrovert, doubter. There is another mental-emotional personality all whose ideas are for belief in the Divine, Yoga, bhakti, Guruvada. There is the psychic being also which has pushed you into the sadhana and is waiting for its hour of emergence.

What are you going to do with all these people? If you want Nirvana, you have either to expel them or stifle them or beat them into coma. All authorities assure us that this exclusive Nirvana business is a most difficult job (*duḥkham dehavadbhīḥ* says the Gita), and your own fatal attempt at suppressing the others was not encouraging,—according to your own account it left you as dry and desperate as a sucked orange, no juice left anywhere. If the desert is your way to the promised land, that does not matter. But —

Well, if it is not, then there is another way—it is what we call the integration, the harmonisation of the being. That cannot be done from outside, it cannot be done by the mind and vital being—they are sure to bungle their affair. It can be done only from within by the soul, the Spirit which is the centraliser, itself the centre of these radii. In all of them there is a truth that can harmonise with the true truth of the others. For there is a truth in Nirvana—Nirvana is nothing but the peace and freedom of the Spirit which can exist in itself, be there world or no world, world-order or world-disorder. Bhakti and the heart's call for the Divine have a truth—it is the truth of the divine Love and Ananda. The will for Tapasya has in it a truth—it is the truth of the Spirit's mastery over its members. The musician and poet stand for a truth, it is the truth of the expression of the Spirit through beauty. There is a truth behind the mental Affirmer; even there is a truth behind the mental doubter, the Russellian, though far behind him—the truth of the denial of false forms. Even behind the two vital personalities there is a truth, the truth of the possession of the inner and outer worlds—not by the ego but by the Divine. That is the harmonisation for which our Yoga stands—but it cannot be achieved by any

outward arrangement, it can only be achieved by going inside and looking, willing and acting from the psychic and from the spiritual centre. For the truth of the being is there and the secret of Harmony also is there.

The Illusionist Metaphors

The illusionist metaphors all fail when you drive them home — they are themselves an illusion. Identification with the body is an error, not an illusion. We are not the body, but the body is still something of ourselves. With realisation the erroneous identification ceases — in certain experiences the existence of the body is not felt at all. In the full realisation the body is within us, not we in it, it is an instrumental formation in our wider being — our consciousness exceeds but also pervades it; it can be dissolved without our ceasing to be the self. That is about all.

*

Your objection is correct. The snake-rope image cannot be used to illustrate the non-existence of the world, it would only mean that our seeing of the world is not that of the world as it really is. The idea of complete illusion would better be illustrated by the juggler's rope-climbing trick, where there is no rope and no climber, and yet one is persuaded that they are there.

Laya

According to both Buddha and Shankara liberation means *laya* of the individual in some transcendent Permanence that is not individualised — so logically a belief in the individual soul must prevent liberation while the sense of misery in the world leads to the attempt to escape.

*

The impulse towards laya is a creation of the mind, it is not the sole possible destiny of the soul. When the mind tries to abolish its own Ignorance, it finds no escape from it except laya,

because it supposes that there is no higher principle of cosmic existence beyond itself—beyond itself is only the pure Spirit, the absolute impersonal Divine. Those who go through the heart (love, bhakti) do not accept laya, they believe in a state beyond of eternal companionship with the Divine or dwelling in the Divine without laya. All this quite apart from supramentalisation. What then becomes of your starting point that laya is the inevitable destiny of the soul and it is only the personal descent of the Avatar that saves it from inevitable laya?

*

There were two points of error [*in the correspondent's remarks about laya*]. (1) That the soul formerly had no other possibility once it reached the Divine than laya. There were other possibilities, e.g. passing into a higher plane, living in the Divine or in the presence of the Divine. Both imply the refusal of birth and leaving the Lila on earth. (2) That it was only for the sake of living with the incarnate Divine and by reason of this descent that the soul consented to give up laya. The capital point is the supramentalisation of the being which is the Divine intention in the evolution on earth and cannot fail to come; the descent or incarnation is only an instrumentation for bringing that about. Your statement therefore became wrong by incompleteness.

*

It is the Vedantic Adwaita experience of laya. It is only one phase of experience—not the whole or the highest Truth of the Divine.

Chapter Seven

Tantra

Tantra and the Integral Yoga

Veda and Vedanta are one side of the one Truth; Tantra with its emphasis on Shakti is another. In this Yoga all sides of the Truth are taken up, not in the systematic forms given them formerly, but in their essence and carried to the fullest and highest significance. But Vedanta deals more with the principles and essentials of the divine knowledge and therefore much of its spiritual knowledge and experience has been taken bodily into the *Arya*. Tantra deals more with forms and processes and organised powers—all these could not be taken as they were, for the integral Yoga needs to develop its own forms and processes, but the ascent of the consciousness through the centres and other Tantrik knowledge are there behind the process of transformation to which so much importance is given by me—also the truth that nothing can be done except through the force of the Mother.

*

The ascension and descent of the Force in this Yoga accomplishes itself in its own way without any necessary reproduction of the details laid down in the books [*on Tantra*]. Many become conscious of the centres, but others simply feel the ascent or descent in a general way or from level to level rather than from centre to centre, that is to say, the Force descending first to the head, then to the heart, then to the navel and still below. It is not at all necessary to become aware of the deities in the centres according to the Tantrik description, but some feel the Mother in the different centres. In these things our sadhana does not cleave to the knowledge given in the books, but only keeps to the central truth behind and realises it independently without any subjection to the old forms and symbols. The centres themselves

have a different interpretation here from that given in the books of the Tantriks.

Kundalini, the Chakras and the Integral Yoga

The process of the Kundalini awakened rising through the centres as also the purification of the centres is a Tantrik knowledge. In our Yoga there is no willed process of the purification and opening of the centres, no raising up of the Kundalini by a set process either. Another method is used, but still there is the ascent of the consciousness from and through the different levels to join the higher consciousness above; there is the opening of the centres and of the planes (mental, vital, physical) which these centres command; there is also the descent which is the main key of the spiritual transformation. Therefore there is, I have said, a Tantrik knowledge behind the process of transformation in this Yoga.

*

There is [*in the Integral Yoga*] no willed opening of the chakras, they open of themselves by the descent of the Force. In the Tantrik discipline they open from down upwards, the Mula-dhara first—in our Yoga, they open from up downward. But the ascent of the force from the Muladhara does take place.

*

The ascent of the Kundalini—not its descent, so far as I know—is a recognised phenomenon; there is one that corresponds in our Yoga, the feeling of the consciousness ascending from the vital or physical to meet the higher consciousness. This is not necessarily through the chakras but is often felt in the whole body. Similarly the descent of the higher consciousness is not felt necessarily or usually through the chakras but as occupying the whole head, neck, chest, abdomen, body.

*

In the Tantra the centres are opened and Kundalini is awakened

by a special process, its action of ascent is felt through the spine. Here it is the pressure of the Force from above that awakens it and opens the centres. There is an ascension of the consciousness going up till it joins the higher consciousness above. This repeats itself (sometimes a descent also is felt) until all the centres are open and the consciousness rises above the body. At a later stage it remains above and widens out into the cosmic consciousness and the universal Self. This is a usual course, but sometimes the process is more rapid and there is a sudden and definite opening above.

*

It [*a force in the navel region rising upward in a coiling, pulsating movement*] is what is meant by the Kundalini rising towards the Brahmarandhra — not the whole of it, but something of it is released coiling or circling upward with vibrations (*spandana*) from the Muladhara. It is not always felt like that. Sometimes one simply feels currents or a Force of some kind rising up or just an ascending movement of consciousness. But in all cases it is the release of the Yogic consciousness which is shut up in the chakras and its ascent to meet the Divine Consciousness above. It is this and the corresponding descent from above that make Yogic experiences and realisations possible.

*

It [*the Kundalini*] is the Yogic force asleep in the Muladhara and covered up in the other centres by the ordinary consciousness. When it is liberated, it rises up to join the Brahmic (Divine) consciousness above passing through the centres on its way.

*

There is no Kundalini Shakti above the head. Above the head is the universal or Divine Consciousness and Force. The Kundalini is the latent power asleep in the chakras.

*

The Energy in the Kundalini is the Mother's.

*

I am afraid the attempt to apply scientific analogies to spiritual or Yogic things leads more often to confusion than to anything else,—just as it creates confusion if thrust upon philosophy also. Kundalini coiled in the Muladhara is asleep, plunged in the unconsciousness, supporting the play of the Ignorance. Naturally if she heaves up from there, there may be a disturbance or disruption of the states of the Ignorance, but that would be rather a salutary upheaval and helpful to the purpose of Yoga. Kundalini becoming conscious rises up to meet the Brahman in the thousand-petalled lotus. A mere ejection from her uniting with the higher consciousness would hardly lead to a radical change. Of course she need not abandon connection with the physical centre altogether; but she is no longer coiled there: if she were, the great occult force residing there would not be liberated. The usual image of her risen and awake is, I believe, that of a serpent standing erect, the tail touching the lowest centre, the head the highest at the Brahmarandhra. Thus with all the centres open and active she unites the two poles, superior and inferior, of the being, the spirit with Matter.

*

Sri Aurobindo¹ cannot undertake to guide you as your Guru, for the reason that he takes as disciples only those who follow his special path of Yoga; your experiences follow a different line. In his Yoga there may be an occasional current in the spine as in other nerve channels or different parts of the body, but no awakening of the Kundalini in this particular and powerful fashion. There is only a quiet uprising of the consciousness from the lower centres to join the spiritual consciousness above and a descent of the Divine Force from above which does its own work in the mind and body—the manner and stages varying in each sadhak. A perfect confidence in the Divine Mother and a vigilance to repel all wrong suggestions and influences is the main law of this Yoga. Your opening having once been so powerful on

¹ This letter was written by Sri Aurobindo in the third person and sent to the enquirer through his secretary.—Ed.

the more usual Tantric lines (even without your own will intervening), it is hardly probable that it could now change easily to other lines — any such effort might create a serious disturbance. In speaking of a competent Guru Sri Aurobindo meant one who had himself practised this opening of the centres and become siddha in that line of Yoga. It should not be impossible to find one — when one has the call for the Guru, the Guru sooner or later comes. Meanwhile to put away fear and have confidence in the Divine working is indispensable — but no effort should be made to force the pace by concentrated meditation unless you have a guide whom you can trust — a clear guidance from within or a guide from without. The inspiration about the Ida nadi and the subsequent waking of the Shakti show that there was an intervention at a critical moment and that the call to it whenever needed is likely to be effective.

In the experiences proper related in your first letter there is absolutely nothing that should have disturbed you — all was quite normal, the usual experiences of the Yogi at such a juncture and very good and powerful, such as do not come except by the grace of the Divine. Probably the opening came after slow invisible preparation as a result of the meditation on the lotus at the top of the head; for that is always an invitation to the Kundalini to awake or for the lower consciousness to rise and meet the higher. The disturbing factor came with the feeling of discomfort in the heart due to some resistance in the physical being which is very often felt and can be overcome by the working of the Force itself and the fear that came afterwards in the seats of the vital Nature, heart, navel etc. But that was no part of the experience, it was an interference by a wrong reaction from the lower or exterior consciousness. If you had not allowed yourself to be disturbed, probably nothing untoward would have disturbed the process. One must not get frightened by unusual states or movements or experiences, the Yogi must be fearless, *abhīḥ*; it is absurd to have a fear because one can control one's states; that is a power very much to be desired and welcomed in Yoga.

The crisis related in the second letter would hardly have

come, if there had not been this reaction; but in any case there was the intervention and setting right of the trouble. However these reactions and the fact that the disturbance came show that something in the exterior consciousness is not altogether prepared; it is better to wait and seek for a guide so that ignorant steps or reactions may not bring again a serious trouble or danger. This is all that Sri Aurobindo can say by way of enlightenment and advice. He does not usually intervene with anyone not his disciple, but as your case was an unusual one and your call urgent, he has given you what light he can on your experience.

Levels of Speech (Vak)

The Tantriks locate these forms of speech in different chakras. Speech may be internal or external, either may have the stamp of the same power. But if it is to be measured by withdrawal from externality, then Para ought to mean something of the causal realm beyond mind.

*

Pashyanti is evidently speech with the vision of Truth in it —Para is probably the revelatory and inspired speech. I am not certain about the exact nature of the others [*Vaikhari and Madhyama*].

Chapter Eight

Bhakti Yoga and Vaishnavism

The Vaishnava Theory and Sadhana

They [*the Vaishnavas*] accept the world as a Lila, but the true Lila is elsewhere in the eternal Brindavan. All the religions which believe in the personal Godhead accept the universe as a reality, a Lila or a creation made by the will of God, but temporal and not eternal. The aim is the eternal status above.

*

The idea of a temporary Kingdom of heaven on earth is contained in the Puranas and conceived by some Vaishnava saints or poets; but it is a devotional idea, no philosophical basis is given for the expectation. I think the Tantric overcoming of imperfection is more individual, not collective.

*

It is the Vaishnava theory — that if you only repeat the name of Hari it is enough — nothing else needed. Even if you do it by accident, you will go posthaste to Heaven. It has always seemed to be the apotheosis of laziness and incompetence. There are plenty of people who have a little Bhakti for Krishna but I don't find them revelling in all the fruits of tapasya.

*

If you can feel the Name bringing you peace, it should be able to bring everything else, bhakti, joy, the revelation of the Power and the Presence and the full feeling and consciousness of it to you. That is indeed the process of the Vaishnava sadhana and the power of the Name in it. Only, keep your poise and persevere.

*

The Supramental is something in which the basis is absolute calm

and however intense a Divine Love there is in it it does not disturb the calm but increases its depth. Chaitanya's experience was not that of Supermind, but of a Love and Ananda brought from above into the vital—the response of the vital is an extreme passion and exultation of Godward love and Ananda, the result of which is these *vikāras*. Chaitanya claimed this supremacy for the Radha experience because Ananda is higher than the experiences of the spiritual mind, Ananda being according to the Upanishads the supreme plane of experience. But this is a logical conclusion which cannot be accepted wholly—one must pass through the supermind to arrive to the highest Ananda and in the supermind there is a unification and harmonisation of all the divine Powers (Knowledge, etc. as well as Love and Ananda). Different sadhanas emphasise one aspect or another as the highest, but it is this union of all that must be the true base of the highest realisation and experience.

Vaishnava Bhakti and the Integral Yoga

It is not necessary to repeat past forms [of *Bhakti Yoga*]—to bring out the bhakti of the psychic being and give it whatever forms come naturally in the development is the proper way for our sadhana.

*

What three signs [of the *Paramhansa*]? If you refer to the four conditions (child, madman, demon, inert), it is not Ramakrishna who invented that. It is an old Sanskrit sloka, *bālonmādapiśācājadavat*, describing the Paramhansa or rather the various forms of Paramhansahood. The Paramhansa is a particular grade of realisation, there are others supposed to be lower or higher.

I have no objection to them [*vital manifestations of love and bhakti*] in their own place. But I must remind you that in my Yoga all vital movements must come under the control of the psychic and of the spiritual calm, knowledge and peace. If they conflict with the psychic or the spiritual control, they upset the balance and prevent the forming of the base of transformation.

If unbalance is good for other paths, that is the business of those who follow them. It does not suit mine.

*

Everybody must be made to understand clearly that this is not a sadhana of emotional and egoistic *bhakti*, but of surrender. One who makes demands and threatens to commit suicide if his demands are not complied with, is not meant for this Yoga. . . .

This Yoga is not a Yoga of emotional egoistic vital *bhakti* full of demands and desires. There is no room in it for *ābdār* of any kind. It is only for those who surrender to the Divine and obey implicitly the directions given to them by Sri Aurobindo and the Mother.

The True Vaishnava Attitude

Your whole-hearted acceptance of the Vaishnava idea and *bhakti* becomes rather bewildering when it is coupled with an insistence that love cannot be given to the Divine until one has experience of the Divine. For what is more common in the Vaishnava attitude than the joy of *bhakti* for its own sake? "Give me *bhakti*," it cries, "whatever else you may keep from me. Even if it is long before I can meet you, even if you delay to manifest yourself, let my *bhakti*, my seeking for you, my cry, my love, my adoration be always there." How constantly the Bhakta has sung, "All my life I have been seeking you and still you are not there, but still I seek and cannot cease to seek and love and adore." If it were really impossible to love God unless you first experience him, how could this be? In fact your mind seems to be putting the cart before the horse. One seeks after God first, with persistence or with passion, one finds him afterwards, some sooner than others, but most after a long seeking. One does not find him first, then seek after him. Even a glimpse only comes after long or fervent seeking. One has the love of God or at any rate some heart's desire for him and afterwards one becomes aware of God's love, its reply to the heart's desire, its response of the supreme joy and Ananda. One does not say to God, "Show your love for

me first, shower on me the experience of yourself, satisfy my demand, then I will see whether I can love you so long as you deserve it.” It is surely the seeker who must seek and love first, follow the quest, become impassioned for the Sought—then only does the veil move aside and the Light be seen and the Face manifest that alone can satisfy the soul after its long sojourn in the desert.

Then again you may say, “Yes, but whether I love or not, I want, I have always wanted and now I want more and more, but I get nothing.” Yes, but wanting is not all. As you now begin to see, there are conditions that have to be met—like the purification of the heart. Your thesis was, “Once I want God, God must manifest to me, come to me, at least give glimpses of himself to me, the real solid concrete experiences, not mere vague things which I can’t understand or value. God’s Grace must answer my call for it, whether I yet deserve it or not—or else there is no Grace.” God’s Grace may indeed do that in certain cases, but where does the “must” come in? If God must do it, it is no longer God’s Grace, but God’s duty or an obligation or a contract or a treaty. The Divine looks into the heart and removes the veil at the moment which he knows to be the right moment to do it. You have laid stress on the bhakti theory that one has only to call his name and he must reply, he must at once be there. Perhaps, but for whom is this true? For a certain kind of Bhakta surely who feels the power of the Name, who has the passion of the Name and puts it into his cry. If one is like that, then there may be the immediate reply—if not, one has to become like that, then there will be the reply. But some go on using the Name for years, before there is an answer. Ramakrishna himself got it after a few months, but what months! and what a condition he had to pass through before he got it! Still he succeeded quickly because he had a pure heart already—and that divine passion in it.

It is not surely the Bhakta but the man of knowledge who demands experience first. He can say, “How can I know without experience?”, but even he goes on seeking like Tota Puri even though for thirty years, striving for the decisive realisation. It is

really the man of intellect, the rationalist who says, "Let God, if he exists, prove himself to me first, then I will believe, then I will make some serious and prolonged effort to explore him and see what he is like."

All this does not mean that experience is irrelevant to sadhana—I certainly cannot have said such a stupid thing. What I have said is that the love and seeking of the Divine can be and ordinarily is there before the experience comes—it is an instinct, an inherent longing in the soul and it comes up as soon as certain coverings of the soul disappear or begin to disappear. The next thing I have said is that it is better to get the nature ready first (the purified heart and all that) before the "experiences" begin rather than the other way round and I base that on the many cases there have been of the danger of experiences before the heart and vital are ready for the true experience. Of course in many cases there is a true experience first, a touch of the Grace, but it is not something that lasts and is always there, but rather something that touches and withdraws and waits for the nature to get ready. But this is not so in every case, not even in many cases, I believe. One has to begin with the soul's inherent longing, then the struggle with the nature to get the temple ready, then the unveiling of the Image, the permanent Presence in the sanctuary.

P.S. All this is of course only an answer couched in mental terms to your one objection or inability to conceive how one can love God without having first known Him or had experience of Him. But mental reasoning by itself leads to nothing—it is something in yourself that has to see and then there is no difficulty. Fortunately, you are moving near to that. Nor would I trouble at all about this point, if you did not make of it a support for depression and despair. Otherwise it would have no importance, since with one idea or with the other one can arrive at the goal because the soul drives towards it.

The Sunlit Way of Yoga

Peace was the very first thing that the Yogins and seekers of old

asked for and it was a quiet and silent mind — and that always brings peace — that they declared to be the best condition for realising the Divine. A cheerful and sunlit heart is the fit vessel for the Ananda and who shall say that Ananda or what prepares it is an obstacle to the Divine union? As for despondency, it is surely a terrible burden to carry on the way. One has to pass through it sometimes, like Christian of *The Pilgrim's Progress* through the Slough of Despond, but its constant reiteration cannot be anything but an obstacle. The Gita specially says, "Practise the Yoga with an undespondent heart", *anirvijn̄acetasā*.

I know perfectly well that pain and suffering and struggle and excesses of despair are natural — though not inevitable — on the way, — not because they are helps, but because they are imposed on us by the darkness of this human nature out of which we have to struggle into the Light. I do not suppose Ramakrishna or Vivekananda would have recommended the incidents you allude to as an example for others to follow — they would surely have said that faith, fortitude, perseverance were the better way. That after all was what they stuck to in the end in spite of these bad moments and they would never have dreamed of giving up the Yoga or the aspiration for the Divine on the ground that they were unfit and not meant for the realisation.

At any rate Ramakrishna told the story of Narada and the ascetic Yogi and the Vaishnava Bhakta with approval of its moral. I put it in my own language but keep the substance. Narada on his way to Vaikuntha met a Yogi practising hard tapasya on the hills. "O Narada," cried the Yogi, "you are going to Vaikuntha and will see Vishnu. I have been practising terrific austerities all my life and yet I have not even now attained to Him. Ask Him at least for me when I shall reach Him." Then Narada met a Vaishnava, a Bhakta who was singing songs to Hari and dancing to his own singing, and he cried also, "O Narada, you will see my Lord, Hari. Ask my Lord when I shall reach Him and see His face." On his way back Narada came first to the Yogi. "I have asked Vishnu; you will realise Him after six more lives." The Yogi raised a cry of loud lamentation,

“What, so many austerities! such gigantic endeavours! and my reward is realisation after six long lives! O how hard to me is the Lord Vishnu.” Next Narada met again the Bhakta and said to him, “I have no good news for you. You will see the Lord, but only after a lakh of lives.” But the Bhakta leapt up with a great cry of rapture, “Oh, I shall see my Lord Hari! after a lakh of lives I shall see my Lord Hari! How great is the grace of the Lord.” And he began dancing and singing in a renewed ecstasy. Then Narada said, “Thou hast attained. Today thou shalt see the Lord!” Well, you may say, “What an extravagant story and how contrary to human nature!” Not so contrary as all that and in any case hardly more extravagant than the stories of Harishchandra and Shivi. Still I do not hold up the Bhakta as an example, for I myself insist on the realisation in this life and not after six or a lakh of births more. But the point of these stories is in the moral and surely when Ramakrishna told it, he was not ignorant that there was a sunlit path of Yoga! He even seems to say that it is the quicker way as well as the better! You are quite mistaken in thinking that the possibility of the sunlit path is a discovery or original invention of mine. The very first books on Yoga I read more than thirty years ago spoke of the dark and sunlit way and emphasised the superiority of the second over the other.

It is not either because I have myself trod the sunlit way or flinched from difficulty and suffering and danger. I have had my full share of these things and the Mother has had ten times her full share. But that was because the finders of the Way had to face these things in order to conquer. No difficulty that can come on the sadhak but has faced us on the path; against many we have had to struggle hundreds of times (in fact that is an understatement) before we could overcome; many still remain protesting that they have a right until the perfect perfection is there. But we have never consented to admit their inevitable necessity for others. It is in fact to ensure an easier path to others hereafter that we have borne that burden. It was with that object that the Mother once prayed to the Divine that whatever difficulties, dangers, sufferings were necessary for the path might be laid on

her rather than on others. It has been so far heard that as a result of daily and terrible struggles for years those who put an entire and sincere confidence in her *are* able to follow the sunlit path and even those who cannot, yet when they do put the trust find their path suddenly easy and, if it becomes difficult again, it is only when distrust, revolt, abhiman, or other darknesses come upon them. The sunlit path is not altogether a fable.

But you will ask what of those who cannot? Well, it is for them I am putting forth all my efforts to bring down the supramental Force within a measurable time. I know that it will descend but I am seeking its near descent and, with whatever dark obstruction of the earth-nature or furious inroads of the Asuric forces seeking to prevent it, it is approaching the terrestrial soil. The supramental is not, as you imagine, something cold, hard and rocklike. It bears within it the presence of the Divine Love as well as the Divine Truth and its reign here means for those who accept it the straight and thornless path on which there is no wall or obstacle of which the ancient Rishis saw the far-off promise.

The dark path is there and there are many who make like the Christians a gospel of spiritual suffering; many hold it to be the unavoidable price of victory. It may be so under certain circumstances, as it has been in so many lives at least at the beginning, or one may choose to make it so. But then the price has to be paid with resignation, fortitude or a tenacious resilience. I admit that if borne in that way the attacks of the Dark Forces or the ordeals they impose have a meaning. After each victory gained over them, there is then a sensible advance; often they seem to show us the difficulties in ourselves which we have to overcome and to say, "Here you must conquer us and here." But all the same it is a too dark and difficult way which nobody should follow on whom the necessity does not lie.

In any case one thing can never help and that is to despond always and say, "I am unfit; I am not meant for the Yoga." And worse still are these perilous mental formations such as you are always accepting that you must fare like X (one whose difficulty of exaggerated ambition was quite different from yours) and

that you have only six years etc. These are clear formations of the Dark Forces seeking not only to sterilise your aspiration but to lead you away and so prevent your sharing in the fruit of the victory hereafter. I do not know what Krishnaprem has said but his injunction, if you have rightly understood it, is one that cannot stand as valid, since so many have done Yoga relying on tapasya or anything else but not confident of any divine Grace. It is not that, but the soul's demand for a higher Truth or a higher life that is indispensable. Where that is, the Divine Grace whether believed in or not, will intervene. If you believe, that hastens and facilitates things; if you cannot yet believe, still the soul's aspiration will justify itself with whatever difficulty and struggle.

*

Prāyopaveśana would be quite the wrong movement, it would be a sort of Satyagraha against the Divine. In essence it is an attempt to force the Divine to do what one wants instead of trusting to him to do what is best according to his own divine will and wisdom; it is a culminating act of vital impatience and disappointed desire, while the true movement is a pure aspiration and an ardent surrender.

After all, one has not a *right* to call on the Divine to manifest himself; it can come only as a response to a spiritual or psychic state of consciousness or to a long course of sadhana rightly done; or, if it comes before that or without any apparent reason, it is a grace; but one cannot demand or compel grace; grace is something spontaneous which wells out from the Divine Consciousness as a free flower of its being. The bhakta looks for it, but he is ready to wait in perfect reliance, even if need be all his life, knowing that it will come, never varying in his love and surrender because it does not come now or soon. That is the spirit of so many songs of the devotees, which you have sung yourself; I heard one such song from you in a record some time ago and a very beautiful song it was and beautifully sung—“Even if I have not won thee, O Lord, still I adore.”

What prevents you from having that, is the restless element

of vital impatience and ever recurring or persisting disappointment at not having what you want from the Divine. It is the idea, "I wish so much for it, surely I ought to have it; why is it withheld from me?" But wanting, however strongly, is not a passport to getting; there is something more to it than that. Our experience is that too much vital eagerness and insistence often blocks the way, it makes a sort of obstructing mass or a whirl of restlessness and disturbance which leaves no quiet space for the Divine to get in or for the thing wished for to come. Often it does come, but when the impatience has been definitely renounced and one waits, quietly open, for whatever may be (or for the time not be) given. But so often when you are preparing for a greater progress in the true devotion the habit of this vital element stands up and takes hold and interrupts the progress made.

The joylessness also comes from the vital. It is partly due to the disappointment but not solely, for it is a very common phenomenon when there is a pressure from the mind and soul on the vital to give up its attachments and its full unpurified acceptance of the outward life; it often gets a rajasic or tamasic vairagya instead of the sattwic kind, refuses to take a joy in anything, becomes dry, listless or unhappy, or it says, "Well, I have given up, I am giving up, but in exchange I must have the realisation you promise me; why don't I get it, I can't wait." To get rid of that, it is best, even while observing it, not to identify oneself with it; if the mind or some part of the mind sanctions or justifies, it will persist or recur. If sorrow there must be, the other kind you described in the previous letter is preferable, the sadness that has a sweetness in it, no revolt, no despair, only the psychic longing for the true thing to come.

It is not by *prāyopavesāna* or anything of the kind that it must come, but by the increase of the pure and true bhakti. You have been constantly told so by us and lately by Krishnaprem and his guru; remember that she told you that the presence of Krishna during your singing was a sure sign that it would come, —not necessarily today or tomorrow or the day after, but that it would surely come. We can't be all of us wrong and your vital

impatience only in the right. For heaven's sake, get rid of it and settle down to quiet aspiration and an ever growing devotion and surrender leaving it to Krishna to do what he is sure to do in his own way and time.

Ordinary Life, Vaishnava Traditions and the Supramental Yoga

Even if things were as bad as you say, I don't see how going away would help you in the least—(it would certainly not make you non-human); some have tried before this device of progress by departure and it has never succeeded, they have had to come back and face their difficulty. Why do you always come back to this notion of going away or entertain it at all? It is quite meaningless from any rational point of view; it only encourages the adverse Force which wants to take you away from the path to return to the attack, and it prevents the speedy conversion of that dissatisfied part of your vital which is always kicking against the pricks—the pricks of your soul and of your spiritual destiny. However sad the prospect may seem to this dissatisfied vital fragment, your destiny is to be a Yogi and the sooner it reconciles itself to the prospect the better for it and for all the other personalities in you. Your alleged or inferred unfitness is a delusion, an imagination of this vital part; it doesn't exist. If persistence of difficulties is a proof of unfitness, then there is nobody in this Asram who is fit for the Yoga. We would all have to pack up our belongings or give them away and start either to get back to the ordinary world or en route for the Himalayas.

You describe the rich human egoistic life you might have lived and you say "not altogether a wretched life, you will admit". On paper, it sounds even very glowing and satisfactory, as you describe it. But there is no real or final satisfaction in it, except for those who are too common or trivial to seek anything else, and even they are not really satisfied or happy,— and in the end, it tires and palls. Sorrow and illness, clash and strife, disappointment, disillusionment and all kinds of human suffering come and beat its glow to pieces—and then decay and death.

That is the vital egoistic life as man has found it throughout the ages, and yet it is that which this part of your vital regrets? How do you fail to see, when you lay so much stress on the desirability of a merely human consciousness, that suffering is its badge? When the vital resists the change from the human into the divine consciousness, what it is defending is its right to sorrow and suffering and all the rest of it, varied and relieved no doubt by some vital or mental pleasures and satisfactions, but very partially relieved by them and only for a time. In your own case, it was already beginning to pall on you and that was why you turned from it. No doubt, there were the joys of the intellect and of artistic creation, but a man cannot be an artist alone; there is the outer quite human lower vital part and, in all but a few, it is the most clamorous and insistent part. But what was dissatisfied in you? It was the soul within, first of all, and through it the higher mind and the higher vital. Why then find fault with the Divine for misleading you when it turned you to the Yoga or brought you here? It was simply answering to the demand of your own inner being and the higher parts of your nature. If you have so much difficulty and become restless, it is because you are still divided and something in your lower vital still regrets what it has lost or, as a price for its adhesion or a compensation — a price to be *immediately* paid down to it, — asks for something similar and equivalent in the spiritual life. It refuses to believe that there is a greater compensation, a larger vital life waiting for it in which there shall not be the old inadequacy and unrest and final dissatisfaction. The foolishness is not in the Divine guidance, but in the irrational and obstinate resistance of this confused and obscure part of you to the demand, made not only by this Yoga, but by all Yoga — to the necessary conditions for the satisfaction of the aspiration of your own soul and higher nature.

The “human” vital consciousness has moved always between these two poles, the ordinary vital life which cannot satisfy and the recoil from it to the ascetic solution. India has gone fully through that see-saw; now Europe is beginning once more after a full trial to feel the failure of the mere vital egoistic life.

The traditional Yogas — to which you appeal — are founded upon the movement between these two poles. On one side are Shankara and Buddha and most go, if not by the same road, yet in that direction; on the other are Vaishnava or Tantric lines which try to combine asceticism with some sublimation of the vital impulse. And where did these lines end? They fell back to the other pole, to a vital invasion, even corruption and a loss of their spirit. At the present day the general movement is towards an attempt at reconciliation, and you have alluded sometimes to some of the protagonists of this attempt and asked me my opinion about them, yours being unfavourable. But these men are not mere charlatans, and if there is anything wrong with them (on which I do not pronounce), it can only be because they are unable to resist the magnetic pull of this lower pole of the egoistic vital desire-nature. And if they are unable to resist, it is because they have not found the true force which will not only neutralise that pull and prevent deterioration and downward lapse, but transform and utilise and satisfy in their own deeper truth, instead of destroying or throwing away, the life-force and the embodiment in matter; for that can only be done by the supermind power and by no other.

You appeal to the Vaishnava-Tantric traditions, to Chaitanya, Ramprasad, Ramakrishna. I know something about them and, if I did not try to repeat them, it is because I do not find in them the solution, the reconciliation I am seeking. Your quotation from Ramprasad does not assist me in the least — and it does not support your thesis either. Ramprasad is not speaking of an embodied, but of a bodiless and invisible Divine — or visible only in a subtle form to the inner experience. When he speaks of maintaining his claim or case against the Mother until she lifts him into her lap, he is not speaking of any outer vital or physical contact, but of an inner psychic experience; precisely, he is protesting against her keeping him in the external vital and physical nature and insists on her taking him on the psycho-spiritual plane into *spiritual* union with her. All that is very good and very beautiful, but it is not enough; the union has indeed to be realised in the inner psycho-spiritual experience first, because

without that nothing sound or lasting can be done; but also there must be a realisation of the Divine in the outer consciousness and life, in the vital and physical planes on their own essential lines. It is that which, without your mind understanding it or how it is to be done, you are asking for, and I too; only I see the necessity of a vital transformation, while you seem to think and to demand that it should be done without any radical transformation, leaving the vital as it is. In the beginning, before I discovered the secret of the supermind, I myself tried to seek the reconciliation through an association of the spiritual consciousness with the vital, but my experience and all experience shows that this leads to nothing definite and final,—it ends where it began, midway between the two poles of human nature. An association is not enough, a transformation is indispensable.

The tradition of later Vaishnava bhakti is an attempt to sublimate the vital impulses through love by turning human love towards the Divine. It made a strong and intense effort and had many rich and beautiful experiences; but its weakness was just there, that it remained valid only as an inner experience turned towards the inner Divine, but it stopped at that point. Chaitanya's *prema* was nothing but a psychic divine love with a strong sublimated vital manifestation. But the moment Vaishnavism before or after him made an attempt at greater externalisation, we know what happened—a vitalistic deterioration, much corruption and decline. You cannot appeal to Chaitanya's example as against psychic or divine love; it was not something merely vital-human; in its essence, though not in its form, it was very much the first step in the transformation, which we ask of the sadhaks, to make their love psychic and use the vital not for its own sake, but as an expression of the soul's realisation. It is the first step and perhaps for some it may be sufficient, for we are not asking everybody to become supramental; but for any *full* manifestation on the physical plane the supramental is indispensable.

In this later Vaishnava tradition the sadhana takes the form of an application of human vital love in all its principal turns to the Divine; *viraha, abhimāna*, even complete separation (like the

departure of Krishna to Mathura) are made prominent elements of this Yoga. But all that was only meant — in the sadhana itself, not in the Vaishnava poems — as a passage of which the end is *milana* or complete union; but the stress laid on the untoward elements by some would almost seem to make strife, separation, *abhimāna*, the whole means if not the very object of this kind of *prema-yoga*. Again, this method was only applied to the inner, not to a physically embodied Divine and had a reference to certain states and reactions of the inner consciousness in its seeking after the Divine. In the relations with the embodied Divine manifestation, or, I may add, of the disciple with the Guru, such things might rise as a result of human imperfection, but they were not made part of the theory of the relations. I do not think they formed a regular and authorised part of the relations of the bhaktas to Chaitanya or of the disciples at Dakshineshwar towards Ramakrishna! On the contrary, the relation of the disciple to the Guru in the Guruvada is supposed always to be that of worship, respect, complete happy confidence, unquestioning acceptance of the guidance. The application of the unchanged vital relations to the embodied Divine or the Guru may lead and has led to movements which are not conducive to the progress of the Yoga.

Ramakrishna's Yoga was also turned only to an inner realisation of the inner Divine, — nothing less but also nothing more. I believe his sentence about the claim of the sadhak on the Divine for whom one has sacrificed everything was the assertion of an inner and not an outer claim, on the inner rather than on any physically embodied Divine: it was a claim for the full spiritual union, the God-lover seeking the Divine, but the Divine also giving himself and meeting the God-lover. There can be no objection to that; such a claim all seekers of the Divine have; but as to the modalities of this Divine meeting, it does not carry us much farther. In any case, my object is a realisation on the physical plane and I cannot consent merely to repeat Ramakrishna. I seem to remember too that for a long time he was withdrawn into himself, all his life was not spent with his disciples! He got his siddhi first in retirement and when

he came out and received everyone—well, a few years of it wore out his body. To that, I suppose, he had no objection; he even pronounced a theory, when Keshav Chandra was dying, that spiritual experience *ought* to wear out the body! But at the same time, when asked why he got his illness in the throat, he answered that it was the sins of his disciples which they threw upon him and he had to swallow! Not being satisfied, as he was, with an inner liberation alone, I cannot accept these ideas or these results, for it does not sound to me like a successful meeting of the Divine and the sadhak *on the physical plane*, however successful it might have been for the inner life. Krishna did great things and was very clearly a manifestation of the Divine. But I remember a passage of the Mahabharata in which he complains of the unquiet life his followers and adorers gave him, their constant demands, reproaches, their throwing of their unregenerate vital nature upon him. And in the Gita he speaks of this human world as a transient and sorrowful affair and, in spite of his gospel of divine action, seems almost to admit that to leave it is after all the last solution! The traditions of the past are very great in their own place,—in the past; but I do not see why we should merely repeat them and not go farther. In the spiritual development of the consciousness upon earth the great past ought to be followed by a greater future.

There is the rub that you seem all to ignore entirely, the difficulties of the physical embodiment and the divine realisation on the physical plane. For most, it seems to be a simple alternative; either the Divine comes down in full power and the thing is done — no difficulty, no necessary conditions, no law or process, only miracle and magic, or else, well, this can't be the Divine! Again you all (or almost all) insist on the Divine becoming human, remaining in the human consciousness and you protest against any attempt to make the human divine; on the other hand there is an outcry of disappointment, bewilderment, distrust, perhaps indignation, if there are human difficulties, if there is strain in the body, a swaying struggle with adverse forces, obstacles, checks, illness, and some begin to say, "Oh, there is nothing divine here!" — as if one could remain, vitally and physically, in the

untransformed undivinised human consciousness, in unchanged contact with it, satisfying its demands, and yet be immune under all circumstances and in all conditions against strain and struggle and illness. If I want to divinise the human consciousness, to bring down the supramental, the Truth-Consciousness, the Light, the Force into the physical to transform it, to create there a great fullness of Truth and Light and Power and Bliss and Love, and make these other things impossible, the response is repulsion, or fear, or unwillingness—or a doubt whether it is possible. On one side there is the claim that illness and the rest should be impossible, on the other a violent rejection of the only condition under which these things can become impossible. I know that this is the natural inconsistency of the human vital mind wanting two inconsistent and incompatible things together; but that is one reason why it is necessary to transform the human and put something a little more luminous in its place.

But is the Divine then something so terrible, horrible or repellent that the idea of its entry into the physical, its divinising of the human should create this shrinking, refusal, revolt or fear? I can understand that the unregenerate vital attached to its own petty sufferings and pleasures, to the brief ignorant drama of life, should shrink from what will change it. But why should a God-lover, a God-seeker, a sadhak fear the divinisation of the consciousness! Why should he object to becoming one in nature with what he seeks, why should he recoil from *sādṛśya-mukti*? Behind this fear there are usually two causes: first, there is the feeling of the vital that it will have to cease to be obscure, crude, muddy, egoistic, unrefined (spiritually), full of stimulating desires and small pleasures and interesting sufferings (for it shrinks even from the Ananda which will replace them); next, there is some vague ignorant idea of the mind, due, I suppose, to the ascetic tradition, that the divine nature is something cold, bare, empty, austere, aloof, without the glorious riches of the egoistic human vital life. As if there were not a divine vital and as if that divine vital is not itself and, when it gets the means to manifest, will not make the life on earth also infinitely more full of beauty, love, radiance, warmth, fire, intensity and divine passion and

capacity for bliss than the present impotent, suffering, pettily and transiently excited and soon tired vitality of the still so imperfect human creation!

But you will say that it is not the Divine from which you recoil, rather you accept and ask for it (provided that it is not too divine), but what you object to is the supramental—grand, aloof, incomprehensible, unapproachable, a sort of austere Nirakara Brahman. The supramental so described is a bogey created by this part of your vital mind in order to frighten itself and justify its attitude. Behind this strange description there seems to be an idea that the supramental is a new version of the Vedantic featureless and incommunicable Parabrahman, vast, grand, cold, empty, remote, devastating, overwhelming; it is not quite that, of course, since it can come down, but for all practical purposes it is just as bad! It is curious that you admit your ignorance of what the supramental can be, and yet you in these moods not only pronounce categorically what it is like, but reject emphatically my experience about it as of no practical validity or not valid for anybody but myself! I have not insisted, I have answered only casually because I am not asking you now to be non-human or divine, much less to be supramental; but as you are always returning to this point when you have these attacks and making it the pivot—or at least a main support—of your depression, I am obliged to answer. The supramental is *not* grand, aloof, cold and austere; it is not something opposed to or inconsistent with a full vital and physical manifestation; on the contrary, it carries in it the only possibility of the full fullness of the vital force and the physical life on earth. It is because it is so, because it was so revealed to me and for no other reason that I have followed after it and persevered till I came into contact with it and was able to draw down some power of it and its influence. I am concerned with the earth and not with worlds beyond for their own sake; it is a terrestrial realisation that I seek and not a flight to distant summits. All other Yogas regard this life as an illusion or a passing phase; the supramental Yoga alone regards it as a thing created by the Divine for a progressive manifestation and takes the fulfilment

of the life and the body for its object. The supramental is simply the Truth-Consciousness and what it brings in its descent is the full truth of life, the full truth of consciousness in Matter. One has indeed to rise to high summits to reach it, but the more one rises, the more one can bring down below. No doubt, life and body have not to remain the ignorant, imperfect, impotent things they are now; but why should a change to fuller life-power, fuller body-power be considered something aloof, cold and undesirable? The utmost Ananda the body and life are now capable of is a brief excitement of the vital mind or the nerves or the cells which is limited, imperfect and soon passes; with the supramental change all the cells, nerves, vital forces, embodied mental forces can become filled with a thousandfold Ananda, capable of an intensity of bliss which passes description and which need not fade away. How aloof, repellent and undesirable! The supramental love means an intense unity of soul with soul, mind with mind, life with life, and an entire flooding of the body consciousness with the physical experience of oneness, the presence of the Beloved in every part, in every cell of the body. Is that too something aloof and grand but undesirable? With the supramental change, the very thing on which you insist, the possibility of the free physical meeting of the embodied Divine with the sadhak without conflict of forces and without undesirable reactions becomes possible, assured and free. That too is, I suppose, something aloof and undesirable? I could go on—for pages, but this is enough for the moment.

Different Approaches through Love and Bhakti

It seems to me that these differences of valuation come from the mind laying stress on one side or another of the approach to the Divine or exalting one aspect of realisation over another. When there is the approach through the heart, through Love and Bhakti, its highest culmination is in a transcendent Ananda, an unspeakable Bliss or Beatitude of union with the Divine through Love. The school of Chaitanya laid especial and indeed sole emphasis on this way and made this the whole reality of

Krishna consciousness. But the transcendent Ananda is there at the origin and end of all existence and this is not and cannot be the sole way to it. One can arrive at it also through the Vasudeva consciousness, which is a wider, more mentalised approach — as in the method of the Gita where knowledge, works, bhakti are all centred in Krishna, the One, the Supreme, the All and arrive through the cosmic consciousness to the luminous transcendence. There is the way too described in the Taittiriya Upanishad, the Vedanta's Gospel of Bliss. These are certainly wider methods, for they take up the whole existence through all its parts and ways of being to the Divine. If less intense at their starting point, a vaster and slower movement, there is no reason to suppose that they are less intense on their summits of arrival. It is the same transcendence to which all arrive, either with a large movement gathering up everything spiritual in us to take it there in a vast sublimation, or in a single intense uplifting from one point, a single exaltation leaving all the rest aside. But who shall say which is profounder of the two? Concentrated love has a profundity of its own which cannot be measured; concentrated wisdom has a wider profundity but one cannot say that it is deeper.

Cosmic values are only reflections of the truth of the Transcendence in a lesser truth of time experience which is separative and sees diversely a thousand aspects of the One. As one rises through the mind or any part of the manifested being, any one or more of these aspects can become more and more sublimated and tend towards its supreme transcendental intensity, and whatever aspect is so experienced is declared by the spiritualised mental consciousness to be the supreme thing. But when one goes beyond mind all tends not only to sublimate but to fuse together until the separated aspects recover their original unity, indivisible in the absoluteness of all made one. Mind can conceive and have experience of existence without consciousness or Ananda and this receives its utmost expression in the inconscience attributed to Matter. So also it can conceive of Ananda or Love as a separate principle; it even feels consciousness and existence losing themselves in a trance or swoon of

Love or Ananda. So too the limited personal loses itself in the illimitable Person, the lover in the supreme Beloved, or else the personal in the Impersonal,—the lover feels himself immersed, losing himself in the transcendental reality of Love or Ananda. The personal and the impersonal are themselves posited and experienced by mind as separate realities—and one or other is declared and seen as supreme, so that the personal can have *laya* in the Impersonal or on the contrary the impersonal disappear into the absolute reality of the supreme and divine Person; the impersonal in that view is only an attribute or power of the personal Divine. But at the summit of spiritual experience passing beyond mind one begins to feel the fusion of all these things into one. Consciousness, Existence, Ananda return to their indivisible unity, Sachchidananda. The personal and the impersonal become irrevocably one, so that to posit one as against the other appears as an act of ignorance. This tendency of unification is the basis of the supramental consciousness and experience; for cosmic or creative purposes the supermind can put forward one aspect prominently where that is needed, but it is aware of all the rest behind it or contained in it and does not admit into its view any separation or opposition anywhere. For that reason a supramental creation would be a multifold harmony and not a separative process fragmenting or analysing the One into parts and setting these parts over against each other or else putting them contradictorily against each other and having afterwards to synthetise and piece them together in order to arrive at harmony or else to exclude some or all of the parts in order to realise the indivisible One.

You speak of the Vaishnava school emphasising the personal felicities, as in the classification of the *bhāvas*, and you say that these are short and quick feelings and lack in vastness or amplitude. No doubt, when they are first felt and as they are felt by the limited consciousness in its ordinary functioning and movement; but that is only because the emotional in man with this imperfect bodily instrument acts largely by spasms of intensity when it wants to sublimate and cannot maintain either the continuity or the extension or the sublimated paroxysm of

these things. But as the individual becomes cosmic (the universalising of the individual without his losing his higher individuality as a divine centre is one of the processes which lead towards the supramental Truth), this disability begins to disappear. The truth behind the *dāsyā* or *madhura* or any other *bhāva* or fusion of *bhāvas* becomes a vast and ample continuous state,—if by chance they lose something of their briefer intensities by this extension of themselves, they recover them a thousandfold in the movement of the universalised individual towards the Transcendence. There is an ever enlarging experience which takes up the elements of spiritual realisation and in this uplifting and transforming process they become other and greater things than they were and more and more they take their place by sublimation, first in the spiritual-cosmic, then in the all-embracing transcendent whole.

The difference of view between Shankara and Ramanuja and on the other side Chaitanya about Krishna arises from the turn of their experience. Krishna was only an aspect of Vishnu to the others because that ecstatic form of love and bhakti which had become associated with Krishna was not for them the whole. The Gita, like Chaitanya, but from a different viewpoint, regarded Krishna as the Divine himself. To Chaitanya he was Love and Ananda, and Love and Ananda being for him the highest transcendental experience, so Krishna too must be the Supreme. For the writer of the Gita, Krishna was the source of Knowledge and Power as well as Love, the Destroyer, Preserver, Creator in one, so necessarily Vishnu was only an aspect of this universal Divine. In the Mahabharat indeed Krishna comes as an incarnation of Vishnu, but that can be turned by taking it that it was through the Vishnu aspect as his frontal appearance that he manifested, for that the greater Godhead can manifest later than others is logical if we consider the manifestation as progressive,—just as Vishnu is in the Veda a younger Indra, Upendra, but gains upon his elder and subsequently takes place above him in the Trimurti.

I cannot say much about the Vaishnava idea of the form of Krishna. Form is the basic means of manifestation and without

it it may be said that the manifestation of anything is not complete. Even if the Formless logically precedes Form, yet it is not illogical to assume that in the Formless, Form is inherent and already existent in a mystic latency, otherwise how could it be manifested? For any other process would be the creation of the non-existent, not manifestation. If so, it would be equally logical to assume that there is an eternal form of Krishna, a spirit body. As for the highest Reality, it is no doubt absolute Existence, but is it only that? Absolute Existence as an abstraction may exclude everything else from itself and amount to a sort of very positive zero; but Absolute Existence as a reality — who shall define and say what is or is not in its inconceivable depths, its illimitable Mystery? Mind can ordinarily conceive of the Absolute Existence only as a negation of its own concepts spatial, temporal or other. But it cannot tell what is at the basis of manifestation or what manifestation is or why there is any manifestation at all out of its positive zero — and the Vaishnavas, we must remember, do not admit this conception as the absolute and original truth of the Divine. It is therefore not rigidly impossible that what we conceive and perceive as spatial form may correspond to some mysterious power of the spaceless Absolute. I do not say all that as a definite statement of Truth, I am only pointing out that the Vaishnava position on its own ground is far from being logically or metaphysically untenable.

Love and Bhakti for Krishna

As for Krishna, why not approach simply and straight? The simple approach means trust. If you pray, trust that he hears. If the reply takes long in coming, trust that he knows and loves and that he is wisest in the choice of the time. Meanwhile quietly clear the ground, so that he may not have to trip over stone and jungle when he comes. That is my suggestion and I know what I am saying — for whatever you may say, I know very well all human difficulties and struggles and I know of the cure. That is why I press always on the things that would minimise and shorten the struggles and difficulties, — the psychic turn, faith, perfect

and simple confidence and reliance. These, let me remind you, are tenets of the Vaishnava Yoga. Of course, there is the other Vaishnava way which swings between yearning and despair—ardent seeking and the pangs of viraha. It is that you seem to be following and I do not deny that one can arrive by that as one can by almost any way, if followed sincerely. But then those who follow it find a rasa even in viraha, in the absence and the caprice of the Divine Lover. Some of them have sung that they have followed after him all their lives but always he has slipped away from their vision and even in that they find a rasa and never cease following. But you find no rasa in it. So you cannot expect me to approve of that for you. Follow after Krishna by all means, but follow with the determination to arrive: don't do it with the expectation of failure or admit any possibility of breaking off half-way.

*

As for the “hostile forces”, it is quite true that to persuade the sadhak to cut off outer contact with us on the plea of solitude and intense sadhana, is a favourite device of theirs and has often led to disaster. It gives them a freer field to bring in their own influence and represent it as the divine influence or as our own influence, and it ends often by a revolt and finally the sadhak cuts off the inner relation also or even turns hostile. This has happened fairly often and that is one reason why I have usually discouraged that or any kind of complete solitude. Absence from darshan for a short time if there is good reason for it, but more than that is inadvisable.

The direct approach to Krishna is not safe or easy; it can sometimes be terribly risky, if there is anything in the sadhak that interferes with the clarity and singleness of his attitude. In that case any wrong desire, vanity, pride, sexual impurity, ambition, or any other pronounced weakness may open the way to serious distortion of the sadhana, turning into wrong ways, breakdown or collapse, even to spiritual perdition. Krishna's own influence cannot be a wrong influence, if it is really his, but it is easy to mistake and accept some other influence as his. Especially, he is

the Lord of Love and Beauty and Delight, and nothing is easier for men who are always going in the wrong way in search of these things, to bring their wrong ways into their search for him also. That experience must be one of the reasons why the seers insist on the approach through the guru and say that Krishna cannot be attained otherwise. It is the reason why they insist on vairagya, detachment from the ordinary aims and ends of human nature as so necessary. That is also why Krishna does not like to show himself until the field is clear for him! The intervention of some power or influence that represents itself as he, even puts on an imitation of his form or voice would be fatal if accepted; but even his real manifestation might bring about an upset in someone not really ready for it. One must be on guard against these dangers and it is the guru who can interpose himself as a shield against them.

The identification of the guru with the Divine is a common rule, not peculiar to the Vaishnava bhakti. Ordinarily, so far as the outer mind is concerned, it is a firm belief; the outer mind can believe, can by its faith have some feeling of it, can with the help of the heart worship, adore, serve with humility and fidelity; ordinarily, this is enough and it prepares besides for something deeper. But to realise the identity is another matter, [*incomplete*]

*

I do not know that I can answer your question about what Krishnaprem means by Krishna's light. It is certainly not what people ordinarily mean by knowledge. He may mean the light of the Divine Consciousness, or if you like, the light that is the Divine Consciousness or the light that comes from it or he may mean the luminous being of Krishna in which all things are in their supreme truth,—the truth of Knowledge, the truth of Bhakti, the truth of ecstasy and Ananda, everything is there.

There is also a manifestation of Light—the Upanishads speak of *jyotir brahma*, the Light that is Brahman. Very often the sadhak feels a flow of Light upon him or around him or a flow of Light invading his centres or even his whole being and body, penetrating and illuminating every cell and in that Light

there grows the spiritual consciousness and one becomes open to all or many of its workings and realisations. Appositely I have a review of a book of Ramdas (of the *Vision*) before me in which is described such an experience got by the repetition of the Rama mantra, but, if I understand rightly, after a long and rigorous self-discipline. "The mantra having stopped automatically, he beheld a small circular light before his mental vision. This yielded him thrills of delight. This experience having continued for some days, he felt a dazzling light like lightning, flashing before his eyes, which ultimately permeated and absorbed him. Now an inexpressible transport of bliss filled every pore of his physical frame." It does not always come like that — very often it comes by stages or at long intervals, at first, working on the consciousness till it is ready.

We speak here also of Krishna's light — Krishna's light in the mind, Krishna's light in the vital; but it is a special light — in the mind it brings clarity, freedom from obscurity, mental error and perversion; in the vital it clears out all perilous stuff and where it is there is a pure and divine happiness and gladness.

There are some however who seem to regard this invasion of Light not merely as a thing without value but a thing of evil or, possibly, one that can be such and so to be distrusted: for I have before me a letter describing an experience very similar to Ramdas's, but it was condemned by the writer's Guru as an attempt at possession by a devil to be dispelled by uttering the name of Ramakrishna!

But why limit oneself, insist on one thing alone and shut out every other? Whether it be by Bhakti or by Light or by Ananda or by Peace or by any other means whatsoever that one gets the initial realisation of the Divine, to get it is the thing and all means are good that bring it.

If it is Bhakti that one insists on, it is by Bhakti that Bhakti comes and Bhakti in its fullness is nothing but an entire self-giving, as Krishnaprem very rightly indicates. Then all meditation, all tapasya, all means of prayer or mantra must have that as its end and it is when one has progressed sufficiently in that that the Divine Grace descends and the realisation comes

and develops till it is complete. But the moment of its advent is chosen by the wisdom of the Divine alone and one must have the strength to go on till it arrives; for when all is truly ready it cannot fail to come.

*

As to the point that puzzles you, it only arises from a confusion between the feeling of the devotee and the observation of the observer. Of course the devotee loves Krishna because Krishna is lovable and not for any other reason—that is his feeling and his true feeling. He has no time to bother his head about what in himself made him able to love, the fact that he does love is sufficient for him and he does not need to analyse his emotions. The Grace of Krishna consists for him in Krishna's very loveliness, in his showing of himself to the devotee, in his call, the cry of his flute. That is enough for the heart or, if there is anything more, it is the yearning that others or all may hear the flute, see the face, feel all the beauty and rapture of this love.

It is not the heart of the devotee but the mind of the observer that questions how it is that the Gopis were called or responded at once and others—the Brahmin women, for instance—were not called or did not respond at once. Once the mind puts the question, there are two possible answers, the mere will of Krishna without any reason, what the mind would call his absolute divine choice or his arbitrary divine caprice or else the readiness of the heart that is called, and that amounts to *adhikāri-bheda*. A third reply would be—circumstances, as for instance, the parking off of the spiritual ground into closed preserves. But how can circumstances prevent the Grace from acting? In spite of the parking off, it works—Christians, Mahomedans do answer to the Grace of Krishna. Tigers, ghouls must love if they see him, hear his flute? Yes, but why do some hear it and see him, others not? We are thrown back on the two alternatives, Krishna's Grace calls whom it wills to call without any determining reason for the choice or rejection, his mercy or his withholding or at least delaying of his mercy, or else he calls the hearts that are ready to vibrate and leap up at his call—and even there he waits till the moment has come. To say that it does not depend

on outward merit or appearance of fitness is no doubt true; the something that was ready to wake in spite, it may be, of many hard layers in which it was enclosed, may be something visible to Krishna and not to us. It was there perhaps long before the flute began to play, but he was busy melting the hard layers so that the heart in its leap might not be pressed back by them when the awakening notes came. The Gopis heard and rushed out into the forest—the others did not—or did they think it was only some rustic music or some rude cowherd lover fluting to his sweetheart, not a call that learned and cultured or virtuous ears could recognise as the call of the Divine? There is something to be said for the *adhikāri-bheda*. But of course it must be understood in a large sense,—some may have the *adhikāra* for recognising Krishna's flute, some for the call of Christ, some for the dance of Shiva—to each his own way and his nature's answer to the Divine Call. *Adhikāra* cannot be stated in rigid mental terms, it is something spiritual and subtle, something mystic and secret between the called and the Caller.

As for the swelled head, the theory of Grace may no doubt contribute to it, though I should imagine that the said head never felt the Grace but only the magnanimity of its own ego. The swelling may come equally in the way of personal effort as by the craving for Grace. It is fundamentally not due to either, but to a natural predisposition to this kind of oedema.

*

If Krishna was always and by nature cold and distant (Lord, what a discovery—Krishna of all people!), how could human devotion and aspiration come near him—he and it would soon be like the North and South Pole, growing icier and icier, always facing each other but never seeing because of the earth's bulge. Also, if Krishna did not want the human bhakta as well as the bhakta wanting him, who could get at him?—he would be always sitting on the snows of the Himalayas like Shiva. History describes him otherwise and he is usually charged with being too warm and sportive.

*

If one wants Krishna, one gets Krishna — but he is a sufficiently trying Deity and does not come at once, though he may come suddenly at any time. But usually one has to want him so badly and obstinately that one is prepared to pay any price. One has to know how to wait as well as to want — to go on insisting and insisting without taking heed of even the longest denial. The psychic can do that — but the mind and the vital have to learn how to do it also.

*

Certainly Krishna is credited with much caprice, difficult dealings and a playfulness (*lila!*) which the played-with do not always immediately appreciate. But there is a reasoning as well as a hidden method in his caprices, and when he does come out of it and takes a fancy to be nice to you, he has a supreme attractiveness, charm and allurement which compensates and more than compensates for all you have suffered.

*

Well, why should not Krishna ride a horse if he so wants?¹ His actions or habits cannot be fixed by the human mind or by an immutable tradition. Especially Krishna is a law to himself. Perhaps he was in a hurry to get to the place where he wanted to flute.

*

The Gopis are not ordinary people in the proper sense of the word — they are extraordinary by their extremeness of love, passionate devotion, unreserved self-giving. Whoever has that, however humble his position in other respects, learning, external sanctity etc. etc., can easily follow after Krishna and reach him; that seems to me the sense of the symbol of the Gopis. There are many other significances, of course — that is only one among the many.

*

¹ The correspondent wrote about a disciple who had a vision of Krishna galloping on a horse. — Ed.

Radha is the personification of the absolute love for the Divine, total and integral in all parts of the being from the highest spiritual to the physical, bringing the absolute self-giving and total consecration of all the being and calling down into the body and the most material Nature the supreme Ananda.

*

The coming of sex on seeing the image of Krishna and Radha is due to the past association of sex with the cult of Radha-Krishna. But in fact the image has nothing to do with sex. The true symbol for it would not be the human sex-attraction, but the soul, the psychic, hearing the call of the Divine and flowering into the complete love and surrender that brings the supreme Ananda. That is what Radha and Krishna by their divine union bring about in the human consciousness and it is so that you must regard it, throwing aside the old sex-associations.

Love of Krishna and This Yoga

What you were told of the incompatibility of love and adoration of Krishna with this Yoga, is not true. There is not and cannot be any such incompatibility. Otherwise we would not have encouraged you in your aspiration. You can seek for him quite as well here as in Brindaban.

*

As regards Krishna and devotion, I think I have already answered more than once. I have no objection at all to the worship of Krishna or the Vaishnava form of devotion, nor is there any incompatibility between Vaishnava bhakti and my supramental Yoga. There is in fact no special and exclusive form of supramental Yoga: all ways can lead to the Supermind, just as all ways can lead to the Divine.

Certainly, I will help you and am helping and will always help you; the idea that I can stop doing it or will send you away has no sense in it. If you persevere, you cannot fail to get the permanent bhakti you want and the realisation you want, but

you should learn to put an entire reliance on Krishna to give it when he finds all ready and the time come. If he wants you to clear out imperfections and impurities first, that is after all understandable. I don't see why you should not succeed in doing it, now that your attention is being so constantly turned on it. To see them clearly and acknowledge them is the first step, to have the firm will to reject them is the next, to separate yourself from them entirely so that if they enter at all it will be as foreign elements, no longer parts of your normal nature but suggestions from outside, brings their last state; even, once seen and rejected, they may automatically fall away and disappear; but for most the process takes time. These things are not peculiar to you; they are parts of universal human nature; but they can, do and will disappear.

*

But I have already told you more than once that I have no objection to your seeking Krishna or to your asking for Ananda or milan or anything else. I have never pressed you or others either to seek after Supermind or to accept me as an Avatar. These things have risen as an answer to questions put by yourself or others and I have treated them as matters of knowledge. But each must go by his own way and his own nature to his own goal. Ahaituki bhakti according to the Vaishnava ideal is the highest way and also the quickest, but if one does not feel equal to it, sahaituki bhakti will do well enough. Or if one has no turn for bhakti at all, there are plenty of other ways. Or if one does not care to follow any way, there is, as I said, in answer to X's question, the pressure of something in the nature to find the Self, if that is what it is after, or God or Krishna or the Mother or whatever it may be.

If you know the urge in you, well, follow it straight — there is no need of questioning or going this side or that. Follow the heart's urge till it reaches what it is seeking.

Chapter Nine

The Teachings of Some Modern Indian Yogis

Ramana Maharshi

According to Brunton's description of the sadhana he (Brunton) practised under the Maharshi's instructions,¹ it is the Overself one has to seek within, but he describes the Overself in a way that is at once the Psychic Being, the Atman and the Ishwara. So it is a little difficult to know what is the exact reading.

*

The methods described in the account [of *Ramana Maharshi's technique of self-realisation*] are the well-established methods of Jnanayoga—(1) one-pointed concentration followed by thought-suspension, (2) the method of distinguishing or finding out the true self by separating it from mind, life, body (this I have seen described by him [Brunton] more at length in another book) and coming to the pure I behind; this also can disappear into the Impersonal Self. The usual result is a merging in the Atman or Brahman—which is what one would suppose is meant by the Overself, for it is that which is the real Overself. This Brahman or Atman is everywhere, all is in it, it is in all, but it is in all not as an individual being in each but is the same in all—as the Ether is in all. When the merging into the Overself is complete, there is no ego, no distinguishable I, or any formed separative person or personality. All is *ekākāra*—an indivisible and undistinguishable Oneness either free from all formations or carrying all formations in it without being affected—for one can realise it in either way. There is a realisation in which all

¹ *The correspondent sent to Sri Aurobindo two paragraphs from Paul Brunton's book A Message from Arunachala (London: Rider & Co., n.d. [1936], pp. 205–7). —Ed.*

beings are moving in the one Self and this Self is there stable in all beings; there is another more complete and thoroughgoing in which not only is it so but all are vividly realised as the Self, the Brahman, the Divine. In the former, it is possible to dismiss all beings as creations of Maya, leaving the one Self alone as true — in the other it is easier to regard them as real manifestations of the Self, not as illusions. But one can also regard all beings as souls, independent realities in an eternal Nature dependent upon the One Divine. These are the characteristic realisations of the Overself familiar to the Vedanta. But on the other hand you say that this Overself is realised by the Maharshi as lodged in the heart-centre, and it is described by Brunton as something concealed which when it manifests appears as the real Thinker, source of all action, but now guiding thought and action in the Truth. Now the first description applies to the Purusha in the heart, described by the Gita as the Ishwara situated in the heart and by the Upanishads as the Purusha Antaratma; the second could apply also to the mental Purusha, *manomayah prāṇaśarīra netā* of the Upanishads, the mental Being or Purusha who leads the life and the body. So your question is one which on the data I cannot easily answer. His Overself may be a combination of all these experiences, without any distinction being made or thought necessary between the various aspects. There are a thousand ways of approaching and realising the Divine and each way has its own experiences which have their own truth and stand really on a basis, one in essence but complex in aspects, common to all, but not expressed in the same way by all. There is not much use in discussing these variations; the important thing is to follow one's own way well and thoroughly. In this Yoga, one can realise the psychic being as a portion of the Divine seated in the heart with the Divine supporting it there — this psychic being takes charge of the sadhana and turns the whole being to the Truth and the Divine, with results in the mind, the vital, the physical consciousness which I need not go into here, — that is a first transformation. We realise it next as the one Self, Brahman, Divine, first *above* the body, life, mind and not only within the heart supporting them — above

and free and unattached as the static Self but also extended in wideness through the world as the silent Self in all and dynamic too as the active Divine Being and Power, Ishwara-Shakti, containing the world and pervading it as well as transcending it, manifesting all cosmic aspects. But, what is most important for us, is that it manifests as a transcending Light, Knowledge, Power, Purity, Peace, Ananda of which we become aware above and which descends into the being and progressively replaces the ordinary consciousness by its own movements—that is the second transformation. We realise also the consciousness itself as moving upward, ascending through many planes physical, vital, mental, overmental to the supramental and Ananda planes. This is nothing new; it is stated in the Taittiriya Upanishad that there are five Purushas, the physical, the vital, the mental, the Truth Purusha (supramental) and the Bliss Purusha; it says that one has to draw the physical self up into the vital, the vital into the mental, the mental into the Truth Self, the Truth Self into the Bliss Self and so attain perfection. But in this Yoga we become aware not only of this taking up but of a pouring down of the powers of the higher Self, so that there comes in the possibility of a descent of the Supramental Self and nature to dominate and change our present nature and turn it from nature of Ignorance into nature of Truth-Knowledge (and through the supramental into nature of Ananda)—this is the third or supramental transformation. It does not always go in this order, for with many the spiritual descent begins first in an imperfect way before the psychic is in front and in charge, but the psychic development has to be attained before a perfect and unhampered spiritual descent can take place, and the last or supramental change is impossible so long as the two first have not become full and complete. That's the whole matter, put as briefly as possible.

*

The Upanishads do not say that about the Atman²—what they

² *That is, the Upanishads do not say that the Atman is situated in the core of the heart.*
—Ed.

say about the Atman is that it is in all and all is in it, it is everywhere and all this universe is the Atman. What they speak of as situated in the deeper inner heart is the Purusha in the heart or Antaratman.³ This is in fact what we call the psychic being, *caitya puruṣa*.

The heart spoken of by the Upanishads corresponds with the physical cardiac centre; it is the *hṛtpadma* of the Tantriks. As a subtle centre, *cakra*, it is supposed to have its apex on the spine and to broaden out in front. Exactly where in this area one or another feels it does not matter much; to feel it there and be guided by it is the main thing. I cannot say what the Maharshi has realised—but what Brunton describes in his book as the Self is certainly this Purusha Antaratma but concerned more with *mukti* and a liberated action than with transformation of the nature. What the psychic realisation does bring is a psychic change of the nature purifying it and turning it altogether towards the Divine. After that or along with it comes the realisation of the cosmic Self. It is these two things that the old Yogas encompassed and through them they passed to Moksha, Nirvana or the departure into some kind of celestial transcendence. The Yoga practised here includes both liberation and transcendence, but it takes liberation or even a certain Nirvana, if that comes, as a first step and not as the last step of its siddhi. Whatever exit to or towards the Transcendent it achieves is an ascent accompanied by a descent of the power, light, consciousness that has been achieved and it is by such descents that is to be achieved the spiritual and supramental transformation here. This possibility does not seem to be admitted in the Maharshi's thought,—he considers the Descent as superfluous and logically impossible. "The Divine is here, from where will He descend?" is his argument. But the Divine is everywhere, he is above as well as within, he has many habitats, many strings to his bow of Power, there are many levels of his dynamic Consciousness and each has its own light and force. He is not confined to his position in the heart or to the single cord of the psycho-spiritual

³ *āṅguṣṭhamātrah puruṣo antarātmā.*

realisation. He has also his supramental station above the heart-centre and mind-centres and can descend from there if He wants to do so.

Swami Ramatirtha

I think Ramatirtha's realisations were more mental than anything else. He had opening of the higher mind and a realisation there of the cosmic Self, but I find no evidence of a transformed mind and vital; that transformation is not a result or object of the Yoga of Knowledge. The realisation of the Yoga of Knowledge is when one feels that one lives in the wideness of something silent, featureless and universal (called the Self) and all else is seen as only forms and names; the Self is real, nothing else. The realisation of "*my* self in other forms" is a part of this or a step towards it, but in the full realisation the "*my*" should drop so that there is only *the* one Self or rather only the Brahman. For the Self is merely a subjective aspect of the Brahman, just as the Ishwara is its objective aspect. That is the Vedantic "Knowledge". Its result is peace, silence, liberation. As for the active Prakriti, (mind, vital, body), the Yoga of Knowledge does not make it its aim to transform them—that would be no use as the idea is that if the liberation has come, it will all drop off at death. The only change wanted is to get rid of the idea of ego and realise as true only the supreme Self, the Brahman.

Swami Ramdas

I have not read Ramdas's writings nor am I at all acquainted with his personality or what may be the level of his experience. The words you quote from him could be expressions either of a simple faith or of a pantheistic experience; evidently, if they are used or intended to establish the thesis that the Divine is everywhere and is all and therefore all is good, being Divine, they are very insufficient for that purpose. But as an experience, it is a very common thing to have this feeling or realisation in the Vedantic sadhana—in fact without it there would be

no Vedantic sadhana. I have had it myself on various levels of consciousness and in numerous forms and I have met scores of people who have had it very genuinely — not as an intellectual theory or perception, but as a spiritual reality which was too concrete for them to deny whatever paradoxes it may entail for the ordinary intelligence.

Of course it does not mean that all here is good or that in the estimation of values a brothel is as good as an Asram, but it does mean that all are part of one manifestation and that in the inner heart of the harlot as in the inner heart of the sage or saint there is the Divine. Again his experience is that there is one Force working in the world both in its good and in its evil — one Cosmic Force; it works both in the success (or failure) of the Asram and in the success (or failure) of the brothel. Things are done in this world by the use of the force, although the use made is according to the nature of the user, one uses it for the works of light, another for the works of Darkness, yet another for a mixture. I don't think any Vedantin (except perhaps some modernised ones) would maintain that all is good here — the orthodox Vedantic idea is that all is here an inextricable mixture of good and evil, a play of the Ignorance and therefore a play of the dualities. The Christian missionaries, I suppose, hold that all that God does is morally good, so they are shocked by the Taoist priests aiding the work of the brothel by their rites. But do not the Christian priests invoke the aid of God for the destruction of men in battle and did not some of them sing Te Deums over a victory won by the massacre of men and the starvation of women and children? The Taoist who believes only in the Impersonal Tao is more consistent and the Vedantin who believes that the Supreme is beyond good and evil, but that the Cosmic Force the Supreme has put out here works through the dualities, therefore through both good and evil, joy and suffering, has a thesis which at least accounts for the double fact of the experience of the Supreme which is All Light, All Bliss and All Beauty and a world of mixed light and darkness, joy and suffering, what is fair and what is ugly. He says that the dualities come by a separative Ignorance and so long as you

accept this separative Ignorance, you cannot get rid of that, but it is possible to draw back from it in experience and to have the realisation of the Divine in all and the Divine everywhere and then you begin to realise the Light, Bliss and Beauty behind all and this is the one thing to do. Also you begin to realise the one Force and you can use it or let it use you for the growth of the Light in you and others—no longer for the satisfaction of the ego and for the works of the ignorance and darkness.

As to the dilemma about the cruelty of things, I do not know what answer Ramdas would give. One answer might be that the Divine within is felt through the psychic being and the nature of the psychic being is that of the divine light, harmony, love, but it is covered by the mental and separative vital ego from which strife, hate, cruelty naturally come. It is therefore natural to feel in the kindness the touch of the Divine, while the cruelty is felt as a disguise or perversion in Nature, although that would not prevent the man who has the realisation from feeling and meeting the Divine behind the disguise. I have known even instances in which the perception of the Divine in all accompanied by an intense experience of universal love or a wide experience of an inner harmony had an extraordinary effect in making all around kind and helpful, even the most coarse and hard and cruel. Perhaps it is some such experience which is at the base of Ramdas's statement about the kindness. As for the Divine working, the experience of the Vedantic realisation is that behind the confused mixture of good and evil something is working that he realises as the Divine and in his own life he can look back and see what each step, happy or unhappy, meant for his progress and how it led towards the growth of his spirit. Naturally this comes fully as the realisation progresses; before that he had to walk by faith and may have often felt his faith fail and yielded to grief, doubt and despair for a time.

As for my writings, I don't know if there is any that would clear up the difficulty. You would find mostly the statement of the Vedantic experience, for it is that through which I passed and, though now I have passed to something beyond, it seems to me the most thorough-going and radical preparation for whatever

is Beyond, though I do not say that it is indispensable to pass through it. But whatever the solution, it seems to me that the Vedantin is right in insisting that one must, to arrive at it, admit the two facts, the prevalence of evil and suffering here and the experience of that which is free from these things — and it is only by the progressive experience that one can get a solution — whether through reconciliation, a conquering descent or an escape. If we start from the basis taken as an axiom that the prevalence of suffering and evil in the present and in the hard, outward fact of things, disproves of itself all that has been experienced by sages and mystics of the other side, the realisable Divine, then no solution seems possible.

Chapter Ten

Christianity and Theosophy

Christianity

The gospel of suffering, the obsessing sense of sin and the dramatic vital turn which goes with these things are certainly the most prominent defects of the Christian attitude, and they keep the religion even in its esoteric movements too much tied to a half-spiritualised vital movement. Christianity seems to me to have never clarified its intelligence by the spiritual light in the higher reaches of the mind; it is lacking in a spiritual philosophy and never really went beyond theology — in spite of one or two large thinkers who were the exception rather than the rule. One has to pass beyond even the higher mind, but not to have developed the spiritual light in it leaves the instrument defective and, instead of going above the mind, one is then apt to be content to remain below receiving whatever flashes and upliftings one can from a high and far-off and very much veiled Divine. And in such a state it is easier to mistake partial deities or even, if one is not careful, undivine Powers for the Supreme.

*

There is no connection between the Christian conception (of the Kingdom of Heaven) and the idea of the supramental descent. The Christian conception supposes a state of things brought about by religious emotion and moral purification; but these things are no more capable of changing the world, whatever value they may have for the individual, than mental idealism or any other power yet called upon for the purpose. The Christian proposes to substitute the sattwic religious ego for the rajasic and tamasic ego, but although this can be done as an individual achievement, it has never succeeded and will never succeed in accomplishing itself in the mass. It has no higher spiritual or psychological knowledge behind it and ignores the foundations

of human character and the source of the difficulty — the duality of mind, life and body. Unless there is a descent of a new Power of Consciousness, not subject to the dualities but still dynamic which will provide a new foundation and a lifting of the centre of consciousness above the mind, the Kingdom of God on earth can only be an ideal, not a fact realised in the general earth-consciousness or earth-life.

*

I feel it difficult to say anything about X's Christ and Krishna. The attraction which she says people feel for Christ has never touched me, partly because I got disgusted with the dryness and deadness of Christianity in England and partly because the Christ of the gospels (apart from a few pregnant episodes) is luminous no doubt, but somewhat shadowy and imperfectly constructed in his luminosity; there is more of the ethical put forward than of the spiritual or divine man. The Christ that has strongly lived in the Western saints and mystics is the Christ of St. Francis of Assisi, St. Teresa and others. But apart from that, is it a fact that Christ has been strongly or vividly loved by Christians? Only by a very few, it seems to me. As for Krishna, to judge him and his revealing tradition by the Christ figure and Christ tradition is not possible. The two stand in two different worlds. There is nothing in the latter of the great and boundless and sovereign spiritual knowledge and power of realisation we find in the Gita, nothing of the emotional force, passion, beauty of the Gopi symbol and all that lies behind it, nothing of the many-sided manifestation of the Krishna figure. The other has other qualities: there is no gain in putting them side by side and trying to weigh them against each other. That is the besetting sin of the Christian mind even in those who are most liberal like Dr. Stanley Jones; they cannot get altogether free from the sectarian narrowness and leave each manifestation to its own inner world for those to follow who have the inner drawing to the one or the other. I have always refrained from these comparisons in my published writings in order to avoid this error. What I feel

personally is for myself—I can't ask others to conform to my measure.

*

I do not gather from these extracts¹ the true nature of the transformation spoken of here. It seems to be something mental and moral with the love of God and a certain kind of union in separateness brought about by this divine love as the spiritualising element.

Love of God and union in separateness through that love and a transformation of the nature by realising certain mental, ethical, emotional, perhaps even physical possibilities (for the Vaishnavas speak of a new *cinmaya* body) is the principle of Vaishnava Yoga. So there is nothing here that was not already present in that line of Asiatic mysticism which looks to a Personal Deity and insists on the eternal pre-existence and survival of the individual being. A spiritual raising of the nature to its highest possibilities is a part of the Tantric discipline—so that too is not absent from Indian Yoga. The writer seems like most European writers to know only Illusionism and Buddhism and to accept them as the whole wisdom of Asia (*sagesse asiatique*); but even there he misinterprets their idea and their experience. Adwaita even in its extreme form does not aim at the extinction of existence, the adoption of nothingness, the end of the being and destruction of the essence. Only a certain kind of Nihilistic Buddhism aims at that and even so that Nothingness, Sunya, is described on another side of it as the Permanent. What these disciplines aim at is a passing from Time to Eternity, a putting off of the finite and putting on of the Infinite, a casting off of the bonds of ego and its results, desire, suffering, a falsified existence, in order to live in the true Self. These descriptions of the Christian writer betray an entire ignorance of the realisation which he decries, its infinity, freedom, surpassing peace, the ecstasy of the Brahmananda. It is an extinction of the limited individual personality but a liberation into cosmic and then into

¹ Brief extracts from a book by Henri Massis, *Défense de l'Occident* (Paris: Librairie Plon, 1927), pp. 214–24.—Ed.

transcendental consciousness — an extinction of thought and life but a liberation into an unlimited consciousness and knowledge and being. The personality is extinguished but in something greater than itself, not in something less nor in mere “*Néant*”. If it be said that that negates earthly life, so does the Christian ideal, for the Christian ideal aims at the attainment of a celestial existence beyond the earth existence (beyond this single earth life, for reincarnation is not admitted), which is only a vale of sorrows and a passing ordeal. It insists on the preservation of the spiritual personality, but so do Vaishnavism and Shaivism and other “Asiatic” ideals. The writer’s ignorance of the many-sidedness of Asiatic wisdom deprives his depreciation of it of all value.

The phrases which struck you as resembling superficially at least our ideal of transformation are of a general character and could be adopted without hesitation by almost any spiritual discipline, even Illusionism would be willing to include it as a stage or experience on the way. All depends on the content you put into the words, what actual change in the consciousness and life they are intended to cover. If the transformation be “from sin to sainthood” by the union of the soul with God “in an intellectual light full of love” — which is the most definite description of it in these extracts, — then it is not at all identical, but rather very far from what I mean by transformation. For the transformation I aim at is not from sin to sainthood but from the lower nature of the Ignorance to the Divine Nature of Light, Peace, Truth, Divine Power and Bliss beyond the Ignorance. It journeys towards a supreme self-existent good and leaves behind it the limited struggling human conception of sin and virtue; it is not an intellectual light that is the sun of its aspiration but a spiritual supra-intellectual supramental light; it is not sainthood that is its culmination but divine consciousness — or if you like, soul-hood, spirit-hood, conscious self-hood, divine-hood. There is therefore between these two kinds or two degrees of transformation an immense difference.

I. *“It is a heroic surrender in which the soul reaches the summit of free activity, the being is transformed and its faculties are*

purified, deified by Grace, without its essence being destroyed.”²

What is meant by free activity? With us the freedom consists in freedom from the darkness, limitation, error, suffering, transience of the ignorant lower Nature, but also in a total surrender to the Divine. Free action is the action of the Divine in us and through us; no other action can be free. That seems to be accepted in II and III; but this perception, this conception is as old as spiritual knowledge itself—it is not peculiar to Catholicism. What again is meant by the purification and deification of the faculties by Grace? If it is an ethical purification, that goes a very small way and does not bring deification. Again, if the deification is limited by the intellectual light, it must be a rather petty affair at the best. There was a similar aim in ancient Indian spirituality, but it had a larger sweep and a higher height than that. No spiritual discipline aims at purification or deification by the destruction of the essence—there can be no such thing, the very phrase is meaningless and self-contradictory. The essence of the being is indestructible. Even the most rigid Adwaita discipline does not aim at any such destruction; its object is the purest purity of the essential self. Transformation aims at this essential purity of the pure Spirit, but it asks also for the purity and divinity of the supreme Nature; it is not the essence of being but the accidents of our undeveloped imperfect nature that are destroyed and replaced by the manifestation of the divine Nature. The monistic Adwaita aims at the disappearance of the ego, not of the essence of the person; it arrives at its disappearance by identity with the One, by dissolution of the Nature-constructed ego into the reality of the eternal Self, for that, it says, not ego, is the essence of the person—*so’ham, tat tvam asi*. In our idea of transformation also there is the destruction of the ego, its dissolution into the cosmic and the divine consciousness, but by that destruction we recover the true or spiritual person which is an eternal portion of the Divine.

II. “The contemplation of the Christian . . . is inseparable

² This extract and those that follow appear here in translation. The original French extracts are given in the Note on the Texts.—Ed.

from the state of Grace³ and the divine life. Even when he annuls himself, his personality still triumphs by allowing itself to be torn away from all that is not itself, by breaking all the bonds that tie it to the flesh so that the living God may seize him, possess him and dwell in him.

III. “Freedom means first to subordinate what is inferior in one’s nature to what is superior.”

These passages can be taken in the above sense and as approximating to our ideal; but the confusion here is in the use of the word “personality”. Personality is a temporary formation and to eternise it would be to eternise ignorance and limitation. The true “I” is not the mental ego or the present personality which is only a mask, but the eternal I which assumes various personalities in various lives. The Christian and European conception of a single life on earth tends to bring about this error by making our present personality appear as if it were our whole self . . . Again, it is not merely the bodily individuality to which ignorance ties us, but the mental individuality and vital individuality also. All these ties have to be broken, the imperfect forms of mind and life transcended, mind transformed into something beyond mind, life into divine life, if the transformation is to be real and not merely a new shaping or heightening of the lights of the Ignorance.

IV. “This solitude of the soul [of the Asiatic ascetic] is not the true spiritual leisure, the active solitude in which the transformation from sin to sainthood takes place through the soul’s union with God in an intellectual light full of love.”

I have commented already on this description of the transformation to be effected and have to add only one more reserve. The solitude of the self in the Divine has no doubt to be active as well as static and passive; but none who has not arrived at the silence and motionless solitude of the eternal Self can have the free and integral activity of the higher divine Nature. For the

³ Grace is not a conception peculiar to the Christian spiritual idea—it is there in Vaishnavism, Shaivism, the Shakta religion,—it is as old as the Upanishads.

action is based on the silence and by the silence it is free.

V. “ . . . *the Christian life, a mystic, progressive life which is an enrichment, an infinite enlargement of the human being.*”

This is not our idea of transformation — for the human person is the mental being limited by life and body. An enrichment and enlargement of it cannot go beyond the extreme limit of that formula, it can only widen and adorn its present poverty and narrowness. It cannot ascend out of the mental ignorance into a greater Truth and Light or bring that down in any fullness into earthly nature, which is the aim of transformation as we conceive it.

VI. “*For the Asiatic, the personality is the fall of man; for the Christian it is the very plan of God, the principle of union, the summit of the natural creation, and it calls wholly to the Grace.*”

The personality of this single life in man is a formation in the Ignorance, therefore a fall; it cannot be the summit of the being. We do not admit that it is the summit of the natural creation either, but say there are higher summits to which we have to climb and reveal their powers in earthly nature. The natural creation is an evolution of the hidden Divine Consciousness in Nature which is limited and disguised at first by the Ignorance. It has still to climb out of the Ignorance — therefore to get beyond the human person into the divine person. It is in this spiritual evolution that the Plan Divine (*dessein de Dieu*) manifests its central and significant line and calls all creation to the crowning Grace.

You will see therefore that the resemblance of the transformation here to our ideal is only on the surface, in the words, but not in the content of the words which is much narrower and of another order. So far as there is agreement and coincidence, it is because there is contained in them what is common (a certain conversion of the consciousness) to all spiritual disciplines; for all, in East or in West, have a common core of experience — it is in their developments, range, turn to this or that aspect or else their will towards the totality of the Truth that they differ.

Theosophy

It [*Theosophy*] is a movement that has taken from each previous movement European or Asiatic some of its knowledge and mixed it with much error and imagination of a rather vital character. It is that mixture and the mental character of its knowledge that prevent it from being a sound thing. Many start with it, but have to leave it if they want to get to real spiritual life and knowledge.

Note on the Texts

Note on the Texts

LETTERS ON YOGA—II, the second of four volumes, contains letters in which Sri Aurobindo speaks about the practice of his system of Yoga. The letters have been arranged in three parts dealing with these broad subject areas:

1. The Path of the Integral Yoga
2. The Synthetic Method of the Integral Yoga
3. The Integral Yoga and Other Spiritual Paths

The letters in this volume have been selected from the extensive correspondence Sri Aurobindo carried on with his disciples and others between 1927 and 1950. Letters from this corpus appear in seven volumes of THE COMPLETE WORKS OF SRI AUROBINDO: *Letters on Poetry and Art* (Volume 27), *Letters on Yoga* (Volumes 28–31), *The Mother with Letters on the Mother* (Volume 32), and *Letters on Himself and the Ashram* (Volume 35). The titles of these works specify the nature of the letters included in the volumes, but there is some overlap. For example, a number of letters in the present volume are also published in *Letters on Himself and the Ashram*.

The Writing of the Letters

Between 1927 and 1950, Sri Aurobindo replied to hundreds of correspondents in tens of thousands of letters, some of them many pages in length, others only a few words long. Most of his replies, however, were sent to just a few dozen disciples, almost all of them resident members of his Ashram; of these disciples, about a dozen received more than half the replies. Sri Aurobindo wrote most of these letters between 1931 and 1937, the prime period of his correspondence. Letters before and after this period were written on a more restricted scale and confined to a few persons for special reasons.

Disciples in the Ashram wrote to Sri Aurobindo on loose sheets or

sent him the notebooks in which they kept diaries as a record of their spiritual endeavour and a means of communicating with him. These notebooks and loose sheets reached Sri Aurobindo via an internal “post” once or twice a day. Letters from outside which his secretary thought he might like to see were sent at the same time. Correspondents wrote in English if they knew the language well enough, but a good number wrote in Bengali, Gujarati, Hindi or French, all of which Sri Aurobindo read fluently, or in other languages that were translated into English for him. The disciples usually addressed their letters to the Mother, since Sri Aurobindo had asked them to do so, but most assumed that he would answer them. He generally replied in the notebook or on the sheets sent by the correspondent, writing beneath the correspondent’s remarks or in the margin or between the lines; sometimes, however, he wrote his reply on a separate sheet of paper. In some cases he had his secretary prepare a typed copy of his letter, which he revised before it was sent. For correspondents living outside the Ashram, Sri Aurobindo sometimes addressed his reply not to the correspondent but to his secretary, who quoted, paraphrased or translated the reply and signed the letter himself. In these indirect replies, Sri Aurobindo often referred to himself in the third person.

While going through Sri Aurobindo’s letters, the reader should keep in mind that each letter was written to a specific person at a specific time, in specific circumstances and for a specific purpose. The subjects taken up arose in regard to the needs of the person. Sri Aurobindo varied the style and tone of his replies according to his relationship with the correspondent; to those with whom he was close, he sometimes employed humour, irony and even sarcasm.

Although written to specific recipients, these letters contain much of general interest, which justifies their inclusion in a volume destined for the general public. For the reasons mentioned above, however, the advice in them does not always apply equally to everyone. Aware of this, Sri Aurobindo himself made some cautionary remarks about the proper use of his letters:

I should like to say, in passing, that it is not always safe to apply practically to oneself what has been written for another.

Each sadhak is a case by himself and one cannot always or often take a mental rule and apply it rigidly to all who are practising the Yoga.

The tendency to take what I lay down for one and apply it without discrimination to another is responsible for much misunderstanding. A general statement, too, true in itself, cannot be applied to everyone alike or applied now and immediately without consideration of condition or circumstance or person or time.

It is not a fact that all I write is meant equally for everybody. That assumes that everybody is alike and there is no difference between sadhak and sadhak. If it were so everybody would advance alike and have the same experiences and take the same time to progress by the same steps and stages. It is not so at all.¹

The Typing and Revision of the Letters

Most of the shorter items in this volume, and many of the longer ones, were not typed or revised during Sri Aurobindo's lifetime and are reproduced here directly from his handwritten manuscripts. A good number of the letters, however, as mentioned above, were typed for Sri Aurobindo and revised by him before sending. Other letters were typed by the recipients for their own use or for circulation within the Ashram. At first, circulation of the letters was restricted to members of the Ashram and others whom Sri Aurobindo had accepted as disciples. When these letters were circulated, personal references were removed. Persons mentioned by Sri Aurobindo were indicated by their initials or by the letters X, Y, Z, etc. Copies of these typed letters were kept by Sri Aurobindo's secretary and sometimes presented to Sri Aurobindo for revision before publication. These typed copies sometimes contained errors, most of which were corrected by him while revising.

¹ First and third passages: *Letters on Himself and the Ashram*, volume 35 of THE COMPLETE WORKS OF SRI AUROBINDO, pp. 473 and 475. Second passage: *The Mother with Letters on the Mother*, volume 32, p. 349.

Sri Aurobindo's revision sometimes amounted merely to making minor changes here and there, sometimes to a complete rewriting of the letter. He generally removed personal references if this had not already been done by the typist. When necessary, he also rewrote the openings or other parts of the replies in order to free them from dependence on the correspondent's question. As a result, some of these letters have an impersonal tone and read more like brief essays than personal communications.

The Publication of the Letters

Around 1933, Sri Aurobindo's secretary Nolini Kanta Gupta began to compile selections from the growing body of letters in order to publish them. During Sri Aurobindo's lifetime, four small books of letters were published: *The Riddle of This World* (1933), *Lights on Yoga* (1935), *Bases of Yoga* (1936) and *More Lights on Yoga* (1948). Sri Aurobindo revised the typescripts of most of the letters in these books. During this revision, he continued the process of removing personal references. A letter he wrote in August 1937 alludes to his approach to the revision:

I had no idea of the book being published as a collection of personal letters—if that were done, they would have to be published whole as such without a word of alteration. I understood the book was meant like the others [*i.e., like Bases of Yoga, etc.*] where only what was helpful for an understanding of things Yogic was kept with necessary alterations and modifications. . . . With that idea I have been not only omitting but recasting and adding freely. Otherwise as a book it would be too scrappy and random for public interest. In the other books things too personal were omitted—it seems to me the same rule must hold here—except very sparingly where unavoidable.

A number of letters not included in the four books mentioned above were published in the mid and late 1940s in several journals associated with the Ashram: *Sri Aurobindo Circle*, *Sri Aurobindo Mandir Annual*, *The Advent* and *Mother India*. Many letters in these journals

were revised by Sri Aurobindo before publication.

By the mid-1940s a significant body of letters had been collected, typed and revised. In 1945 plans were made, with Sri Aurobindo's approval, to publish a collection of his letters. The work of compiling and editing these letters was done under his guidance. At that time, many typed or printed copies of letters, some revised, some not, were presented to Sri Aurobindo for approval or revision. The resulting material was arranged and published in a four-volume series entitled *Letters of Sri Aurobindo*. Series One appeared in 1947, Series Two and Three in 1949 and Series Four in 1951. The first, second and fourth series contained letters on Yoga, the third letters on poetry and literature. In 1958, most of these letters on Yoga, along with many additional ones, were published under the titles *On Yoga II: Tome One* and *On Yoga II: Tome Two*, as Volumes VI and VII of the Sri Aurobindo International University Centre collection. The first tome, with further additions, was reissued in 1969. In 1970 a new edition of the letters was published under the title *Letters on Yoga*; this edition contained many new letters not included in *On Yoga II*. The three volumes of the enlarged edition constituted volumes 22, 23 and 24 of the Sri Aurobindo Birth Centenary Library.

The present edition, also titled *Letters on Yoga*, incorporates the Centenary Library letters, but also contains a large number of letters that have come to light in the four decades between the two editions. One source of new letters is the correspondences of several disciples which were published in books after the Centenary Library edition had been issued. Govindbhai Patel's correspondence was published in 1974 in a book entitled *My Pilgrimage to the Spirit*; an enlarged edition appeared in 1977. Nagin Doshi's correspondence, *Guidance from Sri Aurobindo: Letters to a Young Disciple*, was brought out in three volumes in 1974, 1976 and 1987. *Nirodbaran's Correspondence with Sri Aurobindo* came out in two volumes in 1983 and 1984. Sahana Devi's correspondence came out in 1985 in a book entitled *At the Feet of Sri Aurobindo and the Mother*. Prithwi Singh's correspondence came out in 1988 as *Sri Aurobindo and the Mother to Prithwi Singh*. Dilip Kumar Roy's correspondence was issued in four volumes in 2003, 2005, 2007 and 2011 under the title *Sri Aurobindo to Dilip*. A second source of new material is individual letters and small collections of

letters published in Ashram journals and elsewhere after the Centenary Library had been issued. A third source is letters transcribed from manuscripts or from early typed copies. Many unpublished letters were discovered while reviewing correspondences long held by the Ashram; some of these had never been assessed to find letters for publication; others had been assessed, but relatively few letters were selected at the time. Additional letters were received by the Ashram upon the passing away of disciples. From the three sources mentioned above, many letters have been found that are worthy of publication. The present edition contains about one-third more letters than appear in the Centenary Library.

The Selection, Arrangement and Editing of the Letters

In compiling the present edition, all known manuscripts, typed copies or photographic copies of manuscripts and printed texts of letters were checked. From these sources, letters that seemed to be of general interest were selected. Electronic texts of the letters were then made and carefully checked at least twice against the handwritten, typed, photocopied, and printed versions of the texts.

The selected letters have been arranged according to subject and placed in the four volumes of the present edition. Each volume is divided and subdivided into parts, sections, chapters and groups with descriptive headings; each group, the lowest unit of division, contains one or more letters devoted to the specific subject of the group.

The present volume consists of 1163 separate items, an “item” being defined as what is published between one heading or asterisk and another heading or asterisk. Many items correspond exactly to individual letters; a good number, however, contain only part of the individual letters; a small number consist of two or more letters (or parts of them) that were joined together by early typists or editors and then revised in that form by Sri Aurobindo.

Whenever possible, the letters are reproduced to their full extent. In some cases, however, portions of the letters have been omitted because they are not of general interest. A number of letters, for example, begin with personal remarks by Sri Aurobindo unrelated to the more substantial remarks which follow; these personal openings have often

been removed. In some letters, Sri Aurobindo marked the transition from one part of a letter to another with a phrase such as "As to"; these transitional phrases have often been retained and stand at the beginning of abbreviated letters—that is, letters in which the first part of the letter has been omitted or placed elsewhere.

A number of letters, or portions of them, have been published in more than one volume of THE COMPLETE WORKS OF SRI AUROBINDO. Most of this doubling of letters occurs between *Letters on Yoga* and *Letters on Himself and the Ashram*. The form of these letters is not always the same in both places. In *Letters on Himself and the Ashram*, the manuscript version of a given letter has often been used because it contains Sri Aurobindo's remarks on himself or the Mother or members of the Ashram. These personal remarks, as noted above, were usually removed by Sri Aurobindo when he revised the letter for publication as a letter on Yoga. This revised form of the letter has generally been reproduced in *Letters on Yoga*. Thus, a number of letters are available both in their original form and their revised form.

As in previous collections of Sri Aurobindo's letters, the names of Ashram members and others have often been replaced by the letters X, Y, Z, etc. In any given letter, X stands for the first name replaced, Y for the second, Z for the third, A for the fourth, and so on. An X in a given letter has no necessary relation to an X in another letter. Names of Ashram members to whom Sri Aurobindo referred not as sadhaks but as holders of a certain position—notably Nolini Kanta Gupta in his position as Sri Aurobindo's secretary—are given in full. Sometimes the names of people who played a role in the history of the period are also given.

In his letters Sri Aurobindo sometimes wrote Sanskrit words in the devanagari script; these words have been transliterated into roman script in this edition. Words in Bengali script have likewise been transliterated. This policy is in accord with the practice followed in Sri Aurobindo's lifetime.

The reader may note that Sri Aurobindo almost always spelled the word "Asram" without an "h" in his manuscripts. Around 1945, due to failing eyesight, he began dictating most of his writings to his amanuensis Nirodbaran; Nirodbaran sometimes spelled the word without an "h", sometimes with one. In the present edition, the word

is always spelled as it occurs in the manuscripts, both those of Sri Aurobindo and of Nirodbaran. In headings and other editorial matter, the spelling “Ashram” has been used, since this is now the official spelling of the Sri Aurobindo Ashram.

**Original French Texts of Six Extracts
Cited in the Letter on Pages 506–10**

I. “*C'est un abandon héroïque, où l'âme parvient au sommet de l'activité libre, où la personne se transforme, où ses facultés sont épurées, déifiées par la grâce, sans que son essence soit détruite.*”

II. “*La contemplation du chrétien . . . est inseparable de l'état de grâce et de vie divine. S'il doit s'anéantir, c'est encore sa personnalité qui triomphe en se laissant arracher à tout ce qui n'est pas elle, en brisant tous les liens qui l'unissent à son individu de chair, afin que le Dieu vivant puisse s'en saisir, l'assumer, l'habiter.*”

III. “*Liberté qui consiste d'abord à subordonner ce qui est inférieur dans sa nature à ce qui lui est supérieur.*”

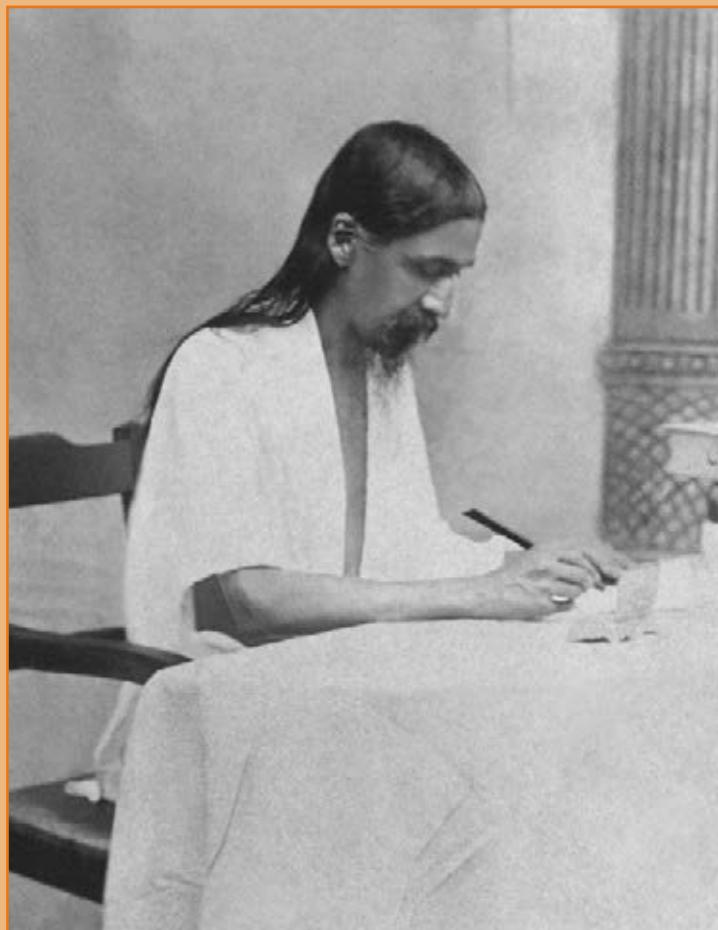

IV. “*Cette solitude de l'âme [de l'ascète asiatique] . . . n'est pas le vrai loisir spirituel, la solitude active où s'opère la transformation du péché en sainteté par l'union de l'âme avec Dieu dans ‘une lumière intellectuelle toute pleine d'amour’.*”

V. “*. . . la vie chrétienne. Mystique progressive qui est un enrichissement, un élargissement infini de la personne humaine.*”

VI. “*Pour l'Asiatique la personnalité est la chute de l'homme; pour le chrétien, c'est le dessein même de Dieu, le principe de l'union, le sommet naturel de la création qu'il appelle tout entière à la grâce.*”

Letters on Yoga — III

Experiences and Realisations
in the Integral Yoga

Publisher's Note

Letters on Yoga — III comprises letters written by Sri Aurobindo on the experiences and realisations that may occur in the practice of the Integral Yoga. It is the third of four volumes of *Letters on Yoga*, arranged by the editors as follows:

- I. Foundations of the Integral Yoga
- II. Practice of the Integral Yoga
- III. Experiences and Realisations in the Integral Yoga
- IV. Transformation of Human Nature in the Integral Yoga

The letters in these volumes have been selected from the large body of letters that Sri Aurobindo wrote to disciples and others between 1927 and 1950. Other letters from this period are published in *Letters on Poetry and Art*, *The Mother with Letters on the Mother* and *Letters on Himself and the Ashram*, volumes 27, 32 and 35 of THE COMPLETE WORKS OF SRI AUROBINDO. Letters written before 1927 are reproduced in *Autobiographical Notes and Other Writings of Historical Interest*, volume 36 of THE COMPLETE WORKS.

During Sri Aurobindo's lifetime, relatively few of his letters were published. Three small books of letters on Yoga were brought out in the 1930s. A more substantial collection came out between 1947 and 1951 in a four-volume series entitled *Letters of Sri Aurobindo* (including one volume of letters on poetry and literature). In 1958, many more letters were included in the two large tomes of *On Yoga — II*. A further expanded collection in three volumes entitled *Letters on Yoga* was published in 1970 as part of the Sri Aurobindo Birth Centenary Library. The present collection, also entitled *Letters on Yoga*, constitutes volumes 28–31 of THE COMPLETE WORKS. These volumes incorporate previously published letters and contain many new ones as well.

About one-third of the letters in the present volume were not published in the Centenary Library.

The present volume is arranged by subject in four parts:

1. The Place of Experiences in the Practice of Yoga
2. The Opening of the Inner Senses
3. Experiences of the Inner Consciousness and the Cosmic Consciousness
4. The Fundamental Realisations of the Integral Yoga

The texts of all the letters have been checked against the available manuscripts, typescripts and printed versions.

CONTENTS

PART ONE

THE PLACE OF EXPERIENCES IN THE PRACTICE OF YOGA

Section One

The Nature and Value of Experiences

Experiences and Realisations

The Difference between Experience and Realisation	5
The Yogi and the Sadhak	6
Subordinate and Great Experiences	6
Feelings as Experiences	7
Love, Joy and Experience	8
Imagined Experiences	9
Mental Knowledge and Spiritual Experience	9
Mental Realisation and Spiritual Realisation	11
Spiritual Experience as Substantial Experience	12

The Value of Experiences

Experience and Development of Consciousness	13
The Importance of Small Beginnings	14

Inner Experience and Outer Life

Subjective Experience and the Objective Existence	21
Experience and the Change of One's Nature	23
Inner Attitude and Outward Things	26
The Power of Creative Formation	26

The Danger of the Ego and the Need of Purification

Spiritual Experiences and the Ego	29
Purification and Preparation of the Nature	32
Mixed and Confused Experiences	35
Purification and Positive Experience	39
Purification and Consecration	41
Purification and Transformation	43
Conditions for the Coming of Experience	44

CONTENTS

Suggestions for Dealing with Experiences	
Letting the Experiences Develop Naturally	47
Thinking about Experiences	47
Observing Experiences without Attachment	48
Observing Experiences without Fear or Alarm	49
Speaking about Experiences	50
The Difficulty of Keeping Experiences	52
Section Two	
Vicissitudes on the Way to Realisation	
Variations in the Intensity of Experience	
The Up and Down Movement in Yoga	57
Alternations, Oscillations, Fluctuations of Consciousness	59
Fluctuations in the Working of the Force	62
Lulls, Pauses, Interim Periods	63
Drops or Falls of Consciousness	65
Fatigue, Inertia and Lowering of the Consciousness	66
Variations during the Day	68
The Need for Periods of Assimilation	70
Emptiness, Voidness, Blankness and Silence	
Periods of Emptiness	72
Emptiness — A Transitional State	74
Voidness	77
Blankness	78
Emptiness, Blankness and Silence	79

Part One

The Place of Experiences in the Practice of Yoga

Section One

The Nature and Value of Experiences

Chapter One

Experiences and Realisations

The Difference between Experience and Realisation

Experience is a word that covers almost all the happenings in Yoga; only when something gets settled, then it is no longer an experience but part of the siddhi. E.g. peace when it comes and goes is an experience — when it is settled and goes no more it is a siddhi. Realisation is different — it is when something for which you are aspiring becomes real to you. E.g. you have the idea of the Divine in all, but it is only an idea, a belief; when you feel or see the Divine in all, it becomes a realisation.

*

Experience of Truth is an isolated or repeated descent of the Truth into the consciousness or ascent of the consciousness into it. Realisation is when the Truth becomes a settled part of the consciousness.

*

An experience of a truth in the substance of mind, in the vital or the physical, wherever it may be, is the beginning of realisation. When I experience peace, I begin to realise what it is. Repetition of the experience leads to a fuller and more permanent realisation. When it is settled anywhere, that is the full realisation of it in that plane or in that part of the being.

*

Your going up to a higher plane is an experience — the descent of the higher plane into you, if temporary, is an experience.

If you become fully aware of the nature of the higher plane and if that becomes part of your consciousness, it is a realisation.

These are the two words usually used, realisation and experience.

*

There is a fundamental realisation in which one can say, "I have now realised the Divine" and there is no longer any anxiety or straining after something unachieved. But after that even there is a development of this consciousness of realisation into which more and more of the Divine Truth comes into the fundamental experience.

The Yogi and the Sadhak

The Yogi is one who is already established in realisation — the sadhak is one who is getting or still trying to get realisation.

*

A sadhaka is one who is doing sadhana to attain union with the divine consciousness. A Yogi is one who is already living in some kind of oneness with the Divine, not in the ordinary consciousness.

Subordinate and Great Experiences

One who lives in the spiritual consciousness is a spiritual man, just as one who lives in thinking mind is an intellectual man. The spiritual consciousness is that in which you realise the Divine, the Self, the cosmic oneness as the constant living contact with these things. I do not know what you mean by abnormal experiences. There are many abnormal experiences that are not spiritual. There are two kinds of experiences: (1) subordinate things (like visions etc.) that help to open or build up or furnish a new (Yogic) consciousness; (2) the great experiences of Self, Peace, Light, Ananda, etc., also the perception of a deeper knowledge which shows us the truths of Soul and Nature and of the aspects of the Divine. This class of experiences are the beginning of realisation and it is when they settle and become part of the consciousness that realisation is complete.

*

One develops by spiritual knowledge and experience which

comes from above the mind or one develops by psychic perception and experience which comes from within—these are the two main things. But it is also necessary to grow by inner mental and vital experiences and visions and dream experiences play a large part here. One thing may predominate in one sadhak, others in another; each develops according to his nature.

Feelings as Experiences

There is no law that a feeling cannot be an experience; experiences are of all kinds and take all forms in the consciousness. When the consciousness undergoes, sees or feels anything spiritual or psychic or even occult, that is an experience—in the technical Yogic sense, for there are of course all sorts of experiences that are not of that character. Feelings themselves are of many kinds. The word feeling is often used for an emotion, and there can be psychic or spiritual emotions which are numbered among Yogic experiences, such as a wave of shuddha bhakti or the rising of love towards the Divine. A feeling also means a perception of something felt—a perception in the vital or psychic or in the essential substance of the consciousness. I find even often a mental perception when it is very vivid described as a feeling. If you exclude all these feelings and kindred ones and say that they are feelings, not experiences, then there is very little room left for experiences at all. Feeling and vision are the main forms of spiritual experience. One sees and feels the Brahman everywhere; one feels a force enter or go out from one; one feels or sees the presence of the Divine within or around one; one feels or sees the descent of light; one feels the descent of peace or Ananda. Kick all that out on the ground that it is only a feeling and you make a clean sweep of most of the things that we call experience. Again we feel a change in the substance of the consciousness or the state of consciousness. We feel ourselves spreading in wideness and the body only as a small thing in the wideness (this can be seen also); we feel the heart-consciousness becoming wide instead of narrow, soft instead of hard, illumined instead of obscure, the head-consciousness also, the vital, even

the physical; we feel thousands of things of all kinds and why are we not to call them experiences? Of course it is an inner sight, an inner feeling, subtle feeling, not material like the feeling of a cold wind or a stone or any other object, but as the inner consciousness deepens it is not less vivid or concrete, it is even more so.

In this case what you felt was not an emotion, though something emotional came with it. You felt a condition in the very substance or consciousness—a softness, a plasticity, even a velvety softness, an ineffable plasticity. Any fellow who knows anything about Yoga would immediately say, “What a fine experience”, — a very clear psychic and spiritual experience.

Love, Joy and Experience

Your supposition [*that one cannot love the Divine until one experiences him*] conflicts with the experience of many sadhaks. I think Ramakrishna indicated somewhere that the love and joy and ardour of seeking was much more intense than that of fulfilment. I don't agree, but that shows at least that intense love is possible before realisation.

*

My point is that there have been hundreds of Bhaktas who have the love and seeking without any concrete experience, with only a mental conception or emotional belief in the Divine to support them. The whole point is that it is untrue to say that one must have a decisive or concrete experience before one can have love for the Divine. It is contrary to the facts and the quite ordinary facts of the spiritual experience.

*

The ordinary Bhakta is not a lion heart. The lion hearts get experiences comparatively soon but the ordinary Bhakta has often to feed on his own love or yearning for years and years—and he does it.

*

I really do not know what kind of joy you want. All experiences are not accompanied by joy. Interest is another matter.

Imagined Experiences

When one is living in the physical mind, the only way to escape from it is by imagination. Incidentally, that is why poetry and art etc. have so strong a hold. But these imaginations are often really shadows of supraphysical experience and once the barrier of the physical mind is broken or even swung a little open, there come the experiences themselves if the temperament is favourable. Hence are born visions and other such phenomena — all those that are miscalled psychic phenomena.

*

Even imagined experiences (honestly imagined) can help to mental realisation and mental realisation can be a step to total realisation.

Mental Knowledge and Spiritual Experience

These disadvantages of mental knowledge no doubt exist.¹ But I doubt whether anybody could mentally simulate to himself the experience of the One everywhere or the downflow of peace. He might mistake a first mental realisation for the deeper spiritual one or think the descent was in his physical when it was in his mental influencing the body through the mental sheath of the subtle body — but those who have no mental knowledge can also make these mistakes. The disadvantage of the one who does not know mentally is that he gets the experience without understanding it and this may be a hindrance or at least retardatory to development while he would not get so easily out of a

¹ *The correspondent suggested that a mere mental knowledge of spiritual experience might lead one to concoct an experience through imagination or to exaggerate an experience by adding something to it mentally or to doubt an experience, thinking it might be a mental formation. — Ed.*

mistake as one more mentally enlightened.

*

Usually they [*persons without mental knowledge of the Self*] feel first through the psychic centre by union with the Mother and do not call it the Self—or else they simply feel a wideness and peace in the head or in the heart. Previous mental knowledge is not indispensable. I have seen in more cases than one sadhaks getting the Brahman realisation and asking “what is this?”—describing it with great vividness and exactness but without any of the known terms.

Just after writing this I read a letter from a sadhika in which she writes, “I see that my head is becoming very quiet, pure, luminous, universal, *viśvamaya*.” Well, that is the beginning of the realisation of the universal Brahman-Self in the mind, but if I put it to her in that language she would understand nothing.

*

Mental realisation is useful at the beginning and prepares spiritual experience.

It [*book-knowledge*] can help too at the beginning—but also it can hinder. It depends on the sadhak.

*

You have to learn by experience. Mental information (badly understood, as it always is without experience) might rather hamper than help. In fact there is no fixed mental knowledge for these things, which vary infinitely. You must learn to go beyond the hankering for mental information and open to the true way of knowledge.

*

All the experiences [*of the Theosophists*] are mental except with a very few. Wordsworth's experience also was mental. Mental experiences are of course a good preparation, but to stop there leaves one far away from the real thing.

*

Yes, if one has thought much of one kind of realisation and absorbed the idea deeply — then it is quite natural that the spiritual experience of it should be one of the first to come.

Mental Realisation and Spiritual Realisation

It [*mental realisation of the Divine*] is a certain kind of living cognition — of which there are two parts — the living perception in thought rising as far as intuition or revelation, the vivid mental feeling and reproduction of what is thus known in the substance of mind. Thus the One in all is felt, seen, realised by the mind by a sort of inner mental sense. The spiritual realisation is more concrete than that — one has the Knowledge by a kind of identity in one's very substance.

*

A mental or vital sense of oneness has not the same essentiality or the same effect as a spiritual realisation of oneness — just as the mental perception of the Divine is not the same thing as the spiritual realisation. The consciousness of one plane is different from the consciousness of another. Spiritual and psychic love are different from mental, vital or physical love — so with everything else. So too with the perception of oneness and its effects. That is why the different planes have their importance; otherwise their existence would have no meaning.

*

You have to know by experience. The mental perception and mental realisation are different from each other — the first is only an idea, in the second the mind in its very substance reflects or reproduces the truth. The spiritual experience is more than the mental — it is in the very substance of the being that the experience takes place.

*

But if you have that [*peace, calm, silence, wideness*] when you concentrate, it is a true spiritual realisation — that which

accompanies or prepares the experience of the Atman. It is not merely a mental realisation.

Spiritual Experience as Substantial Experience

Your feeling [*of spiritual experience as a “substance”*] is quite correct. All spiritual experience is a substantial experience—consciousness, Ananda even are felt as something substantial. It is also true that it is felt so by something deeper than mind; it is the mind that turns concrete realities into abstractions.

*

Yes, so long as the attitude is mental it is insecure because it is something imposed on the nature—a mental direction and control. But with the spiritual experience what begins is a change in the stuff of the consciousness itself and by that, as it proceeds to settle and confirm itself, begins naturally what we call the transformation of the nature.

*

The phrase [*“stuff of consciousness”*] simply means “substance of consciousness”, the consciousness in itself.

As the Yogic experience develops, consciousness is felt as something quite concrete in which there are movements and formations which are what we call thoughts, feelings etc.

Chapter Two

The Value of Experiences

Experience and Development of Consciousness

It is only by persistent experience and development of consciousness that the veil of Ignorance can be entirely dispelled.

*

An experience is an unmistakable thing and must be given its proper value. The mind may exaggerate in thinking about it, but that does not deprive it of its value.

*

Trances and experiences have their value. There is no question of less or more important — each thing has its place.

*

It is not a question of giving an equal value to everything you do, but of recognising the value of all the different elements of the sadhana. No such rule can be made as that trances are of little value or that experiences are of inferior importance any more than it can be said that work is of no or inferior importance.

*

Your experience is the beginning of the fundamental and decisive realisation which carries the consciousness out of the limited mental into the true spiritual vision and experience in which all is one and all is the Divine. It is this constant and living experience that is the true foundation of spiritual life. There can be no doubt about its truth and value, for it is evidently something living and dynamic and goes beyond a mental realisation. It may add to itself in future different aspects, but the essential fundamental realisation you now have. When this is permanent, one can be said to have passed out of the twilight of the mind

into the light of the Spirit.

What you have now to do is to allow the realisation to grow and develop. The necessary movements will probably come of themselves as these have come — provided you keep your will single and faithful towards this Light and Truth. Already it has brought you the guidance towards the next step, cessation of the flow of thought, the inner mind's silence. Once that is won, there is likely to come a settled peace, liberation, wideness. The sense of the need of simplicity and transparency is also a true movement and comes from the same inner guidance. That is necessary for the deepest inmost divine element within behind the mind, life and body to come forward fully in you — when it does you will be able to become aware of the inner guide within you and of a Force working for the full spiritual change. This simplicity comes by a separation from the manifold devious mental and vital movements which lead one in all directions — a quiet, a detachment in the heart which turns one singly towards the one Truth and the one Light till it takes up the whole being and the whole life.

Put your trust in the grace of the One and Divine which has already touched you and opened its door and rely on it for all that is to come.

The Importance of Small Beginnings

What I meant about the experiences was simply this that you have erected your own ideas about what you want from the Yoga and have always been measuring what began to come by that standard and because it was not according to expectation or up to that standard telling yourself after a moment, "It is nothing, it is nothing." That dissatisfaction laid you open at every step to a reaction or recoil which prevented any continuous development. The Yогin who has experience knows that the small beginnings are of the greatest importance and have to be cherished and allowed with great patience to develop. He knows for instance that the neutral quiet so dissatisfying to the vital eagerness of the sadhak is the first step towards the peace that passeth all

understanding, the small current or thrill of inner delight the first trickling in of the ocean of Ananda, the play of lights or colours the key of the doors of the inner vision and experience, the descents that stiffen the body into a concentrated stillness the first touch of something at the end of which is the presence of the Divine. He is not impatient; he is rather careful not to disturb the evolution that is beginning. Certainly, some sadhaks have strong and decisive experiences at the beginning, but these are followed by a long labour in which there are many empty periods and many periods of struggle.

*

If you truly decide in all your consciousness to offer your being to the Divine to mould it as He wills, then most of your personal difficulty will disappear — I mean that which still remains, and there will be only the lesser difficulties of the transformation of the ordinary into the Yogic consciousness, normal to all sadhana. Your mental difficulty has been all along that you wanted to mould the sadhana and the reception of experience and the response of the Divine according to your own preconceived mental ideas and left no freedom to the Divine to act or manifest according to His own truth and reality and the need not of your mind and vital but of your soul and spirit. It is as if your vital were to present a coloured glass to the Divine and tell Him, "Now pour yourself into that and I will shut you up there and look at you through the colours", or, from the mental point of view, as if you were to offer a test-tube in a similar way and say, "Get in there and I will test you and see what you are." But the Divine is shy about such processes and His objections are not altogether unintelligible.

At any rate I am glad the experience has come back again — it has come as the result of your effort and mine for the last days and is practically a reminder that the door of entry into Yogic experience is still there and can open at the right touch. You taxed me the other day with making a mistake about your experience of breathing with the name in it and reproached me for drawing a big inference from a very small phenomenon — a

thing, by the way, which the scientists are doing daily without the least objection from your reason. You had the same idea, I believe, about my acceptance of your former experiences, this current and the descent of stillness in the body, as signs of the Yogi in you. But these ideas spring from an ignorance of the spiritual realm and its phenomena and only show the incapacity of the outer intellectual reason to play the role you want it to play, that of a supreme judge of spiritual truth and inner experience—a quite natural incapacity because it does not know even the A.B.C. of these things and it passes my comprehension how one can be a judge about a thing of which one knows nothing. I know that the “scientists” are continually doing it with supra-physical phenomena outside their province—those who never had a spiritual or occult experience laying down the law about occult phenomena and Yoga; but that does not make it any more reasonable or excusable. Any Yogi who knows something about pranayama or japa can tell you that the running of the name in the breath is not a small phenomenon but of great importance in these practices and, if it comes naturally, a sign that something in the inner being has done that kind of sadhana in the past. As for the current it is the familiar sign of a first touch of the higher consciousness flowing down in the form of a stream—like the “wave” of light of the scientist—to prepare its possession of mind, vital and physical in the body. So is the stillness and rigidity of the body in your former experience a sign of the same descent of the higher consciousness in its form or tendency of stillness and silence. It is a perfectly sound conclusion that one who gets these experiences at the beginning has the capacity of Yoga in him and can open, even if the opening is delayed by other movements belonging to his ordinary nature. These things are part of the science of Yoga, as familiar as the crucial experiences of physical Science are to the scientific seeker.

As for the impression of swooning, it is simply because you were not in sleep, as you imagined, but in a first condition of what is usually called *svapna samādhi*, dream trance. What you felt like swooning was only the tendency to go deeper in, into a more profound *svapna samādhi* or else into a *susupta* trance—

the latter being what the word trance usually means in English, but it can be extended to the *svapna* kind also. To the outer mind this deep loss of the surface consciousness seems like a swoon, though it is really nothing of the kind — hence the impression. Many sadhaks here get at times or sometimes for a long period this deeper *svapna samādhi* in what began as sleep — with the result that a conscious sadhana goes on in their sleeping as in their waking hours. This is different from the dream experiences that one has on the vital or mental plane which are themselves not ordinary dreams but actual experiences on the mental, vital, psychic or subtle physical planes. You have had several dreams which were vital dream experiences, those in which you met the Mother, and recently you had one such contact on the mental plane which, for those who understand these things, means that the inner consciousness is preparing in the mind as well as in the vital, which is a great advance.

You will ask why these things take place either in sleep or in an indrawn meditation and not in the waking state. There is a twofold reason. First, that usually in Yoga these things begin in an indrawn state and not in the waking condition, — it is only if or when the waking mind is ready that they come as readily in the waking state. Again in you the waking mind has been too active in its insistence on the ideas and operations of the outer consciousness to give the inner mind a chance to project itself into the waking state. But it is through the inner consciousness and primarily through the inner mind that these things come; so, if there is not a clear passage from the inner to the outer, it must be in the inner states that they first appear. If the waking mind is subject or surrendered to the inner consciousness and willing to become its instrument, then even from the beginning these openings can come through the waking consciousness. That again is a familiar law of the Yoga.

I may add that when you complain of the want of response, you are probably expecting immediately some kind of direct manifestation of the Divine which, as a rule though there are exceptions, comes only when previous experiences have prepared the consciousness so that it may feel, understand, recognise the

response. Ordinarily the spiritual or divine consciousness comes first — what I have called the higher consciousness — the presence or manifestation comes afterwards. But this descent of the higher consciousness is really the touch or influx of the Divine itself, though not at first recognised by the lower nature.

*

“I will try again” is not sufficient; what is needed is to try always — steadily, with a heart free from despondency, as the Gita says, *anirvijnācetasā*. You speak of five and a half years as if it were a tremendous time for such an object, but a Yogi who is able in that time to change radically his nature and get the concrete decisive experience of the Divine would have to be considered as one of the rare gallopers of the spiritual Way. Nobody has ever said that the spiritual change was an easy thing; all spiritual seekers will say that it is difficult but supremely worth doing. If one’s desire for the Divine has become the master desire, then surely one can give one’s whole life to it without repining and not grudge the time, difficulty or labour.

Again you speak of your experiences as vague and dreamlike. In the first place the scorn of small experiences in the inner life is no part of wisdom, reason or common sense. It is in the beginning of the sadhana and for a long time the small experiences that come on each other and, if given their full value, prepare the field, build up a preparatory consciousness and one day break open the walls to big experiences. But if you despise them with the ambitious idea that you must have either the big experiences or nothing, it is not surprising that they come once in a blue moon and cannot do their work. Moreover, all your experiences were not small. There were some like the stilling descent of a Power in the body — what you used to call numbness — which anyone with spiritual knowledge would have recognised as a first strong step towards the opening of the consciousness to the higher Peace and Light. But it was not in the line of your expectations and you gave it no special value. As for vague and dreamlike, you feel it so because you are looking at them and at everything that happens in you from the standpoint of

the outward physical mind and intellect which can take only physical things as real and important and vivid and to it inward phenomena are something unreal, vague and truthless. The spiritual experience does not even despise dreams and visions; it is known to it that many of these things are not dreams at all but experiences on an inner plane and if the experiences of the inner planes which lead to the opening of the inner self into the outer so as to influence and change it are not accepted, the experiences of the subtle consciousness and the trance consciousness, how is the waking consciousness to expand out of the narrow prison of the body and the body-mind and the senses? For, to the physical mind untouched by the inner awakened consciousness, even the experience of the cosmic consciousness or the Eternal Self might very well seem merely subjective and unconvincing. It would think, "Curious, no doubt, rather interesting, but very subjective, don't you think? Hallucinations, yes?" The first business of the spiritual seeker is to get away from the outward mind's outlook and to look at inward phenomena with an inward mind to which they soon become powerful and stimulating realities. If one does that, then one begins to see that there is here a wide field of truth and knowledge, in which one can move from discovery to discovery to reach the supreme discovery of all. But the outer physical mind, if it has any ideas about the Divine and spirituality at all, has only hasty *a priori* ideas miles away from the solid ground of inner truth and experience.

I have not left myself time to deal with other matters at any length. You speak of the Divine's stern demands and hard conditions — but what severe demands and iron conditions you are laying on the Divine! You practically say to Him, "I will doubt and deny you at every step, but you must fill me with your unmistakable Presence; I will be full of gloom and despair whenever I think of you or the Yoga, but you must flood my gloom with your rapturous irresistible Ananda; I will meet you only with my outer physical mind and consciousness, but you must give me in that the Power that will transform rapidly my whole nature." Well, I don't say that the Divine won't or can't do it, but if such a miracle is to be worked, you must give Him

some time and just a millionth part of a chance.

*

There is no reason certainly for despair. The bliss always comes in drops at first, or a broken trickle. You have to go on cheerfully and in full confidence, till there is the cascade.

Chapter Three

Inner Experience and Outer Life

Subjective Experience and the Objective Existence

Experiences on the mental and vital and subtle physical planes or thought formations and vital formations are often represented as if they were concrete external happenings; true experiences are in the same way distorted by mental and vital accretions and additions. One of the first needs in our Yoga is a discrimination and a psychic tact distinguishing the false from the true, putting each thing in its place and giving it its true value or absence of value, not carried away by the excitement of the mind or the vital being.

*

What do you mean by true? You have a subjective experience belonging to a higher plane of consciousness; when you descend you come down with it into the material and the whole of existence is seen by you in the terms of that consciousness — just as when a man sees the vision of the Divine everywhere, he sees all down to the material world as the Divine.

*

It happens so in the sadhak's own subjective consciousness [*that the Divine is seen everywhere and there is no sorrow or suffering in the world*]. Of course it does not mean that the whole world becomes like that in everybody's consciousness.

If your experience were objective, then that would mean that the whole world had changed, everybody became conscious, no sorrow or suffering anywhere. Needless to say, the material world has not changed objectively in that way. Only in your own consciousness, subjectively, you see the Divine

everywhere, all disharmony disappears, sorrow and suffering become impossible for the time at least—that is a subjective experience.

*

It depends on what you mean by subjective and objective. Knowledge and Ignorance are in their nature subjective. But from the personal point of view, the Force of Ignorance may manifest as something objective, outside oneself so that even when one has knowledge for oneself one cannot remove the environing Ignorance. If that is so, Ignorance is not merely a subjective force in oneself, it is there in the world.

*

It seems to have been a series of experiences of the different bhavas of bhakti and it came for experience only—or for a manifold development of the bhakti. These of course are purely subjective experiences meant to educate the consciousness and have no definitive value for the actual manifestation. It is merely for subjective experience and knowledge.

*

Subjective does not mean false. It only means that the Truth is experienced within but it has not yet taken hold of the dynamic relations with the outside existence. It is an inner experience of the cosmic consciousness and the overmind knowledge that you have.

*

The cosmic consciousness, the overmind knowledge and experience is an inner knowledge—but its effect is subjective. As long as one lives in it, one can be free in soul, but to transform the external nature more is needed.

*

I have told you once before that your experiences are subjective—and in the subjective sphere they are correct in substance so

far as they go. But to enter the Supermind subjective experience is not sufficient. Some sufficient application of intuition and overmind to life must first be done.

*

The difficulty of the Yoga is not in getting experiences or a subjective realisation of the Truth; it is in objectivising the Truth, that is, in making the outer consciousness down to the material an expression of the inner Truth. So long as that is not done, the attacks of the lower Nature can always continue.

Experience and the Change of One's Nature

Merely to have experiences of the higher consciousness will not change the nature. Either the higher consciousness has to make a dynamic descent into the whole being and change it—or it must establish itself in the inner being down to the inner physical so that the latter feels itself separate from the outer and is able to act freely upon it—or the psychic must come forward and change the nature—or the inner will must awake and force the nature to change. These are the four ways in which change can be brought about.

*

When you are in connection with the higher worlds above the mental, with the mental and the psychic or even with some of the higher vital planes, then there is the peace and Ananda—but connection with the lower vital worlds can easily bring disturbance and unrest, so long as your vital itself is not changed and made full of peace and strength and quiet.

*

You forget that for a long time she was often keeping much more to herself, to X's great anger. During that time she built up an inner life and made some attempt to change certain things in her outer—not in the outward appearance but in the movements governing it. There is still an enormous amount to be done before

the inward change can be outwardly visible, but still she is not insincere in her resolution. As for her not having any depression it is because she has established a fundamental calm which is only upset by clashes with X; all the rest passes on the surface ruffling it perhaps, but not breaking the calm. She has also a day or two ago had the experience of the ascent above and of the wideness of peace and joy of the Infinite (free from the bodily sense and limitation) as also the descent down to the Muladhara. She does not know the names or technicalities of these things but her description which was minute and full of details was unmistakable. There are three or four others who have had this experience recently so that we may suppose the working of the Force is not altogether in vain, as this experience is a very big affair and is supposed to be, if stabilised, the summit of the old Yogas. For us it is only a beginning of spiritual transformation. I have said this though it is personal so that you may understand that outside defects and obstacles in the nature or the appearance of unyogicness does not necessarily mean that a person can do or is doing no sadhana.

*

To change the nature is not easy and always takes time, but if there is no inner experience, no gradual emergence of the other purer consciousness that is concealed by all these things you now see, it would be almost impossible even for the strongest will. You say that first you must get rid of all these things, then have the inner experiences. But how is that to be done? These things, anger, jealousy, desire, are the very stuff of the ordinary human vital consciousness. They could not be changed if there were not a deeper consciousness within which is of quite another character. There is within you a psychic being which is divine, directly a part of the Mother, pure of all these defects. It is covered and concealed by the ordinary consciousness and nature, but when it is unveiled and able to come forward and govern the being, then it changes the ordinary consciousness, throws all these undivine things out and changes the outer nature altogether. That is why we want the sadhaks to concentrate, to open this concealed

consciousness — it is by concentration of whatever kind and the experiences it brings that one opens and becomes aware within and the new consciousness and nature begin to grow and come out. Of course we want them also to use their will and reject the desires and wrong movements of the vital, for by doing that the emergence of the true consciousness becomes possible. But rejection alone cannot succeed; it is by rejection and by inner experience and growth that it is done.

You say that all these things were hidden within you. No; they were not deep within, they were in the outer or surface nature, only you were not sufficiently conscious of them because the other true consciousness had not opened and grown within you. Now by the experiences you have had the psychic has been growing and it is because of this new psychic consciousness that you are able to see clearly all that has to go. It does not go at once because the vital had so much the habit of them in the past, but they will now have to go because your soul wants to get rid of them and your soul is growing stronger in you. So you must both use your will aided by the Mother's force to get rid of these things, and go on with your inner psychic experiences — it is by the two together that all will be done.

*

The persistence or the obstinate return of the old Adam is a common experience: it is only when there is a sufficient mass of experience and a certain progression of consciousness in the higher parts of the being that the lower can be really transmuted. It is that that one must allow to develop. It is the pressure of the Yoga shakti and the increase of the experiences that is wanted in your case, not this preoccupation with an external “grim” tapasya.

*

Once these experiences [*of peace and the descent of force*] begin, they repeat themselves usually, whether the general condition is good or not. But naturally they cannot make a radical change until they settle themselves and become normal in the whole

being or at least in the inner part of it. In the latter case the old movements can still come, but they are felt as something quite superficial and the sadhana increases in spite of them. There is no question of good or wicked. If some part of the being even has been opened the experiences come.

*

The action of the higher consciousness does not usually begin by changing the outer nature—it works on the inner being, prepares that and then goes outward. Before that, whatever change is done in the outer nature has to be done by the psychic.

*

All experiences can be brought into the smallest constituents of the being.

Inner Attitude and Outward Things

You have had some experiences which are signs of a future possibility. To have more within the first one and a half years it would be necessary to have the complete attitude of the sadhak and give up that of the man of the world. It is only then that progress can be rapid from the beginning.

*

All these [*outward restraints such as moderation in eating food and drinking tea*] are external things that have their use, but what I mean [*by “the complete attitude of the sadhak”*] is something more inward. I mean not to be interested in outward things for their own sake, following after them with desire, but at all times to be intent on one's soul, living centrally in the inner being and its progress, taking outward things and action only as a means for the inner progress.

The Power of Creative Formation

It [*feeling that the Mother and Sri Aurobindo are looking at one*]

simply means you have a subjective sense of our Presence. But must a subjective sense of things be necessarily a vain imagination? If so, no Yoga is possible. One has to take it as an axiom that subjective things can be as real as objective things. No doubt there may be and are such things as mental formations—but, to begin with, mental formations are or can be very powerful things, producing concrete results; secondly whether what one sees or hears is a mental formation or a real subjective object can only be determined when one has sufficient experience in these inward things.

*

You have a strong power of (subjective) creative formation, mostly, I think, on the mental but partly too on the vital plane. This kind of formative faculty can be used for objective results if accompanied by a sound knowledge of the occult forces and their workings; but by itself it results more often in one's building up an inner world of one's own in which you can live very well satisfied, so long as you live in yourself, apart from any close contact with external physical life; but it does not stand the test of objective experience.

*

In each plane there is an objective as well as a subjective side. It is not the physical plane and life alone that are objective.

When you have the power of formation of which I spoke, whatever is suggested to the mind, the mind constructs and establishes a form of it in itself. But this power can cut two ways; it may tempt the mind to construct mere images of the reality and mistake them for the reality itself. It is one of the many dangers of a too active mind.

You make a formation in your mind or on the vital plane in yourself—it is a kind of creation, but subjective only; it affects only your own mental or vital being. You can create by ideas, thought-forms, images a whole world in yourself or for yourself; but it stops there.

Some have the power of making consciously formations that

go out and affect the minds, actions, vital movements, external lives of others. These formations may be destructive as well as creative.

Finally, there is the power to make formations that become effective realities in the earth-consciousness here, in its mind, life, physical existence. That is what we usually mean by creation.

Chapter Four

The Danger of the Ego and the Need of Purification

Spiritual Experiences and the Ego

A certain exaltation of the being comes naturally with the stronger experiences and the sense of marvel or miracle may go with it, but there should be no egoistic feeling in the exaltation.

*

What you have to be careful about is, when the feeling of power and strength comes into you or when you have experiences, not to allow it to be seized on by any kind of egoistic or vital desire, pride, ambition, wish to dominate others — even if it takes the garb of doing the Mother's work, — for this is your great weakness which always gets in and spoils your progress. Also when you have experiences, do not allow yourself to get exalted and excited by them so as to lose discrimination; for, if you do, then even though the experiences when they begin may be of the right kind, the vital forces take advantage of the excitation and rush in with their own deformations. Remain always calm, collected, quiet within, vigilant — discriminate always. The progress so made may be more slow or seem so; but it is more sure.

*

A true spiritual experience must be free from the claim of the ego. What the ego can do however is to get proud of having the experience and think, "What a great one am I." Or it may think, "I am the Self, the Divine, so let me go and do what I will, for it is the Divine who wills in me." It is only if the experience of Self imposes silence on the other parts and frees the psychic that the ego disappears. Even if not ego itself, numerous fragments and

survivals of ego-habit can remain and have to be eliminated.

*

Yes, if there is the solid experience, the ego habit is much diminished, but it does not go altogether. It takes refuge in the sense of being an instrument and—if there is not the psychic turn—it may easily prefer to be the instrument of some Force that feeds the satisfaction of the ego. In such cases the ego may still remain strong although it feels itself instrumental and not the primary actor.

*

Although there is no ego in the spiritual planes, yet by the spiritual experience the ego on the lower planes may get aggrandised through pride and wrong reception of the experience. Also by entering into the larger mental and vital planes one may aggrandise the ego. These things are always possible so long as the higher consciousness and the lower are not harmonised in the being and the lower transformed into the nature of the higher.

*

The first result of the downflow of the overmind forces is very often to exaggerate the ego, which feels itself strong, almost irresistible (though it is not really so), divinised, luminous. The first thing to do, after some experience of the thing, is to get rid of this magnified ego. For that you have to stand back, not allow yourself to be swept in by the movement, but to watch, understand, reject all mixture, aspire for a purer and yet purer light and action. This can only be done perfectly if the psychic comes forward. The mind and vital, especially the vital, receiving these forces, can with difficulty resist the tendency to seize on and use them for the ego's objects or, which comes practically to the same thing, they mix the demands of the ego with the service of a higher object.

*

There is [*when one receives forces without a basis of peace, light and love*] more a sense of having power than real power. There are some mixed and quite relative powers — sometimes a little effective, sometimes ineffective — which could be developed into something real if put under the control of the Divine, surrendered. But the ego comes in, exaggerates these small things and represents them as something huge and unique and refuses to surrender. Then the sadhak makes no progress — he wanders about in the jungle of his own imaginations without any discrimination or critical sense or among a play of confused forces he is unable to understand or master.

Forces can come anywhere. The Asuras have their forces, but without peace, light or love — only they are forces of darkness.

*

The man there [*in the correspondent's dream*] symbolises that ego-tendency in the human nature which makes a man, when some realisation comes, to think how great a realisation is this and how great a sadhak am I and to call others to see and admire — perhaps he thinks like the man in the dream, "I have seen the Divine, indeed I feel I am one with the Divine, — I will call everybody to see that." This is a tendency which has injured the sadhana of many and sometimes ruined the sadhana altogether. In the thoughts you describe you came to see something in yourself which is there more or less in all human beings, the desire to be thought well of by others, to occupy a high place in their esteem or their affection, to have honour, position, admiration. When anybody joins this feeling to the idea of sadhana, then the disposition to do the sadhana for that and not purely and simply for the sake of the Divine comes in and there must be disturbance or else an obstruction in the sadhana itself or if in spite of it spiritual experience comes, then there is the danger of his misusing the experience to magnify his ego like the man in the dream. All these dreams are coming to you to give you a vivid and concrete knowledge and experience of what these human defects are so that you may find it easier to throw them

out, to recognise them when they come in the waking state and refuse them entrance. These things are not in yourself only but in all human nature; they are the things one has to get rid of or else to guard against so that one's consecration to the Divine may be complete, selfless, true and pure.

Purification and Preparation of the Nature

I don't think there is any cause for dissatisfaction with the progress made by you. Experiences come to many before the nature is ready to make full profit from them; to others a more or less prolonged period of purification and preparation of the stuff of the nature or the instruments comes first while experiences are held up till this process is largely or wholly over. The latter method which seems to be adopted in your case is the safer and sounder of the two. In this respect we think it is evident that you have made considerable progress, for instance in control over the violence and impatience and heat natural to the volcanic energy of your temperament, in sincerity also curbing the devious and errant impulses of an enormously active mind and temperament, in a greater quiet and harmony in the being as a whole. No doubt the process has to be completed, but something very fundamental seems to have been done. It is more important to look at the thing from the positive rather than the negative side. The things that have to be established are—*brahmaccaryam śamah satyam prasāntir ātmasamīyamah*: *brahmaccaryam*, a complete sex-purity; *śamah*, quiet and harmony in the being, its forces maintained but controlled, harmonised, disciplined; *satyam*, truth and sincerity in the whole nature; *prasāntih*, a general state of peace and calm; *ātmasamīyamah*, the power and habit to control whatever needs control in the movements of the nature. When these are fairly established one has laid a foundation on which one can develop the Yogic consciousness and with the Yogic consciousness there comes an easy opening to realisation and experience.

*

The progress does not always come in the way that people expect. There is first a preparation within even for many years before such experiences come as people usually associate with the word progress. There has been this preparation and progress in you, but because struggle is still there you cannot recognise it.

You must put your trust in the Mother and let her Force work in you — keep the attitude of confidence and self-offering and the result will appear as soon as the consciousness is ready.

*

According to the affirmation of people acquainted with the subject, the preliminary purification before getting any Yogic experiences worth the name may extend to 12 years. After that one may legitimately expect something. You are far from the limit yet — so no reason to despair.

*

Do not be over-eager for experience, — for experiences you can always get, having once broken the barrier between the physical mind and the subtle planes. What you have to aspire for most is the improved quality of the recipient consciousness in you — discrimination in the mind, the unattached impersonal Witness look on all that goes on in you and around you, purity in the vital, calm equanimity, enduring patience, absence of pride and the sense of greatness — and more especially, the development of the psychic being in you — surrender, self-giving, psychic humility, devotion. It is a consciousness made up of these things, cast in this mould that can bear without breaking, stumbling or deviation into error the rush of lights, powers and experiences from the supraphysical planes. An entire perfection in these respects is hardly possible until the whole nature from the highest mind to the subconscious physical is made one in the light that is greater than Mind; but a sufficient foundation and a consciousness always self-observant, vigilant and growing in these things is indispensable — for perfect purification is the basis of the perfect siddhi.

*

You must not try to get experiences; you are not yet ready for them; instead of the right experience something abnormal comes. You must get your vital purified and calm so that these movements may not come. Nothing abnormal like not sleeping, not eating — all that is the vital trying to do extraordinary things so as to imagine it is going fast and doing high sadhana. A pure, simple, quiet, well-balanced vital is necessary for this Yoga.

*

The automatic tendency is a good sign as it shows that it is the inner being opening to the Truth which is pressing forward the necessary changes.

As you say, it is the failure of the right attitude that comes in the way of passing through ordeals to a change of nature. The pressure is becoming greater now for this change of character even more than for decisive Yoga experience — for if the experience comes it fails to be decisive because of the want of the requisite change of nature. The mind for instance gets the experience of the One in all, but the vital cannot follow because it is dominated by ego-reaction and ego-motive or the habits of the outer nature keep up a way of thinking, feeling, acting, living which is quite out of harmony with the experience. Or the psychic and part of the mind and emotional being feel frequently the closeness of the Mother, but the rest of the nature is unoffered and goes its own way prolonging division from her nearness, creating distance. It is because the sadhaks have never even tried to have the Yogic attitude in all things — they have been contented with the common ideas, common view of things, common motives of life, — only varied by inner experiences and transferred to the framework of the Asram instead of that of the world outside. It is not enough — and there is great need that this should change.

*

Quite correct. Unless the adhar is made pure, neither the higher truth (intuitive, illumined spiritual) nor the overmental nor the supramental can manifest; whatever forces come down from

them get mixed with the inferior consciousness and a half-truth takes the place of the Truth or even sometimes a dangerous error.

*

As for experiences, anybody with an occult bent can have experiences. The thing is to know what to do with them.

Mixed and Confused Experiences

I do not question at all the personal intensity or concreteness of your internal experiences, but experiences can be intense and yet be very mixed in their truth and their character. In your experience your own subjectivity, sometimes your ego-pushes interfere very much and give them their form and the impression they create on you. It is only if there is a pure psychic response that the form given to the experience is likely to be the right one and the mental and vital movements will then present themselves in their true nature. Otherwise the mind, the vital, the ego give their own colour to what happens, their own turn, very usually their own deformation. *Intensity* is not a guarantee of entire truth and correctness in an experience; it is only *purity* of the consciousness that can give an entire truth and correctness.

The Mother's presence is always there; but if you decide to act on your own — your own idea, your own notion of things, your own will and demand upon things, then it is quite likely that her presence will get veiled; it is not she who withdraws from you, but you who draw back from her. But your mind and vital don't want to admit that, because it is always their preoccupation to justify their own movements. If the psychic were allowed its full predominance, this would not happen; it would have felt the veiling, but it would at once have said, "There must have been some mistake in me, a mist has arisen in me," and it would have looked and found the cause.

It is perfectly true that so long as there is not an unreserved self-giving in both the internal and external, there will always be veilings, dark periods and difficulties. But if there is unreserved

self-giving in the internal, the unreserved self-giving in the external would naturally follow; if it does not, it means that the internal is not unreservedly surrendered; there are reservations in some part of the mind insisting on its own ideas and notions; reservations in some part of the vital insisting on its own demands, impulses, movements, ego-ideas, formations; reservations in the internal physical insisting on its own old habits of many kinds, and all claiming consciously, half-consciously or subconsciously that these should be upheld, respected, satisfied, taken as an important element in the work, the “creation” or the Yoga.

*

All this is absolutely idiotic confusion. It has come because you have persisted in disobeying and disregarding everything I wrote for you.

I told you you were not to try to decide by your mind. You persistently go on repeating, “*I must decide. I must decide. I must take a decision. I must take a resolution.*” You are always repeating this “*I, I, I must decide*” as if you knew better than myself and the Mother! “*I must understand, I must decide.*” And always you find that your mind can decide nothing and understand nothing. And yet you go on repeating the same falsehood.

I tell you plainly once again that all your so-called experiences are worth nothing, mere vital ignorance and confusion. The only experience you need is the experience of the presence of the Mother, the Mother’s light, the Mother’s force, and the change they bring in you.

You have to throw away all other influences and open yourself only to the Mother’s influence.

You have to think and talk no longer about energies flowing out and your energies and others’ energies. The only energy you have to feel is the descent and inflow and action of the Mother’s force.

These were my instructions and so long as you carried them out, you were progressing rapidly.

Throw all these incoherent false experiences away. Go back to the single rule I gave you. Open to the Mother's presence, influence, light, force — reject everything else. Only so will you get back clearness (instead of this confusion), peace, psychic perception and progress in the sadhana.

*

But why be overwhelmed by any wealth of any kind of experiences? What does it amount to after all? The quality of a sadhak does not depend on that; one great spiritual realisation direct and at the centre will often make a great sadhak or Yogi, an army of intermediate Yogic experiences will not, that has been amply proved by a host of instances. You need not therefore compare that wealth to your poverty. To open yourself to the descent of the higher consciousness (the true being) is the one thing needed and that, even if that comes after long effort and many failures, is better than a hectic gallop leading nowhere.

*

You have missed my rather veiled hint about wealth of "any kind of experiences" and the reference to the intermediate zone which, I think at least, I made. I was referring to the wealth of *that* kind of experience. I do not say that these experiences are always of no value, but they are so mixed and confused that if one runs after them without any discrimination at all they end either by leading astray, sometimes tragically astray, or by bringing one into a confused nowhere. That does not mean that all such experiences are useless or without value. There are those that are sound as well as those that are unsound; those that are helpful, in the true line, sometimes signposts, sometimes stages on the way to realisation, sometimes stuff and material of the realisation. These naturally and rightly one seeks for, calls, strives after, or at least one opens oneself in the confident expectation that they will sooner or later arrive. Your own main experiences may have been few or not continuous, but I cannot recollect any that were not sound or were unhelpful. I would say that it is better to have a few of these than a multitude of

the others. My only meaning in what I wrote was not to be impressed by mere wealth of experiences or to think that that is sufficient to constitute a great sadhak or that not to have this wealth is necessarily an inferiority, a lamentable deprivation or a poverty of the one thing desirable.

There are two classes of things that happen in Yoga — realisations and experiences. Realisations are the reception in the consciousness and the establishment there of the fundamental truths of the Divine, of the Higher or Divine Nature, of the world-consciousness and the play of its forces, of one's own self and real nature and the inner nature of things, the power of these things growing in one till they are a part of one's inner life and existence, — as for instance, the realisation of the Divine Presence, the descent and settling of the higher Peace, Light, Force, Ananda in the consciousness, their workings there, the realisation of the divine or spiritual love, the perception of one's own psychic being, the discovery of one's own true mental being, true vital being, true physical being, the realisation of the overmind or the supramental consciousness, the clear perception of the relation of all these things to our present inferior nature and their action on it to change that lower nature. The list of course might be infinitely longer. These things also are often called experiences when they only come in flashes, snatches or rare visitations; they are spoken of as full realisations only when they become very positive or frequent or continuous or normal.

Then there are the experiences that help or lead towards the realisation of things spiritual or divine or bring openings or progressions in the sadhana or are supports on the way — experiences of a symbolic character, visions, contacts of one kind or another with the Divine or with the workings of the higher Truth, things like the waking of the Kundalini, the opening of the chakras, messages, intuitions, openings of the inner powers, etc. The one thing that one has to be careful about is to see that they are genuine and sincere and that depends on one's own sincerity, for if one is not sincere, if one is more concerned with the ego or being a big Yogi or becoming a superman than with meeting the Divine or getting the Divine Consciousness which enables one

to live in or with the Divine, then a flood of pseudos or mixtures comes in, one is led into the mazes of the intermediate zone or spins in the grooves of one's own formations. There is the truth of the whole matter.

Then why does Krishnaprem say that one should not hunt after experiences but only love and seek the Divine? It simply means that you have not to make experiences your main aim, but the Divine only your aim; and if you do that, you are more likely to get the true helpful experiences and avoid the wrong ones. If one seeks mainly after experiences, his Yoga may become a mere self-indulgence in the lesser things of the mental, vital and subtle physical worlds or in spiritual secondaries, or it may bring down a turmoil or maelstrom of the mixed and the whole or half-pseudo and stand between the soul and the Divine. That is a very sound rule of sadhana. But all these rules and statements must be taken with a sense of measure and in their proper limits,—it does not mean that one should not welcome helpful experiences or that they have no value. Also when a sound line of experience opens, it is perfectly permissible to follow it out, keeping always the central aim in view. All helpful or supporting contacts in dream or vision, such as those you speak of, are to be welcomed and accepted. I had no intention of discouraging such things at all. Experiences of the right kind are a support and help towards the realisation; they are in every way acceptable.

Purification and Positive Experience

It is a mistake to dwell too much on the lower nature and its obstacles, which is the negative side of the sadhana. They have to be seen and purified, but preoccupation with them as the one important thing is not helpful. The positive side of experience of the descent is the more important thing. If one waits for the lower nature to be purified entirely and for all time before calling down the positive experience, one might have to wait for ever. It is true that the more the lower nature is purified, the easier is the descent of the higher Nature, but it is also and more true that the more the higher Nature descends, the more the lower is purified.

Neither the complete purification nor the permanent and perfect manifestation can come all at once, it is a matter of time and patient progress. The two (purification and manifestation) go on progressing side by side and become more and more strong to play into each other's hands — that is the usual course of the sadhana.

*

I do not know what Krishnaprem said or in which article, I do not have it with me. But if the statement is that nobody can have a successful meditation or realise anything till he is pure and perfect, I fail to follow it; it contradicts my own experience. I have always had realisation by meditation first and the purification started afterwards as a result. I have seen many get important, even fundamental realisations by meditation who could not be said to have a great inner development. Are all Yogis who have meditated with effect and had great realisations in their inner consciousness perfect in their nature? It does not look like it to me. I am unable to believe in absolute generalisations in this field, because the development of spiritual consciousness is an exceedingly vast and complex affair in which all sorts of things can happen and one might almost say that for each man it is different according to his nature and that the one thing that is essential is the inner call and aspiration and the perseverance to follow always after it no matter how long it takes or what are the difficulties or impediments — because nothing else will satisfy the soul within us.

It is quite true that a certain amount of purification is indispensable for going on, that the more complete the purification the better because then when the realisations begin they can continue without big difficulties or relapses and without any possibility of fall or failure. It is also true that with many purification is the first need, — certain things have to be got out of the way before one can begin any consecutive inner experience. But the main need is a certain preparation of the consciousness so that it may be able to respond more and more freely to the higher Force. In this preparation many things are useful — the poetry

and music you are doing can help, for it acts as a sort of *śravāṇa* and *manana*, even, if the feeling roused is intense, a sort of natural *nididhyāṣana*. Psychic preparation, clearing out of the grosser forms of mental and vital ego, opening mind and heart to the Guru and many other things help greatly—it is not perfection or a complete freedom from the dualities or ego that is the indispensable preliminary, but preparedness, a fineness of the inner being which makes spiritual responses and receiving possible.

There is no reason therefore to take as gospel truth these demands which may have been right for Krishnaprem on the way he has trod, but cannot be imposed on all. There is no ground for despondency on that ground—the law of the spirit is not so exacting and inexorable.

Purification and Consecration

What Krishnaprem writes (I have not read it yet) is perfectly true that purification of the heart is necessary before there can be the spiritual attainment. All ways of spiritual seeking are agreed on that. Purification and consecration are two great necessities of *sadhanā*. It is not a fact that one must be pure in heart before one can have *any* Yogic experience at all, but those who have experiences before purification is done run a great risk. It is much better to have the heart pure first, for then the way becomes safe. Nor can the Divine dwell in one's consciousness, if that consciousness is obscure with impurity. It is for the same reason that I advocate the psychic change of the nature first—for that means the purification of the heart, the turning of it wholly to the Divine, the subjection of the mind, of the vital passions, desires, demands, of the physical instincts to the control of the inner being, the soul. What Krishnaprem calls intuitions I would describe as psychic intimations or, as some experience it, the voice of the soul showing the outer members what is the true thing to be done. Always when the soul is in front, one gets the right guidance from within what is to be done, what avoided, what is the wrong thing or the true thing in thought, feeling, action. But this inner intimation emerges in proportion as the

consciousness grows more and more pure.

I never intended that X should stay here; he came for darshan and sat down here without a “by your leave”. I allowed him to remain for a while to see if he got any profit out of it; afterwards came his repeated illness and he somehow stuck on till now. What I meant by some concrete method was things like repetition of a mantra, pranayama, asana etc. He has been doing these things even here or some of them at least; it is the only thing he really understands (or misunderstands?); but purification of the heart he has not been capable of doing. What I mean by subtle methods is psychological, non-mechanical processes — e.g. concentration in the heart, surrender, self-purification, working out by inner means the change of the consciousness. This does not mean that there is no outer change, — the outer change is necessary but as a part of the inner change. If there is impurity and insincerity within, the outer change will not be effective; but if there is a sincere inner working, the outer change will help it and accelerate the process. What use is X’s eating less except for his body’s health? But if a man seeks to restrain and get rid of his greed for food or attachment, (not by starvation, though), then he is doing something useful to his sadhana.

Y’s case is different. His main stumbling block was ambition, pride, vanity, the desire to be a big Yogi with occult powers. To try to bring down occult powers into an unpurified mind, heart and body — well, you can do it if you want to dance on the edge of a precipice. Or you can do it if your aim is not to be spiritual but to be an occultist, for then you can follow the necessary methods and get the help of the occult powers. But the occult spiritual forces and masteries can be called down or come down without calling only if that is quite secondary to the true thing, the seeking for the Divine, and if it is part of the Divine plan in you. Occult powers can only be for the spiritual man an instrumentation of the Divine Power that uses him, they cannot be the aim or an aim of his sadhana. I don’t know who started Y on this false path or whether he hit on it himself; many people here have a habit of doing Yoga according to their own ideas without caring for the guidance of the Guru — from whom

however they expect an entire protection and success in sadhana even if they prance or gambol into the wrongest paths possible.

Of course, renunciation of sex is indispensable for the purification you seek,—the heart must be pure and consecrated to the Divine. There must be no turn left that side. As for food, well, that is not so much a purification of the heart as of the vital in the physical, but it is of course very helpful to get control there. The purification of the heart is the central necessity, but a purification of the mind, vital and physical is also called for. But the most important thing for purification of the heart is an absolute sincerity. No pretence with oneself, no concealment from the Divine or oneself or the Guru, a straight look at one's nature and one's movements, a straight will to make them straight. It does not so much matter if it takes time; one must be prepared to make it one's whole life-task to seek the Divine. Purifying the heart means after all a pretty considerable achievement and it is no use getting despondent, despairful etc. because one finds things in oneself that still need to be changed. If one keeps the true will and true attitude, then the intuitions or intimations from within will begin to grow, become clear, precise, unmistakable and the strength to follow them will grow also. And then before even you are satisfied with yourself, the Divine will be satisfied with you and begin to withdraw the veil by which he protects himself and his seeker against a premature and perilous grasping of the greatest thing to which humanity can aspire.

Purification and Transformation

Transformation is made possible by purification.

*

If you remain in a fully conscious state, the clearing of the outer nature ought not to be difficult—afterwards the positive work of its transformation into a perfect instrument can be undertaken.

Conditions for the Coming of Experience

If you make your mind quiet, the experience will come. If you cannot make your mind quiet, work and pray and wait. Those who are able to open to the Divine receive him—but also to those who can wait for the Divine, the Divine comes.

*

If one feels [*the Mother's Force working while in a state of quietness*] it is all right—but it does not always happen. The quietness, silence or peace is a basis for the extension of consciousness, the coming of higher experiences or realisations etc. In what way or order they come differs according to the individual nature.

*

Visions and experiences will come; but the most important thing is to get in the peace, Ananda, confidence and establish it. When that is fixed, afterwards the consciousness can open to the working of the Mother's Force—it's coming down into the body and its working will bring all the experience and change that is needed.

*

To fix the calm and strength is the main thing now—more important than fresh experiences; these will come fast enough if the calm and strength become durable, are made the habit and stuff of the consciousness.

*

As for sadhana what is necessary is to arrive at a certain quiet of the inner mind which makes meditation fruitful or a quietude of the heart which creates the psychic opening. It is only by regular concentration, constant aspiration and a will to purify the mind and heart of the things that disquiet and agitate them that this can be done. When a certain basis has been established in these two centres the experiences come of themselves. Many,

no doubt, get some kind of experiences such as visions etc. before the basis is well laid by a sort of mental or vital aptitude for these things, but such experiences do not of themselves lead to transformation or realisation — it is by the quietude of the mind and the psychic opening that these greater things can come.

*

Experience in the sadhana is bound to begin with the mental plane,—all that is necessary is that the experience should be sound and genuine. The pressure of understanding and will in the mind and the Godward emotional urge in the heart are the two first agents of Yoga, and peace, purity and calm (with a lulling of the lower unrest) are precisely the first basis that has to be laid; to get that is much more important in the beginning than to get a glimpse of the supraphysical worlds or to have visions, voices and powers. Purification and calm are the first needs in the Yoga. One may have a great wealth of experiences of that kind (worlds, visions, voices etc.) without them, but these experiences occurring in an unpurified and troubled consciousness are usually full of disorder and mixture.

At first the peace and calm are not continuous, they come and go, and it usually takes a long time to get them settled in the nature. It is better therefore to avoid impatience and to go on steadily with what is being done. If you wish to have something beyond the peace and calm, let it be the full opening of the inner being and the consciousness of the Divine Power working in you. Aspire for that sincerely and with a great intensity but without impatience and it will come.

*

It is necessary to lay stress on three things — (1) an entire quietness and calm of the mind and the whole being, (2) a continuance of the movement of purification so that the psychic being (the soul) may govern the whole nature, (3) the maintenance in all conditions and through all experiences of the attitude of adoration and bhakti for the Mother. These are the conditions in which one can grow through all experiences with security and

have the right development of the complete realisation without disturbance to the system or being carried away by the intensity of the experiences. Calm, psychic purity, bhakti and spiritual humility before the Divine are the three conditions.

*

The special experiences you are having are glimpses of what is to be and what is growing and preparing and are helping to make the consciousness ready for it. It is not therefore surprising that they change and are replaced by others — that is what usually happens; for it is not these forms that are to be perpetuated, but the essence of the thing which they are bringing. Thus the one thing that has to grow most now is the silence, the quietude, the peace, the free emptiness into which experiences can come, the sense of coolness and release. When that is in possession of the consciousness fully, then something else will come into it which is also essential to the true consciousness and fix itself — it proceeds usually like that. There is nothing strange therefore in the special forms of experience ceasing and being followed by others after you have written about or brought them to the Mother. When the more permanent forms of realisation begin to come, it will no longer be like that.

Chapter Five

Suggestions for Dealing with Experiences

Letting the Experiences Develop Naturally

It is better to let the experiences develop naturally. It is not necessary, when they come freely, to determine with the mind which is to be remembered or sought after.

*

An experience should be allowed its full time to develop or have its full effect. It should not be interrupted except in case of necessity or, of course, if it is not a good experience.

*

You have to watch and see how they [*experiences*] develop. For the most part they carry their own meaning and if you go on observing them with a silent and vigilant mind you will understand more than if you were in a constant turmoil of thought about them.

*

When an experience begins, you should not interfere with it by either questioning or by disturbing movements.

Thinking about Experiences

To think and question about an experience when it is happening is the wrong thing to do; it stops it or diminishes it. Let the experience have its full play—if it is something like this “new life force” or peace or Force or anything else helpful. When it is over, you can think about it—not while it is proceeding. For these experiences are spiritual and not mental and the mind has

to be quiet and not interfere.

*

During the experience the mind should be quiet. After the experience is over it can be active. If it is active while it is there, the experience may stop altogether.

*

It was not an imagination, but an experience. When such an experience occurs, the attempt to take hold of it mentally and continue it may on the contrary interrupt it. It is best to let it continue of itself; if it ceases, it is likely to recur.

*

There are two centres or parts of the consciousness — one is a witness, *sākṣī*, and observes, the other consciousness is active and it is this active consciousness that you felt going down deep into the vital being. If your mind had not become active, you would have known where it went and what it went there to experience or do. When there is an experience, you should not begin to think about it, for that is of no use at all and it only stops the experience — you should remain silent, observe and let it go on to its end.

*

There is something in you that does want to stick to the habit of mentalising about everything. So long as you were not having real experiences, it did not matter. But once real experiences begin you have to learn to approach them in the right way.

Observing Experiences without Attachment

At a certain stage of the sadhana, in the beginning (or near it) of the more intense experiences, it sometimes happens that there is the intense realisation of some aspect of the Divine, a sort of communion with it, and that is seen everywhere and all as that. It is a transitory phase and afterwards one gets the

larger experience of the Divine in all its aspects and beyond all aspects. Throughout the experience there should be one part of the being that observes and understands—for sometimes ignorant sadhaks are carried away by their experience and stop short there or fall into extravagance. It must be taken as an experience through which you are passing.

Observing Experiences without Fear or Alarm

It is always dangerous to allow fear to come in like that and associate itself with experiences in the sadhana. There is nothing in the experiences themselves as you describe them that are at all alarming. A burning in the head or a creeping or ticklish sensation or a sense of something moving and working in the head has often been felt by many when there was an opening and the Force was working there. The other things also are in themselves usual enough, the sense of something separate from oneself and the opening and connection made between the head and the centre above. But where the anomaly comes in is that with the connection comes the fear and nervous physical upsetting. So long as there is fear it is no use going on with these experiences—you have to stop and get back to the normal consciousness. Besides that, as I have already said, you must realise what it is in you that has come across and created this upsetting. It is not the descent and the experiences, for many have had them or similar things without being any the worse. It is something in you, probably in your lower vital and physical, that does not want the Higher Consciousness because it will have to change and it has no intention of changing. When this pressure acts, it gets at once a fear and shakes the physical mind and system by its fear. You will have then to get rid of this—till then it will not be safe for you to go farther.

*

These experiences are symbolic in their character, so there is no reason to be horrified by the green waters even if you did drown in a well in the last life. All such experiences should be observed

quietly without alarm or depression or other such feelings. One can look at them and try to see or feel their meaning, but too active a speculation in the mind rather hinders than helps the seeing.

If you sink down into an unopened part and open it to the light or empty and clear it, that is a quite salutary and necessary operation and there is no reason for alarm. As for self-preservation, one does not drown in these inner wells—it is only a bath or a plunge. And if it happens to be the well of the psychic, nothing more salutary than to plunge into it.

Speaking about Experiences

The usual rule given by Yogis is that one should not speak of one's experience to others except of course the Guru while the sadhana is going on because it wastes the experience, there is what they call *kṣaya* of the tapasya. It is only long past experiences that they speak of and even that not too freely.

*

The Light left you because you spoke of it to someone who was not an *adhikārī*. It is safest not to speak of these experiences except to a guru or to one who can help you. The passing away of an experience as soon as it is spoken of is a frequent happening and for that reason many Yogis make it a rule never to speak of what happens within them unless it is a thing of the past or a settled realisation that nothing can take away. A settled permanent realisation abides, but these were rather things that come to make possible an opening in the consciousness to something more complete—to prepare it for realisation.

*

I thought it was understood that what I wrote to you about persons was private. Experiences one's own or others' if one comes to know of them, should not be talked about or made a matter of gossip. It is only if there can be some spiritual profit to others and even then if they are experiences of the past that one

can speak of them. Otherwise it becomes like news of Abyssinia or Spain, something common and trivial for the vital mass-mind to chew or gobble.

*

To show what is written about experiences or to speak about one's experiences to others is always risky. They are much better kept to oneself.

*

I rather doubt whether it should be done.¹ There is a privacy about experiences which stands in the way of their being dealt with like that, at least until the sadhak has got into siddhi. They can be spoken of to a few, if one wishes, but to make public like that in a general way, even without names, is a little difficult. People besides might begin to speculate on these experiences, gossip and ask questions. What might be useful is some experiences with explanation, if the answer gives one, which would make clear certain sides of the sadhana. But they would have to be carefully chosen.

*

General knowledge is another matter, it is intellectual and the intellect gains by the intellectual activity of teaching. Also if in Yoga it were only a matter of imparting intellectually one's mental knowledge of the subject, that rule² would perhaps hold; but this mental aspect is only a small part of Yoga. There is something more complex which forms the bigger part of it. In teaching Yoga to another one becomes to some extent a master with disciples. The Yogis have always said that one who takes disciples, takes upon himself the difficulties of his disciples as well as one's own—that is why it is recommended not to take

¹ *The correspondent wished to compile a "Journal of Experiences" containing the letters of sadhaks who had written about their experiences to Sri Aurobindo and he had commented on them. This collection of letters would be kept in the Ashram library for sadhaks to read.—Ed.*

² *The rule that one understands something better by teaching it.—Ed.*

disciples unless and until one is siddha and even then only if one receives the Divine authority to do it—what Ramakrishna called getting the *cāprās*. Secondly, there is the danger of egoism —when one is free from that, then the objection no longer holds. There is a separate question and that is the telling of one's own experiences to others. That too is very much discouraged by most Yogis—they say it is harmful to the sadhana. I have certainly seen and heard of any number of instances in which people were having a flow of experiences and, when they told it, the flow was lost—so there must be something in this objection. I suppose however it ceases to apply after one has reached a certain long-established stability in the experience, that is to say, when the experience amounts to a definite and permanent realisation, something finally and irrevocably added to the consciousness. I notice that those who keep their experiences to themselves and do not put themselves out on others seem to have a more steady sadhana than others, but I don't know whether it is an invariable rule. It would probably not apply any longer after a certain stage of realisation.

*

It is true that experiences often disappear when spoken or written about to others. But that does not always happen, nor does it happen to everybody.

*

It is not good to talk too much to others about the sadhana and its experiences. There can be exceptions to the rule, but that depends on the person and circumstances.

*

If you want to keep the joy, it will be wise not to speak of it to others. Things spoken about get wings and try to escape.

The Difficulty of Keeping Experiences

The rush of the experience at the beginning is often very powerful, so powerful that the resisting elements remain quiescent—

afterwards they rise up. The experience has then to be brought down and settled in these parts also.

*

Yes, that is the truth of the working. At first what has to be established comes with difficulty and is felt as if abnormal, an experience that one loses easily—afterwards it comes of itself, but does not yet stay; finally it becomes a frequent and intimate state of the being and makes itself constant and normal. On the other hand all the confusions and errors once habitual to the nature are pushed out; at first they return frequently, but afterwards they in their turn become abnormal and foreign to the nature and lose frequency and finally disappear.

*

One can speak of a condition as coming freely and spontaneously when it comes of itself or as soon as it is remembered after an interruption. One can speak of it as coming at will, when it comes back at a slight pressure of the will and nothing more is necessary. Yours comes by an effort of the will which has to be sustained and is kept at the price of a constant vigilance. But this effort and vigilance are quite the right thing and must be done until the condition either becomes stable or comes automatically or at will, as described above. This is not pulling, so you need not hesitate to go on with it fully. It is the necessary tapasya.

What prevents it from remaining is the natural lapse to a lower consciousness which comes either from the mind's or vital's inclination to indulge in accustomed occupations or by sleep or by losing oneself in some outer action such as talking —because these things are associated with the ordinary mental consciousness and still need it to be done. At a later stage it will be possible to do these things with the surface mind only while the new consciousness remains intact and is either found there immediately as soon as the surface occupation ceases or else remains even during the occupation upholding the surface action or enveloping it as a small movement in itself.

*

All that you have written is quite correct; but the smallness is a general characteristic of the human instrument before it has the spiritual change. When the quietude comes, then the wideness also begins to come. The state you feel in which things go right, is the psychic and spiritual condition of the being; it is true that at first it is there only at times, but that is usual in the sadhana. All new states and realisations come like that at first; they are there for a short time, then seem to cease and other things come up from below and cover and hide the new condition. This is because of the habit of the past nature. But the true condition goes on returning till it and not the old things establishes itself as the habit and rule of a new nature.

The inward condition and its new outlook on things without the eagerness of the old consciousness in work is simply a passage through which you are going towards the new nature in which you will remain unmoved and undisturbed by things, but with a new and freer power of action which comes from within and from above.

*

It is more difficult at this stage for the experiences of Ananda (this felicity seems from your description to be an intense psychic Ananda) to be kept permanently than for peace to remain abidingly. The difficulty of keeping up these states in work or reading is more a matter of habit than anything else, because the mind is accustomed to absorb in the reading or work and forget all else for the time being. But once one gets the right poise and can keep in the inner being during work, that difficulty disappears.

Section Two
Vicissitudes on the Way
to Realisation

Chapter One

Variations in the Intensity of Experience

The Up and Down Movement in Yoga

The up and down movement which you speak of is common to all ways of Yoga. It is there in the path of bhakti, but there are equally alternations of states of light and states of darkness, sometimes sheer and prolonged darkness, when one follows the path of knowledge. Those who have occult experiences come to periods when all experiences cease and even seem finished for ever. Even when there have been many and permanent realisations, these seem to go behind the veil and leave nothing in front except a dull blank, filled, if at all, only with recurrent attacks and difficulties. These alternations are the result of the nature of human consciousness and are not a proof of unfitness or of predestined failure. One has to be prepared for them and pass through. They are the “day and night” of the Vedic mystics.

As for surrender, everyone has his own first way of approach towards it; but if it is due to fear, “form” or sense of duty, then certainly that is not surrender at all; these things have nothing to do with surrender. Also, complete and total surrender is not so easy as some seem to imagine. There are always many and large reservations; even if one is not conscious of them, they are there. Complete surrender can best come by a complete love and bhakti. Bhakti on the other hand can begin without surrender, but it naturally leads, as it forms itself, to surrender.

You are surely mistaken in thinking that the difficulty of giving up intellectual convictions is a special stumbling-block in you more than in others. The attachment to one's own ideas and convictions, the insistence on them is a common characteristic and here it seems to manifest itself with an especial vehemence. It can be removed by a light of knowledge from above which

gives one the direct touch of Truth or the luminous experience of it and takes away all value from mere intellectual opinion, ideas or conviction and removes the necessity for it, or by a right consciousness which brings with it right ideas, right feeling, right action and right everything else. Or else it must come by a spiritual and mental humility which is rare in human nature — especially the mental, for the mind is always apt to think its own ideas, true or false, are the right ideas. Eventually it is the psychic growth that makes this surrender too possible and that again comes most easily by bhakti. In any case, the existence of this difficulty is not in itself a good cause for forecasting failure in Yoga.

*

The rhythm of up and down is fairly general — it is only a few who keep an even course and even these have slight though comparatively rare drops of the consciousness. But the times vary — although it is true that it comes upon a few at the same time, and occasionally there is a massed general attack and shaking. It seems difficult as yet to eliminate these vicissitudes of the sadhana.

*

Everything once gained is there and can be regained. Yoga is not a thing that goes by one decisive rush one way or the other — it is a building up of a new consciousness and is full of ups and downs. But if one keeps to it the ups have a habit of resulting by accumulation in a decisive change — therefore the one thing to do is to keep at it. After a fall don't wail and say, "I'm done for," but get up, dust yourself and proceed farther on the right path.

*

After one has got to a certain stage the things gained are never lost — they may be covered over but they return — they have only gone inside and come back to the surface.

Alternations, Oscillations, Fluctuations of Consciousness

It is always like that — some days of experience, some days of no experience (or only experience of peace and quietude) alternating. It is only later on that the consciousness becomes capable of continuous experience and even then there are alternations of the level.

*

The reason why there are these alternations of which you complain is that the nature of the consciousness is like that; after a little spell of wakefulness it feels the need of a little sleep. Very often in the beginning the wakings are brief, the sleeps long; afterwards it becomes more equal and later on the sleep periods are shorter and shorter. Another cause of these alternations, when one is receiving, is the nature's need of closing up to assimilate. It can take perhaps a great deal, but while the experience is going on it cannot absorb properly what it brings, so it closes down for assimilation. A third cause comes in in the period of transformation, — one part of the nature changes and one feels for a time as if there had been a complete and permanent change. But one is disappointed to find it cease and a period of barrenness or lowered consciousness follows. This is because another part of the consciousness comes up for change and a period of preparation and veiled working follows which seems to be one of unenlightenment or worse. These things alarm, disappoint or perplex the eagerness and impatience of the sadhak; but if one takes them quietly and knows how to use them or adopt the right attitude, one can make these unenlightened periods also a part of the conscious sadhana. So the Vedic Rishis speak of the alternation of "Day and Night both suckling the divine Child".

*

Everyone has these alternations because the total consciousness is not able to remain always in the above experience [*of the higher force working powerfully*]. The point is that in the intervals there should be quietude, at least in the inner being, no

restlessness, dissatisfaction or struggle. If that point is attained, then the sadhana can go on smoothly—not that there will be no difficulties, but there will be no disquietude or dissatisfaction etc. etc.

*

The impermanence of the better condition is a fairly general phenomenon. There is an oscillation always, a coming and going till the change that is trying to take place is strong enough to fix itself. This is due to two reasons, first the inability of the vital and physical to give up their old movements at once and accommodate themselves to the new and secondly to the habit of things hiding in the nature somewhere under the pressure from above and turning up as soon as they get an opportunity.

*

These slight oscillations always happen until everything is open. They are due to one of two causes,—either

- (1) Some small part or movement of the being comes up which is not quite open and needs to have the Influence brought into it, or
- (2) A shadow is thrown by the outside force, bringing back, not the old disturbance, but some temporary obscuration or appearance of obscuration.

Do not be disturbed, but immediately become quite quiet and open yourself.

The important thing is not to allow the old strong disturbance and confusion to come back and, secondly, not to allow a long obscuration, even if the obscuration be without a serious disturbance. To keep hold on quiet persistently will prevent the serious disturbance; to keep quiet and steadily open yourself will prevent any long obscuration.

*

These oscillations [*of consciousness*] always come. The universal lower Nature tries to come back and resume its hold—the lower vital or the physical consciousness responds, not always because

it wants or likes to do so but because the old habit of response is still so strong that it cannot help it.

The first necessity is to detach yourself, not to regard it as your own, to learn to feel it as something foreign and refuse to be touched or upset. Then it will become easier for the lower vital or physical itself to reject and refuse to admit it.

*

These fluctuations in the force of the aspiration and the power of the sadhana are unavoidable and common to all sadhaks until the whole being has been made ready for the transformation. When the psychic is in front or active and the mind and vital consent, then there is the intensity. When the psychic is less prominent and the lower vital has its ordinary movements or the mind its ignorant action, then the opposing forces can come in unless the sadhak is very vigilant. Inertia comes usually from the ordinary physical consciousness, especially when the vital is not actively supporting the sadhana. These things can only be cured by a persistent bringing down of the higher spiritual consciousness into all the parts of the being.

*

These fluctuations always take place. By insistence and practice it becomes finally possible to keep the aspiration and the open consciousness above continuously, but even then periods of active progress and periods of assimilation alternate.

*

Fluctuations of this kind cannot but come and when they come, one has to remain very quiet and detach oneself from the surface condition and wait for it to pass while calling the Mother's Force. A neutral condition of this kind serves a certain purpose in the economy of the purification and change—it brings up things that have to be transformed or rejected, lifts up some part of the being in order to expose it to the transforming force. If one can understand, remain quiet and detached from the surface movements, not identified, then it goes sooner, the Force can

quickly clear out what rises and afterwards it is found that something has been gained and a progress made.

*

Yes, indeed, to keep the fixed consciousness of the soul, even when there are fluctuations in the outer nature, is a great victory. If one can do that, it means that the capacity to arrive is there fixed in the being and only the firm will is needed for the entire certitude.

Fluctuations in the Working of the Force

There are no fixed rules [*about fluctuations in the working of the Force*]. There are simply a mass of tendencies and forces with which one has to become familiar. It is not a fixed machinery which one can manage by devices or by pulling this or that button. It is only by the inner Will, the constant aspiration, by detachment and rejection, by bringing down the true consciousness, force etc. that it can be done.

*

I can only say as before, that there is no specific reason [*for fluctuations in the working of the Force*] which the mind can determine. It depends on the total condition and interaction of the forces. One has to hold on to the aspiration and look steadily towards the goal without being disturbed by these inequalities and fluctuations.

*

I don't know.¹ Times and seasons vary according to the poise and flux and reflux of the forces in the consciousness. It is not a thing to which you can affix a rationalised and systematised explanation. One can feel it and understand in the essence of the consciousness, but not formulate precise cause and effect.

¹ *The correspondent asked why he felt an emptiness in the morning, a suspension of sadhana.—Ed.*

Lulls, Pauses, Interim Periods

There are always lulls of this kind. One must not get upset—otherwise they are prolonged and disturbances come in. One must remain quiet, aspire steadily but without vehemence or, if one presses for a change, then too with a quiet steady pressure.

*

There are always periods when all one can do is to remain quiet and aspire. A continuous activity of the light and power is only possible when the whole being has been prepared and the psychic is constantly in front.

*

Everyone has periods when the consciousness is covered up. One has to go on in spite of that, and if you persist in aspiration and keep turned to the Mother, then these periods will diminish and the consciousness more and more open to her.

At such periods instead of allowing these things to hold you, you should separate yourself from them and regard them as something foreign which you have to reject.

*

There are always long periods of this kind at the beginning when the first openings of experience are covered up by the restless mind and vital; but with perseverance they diminish—the experience always returns and takes up more and more of the consciousness till it becomes its normal state.

*

There are always pauses of preparation and assimilation between two movements. You must not regard these with fretfulness or impatience as if they were untoward gaps in the sadhana. Besides, the Force rises up lifting part of the nature on a higher level and then comes down to a lower layer to raise it; this motion of ascent and descent is often extremely trying because the mind partial to an ascent in a straight line and the vital eager

for rapid fulfilment cannot understand or follow this intricate movement and are apt to be distressed by it or resent it. But the transformation of the whole nature is not an easy thing to accomplish and the Force that does it knows better than our mental ignorance or our vital impatience.

*

There is nothing wrong in having intervals of passive peace without anything happening—they come naturally in the sadhana as a basis for fresh action when the nature is ready for it. It is only the vital attitude that turns it into a disharmony, because somewhere in its being there is not the assent to or participation in the peace and passivity. To be able often to rest, repose in all the being outspread in the silent Brahman is an indispensable thing for the Yogi. But the vital wants always fuss, action, to feel that it is somebody doing something, getting on, having progress, on the move. The counterpart to this rajasic fuss is inertia. If the whole being can widen itself out, rest satisfied in the silence, then progressively inertia fades out and gives place to *sama*.

*

In the interim periods, if any come, to maintain the calm observing consciousness is the one great necessity.

The dynamic activity of the higher consciousness may be suspended but once manifested its presence is always there.

*

They [*certain experiences*] are first indications of an opening—but the opening has to be stabilised and enlarged. Also so long as the external mind is very much on the top they come at intervals only. Continuous experience is only possible when one gets inside and stays there.

*

There are always variations in the intensity of experience, due to the necessity of assimilation in the consciousness. It is only at

a much later stage that the consciousness remains always at its highest level.

*

These variations are inevitable. They go on until three things are sufficiently and unfluctuatingly established: (1) A fixed peace and gladness. (2) A clear light and understanding. (3) A complete selfless love and surrender.

Drops or Falls of Consciousness

These drops [of consciousness] happen to all sadhaks; their causes are various; sometimes it is a pull from below, sometimes an invasion from outside, sometimes a less ascertainable cause. When it happens, one must always remain as quiet as possible behind and call back the better condition.

*

A drop of consciousness need not be so serious or take as long a time to repair. A few hours or, if there is much disturbance or mental obstruction, a few days should be sufficient to recover. Sometimes it takes longer if the sadhak continues to be too troubled or agitated or otherwise stands in his own way by dwelling too much on the obstacle. But years are taken only when there is, not a mere dropping of the consciousness, but a strong fall of the whole nature from the path or other very serious accident etc. There is nothing of this kind here or anything that could cause it.

*

You must have allowed the consciousness to fall — there may have been some tamasic movement or it may merely be the habit of oscillation between the two conditions [*obscure and luminous*] that still persists.

The speedy removal of the difficulties depends on the continuance of the experiences. Otherwise the consciousness oscillates between the higher and the lower condition — which does not

prevent the ultimate liberation, but does cause delay.

*

Yes—if the peace is established, then the falls [*of consciousness*] are only on the surface and do not affect the inner consciousness.

*

Fall of the concentration happens to everybody—it has not to be taken as if it were something tragic or allowed to be the cause of depression.

Fatigue, Inertia and Lowering of the Consciousness

The falling down [*of the consciousness*] comes usually by some inertia coming in the consciousness through fatigue or through mere habit of relaxation or it comes through some vital reaction which one may or may not notice or it comes through a wrong movement of the mind. These are the positive lowering causes, but at the back of them is the fact that these alternations are almost inevitable so long as the consciousness is in any way subject to the old nature. The intervals of non-sadhana may however be long or short according to inner circumstances (mainly the power of the will or the psychic or the higher being to restore quickly the true poise).

*

An occasional sinking of the consciousness happens to everybody. The causes are various, some touch from outside, something not yet changed or not sufficiently changed in the vital, especially the lower vital, some inertia or obscurity rising up from the physical parts of nature. When it comes, remain quiet, open yourself to the Mother and call back the true condition, and aspire for a clear and undisturbed discrimination showing you from within yourself the cause or the thing that needs to be set right.

*

Yes, the ordinary physical consciousness is not able to hold the

contact and it does get tired—also it cannot assimilate much at a time. But it is not always the Divine who takes away the pressure; the lower consciousness itself loses it or gives it up.

*

An always intense aspiration, an unswerving and unwavering will turned to the one thing only, help to get through the difficulties without discouragement or falling into depression—they give an impetus for a rapid development. But the difficulties come all the same because they are inherent in human nature. Even the best sadhaks have these periods of suspension of the sadhana, of nothing happening, of the absence of the urge of the inner being. It is when some difficulty arises in the physical nature that has to be dealt with or when a pause has to be made for a veiled preparation, or for some similar reason. Even when the working of the sadhana is in the mind or vital which are more plastic such periods are frequent—when the physical is concerned they must necessarily come and are usually marked not so much by any apparent struggle but by an immobility and an inertia of the energies that were at work before. This is very troublesome to the mind because it suggests entire cessation, incapacity to progress or unfitness. But it is not really so. One must be quiet and go on opening oneself to the working or keeping the will to do so—afterwards there will be a greater progress. Many sadhaks indulge in such a period a spirit of despondency and loss of faith in the future which delays the renewal, but this should be avoided.

*

It is difficult to say [*why the veiling of consciousness persists*]—usually it is when something in the mind and vital accepts and indulges the lower forces that this inability to re-enter the true consciousness remains so obstinate. Physical tamas can produce long interregnums of obscure consciousness, but not usually with such a violent obstruction—usually only dull and obstinate.

*

The depression is not the only cause of suspension of experiences. There are others such as inertia etc. If one can have experiences continuously in spite of these things, that means that a part of the consciousness has definitely separated from the rest and is able to go on in spite of the outer resistance.

*

Even if there is physical fatigue sometimes it is not inevitable that it should interfere with the sadhana. The inner movement can always go on.

*

When the physical consciousness prevails, often one does not feel any sign or effect [of *inner or higher experiences*] even if they are there.

*

How do you expect anything so obtuse and forgetful as the physical consciousness to have the effect if the experiences are not repeated? It is as when you learn a lesson, you have to repeat it till the physical mind gets hold of it — otherwise it does not become a part of consciousness.

Variations during the Day

It happens to most sadhaks that in particular parts of the day they feel concentrated and get results, and in others that condition is not there. This is especially in the earlier stages of the progress. It is only after the higher consciousness, peace etc. have settled in the being that one can usually be at all times in the active condition of sadhana.

*

It is often like that — the period of intense activity is limited to a particular part of the day and then the rest of the time there is a lull.

*

It is quite usual to have such periods in the day. The consciousness needs time for rest and assimilation, it cannot be at the same pitch of intensity at all times. During the assimilation a calm quietude is the proper condition.

*

These variations in the consciousness during the day are a thing that is common to almost everybody in the sadhana. The principle of constant oscillation, relaxation, relapse to a normal or a past lower condition from a higher state that is experienced but not yet fixed in realisation or else realised but not yet perfectly stable, becomes very strong and marked when the working of the sadhana is in the physical consciousness. For there is an inertia in the physical nature that does not easily allow the intensity natural to the higher consciousness to remain constant,— the physical is always sinking back to something more ordinary; the higher consciousness and its force have to work long and come again and again before they can become constant and normal in the physical nature. Do not be disturbed or discouraged by these variations or this delay, however long and tedious; remain careful only to be quiet always with an inner quietude and as open as possible to the higher Power, not allowing any really adverse condition to get hold of you. If there is no adverse wave, then the rest is only a persistence of imperfections which all have in abundance; that imperfection and persistence the Force must work out and eliminate, but for the elimination time is needed.

*

There is no mentally definite and rigidly effective reason for the thing [*a fall into inertia*] coming in the evening rather than at 2 p.m. or in the midnight or in the morning. For some people the fall comes in the evening, for some in the morning, for some at other times, and so too with the rise. But the alternations happen to most people in one kind of rhythm or another. The times vary with people and even can vary with the same men. There is no definable reason for it being at a particular time except that it has made itself habitual at that time. The rest is a question of

the play of forces which is observable but the reasons of which escape mental definition.

*

That is a frequent experience (though I suppose it is not general)—not only with peace, but other things; there is a tendency towards a lowering of the consciousness in the evening. On the other hand with some it is the opposite. I don't know that it actually depends on work and mixing, though these may have a wearing effect—I find more often that it is a sort of rhythm of rise and fall in the consciousness during the day. Even when peace is perfectly established, there may be this rhythm for other things that are being developed.

The Need for Periods of Assimilation

Intensities like that do not remain so long as the consciousness is not transformed—there has to be a period of assimilation. When the being is unconscious, the assimilation goes on behind the veil or below the surface and meanwhile the surface consciousness sees only dullness and loss of what it had got; but when one is conscious, then one can see the assimilation going on and one sees that nothing is lost, it is only a quiet settling in of what has come down.

*

Yes—the system has to take rest so as to assimilate and renew its receptive power.

*

When one is assimilating, one is not receiving.

*

The periods of assimilation continue really till all that has to be done is fundamentally done. Only they have a different character in the later stages of sadhana. If they cease altogether at an early stage (you are still in a very early stage), it is because all the

nature was capable of has been done and that would mean it was not capable of much.

*

What I have written is perfectly clear. The periods of assimilation continue till all that has to be done is fundamentally done. If they stop early, it means that all has been done that could be done and nothing more is possible, the later and more advanced developments of the sadhana are not possible,—if they were, the assimilation periods would continue until all was developed and not cease. The only reason for such a premature end of the sadhana would be that the sadhaka is not capable of going farther.

*

The only change in the assimilation periods afterwards is that certain things remain settled while the assimilation applies to others that are not yet settled in the system. E.g. one feels always a constant peace in the inner being, but disturbances go on on the surface, till the surface also has assimilated peace. Or perhaps peace is settled everywhere and always there but knowledge comes and goes or strength comes and goes. Or all these are there but Ananda comes and goes etc. etc.

*

There is always a gain or progress at some point after these periods of assimilation if one takes them rightly—however dull or troublesome they may be.

*

If your faith is getting firmer day by day, you are certainly progressing in your sadhana and there can have been no fall. An interruption of definite experiences may be only a period of assimilation in which one prepares for a new range of experience. Keep yourself open and aspire.

Chapter Two

Emptiness, Voidness, Blankness and Silence

Periods of Emptiness

If it is only emptiness, there is nothing wrong. Alternations of emptiness and fullness are a quite normal feature of experience in sadhana.

*

Emptiness usually comes as a clearance of the consciousness or some part of it. The consciousness or part becomes like an empty cup into which something new can be poured. The highest emptiness is the pure existence of the Self in which all manifestation can take place.

*

To be an empty vessel is a very good thing if one knows how to make use of the emptiness.

*

Keep the quiet and do not mind if it is for a time empty; the consciousness at times is like a vessel which has to be emptied of its mixed and undesirable contents; it has to be kept vacant for a while till it can be filled with the right contents. The one thing to be avoided is the refilling of the cup with the old contents. Meanwhile wait, open yourself upwards, call very quietly and steadily, not with a too restless eagerness for the peace to come into the silence and, once the peace is there, for the joy and the presence.

*

You have written of the Force coming down [*during a period of*

emptiness] — even sometimes of its filling all parts — so what is this “never”? I did not at all mean that there is a mechanical process by which every time there is emptiness afterwards there comes an entire filling up. It depends on the stage of the sadhana. The emptiness may come often or stay long before there is any descent — what fills may be silence and peace or Force or Knowledge and they may fill only the mind or mind and heart or mind and heart and vital or all. But there is nothing fixed and mechanically regular about these two processes.

*

Usually such feelings of emptiness [*in the body*] come when the identification with the body is lessening and the consciousness is preparing to take its seat either above or in a cosmic wideness or in some beginning of that wideness.

*

An emptiness in the mind or vital may be spiritual without emptiness being an essential characteristic of the higher consciousness. If it were, there could be no Force, Light or Ananda in the higher consciousness. Emptiness is only a result produced by a certain action of the higher Force on the system in order that the higher consciousness may be able to come into it. It is a spiritual emptiness as opposed to the dull and inert emptiness of complete tamas which is not spiritual.

*

If it is the spiritual emptiness then it will not be felt as interfering with the sadhana.

*

If it is real emptiness, one can last in it for years together, — it is because the vital is restless and full of desires (not empty) that it is like that [*difficult to remain empty*]. Also the physical mind is by no means at rest. If the desires were thrown out and the ego less active and the physical mind at rest knowledge would come from above; in place of the physical mind’s stupidities,

the vital mind could be calm and quiet and the Mother's Force take up the action and the higher consciousness begin to come down. That is the proper sequel of emptiness. But nothing of this has happened because the "emptiness" could not complete itself, that is to say, the true silence and peace.

Emptiness — A Transitional State

The emptiness that you described in your letter yesterday was not a bad thing—it is this emptiness inward and outward that often in Yoga becomes the first step towards a new consciousness. Man's nature is like a cup of dirty water—the water has to be thrown out, the cup left clean and empty for the divine liquor to be poured into it. The difficulty is that the human physical consciousness feels it difficult to bear this emptiness—it is accustomed to be occupied by all sorts of little mental and vital movements which keep it interested and amused or even if in trouble and sorrow still active. The cessation of these things is hard to bear for it. It begins to feel dull and restless and eager for the old interests and movements. But by this restlessness it disturbs the quietude and brings back the things that had been thrown out. It is this that is creating the difficulty and the obstruction for the moment. If you can accept emptiness as a passage to the true consciousness and true movements, then it will be easier to get rid of the obstacle.

All in the Asram are not suffering from the sense of dullness and want of interest, but many are because the Force that is descending is discouraging the old movements of the physical and vital mind which they call life and they are not accustomed to accept the renunciation of these things, or to admit the peace or joy of silence.

*

There is a certain truth in what you say about the empty cup—a certain emptying of the consciousness of old things is necessary before anything positive can settle itself. It is what is happening in your physical consciousness, the old movements are being

emptied out and you fall quiet, but they press in again and the cup has to be repeatedly emptied. If there is a firm and persistent rejection, then this repeated return of these old movements will cease to be so persistent; the periods of quiet and its intensity will increase until the peace and quietude can be established and permanent.

It is not however a fact that the whole nature has to be emptied of the old things before there can be the Light and Grace. It is done usually in different parts of the nature at different times. You had your former experiences because the mind and higher vital were sufficiently emptied and quiet to receive some experiences of a new consciousness. Now it is the physical mind, physical vital and body that have to be emptied — these always take longer than the others because the physical is more full of old habits, more obstinate in keeping and always repeating them, more slow to receive anything new or to change. But by the detachment and steady rejection and reliance on the Mother's force, this obstinacy can be overcome and the cup emptied for filling with the Divine Light.

*

There is nothing out of the normal in what you describe — it happens in the course of the change of consciousness. What has to be remedied is that you feel the stillness, emptiness, but seem to have no joy of it or the satisfied peace of the self or sense of wideness or quiet release and freedom. Usually the cessation of the lower activities brings a sense of freedom, release, repose. The inner consciousness does not miss the mental jumpings or the vital swirl — it feels as if the silence were its native element.

*

Emptiness is not in itself a bad condition, only if it is a sad and restless emptiness of the dissatisfied vital. In sadhana emptiness is very usually a necessary transition from one state to another. When mind and vital fall quiet and their restless movements, thoughts and desires cease, then one feels empty. This is at first often a neutral emptiness with nothing in it, nothing in it either

good or bad, happy or unhappy, no impulse or movement. This neutral state is often or even usually followed by the opening to inner experience. There is also an emptiness made of peace and silence, when the peace and silence come out from the psychic within or descend from the higher consciousness above. This is not neutral, for in it there is the sense of peace, often also of wideness and freedom. There is also a happy emptiness with the sense of something close or drawing near which is not yet there, e.g. the closeness of the Mother or some other preparing experience. What you describe is the neutral quiet. There is no need for anxiety. When it comes, one has only to remain quiet and open and turned to the Mother till something develops from within.

*

What you describe is the same neutral condition that you had before. It is a transitional state in which the old consciousness has ceased to be active, the new is preparing behind a neutral quietude. One must take it quietly and wait for it to turn into the spiritual peace and the psychic happiness which is quite different from vital joy and grief. To have neither vital joy nor vital grief is considered by the Yogins to be a very desirable release,—it makes it possible to pass from the ordinary human vital feelings to the true and constant inner peace, joy or happiness. I suppose you have no time just now for sitting in meditation. The pressure of sleep is a pressure to go inside and the habit of meditation makes it possible to turn the sleep that comes into a kind of sleep-samadhi in which one is conscious of various experiences and progresses in the inner being.

*

If you mean that after this kind of samadhi [*during the afternoon rest*], you feel a greater emptiness or voidness, it is quite natural. To void the being of the old consciousness and its movements and to fill the mind from above are the two main processes now by the Force from above.

*

When you feel empty like that, you have only to remain very still and open yourself to receive the Light and Force. Emptiness is a bad condition only when it is dull or when you receive into it wrong movements. But often one has to be empty in order to receive what is to be given.

*

In itself this emptiness and quietude free from all anxiety or trouble or thought about people or things is not a bad sign or an undesirable state. It is a state of what the Yogis call *udāśinatā*, a separateness from all things and indifference, an untroubled neutral quietude. In many Yogas it is considered a very advanced and desirable condition — a state of liberation from the world, though not yet of realisation of the Divine, — but they consider it a necessary passage to the realisation. In our Yoga it is only a passage through which one arrives at a more positive spiritual calm consciousness in which all experiences and all realisations become possible. The feeling of dullness is due probably not to this state which is in itself a condition of ease and release, but to the depressed condition of the bodily health and strength. That also is probably the cause why the more positive state does not come quickly. The forgetfulness you speak of comes sometimes in the period of change, but passes away afterwards; a new force of memory comes.

Voidness

The voidness is the best condition for a full receptivity.

*

The voidness (if by that you mean silence and emptiness of thoughts, movements etc.) is the basic condition into which the higher consciousness can flow.

*

The usual result of voidness is to quiet down any vital tumult although it does not, unless it is complete, stop the mechanical

recurrent action of the mind.

*

Yes, it becomes like that.¹ In the end you feel as if you had no body, but were spread out in the vastness of space as an infinite consciousness and existence — or as if the body were only a dot in that consciousness.

*

There is no reason why the void should be a dull or unhappy condition. It is usually the habit of the mind and vital to associate happiness or interest only with activity, but the spiritual consciousness has no such limitations.

*

Voidness can come from anywhere, mind, vital or from above.

*

Voidness may be of different kinds — a certain kind of spiritual voidness or the emptiness that is a preparation for new experience. But an exhaustion of life energy is a very different thing. It may arise from fatigue, from somebody or something drawing away the vital force or from an invasion of tamas.

Blankness

In the course of the sadhana a state of blankness, of “neutral quiet” like this often comes — especially when the sadhana is in the physical consciousness. It is not that the aspiration is gone, but that it does not manifest for the time being, because all has become neutrally quiet. This condition is trying for the human mind and vital which are accustomed to be in some kind of activity always and regard this as a lifeless state. But one must not feel disturbed or disappointed when this comes, but remain calm in the full confidence that it is a stage only, a ground that

¹ *The correspondent wrote that in the state of voidness his body felt as light as cotton.*
— Ed.

has to be crossed in the sadhana. In whatever condition, the faith and the fixed idea of surrender must be kept before the mind. As for the brief movements of restlessness, they will still down if this is kept and the quiet mind and vital reassert themselves quickly.

*

The physical does not get tired of the blankness. It may feel tamasic because of its own tendency to inertia, but it does not usually object to voidness. Of course it may be the vital physical — you have only to reject it as a remnant of the old movements.

*

Blankness is only a condition in which realisation has to come. If aspiration is needed for that, it has to be used; if the realisation comes of itself, then of course aspiration is not necessary.

Emptiness, Blankness and Silence

Silence of the being is the first natural aim of the Yoga. You and some others do not find satisfaction in it because you have not overcome the vital mind which wants always some kind of activity, change, doing something, making something happen. The eternal immobility of the silent Brahman is a thing it does not relish. So when emptiness comes, it finds it dull, inert, monotonous.

*

I do not quite gather what is the nature of this silence and this heat which makes you feel like that. An inner silence is a condition favourable to the sadhana even if for a time it means the cessation of all activity within, all thoughts, emotions or mental perceptions. But it is possible and it does happen that the unaccustomed physical consciousness feels the silence to be dull and a deprivation of intelligence rather than a release and repose, and the strangeness of this inactive condition causes it apprehension and an alarmed perplexity. As for the heat that also may be troublesome and difficult to bear to the physical

consciousness because it is unaccustomed and gets alarmed and troubled. If it is that we must try to slow down and diminish the intensity of the force that is acting.

But in any case try to dismiss any alarm that may be suggested to you and keep the faith which you express in the last part of the letter.

*

I cannot have written that it is only you who feel the silence as empty, as there are plenty who do so feel it at first. One feels it empty because one is accustomed to associate existence with thought, feeling and movement or with forms and objects, and there are none of these there. But it is not really empty.

*

Certainly, the vital cannot take an interest in a blank condition. If you depend on your vital you cannot prolong it. It is the spirit that feels a release in the silence empty of all mental or other activities, for in that silence it becomes self-aware. For the blankness to be real one must have got into the Purusha or Witness consciousness. If you are looking at it with your mind or vital, then there is not blankness,—for even if there are no distinct thoughts then there must be a mental attitude or mental vibrations—e.g. the not feeling interest.

*

The silence can remain when the blankness has gone. All sorts of things can pour in and yet the silence still remains, but if you become full of force, light, Ananda, knowledge etc. you can't call yourself blank any longer.

*

Every kind of realisation— infinite self, cosmic consciousness, the Mother's Presence, Light, Force, Ananda, Knowledge, Sach-chidananda realisation, the different layers of consciousness up to the Supermind—all these can come in the silence which remains but ceases to be blank.

*

The emptiness, silence and peace are the basic condition for the spiritual siddhi—it is the first step towards it. It enables the Purusha to be free from the movements of Prakriti, to see and know where they come from since they no longer rise from within the mind, heart etc., these being in a state of quietude, and to reject the lower movements and to call in the knowledge, will etc. of the higher Consciousness which is above.

Emptiness, Voidness and the Self

Emptiness is a state of quietude of the mental or vital or all the consciousness not visited by any mind or vital movements, but open to the Pure Existence and ready or tending to be that or already that but not yet realised in its full power of being. Which of these conditions it happens to be depends on the particular case. The Self state or the state of pure Existence is sometimes also called emptiness, but only in the sense that it is a state of sheer static rest of being without any contacts of mobile Nature.

*

Emptiness as such is not a character of the higher consciousness, though it often looks like that to the human vital when one has the pure realisation of the Self, because all is immobile, and for the vital all that is not full of action appears empty. But the emptiness that comes to the mind, vital or physical is a special thing intended to clear the room for the things from above.

*

The void is the condition of the Self—free, wide and silent. It seems void to the mind, but in reality is simply a state of pure existence and consciousness, Sat and Chit with Shanti.

*

There is no such thing as *néant*. By “void” is meant emptiness clear of all contents except existence pure and simple. Without that one cannot realise the silent Brahman.

Part Two

The Opening of the Inner Senses

Section One

Visions, Sounds, Smells and Tastes

Chapter One

The Value of Visions

Vision, Experience and Realisation

When you see Light, that is vision; when you feel Light entering into you, that is experience; when Light settles in you and brings illumination and knowledge, that is a realisation. But ordinarily visions are also called experiences.

*

Sometimes a vision accompanies an experience and is as it were a visual rendering of it or accompaniment to it, but the experience itself is a separate thing.

*

Vision is something *seen* in the conscious state (whether with closed or open eyes) which is not of the physical plane. In “conscious state” I include the consciousness of Samadhi when one is unaware of outward things but conscious of things going on within.

Experience is a wide term which covers almost everything that happens in the inner consciousness — usually it indicates either a spiritual happening, e.g. the descent of peace, the feeling of the presence of the Mother, or an occult experience, e.g. a going into the other worlds in dream and seeing and doing things there. There are thousands of different kinds of experience. Visions are a special kind of experience in which the inner eye is active.

*

Visions do not come from the spiritual plane — they come from the subtle physical, the vital, the mental, the psychic or from planes above the Mind. What comes from the spiritual planes are experiences of the Divine, e.g. the experience of self

everywhere, of the Divine in all etc.

*

The Infinite is in all things and can be seen through them when the vision opens.

*

By going deep [*in meditation*] one person may see visions; another may fall in deeper consciousness but see no vision—and so on. The result varies with the nature.

*

Yes, it [*the higher consciousness*] can come down into the mind planes bringing peace, wideness, the cosmic consciousness, the realisation of the Divine, the sense of the cosmic forces and other things—without any breaking of the veil through vision. Ordinarily, however, with most people the inner vision comes first.

*

I said [*in the preceding letter*] the realisation of the Divine in the mind. If there is to be the total realisation, the breaking of the veil is indispensable.

*

Usually the visions precede realisation, in a way they prepare it.

*

Visions and voices have their place when they are the genuine visions and the true voices. Naturally, they are not the realisation but only a step on the way and one has not to get shut up in them or take all as of value.

*

The vision of the higher planes or the idea of what they are can be had long before the transformation. If that were not possible, how could the transformation take place—the lower

nature cannot change of itself, it changes by the growing vision, perception, descent of the higher consciousness belonging to the higher planes? It is through aspiration, through an increasing opening that these visions and perceptions begin to come — the realisation comes afterwards.

Sensing Supraphysical Things

No, it was neither optical illusion nor hallucination nor coincidence nor auto-suggestion nor any of the other ponderous and vacant polysyllables by which physical science tries to explain away or rather avoid explaining the scientifically inexplicable. In these matters the scientist is always doing what he is always blaming the layman for doing when the latter lays down the law on things about which he is profoundly ignorant, without investigation or experiment, without ascertained knowledge — simply by evolving a theory or *a priori* idea out of his own mind and plastering it as a label on the unexplained phenomena.

There is, as I have told you, a whole range or many inexhaustible ranges of sensory phenomena other than the outward physical which one can become conscious of, see, hear, feel, smell, touch, mentally contact — to use the new established Americanism — either in trance or sleep or an inward state mis-called sleep or simply and easily in the waking state. This faculty of sensing supraphysical things internally or externalising them, so to speak, so that they become visible, audible, sensible to the outward eye, ear, even touch, just as are gross physical objects, this power or gift is not a freak or an abnormality; it is a universal faculty present in all human beings, but latent in most, in some rarely or intermittently active, occurring as if by accident in others, frequent or normally active in a few. But just as anyone can with some training learn science and do things which would have seemed miracles to his forefathers, so almost anyone, if he wants, can with a little concentration and training develop the faculty of supraphysical vision. When one starts Yoga, this power is often though not invariably — for some find it difficult — one of the first to come out from its latent condition and

manifest itself, most often without any effort, intention or previous knowledge on the part of the sadhak. It comes more easily with the eyes shut than with the eyes open, but it does come in both ways. The first sign of its opening in the externalised way is very often that seeing of "sparkles" or small luminous dots, shapes etc. which was your first introduction to the matter; a second is, often enough, the seeing of circles of light or colour round objects, most easily round luminous objects like a star; seeing of colours is a third initial experience—but they do not always come in that order. The Yogis in India very often in order to develop the power use the method of *trāṭak*, concentrating the vision on a single point or object—preferably a luminous object. Your looking at the star was precisely an exercise in *trāṭak* and had the effect which any Yogi in India would have told you is normal. For all this is not fancy or delusion; it is part of an occult science which has been practised throughout the historic and prehistoric ages in all countries and it has always been known to be not merely auto-suggestive or hallucinatory in its results, but, if one can get the key, veridical and verifiable. Your first scepticism may be natural in a "modern" man plunging into these lasting things of the past, present and future,—natural but not justifiable because very obviously inadequate to the facts observed; but once you have seen, the first thing you should do is to throw all this vapid pseudo-science behind you, this vain attempt to stick physical explanations on supraphysical things, and take the only rational course. Develop the power, get more and more experience—develop the consciousness by which these things come: as the consciousness develops, you will begin to understand and get the intuition of the significances. Or if you want their science too, then learn and apply the occult science which can alone deal with supraphysical phenomena. As for what showed itself to you, it was not mere curious phenomena, not even merely symbolic colours, but things that have a considerable importance.

Develop this power of inner sense and all that it brings you. These first seeings are only an outer fringe—behind lie whole worlds of experience which fill what seems to the material

man the gap (your Russell's inner void) between the earth-consciousness and the Eternal and Infinite.

The Importance of Visions

All visions have a significance of one kind or another. This power of vision is very important for the Yoga and should not be rejected although it is not the most important thing — for the most important thing is the change of the consciousness. All other powers like this of vision should be developed without attachment as parts and aids of the Yoga.

*

The particular things seen may be of no importance, but the power of seeing is of importance and can be of great help in the Yoga. It enables you to see things belonging to other planes (other than the physical) and get knowledge that is useful for sadhana — also to have concrete contact with the Mother in those planes (mental, vital, psychic worlds) etc.

*

Visions come from all planes and are of all kinds and different values. Some are of very great value and importance, others are a play of the mind or vital and are good only for their own special purpose, others are formations of the mind and vital plane, some of which may have truth, while others are false and misleading, or they may be a sort of artistry of that plane. They can have considerable importance in the development of the first Yogic consciousness, that of the inner mind, inner vital, inner physical or for an occult understanding of the universe. Visions which are real can help the spiritual progress, I mean, those which show us inner realities: one can for instance meet Krishna, speak with him and hear his voice in an inner "real" vision, quite as real as anything on the outer plane. Merely seeing his image is not the same thing, any more than seeing his picture on the wall is the same thing as meeting him in person. But the picture on the wall need not be useless for the spiritual life. All one can say is that

one must not attach oneself too much to this gift and what it shows us, but neither is it necessary to belittle it. It has its value and sometimes a considerable spiritual utility. But, naturally, it is not supreme,—the supreme thing is the realisation, the contact, the union with the Divine, bhakti, change of the nature etc.

*

Visions and experiences (especially experiences) are all right; but you cannot expect every vision to translate itself in a corresponding physical fact. Some do, the majority don't, others belong to the supraphysical entirely and indicate realities, possibilities or tendencies that have their seat there. How far these will influence the life or realise themselves in it or whether they will do so at all depends upon the nature of the vision, the power in it, sometimes on the will or formative power of the seer.

People value visions for one thing because they are one key (there are others) to contact with the other worlds or with the inner worlds and all that is there and these are regions of immense riches which far surpass the physical plane as it is at present. One enters into a larger freer self and a larger more plastic world; of course individual visions only give a contact, not an actual entrance, but the power of vision accompanied with the power of the other subtle senses (hearing, touch, etc.) as it expands does give this entrance. These things have not the effect of a mere imagination (as a poet's or artist's, though that can be strong enough) but if fully followed out bring a constant growth of the being and the consciousness and its richness of experience and its scope.

People also value the power of vision for a greater reason than that: it can give a first contact with the Divine in his forms and powers; it can be the opening of a communion with the Divine, of the hearing of the Voice that guides, of the Presence as well as the Image in the heart, of many other things that bring what man seeks through religion or Yoga.

Farther, vision is of value because it is often a first key to inner planes of one's own being and one's own consciousness as distinguished from worlds or planes of the cosmic consciousness.

Yoga experience often begins with some opening of the third eye in the forehead (the centre of vision in the brows) or with some kind of beginning and extension of subtle seeing which may seem unimportant at first, but is the vestibule to deeper experience. Even when it is not that,—for one can go to experience direct,—it can come in afterwards as a powerful aid to experience; it can be full of indications which help to self-knowledge or knowledge of things or knowledge of people; it can be veridical and lead to prevision, premonition and other openings of less importance but very useful to a Yogi.

In short, vision is a great instrument though not absolutely indispensable.

But, as I have suggested, there are visions and visions just as there are dreams and dreams, and one has to develop discrimination and a sense of values and kinds and know how to understand and make use of these powers. But that is too big and intricate a matter to be pursued now.

*

The visions he has between the eyebrows are not imaginations — they could be so only if he thought them first and his thoughts took shape, but as they came independent of his thoughts, they are not visual imagination but vision. This faculty is a useful one in Yoga and it can be allowed to develop; it should not be discouraged. I do not know what he means by not having *śraddhā* in them. What he sees now are probably only images of subtle (*sūkṣma*) scenes and objects; but, when developed, this can become a power of symbolic, representative or real vision, showing the truths of things or realities of this or other worlds or representations of the past, present or future.

If the concentration goes naturally to the centre between the eyebrows which is the centre of inner mind and its thought, will and vision, there is no harm in that.

*

These lights and visions are not hallucinations. They indicate an opening of the inner vision whose centre is in the forehead

between the eyebrows. Lights are very often the first thing seen. Lights indicate the action or movement of subtle forces belonging to the different planes of being,—the nature of the force depending on the colour and shade of the light. The sun is the symbol and power of the inner or higher Truth—to see it in meditation is a good sign. The sea is also often symbolic, indicating usually the vital nature, sometimes the expanse of consciousness in movement. The opening of vision must be allowed to develop, but too much importance need not be given to the individual visions unless or until they become evidently symbolic or significant or shed light on things in the sadhana etc.

*

What was developed in you is a power of true inner vision—this will help you to enter through it into touch with the Divine; you have only to let it develop. Two other things have to develop—the feeling of the Divine Presence and power and inspiration behind your actions, and the inner contact with myself and the Mother. Aspire with faith and sincerity and these will come. I do not wish to give any more precise instructions until I see what happens in you during your stay here; for although the path is common to all, each man has his own way of following it.

*

The frequent seeing of lights such as those he writes of in his letter is usually a sign that the seer is not limited by his outward surface or waking consciousness but has a latent capacity (which can be perfected by training and practice) for entering into the experiences of the inner consciousness of which most people are unaware but which opens by the practice of Yoga. By this opening one becomes aware of subtle planes of experience and worlds of existence other than the material. For the spiritual life a still farther opening is required into an inmost consciousness by which one becomes aware of the Self and Spirit, the Eternal and the Divine.

*

From what he writes it is apparent that he has a capacity [*for Yoga*], and it is probable that he would have made more progress if he had not shut the door that was opening. Evidently, he made a mistake when he stopped the visions that were coming. Vision and hallucination are not the same thing. The inner vision is an open door on higher planes of consciousness beyond the physical mind which gives room for a wider truth and experience to enter and act upon the mind. It is not the only or the most important door, but it is one which comes readiest to very many if not most and can be a very powerful help. It does not come easily to intellectuals as it does to men with a strong life-power or the emotional and the imaginative. It is true that the field of vision, like every other field of activity of the human mind, is a mixed world and there is in it not only truth but much half-truth and error. It is also true that for the rash and unwary to enter into it may bring confusion and misleading inspirations and false voices, and it is safer to have some sure guidance from those who know and have spiritual and psychic experience. One must look at this field calmly and with discrimination, but to shut the gates and reject this or other supraphysical experiences is to limit oneself and arrest the inner development.

*

Visions and voices are not meant for creating faith; they are effective only if one has faith already.

Visions Not the Most Important Thing

Visions are not indispensable — they are a help, that is all, when they are of the right kind.

*

Anybody with a predisposition can develop the power of seeing visions like that. People are mistaken in thinking it is a sign of great Yogashakti. Apposite and effective visions, those that reveal movements in the occult workings of the nature or help the spiritual growth, are another matter.

*

Well, it is difficult to explain [*what kind of visions help one's spiritual growth*]. I might give the example of St. Paul's vision on the way to Damascus as an example of a vision which really meant business. You have yourself given the Kurukshetra example. But all visions need not be so stupendous as that—small ones can also be useful.

But the predisposition I spoke of was for visionary display, not for spiritual growth. There are people who can see visions by the hundred and there are those who cannot. But it does not follow that the non-visionary cannot have decisive spiritual experiences or the realisation.

*

The kind of vision you want comes only if the general visual power opens and develops. It is not the greatest form of experience; many advance very far and have high experiences and change of consciousness without it. The important thing is to feel the Presence of the Mother with one and in one, her Light, her Power working, her Ananda. The form can be there, if the vision develops, but only as one element of the experience.

*

I did not quite understand from your letter what is the nature of these sights and objects that pass like a cinema film before you. If they are things seen by the inner vision, then there is no need to drive them away—one has only to let them pass. When one does sadhana an inner mind which is within us awakes and sees by an inner vision images of all things in this world and other worlds—this power of vision has its use, though one has not to be attached to it; one can let them pass with a quiet mind, neither fixing on them nor driving them away.

*

This kind of vision [*seeing water, a rose, a tiger*] almost anybody can have except those who live too much in the mind. For others it is very near to the surface, this faculty of vision. Many have it in this elementary way without doing any Yoga at all.

*

The power of occult seeing is there in everyone, mostly latent, often near the surface, sometimes but much more rarely already on the surface. If one practises *trāṭak*, it is pretty certain to come out sooner or later,—though some have a difficulty and with them it takes time; those in whom it comes out at once have had all the time this power of occult vision near the surface and it emerges at the first direct pressure.

No Reason to Fear Visions

Such visions [of *human figures*] often happen when the inner sight is open. These were evidently two powers of the supra-physical world. One has to see quietly whatever comes of this kind—there is no reason to fear them, any more than if you saw a picture or moving figures in the cinema.

Wrong Visions and Voices

When the sadhana progresses, one almost always gets the power of vision; what one sees is true if one remains in the right consciousness. There are also wrong voices and experiences. The people who have gone mad, went mad because they were egoistic, began to think themselves great sadhaks and attach an exaggerated importance to themselves and their experiences; this made them get a wrong consciousness and wrong voices and visions and inspirations. They attached so much importance to them that they refused to listen to the Mother and finally became hostile to her because she told them they were in error and checked their delusions. Your visions and experiences are very true and good and I have explained to you what they signify—the wrong ones tried to come but you threw them away, because you are not attached to them and are fixed on the true aim of sadhana. One must not get attached to these things, but observe them simply and go on; then they become a help and cannot be a danger.

Chapter Two

Kinds of Vision

The Inner Vision

There is an inner vision that opens when one does sadhana and all sorts of images rise before it or pass. Their coming does not depend upon your thought or will; it is real and automatic. Just as your physical eyes see things in the physical world, so the inner eye sees things and images that belong to the other worlds and subtle images of things of this physical world also.

*

Everything not physical is seen by an inner vision.

*

When the inner vision opens, there can come before it all that ever was or is now in the world, even it can open to things that will be hereafter — so there is nothing impossible in seeing thus the figures and the things of the past.

*

The inner vision can see objects — but it can also see instead the vibration of the forces which act through the object.

*

This realm (whose centre is between the eyebrows) is the realm of inner thought, will, vision — the motor-car indicates a rapid progress in this part of the consciousness. The motor-car is a symbolic image, these images do not refer to anything physical.

These things take place in the inner mind or inner vital and usually there is a truth behind them, but the form in which they come into the mind may be imperfect — i.e. the meaning may be something not perfectly revealed in the words.

*

Things inside can be seen as distinctly as outward things whether in an image by the subtle vision or in their essence by a still more subtle and powerful way of seeing; but all these things have to develop in order to get their full power and intensity.

Stages in the Development of the Inner Vision

It is the inner vision that is opened or opening in you. When that opens, the first thing that you see is colours or lights moving or small or vague shapes or objects — afterwards flowers etc., then figures of people, scenes, landscapes, things happening etc. Often by the power of this subtle vision the sadhak can see the image of the Divine he worships in his heart and so feel more concretely the presence.

*

The seeing of colours is the beginning of inner vision, what is called *sūkṣmadṛṣṭi*. Afterwards this vision opens and one begins to see figures and scenes and people. It is good that the seeing began with an image of the Mother.

*

When one tries to meditate, the first obstacle in the beginning is sleep. When you get over this obstacle, there comes a condition in which, with the eyes closed, you begin to see things, people, scenes of all kinds. This is not a bad thing, it is a good sign and means that you are making progress in the Yoga. There is, besides the outer physical sight which sees external objects, an inner sight in us which can see things yet unseen and unknown, things at a distance, things belonging to another place or time or to other worlds; it is the inner sight which is opening in you. It is the working of the Mother's force which is opening it in you, and you should not try to stop it. Remember the Mother always, call on her and aspire to feel her presence and her power working in you; but you do not need, for that, to reject this or other developments that may come in you by her working hereafter. It is only desire, egoism, restlessness and other wrong movements

that have to be rejected.

*

The visions you describe are those which come in the earliest stages of sadhana. At this stage most of the things seen are formations of the mental plane and it is not always possible to put on them a precise significance, for they depend on the individual mind of the sadhak. At a later stage the power of vision becomes important for the sadhana, but at first one has to go on without attaching excessive importance to the details — until the consciousness develops more. The opening of the consciousness to the Divine Light and Truth and Presence is always the one important thing in the Yoga.

The Diverse Nature and Significance of Visions

Your visions are not mental images but significant symbols. The white dove is the higher divine or spiritual Consciousness above the mental surrounded by the golden lightnings of the Truth. The lamb is the psychic aspiring to the Truth. When one has a thought or feeling and creates a mental form of it, that is a mental image — or when not so positively or consciously self-created forms arise either in meditation or sleep, which correspond to mental thoughts or vital feelings, one's own or those of others, those also are simply mental images or vital formations. The true significant ones are those that come of themselves and correspond to things, states of consciousness or a play of forces that are actual and not determined mainly by one's ideas, will or feelings.

*

Visions are of all kinds — some are merely suggestions of what wants to be or is trying to be, some indicate some approach of the thing or movement towards it, some indicate that the thing is being done.

*

Nothing has to be done to develop them [*images seen in vision*]. They develop of themselves by the growing practice of seeing, — what was faint becomes clear, what was incomplete becomes complete. One cannot say in a general way that they are real or unreal. Some are formations of the mind, some are images that come to the sight of themselves, some are images of real things that show themselves directly to the sight — others are true pictures, not merely images.

*

No rule of a general character can be given. Each vision or dream has to be taken by itself; some are mental constructions, symbols or indications, some are vital possibilities truly or falsely represented, some are representations of physical facts — but this last is more rare.

*

The seeing of the body (at least one's own) in its internal parts is a Yogic power developed by the Raja and Hathayogins — I suppose it could be extended to the body of others. There is also the sense of subtle smells and I have noticed that sometimes one smell persists.

*

Subtle images can be images of all things in all worlds.

*

There is no criterion [*for distinguishing visions from dreams of a deeper origin*], but one can easily distinguish if one is in the inward condition, not sleep, in which most visions take place by the nature of the impression made. A vision in dream is more difficult to distinguish from a vivid dream-experience, but one gets to feel the difference.

*

Vision in trance is vision no less than vision in the waking state. It is only the condition of the recipient consciousness that varies

—in one the waking consciousness shares in the vision, in the other it is excluded for the sake of greater facility and range in the inner experience. But in both it is the inner vision that sees.

*

The physical things¹ are simply an occasion or starting-point for the inner vision to work through the open eyes and bring in the significant inner things.

Representative and Dynamic Visions

It depends on the nature of the symbolic vision whether it is merely representative, offering to the inner vision and nature (even though the outer mind has not the understanding, the inner can receive its effect) the thing symbolised in its figure or whether it is dynamic. The Sun symbol, for instance, is usually dynamic. Again among the dynamic symbols some may bring simply an influence of the thing symbolised, some indicate what is being done but not yet finished, some a formative experience that visits the consciousness, some a prophecy of something that may or will or is soon about to happen. There are others that are not merely symbols but present actualities seen by the vision in a symbolic figure.

*

When the colours begin to take definite shapes [*in one's visions*], it is a sign of some dynamic work of formation in the consciousness—a square for instance means that some kind of creation is in process in some field of the being; the square indicates that the creation is to be complete in itself while the rectangle indicates something partial and preliminary. The waves of colour mean a dynamic rush of forces and the star may in such a context indicate the promise of the new being that is to be formed. The blue colour must here be the Krishna light—so it is a creation under the stress of the Krishna light. All these are symbols of what is

¹ *The correspondent saw the lights on a pier at night as sparkling diamonds. —Ed.*

going on in the inner being, in the consciousness behind, and the results well up from time to time in the external or surface consciousness in such feelings as the awareness of a softening and opening which you had, devotion, joy, peace, Ananda etc. When the opening is complete, there is likely to be a more direct consciousness of the working that is going on behind till it is no longer behind but in the front of the nature.

*

When you see a square, that is a symbol of complete creation; when you see a buffalo rushing upon you and missing and feel you have escaped a great danger, that is a transcription. Something actually happened of which the buffalo's ineffectual rush was your mind's transcription — the rush of some hostile force represented by the buffalo.

Seeing Forms of the Divine and Other Beings

Subjective visions can be as real as objective sight — the only difference is that one is of real things in material space, while the others are of real things belonging to other planes down to the subtle physical; even symbolic visions are real insofar as they are symbols of realities. Even dreams can have a reality in the subtle domain. Visions are unreal only when these are merely imaginative mental formations not representing anything that is true or was true or is going to be true.

In this case the thing seen [*a vision of Krishna, silvery blue in colour, standing in a dance pose playing the flute*] can be taken as true since it has been seen by many and always in the same relation and still more because it has been confirmed by what was seen by Yashodabai and Krishnaprem. It means obviously that your singing by the power of the bhakti it expresses can and does bring the presence of Krishna there. It is not that Krishna "shows himself", but simply that he is there and some who have the power of vision catch sight of him and others who have not the power fail to do so. This power of vision is sometimes inborn and habitual even without any effort of development,

sometimes it wakes up of itself and becomes abundant or needs only a little practice to develop; it is not necessarily a sign of spiritual attainment, but usually when by practice of Yoga one begins to go inside or live within, the power of subtle vision awakes to a greater or less extent; but this does not always happen easily, especially if one has been habituated to live much in the intellect or in an outward vital consciousness.

I suppose what you are thinking of is “darshan”, the self-revelation of the Deity to the devotee; but that is different, it is an unveiling of his presence, temporary or permanent, and may come as a vision or may come as a close feeling of his presence which is more intimate than sight and a frequent or constant communication with him; that happens by deepening of the being into its inner self and growth of consciousness or by growth of the intensity of bhakti. When the crust of the external consciousness is sufficiently broken by the pressure of increasing and engrossing bhakti, the contact comes.

*

It is quite usual at a certain stage of the sadhana for people who have the faculty to see or hear the Devata of their worship and to receive constant directions from him or her with regard either to action or to sadhana. Defects and difficulties may remain, but that does not prevent the direct guidance from being a fact. The necessity of the Guru in such cases is to see that it is the right experience, the right voice or vision—for it is possible for a false guidance to come as it did with X and Y.

*

These things [*the seeing of Buddha, Ramakrishna, Vivekananda, Shankaracharya in vision*] are the result of past thoughts and influences. They are of various kinds—sometimes merely thought-forms created by one's own thought-force to act as a vehicle for some mental realisation—sometimes Powers of different planes that take these forms as a support for their work through the individual,—but sometimes one is actually in communion with that which had the name and form and personality

of Buddha or Ramakrishna or Vivekananda or Shankara.

It is not necessary to have an element akin to these personalities—a thought, an aspiration, a formation of the mind or vital are enough to create the connection—it is sufficient for a vibration of response anywhere to what these Powers represent.

Cosmic, Inner and Psychic Vision

Cosmic vision is the seeing of the universal movements—it has nothing to do with the psychic necessarily. It can be in the universal mind, the universal vital, the universal physical or anywhere.

What do you mean here by psychic vision? Inner vision means the vision with the inner seeing as opposed to outer vision, the external sight with the surface mind or the surface eyes. Psychic in the language of this Yoga is confined to the soul, the psychic being—it is not as in the ordinary language in which if you see a ghost it is called a psychic “vision”: we speak of the inner vision or the subtle sight or the occult sight—not the psychic vision.

*

The “sight” spoken of [*in passages of the Upanishads*] is not a sense vision but an experience in the inner consciousness which is more true and living and dynamic than the experiences given to the external consciousness by the material senses.

There is also a psychic vision by which one can see the forms of the Gods or one of the many forms in which the Ishwara reveals himself to the Bhakta.

There is too an inner or subtle sense and sight by which one can see and experience forms and happenings which are not present to the physical eye and also those which belong to other planes than that of the physical world. There are many supraphysical worlds and one can get into contact with these worlds and their beings only by an awakening or developing of this inner sense.

Mental Visions

The mental visions are meant to bring in the mind the influence of the things they represent.

*

Inner vision is vivid like actual sight, always precise and contains a truth in it. In mental vision the images are invented by the mind and are partly true, partly a play of possibilities. Or a mental vision like the vital may be only a suggestion,—that is a formation of some possibility on the mental or vital plane which presents itself to the sadhak in the hope of being accepted and helped to realise itself.

*

The visions and experiences you have described are all of the mental plane and show a great openness and purity of the inner mental being free from unfavourable influences. But it is difficult to tell the precise significance of those that are in the nature of colours, lights, a star etc., because they depend on contacts which are personal to the sadhaka. The first five are of this kind and appear to indicate contact with powers, influences, personalities (godheads), etc. of the higher mental plane. E.g. the light of pink colour might be that of some influence or godhead of love or bhakti in contact with the mental being. In some cases it may be the figure of a formation of the mental being itself. The flowers, diamonds and gems etc. would seem to indicate contact with Radha, Mahalakshmi and Mahakali influences. The vision of writing is also frequent on the mental plane—it is known by us as the *lipi*, and if it organises itself so as to be legible and intelligible, it can embody many things such as intuitions, messages from one or other of the mental planes—the voice you heard was probably one of these messages. There is no necessity to explain the vision of the form of the Mother and mine—for that is clear.

Vital Visions

The dream was on the vital plane. Dreams or visions on the vital plane are usually either

- (1) symbolic vital visions
- (2) actual occurrences on the vital plane
- (3) formations of the vital mind, either of the dreamer or of someone else with whom he contacts in sleep or of powers or beings of that plane. No great reliance can be put on this kind of experience.

*

These are visions of the vital world and the vital planes and one sees hundreds of them there.² Those of the type of the first have no significance; they are only things seen just as on earth you may see a man bathing in water. The other seems to indicate a being or else simply a Force given form entering into the consciousness. All the parts of the consciousness are like fields into which forces from the same planes of consciousness in the universal Nature are constantly entering or passing. The best thing is to observe without getting affected in either way or without attaching too much importance—for these are minor experiences and one's concentration must call the major ones.

*

Most of these visions are the result of your getting into contact with a certain field of forces in the vital world which are at present creating the pressure for war and revolution and all catastrophic things in Europe. It was from here that these menacing visions were coming. There is no coherence or reality in them. Chhinnamasta is a symbol of this kind of force, feeding as it were the world with her own blood.

They have to be at once rejected. It was not meant that you should be inactive, but that there was sufficient Force gathering

² *The correspondent had two visions in dream—one of a young lad standing waist deep in water, another of a woman's face which looked at the correspondent and then entered his chest. —Ed.*

to carry on the sadhana as if by an automatic action. But the consent of the sadhak, his rejection of all that comes against is always necessary.

*

It is the vital plane—probably the vital physical. It is mostly there that the beings of the vital world appear with animal heads or features. A human figure with a dog's face means a very coarse and material sexual energy. Of course, all such energies can be transformed and cease to be sexual—turned into material strength of some kind, just as the seminal force can be turned by brahmacharya into ojas.

*

This gazing on a flame or a bright spot is the traditional means used by Yogis for concentration or for awakening of the inner consciousness and vision. You seem to have gone by the gazing into a kind of surface (not deep) trance, which is indeed one of its first results, and begun to see things probably on the vital plane. I do not know what were the “dreadful objects” you saw but that dreadfulness is the character of many things first seen on that plane, especially when crossing its threshold by such means. You should not employ these means, I think, for they are quite unnecessary and besides, they may lead to a passive concentration in which one is open to all sorts of things and cannot choose the right ones.

Subtle Physical Visions

All that can be seen with closed eyes can be seen with open eyes also; it is sufficient that the inner sight should extend to the subtle physical consciousness for that to happen.

*

One can see [*visions*] either with open or closed eyes or both. It is a matter of temperament or idiosyncrasy which one starts with.

*

The world you see is in some subtle physical plane where men see the gods according to their own ideas and images of them.

*

As you were concentrating your attention on the electric light, it may have been the god of electricity you saw, Vaidyuta Agni. There is no reason why he should have many faces — the many-headed or many-armed figures belong usually to the vital plane — and it may not have been in his vital form that he was manifesting. As for the colours, colours are symbols of forces and Agni need not be pure red — the principle of Fire can manifest all the colours and the pure white fire is that which contains in itself all the colours.

*

The gods in the overmental plane have not many heads and arms — this is a vital symbolism, it is not necessary in other planes. This figure [of *Vaidyuta Agni*, mentioned in the preceding letter] may have belonged to the subtle physical plane.

*

(1) It [*the vision of a flower*] was seen through the physical eyes but by the subtle physical consciousness; in other words there was an imposition of one consciousness upon another. After a certain stage of development, this capacity of living in the ordinary physical consciousness and yet having superadded to it another and more subtle sense, vision, experience becomes quite normal. A little concentration is enough to bring it; or, even, it happens automatically without any concentration.

As the flower was a subtle physical object, not entirely material in the ordinary sense of the word (though quite substantial and material in its own plane, not an illusion), a camera would not be able to detect it — except in the case of one of those abnormal interventions by which a subtle form has been thrown upon the material plate.

It could be sensed in a dark room, though not so easily, and it would not then have so vivid an appearance — unless you are

able to bring out something of the light of the subtle physical plane to surround it and give it its natural medium.

If seen with the eyes shut, it would be no longer a subtle physical form, but an object or formation of the vital, mental or other plane. Unless, indeed, the inner consciousness had progressed so far as to be able to project itself into the physical planes; but this is a rare and, in most cases, a late development.

(2) It is not, usually, the object that vanishes; it is the consciousness that changes. Owing to lack of sustained capacity or lack of training, one is not able to keep the subtle physical vision which is what was really seeing the object. This subtle physical vision comes easiest in the moment between light sleep and waking—either when one just comes out of the sleep or when one is just going into it. But one can train oneself to have it when one is quite wide awake.

At first when one begins to see, it is quite usual for the more ill-defined and imprecise figures to last longer while those which are successful, complete, precise in detail and outline are apt to be quite momentary and disappear in an instant. It is only when the subtle vision is well developed that the precise and full seeing lasts for a long time. This results from the difficulty of keeping what is still an abnormal consciousness and also, in this case, from the difficulty of keeping the two momentarily superimposed consciousnesses together.

(3) There are all kinds in the experiences of each plane—symbolic forms, figures of suggestion, thought-figures, desire-formations or will-formations, constructions of all kinds, things real and lasting in the plane to which they belong and things fictitious and misleading. The haphazardness belongs to the consciousness that sees with its limited and imperfect way of cognizing the other worlds, not to the phenomena themselves. Each plane is a world or a conglomeration or series of worlds, each organised in its own way, but organised, not haphazard; only, of course, the subtler planes are more plastic and less rigid in their organisation than the material plane.

Chapter Three

Subtle Sights, Sounds, Smells and Tastes

Sights and Sounds of Other Planes

The sounds of bells and the seeing of lights and colours are signs of the opening of the inner consciousness which brings with it an opening also to sights and sounds of other planes than the physical. Some of these things, like the sound of bells, crickets etc., seem even to help the opening. The Upanishad speaks of them as *brahmavyaktikarāni yoge*. The lights represent forces — or sometimes a formed light like that you saw may be the Light of a being of the supraphysical planes.

*

When the inner senses open, or any of them, one sees or hears things belonging to the other planes automatically. What one sees or hears depends on the development of the inner sense. It depends on what you hear whether these are the symbol sounds only which have a connection with the sadhana or simply other-plane sounds of an ordinary character.

*

It depends on the nature of the sounds. Some have a connection [*with sadhana*], others are merely sounds of the other planes.

Subtle Sounds

When the mind becomes quiet, there are certain sounds that are heard, which are supposed to be signs of the awakening of the subtle senses and the inner consciousness.

*

Sounds in the ear indicate a pressure to open the inner consciousness.

*

The sound is a very good sign. It comes when the inner consciousness is opening or preparing to open to the Yoga-force and the deeper experiences it brings.

*

They [*subtle sounds*] are the signs of a working going on to prepare something — but as that is a general thing, it cannot be said from the sounds themselves what the preparation is.

*

The sounds or voices you hear are like the sights (persons, objects) you see. As there is an inner sight other than the physical, so there is an inner hearing other than that of the external ear, and it can listen to voices and sounds and words of other worlds, other times and places, or those which come from supraphysical beings. But here you must be careful. If conflicting voices try to tell you what to do or not to do, you should not listen to them or reply. It is only myself and the Mother who can tell you what you should or should not do or guide or advise you.

*

Such sounds (bells, bees, crickets etc.) are stated in the Upanishad to be signs of realisation approaching. They come very commonly when the inner or subtle consciousness is awake.

*

The hearing of the bells has always been considered a sign or a premonition of the opening of the inner being to spiritual experience.

*

It [*the sound of the conch*] is one of the many symbol sounds one hears in Yoga. The conch shell is the sound of victory.

*

Both of these [*the sound of OM and of church bells*] are usually sounds that indicate the opening or attempt to open to the cosmic consciousness.

*

The music you heard was the music of the divine call to the soul — like the flute of Krishna.

Subtle Smells and Tastes

It [*experiencing subtle smells and tastes*] was not an opening of occult knowledge and powers, but simply an opening of the inner consciousness.

*

Subtle smells of that kind [*sweet smells*] are a common feature of occult experience. Their exact nature and *provenance* varies, but they have no gross physical cause.

*

The smell [*coming from a person*] is due to something in the person's vital-physical. That something may not be prominent at all times. When it is, the smell is there.

*

I wrote [*in the preceding letter*] that the something may be of different kinds in different cases and one cannot give a rule that it is this or it is that. What has the dirtiest smell is sex.

*

Every man has a different smell; also there is a particular smell that goes with different states of the vital-physical. Animals (like the dogs) recognise a man and his character by the smell. The human sense has lost this acuteness, but it can be recovered by a development in the sense consciousness. That is what probably has happened in your case. There are others in the Asram who have the same experience.

Section Two

Lights and Colours

Chapter One

Light

Seeing Light

Light is always seen in Yoga with the inner eye and even with the outer eye, but there are many lights; all are not and all do not come from the *param jyotih*.

*

Lights of various colours are one of the first things people see when they meditate.

*

There is no imagination in the seeing of these lights — it is when the inner vision is open or active that one sees them — for they themselves are subtle and not physical lights.

*

A concentrated mind is not always necessary for seeing the light — if there is an opening anywhere in the consciousness, that is sufficient.

*

It is not necessary to have the mind quiet in order to see the lights — that depends only on the opening of the subtle vision in the centre which is in the forehead between the eyebrows. Many people get that as soon as they start sadhana. It can even be developed by effort and concentration without sadhana by some who have it to a small extent as an inborn faculty. The quietude of the mind is needed for other things, such as the feeling of the presence of the Mother etc.

*

Light between the eyebrows indicates some opening of the Ajna-

chakra, which is there — it is the centre of the inner mind, inner will and occult vision.

*

The light outside means a touch or influence of the Force indicated by the light (golden is truth-light, blue is some spiritual force from the upper planes), while within means that it has penetrated and is established or is frequently active in the nature itself. Light above means a Force descending upon the mind, light around a general enveloping influence.

*

The golden and blue lights are both of them lights of Krishna. It was intimated to you by your seeing them once that they are there within you waiting to manifest. But it is by a psychic and spiritual, not a physical pressure that it must be done. If the mind can become silent and not interfere and if the nature can become more pure and both open to what is above the mind, these lights descend into the body and with them the divine influence.

Light and the Illumination of the Consciousness

Light or rays of light are always light of the higher consciousness working in the being to illumine or to purify or to awaken the consciousness or attune it to the Truth.

*

It [*Light*] is the power that enlightens whatever it falls upon — the result may be vision, memory, knowledge, right will, right impulse etc.

*

There are many lights of various planes — there is also the Divine Light that comes down from the higher planes and illuminates the Adhar.

*

It is not necessary or possible to define [*the Divine Light*].

Light is light just like the light you see, only subtle — it clarifies the consciousness and works as a force and makes knowledge possible.

*

It [*the Divine Light*] has no function — it is just Light of Divine Consciousness. If you mean the result, it is supposed to illumine, to remove darkness and obscurity, to make the nature fit for true consciousness, Knowledge etc.

*

Light is a general term. Light is not knowledge but the illumination that comes from above and liberates the being from obscurity and darkness. But this Light also assumes different forms such as the white light of the Mother, the pale blue light of Sri Aurobindo, the golden light of Truth, the psychic light (pink and rose) etc.

*

The light, colours, flowers are always seen when there is a working of the forces within at a certain stage of the sadhana. The light of course indicates an illumination of the consciousness, the colour the play of forces mental (yellow), physical and vital, but forces making for enlightenment of these parts of the being. The flowers usually indicate a psychic activity.

Different Forms of Light

One sometimes sees the Light in masses, sometimes in forms — and the most common forms are sun, moon, star or fire.

*

The Light is often seen in front before the centre of inner vision, mind and will which is between the eyebrows in the forehead. The Sun means the formed Light of the Divine Truth, the starry light is the same Light acting as a diffused Power on the ordinary consciousness which is seen as the night of Ignorance. The call

brought the Light etc. streaming down into the inner being.

*

It is not balls or flashes of light [*seen around the Mother*], but a flow or sea of Light entering into the body and surrounding it and illumining the whole field of consciousness. There can also be a vivid sense of Light and illumination without the vision. It can be seen or felt usually as an intense white or diamond or golden Light or something like sunlight or, for many, a blue or bluish white light.

*

What you saw was the procession of the chariots of the gods (Divine Powers) bringing light flashes into the air and the other was the corresponding movement of lightning flashes of the Truth in the heart lighting up the consciousness. These lightning flashes do not as yet bring knowledge — as the sunlight from above the mind does, — but they prepare the consciousness for realisation and knowledge.

*

Sparks or movements of light indicate the play of forces in the consciousness or around it.

*

Any well-formed illumined thought can be seen as a spark of light.

*

A glow means a subdued but rich light or else a sort of warm exhilaration of a luminous kind.

Two Visions Explained

(1) The lid of the skull opening means that the mental being has opened to the Divine Light and the flames indicate aspiration filled with the Light arising to join the mental part to what is above Mind.

(2) The Divine Light from above is of various colours. White is the Divine Power of purity, blue the light of the spiritual consciousness, gold the hue of the supramental knowledge or of knowledge from the intermediate planes.

(3) OM golden rising to the sky = the cosmic consciousness supramentalised and rising towards the Transcendent consciousness.

(1) and (2) indicate either something that is happening at present or a potentiality that is trying to materialise. (3) symbolises the process of the Yoga which will be followed if this potentiality is realised and pursued to its natural goal.

*

About your vision. It came as an answer to your call for the removal of ugly things in your own nature and you were shown how it would be effectively done.

First a vivid realisation was given of what the lower nature is, its terrible darkness and ugliness in which men contentedly live. But having realised its true nature a cry came from your lower nature itself for the change.

You were then shown the light of the higher nature by whose descent the change could come — the white light of the Mother's consciousness and a flame of it descended into you by the usual path and filled you with the light. From there it descended into the subconscious and brought the light there. As a result the consciousness (it was the inner consciousness) became like a crystal pillar connecting the heights with the depths, the superconscious with the subconscious. In it the image of the Mother filled with the light in her.

You were then shown a symbol of the *rūpāntar*, the change in the universal Nature. This change was only in seed and in symbol. Afterwards this part of the vision disappeared and you saw again the darkness of the lower Nature. But in you the light was there still and the assurance that it brings. For it is in the individual that the change must first come and it is with the light and the faith in the individual as a support that the wider change can be made.

Chapter Two Colours

The Symbolism of Colours

Colour and light are always close to each other—colour being more indicative, light more dynamic. Colour incandescent becomes light.

*

As for the exact symbolism of colours, it is not always easy to define exactly, because it is not rigid and precise, but complex, the meaning varying with the field, the combinations, the character and shades of the colour, the play of forces. A certain kind of yellow, for instance, is supposed by many occultists to indicate the *buddhi*, the intellect, and it often has that sense, but occurring among a play of vital forces it could not always be so interpreted—that would be too rigid. Here all one can say is that the blue (the particular blue seen, not every blue) indicated the response to the Truth; the green—or *this* green—is very usually associated with Life and a generous emanation or action of forces—often of emotional life-force, and it is probably this that it would indicate here.

*

The rays which you saw the trees giving out are there always, only they are veiled to the ordinary material vision. I said the blue and gold together indicated the combined presence of Krishna and Durga-Mahakali; but gold and yellow have different significances. Yellow in the indication of forces signifies the thinking mind, *buddhi*, and the pink (modified here into a light vermillion) is a psychic colour; the combination probably meant the psychic in the mental.

In interpreting these phenomena you must remember that all depends on the order of things which the colours indicate in

any particular case. There is an order of significances in which they indicate various psychological dynamisms, e.g., faith, love, protection, etc. There is another order of significances in which they indicate the aura or the activity of divine beings, Krishna, Mahakali, Radha or else of other superhuman beings; there is another in which they indicate the aura around objects or living persons—and that does not exhaust the list of possibilities. A certain knowledge, experiences, growing intuition are necessary to perceive in each case the true significance. Observation and exact description are also very necessary; for sometimes people say, for instance, yellow when they mean gold or *vice versa*; there are besides different possible meanings for different shades of the same colour. Again, if you see colour near or round a person or by looking at him or her, it does not necessarily indicate that person's aura; it may be something else near him or around him. In some cases it may have nothing to do with the person or object you look at, which may serve merely the purpose of a background or a point of concentration—as when you see colours on a wall or by looking at a bright object.

*

There are no separate colours of the beings. There is a characteristic colour of mind, yellow, of the psychic, pink or pale rose, of the vital, purple; but these are colours corresponding to the forces of mind, psychic, vital—they are not the colours of the beings. Also other colours can play, e.g. in the vital, green and deep red as well as purple and there are other colours for the hostile vital forces.

*

The lights one sees in concentration are the lights of various powers or beings or forces and often lights that come down from the higher consciousness.

The violet light is that of the Divine Compassion (*karunā*—Grace)—the white light is the light of the Mother (the Divine Consciousness) in which all others are contained and from which they can be manifested.

Purple is the colour of vital power. "Red" depends on the character of the colour, for there are many reds—this may be the colour of the physical consciousness.

*

As for the tricoloured ball of energy, I am not quite sure, but it may mean the triple force, Love, Light, Life which are contained and constrained in the inconscient sleep of the Shakti in the Muladhara. Possibly an observation of the colours might determine the significance; but this is not sure, as the colours on these lower planes have various meanings.

*

The four lights were the lights of the Truth,—white the purity and power of the divine Truth, green its active energy for work, blue the spiritual consciousness of the divine Truth, the gold its knowledge.

*

The silver temple is that of the spiritualised mind—the golden is that of the divine Truth. Yellow is the colour of the light of the thinking mind—white is that of the divine consciousness.

White Light

White light indicates the divine consciousness.

*

White indicates a force of purity.

*

The forces that come with white light are usually those of purity and peace.

*

The important experience is that of the white ray in the heart—for that is a ray of the Mother's light, the white light, and the

illumining of the heart by this light is a thing of great power for this sadhana.

*

The white light is, as you know, the Mother's light — it is the light of the Force of the Divine Consciousness; the sun of white light is symbolic of that Force in its origin and fullness of manifestation. It is a very good sign and if one feels its power in the being or mind or body it can have a strong influence.

*

What you saw was the Light (the white Light is the Mother's) which is always there in a mass; but it is seen only when the inner (Yogic) eye is open and the consciousness in some part of it at least can enter into touch with the Light.

*

The diamond light is the Mother's own light (that of divine Consciousness) at its most intense.

White Light with Light of Other Colours

The white light is that of the Pure Conscious Force from which all the rest come. The golden light is that of the Divine Truth on the higher planes.

*

The pale blue light is mine — the white light is the Mother's. The world you saw above the head was the plane of the illumined Mind which is a level of consciousness much higher than the human intelligence. It is there that the Divine Light and Power come down to be transmitted to the human consciousness and from there they work and prepare the transformation of the human consciousness and even the physical nature.

*

The two first [*bright white and whitish blue*] are the Mother's

light and mine — the golden red is the touch of the Truth in the physical.

Whitish Blue Light

The pale whitish blue light is “Sri Aurobindo’s light” — it is the blue light modified by the white light of the Mother.

*

The snake form is a symbol of Energy and the white blue light may be that of the Mother’s consciousness in the higher mind, or if it is not two separate colours but whitish blue then it is Sri Aurobindo’s light. The light is a manifestation of Force, the nature of the force being indicated by the colour of the Light.

*

The lights indicate the action of certain forces, usually indicated by the colour of the light. Whitish blue is known as Sri Aurobindo’s light or sometimes Sri Krishna’s light.

*

Whitish blue is Krishna’s light or mine; deeper blues often indicate light from the higher consciousness.

*

There are two pale blues, one which is whitish blue and is known as Sri Aurobindo’s light, the other quite blue which is that of the higher consciousness just above mind.

*

The meaning of blue light depends on the exact character of the colour, its shade and nature. A whitish blue like moonlight is known as Krishna’s light or Sri Aurobindo’s light — light blue is often that of the Illumined Mind — there is another deeper blue that is of the Higher Mind; another, near to purple, which is the light of a power in the vital.

Blue Light

Blue light, according to the shades, means several different things.

*

If the blue lights [*seen in vision*] were of different shades it might mean the overhead planes, Overmind, Intuition, Illumined Mind, Higher Mind.

*

The light from the higher planes of consciousness just above the mind is blue.

*

The light indicates an action of force (bluish probably indicates the spiritual-mind-force), the rest was a working to open the higher spiritual centre (*sahasradala*).

*

Blue is the normal colour of the spiritual planes; moonlight indicates the spiritual mind and its light.

*

Moonlight indicates spirituality—the blue light may be that of the higher or illumined mind.

*

The plane with the blue light is the Higher Mind which is just above the ordinary human intelligence, the first of several planes of higher consciousness through which one has to pass in order to reach the Divine Truth. Something from your mind (thinking willing mind) is trying to rise up into the blue light of the Higher Mind so as to join and become one with it.

*

There is one blue that is the higher mind, a deeper blue that

belongs to the mind — Krishna's light in the mind.

*

There are different Krishna lights — pale diamond blue, lavender blue, deep blue etc. It depends on the plane in which it manifests.

*

Diamond blue is Krishna's light in the overmind — lavender blue in intuitive mind.

*

There is the whitish moonlight blue of Krishna's light — lavender blue of devotion, deep blue of the physical mind, sapphire blue of the higher mind and many others.

*

All blue is not Krishna's light.

*

Blue is also the Radha colour.

Violet Light

The violet is the light of the Divine grace and compassion.

*

“Violet” is the colour of benevolence or compassion, but also more vividly of the Divine Grace — represented in the vision as flowing from the heights of the spiritual consciousness down on the earth. The golden cup is I suppose the Truth consciousness.

*

Violet is indeed the colour or light of Divine Compassion, so also of Krishna's grace.

Golden Light

Golden Light is the light of the divine Truth descending from above.

*

The golden light is the light of the Divine Truth which comes out from the supralental sunlight and, modified according to the level it crosses, creates the ranges from Overmind to higher Mind.

*

The golden light is usually a light from the supermind — a light of Truth-Knowledge (it may sometimes be the supralental Truth-Knowledge turned into overmind or intuitive Truth).

*

It [*golden light*] always means the light of Truth — but the nature of the Truth varies according to the plane to which it belongs. Light is the light of consciousness, truth, knowledge — the Sun is the concentration or source of the Light.

*

The sunlight is the light of the Truth itself — whatever power of Truth it may be — while the other lights derive from the Truth.

*

The Light of the Sun descending into the heart (the Sun of the Knowledge) turns upon the physical and purifies it.

*

The golden light is the promise of the higher knowledge. For the coming of that knowledge the silence of the frontal exterior mind is necessary.

*

Gold is always the symbol of the higher Truth.

*

The hand with the gold pen writing golden letters was perhaps an indication of the Mother writing the things of the Divine Truth in you,—for gold in these visions is the symbol of the Divine Truth.

*

The spiritual Power is naturally more free on its own level than in the body. The golden colour indicates here Mahakali force which is the strongest for the working in the body.

*

The different parts [*mind, life and body*] are naturally coloured by the lights of the powers that come down (golden of Overmind and Intuition, blue of higher, illumined and intuitive mind) while keeping their own characteristic shade as an element.

Gold-Green Light

Gold-green: gold indicates at its most intense something from the supramental, otherwise overmind truth or intuitive truth deriving ultimately from the supramental Truth consciousness. Green has much to do with the vital and indicates here, I think, the emotional forces in their outpouring. The play of the emotional forces in the divine Truth is, obviously, very pertinent to the working of the Krishna lights.

*

Sunlight is the direct light of the Truth; when it gets fused into the vital, it takes the mixed colour — here gold and green — just as in the physical it becomes golden red or in the mental golden yellow.

Golden Red or Red Gold Light

Golden red is the colour of the supramental physical light — so this yellow red may indicate some plane of the Overmind in which there is a nearer special connection with that. The golden

red light has a strong transforming power.

*

The golden Light is that of the modified (overmentalised) Supramental, i.e., the Supramental Light passing through the Overmind, intuition etc. and becoming the Light of Truth in each of these planes. When it is golden red it means the same modified supramental-physical Light — the Light of divine Truth in the physical.

*

“Red gold” is rather the light of the Truth in the physical.

*

Orange or red gold is supposed by the way to be the light of the supramental in the physical.

Orange Light

Orange is the true light manifested in the physical consciousness and being.

*

Orange is the colour of occult knowledge or occult experience.

Yellow Light

Yellow is the thinking mind. The shades indicate different intensities of mental light.

*

Yellow is light of the mind — golden is light from above the mind.

*

It is again the ascent into one of the higher planes of mind illumined with the light of the Divine Truth. Yellow is the light

of mind growing brighter as one goes higher till it meets the golden light of the Divine Truth.

Pink or Rose Light

The rosy light is that of love—so probably you entered the psychic worlds—or at least one of them.

*

The colour of the psychic light is according to what it manifests — e.g., psychic love is pink or rose, the psychic purity is white etc.

Green Light

Green is the higher light in the vital, especially the emotional vital.

*

The green light is a vital force, a dynamic force of the emotional vital which has the power to purify, harmonise or cure.

*

Green is a vital energy of work and action.

*

Green light can signify various things according to the context — in the emotional vital it is the colour of a certain form of emotional generosity, in the vital proper an activity with vital abundance or vital generosity behind it — in the vital physical it signifies a force of health.

Purple and Crimson Light

It [*purple light*] is a light of vital power.

*

Purple is the colour of the vital force — crimson is usually physical.

*

Both [*purple and crimson*] are vital lights, but when seen above they represent the original forces of which the vital are the derivations.

*

The crimson colour is the light of Love in the vital and physical.

Red Light

Red is the colour of the physical, — touched by the higher Light it becomes golden red.

*

It seems to be an opening of various powers and the peace, light and wideness of the spiritual consciousness. The red Purusha may be the power of the true physical — red being the colour of the physical.

*

It depends on the nature of the red. Red (when it does not mean the light of the physical consciousness) indicates always some kind of Force or Power, but what power it is depends on the shade.

*

Deep red is the Divine Love — rosy is the psychic love.

*

The deep red is the light of the Power that descended before the 24th [November 1933] for the transformation of the physical.

*

The deep red light is a Light that came down into the physical for

its change just before the 24th [November 1933]. It is associated with the sunlight and the golden Light.

Red and Black

Red is the colour of rajas, black is the colour of tamas.

Section Three

Symbols

Chapter One

Symbols and Symbolic Visions

Different Kinds of Symbols

A symbol, as I understand it, is the form on one plane that represents a truth of another. For instance, a flag is the symbol of a nation. But generally all forms are symbols. This body of ours is a symbol of our real being and everything is a symbol of some higher reality. There are, however, different kinds of symbols:

(1) Conventional symbols, such as the Vedic Rishis formed with objects taken from their surroundings. The cow stood for light because the same word go meant both ray and cow, and because the cow was their most precious possession which maintained their life and was constantly in danger of being robbed and concealed. But once created, such a symbol becomes alive. The Rishis vitalised it and it became a part of their realisation. It appeared in their visions as an image of spiritual light. The horse also was one of their favourite symbols, and a more easily adaptable one, since its force and energy were quite evident.

(2) What we might call Life-symbols, such as are not artificially chosen or mentally interpreted in a conscious deliberate way, but derive naturally from our day-to-day life and grow out of the surroundings which condition our normal path of living. To the ancients the mountain was a symbol of the path of Yoga, level above level, peak upon peak. A journey involving the crossing of rivers and the facing of lurking enemies, both animal and human, conveyed a similar idea. Nowadays I dare say we would liken Yoga to a motor ride or a railway trip.

(3) Symbols that have an inherent appositeness and power of their own. Akasha or etheric space is a symbol of the infinite all-pervading eternal Brahman. In any nationality it would convey the same meaning. Also, the Sun stands universally for the

supramental Light, the divine Gnosis.

(4) Mental symbols, instances of which are numbers or alphabets. Once they are accepted, they too become active and may be useful. Thus geometrical figures have been variously interpreted. In my experience the square symbolises the Supermind. I cannot say how it came to do so. Somebody or some force may have built it before it came to my mind. Of the triangle, too, there are different explanations. In one position it can symbolise the three lower planes, in another the symbol is of the three higher ones: so both can be combined together in a single sign. The ancients liked to indulge in similar speculations concerning numbers, but their systems were mostly mental. It is no doubt true that supramental realities exist which we translate into mental formulas such as Karma, psychic evolution etc. But they are, so to speak, infinite realities which cannot be limited by these symbolic forms, though they may be somewhat expressed by them; they might be expressed as well by other symbols, and the same symbol may also express many different ideas.

The Effect of Symbolic Visions

It is the same with the symbols in Yoga [*as with images in mystic poetry*]. One puts an intellectual label on the “White Light” and the mind is satisfied and says, “Now I know all about it; it is the pure divine Consciousness light,” and really it knows nothing. But if one allows the Divine White Light to manifest and pour through the being, then one comes to know it and get all its results. Even if there is no labelled knowledge there is the luminous experience of all its significance.

*

The vision of the moon and the rain of flowers means always the falling of the light of spirituality on the consciousness (the moon) and the descent of a psychic influence (flowers). These things are symbols to the mind, but in the inner experience they have a reality and can produce a tangible effect.

Some Symbolic Visions and Dreams Interpreted

The depth of the sleep in your experience was intended to make you go deep inside and, as soon as you did so, you entered into the psychic and spiritual state which takes the figure of the beautiful *maidān* and the flow of white light and the coolness and peace. The staircase was a symbol of the ascent from this psychic and spiritual state into higher and higher levels of the spiritual consciousness where is the source of the light. The Mother's hand was the symbol of her presence and help which will draw you up and lead you to the top of the ladder.

*

The separate images [*in a mystic poem submitted by the correspondent*] are very usual symbols of the inner experience, but they have been combined together here in a rather difficult way. The fire of course is the psychic fire which wells up from the veiled psychic source. The bird is the soul and the flower is the rose of love and surrender. The moon is the symbol of spirituality. As the star is within it is described as piercing through the knots of the inner darkness and worsting the vital growths that are like clouds enwrapping it. The boat also is a usual symbol in the inner visions. The elephant is the spiritual strength that removes obstacles and the horse the force of tapasya that gallops to the summits of the spiritual realisation. The sun is the symbol of the higher Truth. The lotus is the symbol of the inner consciousness.

*

The vision you saw was a symbol of the outward physical consciousness obscured by the ordinary movements (clouds), but with the spirituality (the moon) still spreading its light everywhere from behind the ordinary human ignorance. The dog indicates something in the physical (the part that is faithful, obedient etc.) waiting confidently for the Light to come.

The fire you felt was the fire of purification and the heat came because it was burning up some resistance,—after that was burnt out there was coolness and peace and quietude. The

voices and sounds and impression of X being there indicate a confused activity of the occult sense in the vital which hears things other than the physical. When this kind of thing comes, there has to be a quiet rejection in the being and the thing will pass away. Some people get interested and have a lot of trouble because they get into the habit of hearing voices and seeing and feeling things which are only partly or sometimes true but mixed with much that is false and misleading. It is good that there was something in your vital being which rejected it.

*

The dream is evidently an indication of the difficulty you are experiencing. The sea is the sea of the vital nature whose flood is pursuing you (desires are the sea water) on your road of sadhana. The Mother is there in your heart but sleeping — i.e. her power has not become conscious in your inner consciousness because she is surrounded by the thin curtain of skin (the obscurity of the physical nature). It is this (it is not thick any longer but still effective to veil her from you) which has to go so that she may awake. It is a matter of persistence in the will and the endeavour — the response from within, the awaking of the Mother in the heart will come.

*

It is probably a symbol of three stages or developments or planes of spiritualised life. A star means creation, the triangle a triple principle. The tree is life in a new creation. Green is the colour of the emotional vital, the moon governs a spiritualised emotional life; blue is the colour of the higher mind, the moon there governs a spiritualised higher mind life; the gold colour is that of the Divine Truth, whether intuitive or overmind — the moon here is the spiritualised Truth-life. As the star is *sphatika*-coloured, the triangle may indicate Sachchidananda principle. The butterflies and birds are of course life forces and soul forces, powers or beings. Probably it indicates three stages of transformation before the supramental can reign altogether or else three that will exist as the steps towards the supramental.

*

Your dreams were very beautiful and, symbolically, very true. By the way, let me repeat, they were not really dreams; the state between sleep and waking or which is neither sleep nor waking is not a dozing but an inward gathered consciousness, quite as much awake as the waking mind, but awake in a different plane of experience.

As for the dream of the cobras it could be taken as an answer to your complaints against the Divine being grim and solemn and refusing to play and your remark that if you could have the faith that the troubles were a part of the Divine plan leading you through them to the Divine, you would be more at ease. The answer of the symbolic experience was that the Divine can play if you know how to play with him—and bear his play on your shoulders; the cobras and the bite indicate that what seems to you in the vital painful and dangerous may be the very means of bringing you the ecstasy of the Divine Presence.

Less generally the cobras are the forces of the evolution, the evolution towards the Divine. Their taking the place of the legs means that their action here takes place in the physical or external consciousness, in the evolution of the external mind, vital, physical towards the experience of the Divine and of the Divine Nature. The bite of the cobras (Shiva's cobras!) does not kill, or it only kills the "old Adam" in the being; their bite brings the ecstasy of the presence of the Divine—that which you felt coming upon your head as trance waves. It is this trance ecstasy that has descended upon you each time you went inside or were even on the point of going inside in meditation. It is the universal experience of sadhaks that a force or consciousness or Ananda like this first comes from above—or around—and presses on or surrounds the head, then it pierces the skull as it were and fills first the brain and forehead, then the whole head and descends occupying each centre till the whole system is full and replete. (Of course there are or can be preliminary rushes occupying the whole body for a time or some other part of the system most open and least resistant to the influence.)

Chapter Two

Sun, Moon, Star, Fire

Sun

Fire, lights, sun, moon are usual symbols and seen by most in sadhana. They indicate movement or action of inner forces. The Sun means the inner truth.

*

The sun is the symbol of the concentrated light of Truth.

*

The Sun is the Truth-Light of the One Existence and the flame the dynamic power of action (Yogic) of that Truth-Light.

*

The Sun is the divine Truth-Light on whatever plane of consciousness. It is, I suppose, the original cosmic Truth that is here indicated.

*

The Sun is the Truth from above, in the last resort the Supramental Truth.

*

The sun is the symbol of the Supermind.

*

The sun in the Yoga is the symbol of the supermind and the supermind is the first power of the Supreme which one meets across the border where the experience of spiritualised mind ceases and the unmodified divine Consciousness begins the domain of the supreme Nature, *parā prakṛti*. It is that Light of which the Vedic mystics got a glimpse and it is the opposite of the intervening

darkness of the Christian mystics, for the supermind is all light and no darkness. To the mind the Supreme is *avyaktāt param avyaktam* but if we follow the line leading to the supermind, it is an increasing affirmation rather than an increasing negation through which we move.

*

Supermind is not mind at all, it is something different. The Sun indicates Truth directly perceived in whatever plane it may be. It is the symbol of Supermind but the Truth may come down into the other planes and then that is no longer supramental but modified to the substance of the other planes — still it is the direct Light of Truth.

*

The sun rising on the horizon is the direct light of the Divine Truth rising in the being — the ray upwards opens the being to the Truth as it is above mind, the ray in front opens it to what we call the cosmic consciousness, it becomes released from the personal limitation and opens and becomes aware of the universal mind, universal physical, universal vital. The action on the heart was the pressure of this Sun on it to have this direct opening, so that the consciousness may become free, wide and wholly at peace.

*

There are different suns in the different planes, each with its own colour. But there are also suns of a similar colour above, only more bright, from which these minor suns derive their light and power.

*

The golden [Sun] is the Light of the Truth on the higher planes. The white [Sun] is the Sun of the Mother's consciousness (the Divine Consciousness) which manifests on all the planes.

*

The white sun indicates the purity and peace of the Divine Consciousness.

*

The red sun is a symbol of the true, illumined physical consciousness which is to replace the obscure and ignorant physical consciousness in which men now live. Red is the colour of the physical; the red diamond is the Mother's consciousness in the physical.

*

In the experience the disc of the sun indicates the supramental consciousness with the Divine Being in it (the supramental Divine who can bridge by his light the gulf between the higher and the lower consciousness and unify them). But the smoky appearance, the veil etc. indicated that there was something in the (human) nature that made rapid realisation difficult. This was what was also said by the voice that the time was not yet. Obviously the supramental cannot be achieved except by a long sadhana — the experience should not be taken as meaning anything more than that.

Moon

The moon signifies the light of spirituality or of the spiritual consciousness.

*

The moonlight indicates the light of the spiritual consciousness.

*

The moonlit *maidān* is the spiritual consciousness at the doors of which you are standing as it were and feeling its peace and ease.

*

The moon generally indicates spiritual realisation in the mind.

*

The moon indicates different things according to circumstances — most often spiritual consciousness in the mind.

*

The light above the head is never an imagination in Yoga; if it is felt, it is because it is there. If it is the moon, it means the light of the spiritual consciousness in the mind.

*

The moon as a symbol in vision signifies usually spirituality in the mind or, simply, the spiritual consciousness. It can also indicate the flow of spiritual Ananda (nectar is in the moon according to the old tradition).

*

The moon indicates spirituality, sometimes also spiritual Ananda. ■

*

It [*spiritual mind, symbolised by the moon*] is Mind in contact with truths of the spirit and reflecting them. The Sun is the light of the Truth, the Moon only reflects the light of the Truth — that is the difference.

*

Golden light means the light of the higher Truth — the moon is the symbol of spirituality. A golden moon means a power of spirituality full of the light of the higher Truth.

*

The moon, as I have already written, indicates spirituality — the crescent form means a commencement of the spiritual light. The position near the knee would indicate an action on the physical consciousness — for all below the Muladhara down to the feet is the physical province.

*

The moon is sometimes a symbol of the Light in the mind, — if

it is a full moon. The crescent moon may be a symbol of growing spirituality of the mind centre.

Star

The star signifies a creation or formation or the promise or power of a creation or formation.

*

The star is always a promise of the Light to come; the star changes into a sun when there is the descent of the Light. It is not possible to fix the actual value of these signs for the future; they indicate a turn or a possibility, but everything depends on herself and the future orientation she gives to her being.

*

Stars in such visions¹ indicate points of light or of higher experience in the consciousness. The earth means the physical consciousness.

*

Stars indicate points of light in the ignorant mental consciousness.

Moon = spiritual light

Sun = the higher Truth light

*

They [*gold stars in the sky*] are simply indications of divine Truth in the mind — the sky is a symbol of mind very often.

*

The sky is always some mental plane. The stars indicate beginnings or promises of Light — the various lights indicating various powers of the consciousness: gold = Truth, blue = higher

¹ In one vision the correspondent saw stars in the sky, in another stars upon earth. — Ed.

spiritualised mind, violet = sympathy, unity or universal compassion.

Fire and Burning

The fire indicates a dynamic action.

*

The white fire is the fire of aspiration, the red fire is the fire of renunciation and tapasya, the blue fire is the fire of spirituality and spiritual knowledge which purifies and dispels the Ignorance.

*

The fire is always the fire of purification — it is very red when it is acting on the vital; when the vital no longer covers the psychic, then the rose colour of the psychic comes out more and more.

*

It is the purification of the physical that is usually indicated in the symbol of burning.

Chapter Three

Sky, Weather, Night and Dawn

Sky

The sky usually symbolises a plane of consciousness mental or higher than the ordinary mental — stars are formations of light on that plane.

*

The sky is a symbol of the mental consciousness (or the psychic) or other consciousnesses above the mind — e.g. the higher mind, intuition, overmind etc. Akasha as the ether indicates also the infinite.

*

The sky in the heart is the chidakash. It is seen usually above the head, but when it is seen in the heart, that means the opening of the heart to the higher consciousness.

*

The blue sky is that of the Higher Mind — the nearest of the planes between human mentality and the Supermind. The moon here [*in a vision*] is the symbol of spirituality in the mental planes. The world of the Higher Mind is above those directly connected with the body consciousness.

*

The higher consciousness on any of its levels is seen usually as a sky or ether, but when felt through the vital it is often perceived as a sea.

*

Sat, Chit, Ananda, Supermind, Mind, Life, Matter are the seven [*seas of consciousness mentioned in the Veda*]. But in this Yoga

one sees many levels of consciousness which appear as skies or else as seas.

Rain, Snow, Clouds, Lightning, Rainbow

The rain is the symbol of the descent of Grace or of the higher consciousness which is the cause of the riches—the spiritual plenty.

*

The vision you saw of the snow is probably a symbol of the consciousness in a condition of purity, silence and peace like a snowy ground; in that a new life (psychic, spiritual as indicated by the flowers) appears in place of the old mental and vital life which has been covered by that mantle of snowy whiteness.

*

Clouds are a symbol of obscurity.

*

The lightning is a symbol of the dynamic force of the higher consciousness acting at intervals to enlighten the rest of the being.

*

The rainbow is the sign of peace and deliverance.

Night and Dawn

The Night is the symbol of the Ignorance or Avidya in which men live just as Light is the symbol of Truth and Knowledge.

*

Dawn always means an opening of some kind—the coming of something that is not yet fully there.

Chapter Four

Water and Bodies of Water

Water

Water is the symbol of a state of consciousness or a plane.

Sea or Ocean

The sea with the sun over it is a plane of consciousness lit by the Truth. To enter into the rays is to be no longer merely lit by it, but in one's own conscious being to begin to become part of the Truth.

*

A sea in tumult usually indicates a vital upheaval or a period of strain and stress and struggle.

*

The blue ocean is often a symbol of the spiritual consciousness in higher Mind one and indivisible.

*

Normally, the ocean of higher consciousness is above the head (mind) and all below is that of the lower consciousness. Your seeing of the two oceans rather means that in the descent the influence of the higher consciousness reaches down to the heart (emotional being with the psychic behind it), but does not yet reach below in the lower vital and physical — but it is dissolving the knot in the heart centre which prevents the descent into the lower vital and physical centres. The joy in the *sānta svarūpa* is indeed a sign of the release of the heart centre. But the phrase in the Upanishads refers more particularly to the breaking of the knots of desire, attachment, sanskara, ego in the heart, which stand in the way of spiritual liberation and ascension — not to

the knot which prevents the descent.

Pond, Lake, River

When the water is symbolic [*it is a plane of consciousness*] and here it is a big expanse of water—but a river or a pond are not large enough to symbolise a plane. It may be an actual experience in another world—or it may be the symbol of a particular movement in the sadhana.

It is not from dreams that you can know what plane of consciousness you are living in; it is by an observation of your condition.

*

Sometimes a part of the consciousness is seen in the image of a pond, lake or sea. The fish must be the vital mind.

*

The lake is the being in its individual consciousness, the sea is the same being with a universalised consciousness which can hold the universe and its cosmic forces in itself—the one (individual) merges into the other (the universal). The boat is the formation of the Mother's consciousness in you in which you are preparing to sail on this sea.

*

The river represents some movement of the consciousness. All these are images of the vital plane.

Chapter Five

Earth

Mountain

The mountain is the symbol of the embodied consciousness based upon earth but rising up towards the Divine.

*

The mountain always represents the ascending hill of existence with the Divine to be reached on the summits.

*

The mountain always means the same thing — it is the ascending consciousness.

*

The mountain is an image of the ascending consciousness.

*

The mountain is a very usual symbol of the consciousness with its ascending levels. The flowing of water from the peak indicates some flow from the higher consciousness above.

*

The mountain represents the ascending planes of the higher consciousness. The journey in the train is the passage from one consciousness to another.

*

The bucket is the physical consciousness; milk is always a symbol of the flow of consciousness from Above; the mountain is the Adhar with its ascending levels from the physical to the Above.¹

¹ In a vision during meditation, the correspondent saw a stream of milk flowing down a mountain and filling a bucket at its base. —Ed.

The golden mountain is a symbol of the ascent to the Truth.

*

The Golden Mountain is always the mountain of the Divine Truth which one has to ascend — at its summit is the dwelling place of the Divine.

*

The experience of the great expanse of golden light on a mountain-top came because I had asked X to aspire for the higher experiences of the consciousness from above. The symbolic image of the mountain with the light on its top comes to most sadhaks who have the power of vision at all. The mountain is the consciousness rising from earth (the physical) through the successive heights (vital, mental, above-mental) towards the spiritual heaven. The golden light is always the light of the higher Truth (Supermind, Overmind or a little lower down the pure Intuition) and it is represented as a great luminous expanse on the summits of the being. X by concentrating on the light entered into contact with the higher reaches and that always gives these results, peace, joy, strength, a consciousness secure in the power of the Divine. It is of course through the psychic that she got into this contact, but in itself it is more an experience of the higher spiritual consciousness above mind than a psychic experience.

*

The silvery narrow way upward is the path of the spiritual consciousness.

Earth and Patala

Patala simply means the subconscious below the Earth — the Earth being the conscious physical plane.

*

You had asked the other day about the subconscious, what it was. In the vision you describe you were shown the universal

subconscious in the figure of Patala, a place without light of consciousness and, because universal, therefore without bounds or end — the dark unconscious infinite out of which this material universe has arisen — it is walled with darkness on all sides, it seems also to have no bottom. The Light comes from above from the higher consciousness and coming down through the mind and heart and vital and physical has to pour down into this subconscious and make it luminous.

*

“Patala” is a name for the subconscious — the beings there [*in a dream*] had no heads, that is to say, there is there no mental consciousness; men have all of them such a subconscious plane in their own being and from there rise all sorts of irrational and ignorant (headless) instincts, impulsions, memories etc. which have an effect upon their acts and feelings without their detecting the real source. At night many incoherent dreams come from this world or plane. The world above is the superconscious plane of being — above the human consciousness — there are many worlds of that kind; they are divine worlds.

Chapter Six

Gods, Goddesses and Semi-Divine Beings

Agni

There are many forms of Agni,—the solar fire, the vaidyuta fire and the nether fire are one Trinity—the fivefold fire is part of the Vedic symbolism of sacrifice.

*

The vision you saw of the man and the fire at his feet was probably a vision of the God Agni from whom flows the fire of tapasya and purification in the sadhana.

Shiva

The vision you had was of the way to the goal. Shiva on the way is the Power that pours the light but also scrutinises the sadhak to see whether he is ready for the farther advance. When he lets him pass, then is the rush of new and higher experiences, the march and progress of the divine forces, the Gods and their powers, the transformation of the nature into a higher consciousness. It was these powers that you saw passing in your vision.

Parvati-Shankara

It is probably the realm of the dynamic creative Spirit on the highest mental plane which you saw as the world of Parvati-Shankara.

Narayana, Vishnu, Brahma, Lakshmi, Saraswati, Ananta

Narayana is usually taken as a name of Vishnu—to the Vaishnavas he is the Supreme as Shiva is to the Shaivas. Both are

cosmic Personalities of the Divine and both like Brahma have their original plane in the Overmind, although they take different forms to the human consciousness in the mental, vital and subtle physical planes.

Lakshmi is usually golden, not white. Saraswati is white.

The snake is simply a symbol of Energy or Power. Narayana in your dream is clearly Vishnu as is shown by the presence of Lakshmi and the single many-hooded snake.

Vishnu or Narayana in this image which is a normal Puranic image is the Lord of the waters of Space and Time—the Preserver of the principle of the Universe which he maintains as a seed in himself even in the intervals between one creation and another. Out of that seed in his navel (the navel is the central seat of the Vital, the Life-Principle) Brahma the Creator arises in the Lotus (cosmic consciousness) which grows from it when Vishnu awakens from the inter-cyclic sleep. The Snake Ananta is the Energy of the cosmic manifestation of the Infinite in Space-Time.

Krishna

This is the Krishna of the Gita¹ (the boy Krishna is the Krishna of Brindavan),—Krishna bringing the spiritual knowledge, will, bhakti—and not love and bhakti alone.

The eye indicates the vision of the higher spiritual consciousness and the blue expanse indicates that consciousness.

*

The boy with the flute is Sri Krishna, the Lord descended into the world-play from the divine Ananda; his flute is the music of the call which seeks to transform the lower ignorant play of mortal life and bring into it and establish in its place the lila of his divine Ananda. It was the psychic being in you that heard the call and followed after it.

*

¹ In a dream the correspondent saw Sri Krishna in the prime of manhood. This image disappeared and gave way to a large eye seen in a vast expanse of blue.—Ed.

It is, I suppose, the image of Sri Krishna as Lord of the divine Love and Ananda—and his flute calls the physical being to awake out of the attachments of the physical world and turn to that Love and Ananda.

*

Krishna with Radha is the symbol of the Divine Love. The flute is the call of the Divine Love; the peacock is victory.

*

The green circular disc you saw round Venus must indeed have been the aura of Venus which is of that colour; but this was only an introduction, a first application of the suddenly developed power of vision. Afterwards what came, the blue and the violet, were another kind of seeing more important for your Yoga; both are closely associated with Krishna. Blue is his especial and significant colour, the colour of his aura when he manifests,—that is why he is called *Nil Krishna*; the adjective does not mean that he was blue or dark in his physical body whether in Brindavan or Mathura or Dwarka! Violet is the radiance of Krishna's protection,—that was why, very naturally, it brought to you a sense of peace. The Mother says that she always saw it when she was in communion with Krishna and now too constantly sees it enveloping the Asram. That this should be the first thing shown when the power of vision broke through its state of latency is very significant; it proves that you are in contact, the touch already there in your inner being and this force of presence and protection is already around you or over you as an environing influence.

Hanuman

Hanuman stands for Bhakti.

*

Hanuman = complete bhakti.

*

Hanuman is a symbol of Shakti and devotion.

Narada

Narada stands for the expression of the Divine Love and Knowledge.

Mahakali and Kali

Mahakali and Kali are not the same, Kali is a lesser form. Mahakali in the higher planes appears usually with the golden colour.

*

These — Kali, Shyama, etc. — are ordinary forms seen through the vital; the real Mahakali form whose origin is in the Overmind is not black or dark or terrible, but golden of colour and full of beauty, even when formidable to the Asuras.

Durga on a Lion

The lion with Durga on it is the symbol of the Divine Consciousness acting through a divinised physical-vital and vital-material force.

*

The lion is the attribute of the Goddess Durga, the conquering and protecting aspect of the Universal Mother.

The Death's Head is the symbol of the Asura (the adversary of the gods) vanquished and killed by the Divine Power.

Ganesh

It is according to the need or else the condition of the consciousness that these figures [*of the Gods*] appear in sadhana. Ganesh is at once the god of wisdom and the remover of obstacles.

*

Ganesh (among other things) is the devata of spiritual Knowledge—so as you are getting this knowledge, you saw yourself in this form, identified with Ganesh.

Kartikeya

The peacock is the bird of victory and Kartikeya the leader of the divine forces.

Sanatkumar

Sanatkumar is, I believe, one of the four mind-born sons of Brahma; he cannot therefore be identical with Skanda who is a son of Shiva.

Buddha

Buddha stands for the conquest over the Ignorance of the lower Nature.

Apsaras

Apsaras generally indicate sexual desire.

Chapter Seven

The Human World

Child

The child is usually the symbol of the psychic being.

*

A dream like this of a child—especially a newborn child—usually signifies the birth (i.e. the awakening) of the soul or psychic being in the outward nature.

*

The child usually signifies the psychic being—newborn in the sense that it at last comes to the surface. The colour of the cloth [*bright yellow*] would mean that it comes with health (internal or external or both) and the spiritual riches.

*

The infant in the Mother's arms is the symbol of the psychic being.

*

It is not a fact that the psychic being always appears as a baby—it is sometimes seen symbolically as a newborn baby; many see it as a child of varying ages—it is a very common and usual experience; it is not peculiar to emotional natures. It has several significances such as the new birth of the consciousness into the true psychic nature, the still young growth of this new being, the trust, reliance of the child on the Mother.

*

The child (when it does not mean the psychic being) is usually the symbol of something newborn in some part of the consciousness.

*

I suppose the golden child is the Truth-Soul which follows after the silver light of the spiritual. When it plunges into the black waters of the subconscious, it releases from it the spiritual light and the sevenfold streams of the Divine Energy and, clearing itself of the stains of the subconscious, it prepares its flight towards the supreme Divine (the Mother).

Parents and Relatives

In these dreams the parents or relatives mean the ordinary forces of the physical consciousness (the old nature).

*

A relative is generally a symbol of some element of the hereditary nature (the external being so far as it is created by heredity).

*

Mother, sister or other relatives are usually in such dreams symbols of forces of ordinary nature. The exact meaning depends on the context. But all such dreams are not symbolical — a sex dream for instance may bring up the form of any woman known or unknown.

*

These vital dreams are not interpretable unless there is an evident clue. Aunt or mother usually indicates the ordinary physical nature, a closed room would be some part of the physical nature that was not open to the light, bats would mean forces of the night, i.e. ignorant movements finding a lodging in the obscurity of the unenlightened nature.

*

It [*seeing relatives in dreams*] is the impression left by the past life and its sanskaras that come up in these dreams from the subconscious. They have to be rejected till the impressions are rooted out.

Robbers

The robbers are, as in the Veda, vital beings who come to steal away the good condition or else to steal the gains of the sadhana.

Journeying

The image of journeying always signifies a movement in life or a progress in sadhana.

*

Journeying on a horse or in a conveyance, if symbolic, means a progress or a movement in life, work or sadhana.

*

A journey in a boat or other conveyance means always a movement in the Yoga — often an advance or progress.

*

A journey in a carriage, train, motor car, steamer, boat, aeroplane etc. indicates a movement in the sadhana. The white horse may be the sattvic mind and the red horse the vital rajas giving energy and both combining to make a progress.

*

Aeroplane, steamer and train are always symbols of a rapid progress or forward movement.

*

The railway train at full speed means rapid progress.

*

The railway line is a symbol of rapid progress and the three stars are a symbol of Divine Grace in the mind, life and body.

*

The moving on the sands — it frequently happens in these

dreams — is usually a sign of an easier movement in the sadhana.

Running Away

The running away [*in dream*] is a symbol of the inertia in part of the being which allows the forces to invade, drawing back from them and losing ground instead of facing and destroying them.

Flying

When you find yourself flying it is always the vital being in the subtle body in the vital world that is doing it.

*

Flying during sleep over houses, streets, etc. simply means that the consciousness in the vital sheaths has gone out and is moving over places in the vital or subtle physical world (even sometimes the material); it is always in the vital sheath that one flies like that.

The ascending movement is different — in that it is the consciousness that goes high up to other planes or levels and comes down again to the body.

Ears

The ears signify usually the place of inspired knowledge or else of inspired expression — red and gold mean truth and power joined together.

Teeth

Symbolically, if the dream is symbolic, the falling of teeth means the disappearance of old fixed mental habits belonging to the physical mind.

*

The breaking or falling of teeth [*in dream*] is symbolic usually of the breaking or falling off of habitual formations or sanskaras in the physical mind.

Flesh

The piece of flesh indicates something restless in the physical being which stands by its restlessness and excessive materiality in the way of the full flow of the Ananda. In the dream this became active and was eliminated by the pressure of the psychic.

Being Dead

The feeling of being dead in a vision or dream experience comes when something in the being is to be silenced into entire inactivity and ceases to exist as a part of the nature. It may be a very small part, but as during the process the consciousness is concentrated in it and identified with it for the purpose of the working, the feeling is that “I am dead”. When you said, “I am dead, now let me get up and go”, it simply meant, “The thing is done and the process is over. There is no need to identify myself with this part any longer.” There is no indication in the experience as to what the thing was that passed through this experience.

Chapter Eight

The Animal World

Cow

The cow in the occult symbolism indicates Light or the consciousness — white indicates the purified or spiritual consciousness — the white Light.

*

It is quite clear; it is the Vedic image. In the Veda the Cow is the Divine Light — the white Cow is the pure Consciousness in which there is the Light. The milk is the Knowledge and Power descending from the divine Consciousness.

*

The Cow usually means the Higher Consciousness. Perhaps the calf indicates the truth of the higher consciousness (white) in the physical (red).

*

The white calf is the sign of a pure and clear consciousness, — the cow or calf being the symbol of Light in the consciousness, something psychic or spiritual that you felt natural and intimate to you and inseparable.

*

The vision of the cows must have taken place in the psychic world. It has also a symbolic significance. The sun is the symbol of the Divine Truth, the cows are its powers, rays of the sun, sources of true knowledge, true feeling, true experience.

The descent you felt must have been into some depth of light, probably in the psychic nature.

*

Milk is always the symbol of the flow of the higher consciousness.

Bull

The bull is an emblem of strength and force. It is also in the Veda an image of the Gods, the male powers in Nature. Again the bull is the *vāhana* of Shiva. It may in a dream or an experience be any of these symbols—but it is probably the first here.

Horse

A horse always indicates some power.

*

The Horse is the symbol in dream or vision of a Power or Energy.

*

The Horse is Power—white is pure. It is the pure Power.

*

The Horse is Power, usually Life-Power, but also it may mean Mind-Power in Tapas if it is dynamic and mobile.

*

The Horse is the symbol of Power in motion—often of the Power that makes for rapid progress in sadhana.

*

The horse is a force acting for progress.

*

The horse is always the symbol of Power; it must be then a Power which you were trying to catch and make your own while sometimes it was trying to come up with you, perhaps to use you. This is what happens in the vital where there are these uncertain and elusive movements. The high platform was evidently the

level of a higher Consciousness which stilled this fluctuating movement and made control of the Power more possible, as it became still and near.

*

The ass is the symbol of the inertia and obstruction in the body. The horse is the symbol of force or power. The tunnel of water must be the vital physical and the arch is a passage out, by which, if the ass can cross it or rather be pulled across, then it becomes a horse. In other words, the inertia and obstruction in the physical will be changed into Power and Force of Progress.

Lion

The Lion is the vital force.

*

The lion means vital force, strength, courage—here full of the light, illumined by the spiritual consciousness.¹

*

The lion indicates force and courage, strength and power. The lower vital is not lionlike.

Tiger

It all depends on the attitude of the tiger. If fierce and hostile, it may be a form of an adverse force, otherwise it is simply a power of vital nature which may be friendly.

Elephant

The elephant is Strength—sometimes Strength illumined with Wisdom.

*

¹ *In the correspondent's vision, the lion's face was full of shining light and the hairs of its mane were like rays of spreading light. —Ed.*

The elephant is Strength — sometimes Strength removing obstacles.

*

The blue elephant is the strength of the Higher Consciousness fulfilling itself and removing obstacles.

Giraffe

The Giraffe symbolises aspiration.

Camel

[*Camel manifesting violet light*] Patient progress and endurance as a gift of the Divine Grace.

Deer and Antelope

The deer = speed in the spiritual path.

*

The deer is perhaps a symbol of speed in the spiritual progress.

*

The deer is Immortality, the antelope is Rapid Movement.

Boar

It [*the boar*] is rajasic strength and vehemence. Much however depends upon the context,—these figures have also other meanings.

*

The wild boar points to attacks of the crude vital rajas.

Buffalo

A buffalo conveys the idea often of an obscure violence in the

nature — here [*in the correspondent's dream*] it seems tied up — i.e. under control but not eliminated. But it is not clear to what it refers — if it is symbolic at all.

*

The buffalo is a symbol of unnecessary or blind anger — perhaps it meant that that was still somewhere in your nature.

*

[*Buffaloes*:] Rash and obscure vital forces.

Goat

The goat in vision is often symbolic of lust.

*

Goats usually indicate sex tendencies.

Monkey

The monkey is a symbol of the leaping restless mind; these monkeys are the doubts and suggestions that have been assailing you.

*

The monkey is a symbol of the restless vital consciousness or of one or other of its movements.

Dog

The dog is the symbol of devoted affection and obedience.

*

The dog generally signifies devoted obedience — so it² may indicate the action of a devoted obedience spiritualised in the

² *In a vision the correspondent saw a dog's face bathed in blue light, with its eyes full of white light.* — Ed.

higher consciousness.

*

The dog usually indicates fidelity and as it is yellow, it would be fidelity in the mind to the Divine—but the other black and white one is difficult to interpret—it is something in the vital, but the meaning of the black spots is not clear.

Black Cat

The black cat is usually the symbol of magic of an evil kind or of an evil influence of the vital world acting on the physical as magic does. It is effective so long as its nature and mode of action are not discovered, so long as it can act invisibly—when it is seen it can be dealt with. The others had not seen it and were not aware that it was taking the life of the sick person and that she was not dead and need not die if this force could be destroyed or prevented from acting; you saw it and were therefore able to fight and catch it and kill it. That it took long to kill shows that it was not representing a particular process of magic which can be annulled quickly and decisively, but a Force of evil magic from the vital plane.

Snake or Serpent

The serpent is the symbol of energy, it may be a bad or hostile energy—but it may also be a good, even a divine energy.

*

The snake indicates some kind of energy always—oftener bad, but also it can indicate some luminous or divine energy. It is [*in this case*] the ascent of some such force from the physical upwards. The other details are not clear.

*

About the snake you saw in your meditation—serpents indicate always energies of Nature and very often bad energies of the vital

plane; but they can also indicate luminous or divine energies like the snake of Vishnu. The one you saw was evidently of this latter type—a luminous divine energy and therefore there was no cause for alarm, it was a good sign.

*

A snake is a bad symbol only when it comes from the vital or other lower plane.

*

What you saw was not what is in yourself, but a symbol of the things that are in vital Nature. Scorpions and usually snakes also are symbols of harmful energies; the vital nature of earth is full of these energies and that is why the purification of man's outer vital nature also is so difficult and there are so many wrong movements and happenings in him,—because his vital is easily open to all these earth movements. In order to get rid of them, the inner being must wake and grow and its nature replace the outer nature. Sometimes serpents indicate energies simply, not harmful ones; but more often it is the other way. On the other hand the peacocks you saw were powers of victory, the victory of the energies of light over the energies of darkness.

*

The serpent Ananta is the infinite energy in infinite Time-Space which supports the universe.

*

It is in answer to your aspiration that the Mahakali force descended—the Serpent is the Energy from above working in the vital answering to the Serpent Kundalini which rises from below.

*

The Serpent is the symbol of energy—especially of the Kundalini Shakti which is the divine Force coiled up in the lowest (physical) centre, Muladhara—and when it rises it goes up through the spine and joins the higher consciousness above.

Energies are of all kinds and the snakes can also symbolise the evil powers of the unregenerate vital nature—but here it is not that.

*

The serpent symbolises an energy good or bad, divine or un-divine according to its nature. Here, it looks as if it were the Kundalini trying to ascend to the Brahmarandhra, but it has not yet reached beyond the vital and is stopped—probably because the time has not yet come.

*

This [*vision*] is the symbol of the opening of the centres to the Light.

The swan is the Indian symbol of the individual soul, the central being, the divine part which is turned towards the Divine, descending from there and ascending to it.

The two serpents interlaced are the two channels in the spine, through which the Shakti moves upward and downward.

The serpent with the six hoods is the Kundalini Shakti, the divine Power asleep in the lowest physical centre which, awakened in the Yoga, ascends in light through the opening centres to meet the Divine in the highest centre and so connect the manifest and the unmanifested, joining Spirit and Matter.

*

The golden serpent in the Muladhara is a symbol of the energy of the transformed physical consciousness.

*

The cobra is a symbol of the Energy in Nature—the upraised hood and light indicate the illumination and victorious position of the emerged Energy.

*

The opening of the hood indicates the victorious or successful activity of the Energy indicated by the snake.

*

The serpent with the hood over the head generally indicates future siddhi.

*

Snakes and scorpions always indicate attacks or threats of attack of one kind or another, more often threats from the vital plane or hostile influences on the physical.

*

The serpent is a symbol of force, very often a hostile or evil force of the vital plane. The sea is a symbol of a plane of consciousness. The white light is a manifestation of pure divine force descending from one of the truth-planes leading to the supramental.

The indication is that of a hostile vital force being expelled and the purifying light from above descending to illumine and deliver the part of the plane formerly occupied by it.

Crocodile

The crocodile signifies greed, *lobha*, of some kind.

Frog

Frog = modest usefulness.

Fish

The fish is the always moving vital mind making all sorts of formations.

*

Fish might be formations in the vital consciousness — for water most often indicates the vital consciousness.

Bird

The bird is often a symbol of the being.

*

The bird is a symbol of the individual soul.

*

A bird is a very frequent symbol of the soul, and the tree is the standing image of the universe—the Tree of Life.

*

Birds often indicate either mind-powers or soul-powers.

*

The bird is usually a symbol of some soul power when it is not the soul itself—here it is a power (awakened in the soul) of the whitish blue light—Sri Aurobindo's light.

*

The Blue Bird is always a symbol of aspiration towards something Beyond.

*

The blue bird is the symbol of aspiration to the heights.

Swan or Hansa

The swan is a symbol of the soul on the higher plane.

*

The swan is the liberated soul.

*

Both [*the goose and the swan*] are symbols of the beings in a man—but the goose or ordinary Hansa usually refers to the *manomaya puruṣa*.

*

The Hansa is the symbol of the being—it regains its original purity as it rises until it becomes luminous in the Highest Truth.

*

The Hansa is a symbol of the soul or the self—the peacock is the bird of victory. The golden Hansa is the soul living in the Truth, the golden peacock is the victory of the Truth.

Duck

The duck is the symbol of the soul—silvery colour = the spiritual consciousness—golden wings = the power of the Divine Truth.

*

The duck is usually a symbol of the soul or inner being; perhaps it was the four beings—mental, psychic, vital and physical—that you saw.³

Crane

The crane is the messenger of happiness.

Peacock

The peacock is the Bird of Victory.

*

A peacock is the symbol of spiritual victory.

*

The peacock signifies victory—in Yoga the divine victory. The clear sky would indicate perhaps the mental part cleared of obscurities. Seeing the higher part of the bodies [*of the peacocks*] would mean a victory in the higher parts of the consciousness, in the mental (head and neck) and perhaps also in vital mind and in emotional.

³ *The correspondent saw four ducks with uplifted necks, illuminated with white light, advancing in a row.—Ed.*

Dove or Pigeon

The dove signifies peace. The colours indicate the vital—green would be self-giving in the vital; blue the higher consciousness in the vital. So it must be peace casting its influence from above on the vital.

*

The white pigeon must be Peace.

Crow, Eagle, Kite

The crow signifies practical cleverness, the eagle Intelligence. The kite is Krishna's *vāhana*.

Ostrich

The ostrich may mean rapidity of movement.

Spider

The image of the spider in the Upanishads is used for the Brahman creating the world out of itself, dwelling in it and withdrawing it into itself. But what matters in a symbol is what it means for you. It may mean for you success or successful formations.

White Ants

Obviously it [*white ants seen in a dream*] must have been symbolic of small but destructive forces in the lower vital or physical.

Flies

Something small in the smaller vital.

Chapter Nine

The Plant World

Aswattha or Peepul Tree

The aswattha usually symbolises the cosmic manifestation.

*

It [*the peepul tree*] is the symbol of the cosmic existence.

Jungle

The jungle must be some unregenerated part of the vital nature and the serpent a wrong force emerging from it.

Leaves

Images of leaves and plants usually indicate vital strength or energy.

*

A green leaf means vital strength or energy or vitality.

Fruits

The fruits are the results of the sadhana.

Flowers

Flowers indicate a blossoming in the consciousness, sometimes with special reference to the psychic or the psychicised vital, mental and physical consciousness.

*

The vision of flowers is a symbol usually of psychic qualities or movements whether a potentiality or promise or an actual state of development.

*

It is usually when the psychic is active that this seeing of flowers becomes abundant.

*

The flowers indicate always an opening (usually psychic) in some part of the consciousness.

*

The flowers¹ are the symbols of psychic movements. The sun is the Divine Consciousness. It is the awakening of the psychic consciousness and its activity under the Divine Influence.

*

Red flowers would ordinarily indicate an opening of the consciousness either in the physical or some part of the vital according to the shade.

Lotus

A lotus flower indicates open consciousness.

*

A lotus signifies the opening of the (true) consciousness.

*

The lotus is always the sign of the consciousness opening somewhere — when the consciousness opened from above, you became aware of a new plane of being of which you were not aware before.

*

¹ In a vision the correspondent saw a luminous sun sending forth a multitude of flowers. —Ed.

It [*the lotus*] means consciousness. The opening of the lotus is the opening of some part of the consciousness.

*

The opening of the lotuses² means, I suppose, the opening of the true vital and physical consciousness in which the spiritual being (the Swan) can manifest with all the consequences of that opening.

*

The lotus must represent owing to its numerous petals the “thousand petalled” lotus above the head which is the seat of the higher consciousness above the thinking intelligence. The vision may mean the opening of the consciousness there and in it the adoration of the Divine.

*

A lotus usually indicates an opening into the spiritual. The white and red are symbols of the Mother and the incarnating Divine.

*

The white lotus is the symbol of the Mother’s consciousness,—it does not indicate any part of the individual consciousness.

*

The red lotus is the flower of the Divine Presence.

*

The red lotus is the presence of the Divine on earth—the sun is the Divine Truth. It indicates the Divine manifestation on earth raising earth consciousness towards the Truth.

*

The red lotus signifies the presence of the Divine on the Earth.

*

² *The correspondent wrote about a vision in which two lotuses blossomed in his body, one at the navel region, the other at the base of the spine.—Ed.*

It [*the blue lotus*] can be taken as the (Avatar) incarnation on the mental plane.

Other Flowers

The red rose is the flower of love and surrender, the white is the purity of psychic love.

*

Reddish pink rose = psychic love or surrender.
White rose = pure spiritual surrender.

*

The java [*red hibiscus*] is the flower of the Divine Power.

*

The [*flower named*] eternal smile³ means the self-existent joy and gladness of the Spirit.

*

I told you saffron meant purification—so if it has any significance, it can only mean that the Mother gave you a power of purification to use.⁴

³ Hibiscus micranthus, *a very small white hibiscus*. —Ed.

⁴ The correspondent wrote that in a dream the Mother put a large packet of saffron in her hand. —Ed.

Chapter Ten

Constructions

Building

The building is the symbol of a new creation — the white indicating spiritual consciousness, the coloured lights the different powers.

Workshop

The workshop is probably a symbol of the activity of the ordinary nature which is so full of formations and activities of the ordinary kind that it is difficult to pass through it to the inner or the inmost being.

The walls with the spaces between indicate the different parts of the being to which the outer mind has no access — possibly, the inner vital (the women may be the occult vital nature), emotional etc. The ceiling (yellow) may be the intellect or thinking mind which walls one in and prevents from getting into the open spaces of the higher consciousness. But through all a way lies to the open way of the higher consciousness full of peace, light and Ananda.

Temple

The temple means religious feeling, worship, adoration, consecration.

*

It is a temple and the temple is the symbol of spiritual aspiration. This one being complex meant a rich and many-sided aspiration.

Pyramid and Sphinx

The pyramid is usually a symbol of aspiration — reddish perhaps

because it is in the physical.

*

The Sphinx is a symbol of the eternal quest that can only be answered by the secret knowledge.

Chapter Eleven

Objects

Cross and Shield

The cross is the sign of the triple being, transcendent, universal and individual.

*

The cross indicates the triple Divine (transcendent, universal, individual) — the shield means protection.

Crown

The crown is the sign of fulfilment (here in the intuitive consciousness) and the going up means an ascent to higher planes.

*

The crown indicates the higher consciousness in its static condition, the wheel its dynamic action. The red light is the Power sent down to change the physical.

Diamond

The diamond is the symbol of the Mother's light and energy — the diamond light is that of her consciousness at its most intense.

*

Diamonds may indicate the Mother's Light at its intensest, for that is diamond white light.

*

The diamond in your heart was a formation of the light of Mother's consciousness there, — for the Mother's light is of a white and at its most intense of a diamond radiance. The light

is a sign of the Mother's presence in your heart and that is what you saw once and felt for a moment.

Pearl

It [*a pearl*] may be a representation of the “bindu”, which is a symbol of the infinite in the exceedingly small, the individual point which is yet the Universal.

Flute

The flute is the symbol of a call — usually the spiritual call.

*

The flute is the call of the Divine.

*

The flute is the call of the Divine which descends into you from above and awakes the psychic yearning (the tears) and ends by bringing a vast peace and shows to you the clear sky of the higher consciousness in which there are the Truth-formations (golden stars) some of which begin to descend in a rain upon the physical consciousness (the earth).

Conch

The conch is often the symbol of call or aspiration.

*

The conch is the symbol of the spiritual call.

*

The conch is the call to realisation.

*

The conch is perhaps the proclamation of victory.

*

The lotus is the opened consciousness — the conchshell is the call to victory.

Bells

Bells heard are usually a sign of progress in sadhana, progress to come.

Vina

Harmony.

Wheel, Disc or Chakra

The wheel is the sign of an action of Force (whatever force may be indicated by the nature of the symbol) and as it was surging upwards it must be the fire of aspiration rising from the vital (navel centre) to the Higher Consciousness above.

*

A revolving disc means a force in action on the nature. The whitish blue light is known as Krishna's light, also as Sri Aurobindo's light. White is the Mother's. Perhaps here it is a combination.

*

The [*Sudarshan*] Chakra symbolises the action of Sri Krishna's force.

*

The chakra is the energy at work and it brings the first opening of the consciousness in the gross physical plane, i.e. of the mental physical, psychic physical, vital physical and the material.

*

Yes, the circular movement and the Chakra are always signs of energy in action, generally creative action.

Bow and Arrow

The bow is a symbol of the force sent out to reach its mark.

*

The arrow is the symbol of the Force which goes to its aim. Gold = the Truth, Yellow = the mind, Green = the vital energy. The arrow of the spiritual Truth using the mind and the vital energy.

Key

Is it a key you saw?¹ If so the meaning is clear; it is the key to the divine realisation; the Mother is the key because it is her light (white is her colour) that enables us to open the gate of realisation.

Book

The book indicates some kind of knowledge.

Mirror, Square and Triangle

The mirror between the eyebrows indicates that something in the inner mind has become able to reflect the Truth from above (golden light)—a square is a symbol of the truth beyond the mind as a triangle is the symbol of mind, life, body.

Incense Stick and Tobacco

The incense stick is the symbol of self-consecration.

*

Tobacco is associated with tamas and incense sticks with adoration.

¹ *The correspondent wrote that in a vision he saw a key with the word "MOTHER" written on it in white letters, with white light around it.—Ed.*

Gramophone

The gramophone is obviously symbolic of the mechanical mind.

Chapter Twelve

Numbers and Letters

Numbers

In one form or another all these ideas [*such as the significance of numbers*] have existed in the past. The significance of numbers was one of the chief elements in the teaching of Pythagoras 5 centuries before Christ.

*

The number 7 is the number of realisation — when there are four 7's it indicates perfect realisation.

*

7 is the figure of realisation. 3×3 means the descent from above and the answer from below.

*

There is no unlucky number. Numbers all have their powers and why should 13 not have its chance?

Letters (Writing)

The writing [*floating before the eyes*] is often seen by sadhaks either in meditation and sleep or with the waking eyes or in both states. But if you see it only in sleep or an inward condition, it is not so easy to remember when waking unless you train yourself to remember.

OM

OM there [*above the crown of the head*] indicates the realisation of the Brahman on that level of the (higher) consciousness.

Part Three

Experiences of
the Inner Consciousness
and the Cosmic Consciousness

Section One

Experiences on the Inner Planes

Chapter One

Experiences on the Subtle Physical, Vital and Mental Planes

Subtle Physical Experiences

Is it [*a strong and rapid heartbeat that shakes the whole body*] the physical nerves and heart — or in the subtle body? Often one feels a shaking and vibration of the subtle body and can feel as if heartbeats there, but if not experienced, it impresses as if it were a material phenomenon.

*

It is evidently in a subtle world, not the physical that you move; that is evident from the different arrangement of things, by such details as the third arm and the book marker removed yet there; but they show also that it is a subtle world very near to the physical; it is either a subtle physical world or a very material vital domain. In all the subtle domains the physical is reproduced with a change, the change growing freer and more elastic as one gets farther away. Such details as the lameness show the same thing, — the hold of the physical is still there. It is possible to move about in the physical world, but usually that can only be done by drawing on the atmosphere of other physical beings for a stronger materialisation of the form — when that happens one moves among them and sees them and all the surroundings exactly as they are at that time in the physical world and can verify the accuracy of the details if immediately after returning to the body (which is usually done with a clear consciousness of the whole process of getting into it) one can traverse the same scene in the physical body. But this is rare; the subtle wandering is on the contrary a frequent phenomenon, only when it is near to the physical world, all seems very material and concrete and the association of physical habits and physical

mental movements with the subtle events is closer.

Vital Experiences

The place where you were [*in a dream*] is as much a world of fact and reality as is the material world and its happenings have sometimes a great effect on this world. What an ignorant lot of disciples you all are! Too much modernisation and Europeanisation by half!

These things are meetings on the vital plane, but very often in the transcription of what happened some details get in that are contributed by the subconscious mind. I rather suspect all that about X was such a contribution. The rest seems all right. The writing on the forehead means of course something that is fixed in you in the vital plane and has to come out hereafter in the physical consciousness.

*

You are too physically matter of fact. Besides you are quite ignorant of occult things. The vital is part of what European psychologists sometimes call the subliminal and the subliminal, as everybody ought to know, can do things the physical cannot do — e.g. solve a problem in a few minutes over which the physical has spent days in vain etc. etc.

What is the use of the same things happening on both planes; it would be superfluous and otiose. The vital plane is a field where things can be done which for some reason or other can't be done now on the physical.

There are of course hundreds of varieties of things in the vital as it is a much richer and more plastic field of consciousness than the physical, and all are not of equal validity and value. I am speaking above of the things that are valid. By the way, without this vital plane there would be no art, poetry or literature — these things come through the vital before they can manifest here.

*

At this stage you have only to watch the experiences and observe their significance. It is only when the experiences are in the vital realm that some are likely to be false formations. These of which you write are simply the common experiences of an opening Yogic consciousness and they have to be understood, simply.

Here it is the breaking up of the small surface vital into the largeness of the true or inner vital being which can at once open to the Higher Consciousness, its power, light and Ananda. There is also begun a similar breaking of the small physical mind and sense into the wideness of the inner physical consciousness. The inner planes are always wide and open into the Universal while the outer surface parts of the being are shut up in themselves and full of narrow and ignorant movements.

*

It is plain. The lower being (vital and physical) was receiving an influence (mental light, yellow) from the thinking mind and higher vital which was clearing it of the old habitual lower vital reactions: very often in the sadhana one feels the inner being speaking to the outer or the mind or higher vital speaking to the lower so as to enlighten it.

*

These things that come [*in dreams*] to frighten you are merely impressions thrown on you by small vital forces which want to prevent you (by making you nervous) pushing on the sadhana. They can really do nothing to you, only you must reject all fear. Keep always this thought when these things come, "The Mother's protection is with me, nothing bad can happen"; for when there is the psychic opening and one puts one's faith in the Mother, that is sufficient to ward these things off. Many sadhaks learn, when they have alarming dreams, to call the Mother's name in the dream itself and then the things that menace them become helpless or cease. You must therefore refuse to be intimidated and reject these impressions with contempt. If there is anything frightening, call down the Mother's protection.

The heat you felt was probably due to some difficulty in the

force coming down below the centre between the eyes where it has been working up till now. When such sensations or the unease you once felt or similar things come, you must not be alarmed, but remain quiet and let the difficulty pass.

What you had before that, the moonlight in the forehead, was this working in the centre there between the eyebrows, the centre of the inner mind, will and vision. The moonlight you saw is the light of spirituality and it was this that was entering into your mind through the centre, with the effect of the widening in the heart like a sky filled with moonlight. Afterwards came some endeavour to prepare the lower part of the mind whose centre is in the throat and join it with the inner mind and make it open; but there was some difficulty, as is very usually the case, which caused the heat. It was probably the fire of tapas, Agni, trying to open the way to this centre.

The experience of being taken up into the sky is a very common one and it means an ascent of the consciousness into a higher world of light and peace.

The idea that you must go more and more within and turn wholly to the Mother is quite right. It is when there is no attachment to outward things for their own sake and all is only for the Mother and the life through the inner psychic being is centred in her that the best condition is created for the spiritual realisation.

*

Your series of experiences are very interesting by the constant (though interspaced) development they illustrate. Here two new significant elements have been added to the previous substance of the experience. The first is the very precise localisation of the uprush of the consciousness from the pit of the stomach—that is to say, from above the navel, the movement itself starting from the navel or even below it. The navel-centre (*nābhi-padma*) is the main seat of the centralised vital consciousness (dynamic centre) which ranges from the heart level (emotional) to the centre below the navel (lower vital, sensational desire centre). These three mark the domain of the vital being. It is therefore

clear that it was your inner vital being which had this experience, and its intensity and vehemence was probably due to the whole vital (or most of it) being awake and sharing in it this time. The experience itself was psychic in its origin, but was given a strong emotional-vital form in its expression. I may add, for completeness, that the centre of the psychic is behind the heart and it is through the purified emotions that the psychic most easily finds an outlet. All from the heart above is connected with the mental-vital and above it is the mind with its three centres, one in the throat (the outward-going or externalising mind), one between the eyes or rather in the middle of the forehead (the centre of vision and will) and one above, communicating with the brain, which is called the thousand-petalled lotus and where are centralised the highest thought and intelligence communicating with the greater mind planes (illuminated mind, intuition, overmind) above.

The second new significant feature is the self-manifestation of the inner mind; for it was your inner mind that was watching, observing and criticising the vital being's psychic experience. You found this clear division in you curious, but it will no longer seem curious once you know the perfectly normal divisibility of the different parts of the being. In the outer surface nature mind, psychic, vital, physical are all jumbled together and it needs a strong power of introspection, self-analysis, close observation and disentanglement of the threads of thought, feeling and impulse to find out the composition of our nature and the relation and interaction of these parts upon each other. But when one goes inside as you have done, we find the sources of all this surface action and there the parts of our being are quite separate and clearly distinct from each other. We feel them indeed as different beings in us, and just as two people in a group can do, they too are seen to observe, criticise, help or oppose and restrain each other; it is as if we were a group-being, each member of the group with its separate place and function, and all directed by a central being who is sometimes in front above the others, sometimes behind the scenes. Your mental being was observing the vital and not quite easy about its vehemence,—

for the natural base of the mental being is calm, thoughtfulness, restraint, control and balance, while the natural turn of the vital is dynamism, energy thrown into emotion, sensation and action. All therefore was perfectly natural and in order.

*

As for the experience stated it was probably in the vital plane and such suddennesses and vividnesses of experience are characteristic of the vital — but they are not lasting, they only prepare. It is when one has got into contact with what is beyond mind and vital and body and risen there that the great lasting fundamental realisations usually come.

Influence or Possession by Beings of Other Planes

The case of the girl in question seems to be of a fairly common kind. In one way or another a certain subtle faculty is awakened by which there is contact with some other plane of consciousness and its beings, usually with the vital or larger “life” worlds behind the material plane. These experiences are often of little value, trivial and full of misleading conceptions, messages or suggestions; the inexperienced *voyant* or seer adds to them the formations and delusions of his own subliminal mind. It is only by training and experience that one can arrive at an elimination of these errors and establish the true use of the subtle faculties. These powers are often enough dangerous to their unexperienced or indisciplined possessor and the hysteria of the girl in question was obviously the result (a result that happens in many cases) of her allowing some being of the vital plane to delude and influence her. This kind of thing has no connection at all with the spiritual or psychic experience of the Rishis and sages; it is rather akin to the experiences of mediums and others in Europe.

*

It seems that you do not pay sufficient attention to the instructions that are sent to you from here. You were specially warned

not to allow anything to take possession of you. But in relating one of your experiences repeated for several days you speak of something that was taking possession of you, even obliging you to make incoherent noises, and yet you say you do not know whether it was good or bad or what kind of force it was! It is evident from your description that it was a vital force trying to take violent possession of the body. Nothing can be more dangerous than to allow this kind of loss of control and intrusion of an alien influence. In your present condition of ignorance, the vital being not yet sufficiently open, the psychic not yet sufficiently awake, a hostile power can easily intrude and pass itself off as the divine Force. Remember that no personality and no power is to be allowed to possess you. The divine Force will not act in this way; it will work first to purify, to widen and enlighten and transform the consciousness, to open it to Light and Truth, to awaken the heart and the psychic being. Only afterwards will it take gradual and quiet control through a pure and conscious surrender.

*

I have omitted all this time to reply to your letter forwarding your friend's statement about his experiences. I am not very sure of its significance. The "double" voice is a frequent phenomenon; it happens very often when one has been long repeating a mantra that a voice or consciousness within begins to repeat it automatically—also prayer can be taken up in the same way from within. It is usually by an awakening of the inner consciousness or by the going in of the consciousness more deeply within from its outward poise that this happens. This is supported in his case by the fact that he feels himself halfway to trance, his body seems to melt away, he does not feel the weight of the book etc.; all these are well-known signs of the inner consciousness getting awake and largely replacing the outer. The moral effects of his new condition would also indicate an awakening of the inner consciousness, the psychic or psychic-mental perhaps. But on the other hand, he seems to feel this other voice as if outside him and to have the sense of

another being than himself, an invisible presence in the room. The inner being is often felt as someone separate from or other than the ordinary self, but it is not usually felt outside. So it may be that in this state of withdrawal he comes into contact with another plane or world and attracts to himself one of its beings who wants to share in his sadhana and govern it. This last is not a very safe phenomenon, for it is difficult to say from the data what kind of being it is and the handing over of the government of one's inner development to any other than the Divine, the Guru or one's own psychic being may bring with it serious peril. That is all I can say at present.

*

All the other circumstances which you relate¹ are normal and would be the phenomena of an invasion of Ananda occupying the whole instrumental being while the silent inner being within remains separate as it does usually from all that comes from outside. The circumstance that is not clear is the Presence. There is nothing to indicate who or what it is. If it were an undesirable vital Presence producing a vital joy, there would usually be vital phenomena which would enable you to detect their origin, but these are not apparent here. In the circumstances the only course is to observe the experience without accepting any occupation of the being by what comes, taking it as only an experience which the inner being looks on as a witness, until the point that remains veiled is made clear.

P.S. There are several possible explanations but I do not speak of them as that might influence and interfere with the pure observation of the experience by bringing in a mental suggestion.

*

I have read your letter and I have also read it to the Mother. My conclusion about the experience—I had suspended judgment till now—is the same as hers.

We consider that it will be wiser for you to be on your guard

¹ *This letter and the four that follow it were written to the same person.—Ed.*

about it in future. In the first place it cannot be the Buddha — the Buddha's presence would bring peace but could never give this kind of Ananda. Next, the suggestion based on an old subjective feeling of yours seems to be thrown on you to make you more readily admit some *emprise* that the experience is a means of establishing on you. Again the feeling you have that the Ananda is more than you can bear is a sign not favourable to the experience; you suppose that it is a want of adaptation that gives you the feeling, but it is more likely that it is because it is something foreign thrown on you through the vital with which the psychic being in you does not feel at home. Finally, it is not safe to admit while you are doing the Yoga here another influence, *whatever it may be*, which is not ours or part of the movement of this sadhana. If that takes place anything might happen and we would not be able to protect you against it because you would have stepped out of the circle of protection. You have hitherto been proceeding on a very sound line of development; a diversion of this kind which seems to be on the vital level might be a serious interference. No trust can be put on the beauty of the eyes or the face. There are many Beings of the inferior planes who have a captivating beauty and can enthrall with it and they can give too an Ananda which is not of the highest and may on the contrary by its lure take away from the path altogether. When you have reached the stage of clear discernment where the highest Light is turned on all things that come, then experiences of many kinds may be safely faced, but now a strict vigilance must be exercised and all diversions rejected. It is necessary to keep one's steps firmly on the straight road to the Highest; all else must wait for the proper time.

*

For the eyes, that experience had got a certain hold and it was not to be expected that it would altogether disappear all at once. These things try to persist, but if the refusal is firm and unchanging, they fade away after a time or cease. The lessening of the intensity of the ananda is already a sign that the rejection is having its effect. You have only to persist and after a time the

vital consciousness will be free.

*

I have no doubt that the action of this force once rejected will disappear in time. It is something with which you have been brought into contact, not something intimate to yourself to which part of your being is naturally responsive. That is shown by the inability to catch what the being who manifested wanted to convey to you. It seems to have been an onslaught, as you say, an attempted invasion by force and ruse. It is quite true that when there is the opening to the Light, the adverse Forces as well as the lower forces become active when they can do so. The consciousness of the seeker has come out of its normal limits and is opening to the universal as well as upwards to the Self above and they take advantage of that to attempt an entrance. Such onslaughts however are not inevitable and you are probably right in thinking that you caught it in the atmosphere of X. He has made experiments of many kinds in the occult field and there one comes easily into contact with forces and beings of a darker nature and one needs a great power and light and purity — one's own or a helping Power's — to face them and overcome. There are also deficiencies or errors in one's own nature which can open the door to these beings. But the best is if one can have nothing to do with them; for the conquest of the forces of the lower nature is a sufficiently heavy task without that complication. If the work one has to do necessitates the contact and conflict with them, that is another matter. In your case I think this has been something of an accident and not a necessity of the development of your sadhana.

*

No, there was no special concentration or call from the Mother at that time. It was at a time when she never sees anyone, so evidently she would not have put such a force upon you, nor does she usually exercise her power in this way. You did well to resist the impulsion. It is always necessary to keep the inner perception and will clear, conscious and in perfect balance and

never to allow any force of impulsion, however it may present itself, to sweep without their discerning consent the vital or the body into action. Whatever appearance they may assume, such forces cannot be trusted; once the discriminating intelligence gives up its control, any kind of force can intervene in this way and a path is opened for unbalanced vital impulses to be used to the detriment of the sadhana. A psychic or spiritual control replacing the mental would not act in this way, but whatever intensity or ardour it may give, would maintain a clear perception of things, a perfect discrimination, a harmony between the inward and the outward reality. It is only the vital that is swept by these impulses; the vital must always be kept under the control of the intelligence, the psychic or when that becomes dynamic, the higher spiritual consciousness.

An Experience on the Mental Plane

The vision you had was of the mental plane and symbolic. It symbolised not so much your own position as the general difficulties which lie in the way of one's going deep inside into the psychic centre and living there. The *maidān* full of light was the inmost psychic centre; the dark place in between represents the veil of ignorance created by the gulf between this inmost psychic and the outer nature. The chakra turning round and round which prevents the approach from one side (the mental side) is the activity of the ordinary mind; when the mind becomes quiet, then it is easier. The serpent is the vital energy which covers up the psychic and prevents approach from another (the vital) side. Here again if the vital becomes quiet, then the approach is easier.

The blows on the forehead were perhaps the working of a force to open the centre there—for there between the eyes is the centre of the inner mind, will and vision. All these centres are closed in the ordinary consciousness or else only very slightly open on the surface. If the inner mind centre opens, then the peace etc. from above can enter easily into the mind and afterwards into the vital and both mind and vital will become quiet.

The difficulty about the two parts of the mind is one that everybody has when the tendency to go within begins. It is solved in this sadhana by a sort of harmony being established by which even in doing one's work and keeping the necessary outer activities one can still live within in the fullness of the inner life and experience.

Rely on the Mother always. These things are the first beginnings of Yogic experience and the difficulties of the mind and vital (which are not the old ones you had but simply the ordinary difficulties of the adjustment and harmonisation of the different parts of the being) will get solved of themselves.

Chapter Two

Exteriorisation or Going Out of the Body

The Experience of Exteriorisation

The experience you had was that of exteriorisation or going out of the body. The consciousness went up and remained above the body for a time. The feeling or vision of oneself in the form of an egg is frequent in such cases. It is not always so, for many go out in an individualised consciousness with an awareness of a subtle body, subtle thought, subtle sensation etc. and move about in the vital or even in the physical world till they come back to the body. But when one begins, the vital body is at first a little vague and the consciousness also with the result that all is at first dim and unorganised. The serpent must be the Kundalini force which had left its coiled sleeping position in the Muladhara and taken the lengthened one in which it joins the embodied consciousness with the consciousness above.

The power of exteriorisation is one that can be used for many purposes by the Yogi when it has been developed.

*

It was a partial exteriorisation, part of the consciousness going out to the scene and surroundings described by you while the rest remained in the body and was aware both of the normal surroundings and, by communication or indirect participation, of what the other was experiencing. This is quite possible and for that no form of trance or loss of external consciousness is necessary. As for the cause of such an experience, it does not depend at all on one's own ordinary mental or other interests; it comes by a sort of attraction or touch from someone who is there on the scene and who feels the need of sympathy, support or help of some kind, a need so strong that it forms a sort of call; it is very

usually somebody quite unknown and it just depends on whom the call happens to touch because he is open at the time and receives the vibration and has the capacity to answer. Usually there is a sort of identification of consciousness with that of the person calling so that one can see the surroundings and the things happening through him. It is the physical that becomes nervous at these experiences and this must be overcome; as the inner mental, vital, physical consciousness opens to things behind the thick physical veil all kinds of experiences may happen that are strange to the physical mind and its tendency to be apprehensive or nervous at these things must disappear. It must be able to face even formidable things without fear.

*

A feeling like that of the shock and the stopping of the breath for a second and as if of falling down comes to many when the consciousness for a moment or a longer time exteriorises itself (goes up out of the body); the shock comes from the going up of the consciousness or from the return into the body. The Mother used to have that hundreds of times. It is not anything physical (the Doctor, as you say, found nothing). When this movement of the consciousness is more normal, the feeling will probably disappear.

*

You must have gone out of your body leaving it unprotected and there was an attack which you got rid of after coming into the body. This part of the head from the ears down to the neck is the seat of the physical mind—the centre of the physical or externalising mind is in the throat joining the spine at the back. It was an attack on the physical mind.

Going Out in the Vital Body

It looks as if it were an exteriorisation¹ in which she goes out in

¹ *The correspondent reported the case of a woman who, without willing it, entered into a state of trance at any time, even while writing or talking with someone. —Ed.*

her vital body. When one does so consciously and at will, it is all right, but this unconscious exteriorisation is not always safe. The important question is what effect it has on her. If she comes out of it strong and refreshed or quite normal, there is no cause for distress or anxiety; if she comes out exhausted or depressed, then there are forces that are pulling her out into the vital world to the detriment of her vital sheath and it should not continue.

*

It is clear that when you go out of your body like that you pass into a vital plane and as you are constantly attacked there and have fear, it is not desirable.

It seems to me I have explained all that to you before. Everybody goes out into the vital world in that way, but it is not indispensable to the sadhana to have these experiences and it is better to postpone them till you have the truly helpful experiences—such as those narrated in a recent letter—and can build up a strong consciousness which can enter any plane without fear or danger.

*

As to your experience about the inkstand. When the vital being goes out, it moves on the vital plane and in the vital consciousness, and, even if it is aware of physical scenes and things, it is not with a physical vision. It is possible for one who has trained his faculties to enter into touch with physical things although he is moving about in the vital body, to see and sense them accurately, even to act on them and physically move them. But the ordinary sadhaka who has no knowledge or organised experience or training in these things cannot do it. He must understand that the vital plane is different from the physical and that things that happen there are not physical happenings, though, if they are of the right kind and properly understood and used, they may have a meaning and value for the earth life. But also the vital consciousness is full of false formations and many confusions and it is not safe to move among them without knowledge and without a direct protection and guidance.

*

Your three experiences related in your letter mean that you are going out in your vital body into the vital worlds and meeting the beings and formations of these worlds. The old man of the temple and the girls you saw are hostile beings of the vital plane.

It is better not to go out in this way, unless one has the protection of someone (physically present) who has knowledge and power over the vital world. As there is no one there who can do this for you, you should draw back from this movement. Aspire for perfect surrender, calm, peace, light, consciousness and strength in the mind and the heart. When the mental being and psychic being are thus open, luminous and surrendered, then the vital can open and receive the same illumination. Till then premature adventures on the vital plane are not advisable.

If the movement cannot be stopped, then observe the following instructions:

(1) Never allow any fear to enter into you. Face all you meet and see in this world with detachment and courage.

(2) Ask for the protection of Sri Aurobindo and the Mother before you sleep or meditate. Use their names when you are attacked or tempted.²

(3) Do not indulge in this world in any kind of sympathy such as you felt for the old man in the temple or accept such suggestions, e.g., that he was your spiritual preceptor, which was obviously false since you could have no other spiritual preceptor than Sri Aurobindo and the Mother. It was because of this sympathy and the accepted suggestion that he was able to go inside you and create the pain you felt.

(4) Do not allow any foreign personality to enter into you, only the Light, Power etc. from above.

² Sri Aurobindo refers to himself in the third person here and below; he wrote this letter to be sent over the signature of his secretary.—Ed.

Section Two

Experiences of the Inner Being and the Inner Consciousness

Chapter One

The Inward Movement

The Importance of Inner Experiences

The outer work is only half the matter. There is also the consciousness within which does the work and that must develop from the mental-vital to the spiritual-psychic. How can it do that without experiences? Also one can develop an intuitive consciousness which is helpful to the work.

*

What you say about the outer being is correct; it must change and manifest what is within in the inner nature. But for that one must have experiences in the inner nature and through these the power of the inner nature grows till it can influence wholly and possess the outer being. To change the outer consciousness entirely without developing this inner consciousness would be too difficult. That is why these inner experiences are going on to prepare the growth of the inner consciousness. There is an inner mind, an inner vital, an inner physical consciousness which can more easily than the outer receive the higher consciousness above and put itself into harmony with the psychic being; when that is done the outer nature is felt as only a fringe on the surface, not as oneself, and is more easily transformed altogether.

Whatever difficulties there may still be in the outer nature, they will not make any difference to the fact that you are now awake within, the Mother's force working in you and you her true child destined to be perfectly that in all ways. Put your faith and your thought entirely on her and you will go through all safely.

*

What you express in the letter is the right way of thinking and seeing. The self-will of the mind wanting things in its own way

and not in the Divine's way was a great obstacle. With that gone the way should become much less rough and hard to follow.

The outer consciousness can grow in faith, fidelity to the Divine, reverence, love, worship and adoration, great things in themselves,—though in fact these things too come from within,—but realisation can only take place when the inner being is awake with its vision and feeling of things unseen. Till then, one can feel the results of the divine help and, if one has faith, know that they are the work of the Divine; but it is only then that one can feel clearly the Force at work, the divine Presence, the direct communion.

*

So long as you live only in thoughts and other movements of the surface consciousness, you cannot be conscious in the Yogic sense. It is when the mind becomes quiet that the real (inner) consciousness comes out or the higher consciousness above the mind comes down. It is only then also that the inner physical being becomes active and brings an alert consciousness and an intuitive sense into the body. Also the higher thought and the inner will comes then only.

*

The exterior being has to become aware of the inner—the veil between the inner and outer consciousness has to be removed, it is only then that a real Yogic consciousness begins. The outer has to be merely an instrument or channel for the inner to express itself and communicate with the outer physical world. The inner again has to have free communication with the universal on all the planes—it has to enter into the cosmic consciousness. The outer consciousness has to be remoulded and reshaped through the inner consciousness and the processes that must do it are the psychic by its influence and the higher consciousness by its descent. Naturally, in the process the outer being also will lose its separateness and become aware of and, in a way, unified with the universal.

Becoming Aware of the Inner Being

It is not that anything has been taken from you, but as you say at the end, your being is seen by you in two parts. That is a thing that happens as the sadhana proceeds and must happen in order that one may have completely the knowledge of oneself and the true consciousness. These two parts are the inner being and the outer being. The outer being (mind, vital and physical) has now become capable of quietude and it sits in meditation in a free, happy, vacant quietude which is the first step towards the true consciousness. The inner being (inner mind, vital, physical) is not lost but gone inside—the outer part does not know where—but probably gone inside into union with the psychic. The only thing that can have gone is something of the old nature that was standing in the way of this experience.

*

The silence descends into the inner being first—as also other things from the higher consciousness. One can become aware of this inner being, calm, silent, strong, untouched by the movements of Nature, full of knowledge or light, and at the same time be aware of another lesser being, the small personality on the surface which is made up of the movements of Nature or else still subject to them or else, if not subject to them, still open to invasion by them. This is a condition that any number of sadhaks and Yogis have experienced. The inner being means the psychic, the inner mind, the inner vital, the inner physical. In this condition none of these can be even touched, so there has been an essential purification. All need not feel this division into two consciousnesses, but most do. When it is there, the will that decides the action is in the inner being, not in the outer—so the invasion of the outer by vital movements can in no way compel the action. It is on the contrary a very favourable stage in the transformation because the inner being can bring the whole force of the higher consciousness in it to change the nature wholly, observing the action of Nature without being affected by it, putting the force for change wherever needed

and setting the whole being right as one does with a machine. That is if one wants a transformation. For many Vedantins don't think it necessary — they say the inner being is *mukta*, the rest is simply a mechanical continuation of the impetus of Nature in the physical man and will drop away with the body so that one can depart into Nirvana.

*

In fact all these ignorant vital movements originate from outside in the ignorant universal nature; the human being forms in his superficial parts of being, mental, vital, physical a habit of certain responses to these waves from outside. It is these responses that he takes as his own character (anger, desire, sex etc.) and thinks he cannot be otherwise. But that is not so; he can change. There is another consciousness deeper within him, his true inner being, which is his real self, but is covered over by the superficial nature. This the ordinary man does not know, but the Yogi becomes aware of it as he progresses in his sadhana. As the consciousness of this inner being increases by sadhana, the surface nature and its responses are pushed out and can be got rid of altogether. But the ignorant universal Nature does not want to let go and throws the old movements on the sadhak and tries to get them inside him again; owing to a habit the superficial nature gives the old responses. If one can get the firm knowledge that these things are from outside and not a real part of oneself, then it is easier for the sadhak to repel such notions, or if they lay hold, he can get rid of them sooner. That is why I say repeatedly that these things are not in yourself, but from outside.

The Piercing of the Veil

The cry you heard was not in the physical heart, but in the emotional centre. The breaking of the wall meant the breaking of the obstacle or at least of some obstacle there between your inner and your outer being. Most people live in their ordinary outer ignorant personality which does not easily open to the

Divine; but there is an inner being within them of which they do not know, which can easily open to the Truth and the Light. But there is a wall which divides them from it, a wall of obscurity and unconsciousness. When it breaks down, then there is a release; the feelings of calm, Ananda, joy which you had immediately afterwards were due to that release. The cry you heard was the cry of the vital part in you overcome by the suddenness of the breaking of the wall and the opening.

*

The piercing of the veil between the outer consciousness and the inner being is one of the crucial movements in Yoga. For Yoga means union with the Divine, but it also means awaking first to your inner self and then to your higher self,—a movement inward and a movement upward. It is, in fact, only through the awakening and coming to the front of the inner being that you can get into union with the Divine. The outer physical man is only an instrumental personality and by himself he cannot arrive at this union,—he can only get occasional touches, religious feelings, imperfect intimations. And even these come not from the outer consciousness but from what is within us.

There are two mutually complementary movements; in one the inner being comes to the front and impresses its own normal motions on the outer consciousness to which they are unusual and abnormal; the other is to draw back from the outer consciousness, to go inside into the inner planes, enter the world of your inner self and wake in the hidden parts of your being. When that plunge has once been taken, you are marked for the Yogic, the spiritual life and nothing can efface the seal that has been put upon you.

This inward movement takes place in many different ways and there is sometimes a complex experience combining all the signs of the complete plunge. There is a sense of going in or deep down, a feeling of the movement towards inner depths; there is often a stillness, a pleasant numbness, a stiffness of the limbs. This is the sign of the consciousness retiring from the body inwards under the pressure of a force from above,—that

pressure stabilising the body into an immobile support of the inner life, in a kind of strong and still spontaneous *āsana*. There is a feeling of waves surging up, mounting to the head, which brings an outer unconsciousness and an inner waking. It is the ascending of the lower consciousness in the Adhara to meet the greater consciousness above. It is a movement analogous to that on which so much stress is laid in the Tantrik process, the awakening of the Kundalini, the Energy coiled up and latent in the body and its mounting through the spinal cord and the centres (*cakras*) and the Brahmarandhra to meet the Divine above. In our Yoga it is not a specialised process, but a spontaneous uprush of the whole lower consciousness sometimes in currents or waves, sometimes in a less concrete motion, and on the other side a descent of the Divine Consciousness and its Force into the body. This descent is felt as a pouring in of calm and peace, of force and power, of light, of joy and ecstasy, of wideness and freedom and knowledge, of a Divine Being or a Presence — sometimes one of these, sometimes several of them or all together. The movement of ascension has different results: it may liberate the consciousness so that one feels no longer in the body, but above it or else spread in wideness with the body either almost non-existent or only a point in one's free expanse. It may enable the being or some part of the being to go out from the body and move elsewhere, and this action is usually accompanied by some kind of partial *samādhi* or else a complete trance. Or it may result in empowering the consciousness, no longer limited by the body and the habits of the external nature, to go within, to enter the inner mental depths, the inner vital, the inner (subtle) physical, the psychic, to become aware of its inmost psychic self or its inner mental, vital and subtle physical being and, it may be, to move and live in the domains, the planes, the worlds that correspond to these parts of the nature. It is the repeated and constant ascent of the lower consciousness that enables the mind, the vital, the physical to come into touch with the higher planes up to the supramental and get impregnated with their light and power and influence. And it is the repeated and constant descent of the Divine Consciousness and its Force

that is the means for the transformation of the whole being and the whole nature. Once this descent becomes habitual, the Divine Force, the Power of the Mother begins to work, no longer from above only or from behind the veil, but consciously in the Adhara itself, and deals with its difficulties and possibilities and carries on the Yoga.

Last comes the crossing of the border. It is not a falling asleep or a loss of consciousness, for the consciousness is there all the time; only, it shifts from the outer and physical, becomes closed to external things and recedes into the inner psychic and vital part of the being. There it passes through many experiences and of these some can and should be felt in the waking state also; for both movements are necessary, the coming out of the inner being to the front as well as the going in of the consciousness to become aware of the inner self and nature. But for many purposes the ingoing movement is indispensable. Its effect is to break or at least to open and pass the barrier between this outer instrumental consciousness and that inner being which it very partially strives to express, and to make possible in future a conscious awareness of all the endless riches of possibility and experience and new being and new life that lie untapped behind the veil of this small and very blind and limited material personality which men erroneously think to be the whole of themselves. It is the beginning and constant enlarging of this deeper and fuller and richer awareness that is accomplished between the inward plunge and the return from this inner world to the waking state.

The sadhak must understand that these experiences are not mere imaginations or dreams but actual happenings, for even when, as often occurs, they are formations only, of a wrong or misleading or adverse kind, they have still their power as formations and must be understood before they can be rejected and abolished. Each inner experience is perfectly real in its own way, although the values of different experiences differ greatly, but it is real with the reality of the inner self and the inner planes. It is a mistake to think that we live physically only or only with the outer mind and life. We are all the time living and acting on other planes of consciousness, meeting others there and acting upon

them, and what we do and feel and think there, the forces we gather, the results we prepare have an incalculable importance and effect, unknown to us, upon our outer life. Not all of it comes through, and what comes through takes another form in the physical — though sometimes there is an exact correspondence; but this little is at the basis of our outward existence. All that we become and do and bear in the physical life is prepared behind the veil within us. It is therefore of immense importance for a Yoga which aims at the transformation of life to grow conscious of what goes on within these domains, to be master there and be able to feel, know and deal with the secret forces that determine our destiny and our internal and external growth or decline.

It is equally important for those who want that union with the Divine without which the transformation is impossible. The aspiration could not be realised if you remained bound by your external self, tied to the physical mind and its petty movements. It is not the outer being which is the source of the spiritual urge; the outer being only undergoes the inner drive from behind the veil. It is the inner psychic being in you that is the bhakta, the seeker after the union and the Ananda, and what is impossible for the outer nature left to itself becomes perfectly possible when the barrier is down and the inner self in the front. For the moment this comes strongly to the front or draws the consciousness powerfully into itself, peace, ecstasy, freedom, wideness, the opening to light and a higher knowledge begin to become natural, spontaneous, often immediate in their emergence.

Once the barrier breaks by the one movement or the other, you begin to find that all the processes and movements necessary to the Yoga are within your reach and not as it seems in the outer mind difficult or impossible. The inmost psychic self in you has already in it the Yогин and the bhakta and if it can fully emerge and take the lead, the spiritual turn of your outer life is predestined and inevitable. In the initially successful sadhak it has already built a deep inner life, Yogic and spiritual, which is veiled only because of some strong outward turn the education and past activities have given to the thinking mind and lower

vital parts. It is precisely to correct this outward orientation and take away the veil that he has to practise more strenuously the Yoga. Once the inner being has manifested strongly whether by the inward-going or the outward-coming movement, it is bound to renew its pressure, to clear the passage and finally come by its kingdom. A beginning of this kind is the indication of what is to happen on a greater scale hereafter.

The Movement Inward

The movement inward is all to the good — for going inward if one goes far enough brings one to the psychic. The more peace there is the better; even if it is only a little at first, that is so much gained. If the inward-drawing movement is held to, it will grow and the power to reject anger and other such movements will increase. It is this peace and inward psychic movement in you that we shall try for till it is done.

*

It is rather a pity that the fear came in and spoiled the inward movement — for this inward movement is exceedingly important for the sadhana. The increasing frequency and completeness of the psychic consciousness in you coming in and replacing the ordinary one has hitherto been the most hopeful sign of progress — but the establishment of an inward movement would be a still greater thing; for its natural result would be to liberate the soul within and to give you a stand in the inner being so that you would be able to regard any fluctuations in the outer consciousness without being subjugated by them and without any interruption of the inner poise and freedom. But the movement is bound to come back and fulfil itself. It is very good that the help comes when you call and that you can shake yourself free — it is another sign of the psychic growth.

*

It takes time of course to make the transition from one state of consciousness to another. The depth of feeling will come more

and more as your consciousness draws back from the claim of external things and goes deeper in into the heart region seeing and feeling from there with the psychic to prompt and enlighten it. Faith also will increase with that movement—for it is the outer intellect that is infirm or deficient in faith, the inner being in the heart has it always.

*

That is quite natural [*an inward movement during the afternoon nap*]. The usual movement does not take place, but there is still a pressure habitual at the time under which the consciousness goes inside not into sleep but into some kind of samadhi in which a working takes place in the inner consciousness. As yet you have not developed the power of being conscious in this state nor the power of remembering what took place.

*

It was probably not so much a sleep as a going inward under the pressure of the influence at the Pranam. In any case it was not a dream but an experience, an ascent into one of the higher ranges of consciousness above the mind—all of which have this character of vastness and peace everywhere.

*

X's experiences are those which usually attend the withdrawal from the outer consciousness into an inner plane of experience. The feeling of coldness of the body in the first is one of the signs—like the immobility and stiffness of Y's experience—that the consciousness is withdrawing from the outer or physical sheath and retiring inside. The crystallisation was the form in which he felt the organisation of an inner consciousness which could receive at once firmly and freely from above. The crystals at once indicate organised formation and a firm transparency in which the greater vision and experience descending from the higher planes could be clearly reflected.

As for the other experience, his rejection of the waking consciousness evidently had the result of throwing him into an

inner awareness in which he began to have contact with the supraphysical planes. What was meant by the sea of red colour and stars depends on the character of the red colour. If it was crimson, what he saw was the sea of the physical consciousness and physical life as it is represented to the inner symbolic vision; if it was purple red, then it was the sea of the vital consciousness and the vital life-force. Perhaps, if he had not stopped his sense of the Mother's presence, it would have been better,—he should rather, if he can, take it with him into the inner planes, then he would have had no occasion to fear.

In any case, if he wants to go into the inner consciousness and move in the inner planes — which will inevitably happen if he shuts off the waking consciousness in his meditation — he must cast away fear. Probably he expected to get the silence or the touch of the divine consciousness by following out the suggestion of the Gita. But the silence or the touch of the divine consciousness can be equally and for some more easily got in the waking meditation through the Mother's presence and the descent from above. The inward movement, however, is probably unavoidable and he should try to understand and, not shrinking or afraid, to go to it with the same confidence and faith in the Mother as he has in the waking meditation. His dreams are of course experiences on the inner (vital) plane.

P.S. The dream about the Mahadeva image may mean that someone (not of this world, of course) wanted to mislead him and make him confuse some narrower traditional form of the past with the greater living Truth that he is seeking.

*

The difficulty indicated by you in your last (long) letter indicates that you enter into the inner being and begin to have experiences there, but there is a difficulty in organising them or seeing them coherently. The difficulty is because the inner mind is not yet sufficiently habituated to act and see the inside things and therefore the ordinary outer mind interferes and tries to arrange them; but the outer mind is unable to see the meaning of inner things. When the outer mind is left outside altogether,

the things inside begin to be seen vividly and clearly, but the inner mind not being active, either their coherence is not seen or the consciousness lingers in the confused experiences of the lower vital plane and does not get through to the deeper, more coherent and significant experiences. A development of the inner consciousness is needed — when that development takes place, then all will become more clear and coherent. This development will take place if, without getting disturbed, you quietly aspire and go on calling the Mother's Force to do what is needed.

Your call will always reach the Mother. If you remain quiet and confident, you will in time become aware of the answer. The more the mind becomes quiet, the clearer will it become to you and you will feel her working. From time to time you can write of your experiences; wherever an answer is needed, I will answer.

The Inner Consciousness and the Body

It is the inner consciousness that you felt separated from the body, liberated from the identification with the body, and yet in touch with all the material surroundings. It is a very helpful experience — indispensable for the Yoga.

*

It is that the consciousness is detaching itself from the body.¹ Usually in men it is identified with the body and bound to it — in Yoga it detaches itself and becomes free. The body is no longer felt as oneself, but as something not oneself, something that one carries with oneself or else as an instrument which one uses for certain purposes.

*

If you went inside and lost consciousness of the outer world, it would be called a kind of samadhi — but this experience can

¹ *The correspondent wrote that sometimes he felt raindrops or sunlight falling on his body as if they were touching something other than himself; at other times he felt very light, as if he had no body at all. — Ed.*

be got in the waking state also. It is a liberation from body consciousness and an awakening into the spiritual wideness. At first it is usually felt as a void of all other things but consciousness alone or existence alone.

*

The feeling [*in meditation*] of having no head usually means that the mental consciousness is no longer imprisoned in the head at the time — but silent and extended.

A Transitional State of Inwardness

The condition which you feel is one which is very well known in sadhana. It is a sort of passage or transition, a state of inwardness which is growing but not yet completed — at that time to speak or throw oneself outward is painful. What is necessary is to be very quiet and remain within oneself all the time until the movement is completed; one should not speak or only a little and in a low quiet way nor concentrate the mind on outward things. You should also not mind what people say or question; although they are practising sadhana, they know nothing about these conditions and if one becomes quiet or withdrawn they think one must be sad or ill. The Mother did not find you at all like that, sad or ill; it is simply a phase or temporary state in the sadhana that she has experience of and knows very well.

*

The condition [*of inwardness*] lasts often for a number of days, sometimes many, until something definite begins. Remain confident and quiet.

The Growth of the Inner Being and the Inner Consciousness

What you feel as the new life is the growth of the inner being in you; the inner being is the true being and as it grows the whole consciousness begins to change. This feeling and your new attitude towards people are signs of the change. The seeing

of inner things also usually comes with this growth of the inner being and consciousness; it is an inner vision which awakes in most sadhaks when they enter this stage.

It is also a characteristic of this inner consciousness that even when it is active, there is felt behind the action or containing it a complete quietude or silence. The more one concentrates, the more this quietude and silence increases. That is why there seems to be all quiet within even though all sorts of things may be taking place within.

It is also quite usual that what takes place in the inner consciousness should not express itself at present in the outer physical. It at first creates changes inside, but takes possession of the outer instruments only afterwards.

*

The things you feel are due to the fact that the consciousness goes inside, so physical things are felt as if they were at a distance. The same phenomenon can happen when one goes into another plane of consciousness and sees physical things from there. But it is probably the first that is happening with you. When one goes quite inside, then physical things disappear,—when some connection is kept, then they become distant. But this is a transitory change. Afterwards you will be able to have the two consciousnesses together, be in your psychic in one part of yourself with all the experience and activities of the psychic being and nature and yet with your surface self fully awake and active in physical things with the psychic support and influence behind this outer action.

*

It is a very good sign that when the thoughts and the attempt at disturbance come there is something that remains calm and cool — for that, like the psychic reply from within, shows that the inner consciousness is fixed or fixing itself in part of the being. This is a well-recognised stage of the inner change in sadhana. Equally good is the emerging of the self-existent Ananda from within not dependent on outward things. It is a fact that this

inner gladness and happiness is something peaceful and happy at once—it is not an excited movement like the vital outward pleasure, though it can be more ardent and intense. Another good result is the fading out of the feeling that “the work is mine” and the power to do it with the outward consciousness not engaging the inner being.

The sense of release as if from jail always accompanies the emergence of the psychic being or the realisation of the self above. It is therefore spoken of as a liberation, *mukti*. It is a release into peace, happiness, the soul’s freedom not tied down by the thousand ties and cares of the outward ignorant existence.

It was of course the Mother’s face you saw in your vision, but probably in one of her supraphysical, not her physical form and face—that is also indicated by the great light that came from the form and rendered it invisible.

*

I am glad to hear of the development you speak of in your dealing with others. It is a power proper to the Yoga consciousness that is developing in you, because the Mother’s force is at work and is developing the inner consciousness. For it is one of the powers of this inner consciousness to bring about what it sees to be the right thing by simply communicating in entire silence to the consciousness of another. That is the true way of acting—through the power of the inner consciousness, its knowledge, vision and will. The other thing, the coming of what you want to see on the street, is another form of the same action of the inner conscious force. As for the anger it is evidently in process of control and elimination and its recurrences cannot fail to disappear after a time as the new consciousness increases.

Living Within

There is an inner being in man of which he is not usually conscious; he lives in a superficial consciousness which he calls himself and which is normally concerned with outer things; one is aware of the inner being either not at all or only as something

behind from which feelings, ideas, impulses, imperatives etc. come occasionally into the outer. When one ceases to be mainly concerned with outer and surface things one can go more inside nearer to this inner being and become aware of things other than the ego and the outer nature. One can become aware of the inner being and live in it and get detached from the hold of outer things, dealing with them from an inner consciousness (felt as separate from the outer consciousness) according to an inner truth of the soul and spirit and no longer according to the demands of the outer Nature.

*

If one lives within, then it is the inner consciousness that one depends on, not the outer. The inner consciousness can then always go on independent of the outer state to which it gives attention only when it chooses.

*

It is good. Fasten on the true thing, the concentration in the inner being and the inner life. All these outer things are of minor importance and it is only when the inner life is well established that the difficulties with which they are hampered can get their true solution. That you have seen several times when you went inside. To be too much occupied in mind with the outer difficulties keeps it externalised. Living inwardly you will find the Mother close to you and realise her will and her action.

*

Do not allow outward events to disturb you or be the cause of suggestions. It is as with the words of people and the suggestions they raise which disturb uselessly the consciousness. Both should be rejected. Live in the inner consciousness which can remain in its own calm and light whatever happens outside.

*

To remain within, above and untouched, full of the inner consciousness and the inner experience,—listening, when need be,

to X or another with the surface consciousness, but with even that undisturbed, not either pulled outwards or invaded, that is the perfect condition for the sadhana.

*

You must gather yourself within more firmly. If you disperse yourself constantly, go out of the inner circle, you will constantly move about in the pettinesses of the ordinary outer nature and under the influences to which it is open. Learn to live within, to act always from within, from constant inner communion with the Mother. It may be difficult at first to do it always and completely, but it can be done if one sticks to it—and it is at that price, by learning to do that that one can have the siddhi in the Yoga.

*

It is a very serious difficulty in one's Yoga—the absence of a central will always superior to the waves of the Prakriti forces, always in touch with the Mother, imposing its central aim and aspiration on the nature. That is because you have not yet learned to live in your central being; you have been accustomed to run with every wave of Force, no matter of what kind, that rushed upon you and to identify yourself with it for the time being. It is one of the things that has to be unlearned; you must find your central being with the psychic as its basis and live in it.

*

To be aware of one's central consciousness and to know the action of the forces is the first definite step towards self-mastery.

*

In the things of the subtle kind having to do with the working of consciousness in the sadhana, one has to learn to feel and observe and see with the inner consciousness and to decide by the intuition with a plastic look on things which does not make set definitions and rules as one has to do in outward life.

*

Yes. When one is in the right consciousness, then there is the right movement, the right happiness, everything in harmony with the Truth.

When there is the wrong consciousness, there is demand, dissatisfaction, doubt, all kinds of disharmony.

*

It [*calmness*] is only the proper condition for receptivity. Naturally, it is the proper thing to do if you want to be receptive or become conscious of inner things. So long as the mind is jumping about or rushing out to outside things, it is not possible to be inward, collected, conscious within.

*

Obviously to live in the silent Brahman, the best way is to live within where one can have the silence and resist all outward pulls. As much avoidance of outer pulls—contact does not matter, if there is no pull outward—as will help that, can be very helpful. It is only an entire seclusion that for occult rather than mental reasons is not altogether desirable unless one has already a great inner strength and poise.

Living Within and the External Being

It is the past habit of the vital that makes you repeatedly go out into the external part; you must persist and establish the opposite habit of living in your inner being which is your true being and of looking at everything from there. It is from there that you get the true thought, the true vision and understanding of things and of your own self and nature.

*

You must have somehow externalised yourself too much. It is only by living in one's inner consciousness and doing everything from there that the right psychic condition can be kept. Otherwise it goes inside and the external covers it up. It is not lost, but hidden—one must go inside again to recover it.

*

When one comes out of the inner condition, one gets externalised in the outer consciousness. It is difficult for the outer nature to remain always within, its nature is to pull outward. But when this happens, one must learn to look quietly at what is happening, observe what the outer nature does but not identify with it, not feel that it is oneself that is doing that, but only something that one is observing, while one's real self is that which observes and that which goes within. If one can do that, then there is no disturbance and it is easier to go back again inward.

*

As for the activity going on, it is so with everybody. What has to be done, is not to be upset by it, but to learn to live inside where one always feels the force — or even if one does not feel because the consciousness is covered up, it is still there and after a time dispels the covering and is visible again. Outside the imperfect activities will go on till the whole being is changed and that cannot be done in a day.

Your mistake is to get upset because the exterior being is still there with its imperfections. What you ought to do is not to mind too much, to aspire for changing it but not get upset, to have confidence that it will change in time and meanwhile to stand back from it, to live in the part of you that is open to the force and to regard the rest as you would a cut that has to be cleaned or anything else belonging to you but external.

*

The large inner mind and the true vital having shown themselves are bound to get the mastery; but the old lower nature, especially the vital part of it, is bound to struggle for reaffirming its hold on the consciousness. To remain very firm and repel its attacks till they lose their strength, is necessary.

*

The difficulty is that you attach so much importance to things that are of quite a small value. You behave as if to have or have not a table is something of supreme importance and worry

and excite yourself so much about the rights and wrongs of the matter that you allow it to upset your whole peace of mind and make you fall from the true condition. These things are small and relative—you may have a new table or you may not have a new table, neither way is of any very great importance and it makes no difference to the Divine Purpose in you. The one thing important is to increase calm and peace and the descent of the Divine Force, to grow in equality and inward light and consciousness. Outward things have to be done with a great quiet, doing whatever is necessary but not exciting or upsetting yourself about anything. It is only so that you can advance steadily and quickly. When you feel the Mother's Force about you, the peace closely round you that is the one thing of importance—these small outward things can be settled in a hundred different ways, it does not really matter.

*

The entire dependence on the inner realisation and not on outward things for their own sake and the seeking of the Divine for the sake of the Divine and without any tinge of ego motive is indeed the most difficult thing for the mind even of the Sadhak to learn; but it is the essence of the highest realisation and the condition of a perfect self-finding.

*

When you come to the Divine, lean inwardly on the Divine and do not let other things affect you.

Acting from Within on the Outer Being

Detach yourself from the outer being; live in the inner; let the Force work from the inner being—it will change the outer being.

*

It is on the surface that the transformation is done. One comes up to the surface with what one has gained in the depths, to

change it. It may be you need to go in again and find it difficult to make the movement back quickly. When the whole being becomes plastic you will be able to make whatever movement is needed more quickly.

*

Yes, that is right. Relying on outer methods mainly never succeeds very well. It is only when there is the inner poise that the outer movement is really effective — and then it comes of itself.

*

The difference [*in learning something*] is when a thing is done with the inner mind and when it is done only with the outer brain. What you feel is the inner mind taking it up — then it becomes part of the consciousness and things are really learned — the working of the outer mind is always difficult and superficial.

It is evident that the inner being in you is beginning to come more and more forward. As it does so, these outer difficulties will be more and more pushed out and the consciousness will keep the peace and force at first in the greater part of it, afterwards in the whole.

*

It is a wall of consciousness that one has to build [*against undesirable things*]. Consciousness is not something abstract, it is like existence itself or ananda or mind or prana, something very concrete. If one becomes aware of the inner consciousness one can do all sorts of things with it, send it out as a stream of force, erect a circle or wall of consciousness around oneself, direct an idea so that it shall enter somebody's head in America etc. etc.

*

It is simply that you became conscious of the inner being and the inner world and rose up to a higher plane of being where the outer difficulties do not exist. The object of Yoga is to establish the inner consciousness and the higher being in you and by their strength change the outer existence.

The Double Consciousness

The condition you describe in your work shows that the inner being is awake and that there is now the double consciousness. It is the inner being which has the inner happiness, the calm and quiet, the silence free from any ripple of thought, the inwardly silent repetition of the name. The automatic repetition of the mantra is part of the same phenomenon—that is what ought to happen to the mantra, it must become a conscious but spontaneous thing repeating itself in the very substance of the consciousness itself, no longer needing any effort of the mind. All these doubts and questionings of the mind are useless. What has to happen is that this inner consciousness should be always there not troubled by any disturbance with the constant silence, inner happiness, calm quietude, etc., while the outer consciousness does what is necessary in the way of work etc. or, what is better, has that done through it—it is the latter experience that you have some days as someone pushing the work with so much continuous force without your feeling tired.

If you feel more quiet and the surrender feels more intense, then that is a good, not a bad condition—and if it makes the mind an empty room receiving the light, so much the better. Experiences and descents are very good for preparation, but change of the consciousness is the thing wanted—it is the proof that the experiences and descents have had an effect. Descents of peace are good, but an increasingly stable quietude and silence of the mind is something more valuable. When that is there then other things can come—usually one at a time, light or strength and force or knowledge or ananda. It is not necessary to go on for ever having always the same preparatory experiences—a time comes when the consciousness begins to take a new poise and another state.

The Inner Being and Calmness, Silence, Peace

The calmness you feel is that of the inner being which remains the same whatever the surface experience. But the use to be made

of these things is to liberate oneself from the desires and mental or vital sanskaras of the past so that one may be free to reach that greater Truth consciousness in which there is no need of an Adesh, for all one's action there is the direct conscious movement of the self-knowing Truth and the Mother herself is the doer.

*

The absence of thought is quite the right thing — for the true inner consciousness is a silent consciousness which has not to think out things, but gets the right perception, understanding and knowledge in a spontaneous way from within and speaks or acts according to that. It is the outer consciousness which has to depend on outside things and to think about them because it has not this spontaneous guidance. When one is fixed in this inner consciousness, then one can indeed go back to the old action by an effort of will, but it is no longer a natural movement and, if long maintained, becomes fatiguing. As for the dreams, that is different. Dreams about old bygone things come up from the subconscious which retains the old impressions and the seeds of the old movements and habits long after the waking consciousness has dropped them. Abandoned by the waking consciousness, they still come up in dreams; for in sleep the outer physical consciousness goes down into the subconscious or towards it and many dreams come up from there.

The silence in which all is quiet and one remains as a witness while something in the consciousness spontaneously calls down the higher things is the complete silence which comes when the full force of the higher consciousness is upon mind and vital and body.

*

All experiences come in the silence² but they do not come all pell-mell in a crowd at the beginning. The inner silence and peace have first to be established.

*

² The correspondent wrote that although he was sometimes able to achieve silence of mind, experiences were not coming in the silence. — Ed.

The consciousness from which these experiences come [*such as the division of the mind into an active surface mind and a silent inner mind*] is always there pressing to bring them in. The reason why they don't come in freely or stay is the activity of the mind and vital always rushing about, thinking this, wanting that, trying to perform mountaineering feats on all the hillocks of the lower nature instead of nourishing a strong and simple aspiration and opening to the higher consciousness that it may come in and do its own work. Rasa of poetry, painting or physical work is not the thing to go after. What gives the interest in Yoga is the rasa of the Divine and of the divine consciousness which means the rasa of Peace, of Silence, of inner Light and Bliss, of growing inner Knowledge, of increasing inner Power, of the Divine Love, of all the infinite fields of experience that open to one with the opening of the inner consciousness. The true rasa of poetry, painting or any other activity is truly found when these activities are part of the working of the Divine Force in you and you feel it as that and you feel in it the joy of that working.

This condition you had of the inner being and its silence, separated from the surface consciousness and its little restless workings, is the first liberation, the liberation of Purusha from Prakriti, and it is the fundamental experience. The day when you can keep it, you can know that the Yogic consciousness has been founded in you. This time it has increased in intensity, but it must also increase in duration.

These things do not "drop"—what you have felt was there in you all the time, but you did not feel it because you were living on the surface altogether and the surface is all crowd and clamour. But in all men there is this silent Purusha, base of the true mental being, the true vital being, the true physical being. It was by your prayer and aspiration that the thing came, to show you in what direction you must travel in order to have the true rasa of things, for it is only when one is liberated that one can get the real rasa. For after this liberation come others and among them the liberation and Ananda in action as well as in the static inner silence.

I don't think it is at all owing to the suggestion from what I wrote in the letter that you got the experience [*of a deep spiritual peace*]. The fundamental reason of these things does not belong to the surface, it is in the depths — or on the heights, at any rate, in the inner being behind the veil of the frontal consciousness. The actual occasional cause of the spiritual experience, — the match that sets the fire, so to say, — may be something very slight and looking accidental on the surface, a chance word or happening or something else quite fortuitous in its appearance. The person also through whom it comes may seem very much like a fortuitous instrument. It is true that this is only in appearance; for things slight and seemingly fortuitous have a reason for happening as they do, but that reason too is not on the surface.

As for the experience itself it takes up the movement which had started in you a long time ago and was interrupted by the vital upheaval that brought you so much trouble and struggle. Only, there has been since a widening of the consciousness and a step forward which made this form of the experience possible. At that time you had not much appreciation for calm and peace — you hankered only after bhakti and Ananda. But calm, peace, shanti are the necessary basis for any establishment of other things. Otherwise there is no solid foundation in the consciousness; if there is only unrest and movement, bhakti, Ananda and everything else can only come and go in starts and fits and find no ground to live on. It must, however, be not a mere mental quiet, but the deep spiritual peace of the shantimaya Shiva. It was this that touched you (descending through the head) in this experience. For the rest it is a resumption of the piercing of the veil, the beginning of the power of inner experience as opposed to the lesser experiences of the surface, the opening of the inner being, which is necessary for bringing the Yogic consciousness. A certain amount of vital purification has taken place which made the resumption of this kind of experience possible.

You certainly need not be afraid of going into unconsciousness, for it is not unconsciousness that you would go into, but simply the *inner* consciousness, — that going quite inward which

is the result of intense *dhyāna* and the beginning of a certain kind of *samādhi*.

The Inner Being and the Inmost or Psychic Being

There is an inner being and an inmost being which we call the psychic. When one meditates, one tries to go into the inner being. If one does it, then one feels very well that one has gone inside. What can be realised in meditation can also become the ordinary consciousness in which one lives. Then one feels what is now the ordinary consciousness to be something quite external and on the surface, not one's real self.

*

The inner being is composed of the inner mental, the inner vital, the inner physical. The psychic is the inmost—supporting all the others. Usually it is in the inner mental that this separation first happens and it is the inner mental Purusha who remains silent observing the Prakriti as separate from himself. But it may also be the inner vital Purusha or inner physical or else without location simply the whole Purusha consciousness separate from the whole Prakriti. Sometimes it is felt above the head—but then it is usually spoken of as the Atman and the realisation is that of the silent Self.

*

It is not possible to distinguish the psychic being at first. What has to be done is to grow conscious of an inner being which is separate from the external personality and nature—a consciousness or Purusha calm and detached from the outer action of the Prakriti.

*

The reason why she remembers nothing when she comes out of her meditation is that the experience is taking place in the inner being and the outer consciousness is not ready to receive it. Formerly her sadhana was mainly on the vital plane which is

often the first to open and the connection of that plane with the body consciousness is easy to establish because they are nearer to each other. Even then however her body was suffering because of attacks from the hostile elements in the vital plane. Now the sadhana seems to have gone inward into the psychic being. This is a great advance and she need not mind the want of connection with the most external consciousness at present. The work goes on all the same and it is probably necessary that it should be so just now. Afterwards, if she keeps steadily to the right attitude, it will descend into the outer consciousness.

Chapter Two

Inner Detachment and the Witness Attitude

Inner Detachment

It [*the individual consciousness*] is not by its nature detached from the mental and other activities. It can be detached, it can be involved. In the human consciousness it is as a rule always involved, but it has developed the power of detaching itself—a thing which the lower creation seems unable to do. As the consciousness develops, this power of detachment also develops.

*

Detachment means standing back with part of the consciousness and observing what is being done without being involved in it. There is no “how” to that; you do it or try it until it succeeds.

*

That sense of separate being and concentration behind the frontal consciousness is very good. It helps to liberate the inner being and make it stand back from the movements of the outer nature.

*

That is the condition of progress,—if, whenever there is an attempt to cloud the consciousness, you can stand back, remain quiet and prevent the clouding. Do that always and the progress is sure.

*

All that you have written here is perfectly correct. It is so, by standing back from these forces [*in the surrounding world*], neither attracted nor disturbed by them, that one gets freedom,

perceives their falsity or imperfection and is able to rise above and overcome them. The consciousness that comes forward may be either the psychic or the spiritualised mind — it is probably the former.

*

Well, but it [*the need for detachment*] is not individual to you. Everyone has to do that with his difficulties. Detach means that the Witness in oneself has to stand back and refuse to look on the movement as his own (the soul's own) and look on it as a habit of past nature or an invasion of general Nature. Then to deal with it as such. It may seem difficult, but it comes perfectly well by trying persistently.

*

One must get the power to quiet the mental and vital, if not at first at all times, yet whenever one wills — for it is the mind and vital that cover up the psychic being as well as the self (Atman) and to get at either one must get in through their veil; but if they are always active and you are always identified with their activities, the veil will always be there. It is also possible to detach yourself and look at these activities as if they were not your own but a mechanical action of Nature which you observe as a disinterested witness. One can then become aware of an inner being which is separate, calm and uninvolved in Nature. This may be the inner mental or vital Purusha and not the psychic, but to get at the consciousness of the inner *manomaya* and *prāṇamaya* Purusha is always a step towards the unveiling of the psychic being.

*

The condition in which all movements become superficial and empty with no connection with the soul is a stage in the withdrawal from the surface consciousness to the inner consciousness. When one goes into the inner consciousness, it is felt as a calm, pure existence without any movement, but eternally tranquil, unmoved and separate from the outer nature. This

comes as a result of detaching oneself from the movements, standing back from them and is a very important movement of the sadhana. The first result of it is an entire quietude, but afterwards that quietude begins (without the quietude ceasing) to fill with the psychic and other inner movements which create a true inner and spiritual life behind the outer life and nature. It is then easier to govern and change the latter.

At present there are fluctuations in your consciousness because this inner state is not yet fully developed and established. When it is, there will still be fluctuations in the outer consciousness, but the inner quiet, force, love etc. will be constant and the superficial fluctuations will be watched by the inner being without its being shaken or troubled, until they are removed by the complete outer change.

As for X, it is best to let it pass and try to remain steady within and detached; one cannot separate from all contacts; one must become more and more superior to their customary reactions.

*

Detachment is the beginning of mastery, but for complete mastery there should be no reactions at all. When there is something within undisturbed by the reactions that means the inner being is free and master of itself, but it is not yet master of the whole nature. When it is master, it allows no wrong reactions—if any come they are at once repelled and shaken off, and finally none come at all.

*

The experience you have of a division in the being with the inner void and indifferent, *udāśīna*,—not sorrowful, but neutral and indifferent,—is an experience which many pass through and is highly valued by the Sannyasis. For us it is a passage only to something larger and more positive. In it the old small human feelings fall away and a sort of calm neutral void is made for a higher nature to manifest. It must be fulfilled and replaced by a sense of large silence and freedom into which the Mother's

consciousness can flow from above.

*

In the ordinary consciousness one takes a personal interest in what is done, feels joy or feels sorrow. When one does sadhana, a condition may come in which the consciousness draws back from these reactions of joy and sorrow and does work and action impersonally as a thing that ought or has to be done but without desire or reactions. The Yogis value this condition of complete detachment very highly. In our Yoga it is a passage only, if it comes, through which one goes from the ordinary consciousness to a deeper one in which one acts out of a deep peace and union with the Divine or else of a self-existent Ananda not depending on anything but the presence of the Divine, in which all works are done not out of personal interest or satisfaction but for the sake of the Divine.

The Witness Attitude

A man with a very developed introspective mind often identifies himself with the witness part of his mind and observes his own thoughts and studies their nature. That is a beginning which makes it easy for the full detachment to come. For others it is less easy, but it can be done by all.

*

There is a stage in the sadhana in which the inner being begins to awake. Often the first result is the condition made up of the following elements:

- (1) A sort of witness attitude, in which the inner consciousness looks at all that happens as a spectator or observer, observing things but taking no active interest or pleasure in them.
- (2) A state of neutral equanimity in which there is neither joy nor sorrow, only quietude.
- (3) A sense of being something separate from all that happens, observing it but not part of it.

(4) An absence of attachment to things, people or events.

It seems as if this condition were trying to come in you; but it is still imperfect. For instance in this condition (1) there should be no disgust or impatience or anger when people talk, only indifference and an inner peace and silence. Also (2) there should not be a mere neutral quiet and indifference, but a positive sense of calm, detachment and peace. Again (3) there should be no going out of the body so that you do not know what is happening or what you are doing. There may be a sense of not being the body but something else,—that is good; but there should be a perfect awareness of all that is going on in or around you.

Moreover this condition even when it is perfect is only a transitional stage—it is intended to bring a certain state of freedom and liberation. But in that peace there must come the feeling of the Divine Presence, the sense of the Mother's power working in you, the joy or Ananda.

If you can concentrate in the heart as well as in the head, then these things can more easily come.

*

The mind can become quiet only when you detach yourself from it and see the thoughts as things that pass. Then you don't think yourself but see thoughts passing through your mind. Afterwards you can stop attending to these passers-by and concentrate on the Mother.

Thoughts and feelings are passing from one human being to another all the time, only people don't know or observe it. Especially if people live together the same life, as in the Asram, a sort of atmosphere is formed in which the same thoughts and feelings are moving about and constantly passing from one to another.

You have to become conscious—that is to say, there must be something in you which is not carried away by thoughts and feelings, but looks at them and observes how they work and how they affect you. The part that observes and knows is called the Witness *sākṣī* in man. It is always possible to develop this in oneself.

It is not by thinking and reading that consciousness comes. There are many who read and think a great deal but are not conscious, have not the witness developed in them. There are others who work all day like X, yet are very strongly conscious. When one has the power of stopping thinking altogether and only looking, then the Witness becomes very strong and conscious. This consciousness can come by practice, but it can also come by turning to the Mother and thinking of her always and offering to her everything. The being opens, the Mother's force begins to work and one becomes more and more conscious.

*

It is indeed a great thing that you can keep this calm and this unaffected witness attitude. It is always the sign of a strong inner foundation in the consciousness and that even the physical being shares in this result of the realisation.

*

As for the "spectator" and the coils of the dragon, it is the Chino-Japanese image for the world-force extending itself in the course of the universe and this expresses the attitude of the Witness seeing it all and observing in its unfolding the unrolling of the play of the Divine, Lila. It is this attitude that gives the greatest calm, peace, samata in face of the riddle of the cosmic workings. It is not meant that action and movement are not accepted but they are accepted as the Divine Working which is leading to ends which the mind may not always see at once, but the soul divines through all the supreme purpose and the hidden guidance.

Of course there is afterwards an experience in which the two sides of the Divine Whole, the Witness and the Player, blend together; but this poise of the spectator comes first and leads to that fuller experience. It gives the balance, the calm, the increasing understanding of soul and life and their deeper significances without which the full supramental experience cannot come.

The Witness Purusha or Witness Consciousness

By itself the Purusha is impersonal, but by mixing itself with the movements of Prakriti it makes for itself a surface ego or personality. When it appears in its own separate nature then it is seen to be detached and observing.

*

The consciousness you speak of would be described in the Gita as the witness Purusha. The Purusha or basic consciousness is the true being or at least, on whatever plane it manifests, represents the true being. But in the ordinary nature of man it is covered up by the ego and the ignorant play of the Prakriti and remains veiled behind as the unseen Witness supporting the play of the Ignorance. When it emerges, you feel it as a consciousness behind, calm, central, unidentified with the play which depends upon it. It may be covered over, but it is always there. The emergence of the Purusha is the beginning of liberation. But it can also become slowly the Master—slowly because the whole habit of the ego and the play of the lower forces (which also you describe correctly here) is against that. Still it can dictate what higher play is to replace the lower movement and then there is the process of that replacement, the higher coming, the lower struggling to remain and push away the higher movement. You say rightly that the offering to the Divine shortens the whole thing and is more effective, but usually it cannot be done completely at once owing to the past habit and the two methods continue together until the complete surrender is possible.

*

The attitude of the witness consciousness within—I do not think it necessarily involves an external seclusion, though one may do that also—is a very necessary stage in the progress. It helps the liberation from the lower prakriti—not getting involved in the ordinary nature movements; it helps the establishment of a perfect calm and peace within, for there is then one part of the being which remains detached and sees without

being disturbed the perturbations of the surface; it helps also the ascent into the higher consciousness and the descent of the higher consciousness, for it is through this calm, detached and liberated inner being that the ascent and descent can easily be done. Also, to have the same witness look on the movements of Prakriti in others, seeing, understanding but not perturbed by them in any way is a very great help towards both the liberation and the universalisation of the being. I could not therefore possibly object to this movement in a sadhak.

As for the surrender it is not inconsistent with the witness attitude. On the contrary by liberating from the ordinary Prakriti, it makes easier the surrender to the higher or divine Power. Very often when this witness attitude has not been taken but there is a successful calling in of the Force to act in one, one of the first things the Force does is to establish the witness attitude so as to be able to act with less interference or immixture from the movements of the lower Prakriti.

There remains the question of the avoidance of contact with others and there there is some difficulty or incertitude. Part of your nature has a strong turn towards contact with others, action on others, interchange, almost a need of it. This brings about some fluctuation between the turn to an inner isolation and the turn towards contact and action. There is the same double and fluctuating movement in others here like X. In such cases I generally do not stress upon either tendency but leave the consciousness to find its own poise, because I have seen that to press too much on the isolation tendency when the nature is not mainly contemplative does not succeed very well — unless of course the sadhak himself gets a strong and fixed determination that way. This may be the cause of what you felt. But the question between witness attitude and surrender does not arise, for the reason I have explained — one can very well aid or lead to the other as ours is a Yoga which joins these things together and does not keep them always separate.

*

It is by a constant repetition and development of the experience

[*that the witness consciousness can become constant*]. But the witness being does not always remain as a point. It becomes something extended supporting the rest.

The Purusha and Change of the Prakriti

That is the old Vedantic idea — to be free and detached within and leave the Prakriti to itself. When you die, the Purusha will go to glory and the Prakriti drop off — perhaps into Hell. This theory is a source of any amount of self-deception and wilful self-indulgence.

*

The witness attitude is not meant as a convenient means for disowning the responsibility of one's defects and thereby refusing to mend them. It is meant for self-knowledge and, in our Yoga, as a convenient station (detached and uninvolved, therefore not subject to Prakriti) from which one can act on the wrong movements by refusal of assent and by substituting for them the action of the true consciousness from within or above.

*

You can certainly go on developing the consciousness of the Witness Purusha above, but if it is only a witness and the lower Prakriti is allowed to have its own way, there would be no reason why it [*an unquiet and disturbed condition*] should ever stop. Many take that attitude — that the Purusha has to liberate itself by standing apart, and the Prakriti can be allowed to go on till the end of the life doing its own business, — it is *prārabdha karma*; when the body falls away, the Prakriti will drop also and the Purusha go off into the featureless Brahman! This is a comfortable theory, but of more than doubtful truth; I don't think liberation is so simple and facile a matter as that. In any case, the transformation which is the object of our Yoga would not take place.

The Purusha above is not only a Witness, he is the giver (or withholder) of the sanction; if he persistently refuses the sanction

to a movement of Prakriti, keeping himself detached, then, even if it goes on for a time by its past momentum, it usually loses its hold after a time, becomes more feeble, less persistent, less concrete and in the end fades away. If you take the Purusha consciousness, it should be not only as the Witness but as the Anumanta, refusing sanction to the disturbing movements, sanctioning only peace, calm, purity and whatever else is part of the divine nature. This refusal of sanction need not mean a struggle with the lower Prakriti; it should be a quiet, persistent, detached refusal leaving unsupported, unassented to, without meaning or justification the contrary action of the nature.

Chapter Three

Inner Experiences in the State of Samadhi

Samadhi or Trance

The experience you had is of course the going inside of the consciousness which is usually called trance or *samādhi*. The most important part of it however is the silence of the mind and vital which is fully extended to the body also. To get the capacity of this silence and peace is a most important step in the sadhana. It comes at first in meditation and may throw the consciousness inward in trance, but it has to come afterwards in the waking state and establish itself as a permanent basis for all the life and action. It is the condition for the realisation of the Self and the spiritual transformation of the nature.

*

The experience you relate, the stillness, the emptiness of mind and vital and cessation of thoughts and other movements, was the coming of the state called “samadhi” in which the consciousness goes inside in a deep stillness and silence. This condition is favourable to inner experience, realisation, the vision of the unseen truth of things, though one can get these in the waking condition also. It is not sleep but the state in which one feels conscious within, no longer outside.

*

It [*the experience of samadhi*] is not indispensable at this stage; but if it comes of itself, it can be allowed to develop. But experience in the waking state is more important for this Yoga. Samadhi is a help for reaching the inner depths of the consciousness. One is able to go more easily by it inward below the surface being, to get into direct contact with other supraphysical

planes of experience, to pass into other worlds and return, to contact happenings distant in space and time, to see what is in the supraconscious and to enter into what is supraconscious to our mental status.

*

What she speaks of as losing the body consciousness is probably a tendency of the consciousness to go inside — into Samadhi of some kind. Samadhi means a state in which one is not awake and aware of outward things, but also one is not asleep, one is conscious inwardly with another than the waking consciousness. If this comes, it is not to be avoided, as Yogic realisation can take place in this condition as well as in the waking state.

*

It is a state of inner immobile silence that one gets in Samadhi when the outer mind is stilled and there is only some inner or some higher consciousness which may itself be either in silent concentration or else experiencing some state of Knowledge or Ananda or Peace.

*

Going inside does not bring always Ananda. There are many kinds of samadhi and many sorts of experience in each kind. What happens when one goes in is that one enters into the inner planes of consciousness, it may be the subconscious, it may be the mental, vital or subtle physical plane. From there one goes into the corresponding worlds or else one rises up into higher planes superconscious to us — to the ranges above our mind or to the spiritual mental plane in which one can unite with the Sachchidananda consciousness or to the Supramental. What you describe seems to be the subconscious, but that may be only a first step in the going inside.

*

In samadhi it is the inner mental, vital, physical which are separated from the outer, no longer covered by it — therefore they

can freely have inner experiences. The outer mind is either quiescent or in some way reflects or shares the experience. As for the central consciousness being separated from all mind that would mean a complete trance without any recorded experiences.

*

It is the subtle parts of the physical that go up. The external consciousness can also go up, but then there is a complete trance. There is not much utility for the complete trance in this sadhana.

*

Trance in English is usually used only for the deeper kinds of samadhi; but, as there is no other word, we have to use it for all kinds.

*

Samadhi is not a thing to be shunned — only it has to be made more and more conscious.

Trance Not Essential

It is not necessary to be in samadhi to be in contact with the Divine.

*

Yes, they [*all the stages of higher realisation*] can be attained even in full activity. Trance is not essential — it can be used, but by itself it cannot lead to the change of consciousness which is our object, for it gives only an inner subjective experience which need not make any difference in the outer consciousness. There are plenty of instances of sadhaks who have fine experiences in trance but the outer being remains as it was. It is necessary to bring out what is experienced and make it a power for transformation both of the inner and the outer being. But it can be done without going into Samadhi in the waking consciousness itself. Concentration of course is indispensable.

Kinds of Samadhi

Nirvikalpa Samadhi according to tradition is simply a trance from which one cannot be awakened even by burning or branding—i.e. a trance in which one has gone completely out of the body. In more scientific parlance it is a trance in which there is no formation or movement of the consciousness and one gets lost in a state from which one can bring back no report except that one was in bliss. It is supposed to be a complete absorption in the Sushupti or the Turiya.

*

“Nirvikalpa samadhi” properly means a complete trance in which there is no thought or movement of consciousness or awareness of either inward or outward things—all is drawn up into a supracosmic Beyond. But here it cannot mean that—it probably means a trance in a consciousness beyond the Mind.

*

As to the dream, it was not a dream but an experience of the inner being in a conscious dream state, *svapna-samādhi*. The numbness and the feeling of being about to lose consciousness are always due to the pressure or descent of a Force to which the body is not accustomed but feels strongly. Here it was not the physical body that was being directly pressed, but the subtle body, the *sūksma śarīra* in which the inner being more intimately dwells and in which it goes out in sleep or trance or in the moment of death. But the physical body in these vivid experiences feels as if it were itself that was having the experience; the numbness was the effect on it of the pressure. The pressure on the whole body would mean a pressure on the whole inner consciousness, perhaps for some modification or change which would make it more ready for knowledge or experience; the 3rd or 4th rib would indicate a region which belongs to the vital nature, the domain of the life-force, some pressure for a change there.

*

It [*the kind of samadhi one has*] depends on the nature of the physical consciousness you keep. When there is the descent of consciousness into the body one becomes aware of a subtle physical consciousness and that can remain in samadhi — one seems to be aware of the body, but it is really the subtle body and not the outward physical. But also one can go deep within and yet be aware of the physical body also and of working upon it, but not of outward things. Finally one can be absorbed in a deep concentration but strongly aware of the body and the descent of the Force in it. This last is accompanied with consciousness of outward things, though no attention may be paid to them. This last is not usually called samadhi, but it is a kind of waking samadhi. All conditions from the deep samadhi of complete trance to the working of the Force in the fully waking consciousness are used in this Yoga; one need not insist on complete trance always, for the others also are necessary and without them the complete change cannot take place.

It is good that the higher consciousness and its powers are descending into the parts below the head and heart. That is absolutely necessary for the transformation, since the lower vital and the body must also be changed into stuff of the higher consciousness.

*

For this Yoga these divisions [*the classifications of samadhi in Vedanta*] are not so important.

Samadhi and the Waking State

Trance is a going inside away from the waking state. What corresponds to trance in the waking state would be a complete concentration indifferent to outward movements or else a silence of the whole being in Brahman realisation, the *samāhita* state of the Gita.

*

Immersion in Sachchidananda is a state one can get in the waking

condition without Samadhi — dissolution can come only after the loss of the body on condition that one has reached the highest state and does not will to return here to help the world.

*

On the contrary it is in the waking state that this realisation must come and endure in order to be a reality of the life. If experienced in trance it would be a superconscious state true for some part of the inner being, but not real to the whole consciousness. Experiences in trance have their utility for opening the being and preparing it, but it is only when the realisation is constant in the waking state that it is truly possessed. Therefore in this Yoga most value is given to the waking realisation and experience.

What you write about the work is correct; to work in this calm ever-widening consciousness is at once a *sādhanā* and a *siddhi*.

*

The entire oblivion of the experience means merely that there is still no sufficient bridge between the inner consciousness which has the experience in a kind of samadhi and the exterior waking consciousness. It is when the higher consciousness has made the bridge between them that the outer also begins to remember.

Samadhi and Sleep

It [*a tendency to fall asleep while meditating*] is the result of the attempt to go above. It is not sleep that comes, but a tendency to go inside under the pressure — the old Yogas did this going above precisely in this way, by going into samadhi. For us, it has to come in the waking condition — for until it does, it cannot be made the basis for a new consciousness governing the life.

*

It [*the tendency to fall asleep during meditation*] is a common obstacle with all who practise Yoga at the beginning. The sleep disappears gradually in two ways — (1) by the intensifying of the

force of concentration, (2) by the sleep itself becoming a kind of swapna samadhi in which one is conscious of inner experiences that are not dreams (i.e. the waking consciousness is lost for the time, but it is replaced not by sleep but by an inward conscious state in which one moves in the supraphysical of the mental or vital being).

*

There is no reason why one should not have a burning aspiration in sleep, provided one is conscious in sleep. In fact, the condition you describe was not sleep—it was simply that the consciousness was trying to go inside in a sort of indrawn condition (a kind of half-samadhi) while the external mind was constantly coming out of it. What you have, if you go into this indrawn condition, is not dreams but spiritual experiences or visions or experiences in other supraphysical planes of consciousness. Your burning aspiration was just such a spiritual experience.

*

No, it was not sleep. You went inside into an inner consciousness; in this inner consciousness one is awake inside, but not outside, not conscious of external things but of inner things only. Your inner consciousness was busy doing what your outer mind had been trying to do, that is to work upon the thoughts and suggestions that bring restlessness and to put them right; it can be done much more easily by the inner consciousness than by the outer mind.

As for the things that are necessary to be done, they can be done much more easily by the Force and Peace descending (bringing the solid strength) than by your own mental effort.

*

It was not half sleep or quarter sleep or even one-sixteenth sleep that you had; it was a going inside of the consciousness, which in that state remains conscious but shut to outer things and open only to inner experience. You must distinguish clearly between

these two quite different conditions, one is *nidrā*, the other the beginning at least of *samādhi* (not *nirvikalpa* of course!). This drawing inside is necessary because the active mind of the human being is at first too much turned to outward things; it has to go inside altogether in order to live in the inner being (inner mind, inner vital, inner physical, psychic). But with training one can arrive at a point when one remains outwardly conscious and yet lives in the inner being and has at will the indrawn or the out-poured condition; you can then have the same dense immobility and the same inpouring of a greater and purer consciousness in the waking state as in that which you erroneously call sleep.

*

About your experiences:

(1) The sleep which you felt when meditating was not sleep but an inward condition of the consciousness. When this inward condition is not very deep one can be aware of various scenes, voices etc. which belong not to the physical but to some inner plane of consciousness — their value or truth depends on the plane to which one reaches. Those of the surface are of no importance and one has simply to pass through them till one gets deeper.

(2) The fear, anger, depression etc. which used to rise when making the japa of the names came from a vital resistance in the nature (this resistance exists in everyone) which threw up these things because of the pressure on the vital part to change which is implied in sadhana. These resistances rise and then, if one takes the right attitude, slowly or quickly clear away. One has to observe them and separate oneself from them, persisting in the concentration and sadhana till the vital becomes quiet and clear.

(3) The things you saw (moon, sky etc.) are due to the opening of the inner vision; this usually comes when the concentration begins to open up the inner consciousness of which this subtle vision is a part. This faculty of vision has its importance in the development of the inner being, and need not be discouraged, even though too much importance should not be attached to the

things seen in the earlier stages.

(4) There are some however that are part of the growing spiritual experience, such as the sun you saw overhead and the piece of golden light—for these are signs of an opening within and symbolic. Both are symbols of the Divine Truth and Light and of one action of their influence.

(5) The most important experience, however, is that of the peace and quiet which comes with a good concentration. It is this that must grow and fix itself in the mind and vital and body—for it is this peace and quiet that make a firm basis for the sadhana.

*

The starting of the body happens very often when it is in a kind of sleep of samadhi and something touches whether from within or without.

The Trance of Mediums

The medium trance is of a different kind—they get not into touch with Sachchidananda but with the beings of the lower vital plane. To develop the power of going into this higher kind of trance, one must have done some sadhana. As to purification, entire purification is not necessary, but some part of the being must have turned to higher things.

Chapter Four

Three Experiences of the Inner Being

Opening into the Inner Mental Self

The three experiences of which you speak belong all to the same movement or the same stage of your spiritual life; they are initial movements of the consciousness to become aware of your inner being which was veiled, as in most, by the outer waking self. There are, we might say, two beings in us, one on the surface, our ordinary exterior mind, life, body consciousness, another behind the veil, an inner mind, an inner life, an inner physical consciousness constituting another or inner self. This inner self once awake opens in its turn to our true real and eternal self. It opens inwardly to the soul, called in the language of this Yoga the psychic being which supports our successive births and at each birth assumes a new mind, life and body. It opens above to the Self or spirit which is unborn and by conscious recovery of it we transcend the changing personality and achieve freedom and full mastery over our nature.

You did quite right in first developing the sattwic qualities and building up the inner meditative quietude. It is possible by strenuous meditation or by certain methods of tense endeavour to open doors on to the inner being or even break down some of the walls between the inner and outer self before finishing or even undertaking this preliminary self-discipline, but it is not always wise to do it as that may lead to conditions of sadhana which may be very turbid, chaotic, beset with unnecessary dangers. By adopting the more patient course you have arrived at a point at which the doors of the inner being have begun almost automatically to swing open. Now both processes can go on side by side, but it is necessary to keep the sattwic quietude, patience, vigilance, — to hurry nothing, to force nothing, not to

be led away by any strong lure or call of the intermediate stage which is now beginning before you are sure that it is the right call. For there are many vehement pulls from the forces of the inner planes which it is not safe to follow.

Your first experience is an opening into the inner mental self—the space between the eyebrows is the centre of the inner mind, vision, will and the blue light you saw was that of a higher mental plane, a spiritual mind, one might say, which is above the ordinary human mental intelligence. An opening into this higher mind is usually accompanied by a silence of the ordinary mental thought. Our thoughts are not really created within ourselves independently in the small narrow thinking machine we call our mind; in fact, they come to us from a vast mental space or ether either as mind-waves or waves of mind-force that carry a significance which takes shape in our personal mind or as thought-formations ready-made which we adopt and call ours. Our outer mind is blind to this process of Nature; but by the awakening of the inner mind we can become aware of it. What you saw was the receding of this constant mental invasion and the retreat of the thought-forms beyond the horizon of the wide space of mental Nature. You felt this horizon to be in yourself somewhere, but evidently it was in that larger self-space which even in its more limited field just between the eyebrows you felt to be bigger than the corresponding physical space. In fact, though the inner mind spaces have horizons, they stretch beyond those horizons—illimitably. The inner mind is something very wide projecting itself into the infinite and finally identifying itself with the infinity of universal Mind. When we break out of the narrow limits of the external physical mind we begin to see inwardly and to feel this wideness, in the end this universality and infinity of the mental self-space. Thoughts are not the essence of mind-being, they are only an activity of mental nature; if that activity ceases, what appears then as a thought-free existence that manifests in its place is not a blank or void but something very real, substantial, concrete we may say—a mental being that extends itself widely and can be its own field of existence silent or active as well as the Witness, Knower, Master of that

field and its action. Some feel it first as a void, but that is because their observation is untrained and insufficient and loss of activity gives them the sense of blank; an emptiness there is, but it is an emptiness of the ordinary activities, not a blank of existence.

The recurrence of the experience of the receding away of thoughts, the cessation of the thought-generating mechanism and its replacement by the mental self-space, is normal and as it should be; for this silence or at any rate the capacity for it has to grow until one can have it at will or even established in an automatic permanence. For this silence of the ordinary mind-mechanism is necessary in order that the higher mentality may manifest, descend, occupy by degrees the place of the present imperfect mentality and transform the activities of the latter into its own fuller movements. The difficulty of its coming when you are at work is only at the beginning—afterwards when it is more settled one finds that one can carry on all the activities of life either in the pervading silence itself or at least with that as the support and background. The silence remains behind and there is the necessary action on the surface or the silence is our wide self and somewhere in it an active Power does the works of Nature without disturbing the silence. It is therefore quite right to suspend the work while the visitation of the experience is there—the development of this inner silent consciousness is sufficiently important to justify a brief interruption or pause.

In the case of the other two experiences, on the contrary, it is otherwise. The dream-experience must not be allowed to take hold of the waking hours and pull the consciousness within; it must confine its operation to the hours of sleep. So too there should be no push or pressure to break down the wall between the inner self and the outer "I"—the fusion must be allowed to take place by a developing inner action in its own natural time. I shall explain why in another letter.

The Awakening of the Inner Being in Sleep

Your second experience is a first movement of the awakening of the inner being in sleep. Ordinarily when one sleeps a complex

phenomenon happens. The waking consciousness is no longer there, for all has been withdrawn within into the inner realms of which we are not aware when we are awake, though they exist; for then all that is put behind a veil by the waking mind and nothing remains except the surface self and the outward world — much as the veil of the sunlight hides from us the vast worlds of the stars that are behind it. Sleep is a going inward in which the surface self and the outside world are put away from our sense and vision. But in ordinary sleep we do not become aware of the worlds within either; the being seems submerged in a deep subconscious. On the surface of this subconscious floats an obscure layer in which dreams take place, as it seems to us, but, more correctly it may be said, are recorded. When we go very deeply asleep, we have what appears to us as a dreamless slumber; but in fact dreams are going on, but they are either too deep down to reach the recording surface or are forgotten, all recollection of their having existed even is wiped out in the transition to the waking consciousness. Ordinary dreams are for the most part or seem to be incoherent, because they are either woven by the subconscious out of deep-lying impressions left in it by our past inner and outer life, woven in a fantastic way which does not easily yield any clue of meaning to the waking mind's remembrance, or are fragmentary records, mostly distorted, of experiences which are going on behind the veil of sleep — very largely indeed these two elements get mixed up together. For in fact a large part of our consciousness in sleep does not get sunk into this subconscious state; it passes beyond the veil into other planes of being which are connected with our own inner planes, planes of supraphysical existence, worlds of a larger life, mind or psyche which are there behind and whose influences come to us without our knowledge. Occasionally we get a dream from these planes, something more than a dream, — a dream experience which is a record direct or symbolic of what happens to us or around us there. As the inner consciousness grows by sadhana, these dream experiences increase in number, clearness, coherence, accuracy and after some growth of experience and consciousness, we can, if we observe, come to understand them

and their significance to our inner life. Even we can by training become so conscious as to follow our own passage, usually veiled to our awareness and memory, through many realms and the process of the return to the waking state. At a certain pitch of this inner wakefulness this kind of sleep, a sleep of experiences, can replace the ordinary subconscious slumber.

It is of course an inner being or consciousness or something of the inner self that grows aware in this way, not, as usually it is, behind the veil of sleep, but in the sleep itself. In the condition which you describe, it is just becoming aware of sleep and dream and observing them — but as yet nothing farther — unless there is something in the nature of your dreams that has escaped you. But it is sufficiently awake for the surface consciousness to remember this state, that is to say, to receive and keep the report of it even in the transition from the sleep to the waking state which usually abolishes by oblivion all but fragments of the record of sleep-happenings. You are right in feeling that the waking consciousness and this which is awake in sleep are not the same — they are different parts of the being.

When this growth of the inner sleep consciousness begins, there is often a pull to go inside and pursue the development even when there is no fatigue or need of sleep. Another cause aids this pull. It is usually the vital part of the inner being that first wakes in sleep and the first dream experiences (as opposed to ordinary dreams) are usually in the great mass experiences of the vital plane, a world of supraphysical life, full of variety and interest, with many provinces, luminous or obscure, beautiful or perilous, often extremely attractive, where we can get much knowledge too both of our concealed parts of nature and of things happening to us behind the veil and of others which are of concern for the development of our parts of nature. The vital being in us then may get very much attracted to this range of experience, may want to live more in it and less in the outer life. This would be the source of that wanting to get back to something interesting and entralling which accompanies the desire to fall into sleep. But this must not be encouraged in waking hours, it should be kept for the hours set apart for

sleep where it gets its natural field. Otherwise there may be an unbalancing, a tendency to live more and too much in the visions of the supraphysical realms and a decrease of the hold on outer realities. The knowledge, the enlargement of our consciousness of these fields of inner Nature is very desirable, but it must be kept in its own place and limits.

A Touch of the Inner Self

In my last letter I had postponed the explanation of your third experience. What you have felt is indeed a touch of the Self,—not the unborn Self above, the Atman of the Upanishads, for that is differently experienced through the silence of the thinking mind, but the inner being, the psychic supporting the inner mental, vital, physical being, of which I have spoken. A time must come for every seeker of complete self-knowledge when he is thus aware of living in two worlds, two consciousnesses at the same time, two parts of the same existence. At present he lives in the outer consciousness, the outer being and sees within the inner self—but he will go more and more inward, till the position is reversed and he lives within in this new inner consciousness, inner self and feels the outer as something on the surface formed as an instrumental personality for the inner's self-expression in the material world. Then from within a Power works on the outer to make it a conscious plastic instrument so that finally the inner and the outer may become fused into one. The wall you feel is indeed the wall of the ego which is based on the insistent identification of oneself with the outer personality and its movements. It is that identification which is the keystone of the limitation and bondage from which the outer being suffers, preventing expansion, self-knowledge, spiritual freedom. But still the wall must not be prematurely broken down, because that may lead to a disruption or confusion or invasion of either part by the movements of the two separated worlds before they are ready to harmonise. A certain separation is necessary for some time after one has become aware of these two parts of the being as existing together. The force of the Yoga must be given

time to make the necessary adjustments and openings, and to take the being inward and then from this inward poise to work on the outer nature.

This does not mean that one should not allow the consciousness to go inward so that as soon as possible it should live in the inward world of being and see all anew from there. That inward going is most desirable and necessary and that change of vision also. I mean only that all should be done by a natural movement without haste. The movement of going inward may come rapidly, but even after that something of the wall of ego will be there and it will have to be steadily and patiently taken down so that no stone of it may abide. My warning against allowing the sleep world to encroach on the waking hours is limited to that alone and does not refer to the inward movement in waking concentration or ordinary waking consciousness. The waking movement carries us finally into the inner self and by that inner self we grow into contact with and knowledge of the supraphysical worlds, but this contact and knowledge need not and should not lead to an excessive preoccupation with them or a subjection to their beings and forces. In sleep we actually enter into these worlds and there is the danger, if the attraction of the sleep consciousness is too great and encroaches on the waking consciousness, of this excessive preoccupation and influence.

It is quite true that an inner purity and sincerity, in which one is motived only by the higher call, is one's best safeguard against the lures of the intermediate stage. It keeps one on the right track and guards from deviation until the psychic being is fully awake and in front and, once that happens, there is no farther danger. If in addition to this purity and sincerity there is a clear mind with a power of discrimination, that increases the safety in the earlier stages. I do not think I need or should specify too fully or exactly the forms the lure or pull is likely to take. It may be better not to call up these forces by an attention to them which may not be necessary. I do not suppose you are likely to be drawn away from the path by any of the greater perilous attractions. As for the minor inconveniences of the intermediate

stage, they are not dangerous and can easily be set right as one goes by the growth of consciousness, discrimination and sure experience.

As I have said, the inward pull, the pull towards going inward is not undesirable and need not be resisted. At a particular stage it may be accompanied by an abundance of visions due to the growth of the inner sight which sees things belonging to all the planes of existence. That is a valuable power helpful in the sadhana and should not be discouraged. But one must see and observe without attachment, keeping always the main object in front, realisation of the inner Self and the Divine—these things should only be regarded as incidental to the growth of consciousness and helpful to it, not as objects in themselves to be followed for their own sake. There should also be a discriminating mind which puts each thing in its place and can pause to understand its field and nature. There are some who become so eager after these subsidiary experiences that they begin to lose all sense of the true distinction and demarcation between different fields of reality. All that takes place in these experiences must not be taken as true—one has to discriminate, see what is mental formation or subjective construction and what is true, what is only suggestion from the larger mental and vital planes or what has reality only there and what is of value for help or guidance in inner sadhana or outer life.

Section Three

Experiences of the Cosmic Consciousness

Chapter One

The Universal or Cosmic Consciousness

The Terms “Universal” and “Cosmic”

There is no difference between the terms “universal” and “cosmic” except that “universal” can be used in a freer way than “cosmic”. Universal may mean “of the universe”, cosmic in that general sense. But it may also mean “common to all”, — e.g., “This is a universal weakness” — but you cannot say, “This is a cosmic weakness.”

*

Universal applies to everything in the universe — there are individual beings everywhere, but not physical in the terrestrial sense — the composition being different.

The Nature of the Cosmic Consciousness

Man is shut up at present in his surface individual consciousness and knows the world (or rather the surface of it) only through his outward mind and senses and by interpreting their contacts with the world. By Yoga there can open in him a consciousness which becomes one with that of the world; he becomes directly aware of a universal Being, universal states, universal Force and Power, universal mind, life, matter and lives in conscious relations with these things. He is then said to have the cosmic consciousness.

*

Men are usually shut up in the sense of their separate existence and know of the world and of other beings only what they see, hear, feel by their senses and their mental images and inferences. By Yoga one can get free of this limitation and become directly

aware of the Cosmic Self, the self of other beings, of their movements, of the movements of the cosmic forces, etc. etc. That is the cosmic consciousness.

*

Everyone has a universal consciousness standing concealed behind the individualised personality. When one becomes aware of it one feels in contact with the universal self and forces or one with them.

*

When one has the cosmic consciousness, one can feel the cosmic self as one's own self, one can feel one with other beings in the cosmos, one can feel all the forces of Nature as moving in oneself, all selves as one's own self.

There is no why except that it is so, since all is the One.

*

The ordinary consciousness of man is confined to his own individuality — he can enter into the consciousness of others and of the universe only by indirect means or a superficial and incomplete apprehension, by sense experience, contacts of emotional sympathy, mental concepts, analogy with his own movements, inference. In Yoga at a certain point this limitation breaks down, the consciousness enlarges itself, becomes directly aware of the Cosmic Self and knows the individual self to be one with it; of the Cosmic Energy and meets directly the action of the cosmic forces; of the cosmic mind, life, matter and feels first a contact of its individual mind, life, body with them, then a unity in which one's own individual mentality, vitality, physicality is felt as only a part of the universal, a wave of the ocean, a dynamo receiving and formulating the universal forces. Finally, the individual melts into the cosmic consciousness, the whole world is felt in oneself and oneself suffused through the world — it is the cosmic Consciousness, Mind, Life, material Energy that works through the individual function. The separate ego either does not exist or is only a convenience for the universal Spirit

and its action. This is the complete consummation of the cosmic Consciousness, but in its fullness it is not common, belonging properly to what we may call the Overmind realisation; but a constant partial and growing experience of it or an increasing contact with the cosmic Consciousness is a normal part of Yoga.

The Cosmic Consciousness and the Overmind

The cosmic consciousness does not belong to overmind in especial; it covers all the planes.

*

The overmind is the basis of the total cosmic consciousness, but the cosmic consciousness itself can be felt on any plane, not only above mind, but in mind, life, matter.

The Cosmic Consciousness and the Transcendent

The consciousness in the individual widens itself into the cosmic consciousness outside and can have any kind of dealing with it, penetrate, know its movements, act upon it or receive from it, even become commensurate with or contain it—which was what was meant in the language of the old Yogas by having the *brahmāṇḍa* within you.

The cosmic consciousness is that of the universe, of the cosmic Spirit and cosmic Nature with all the beings and forces within it. All that is as much conscious as a whole as the individual separately is, though in a different way. The consciousness of the individual is part of this, but a part feeling itself as a separate being. Yet all the time most of what he is comes into him from the cosmic consciousness. Only there is a wall of separative ignorance between. Once it breaks down he becomes aware of the cosmic Self, of the consciousness of the cosmic Nature, of the forces playing in it etc. He feels all that as he now feels physical things and impacts. He finds it all to be one with his larger or universal self.

There is the universal mental, the universal vital, the universal physical nature, and it is out of a selection of their forces and movements that the individual mind, vital and physical are made. The soul comes from beyond this nature of mind, life and body. It belongs to the Transcendent and because of it we can open to the higher Nature beyond.

The Divine is always One that is Many. The individual spirit is part of the “Many” side of the One, and the psychic being is what it puts forth to evolve here in the earth-nature. In liberation the individual self realises itself as the One (that is yet Many). It may plunge into the One and merge or hide itself in its bosom—that is the Laya of the Adwaita; it may feel its oneness and yet as part of the Many that is One enjoy the Divine, that is the Dwaitadwaita liberation; it may lay stress on its Many aspect and be possessed by the Divine, the Visishtadwaita, or go on playing with Krishna in the eternal Vrindavan, the Dwaita liberation. Or it may, even being liberated, remain in the Lila or manifestation or descend into it as often as it likes. The Divine is not bound by human philosophies—it is free in its play and free in its essence.

*

One has to get above the cosmic consciousness of the mind, life and matter by entering into the spiritual levels above the ordinary mind, into the higher consciousness. This does not cut one off from the cosmic consciousness, but one sees it without being involved in it.

*

It [*the correspondent's experience*] is the release from the limitations by the body consciousness and the opening into the wider being which is universal although it has an individual centre. As this develops one becomes aware of the true Self silent and illimitable and the cosmic consciousness. The concentration at the apex above the head is the station in the thousand-petalled lotus. There one becomes aware of states of mind above the ordinary human *buddhi*, the higher mind, the illumined mind,

the intuition, the overmind — finally when one has achieved the overmind one opens directly to the supramental consciousness.

*

The cosmic consciousness has many levels — the cosmic physical, the cosmic vital, the cosmic Mind, and above the higher planes of cosmic Mind there is the Intuition and above that the Overmind and still above that the Supermind where the Transcendental begins. In order to live on the Intuitive plane (not merely to receive intuitions), one has to live in the cosmic consciousness because there the cosmic and individual run into each other as it were, and the mental separation between them is already broken down, so nobody can reach there who is still in the separative ego.

A reflected static realisation of Sachchidananda is possible on any of the cosmic planes, but the full entering into it, the entire union with the Supreme Divine dynamic as well as static, comes with the transcendence.

*

It [*realisation of the Cosmic Divine*] is sufficient if only a static Consciousness is aimed at — but if transformation and the dynamic Divine is the aim, then the whole must be known. To realise the Cosmic Divine is after all impossible without entering into or opening to the cosmic consciousness — but one has to know the cosmic Prakriti as well as the cosmic Purusha.

Spiritual, Cosmic and Ordinary Consciousness

1. The spiritual consciousness is that in which we enter into the awareness of Self, the Spirit, the Divine and are able to see in all things their essential reality and the play of forces and phenomena as proceeding from that essential Reality.

2. The cosmic consciousness is that in which the limits of ego, personal mind and body disappear and one becomes aware of a cosmic vastness which is or is filled by a cosmic Spirit and aware also of the direct play of cosmic forces, universal

mind forces, universal life forces, universal energies of Matter, universal Overmind forces. But one does not become aware of all these together; the opening of the cosmic consciousness is usually progressive. It is not that the ego, the body, the personal mind disappear, but one feels them as only a small part of oneself. One begins to feel others too as part of oneself or varied repetitions of oneself, the same self modified by Nature in other bodies or, at the least, as living in the larger universal self which is henceforth one's own greater reality. All things in fact begin to change their value and appearance; one's whole experience of the world is radically different from that of those who are shut up in their personal selves. One begins to know things by a different kind of experience, more direct, not depending on the external mind and the senses. It is not that the possibility of error disappears, for that cannot be so long as mind of any kind is one's instrument for transcribing knowledge, but there is a new vast and deep way of experiencing, seeing, knowing, contacting things, and the confines of knowledge can be rolled back to an almost immeasurable degree. The things one has to be on guard against in the cosmic consciousness are the play of a magnified ego, the vaster attacks of the hostile forces—for they too are part of the cosmic consciousness—and the attempt of the cosmic Illusion (Ignorance, Avidya) to prevent the growth of the soul into the cosmic Truth. These are things that one has to learn by experience; mental teaching or explanation is quite insufficient. To enter safely into the cosmic consciousness and to pass safely through it, it is necessary to have a strong central unegoistic sincerity and to have the psychic being, with its divination of truth and unfaltering orientation towards the Divine, already in front in the nature.

3. The ordinary consciousness is that in which one knows things only or mainly by the intellect, the external mind and the senses and knows forces etc. only by their outward manifestations and results and the rest by inferences from these data. There may be some play of mental intuition, deeper psychic seeing or impulsions, spiritual intimations etc.—but in the ordinary

consciousness these are incidental only and do not modify its fundamental character.

The Widening of the Consciousness

It is very good. The widening of the consciousness so as to be in touch with the Universal Infinite is an important stage in the sadhana.

*

The ordinary man lives in his own personal consciousness knowing things through his mind and senses as they are touched by a world which is outside him, outside his consciousness. When the consciousness subtilises, it begins to come into contact with things in a much more direct way, not only with their forms and outer impacts but with what is inside them, but still the range may be small. But the consciousness can also widen and begin to be first in direct contact with an immense range of things in the world, then to contain them as it were,—as it is said to see the world in oneself,—and to be in a way identified with it. To see all things in the self and the self in all things—to be aware of one being everywhere, aware directly of the different planes, their forces, their beings—that is universalisation.

*

Opening is when it [*the consciousness*] receives the higher forces —widening is when it is no longer limited to the body but widens to meet the cosmic consciousness.

*

The widening of the consciousness beyond the body means that there is a preparation to pass out of the limitation by the body consciousness and feel oneself either in the cosmic consciousness or in contact with it. If one has this feeling of enlargement or wideness above the head one is in contact with the universal Self; below it is according to the level with the cosmic Mind, the cosmic vital or the cosmic physical consciousness. When

one is entirely freed from the body limitation, then one feels the consciousness as infinite with the body only as something very small within it.

*

It [*separation of the consciousness from the body*] means the liberation from the body sense in which one can truly say, “I am not the body.” This liberation is part of the cosmic consciousness — as is also the realisation of the cosmic Will.

It is the liberation from the body sense only. That is quite different from the control of the body.

*

Yes, your experience was a very good one and your feeling about it was correct. When the consciousness is narrow and personal or shut in the body, it is difficult to receive from the Divine — the wider it expands, the more it can receive. A time comes when it feels as wide as the world and able to receive all the Divine into itself.

*

If you feel the barrier in which you lived broken down and an inner ocean of wideness, then a great thing has happened in you. For it is this wideness that comes when the consciousness opens to the Divine. Into this wideness the Divine’s peace, love, light and joy can pour and fix themselves there.

Go on calling the Mother and opening yourself to her. All the rest will come.

*

By a widening of all the parts of the being, a sense of largeness and liberation of the mind, vital and physical, an opening to the Divine everywhere and many other signs [— so the Divine’s wideness manifests itself].

*

Yes — it [*wideness*] is felt as if a great substantial vastness full

of power and giving the sense of oneness free and infinite and the same from top to bottom.

*

The emptiness and wideness in the brain is a very good sign. It is a condition for the opening horizontally into the cosmic consciousness and upward into the Self and higher spiritual Mind above the head.

*

The lightness, the feeling of the disappearance of the head and that all is open is a sign of the wideness of the mental consciousness which is no longer limited by the brain and its body sense—no longer imprisoned but wide and free. This is felt in the meditation only at first or with closed eyes, but at a later stage it becomes established and one feels always oneself a wide consciousness not limited by any feeling of the body. You felt something of this wideness of your being in the second experience when the Mother's foot pressed down your physical mind (head) till it went below and left room for this sense of an infinite Self. This wide consciousness not dependent on the body or limited by it is what is called in Yoga the Atman or Self. You are only having the first glimpses of it, but later on it becomes normal and one feels that one was always this Atman infinite and immortal.

*

It is an experience of the extension of consciousness. In Yoga experience the consciousness widens in every direction, around, below, above, in each direction stretching to infinity. When the consciousness of the Yогин becomes liberated, it is not in the body, but in this infinite height, depth and wideness that he lives always. Its basis is an infinite void or silence, but in that all can manifest—Peace, Freedom, Power, Light, Knowledge, Ananda. This consciousness is usually called the consciousness of the Self or Atman, for it is a pure existence or self that is the source of all things and contains all things.

*

You must dismiss the fear of the concentration. The emptiness you feel coming on you is the silence of the great peace in which you become aware of your self, not as the small ego shut up in the body, but as the spiritual self wide as the universe. Consciousness is not dissolved; it is the limits of the consciousness that are dissolved. In that silence thoughts may cease for a time, there may be nothing but a great limitless freedom and wideness, but into that silence, that empty wideness descends the vast peace from above, light, bliss, knowledge, the higher Consciousness in which you feel the oneness of the Divine. It is the beginning of the transformation and there is nothing in it to fear.

*

If these were imaginations, you would be able to reproduce them exactly each time you thought of them. The idea that it is imagination comes from the physical mind which cannot believe in anything supraphysical.

This opening of the chest into the void (not really the void, but the infinite Akash of the Chit universal and illimitable) is always the sign of an opening of the emotional being into the wideness of the Universal Divine. The image of the Akash is often seen by sadhaks in Dhyanā. When the consciousness is liberated, whether in the mind or other part, there is always this sense of the wide infinite emptiness. From the top of the head to the throat is the mental plane of the being—a similar opening and emptiness or wideness here is the sign of the mind being freed into the Universal. From the throat to the stomach is the higher vital or emotional region. Below is the lower vital plane.

*

It is of course the inner wideness in which you were absorbed so that outward things went on of themselves without engaging the interest. In the meditation it was the same descent into the head—when it fills the head, there is often this feeling of there being no head, only that which is coming down or else a wideness in which that is acting. In the end one gets the feeling of being not something confined in the head and body, but a

wide consciousness with the body only as something comparatively small inside it. The vision was a figure of this wider consciousness with the Mother's inner presence always there.

*

Yes, what you see is right.¹ It is why the former Yogins preferred to remain in the wide consciousness aloof from the play of the energies — they regarded the latter as something belonging to the life of illusion which would fall away only by the rejection of the physical life through knowledge. It is when you oscillate from one consciousness to another that you seem to lose the higher one or feel as if it were lost. By keeping it within always, one is able to regard both sides and change the recalcitrant lower nature.

*

The wideness comes when one exceeds or begins to exceed the individual consciousness and spread out towards the universal. But the psychic can be active even in the individual consciousness.

*

At the beginning the experience of wideness like other experiences comes only from time to time. It is only afterwards that it becomes frequent and remains long, till finally it settles and the consciousness remains always wide.

The Cosmic Consciousness and the Cosmic Self

In the cosmic consciousness the personal I disappears into the one Self of all. The I which alone exists is not that of the person, the individualised I, but the universalised I identical with all and with the cosmic Self (Atman).

*

¹ *The correspondent said that when he lived in the wide consciousness above, he could remain undisturbed by the energies of the lower nature. But when he tried to change those energies, he became troubled and confused by their downward pull. — Ed.*

It is what it represents itself to be — an experience of the universal consciousness aspiring to the Divine Truth and beginning to receive its light. It is not your own consciousness, although you feel it in yourself, but a symbolic experience of this universal Vishwa-Purusha. These things one sees when one opens to the Cosmic Consciousness. Observed, felt and taken rightly they help to liberate, universalise and impersonalise. But keep the ego out of it — *everybody* opening to the Cosmic Divine will have these or similar experiences. Observe and go forward.

*

There is no doubt that you will succeed in your endeavour — all that is needed is firm persistence till the success is complete.

What you saw in the vision was the wide and luminous infinite of what is called the universal Self or spirit. It is that which is one of the fundamental things into which one enters when one reaches the higher consciousness and goes above. The personal being naturally feels itself as something very small and insignificant in that Infinite. But in that Infinite there are higher and higher levels and it is to these levels that the Mother was leading you when she took you by the hand. This often happens in meditation or trance when one has once gone upward into the spiritual infinity. The reason why you did not see the Mother's form was not that the Mother hid herself, or anything in you came between, but that you were both moving in the formless Infinite as spiritual beings and so it was easier to feel the presence than to see any physical form. Not that the form cannot be there, but it is less insistent and therefore not so soon seen as on the physical plane.

The silence in the head and heart and the emptiness are both necessary and desirable. When they are there, the consciousness finds them natural and they give it the sense of lightness and release; that is why the thoughts or speech of the old kind are foreign to it and when they come give fatigue. This silence and emptiness must grow, so that the higher consciousness with its knowledge, light, Ananda, peace can come down in it and progressively replace the old things. They must indeed occupy

not only head and heart but the whole body.

The Cosmic Consciousness and Self-Realisation

Liberation is the first necessity — to live in the peace, silence, purity, freedom of the Self. Along with that or afterwards if one wakens to the cosmic consciousness, then one can be free, yet one with all things.

To have the cosmic consciousness without the liberation etc. is possible, but then there is no freedom anywhere in the being from the lower nature and one may become in one's extended consciousness the playground of all kinds of forces without being able to be either free and detached from the Prakriti or free and master.

On the other hand, if there has been self-realisation, there is one part of the being that remains untouched amid the play of the cosmic forces — while if the peace and purity of the self has been established in the whole inner consciousness, then the outer touches of the lower nature cannot come in or overpower. This is the advantage of self-realisation preceding the cosmic consciousness and supporting it.

*

When there is the development of the Self-realisation or of the cosmic consciousness or if there is the emptiness which is the preliminary condition for these things, there comes an automatic tendency for a unity with all — their affections, mental, vital, physical may easily touch. One has to keep oneself free.

*

Affections here [*in the preceding letter*] has not the ordinary sense — it means “ways in which they are affected by things”, e.g. joy, grief, pleasure, pain, illness etc.

*

What you feel is the normal condition when the liberation takes place. The work of the senses etc. goes on as before, but the

consciousness is different, so that one feels not only the sense of liberation, separation etc., but that one is living in quite another world than that of the ordinary mind, life or senses. It is another consciousness with another knowledge and way of looking at things that begins. Afterwards as this consciousness takes possession of the instruments, there is a harmony of it with the sense and life; but these too become different, with a changed outlook, seeing the world no more as before but as if made of another substance with another significance.

*

It is when you feel the universal or divine beauty or presence in things that the senses are open to the Divine.

Chapter Two

Aspects of the Cosmic Consciousness

The Cosmic Ignorance and the Cosmic Truth

I think you are speaking of two different sides of the cosmic Consciousness, that which is behind all Cosmos and that which is expressed in the apparent universe.

*

There are in the cosmic consciousness two sides — one the contact with and perception of the ordinary cosmic forces and the beings behind these forces, that is what I call the cosmic Ignorance — the other is the perception of the cosmic Truths, the realisation of the one universal, the one universal Force, all the Vedantic truths of the One in all and all in one; all the various aspects of the Divine in the cosmic and a host of other things can come which do help to realisation and knowledge — provided they are taken in the right way. However all that can be best dealt with when it actually comes. It does not always come as soon as there is the widening — many pass through the widening of the consciousness to what is beyond the cosmic and take the cosmic in detail afterwards — and it is perhaps the safest order.

*

Each defect of the nature of the Ignorance is a deformation of something in the higher nature — a deformation which amounts to a contradiction even. It is a concretised perception of this that you got in your experience.

*

There is no ignorance that is not part of the cosmic Ignorance — only in the individual it becomes a limited formation and

movement, while the cosmic Ignorance is the whole movement of world-consciousness separated from the supreme Truth and acting in an inferior motion in which the Truth is perverted, diminished, mixed and clouded with falsehood and error. The cosmic Truth is the view on things of a cosmic Consciousness in which things are seen in their true essence and their true relation to the Divine and to each other.

*

The Yogi's cosmic experiences are spiritual experiences — experience of the play of the Forces and its relation with the self, the action of the Guide, what is behind the appearance of things, occurrences etc. etc., the actual relations of the workings of Purusha and Prakriti etc. The Divine Truth is the truth of the divine Essence, Consciousness, Self-Knowledge, Light, Power, Bliss. It is something from which the cosmos derives with all its movements, but it is more than the cosmos.

*

The cosmic Truth is the truth of things as they are at present expressed in the universe. The Divine Truth is independent of the universe, above it and originates it.

The Cosmic Harmony and Discords

A cosmos or universe is always a harmony, otherwise it could not exist, it would fly to pieces. But as there are musical harmonies which are built out of discords partly or even predominantly, so this universe (the material) is disharmonious in its separate elements — the individual elements are at discord with each other to a large extent, — it is only owing to a sustaining divine Will behind that the whole is still a harmony to those who look at it with the cosmic vision. But it is a harmony in evolution, in progress — that is, all is combined to strive towards a goal which is not yet reached, and the object of our Yoga is to hasten the arrival to this goal. When it is reached, there will be a harmony of harmonies substituted for the present harmony built up on

discords. This is the explanation of the present appearance of things.

*

This harmony of the lower consciousness is a harmony of dis- cords brought about by a clash and mixture of forces.

*

It [*a rhythmic word like a song*]¹ is a representation in sound of the cosmic harmony from which the Ignorance is a fall and a discord.

*

There is a rhythm in everything unheard by the physical ear and by that rhythm things exist.

The Cosmic Will

It is not possible for the individual mind, so long as it remains shut up in its personality, to understand the workings of the Cosmic Will, for the standards made by the personal consciousness are not applicable to them. A cell in the body, if conscious, might also think that the human being and its actions are only the resultant of the relations and workings of a number of cells like itself and not the action of a unified self. It is only if one enters into the Cosmic Consciousness that one begins to see the forces at work and the lines on which they work and get a glimpse of the Cosmic Self and the Cosmic Mind and Will.

*

Everything here is not perfect, but all works out the cosmic Will in the course of the ages.

¹ *The correspondent heard a rhythmic word entering into his ears from above. The word was like a song and its rhythm sustained the universe, though it worked through destruction.—Ed.*

Opening to the Cosmic Mind

What is happening is that you have got into touch with the cosmic Mind where all sorts of ideas, possibilities, formations are moving about. The individual mind takes up those which appeal to it or perhaps come into distinct form when they touch it. But these are possibilities, not truths, so it is better not to let them run free like that.

*

One [*who is open to the cosmic Mind*] is aware of the cosmic Mind and the mental forces that move there and how they work on one's mind and that of others and one is able to deal with one's own mind with a greater knowledge and effective power. There are many other results, but this is the fundamental one. This is of course if one opens in the right way and does not merely become a passive field of all sorts of ideas and mental forces.

*

The opening to cosmic mind makes the experience of the Divine everywhere for instance more easy—but it is not essentially spiritual; if there is not a coming of wider spiritual experiences, then it need not be spiritual at all.

Opening to the Cosmic Life

One [*who is open to the cosmic Life*] becomes aware of all the life-forces and of how they act upon oneself and others, upon mind, upon body—also the force movements behind events. One becomes too directly aware of the vital plane, its worlds, its beings, and the direct action of their formations on the earth-life. One has to become aware also at the same time of one's own true vital being and act from it and not from the surface or desire vital in relation to all these things. All this effect does not come at once,—it develops as the contact with the cosmic Life increases.

*

In the universal vital especially there is a deceptive attraction and an exhilarating rush of power (not true quiet power but mere force) which those who yield to it cling to as a drunkard to his intoxicants. It gives them a sense of being strong and great and full of interesting things — when it is taken from them, they feel “like ordinary people” and ask for it back again.

*

You had a mental and the beginning of a vital opening to the cosmic consciousness — kept on the spiritualised level, the vision or feeling of the Divine Ananda without seeking for possession or a gross outer enjoyment, it would have established a Yogic consciousness and made a base for knowledge and peace and power and psychic love and surrender to come down.

The Cosmic Consciousness and the Physical

One cannot be high in the cosmic consciousness unless one has taken one's station above the body in a cosmic wideness which envelops the whole being. What you did was to open to it to a certain extent and then, instead of plunging into it at once as some do, your sadhana took the turn of coming down into the physical to prepare it. That is not altogether an undesirable turn — for many suffer by not having taken it. X for instance got a very evident opening into the cosmic, but he lost his way in it altogether because neither his vital nor his physical were cleared of certain very serious imperfections.

*

Yes, it is the psychising and purification that have been going on, but you had some openings of contact with the cosmic consciousness which did not prolong themselves when you came into the physical. X's ascents, I suppose, are more a going out of the body in his mind and vital than any stationing of his consciousness above. The latter would have brought a calm and peace and liberation which he does not possess as yet. This kind of ascent brings a conscious contact with cosmic forces of the

mental and vital planes (in his case more the vital) and some extraordinary experiences which are not altogether safe. There is great danger there of entering into and getting perplexed in the intermediate zone. I would rather see him liberated from these things than pursuing them any farther. A descent from above of the higher forces would be far more helpful to him than these ascensions.

Chapter Three

The Universal or Cosmic Forces

The Nature of the Universal or Cosmic Forces

Universal forces means all forces good or bad, favourable or hostile, of light or of darkness that move in the cosmos.

*

The cosmic forces here whether good or bad are forces of the Ignorance. Above them is the Truth-Consciousness that can only manifest when ego and desire are overcome — it is the force from the Divine Truth-Consciousness that must descend — the higher Peace, Light, Knowledge, Purity, Power, Ananda must work upon the cosmic forces in the individual so as to change them and substitute the Truth-Forces in place of the ordinary working.

*

They [*the cosmic forces*] act on everyone, according to the person's nature — and his will and consciousness.

*

It [*knowledge of the working of the cosmic forces*] is necessary — it comes of itself as one gets more and more forward in the cosmic consciousness.

*

They [*pain and misery*] are perhaps rather the result of the action of universal forces — but in a certain sense grief and pain may be said to be universal forces — for there are waves of these things that arrive and invade the being often without apparent cause.

*

The universal forces move by their own force and the consciousness within them — but there is also the Cosmic Spirit

who supports them and determines by his onlook and disposing will their play — although the direct action is left to the forces — it is the play of universal Prakriti with the universal Purusha watching behind it. In the individual also there is the individual Purusha who can, if he wills, not merely assent to the play of Prakriti, but accept or reject or will for its change. All that is in the play itself as we see it here. There is something above — but the action of that is an intervention rather than a moment to moment control; it can become a constant direct control only when one replaces the play of the forces by the government of the Divine.

*

One can live in contact with the Divine even amidst the universal forces — but to live in the Divine one must be able to rise beyond the lower universal nature or to call down the Divine consciousness here. The beginnings are difficult for most — and at no time is it really easy.

The Universal Energies and the Divine Force

There is only one Force or Energy here in reality; what is called the individual energy does not belong to the individual, but to the one universal Power.

In the one infinite Energy itself a distinction has to be made between the Divine Force that descends from above the mind and the inferior universal Energy with all its different forms, movements, waves and currents that come into you from outside. The inferior Energy proceeds from the Divine Shakti, but it has fallen from the truth of its source and has no longer its direct guidance.

When these universal energies come into touch with the Divine Force, rise to meet it and allow it to take hold of them and occupy and change them, then they are purified and uplifted and transformed and become a movement of the Divine Force.

When they are not in touch with the Divine Force, not obedient to it, but act for themselves, they are unenlightened, erring,

impure, mixed and confused — powers of the Ignorance.

Always, therefore, keep in touch with the Divine Force. The best thing for you is to do that simply and allow it to do its own work; wherever necessary, it will take hold of the inferior energies and purify them; at other times it will empty you of them and fill you with itself. But if you let your mind take the lead and discuss and decide what is to be done, you will lose touch with the Divine Force and the lower energies will begin to act for themselves and all go into confusion and a wrong movement.

It is still worse to try to draw these lower universal energies from those around you and keep up with them a vital interchange; what gain can there be in that? On the contrary, it will lead to greater confusion and even bring in all kinds of mischief and trouble.

Often the association of these universal energies with others is a mistake of your mind. Your mind is seeking always to fix them on to somebody, and often it fixes on one or another at random or else according to old experiences which are no longer valid. For instance, what you call X's force was not his, but a universal hostile force which used X at one time and, owing to a continued association in your mind, still presents itself to you as his, but may now no longer have anything to do with him. By keeping up the old association, you simply give greater opportunity for this undesirable energy to come upon you.

Follow always the one rule, to open yourself directly to the Divine Force and not to others; if you keep in touch with it, all else will progressively arrange itself.

The Cosmic Force and the Overmind

The cosmic Force is under the control of the Overmind. The Supermind does not act on it directly — whatever comes down from there is modified so as to pass through the Overmind and takes a lesser form suitable to the plane on which it acts, mental, vital or physical. But this intervention is exceptional in the ordinary play of the cosmic forces.

The Entry of the Universal Forces

There is no rule for that [*the points at which the universal forces enter one*]. The human being is ordinarily conscious only on the surface — but the surface records only the results of subliminal agencies at work. It is often through the centres that the forces come in, for then they get the greatest power to act on the nature — but they can enter anywhere.

*

The universal forces act very often through the subconscious — especially when the force they send is something the person has been in the habit of obeying and of which the seeds, impressions, “complexes” are strongly rooted in the subconscious — or, even if that is no longer the case, of which there is a memory still in the subconscious.

The Universal Forces and the Individual

Egoism is part of the machinery — a chief part — of universal Nature, first to develop individuality out of indiscriminate force and substance of Nature and, secondly, to make the individual (through the machinery of egoistic thought, feeling, will and desire) a tool of the universal forces. It is only when one gets into touch with a higher Nature that it is possible to get free of this rule of ego and subjection to these forces.

*

Yes, certainly, there is nothing in the individual that is not in the cosmic Energy. For all ordinary purposes the individual is only a differentiated centre of the universal forces — although his soul comes from beyond.

Time Vision and the Cosmic Movement

Time vision is the perception of the cosmic movement of things

developing from state to state and in that the individual movements which make it up. There is also possible a sense of the All as Time in flow or of Time as a dimension interwoven with Space like warp and woof of a cloth etc.

Section Four

The Dangers of Inner and Cosmic Experiences

Chapter One

The Intermediate Zone

The Nature of the Intermediate Zone

I mean by it [*the intermediate zone*] that when the sadhak gets beyond the barriers of his own embodied personal mind he enters into a wide range of experiences which are not the limited solid physical truth of things and not yet either the spiritual truth of things. It is a zone of formations, mental, vital, subtle physical, and whatever one forms or is formed by the forces of these worlds in us becomes for the sadhak for a time the truth — unless he is guided and listens to his guide. Afterwards if he gets through he discovers what it was and passes on into the subtle truth of things. It is a borderland where all the worlds meet, mental, vital, subtle physical, pseudo-spiritual — but there is no order or firm foothold — a passage between the physical and the true spiritual realms.

*

The intermediate zone means simply a confused condition or passage in which one is getting out of the personal consciousness and opening into the cosmic (cosmic Mind, cosmic vital, cosmic physical, something perhaps of the cosmic higher Mind) without having yet transcended the human mind levels. One is not in possession of or direct contact with the divine Truth *on its own levels*, but one can receive something from them, even from the Overmind, indirectly. Only, as one is still immersed in the cosmic Ignorance, all that comes from above can be mixed, perverted, taken hold of for their purposes by lower, even by hostile Powers.

It is not necessary for everyone to struggle through the intermediate zone. If one has purified oneself, if there is no abnormal vanity, egoism, ambition or other strong misleading element, or if one is vigilant and on one's guard, or if the psychic is in front,

one can either pass rapidly and directly or with a minimum of trouble into the higher zones of consciousness where one is in direct contact with the Divine Truth.

On the other hand the passage through the higher zones—higher Mind, illumined Mind, Intuition, Overmind—is obligatory; they are the true Intermediaries between the present consciousness and the Supermind.

*

All these experiences are of the same nature and what applies to one applies to another. Apart from some experiences of a personal character, the rest are either idea-truths, such as pour down into the consciousness from above when one gets into touch with certain planes of being, or strong formations from the larger mental and vital worlds which, when one is directly open to these worlds, rush in and want to use the sadhak for their fulfilment. These things, when they pour down or come in, present themselves with a great force, a vivid sense of inspiration or illumination, much sensation of light and joy, an impression of widening and power. The sadhak feels himself freed from the normal limits, projected into a wonderful new world of experience, filled and enlarged and exalted: what comes associates itself, besides, with his aspirations, ambitions, notions of spiritual fulfilment and Yogic siddhi; it is represented even as itself that realisation and fulfilment. Very easily he is carried away by the splendour and the rush and thinks that he has realised more than he has truly done, something final or at least something sovereignly true. At this stage the necessary knowledge and experience are usually lacking which would tell him that this is only a very uncertain and mixed beginning; he may not realise at once that he is still in the cosmic Ignorance, not in the cosmic Truth, much less in the Transcendental Truth, and that whatever formative or dynamic idea-truths may have come down into him are partial only and yet farther diminished by their presentation to him by a still mixed consciousness. He may fail to realise also that if he rushes to apply what he is realising or receiving as if it were something definitive, he may either fall into confusion

and error or else get shut up in some partial formation in which there may be an element of spiritual Truth but it is likely to be outweighed by more dubious mental and vital accretions that deform it altogether. It is only when he is able to draw back (whether at once or after a time) from his experiences, stand above them with the dispassionate witness consciousness, observe their real nature, limitations, composition, mixture that he can proceed on his way towards a real freedom and a higher, larger and truer siddhi. At each step this has to be done. For whatever comes in this way to the sadhak of this Yoga, whether it be from Overmind or Intuition or illumined Mind or some exalted Life-Plane or from all these together, it is not definitive and final; it is not the supreme Truth in which he can rest, but only a stage. And yet these stages have to be passed through, for the Supramental or the Supreme Truth cannot be reached in one bound or even in many bounds; one has to pursue a calm patient steady progress through many intervening stages without getting bound or attached to their lesser Truth or Light or Power or Ananda.

This is in fact an intermediary state, a zone of transition between the ordinary consciousness in mind and the true Yoga knowledge. One may cross without hurt through it, perceiving at once or at an early stage its real nature and refusing to be detained by its half-lights and tempting but imperfect and often mixed and misleading experiences; one may go astray in it, follow false voices and a mendacious guidance, and that ends in a spiritual disaster; or one may take up one's abode in this intermediate zone, care to go no farther and build there some half-truth which one takes for the whole truth or become the instrument of the Powers of these transitional planes,—that is what happens to many sadhaks and Yogis. Overwhelmed by the first rush and sense of power of a supernormal condition, they get dazzled with a little light which seems to them a tremendous illumination or a touch of force which they mistake for the full Divine Force or at least a very great Yoga Shakti, or they accept some intermediate Power (not always a Power of the Divine) as the Supreme and an intermediate consciousness as the supreme

realisation. Very readily they come to think that they are in the full cosmic consciousness when it is only some front or small part of it or some larger Mind, Life-Power or subtle physical ranges with which they have entered into dynamic connection. Or they feel themselves to be in an entirely illumined consciousness, while in reality they are receiving imperfectly things from above through a partial illumination of some mental or vital plane; for what comes is diminished and often deformed in the course of transmission through these planes; the receiving mind and vital of the sadhak also often understands or transcribes ill what has been received or throws up to mix with it its own ideas, feelings, desires which it yet takes to be not its own but part of the Truth it is receiving because they are mixed with it, imitate its form, are lit up by its illumination and get from this association and borrowed light an exaggerated value.

There are worse dangers in this intermediate zone of experience. For the planes to which the sadhak has now opened his consciousness,—not as before getting glimpses of them and some influences, but directly, receiving their full impact,—send a host of ideas, impulses, suggestions, formations of all kinds, often the most opposite to each other, inconsistent or incompatible, but presented in such a way as to slur over their insufficiencies and differences, with great force, plausibility and a wealth of argument or a convincing sense of certitude. Overpowered by this sense of certitude, vividness, appearance of profusion and richness the mind of the sadhak enters into a great confusion which it takes for some larger organisation and order; or else it whirls about in incessant shiftings and changes which it takes for a rapid progress but which lead nowhere. Or there is the opposite danger that he may become the instrument of some apparently brilliant but ignorant formation; for these intermediate planes are full of little Gods or strong Daityas or smaller beings who want to create, to materialise something or to enforce a mental and vital formation in the earth life and are eager to use or influence or even possess the thought and will of the sadhak and make him their instrument for the purpose. This is quite apart from the well-known danger of actually hostile beings whose

sole purpose is to create confusion, falsehood, corruption of the sadhana and disastrous unspiritual error. Anyone allowing himself to be taken hold of by one of these beings, who often take a divine Name, will lose his way in the Yoga. On the other hand, it is quite possible that the sadhak may be met at his entrance into this zone by a Power of the Divine which helps and leads him till he is ready for greater things; but still that itself is no surety against the errors and stumblings of this zone; for nothing is easier than for the powers of these zones or hostile powers to imitate the guiding Voice or Image and deceive and mislead the sadhak or for himself to attribute the creations and formations of his own mind, vital or ego to the Divine.

For this intermediate zone is a region of half-truths—and that by itself would not matter, for there is no complete truth below the Supermind; but the half-truth here is often so partial or else ambiguous in its application that it leaves a wide field for confusion, delusion and error. The sadhak thinks that he is no longer in the old small consciousness at all, because he feels in contact with something larger or more powerful, and yet the old consciousness is still there, not really abolished. He feels the control or influence of some Power, Being or Force greater than himself, aspires to be its instrument and thinks he has got rid of ego; but this delusion of egolessness often covers an exaggerated ego. Ideas seize upon him and drive his mind which are only partially true and by overconfident misapplication are turned into falsehoods; this vitiates the movements of the consciousness and opens the door to delusion. Suggestions are made, sometimes of a romantic character, which flatter the importance of the sadhak or are agreeable to his wishes and he accepts them without examination or discriminating control. Even what is true, is so exalted or extended beyond its true pitch and limit and measure that it becomes the parent of error. This is a zone which many sadhaks have to cross, in which many wander for a long time and out of which a great many never emerge. Especially if their sadhana is mainly in the mental and vital, they have to meet here many difficulties and much danger; only those who follow scrupulously a strict guidance or have

the psychic being prominent in their nature pass easily as if on a sure and clearly marked road across this intermediate region. A central sincerity, a fundamental humility also save from much danger and trouble. One can then pass quickly beyond into a clearer Light where if there is still much mixture, incertitude and struggle, yet the orientation is towards the cosmic Truth and not to a half-illumined prolongation of Maya and Ignorance.

I have described in general terms with its main features and possibilities this state of consciousness just across the border of the normal consciousness, because it is here that these experiences seem to move. But different sadhaks comport themselves differently in it and respond sometimes to one class of possibilities, sometimes to another. In this case it seems to have been entered through an attempt to call down or force a way into the cosmic consciousness — it does not matter which way it is put or whether one is quite aware of what one is doing or aware of it in these terms, it comes to that in substance. It is not the Overmind which was entered, for to go straight into the Overmind is impossible. The Overmind is indeed above and behind the whole action of the cosmic consciousness, but one can at first have only an indirect connection with it; things come down from it through intermediate ranges into a larger mind-plane, life-plane, subtle physical plane and come very much changed and diminished in the transmission, without anything like the full power and truth they have in the Overmind itself on its native levels. Most of the movements come not from the Overmind, but down from higher mind ranges. The ideas with which these experiences are penetrated and on which they seem to rest their claim to truth are not of the Overmind, but of the higher Mind or sometimes of the illumined Mind; but they are mixed with suggestions from the lower mind and vital regions and badly diminished in their application or misapplied in many places. All this would not matter; it is usual and normal, and one has to pass through it and come out into a clearer atmosphere where things are better organised and placed on a surer basis. But the movement was made in a spirit of excessive hurry and eagerness, of exaggerated self-esteem and self-confidence, of a premature

certitude, relying on no other guidance than that of one's own mind or of the "Divine" as conceived or experienced in a stage of very limited knowledge. But the sadhak's conception and experience of the Divine, even if it is fundamentally genuine, is never in such a stage complete and pure; it is mixed with all sorts of mental and vital ascriptions and all sorts of things are associated with this Divine guidance and believed to be part of it which come from quite other sources. Even supposing there is any direct guidance,—most often in these conditions the Divine acts mostly from behind the veil,—it is only occasional and the rest is done through a play of forces; error and stumbling and mixture of Ignorance take place freely and these things are allowed because the sadhak has to be tested by the world-forces, to learn by experience, to grow through imperfection towards perfection—if he is capable of it, if he is willing to learn, to open his eyes to his own mistakes and errors, to learn and profit by them so as to grow towards a purer Truth, Light and Knowledge.

The result of this state of mind is that one begins to affirm everything that comes in this mixed and dubious region as if it were all the Truth and the sheer Divine Will; the ideas or the suggestions that constantly repeat themselves are expressed with a self-assertive absoluteness as if they were Truth entire and undeniable. There is an impression that one has become impersonal and free from ego, while the whole tone of the mind, its utterance and spirit are full of vehement self-assertiveness justified by the affirmation that one is thinking and acting as an instrument and under the inspiration of the Divine. Ideas are put forward very aggressively that can be valid to the mind, but are not spiritually valid; yet they are stated as if they were spiritual absolutes. For instance, equality, which in that sense—for Yogic Samata is a quite different thing—is a mere mental principle, the claim to a sacred independence, the refusal to accept anyone as Guru, the opposition made between the Divine and the human Divine etc., etc. All these ideas are positions that can be taken by the mind and the vital and turned into principles which they try to enforce on the religious or even the spiritual life, but they are not and cannot be spiritual in their nature. There also begin to come in

suggestions from the vital planes, a pullulation of imaginations romantic, fanciful or ingenious, hidden interpretations, pseudo-intuitions, would-be initiations into things beyond, which excite or bemuse the mind and are often so turned as to flatter and magnify ego and self-importance, but are not founded on any well-ascertained spiritual or occult realities of a true order. This region is full of elements of this kind and, if allowed, they begin to crowd on the sadhak; but if he seriously means to reach the Highest, he must simply observe them and pass on. It is not that there is never any truth in such things, but for one that is true there are nine imitative falsehoods presented and only a trained occultist with the infallible tact born of long experience can guide himself without stumbling or being caught through the maze. It is possible for the whole attitude and action and utterance to be so surcharged with the errors of this intermediate zone that to go farther on this route would be to travel far away from the Divine and from the Yoga.

Here the choice is still open whether to follow the very mixed guidance one gets in the midst of these experiences or to accept the true guidance. Each man who enters the realms of Yogic experience is free to follow his own way; but this Yoga is not a path for anyone to follow, but only for those who accept to seek the aim, pursue the way pointed out upon which a sure guidance is indispensable. It is idle for anyone to expect that he can follow this road far, much less go to the end by his own inner strength and knowledge without the true aid or influence. Even the ordinary long-practised Yogas are hard to follow without the aid of the Guru; in this which as it advances goes through untrodden countries and unknown entangled regions, it is quite impossible. As for the work to be done it also is not a work for any sadhak of any path; it is not, either, the work of the "impersonal" Divine—who, for that matter, is not an active Power but supports impartially all work in the universe. It is a training ground for those who have to pass through the difficult and complex way of this Yoga and none other. All work here must be done in a spirit of acceptance, discipline and surrender, not with personal demands and conditions, but with a vigilant

conscious submission to control and guidance. Work done in any other spirit only results in an unspiritual disorder, confusion and disturbance of the atmosphere. In it too difficulties, errors, stumblings are frequent, because in this Yoga people have to be led patiently and with some field for their own effort, by experience, out of the ignorance natural to Mind and Life to a wider spirit and a luminous knowledge. But the danger of an unguided wandering in the regions across the border is that the very basis of the Yoga may be contradicted and the conditions under which alone the work can be done may be lost altogether. The transition through this intermediate zone — not obligatory, for many pass by a narrower but surer way — is a crucial passage; what comes out of it is likely to be a very wide or rich creation; but when one founders there, recovery is difficult, painful, assured only after a long struggle and endeavour.

The Dangers of the Intermediate Zone

As for the letter, I suppose you will have to tell the writer that his father committed a mistake when he took up Yoga without a Guru — for the mental idea about a Guru cannot take the place of the actual living influence. This Yoga especially, as I have written in my books, needs the help of the Guru and cannot be done without it. The condition into which his father got was a breakdown, not a state of siddhi. He passed out of the normal mental consciousness into a contact with some intermediate zone of consciousness (not the spiritual) where one can be subjected to all sorts of voices, suggestions, ideas, so-called inspirations which are not genuine. I have warned against the dangers of this intermediate zone in one of my books.¹ The sadhak can avoid entering into this zone — if he enters, he has to look with indifference on all these things and observe them without lending any credence; by so doing he can safely pass into the true spiritual light. If he takes them all as true or real without discrimination,

¹ The Riddle of This World. Sri Aurobindo is referring to the preceding letter (pp. 296–303), which appeared in this book.—Ed.

he is likely to land himself in a great mental confusion and if there is in addition a lesion or weakness of the brain — the latter is quite possible in one who has been subject to apoplexy — it may have serious consequences and even lead to a disturbance of the reason. If there is ambition or other motive of the kind mixed up in the spiritual seeking, it may lead to a fall in the Yoga and the growth of an exaggerated egoism or megalomania — of this there are several symptoms in the utterances of his father during the crisis. In fact one cannot or ought not to plunge into the experiences of this sadhana without a fairly long period of preparation and purification (unless one has already a great spiritual strength and elevation). Sri Aurobindo himself does not care to accept many into his path and rejects many more than he accepts. It would be well if he can get his father to pursue the sadhana no farther — for what he is doing is not really Sri Aurobindo's Yoga but something he has constructed in his own mind and once there has been an upset of this kind, the wisest course is discontinuance.

*

All these experiences of yours belong to what I have called the intermediate zone; a large proportion of them are of the vital plane. In the vital plane there are all kinds of things, good and bad, helpful and dangerous, true, half true and false, genuine and deceptive. One has therefore to be very careful and be always vigilant and turned towards the true source of Light. The difficulty is that here one may have a true spiritual experience and afterwards all sorts of imitative deceptions come in and bring with them the danger of a false experience. One has to watch, observe one's experiences and try to discriminate and understand, — waiting for two things, the opening of a wider higher consciousness from above and the coming forward of the psychic being from behind. When these two things happen, then the chance of error is diminished and the true inner guidance begins to make itself more and more felt in the sadhana.

Lights are of all kinds, supramental, mental, vital, physical, divine or Asuric — one has to watch, grow in experience and

learn to know one from another. The true lights however are by their clarity and beauty not difficult to recognise.
