To all these ancient questionings the reply of the Upanishad is categorical, explicit, unflinching. "Doing verily works here one should wish to live a hundred years; thus it is with thee & it is not otherwise than this; action cleaveth not to a man." It is not surprising that the great Shankara with his legacy of Buddhist pessimism, his rejection of action, his sense of the nullity of the world, faced by this massive & tremendous asseveration should have put it aside by his favourite device of devoting it to the service of unenlightened minds, although it occurs apparently as an integral portion of the argument & there is not a hint or a trace of its being intended as a contradiction or qualification of the main teaching, although too this interpretation is stultified both by the run of the two lines & by the immediate occurrence of the next verse,—but every incongruity & impossibility is to be accepted rather than suffer such an assertion to stand as the teaching of the Sruti. Nor is it surprising that Shankara's greatest follower, Vidyaranya, feeling perhaps that his master's dealings

with the text in this commentary were of the most arbitrary & violent, should have preferred to exclude the Isha from his list of authoritative Upanishads. But to us, uncommitted to any previous theory, this sloka offers no difficulty but is rather an integral & most illuminating step in the development of a great & liberating doctrine.

Kurvanneva, says the Rishi, having his eye on the great dispute. Thou shalt do works & not abstain from doing them and the works are the works of this material world, those that are to be done iha, here, in this life & body. Doing his works in this world a man shall be joyously willing to live the full span of years allowed to the mortal body. If he grows weary, if he seeks to abridge it, if he has haste in his soul for the side beyond death, he is not yet an enlightened soul, not yet divine. With this great admission the Vedanta can no longer be a mere ascetic gospel. Life — full & unabridged in its duration, — full and uncontracted in its activity is accepted, welcomed, consecrated to divine use. And the Rishi affirms his reason for acceptance — because so it is with thee & it is not otherwise than this. Because in other words this is the law of our being and this is the will of the Eternal. No man, as the Gita clearly teaches, can abstain from works, for even the state of withdrawal of the ascetic, even the self-collected existence of the silent Yогin is an act and an act of tremendous effect & profoundest import. So long as we are in manifest existence, so long we are in the jagati using, influencing & impressing ourselves on the jagat and we cannot escape from the necessity self-imposed on Himself by God within us. And it is so imposed for the reason already stated, because He has made this world for His habitation & as a means for His enjoyment & a thing for His delight — & this his great will & purpose no man can be allowed to frustrate. The wise mind, the illumined soul knowing this truth makes no vain attempt to square this circle; he accepts that which God intends fully & frankly and only seeks the best way to fulfil God in this existence which he occupies on the way to another. For he knows that bondage and freedom are states of the outer mind, not of the inner spirit; for there is none free & none bound, none panting after liberation

& none fleeing from bondage, but only the Eternal rejoicing secretly or manifestly in His innumerable habitations.

But in that case we are eternally bound by the chain of our works, nailed helplessly to the wheel of karma? Not so; for the wheel of karma is an error and the chain of our works is a grand illusion. "Action clingeth not to a man." Bondage is not the result of works, & liberation is not the result of cessation of works. Bondage is a state of the mind; liberation is another state of the mind. When through the principle of desire in the mind the soul, the Ish, the lord, mixes himself up in the whirl of Prakriti, he sees himself in mental consciousness as if carried forward in the stream of causality; he seems to the mind in him to be bound by the effects of his works; when he relinquishes desire, then he recovers his lordship — which in his higher being he has never lost — and appears to himself what he has always been in reality, free in his being, swarat, samrat. It follows then that the way to liberate oneself is not to renounce works but to rise from mind to Supra-mind, from the consciousness of mental being, sambhava, to the consciousness of self-being, swayambhava or asambhuti. It is necessary to remember oneself, but it is not necessary to forget phenomena. For action is the movement of Prakriti and the chain of action is nothing more terrible or mystic than the relation of cause & effect. That chain does not bind the Master; action leaves no stain on the soul. The works of the liberated man produce an effect indeed, but on the stream of Prakriti, not on the soul which is above its action and not under it, uses action & is not victimised by it, determines action & is not determined by it. But if action in its nature bound the soul, then freedom here would be impossible. It does not & cannot; the soul allows mind to mix itself up with its works, buddhir lipyate, but the action does not adhere to the soul, na karma lipyate nare. The fear of action is Maya; the impossibility of combining action with calm & renunciation is a false sanskara. Nivritti or calm is the eternal state & very nature of the soul, pravritti is in manifestation the eternal state and very nature of Prakriti. Their coexistence & harmony is not only possible, but it is the secret of the world obscured only by ignorance in the mind. The enemy therefore is

not action, but ignorance; not works bind us, but works done in the state of ignorance give us the illusion of bondage. The idea of separateness, of limitation with its fruit of desire, internal struggle, disappointment, grief, pain,—this alone is our stumbling block. Abolish it, see God alone everywhere & all difficulty disappears. Nivritti & Pravritti, tyaga & bhoga move harmoniously to the perfect fulfilment of the divine purpose.

Those important enunciations completed, the Sage proceeds to a minor, but not inessential effect of the knowledge he is developing—the life after this one which we have to use here, our progress into worlds beyond. The gati, trans-mortal journey or destination of the soul, occupied profoundly the Vedantic mind as it has occupied humanity in all except in its brief periods of entire materialistic this-worldliness. As yet the Sage does not proceed to any positive statement; but by a negative movement he indicates the importance of the question. Our life here is only one circumstance in our progress—the fundamental circumstance, indeed, since earth is the pratistha or pedestal of our consciousness in manifest being,—but still the fundamental is not the final, the pratistha is not the consummation but only the means to the consummation. It is the first step in our journey, the initial movement in the triple stride of Vishnu. There is beyond it a second step, from which we constantly return till we are ready here for the third, for the consummation. Our future state depends on our fullness at the time of our passage, on our harmonious progress towards divine being. That is the hidden thing in us which we have to develop. We are to become atmavan, to possess our divine being, to disengage & fulfil our real self. Those who fall from this development, who turn aside from it are self-hurters or, to take the full vigorous sense of the word used, self-slayers. Not that God in us can be slain, for death of the soul is impossible,—but there may be temporary perdition of the apparent divinity by the murder of its self-expression. And to this we may arrive either by wilfulness of passion or by intellectual wilfulness. Instead of becoming gods, Suras, images of the Most High, the Paratpara Purusha in His effulgent glory, we may become misrepresentations of Him, false

because distorted images, distorted by imperfection, distorted by onesidedness, Titans, Asuras or else souls unillumined by the sun of Knowledge & if illumined at all then only by false lights which eventually become eclipsed in darkness. Our after state will be Asurya, sunless, unillumined. To what worlds do we then journey?

The ordinary reading of the first word in the third verse of the Upanishad, is *Asūrya*, Titanic, but there is a possible variation *Asúrya*, sunless. The substantial sense resulting from both readings is the same, but the colour given will be different. The Titans or Asuras of the Veda are souls of mere undisciplined might. They are those who found themselves not on light & calm but on *asu*, the vital force & might which is the basis of all energetic & impetuous feeling & action. The self-willed ones, who from temperamental passion wreck themselves by the furious pursuit in desire of a false object or from intellectual passion wreck themselves by the blind pursuit in belief of a false idea, they follow a path because it is their own from Titanical attachment, from an immense though possibly lofty egoism. *Mole ruit sua*. They fall by their own mass, they collapse by excess of greatness. They need not be ignoble souls, but may even seem sometimes more noble than the gods & their victorious legions. When they hack & hew at the god within them, it may be in tremendous devotion to a principle; when they subdue, cloud & torture themselves till they stumble forward into misery & night, till they become demoniac in nature, it may be in furious & hungry insistence on a great aspiration. They may be grandiosely mighty like Hiranyakashipu, ostentatiously largehearted like Bali, fiercely self-righteous like the younger Prahlada. But they fall whether great or petty, noble or ignoble & in their fall they are thrust down by Vishnu to Patala, to the worlds of delusion & shadow, or of impenetrable gloom, because they have used the heart or intellect to serve passion & ignorance, enslaved the spiritual to the material & vital elements & subordinated the man in them to the Naga, the serpent. The Naga is the symbol of the mysterious earthbound force in man. Wisest he of the beasts of the field, but still a beast of the field,

not the winged Garuda revered to be the upbearer of divinity who opens his vans to the sunlight and soars to the highest seat of Vishnu. If we read Asūrya we shall then have to translate “Verily it is to the worlds of the Titans, worlds enveloped in blind gloom, that they after passing hence resort who are self-slayers.” Otherwise it is the worlds farthest removed from the Sun, our symbol & principle of divine Knowledge. There are materialised states of darkness in the conscious being in which they must work out the bewilderment & confusion they have fastened on themselves by an obstinate persistence in self-will & ignorance. In either case the intention of the Sage is evident from the later passages of this Upanishad. Whether we follow exclusively after Avidya or exclusively after Vidya, we go equally astray, exclusiveness means ignorance, exclusiveness means confusion & division of the indivisible Brahman, & persistence in such error is an obstinacy fatal to the soul in its immediate prospects. Temporarily — because eternal perdition is impossible, — it fails to cross successfully over death & enters into trans-mortal darkness. Those who accept the unity of the Brahman, who see in Vidya & Avidya only vyavahara, light & shadow reflected in Him for the use of self-expression in phenomena, who live in the knowledge of the One in the Many, embracing like Brahman all being in themselves, rejecting nothing, preferring nothing, bearing everything, effecting everything, infinite in calm by renunciation, infinite in might & bliss by enjoyment, they are men perfected, they are the siddhas. Even those who not yet attaining, follow faithfully this law & this ideal journey onwards in the way of their self-fulfilment and are lifted by all-purifying Agni to the regions of the Sun where they possess their perfect oneness & receive their consummate felicity.... With this warning (for the promise comes afterward) closes the first movement of the Upanishad.

III

God then & the world are before us, the Inhabitant to be recognised as the Lord of things even when He appears otherwise &

His habitation to be regarded merely as a movement set going by Him for phenomenal purposes, a stream of form & action by which He can enjoy His own conditioned being,—God & the world are to be possessed by a pure & infinite enjoyment, Ananda, or bliss which depends on a perfect renunciation not of the world, but of the limited struggle & the ignorant attachment, of the demand & the groping. These poor & imperfect movements [are] to be replaced by a mighty calm and a divine satisfaction. We are not to renounce works, which do not & cannot stain the soul or bind it, but to be liberated through acceptance of works in a luminous knowledge of their divine use & nature; not mutilation of life is to be our ideal, but fulfilment through life of the intention of the Most High in His phenomenal manifestation. If we mutilate life through self-will & ignorance we imprison ourselves after death in worlds of confusion & darkness and here like a ship befogged & astray in dense sea mists are hindered & long delayed in our divine voyage.

But now farther questions arise. Stated by itself & without development or qualification the first line of this great teaching, although fundamental to the practical living of the divine life and the sufficient & right attitude for its fulfilment might yet, like all trenchant assertions, too positively & exclusively taken, lead us into a profound error & misunderstanding. God & the World, the Movement & the Dweller in the movement, that is the practical relation between the unconditioned & the phenomenal which we have to accept as the unalterable basis of our rule of right living. But this general movement, with the particular knots in it of apparent movement & apparent status which we call formations or objects,—what is it? Movement of Mahat or movement of what nature,—real or unreal? And the inhabitant, is he different from His habitation? If He is different & the habitation is real, what becomes of the universal unity Vedanta teaches and how are we not handed over to duality and a fundamental disparity, if not a fundamental opposition? It is to remove this possible misunderstanding that the Rishi now proceeds to a completer though not yet entirely complete statement of universal existence. He has stated the practical relation,

he now states the essential relation. It amounts in effect to the fundamental tenet of Vedanta in the Upanishads “Sarvam khalu idam Brahma.” All this, in truth, is the Brahman. He says “There is One who unmoving is swifter than mind, neither have the gods reached It for it goes always in front. Standing, it outstrips others as they run. In It Matariswan sets activity. That moves & that does not move; that is far & the same that is verily near; That is within all this, the same that is outside all this.”

Not only the stable but the unstable; not only the constant, but the recurrent; not only the Inhabitant but His habitation; not only Purusha but Prakriti. It is ekam, not a number [of] different beings, as in the dogma of the Sankhyas, but One being; not two separate categories, the real & the unreal, Brahman & Maya, but only One, the Brahman. That which moves not is the Brahman but also that which moves is the Brahman, not merely Maya, not merely a base & ugly dream. We know already by the first verse that the innumerable inhabitants of this moving universe are not essentially many, but are one Soul disporting in many bodies or not really disporting but supporting the multiform play of Prakriti; eko achalah sanatanah, in the solemn language of the Gita, one, motionless, without beginning or end. He is this man & that woman, yonder ancient leaning on his staff, this blue winged bird, that scarlet winged. But now we learn that also the name & form & property, the manhood & the womanhood, the age & the youth, the blueness & the scarlet hue, the staff, the attitude of leaning, the bird, the wing, all is the Brahman. The Inhabitant is not different from His habitation.

This is a difficult point for the ordinary mind to admit intellectually; it is difficult, even for minds not ordinary, really to grasp the intellectual conception, take it into the soul & realise it there in feeling & consciousness. Even the greatest materialist in theory regards himself in his feelings as a mind or a soul and is aware of a gulf between himself & the inanimate. His opinions contradict his heart's consciousness. In Yoga also one of our first realisations is the separateness of the body by the practical removal of the dehatmabuddhi,— a sensation the psychology of which is not well understood & being misunderstood gives

rise to many errors. Hence we have a proneness to regard the inanimate as undivine, the material as gross & even foul and the objective as unreal — as if all this were not merely arrangement & vyavahara, as if the material was not also Atman & spirit, Brahman equally present in clod & man, body & soul, thought & action, as if all were not essentially equal in their divinity, and apparently so diverse merely because of the infinite variation of form & guna! By this cardinal error the intellectual man comes to despise & neglect the body, the religious man to treat the body & often the intellect also as an impediment, praising the heart only, the contemplative spiritual man to aim at casting out both mind & body & banishing from him the very thought & perception of the objective. All are ruled or driven by this dim sensation or clear belief that the subjective soul seated within them alone is God, alone the Self, that the objective movement of Spirit seeming to the movement of mind & senses to be outside & apart from us, is not God & is therefore worthless & evil. They all insist on a mental attitude to things, an attitude of analysis, separation & logical distinction instead of rising beyond mind-limitations & mind-methods to God's transcendent embracing vision which sees all things & states & is affected & bound by none. They all therefore make the essential error of duality, from which eventually every kind of ignorance & confusion arises. It is for this reason, to discourage this error that the Sage insists on his ekam in the neuter — not only is He divine, Sa, God regarding Himself subjectively as universal cognisant Personality, but That is divine, Tat, Brahman realising Himself by identity both beyond & in and as all phenomenal existences, at will & coexistently transcendental & phenomenal, conditioned & unconditioned, One in the One & One in the Many.

Brahman is spoken of here, not as the absolute Parabrahman outside all relation to life & phenomena, for to the unknowable utterness of Parabrahman such phrases as "swifter than the mind" or such ideas as outrunning the gods or going in their front cannot be applied,—It is the Brahman as we see It in Its relation to phenomena, God in the world, conditioned to our awareness in vyavahara, unconditioned to our awareness

in paramartha, which is the subject of this & the following shloka.³ That is the One & sole Existence which, though indeed It does not move, is swifter than the mind & therefore the Gods cannot attain to It because It goes always in front. For the mind served by the senses is the instrument which men use to grasp & measure the world & the gods are the presiding powers of all mental & physical functions, but neither the mind nor the senses, neither sensation nor reason can attain to the Brahman. It always goes far in front of any swiftest agency by which we can pursue It.

What is the precise significance of this imagery? The intention can only be understood if we remember the nature of mental action upon which such enormous stress is here laid and the limitations of that action. Mind always starts from a point, the thinker or the object of thought; it works in space or time on particular objects or groups of objects or at most on the sum of all objects known. It can only seek to know the movement & process of the world, but of that which is beyond & behind movement & process, what can it know? At most it can feel or be told that He the eternal & ineffable exists. Ordinarily, it can only go as far back as itself and say "I, mind, am He; because I think, I am; because I am & think, things are" — propositions which as the expression of a relative & intermediate fact have their validity but are as an universal & ultimate statement untrue. But even the movement of God in nature is too vast & swift for the mind to grasp. It catches at & seizes petty surrounding eddies or even great masses of movement at a little distance; it seizes, arranges to itself in its own terms of vision & classes them triumphantly as ultimate laws of Nature. But who has sailed all these waters or can tell where, if at all, they end? Who shall say that those laws are not byelaws only, or the charter & constitution of a single dependency only or province? Follow

³ *The following sentence was written in the top margin of the manuscript page. Its place of insertion was not marked:*

Of the Absolute all we can say is "It is not that, it is not that"; it is unknowable in Itself, knowable only in our existence here or in relation to our existence here, not to be characterised by any epithet, description or suggestion.

God to the utmost confines of observable space, — He is sure to be whirling universes into being far in front. Pursue Him into the deepest recesses of experimental being, there are unguessed universes of consciousness behind to which you have no present access. Infinity is only one of His aspects, but the very nature of Infinity is that the mind cannot grasp it, though the reason deduces it. Who measured Space? Can any vastest Mind find out when Things began or know when & how they shall end? Nay, there may be near to us universes of another Time, Space & arrangement to which our material dimensions & mind & sense limitations forbid us entrance. Even here who has traced out the purpose of creation or systematised the ways of Providence? Of a hundred things that happen immediately around us, can we even in a dozen instances tell more than fragmentarily & at a hazard why the thing has happened, to what end it conduced, or of what ordering of things it was a piece & movement? Yet, as the eye opens to the innermost secret of things, one realises that an infinite Wisdom presides over the smallest happening & eternally links today's trifling action to the grandiose movement of the centuries — nay, that every thought which passes through our minds however weak, trivial or absurd, has its mark, in the depths of itself its purpose, even its necessity. But of all this how much can the gods of mind, reason & sense ascertain? They run, they gallop, they outstrip the arrow, the bullet, the lightning, the meteor, all material swiftnesses, but That though it moves not, travels still in front. Yes, even when we think we are in front of Him, have fathomed His ways, classified His laws, understood existence, ascertained & determined the future by the past, suddenly we stumble & come across a new landmark or footprint which shows where That has passed; a touch of His finger surprises us as He speeds past & our theories crumble, our knowledge is turned into foolishness, our enlightenment becomes the laughingstock of better enlightened generations. It standing outstrips others as they run, yet all the time, had no need to move. Already God was in front of us, as He is behind, above, below, on every side. Our latest knowledge will always be a candle burning in the mists of the night; our discoveries

pebbles picked up on the shore of a boundless ocean. Not only can we not know That in all Its absolute, transcendent reality, but we cannot know It in all the vastness of Its phenomenal workings. Much we may yet know by the mind, but not all, not more than a corner or a system. All that we can do is to seek the boundless Lord of a boundless universe & here & elsewhere to know each habitation and recognise its Inhabitant. The dweller is divine, but the house too divine, a temple of God, sukritam, well built, delightful & holy — my God Himself manifested as name & form.

That stands really & does not run. What then is the movement by which He outstrips others or is far in front? The clue is given in the expression swifter than mind. It is the mind that runs in us but what is it that runs swifter than mind just as mind runs swifter than any material force? Something of which mind & matter are lower movements, — that which is the essence of the jagati, the essential conscious being of which mind, life & matter are particular currents. This conscious-being is That — the sole Reality which assumes so many appearances. It does not run, for where should it run when it does not exist in time & space, but time & space exist in the Brahman. All things are created in God's consciousness which has no more to move than a man has to move when he follows a particular train of thought. He who was before Time, is still just what He was after Time is finished — drawn back, that is to say, into supratemporal consciousness. He has not moved in His being an inch, He has not changed in His being by the shadow of a shadow. He is still eko achalah sanatanah, one, motionless, without change or end. This side of the Sun or that side of Lyra are to Him one point, or rather no point at all. Space is a symbol into which Thought has translated an arrangement in supraspatial Consciousness. Time & Causality are not different. Therefore it appears that both jagati & jagat are no movement of matter or material force, (that is expressly excluded in the [eighth] verse), nor of mind, (that is expressly excluded here) but of Conscious being in itself, a mysterious activity the essence of which is limitless & absolute Awareness not expressible in language, but translated

in the symbols of our Thought here into a movement in Time, Space & Causality. This universal tenet of Vedanta, although not expressly stated, is yet implied in the Rishi's thought & follows inevitably from his expression. He could very well in his age & surroundings take it for granted, but we have to state it explicitly; for, unless it is assumed, the second movement of the Sage's thought cannot be entirely understood by us. It is, indeed, the foundation of all Vedantic thinking.

In this Brahman Matariswan sets activity. Tasminn apo Matariswa dadhati. Tasmin, in the containing, stable & fulfilling active Brahman already described; Apas, work or activity (Latin opus), this Vedic word being used in preference to karmani, because karmani expresses individual actions & it is here the general universe-activity of Brahman that is intended, not indeed all Prakriti, but that which is manifest as work productive & creative, the movement of the sun & star, the growth of the tree, the flowing of the waters, the progress of life in all its multitude; Matariswa, he that rests in the matrix of things, that is to say Vayu, the motional or first energetic principle of Nature founded in Akasha, the static principle of extension which is the eternal matrix of things, working in it as Prana, the universal life-activity; dadhati, ($\tau\bar{\imath}\theta\eta\sigma\iota$) establishes, sets in its place & manages. For the root dha has always the idea of arrangement, management, working out of things.

The reason for introducing this final and more limiting idea about the Brahman as the culminating phrase of this shloka, is the Sage's intention to emphasise the divineness of that particular movement of Prakriti which is the basis of karmani, human action in this mortal life. Matariswan is the energy of God in Prakriti which enters into as into a womb or matrix (Matar), is first concealed in,—as a child in the womb—& then emerges out of the static condition of extension, represented to our senses in matter as ether. It emerges in the motional principle of expansion & contraction represented to the senses as the gaseous state, especially as breath & as air, called by us therefore Vayu, which by disturbing the even, self-contained vibration (shabda) of the ether, produces vibratory waves (kshobha), generates action &

reaction (rajas) on which ether behind is continually impressing a tendency to equipoise (sattwa), the failure of which is the only cause of disintegration of movement (death, mrityu, tamoguna) & creates contact (sparsha) which is the basis of mental & material sensation & indeed of all relation in phenomenal existence. Matariswan, identifying himself with Vayu, supporting himself on these principles of wave-vibration, action-reaction & contact, valid not only in matter but in life & mind, using the other three elementary or fundamental states known to Vedic enquiry,— agni (fire), the formatory principle of intension, represented to our senses in matter as heat, light & fire, apas or jala (water), the materialising or outward flowing principle of continuation, represented to our senses in matter as sap, seed, rasa, & prithwi (earth), the stabilising principle of condensation, represented to us in matter as earth, the basis of all solids,— Matariswan, deploying existence in settled forms by the fivefold (panchabhaotic) complex movement of the material Brahman, of conscious being as the essential substance of things, reveals himself as universal life activity, upholder of our vitality, prompter & cause of our actions. He as Life, is latently active in the utter inanimate, present, but unorganised in the metal, organised for life and growth only in the plant, for sense & feeling & thought in the animal creation, for reason & illumination & progress to god-head in man, for sempiternal immortality in the gods. But who, ultimately, is this Matariswan? Brahman himself, as the Rigvedic Rishis already knew, manifesting himself in relation to His other movements as the cause, condition & master of vitality.

Life-action, then, is not indeed the whole action of the universe; nor is our human life-action, our apas, work, task here, its culminating activity. There are more developed beings, superior states, other worlds. But it is, whether here or in other planets, the central activity of this universe. It is of this apparently insignificant pebble, the stone that builders not Almighty, not All-wise would have rejected, that God has made the keystone of this work of His construction. In this the movement of our universe finds the means for its central purpose, through it fulfils itself, in it culminates or from it falls away. When God has

fulfilled himself here, under these conditions, with prithivi as his pratistha, then we may pass away finally into other conditions or into the unconditioned, but till then, till God here is satisfied, Brahman here manifested, we come here to fulfil him. Till then, so it must be with us & not otherwise. And this principle is not undivine but divine, not something utterly delusive or diabolical, not the kingdom of a lower spirit or an aberration in knowledge, but God's movement, mahimanam asya, the manifest might, the apparent extension in Itself of the Brahman. Life here is God, the materials of Life here are God. The work is not separate from the worker nor the thought from the thinker. All is the play of a divine Unity.

We can now grasp what the Sage intends when he says, Tad ejati tannaijati. Tat or That, the suggestive vague name for the Brahman whether impersonal or above personality or impersonality, moves & That does not move. It moves or appears to move, — as action of Prakriti & the corresponding knowledge in Purusha, — in the conception of Time, Space & Causality; it does not move in reality, because these are mere symbols, conceptual translations of the actual truth, & movement itself is only such a symbol. The Habitation is the creation of a formative movement of Prakriti, who is indeed always recurrent in her doings because she & her ways are eternal, but also always mutable & inconstant because she works in Time, Space & Causality, terms of perception which have no meaning except as measures of movement or progression from one moment to another, one point to another, one state or event to another. Succession & therefore change is the fundamental law of God's ideative & formative activity in the terms of these three great symbols. But the inhabitant is one & constant, because He is beyond Time & Space. Surrounded apparently by the whirl of Prakriti, to the ignorant tossed about in it, He in reality exists both as its continent & creator as well as its informing soul, master & guide. That therefore in Itself is unmoving, immutable and eternal; in Its movement in Itself, Time-movement, Space-movement, Condition-movement (although as we shall see governed by durable patterns or general processes of conscious being which

ensure order & recurrence from one state or form to another) That is mobile, active, inconstant & fleeting. Sooner or later, all here passes out of our view, except the Inhabitant, the eternal Existence-Consciousness, Him we see seated for ever. On Him in this flux of things we have our sure foundation.

Thus we have the essential reality of things, we have the practical relation of God in Impersonality or Personality as the Inhabitant of His own objective being. We have the principle of unity by which the practical relation refers back always to the essential & derives from it. We have the fundamental justification of works briefly indicated in the identity of the working principle with the eternal Reality behind our works. But the justification of the harmony of tyaga & bhoga on this basis has now to be prepared. After stating, therefore, the identity of the eternal who moveth not, with the eternal who moves, of the Timeless, Spaceless, Conditionless, with the Timed, Spaced & Conditioned, the Sage proceeds with a consideration of the latter only with which our vyavahara or practical life has to deal & emphasises the unity of all things near & far, subjective & objective. That is the near, the same That is the far. He is near to us in our subjective experience, he removes to a distance in the objective where our mind & senses pursue him until they have to cease or return. In the subjective also, he is not only the unknown, but the known, ourselves, that which is seated in our hearts, not only the ungrasped, but the grasped, that which we have & that which we seem not to have, that which we have reached or passed or are approaching & that towards which we vaguely or blindly move. Nothing should we think, feel or observe without saying of it "It is He; it is the Brahman." That is within every creature as all the continent of body & mind & what is more than mind; That is outside every creature as that in which it moves, lives & has its being; not only are our surroundings near or far but that which contains our surroundings, is outside & inside them, alike their continent & their content, sarvam Brahma. For That is the content of all this Universe; That also exceeds & Is apart from every Universe. The Pantheism or Monism which, unable to rise beyond the unity of attainable

data or manifest appearance, makes God conterminous with the world, is not Vedanta. The Pluralism which makes God merely a sum of realised experiences, a growing & diminishing, a fluctuating unknown quantity, X sometimes equal to $a + b$ and sometimes equal to $a - b$, is not our conception of the Universe. These things are He, but He is not these things. To us the world is only a minor term in God's absolute & limitless existence. God is not even infinite, though finity & infinity both are He; He is beyond finity & infinity. He is sarvam Brahma, the All, but he is inexpressibly more than the sarvam. To our highest conception He is One, but in Himself He is beyond conception. Neither Unity nor multiplicity can describe Him, for He is not limited by numbers. Unity is His parabhava, it is His supreme manifestation of being, but it is after all a manifestation, not the utter & unknowable reality.

IV

The object of these two verses which have amplified the idea of monistic Unity in the universe, so as to remove any essential opposition between the world movement & the Inhabitant of the movement, is to lead up to the two verses that follow,—verses of a still higher importance for the purpose of the Upanishad. The Sage has laid down his fundamental positions in the first three verses,—(1) the oneness of all beings in the universe, (2) the harmony of renunciation & enjoyment by freedom from desire & demand, (3) the necessity of action for the fulfilment of the one purpose for which the One inhabits this multitude of names & forms,—the enjoyment of this phenomenal & in its consummation the liberated being. The remainder of the Upanishad is explanatory & justificatory of these original & fundamental positions. In this second movement the object is to establish the possibility of absolutely sorrowless & fearless enjoyment here in this world & in this body on the eternal & unassailable foundations of the Vedantic truth, sarvam khalu idam Brahma. For from that truth the Seer's golden rule of life derives all its validity & practical effectiveness.

These are the words, words of a rich & moving beauty, in which he discharges this part of his argument. "But he who sees all existences in the self and the self in all existences, thereafter shrinketh not at all. He who knows, in whom all existences have become the self, how shall he have grief, how shall he be deluded, who seeth all things as one."

The connecting word एव (the Greek δε) does not in Vedic Sanscrit always imply entire opposition, it suggests a new circumstance or suggests an additional fact or a different point of view. The new circumstance introduced in this verse is the idea of the Atman. The knowledge that the impersonal Brahman is all, need not of itself bring peace & a joyous activity; for the all includes sorrow, includes death, fear, weariness, disgust. Matariswan in establishing action, has also established reaction. He has established that inequality between the force acting & the force acted upon, that want of harmony which is the cause of pain, recoil, disintegration, mutual fear & oppression. We may recognise that all these are one coordinated movement in a single existence, are themselves all one existence but how does that help us if in the movement itself there are these inequalities, these discords, these incapacities which impose on us so much that is painful & sorrowful? We may be calm, resigned, stoical, but how can we be free from pain & sorrow? It is here that Mayavada comes in with its great gospel of liberation. "All this discord" it says in effect "is not Brahman, it is Maya, it is an illusion, a dream, it does not exist in the pure Atman. That is the unmoving; the movement is a cosmic nightmare affecting the mind only. Renounce life, take refuge in the pure, unconditioned, dreamless Atman, mind will dissolve, the world will vanish from you as a dream vanishes & with the world its pain, its useless striving, its miserable joys, its ineffugable sorrow." That is an escape, but it is not the escape which the Seer of the Upanishad meditates for us. He holds to his point. "All this is Brahman, the movement no less than the moving." A few may escape by the wicket gates of the Buddhist & the Mayavadin. Not by denial of fundamental Vedantic truth is mankind intended to be saved.

The worship of a Personal God different from ourselves &

the world brings with it a better chance of joyful activity in the world. "God's will, be it joy or sorrow; God's will, be it the triumph of good or the siege of the evil." This is a great mantra & has mighty effects. But it does not by itself give a secure abiding place. God's will may bring doubt & then there is anguish; may bring loss of the Divine presence, separation from the Beloved & then there is a greater agony. The intellectual man has the intellect God has given him to satisfy. The active man has the impulse to work, but at every step is faced with the difficulties of religion & ethics. He has to slay as a soldier, condemn as a judge, inflict pain, inflict anguish, choose between two courses which seem both to be evil in their nature or their results. Sin enters his heart, or there are ensnaring spirits of doubt which suggest sin where sin is not, he feels that he is acting from passion, not from God. His body suffers, pain distracts, his own pain, the pain of others. In this maelstrom it is only those whose hearts are mightier than their intellects & their devotion a part of their nature who can overcome all the winds that blow upon them. Therefore most devotees withdraw from life or from the greater part of life like the Mayavadins; those who remain have more resignation than happiness. They bear the cross here in the conviction that the aureole awaits them hereafter. But where then is that perfect bliss & that perfect activity which the Sage promises us, doing verily our works here in the ordinary life of mankind? The thing can be done on the devotional foundation, but only by a peculiar & rare temperament aided by God's special grace & favour. We need a wider pedestal, a securer foundation.

He finds that foundation who sees wheresoever he looks (that is the force of *anu* in *anupashyati*) only the Atman, only the Self. He watches the bird flying through the air, but what he is aware of is the Self watching the movement of the Self through the Self—air & bird & flight & watcher are only name & form, presentations of the one Reality to itself in itself by itself *atmani atmanam atmana*. He is stung by the scorpion but what he is aware of is only the touch of the Self on the Self; the scorpion that stings is Brahman, the stung is Brahman, the sting is Brahman, the pain is Brahman. And this he not only

thinks as a metaphysical truth, for mere metaphysical opinion or intellectual attitude never yet brought salvation to living man,—but knows it, feels it & is aware of it utterly with his whole single & complex knowing existence. Body, senses, heart & brain are at one in that experience. Thus to the soul perfected in this knowledge everything that is, seems or is experienced, thinker & thought, action, doer, sufferer, object, field, result, becomes only one reality, Brahman, Self, God and all this variety is only play, only movement of conscious-self in conscious-self. That moves, God has His lila, the Self rejoices in its own inner experiences of itself seen & objectivised. There arises in the soul not merely calm, resignation, desirelessness, heart's joy in God's presence, but with the perfect knowledge comes a perfect bliss in the conditioned & the unconditioned, in the transcendent & in the phenomenal, in action & in resting from action, in Ishwara & in apparent anIshwara, in God's nearness & in God's remoteness, in what men call joy & what men call pain. Grief falls away from the soul, pain becomes rapture, doubt & darkness disappear in an assured & brilliant luminosity. Mukti is fulfilled, the soul is perfectly liberated here & in this body ihaiva,—for this & not renunciation of phenomenal existence is the true Vedantic moksha. This is what is meant by all existing things becoming the Self in a man, this is the result which is predicated of such a divine realisation. "Whence shall he have grief, how shall he be deluded who seeth all things as one?"

There are certain stages in the realisation, two of which are indicated in these slokas, and although the indication is only a minor & incidental movement of the Rishi's thought, the subject is of sufficient practical importance to be dwelt upon for a little even in this necessarily rapid examination. Brahman, Atman, Ishwara—these are the three great names, the three grand realisations we have here about the Absolute Existence. That existence, Paratparam Brahma, in its absolute truth (if such an expression is admissible where the ideas of truth & falsehood, absolute & relative no longer apply & knowledge itself disappears in an unconceivable & unimaginable Identity)—is unknowable by any, even the highest faculty of conscious

mind. Arriving at the farthest limits of our existence here we may become & do become aware of it as a thing beyond our experience. It presents itself to us here as some ultimate shadow of itself which we feel sometimes as Sat, sometimes as Asat, sometimes as both Sat & Asat, & then we perceive that it is none of these things, but something beyond both existence & non-existence which are merely uncertain symbols of it & we end by the formula of the Rishis renouncing all vain attempts at knowledge, Neti, neti, not this not that. We must not go beyond this formula or seek to explain & amplify it. To describe It by negative epithets is as illegitimate & presumptuous as to describe it by positive epithets. We can say of Brahman that it is shuddha, pure; we cannot say of the Paratparam that it is shuddha. How can we know what It is? We can only say that here It translates itself into an utter purity. Neither can we say of It that it is alakshanam, without feature. How do we know what It is not? We can only say that we cannot describe It by any lakshanas, for the features we perceive here are those of a movement in which all opposites present themselves as equally true.

But here in this manifest universal existence we do perceive certain universal states & certain still more fundamental realisations which transcend all phenomena & all oppositions & antinomies. We perceive, for example, a state of Universal Being, the Sad Atman of the Upanishads, the goal of the Adwaitins; we perceive a state of Universal Non-Being, the Asad Atman of the Upanishads, Sunyam, the goal of the Madhyamika Buddhists. Then we perceive that both of these are the same thing differently experienced in the soul. It is That which expresses itself in our experience of Being & forgetfulness of Being, of Consciousness & forgetfulness of Consciousness, of Bliss & forgetfulness of Bliss, of Sacchidananda conditioned & Sacchidananda unconditioned. We call it the Brahman, that which extends itself here in space & time & fills its extension. We feel our identity with it & we realise that it is our true Self & the true Self of everything in the universe & of the universe both in its sum & in its entirety. We call it then the Atman, a word which originally meant true Being or true

Substance. We become aware of It as extending itself & filling its extension here for a purpose, the purpose of Ananda, delight in Vidya, delight in Avidya & governing all things towards that purpose,—self-aware as the One & self-aware as the Many, self-aware as Sat & self-aware as Asat. This great self-aware transcendent more than universal existence we call Sa, Ishwara, "He", God, the Paratpara Purusha, the Higher than the Highest. We see therefore that these three names merely try to express in human language certain fundamental conceptions we have here of That which is not perfectly expressible. The greatest names, tremendous as is their power,—how tremendous only those can know who have made the test without flinching—are only symbols,—I will not say shadows, for that is a word which may be misunderstood. But very great & blissful symbols in which we are meant to find a perfect content & satisfaction.

Through these symbols & the realisations which they try to represent, we have to work out our divine fulfilment here, & the Rishi gives all three of them to us in this Upanishad. For all three are supremely helpful &, in a way, necessary. Until we realise Ishwara, the mighty Inhabitant, as one with ourself, as the Atman, we find a difficulty in identifying Him with all that Is. We fall into these ideas of an extra-Cosmic God which satisfy the early & immature stages of soul development; or we see a God who pervades & upholds all existences but has put them forth in His being as eternally apart from Himself. That is a great practical realisation with immense results to the soul, the realisation of the Bhakta who rests in some kind of Dualism, but it is not the supreme goal which we are seeking. If we realise the Ishwara as the Atman, our Self, without realising Him as the Brahman we run, unless our souls have first become purified, another peril, the peril of the Asura who misapplies the mighty formula So Aham & identifies God with his own unregenerated ignorant Ego,—extending the Inhabitant only to some transient circumstances of the movement in which He dwells. He forgets the other equally important formula, Tat twam asi; he does not realise others as Narayan, does not become one self with all existences, forgets that the very idea of his egoistic self is inconsistent

with the true Adwaita and to extend that in imagination & call it the whole Universe is a caricature of Adwaita. It is like the error of the unphilosophical Idealist who concludes that the objective Universe exists only in his individual Mind, forgetting that it exists equally in other individual minds & not knowing that in reality there is no individual Mind, but only one sea of mind with its self-formed solid bed of sanskaras, waves of which are constantly flowing through him, rising & breaking there & leaving their marks in the sands of his mental, infra-mental & supramental being. Even if we realise all beings as Narayan and one Self, there is a difficulty in realising all things as God & self. The Inhabitant is the Atman, good — but the name & form? We can realise that God dwells in the stone as well as under the stone & around it, but how can the stone be God, — this clod, that rusty piece of iron, this clot of filth? With difficulty the mind unreleased from dwandwa & sanskaras can believe that God logically must be in the piece of filth He has created, but how can He be that filth? The seeker can eventually realise God in the criminal who is to be hanged no less than in the executioner who hangs him & the saint who has pity for both, in the harlot no less than the Sati, in all of the filth no less than in the glorious star that shines in Heaven & the petals of the rose or jasmine that intoxicates our soul with its fragrance, but the crime of the criminal, the sin of the harlot, the corporeality of the filth, must not that be kept separate? The sattwic mere lover of virtue, the lover of beauty, the devotee reverently bowing before the throne, must they not revolt eternally from such conceptions? We shall see that for certain practical reasons we must in action preserve a kind of separateness, — not only between the criminal & his crime, but between the saint & his virtue, — for this reason the Rishi has fixed on the relation of world of Movement & world's Inhabitant as the basis of his system, — but the distinction must be one of vyavahara only, for practice only & must not interfere with our conception of All as Brahman. We must not yield to the limitations of the sattwic mind, the moha or delusions of the sattwic ahankara. For if we yield, we cannot proceed to that greater goal of bliss, which attaining the soul shrinks not at all,

has no delusion, is not touched by any grief. Therefore we must realise the Ishwara not only as the true Self of things, but as Brahman, that which extends itself here equally in all things, in the beautiful but also in the ugly, in the holy & great but also in that which we look on as base & impure. Looking on Brahman moving & Brahman unmoving we have to say with the Mundaka Upanishad, Tad etat satyam (That yonder is this here & the Truth), & looking on Ishwara & Brahman moving & unmoving we have to say with the same Upanishad, "Purusha evedam sarvam karma tapo brahma paramritam." "It is the divine Soul that is all this, even all action and all active force and Brahman & the supreme immortality."

We have to realise the Self everywhere, but we have also to remember always in all our being, to feel always in every fibre of our existence that this Self is Brahman & the Lord. In the realisation of Atman by itself there is this danger that as we human beings stand in the subjective mind, that represents itself to us as our true Self and we are first in danger of identifying our subjective consciousness which is only one movement of Chit, with the Sarva Brahman. Even when we go beyond to the Sad Atman or Pure Existence, we, approaching it necessarily through our subjective being, tend to realise it as pure *subjective* existence & are in danger of not realising the real & ultimate Sat which is pure Existence itself beyond subjectivity & objectivity, but expressing itself here subjectively because of the Purusha & objectively because of the Prakriti,—the mingled strain of our subjective-objective existence here being the result of the interaction & mutual enjoyment of His Male & His Female principle. Hence arise the misconceptions of the Idealists, Illusionists & Mayavadins. If we halt in subjective mind, we see the objective world as a mere dream or vision of our conscious subjective activity. That is the dogma of the Idealist, nor can anyone fathom the depths of our mental being without passing through this experience. If we halt in our pure subjective existence, then not only the objective world, but the mind & its perceptions seem to be a dream, & the only truth is the subjective Nirguna Brahman aware only of his pure subjective existence. When this subjective

Nirguna Brahman looks out from the truth of himself & watches the perceptions of the mind, the great dream of the objective, then It alone as the sakshi seems to be real—but we get rid of the sakshi too & retire into the perfect samadhi in which Brahman is aware only of Itself as self-existent, self-conscious pure Atman. This is the dogma of the Mayavadin & no one can fathom all the depths of our subjective being who has not passed through this experience. Then comes the Buddhist, who turns upon this sakshi, this subjective Atman & says “Thou too art only a dream, for the same thing that tells me thou art, tells me the world is. I have no other evidence of the existence of Atman than I have of the existence of the world without, as both are equally dreams.” And without going farther, he says with the Madhyamikas “The truth is the Asat, the Nihil, the universal Non-being”, or he says with the Buddha — “There is Nirvana of all this subjective & objective; what there is beyond, we need not ask” — so as to say “we cannot know”, “we need only to know that it releases from all pain & grief & death & all return of egoism.” This experience too, if one can have it & not be bound by it, is of great use, of a rich fruitfulness to the soul. He can hardly gaze out of the manifest towards Parabrahman who has never stood face to face with the Asat & launched his soul into the fathomless & shoreless Negation. But we come back to the truth. That which is beyond is Parabrahman & that which represents Him here as the basis of our existence is the absolute existence, neither subjective, nor objective, turned both towards the world & away from it, capable of manifesting everything, capable of manifesting nothing, capable of universality, capable of nullity, capable of putting forth all antinomies, capable of reconciling them, capable therefore both of cosmos & chaos, which is expressed in the formula OM Tat Sat. But this is no other than the Brahman. Is it enough then to realise the Atman as the Brahman? Yes, if we realise that the absolute Brahman, who is rather beyond both Guna & absence of Guna than Nirguna, is also that which expresses itself as Guna, extends itself in space & informs its own extension. We must say with the Mandukya, Sarvam hyetad Brahma — Ayam Atma Brahma — So'yam atma

chatushpak. All this world is Brahman, this Self is Brahman, & this Self which is Brahman is fourfold. Fourfold, not only the Transcendent Turiya, but also He who sees Himself the gross & sees Himself the subtle & sees His own single & blissful being in the states to which we have only access now in the deep trance of sushupti. Nor is this enough. For the realisation goes still too much towards abstraction, towards remoteness. It is necessary to remember that this great Self-Aware Being is the Lord, that He has created & entered into His own movement, with a mighty purpose & for the enjoyment of His own phenomenal being in the worlds. Otherwise we shall not be so much both spectators & masters of our worlds, but its spectators only— & a mere spectator tarries not long at a spectacle, he is soon sated of his inactive joy & withdraws. The movement of withdrawal is necessary for a certain number of souls, it is, so effected, a great, blissful & supremely satisfied movement, but it is not the purpose for which God is in us here. We must realise our true Self as Brahman-Ishwara. We must be one with the Ekah sarvabhuṭantaratma rupam rupam pratirupo bahishcha, the one Self within all existences who shapes Himself to form & form & is outside all of them, & understand the intention of the Aitareya in its great opening, Atma va idam eka evagra asit— Sa ikshata—Sa iman lokan asrijata. In the beginning this was all the Atman, He alone, He looked & put forth these worlds.

Finally, it is not even enough for the Sage's purpose that we should realise the Brahman except as the Atman & Ishwara. For if we do not realise Brahman as the Self & our Self we shall be in danger of losing the subjective aspect of existence & laying too much stress on That as the substratum of our objective existence in which I stand merely as a single unimportant movement. The result is a tamasic, an inert calm, a tendency to merge in the jada Prakriti, the apparent unintelligently active aspect of things which the Europeans call Nature or at the highest a resolution of our selves into that substratum of the objective in the Impersonal Brahman. The denial of the Transcendent Personality, the Paratpara Purusha is a strong tendency of the present-day Adwaita. "God", say these modern Adwaitins, "is a myth, or at most a

dream like ourselves. Just as there is no I, so there is no God.” Under this figure of thought, there lies a philosophical blunder. Personality is not necessarily individual Personality, neither is it a selection & arrangement of qualities, any more than existence is necessarily individual existence or a selection & arrangement of movements in our being. Personality can be & is Universal; this Universal Personality is God in relation to our individual experiences. Personality also can be & is Transcendent, self-existent, beyond individuality & Universality,—this transcendent Personality, a blissful unlimited self-conscious Awareness in self-existence is the Paratpara Purusha — adityavarnas tamasah parastat, drawing us like a sun beyond the darkness of ignorance & the darkness of the Asat. This is He—God universal, but also God transcendent—the Lilamaya Krishna who transcends His lila. Therefore the Upanishads everywhere insist not upon mere Existence, like the later Adwaitin, but on the sole Existent; and they speak continually on the Brahman as the creator, Master, enjoyer of the worlds, by meditating on whom we shall attain to perfect liberation. Neither Buddha nor Jada Bharata are the true guides & fulfillers of our destiny; it is Yajnavalkya, it is Janaka &, most of all, it is Krishna son of Devaki who takes us most surely & entirely into the presence & into the being of the Eternal.

Atman, Brahman, Ishwara, on this triune aspect here of the Transcendent depend all our spiritual realisations and as we take one or the other & in its realisation stop a little this side or proceed a little to that side, our realisations, our experiences & our creeds & systems will vary from each other; & we shall be Buddhists or Adwaitins or Mayavadins or Dualists, followers of Ramanuja or Madhwa, followers of Christ, of Mahomed, of whosoever will give us such light on the Eternal as we are ready to receive. The Rishi of the Isha wishes us to realise all three, but for the sake of divine life in the world to dwell upon Ishwara, but on Ishwara neither extracosmic nor different from His creatures but rather in & about all beings as their indwelling Self, their containing Brahman and that material Brahman also or Prakriti which is the formal continent of the indwelling Self and the

formal content of the containing Brahman. In this realisation there are many stages of progress, many necessary first steps & later approximations; but the Rishi, his work being to throw out brief fundamental & important suggestions only & not to fill in details, to indicate & illumine, not to educate or instruct, gives us for the present only two of the final realisations which are the most essential for his purpose. We shall find, however, that there is more beyond.

We are first to realise this one divine Self, (which is *ourself* also) in all existences and all existences in the Self. We have, therefore, in this realisation three terms, Self within, Self without, which are the same & invariable samam Brahma, & all existences, of which each separate existence is fundamentally the same, but in generic or individual play & movement different from other genera & individuals. All existences—not only animate but inanimate, for sarvabhuteshu does not mean sarvapranishu—not only the man, the animal, the insect, but in the tree, plant & flower & not only in the tree, plant & flower which have a sort of life, but in the mountain, the metal, the diamond, the pebble which seem not to have life, & not only in these bhutas which if they have not an organised life, have at least an organised or a manifest form, but in those which have no organised form, or no form at all to the eye or to any sense. The wind & sea also are He & the gases which constitute the air which moves as wind & the water which flows as the sea. He is ether that contains all & He is that which contains the ether.

Swami Vivekananda in a passage of his works, makes a striking or, as the French say better, a seizing distinction between the locomotive & the worm that it crushes, between the animate which has conscious life in it, however weak, & the inanimate which has only in it, however powerful, a blind & undeveloping power. But, however useful & true this distinction may be for certain practical purposes, certain vyavahara, it is not allowed us by the pure Adwaita of the Upanishads. God is not only in the worm that is crushed, but in the engine that crushes it—the engine too & the power of the engine are Brahman and as much Brahman as the life & consciousness in the worm. He is samam

Brahma. We have a right to make certain practical distinctions for vyavahara but none to make any essential difference. For the Vedanta is inexorable in its positiveness; as it will not spare us the most loathsome worm that crawls but insists that that too is Brahman, so also it will not spare us the most inert or sordid speck of matter, but insists that that too is Brahman. If we stop short anywhere, we create bheda & lose our full spiritual heritage. The seer anupashyati—he follows Prakriti in her movement from the greatest to the most infinitesimal, from the noblest to the meanest & everywhere finds only Brahman, God, the Self. Bhuteshu bhuteshu vichitya dhirah, says the Kena. We must have dhairyam, utter patience, utter understanding. To no weakness, no repugnance, no recoil even of the saint in us or the artist & poet in us, much less of our mere nervous & sensational parts or of the conventional mind with its fixed associations can we stop to listen, if we would attain. Love & hate, joy & grief must not interfere to warp our knowledge. All, all, all without exception is He. He breathes out sweetness upon us in the rose, He touches our cheeks with coolness in the Wind, He fills with His favouring breath the sails of the sailing-ship that carries our merchandise to its market, He tramples down into the Ocean depths the latest marvel & monstrosity of scientific construction in which travel the great ones of the world or in which our beloved are coming to our arms. The wrong that is done to us, it is He that does it—and to whom is it done? To Himself. The blow that is struck, is of His striking. Brahman is the striker, Brahman the instrument, Brahman the stricken. The insult that is cast on us, it is He that has flung it in our face. The disgrace, the defeat, the injustice are of His doing. That crime which we abhor, it is Brahman who has committed it,—it is our Self's, our own doing though we do it in another body. For the least sin that is committed in the world, each one of us is as responsible as the sinner. Our self-righteousness is a Pharisaical error, our hatred of the sinner & our contempt & loathing convict us of ignorance and limit, not increase our power to rectify or to help. The seer, the freed & illuminated soul hates none, condemns nothing but loves all and helps all; he is sarvabhutahite ratah, his occupation

& delight are to do good to all creatures. He is the Self seeing the Self in all, loving the Self in all, enjoying the Self in all, helping the Self in all. That is the ethics & morality of the Vedanta.

For what is the first result of this universal vision? Tato na vijugupsate. Jugupsa is not merely fear but includes all kinds of shrinking, fear, disgust, contempt, loathing in the nerves, hatred in the heart, shrinking of dislike or reluctance from thing or person or action. Raga & dwesha being the motives of all our ordinary feeling & action, jugupsa expresses that movement of recoil in the system which proceeds from dwesha of any kind,—the desire to protect ourselves against or ward off the unwelcome thing that presents itself to the mind, nerves or senses. We see therefore how wide a field the promise of the Upanishad covers. We shall not hate, fear, loathe, despise or shrink from anything whatsoever which the world can present us. It is evident, if this is possible, how all that constitutes real misery will fall from the soul & leave it pure & blissful.

We shall not have any contempt, hatred or disgust for any person, nor shall we fear anyone, however powerful or inimical; for in all we shall see Narayan, we shall know the Lord, we shall recognise ourself. One equal regard will fall from us on the tiger & the lamb, the saint & the sinner, the tyrant who threatens us and the slave who is subject to our lightest caprice. Squalor, sin, disease will not conceal from us the god within nor wrath & cruelty from us God's love working by strange ways under grotesque & fearful masks. No sort of foulness or ugliness will repel us. An universal charity, a wide & tolerant love, a calm & blissful impulse of beneficence to all will be the ethical first fruits of our realisation. We shall make no distinctions, we shall be no respecters of persons. We shall not despise the hut of the peasant nor bow down in the courts of the princes, neither shall we have wrath or scorn against the palace & partiality for the cottage. All these things will be equal to us. The touch of the outcaste will be the same to us as the sprinkling of holy water by the Brahmin — for how shall God pollute God? Every human or living body will be to us a temple & dwelling place of the most High. None shall be to us vile or contemptible. And yet

none shall be too sacred for us, too dear or too inviolable; for it is the house of our Friend & Playmate; nay, it is our own House, for the Lover is not different from the Beloved, & it is a house, jagat not sthanu, a thing that can be changed & has to be changed, for which therefore we shall have deep love, but no fettering attachment. The sword of our enemy will have no terrors for us. For enmity is a play of the Lord & death & life make up one of His games of hide & seek. How shall God slay God? Even as our vision deepens, the touch of the sword shall be to us as much the kiss of His Love as the touch from the lips of a lover—one sharp, poignant & fierce, the other soft & wooing but the manner is the only difference. For we shall have torn aside the grotesque & unreal mask of hatred & seen in the apparent fulfilment of enmity & evil, the real fulfilment of love & good. By the divination of the heart & the vision of the higher knowledge we shall have found out the way of the Lord in His movement.

And because we shall have found out His way & seen everywhere Himself, things also will cause no kind of shrinking in us. We shall exceed the limitations of the senses & the ordinary aesthetic faculties,—we shall have gone beyond the poet & the artist. We shall know why the sages have called Him sarvasundara, the All-Beautiful. For things beautiful will have a more wonderful, intense, ecstatic beauty to us, but things foul, illshapen & ugly will also be to us beautiful, with a larger, more marvellous, more universal beauty than the artistic. We shall exceed the limitations of the mind & heart & conscience; we shall have gone beyond the saint & the moralist. For we shall no more be repelled by the sin of the sinner than by the dirt on our child who has fallen or wallowed in the mud of the roadside. We shall know why the Lord has put on the mask of the sinner & the perfect purpose that is served by sin & crime in the world's economy, & while knowing that it has to be put aside or transformed into good, we shall not be revolted by it, but rather view it with perfect calm & charity. This realisation, although it lifts us beyond the ordinary conceptions of morality & conventional ethics, does not incapacitate us for normal action, as

it might seem to the thought which holds all action impossible except that which proceeds from desire & liking & disliking. Whatever morality the Vedantist practises will be based on a higher & truer ground than the ethics of the ordinary man in love, sympathy & oneness. For an ethics proceeding in its practical action on contempt, dislike or repulsion is an immoral or imperfectly moralised ethics which seeks to drive out poison by poison & it has always failed & will always fail to eradicate sin & evil,— just as the ordinary methods of society have failed to eradicate or even diminish crime & vice, because its method & its spirit are ignorant & paradoxical. Only perfect knowledge & sympathy can give perfect help and these are impossible without oneness.

At the same time it is true that the jivanmukta is not governed by ordinary moral considerations. He shrinks from no actions which the divine purpose demands or the divine impulse commands. He has no wish to kill, but he will not shrink from slaying when it is demanded, for he is bound neither by the rajasic ahankara nor by the sattvic; sattvic obstacles to slaying are therefore taken from him and his knowledge delivers him both from the desire to take life which is the evil of hinsa [and] from the emotional horror of taking life & the nervous fear of taking life which are the rajasic & tamasic basis of outward ahimsa. So also with other actions. For this morality or dharma is of the soul & does not depend upon the action which is a mere outward symbol of the soul & has different values according to the times, the social ideas & environments, the religious creed or the actual circumstances. To men who are not free a conventional morality is an absolute necessity, for there must be a fixed standard to which they can appeal. It is as necessary for the ordinary practice of the world as a standard value of coin for the ordinary commerce of a country. The coin has not really an immutable value; the pound is not perhaps really worth 15 Rs but fluctuates owing to circumstances; nevertheless to allow a fluctuating value is to bring a certain amount of confusion, uncertainty & disorder into finance & commerce. Therefore the liberated man though he knows the truth will not contravene the

fixed rules of society unless he is impelled by divine command or unless the divine purpose is moving towards a change in the fixed morality. Then, if it is the part given to him, he will act as fearlessly against social rules as under ordinary circumstances he will adhere firmly to the law of the environment in which he dwells. For his one care & purpose will be to observe the divine purpose & carry out the divine will.

Neither will events bring to him grief or disappointment, fear or disgust with things, because he follows that divine will & purpose in himself & in others, in the inner world & the outer, watching everywhere the play of the Self. He has divined God's movement. Disgrace & dishonour, obloquy & reproach cannot move him. He is equal in soul to honour & dishonour, respect & insult, mana & apamana, because both come from himself to himself & not from another. Success & failure are equal to him, since he knows that both are equally necessary for the fulfilment of the divine intention. He will no more quarrel with them than with the cold of winter or the breath of the stormblast. They are part of the jagat, part of God's play, of the Self's action on the Self. He acquires a perfect titiksha or power to bear; he moves towards more than titiksha, towards an equal & perfect enjoyment.

Such, then, are some of the practical fruits of the realisation of God as the Self in all existences & the Brahman containing all existences. It raises us towards a perfect calm, resignation, peace & joy; a perfect love, charity & beneficence; a perfect courage, boldness & effectiveness of action; a divine equality to all men & things & equanimity towards all events & actions. And not only perfect, but free. We are not bound by these things we acquire. Our calm does not stay us from even the most colossal activity, for the calm is within us, of the soul & is not an activity in the jagat, in the movement. Our resignation is of the soul & does not mean acquiescence in defeat, but acceptance of it as a circumstance in the struggle towards a divine fulfilment; our peace & joy do not prevent us from understanding & sympathising with the trouble & grief of others; our love does not prevent an outward necessary sternness, our charity a

just appreciation of men & motives nor does our beneficence hold back the sword when it is necessary that it should strike—for sometimes to strike is the highest beneficence, as those only can thoroughly realise who know that God is Rudra as well as Shiva, Chamunda Kali with the necklace of skulls no less than Durga, the protectress & Gauri, the wife & mother. Our courage does not bind itself by the ostentations of the fighter, but knows when flight & concealment are necessary, our boldness does not interfere with skill & prudence, nor our activity forbid us to rest & be passive. Finally our equality of soul leaves room to the other instruments to deal with each thing in the vyavahara according to its various dharma & utility, the law of its being & the law of its purpose.

These are the perfect results of the perfect realisation. But in practice it is difficult for these perfect results to be attained or for this perfect realisation to be maintained, unless after we have attained to it, we go farther & exceed it. In practice we find that there is a flaw, somewhere, which causes us either not perfectly to attain or to slip back after we have attained. The reason is that we are still removed by one considerable step from perfect oneness. We have realised oneness of the self within & the self without, of the self in us & the self in all other existences. But we still regard the jagat, the movement, as not entirely the Self—as movement & play of God, but not itself God, as action of the Lord, but not itself all the Lord expressed to Himself in His own divine awareness. Therefore when things come to us, when action or event affects us, we have to adopt an attitude towards it as something different from ourselves, something that comes, something that affects us. As the result of that attitude we have jugupsa. We have realised oneness, but by what kind of realisation? By seeing,—anupashyati, by action of the seeing faculty in the buddhi or the feeling faculty in the heart—for both these things are vision. Our realisation is a realisation of identity by attitude, not of absolute identity by nature, realisation through instruments of knowledge, not through our conscious being in itself. Subtle as the distinction may seem, it is not really so fine as it appears; it makes a wide difference, it is of first rate

importance in its results. For so long as our divine state depends on our attitude, the least failure or deficiency in that attitude means a waning of the divine state or a defect in its fullness. So long as it rests on a continued act of knowledge in mind & heart, the least discontinuity or defect of that knowledge means a defect of or a falling from our divine fullness. Only if identity with all existences has become our whole nature & being of our being, is the divine state perfected, is its permanent and unbroken enjoyment assured. And so complete & exacting is the oneness of Brahman, so absolute is the law of this Adwaita that if even the name & form & the play & the movement are regarded as Brahman's & not themselves as Brahman, an element of bheda, difference & dissonance, is preserved which tends to prevent this absolute identity of being & preserve the necessity of attitude & the identity only through the instruments of knowledge.

Therefore in his next verse the Rishi gives us a higher & completer realisation which includes the missing elements & perfects the Adwaita. "He in whom Self & all existences have become one and perfectly he knoweth, how shall he be deluded, whence shall he have pain who sees in all things oneness." If we read this verse loosely, we may err by taking it as a justification of that Adwaita which denies the sarvabutani and affirms only the Atma. In that case we shall have not only to translate "All existences have become Self", but to suppose that "become" means "disappeared into", "blotted themselves out in", — an extension of meaning which is justified by nothing, either in the language or in the context. It is contradicted by the immediately following passage in which the Seer insists on the necessity of the simultaneous view of Vidya & Avidya, while the exclusion of the world & its existences can only be effected in the state of sleep or trance and would be broken every time the mind returned to the state of waking. No such broken & truncated realisation is intended. The Mayavada demands that every time we look out on the world & its creatures, we shall say "This is not Brahman, it is a dream, a lie"; Adwaita of the Isha demands that looking out on the world & its creatures we shall say "This is Brahman,

it is God, it is myself.” There is a wide difference between the two attitudes. The one rests a metaphysical & argumentative Adwaita on a tremendous essential Dwaita of Satya & Asatya, that which is true & that which is false; the other rests a practical Adwaita on an apparent Dwaita, all being Satyam, eternal Truth, but Truth seen & recurrent presenting itself to Truth seeing & persistent—the sthanu & the jagat, an apparent difference of appearance to knowledge, not an actual difference of essential reality & unreality. Apart from this divergence, the language of the sloka is such as not to admit of the negation sought by the Mayavadin, but to contradict it. I have not translated the verse literally yet, but now I give the literal translation, “In whom the Self (of him) verily knowing by vijnana has become all creatures, there what delusion, what grief, of him seeing wherever he looks (anu) oneness.” It is evident that the Mayavadin’s position vanishes. The words are sarvani bhutani atmaivabhud—not sarvabhutani atmaivabhuva—a singular verb demanding a singular subject. Therefore it is the Self that becomes, not the bhutas; and we cannot say that this is the attitude of a man still ignorant, ajna, for it is the Self of one who knows entirely, has that knowledge which in the Upanishads is called vijnana & who has attained to the vision of oneness. In him his Self has become all creatures.

Let us understand thoroughly the sense of this important sloka. Yasmin, in whom. The soul has become one with all existence, all existence it feels to be itself containing the creation & exceeding it,—therefore yasmin, not yasya. In him his Self, that which he feels to be his true I has become all creatures. Not only does he feel himself or perceive himself to be *in* all creatures as the divine presence in them & around them, but he is they,—he is each bhuta. The word bhuta means that which has become as opposed to that which eternally is & it includes therefore name & form & play of mind & play of action. The last barrier is broken; ahankara, the sense of separate self, utterly disappears & the soul is all that it sees or is in any way aware of. It is not only the seer in all, but it is the seen; not only the Lord, but his habitation, not only Ish but jagat. In fact, just

as the Lord himself, as Brahman itself becomes all things & all creatures in itself, just as all creatures are only Brahman's becomings, bhutani, just as Brahman is the ejat and the anejat, the moving & the unmoving, God & his world, so is it now with the soul that sees. Of it too it can be said Tad ejati tannajati. It moves & it moves not, it is the near & the far, it is within all things & outside all things. The man thus liberated undergoes a tremendous change of consciousness; he ceases to feel himself as within his body & feels rather his body as within himself & not only his but all bodies; he feels himself at the same time in his body & in all bodies not separately like a piece of water in a jar, but as an unity like one ether undivided in many vessels, & at the same time he feels that they are not in him nor he in them, but that this idea of within & without is merely a way of looking, a way of expressing to the mind a truth in itself beyond expression by space & time — just as we say "I have this in my mind" when we do not really intend to express any location in space but mean rather "This is my mental knowledge as it just now expresses itself." Pashya me yogam aishwaram. For he now feels that these things in which & outside which he seems to be are himself, his becomings in the motion of awareness, jagat, bhutani. This is the first important difference between the preceding realisation of knowledge & this fuller realisation of being. His self has become all existences; they & he are all merely becomings of himself.

But if this realisation is only by the heart through love or only by the purified reason through intellectual perception, then it is not the realisation which this shloka contemplates. For so long as we have not become that which we are realising, realisation is not complete & its moral effects cannot be securely held. For what use is it if we merely understand that all is one when if there is a touch from outside it, the body cries "Something has struck me, I am hurt" or the heart says "Someone has injured me, I am in grief" or the vital spirits cry "Someone means ill to me, I am in fear"? And if the heart realises, but the reason & other instruments fail, how shall we not, feeling one with the grief of others, fail to be crushed by them & overborne? The

lower organs must also consent to the absolute sense of oneness or no sure and perfect result can be gained. How is this to be done? By the force of the vijnana, our ideal self. Therefore the Upanishad adds “vijanatah”, when he knows, not by ordinary knowledge, jnanam, or by intellectual knowledge, prajnanam, but by the ideal knowledge, vijanatah.

What is this vijnana? Vedantic commentators have identified it with buddhi; it is, they think, the discriminating intellect or the pure reason. But in the psychological system of the Veda intellectual vichara, reason, even pure reason, is not the highest nor does it lead to the highest results. The real buddhi is not in mind at all, but above mind. For beyond & behind this intellect, heart, nervous system, body, there is, says the Veda, a level, a sea of being out of which all these descend & here take form, a plane of consciousness in which the soul dwells by the power of perfect truth, in a condition of pure existence of knowledge, satyam, pure arrangement of its nature in that knowledge, ritam or vratham, pure satisfying wideness in being of that knowledge-nature, brihat. This is the soul's kingdom of heaven, its ideal state, immortality, amritatwam. All things here are in the language of [the Vishnu Purana] vijnanavijrimbhitani; they live here in fragments of that wide & mighty truth, but because of bheda, because they are broken up & divide truth against truth, they cannot enjoy Truth of knowledge, Truth of Nature, Truth of being & bliss, but have to strive towards it with much failure, pain & relapse. But if man can rise in himself to that plane and pour down its knowledge upon the lower system, then the whole system becomes remoulded in the mould of the vijnana. Man can get himself a new heart, a new mind, a new life, navyam ayu, even a new body, punah kritam. This whole system will then consent & be compelled to live in the truth — & that truth to which vijnana itself is the door, is Brahman as Sacchidananda. All things here will be Sacchidananda. This is the second superiority of this high realisation as this shloka describes it, that it is vijanatah, attained not by intellectual discernment or feeling of the heart or concentration of the mind, not depending therefore on any state such as sushupti or on any attitude, but

itself determining the attitude, & attained through direct ideal knowledge with the result of becoming all that is in our being, not merely the mind or thought or feeling, in our very nature. The practical consequence will be that body, mind & heart will no longer admit any bahyasparsa, but will utterly feel that nothing can come to them, nothing touch them but only Brahman. To every touch there will be but one response from heart & mind & nerve alike — “This is Brahman.” Nanyat pashyati, nanyach chrinoti. They will see nothing else, hear nothing else, smell nothing else, feel nothing else, taste nothing else, but only Brahman. Of such a state it can be truly & utterly said, & not merely relatively, not subject to any qualification, ekatwam anupashyatah.

That oneness is the oneness of Sacchidananda, one being, one knowledge, one bliss, being that is consciousness, knowledge that is identity, both of them in their essence & reality bliss,— therefore not three separate qualities, but one existence, even though presented to the intellect as a trinity, yet always one. Whatever therefore is felt, seen, heard, thought, it will be bliss that is felt, bliss that is seen, bliss that is heard, bliss that is thought — a bliss which is in its essence & inseparably existence & knowledge. For the intellect we have to use all three words, for on the level of our mental action these three are or seem to be divided & different from each other, but to the illumined being of the Jivanmukta there is no difference, they are one. It is ekatwam. It is Brahman. The highest heights of this realisation are, indeed, not easily attained, but even on its lower levels there is a perfect freedom & an ineffable joy. Swalpam apyasya dharmasya. To these levels, tatra, neither fear, nor grief, nor illusion can come. Tatra ko mohah kah shoka ekatwam anupashyatah. How shall he be deluded, whence shall he have grief, to whose eyes wheresoever they turn all things are one? For grief is born of illusion, shoka proceeds from moha, & the essence of moha is that bewilderment, that stultification of the conscious mind by which we forget oneness. By forgetting oneness, the idea of limitation is fixed on our being; by limitation comes the idea of not being this, not having that; from this idea arises the desire

to be this, to have that; by the disappointment of desire comes disappointment, dislike of that which disappoints, hatred & anger against that which withholds, fear of that which gives contrary experience—the whole brood of earthly ills. Moha shouts “Here is one I love, she is dying”; “Here is one who will kill me, I am terrified”; “Here is a touch too strong for me to bear, it is pain.” “This is virtue, that is sin; if I do not gain one I am lost, if I fall into the other I shall suffer by God’s wrath & judgment. This is fair, that is foul. This is sweet, that is bitter. This I have not which another has, I must have it, even if it be depriving him of his possession.” But he who sees oneness sees only Sacchidananda, only bliss that is conscious being. Just as the mind that has taught itself to see only matter everywhere, says even of mind & soul, even of itself, It is not mind, it is not soul, it is matter, just as it sees everywhere only the play of matter upon matter, in matter, by matter, so the liberated soul says of body & nerve & mind, It is not mind, it is not body, it is not nerve, it is Brahman, it is conscious existence that is bliss and so he sees everywhere this bliss only & the play of bliss upon bliss, in bliss, by bliss. Ananda is the term through which he reconciles himself with the world. Into delight his soul is delivered, by delight he supports in himself the great world movement & dwells in it, in delight he is for ever one with, yet plays with God.

The second movement of the Upanishad is finished. In his first movement the Rishi advanced four propositions,—that the purpose of our existence is the fulfilment of God in the world, realising that the Lord & his movement alone exist, He is the only inhabitant, His movement the only cause of the forms in which He inhabits; secondly that the golden rule of life is to enjoy all God’s movement or God in all his movement but only after the renunciation of demand & desire, for only so can it all be enjoyed; thirdly, that life & action in this world are intended, must be maintained & do not interfere with divine freedom

& bliss; fourthly, that any self-marring movement leads only to confusion & darkness here & beyond & not to our divine realisation. In order to lay down on a firm basis his justification of these teachings, he shows us first that God & the world are one, both are Brahman & therefore the world also is our divine Self compassing by a certain divine power movement of action & phenomenon in its still unmoving Self & without parting with its superiority to the movement, on this basis he shows us that existence & bliss not only can be made one, but if we realise this one Brahman who is our divine Self & God (*antar asya sarvasya*), all existence must necessarily become bliss & cannot be anything else; grief & fear & dislike & delusion have no farther place in us. It is to this realisation we shall arrive by realising God as we give up desire, renounce everything to Him and enjoy the world in Him & by Him, as His movement, as His enjoyment. For we shall then realise that all beings are one with ourself, the renunciation of desire will become possible and we shall not shrink from anything in life, because we shall know that it is God & his movement. Finally, the high & complete realisation will be ours in which the very cause of desire & demand will disappear & all will be utterly the Self, God, Brahman, Sacchidananda.

Chapter V

A question may arise. It is true then that enjoyment of all things here in oneness is possible; that renunciation of desire & self-surrender are the way & the realisation of the Lord in all forms & movements & self-surrender to him the method,—involving also action according to His will, enjoyment according to His will. But when the final realisation is accomplished, when oneness is utterly attained, then what farther need of enjoyment & action? The goal is realised, let the method be abandoned. Why keep the distinction of God & the world, why act any more in

the world when the purpose of action is accomplished? It may still be possible, it is not necessary; it is not even desirable. Lose yourself in Sacchidananda, if not the impersonal unconditioned Brahman. Is it not that in which the vision of oneness logically culminates? Therefore not only the golden rule of conduct has to be justified, but the teaching of a liberated activity has to be justified. It is this to which the Sage next proceeds. He is about to establish the foundations of action in the liberated soul, to show the purpose of the One & the Many,—to reconcile Vidya & Avidya in God's supreme & blissful unity. The eighth verse is the introductory & fundamental verse of this movement.

APPENDIX

[1]

[Bracketed and struck through in the manuscript. See the footnote on page 378.]

From the choice of terms in this opening line certain intellectual consequences arise which we have to accept if we wish to understand the teaching of the Upanishad. First, the Personality of God & His unity. Not only is the impersonal God one Brahman without a second, but the Personal God is one without a second. There is no other person besides God in the universe. Whatever different masks He may wear, from house to house of His habitation, it is always He. The disguises may be utterly concealing. He may manifest as Brahma & Vishnu, Surya & Agni or as the Yaksha & the Pishacha; he may dwell here as the man or dwell here as the animal; he may shine out as the saint or lust in Himself as the criminal; but all these are He.

[2]

[Written on a separate sheet of the manuscript. See the footnote on page 378.]

The world & God. What is the world? It is jagati, says the Rishi, she who is constantly moving. The essence of the world is not Space nor Time nor Circumstance which we call Causality — its essence is motion. Not only so, but every single force & object in it is of the same nature, it is a jagat, a knot of habitual motion. The ancient Hindus knew that the earth moves & therefore the earth also was designated in ancient times by a number of words meaning motion of which jagati itself is one — ga, go, jagati, ila. They knew of the physical movement of the universe. They would not have rejected the scientific hypothesis which sees in every object a mass & arrangement, a sort of cosmos of anus,

atoms in constant movement with regard to [each] other. But the movement here contemplated is not, as we see in the fifth verse, tad ejati & the eighth verse, sa paryagat, movement of matter, but of divine being & conscious force of which matter is only an appearance. But for the present, the Rishi is content to envisage the world as a world of motion & multitude. In essence the kshobha or formative movement called active Prakriti, in universality it is this force ordering & arranging its objects by motion, jagati; in detail it is a multitude of single objects, forces, ideas, sensations etc, all in their nature motion of this moving universe, jagat, the apparently motionless stone no less than the ever circling & rotating earth. In this motion, in the objects, forces, sensations created by it He dwells who is its Lord.

[3]

[Written in the top margin of two pages of the manuscript. Point of insertion not marked. See the footnote on page 380.]

Moreover we must realise the Lord in others as one with Him in ourselves. Then we shall not need to covet any man's possessions. "Do not covet" says the Sage "the possession of any man whomsoever." Dhanam means any kind of possession whatever, not only material wealth — neither the glory of the king, nor the wealth of the merchant, nor the temperament of the sage, nor the strength of elephants, nor the swiftness of eagles. For whom are we envying, whose goods are we coveting? Ourselves, our own goods. If we realise divine unity, we can enjoy them as perfectly in another's experience as in our own. Moreover, being divine in power ourselves we can get them whenever our supreme self wills without anyone else in the world being the poorer for our gain. There must be no demand, no coveting. Not when or if the mind wills, but when or if He wills.

[4]

[Written separately; point of insertion not marked. See the footnote on page 380.]

Practically, therefore, the renunciation demanded of us is the renunciation by the lower unreal & incomplete self, mind, senses, vitality, intellect, will, egoism of all that they are & seek to our real, complete & transcendental Self, the Lord. And that renunciation we make not by substituting another demand, the demand to be rid of all these things & released from the fulfilment of His cosmic purpose, but in order the better to fulfil His purpose & enjoy Him utterly in His movement, in all experience & all action that He in us & through us is manifesting & perfecting. For that which we have to enjoy is not only Ish but jagat,— for as we shall see both are one Brahman & by enjoying Him entirely we must come to enjoy all His movement, since He is here as the Lord of his own movement. For this reason the word Ish has been selected as the fundamental relation of God to ourselves & the world—the master of all our existence to whom we renounce, the Lord who for his purposes has made & governs the world—for in this relation of “Lord” he is inseparable from His movement. It is a relation that depends on the existence & play of the world of which He is the ruler & master. Envisaging the ruler, we envisage that which he rules, the habitation for the sake of the inhabitant indeed, but still the habitation. We get therefore in this first verse of the Upanishad the foundations of the great principle of activity with renunciation with which the teaching of the Gita begins & the still greater principle of atmasamarpana or entire surrender to God, the uttamam rahasayam with which it culminates. We get the reason & spirit of the command to Arjuna from which all the moral teaching of the Gita starts & to which it returns, jitva shatrun bhunkshva rajyam samriddham, the command of activity, the command of enjoyment—but activity for God only, yajnartham, without ahankara, enjoyment in God only, mayi sannyasya, without desire or attachment, neither demanding what He does not take

for Himself in us, nor rejecting what He is here to enjoy, whether the enjoyment be of victory or defeat, of the patched loin cloth of the beggar or the imperial crown.

[5]

[Written in a different notebook; beginning lost or point of insertion unknown. Related thematically to Draft A of "The Life Divine".]

[.....] existence, lies the justification of all that is said in the scriptures of the liberated & perfected soul. He who would be free in this world, must be detached from it, though belonging to it, above it though in it, above it in his inward conscious self-being, though in it in his outward action of Nature. He must combine with a blissful enjoyment of all things in the world, a joyous indifference to all things in the world. He must be not un-mundane but supramundane, not inhuman but superhuman. In all his acts he must have in his soul the loud laughter, the attahasyam, of Kali. He must love with that inner laughter, slay with that laughter, save with that laughter, himself perish or reign, take joy or take torture with that secret & divine laughter. For he knows that the whole world is but a divine play of the eternal Child-God Srikrishna with Himself in the playground of His self-existence. All this he cannot have unless in the roots of his conscious being he feels not concealed or subliminal, but manifest & always present to him, the Bright, Calm, Unconcerned, Unbound, Unrelated Divine Existence.

This Pure Existence is not only an impersonal state of divine being, it is God Himself in His pure personality. For in all the divine manifestation, there is always this double aspect of Personality & Impersonality. God Impersonal manifests Himself, both in the universe & transcendent of the Universe, transcending it as infinite pure Existence, infinite pure Consciousness, infinite pure Delight, the triune Sachchidananda of our Scriptures, entering world existence. He manifests in it all this quality of existence, variation of Consciousness, multiplicity of

delight which with its changes, perversities & apparent self-contradictions makes up the marvellous web of the world. But He is also, transcending existence, the infinite Pure Existent, the infinite Pure Conscious, the infinite Pure Blissful,— not anyone, no person or individual, for He alone is, but still neither a mere abstraction or state of Being. Entering into world existence, He is All-being, God, Shiva, Vishnu, Krishna, Kali, Allah, the Mighty One, the Humble, the Loving, the Merciful, the Ruthless. These things are aspects of Himself to His own consciousness. Just as Sacchidananda is Triune,— not three, but One,— for when we enter deep into the Trinity we find only Unity since Existence is Consciousness & nothing but Consciousness, & Consciousness is Delight & nothing but Delight, so the Personal & Impersonal God are Biune, not two, but one, since when we enter into the depths of this Biune, we find only Unity, Existence nothing but the Existent, the Existent nothing but Existence. The distinction between them is a necessary convention or arrangement of His truth for world manifestation; it does not amount to a difference. The metaphysician fixes his concentration of Will in Knowledge only on the Impersonal & pursuing it through the world & beyond, he affirms the Impersonal God but tends to deny the Personal. The devotee, fixing his concentration on the Personal & pursuing it through the world & beyond, affirms the Personal God but tends to deny or ignore the Impersonal. Both affirmations are true, both denials are false. Neither is one greater than the other, the Impersonal than the Personal, just as in the Personal, Shiva is not greater than Vishnu, nor Vishnu than Shiva, nor the All-Being than Krishna or Kali. Such exaggerated distinctions are the errors of partial or selective Yoga fastening on aspects & ignoring the true being of God in His self-manifestation. We must accept, for our perfection's sake, the multitude of His aspects & even of His divine impersonations, but we must not make them an excuse for breaking up the inalienable unity of God.

The Life Divine

[Draft B]

Part II
The First Movement

Chapter I
God and Nature

I

The Isha Upanishad opens with a monumental phrase in which, by eight brief and sufficient words, two supreme terms of existence are confronted and set forth in their real and eternal relation. Ish is wedded with Jagati, God with Nature, the Eternal seated sole in all His creations with the ever-shifting Universe and its innumerable whorls and knots of motion, each of them called by us an object, in all of which one Lord is multitudinously the Inhabitant. From the brilliant suns to the rose and the grain of dust, from the God and the Titan in their dark or their luminous worlds to man and the insect that he crushes thoughtlessly under his feet, everything is His temple and mansion. He is the veiled deity in the temple, the open householder in the mansion and for Him and His enjoyment of the multiplicity and the unity of His being, all were created and they have no other reason for their existence. Ishá vásyam idam sarvam yat kincha jagatyám jagat. For habitation by the Lord is all this, everything whatsoever that is moving thing in her that moves.

This relation of divine Inhabitant and objective dwelling-place is the fundamental truth of God and the World for life. It is not indeed the whole truth; nor is it their original relation in the terms of being; it is rather relation in action than in being, for purpose of existence than in nature of existence. This practical

relation of the Soul to its world thus selected by the Seer as his starting point is from the beginning and with the most striking emphasis affirmed as a relation not of coordinate equality or simple interaction but of lordship and freedom on one side, of instrumentality on the other, Soul in supreme command of Nature, God in untrammelled possession of His world, not limited by anything in its nature or His nature, but free & Lord. For, since it is the object of the Upanishad to build up a practical rule of life here in the Brahman rather than a metaphysical philosophy for the satisfaction of the intellect, the Seer of the Upanishad selects inevitably the practical rather than the essential relation of God & the world as the starting point of his thought, use & subordination rather than identity. The grammatical form in *vásyam* expresses a purpose or object which has to be fulfilled, —in this instance the object of habitation; the choice of the word *Ishá* implies an absolute control and therefore an absolute freedom in that which has formed the object, envisaged the purpose. Nature, then, is not a material shell in which Spirit is bound, nor is Spirit a roving breath of things ensnared to which the object it inspires is a prisonhouse. The indwelling God is the Lord of His creations and not their servant or prisoner, and as a householder is master of his dwelling-places to enter them and go forth from them at his will or to pull down what he has built up when it ceases to please him or be serviceable to his needs, so the Spirit is free to enter or go forth from Its bodies and has power to build and destroy and rebuild whatsoever It pleases in this universe. The very universe itself It is free to destroy and recreate. God is not bound; He is the entire master of His creations.

The word *Ishá*, starting forward at once to meet us in this opening vibration of the Seer's high strain of thought, becomes the master tone of all its rhythms. It is the key to all that follows in the Upanishad. For not only does it contradict at once all mechanical theories of the Universe and assert the pre-existence, omnipotence, majesty and freedom of the transcendent Soul of things within, but by identifying the Spirit in the universe with the Spirit in all bodies, it asserts what is of equal importance to

its gospel of a divine life for humanity, that the soul in man also is master, not really a slave, not bound, not a prisoner, but free—not bound to grief and death and limitation, but the master, the user of grief and death and limitation and free to pass on from them to other and more perfect instruments. If then we seem to be bound, as undoubtedly we do seem, by a fixed nature of our minds and bodies, by the nature of the universe, by the duality of grief and joy, pleasure and pain, by the chain of cause and effect or by any other chain or tie whatsoever, the seeming is only a seeming and nothing more. It is Maya, illusion of bondage, or it is Lila, a play at being bound. The soul, for its own purposes, may seem to forget its freedom, but even when it forgets, the freedom is there, self-existent, inalienable and, since never lost except in appearance, therefore always recoverable even in that appearance. This is the first truth of Vedanta assumed by the Upanishad in its opening words and from this truth we must start and adhere to it always in our minds, if we would understand in its right bearing & complete suggestion the Seer's gospel of life:—

That which dwells in the body of things is God, Self and Spirit; the Spirit is not the subject of its material, but the master; the soul in the body or in Nature is not the prisoner of its dwelling-place, but has moulded the body and its dharmas, fixed Nature and its processes and can remould, manipulate and arrange them according to its power and pleasure.

Idam sarvam yat kincha, the Seer has said, emphasising the generality of *idam sarvam* by the comprehensive particularity of *yat kincha*. He brings us at once by this expression to the Adwaitic truth in Vedanta that there is a multitude of objects in the universe, (it may be, even, a multitude of universes,) but only one soul of things and not many. Eko 'chalah sanátanah. The Soul in all this and in each particular form is one, still and sempiternal, one in the multitude of its habitations, still and unshifting in the perpetual movement of Nature, sempiternally the same in this constant ceasing and changing of forms. God sits in the centre of this flux of the universe, eternal, still and immutable. He pervades its oceanic heavings and streamings; therefore it endures. Nature is the multiplicity of God, Spirit is

His unity; Nature is His mobility, Spirit is His fixity; Nature is His variation, Spirit is His constant sameness. These truths are not stated at once; the Seer waits for a later verse to arrive at them. In this opening phrase he limits himself to the statement of the unity of God, and the multiplicity and mobility of Nature; for this relation in opposition is all that is immediately necessary to base the rule of divine living which it is his one object in the Upanishad to found upon a right knowledge of God & existence.

The self then of every man, every animal and every object, whether animate or inanimate, is God; the soul in us, therefore, is something divine, free and self-aware. If it seems to be anything else,—bound, miserable, darkened,—that is inevitably some illusion, some freak of the divine consciousness at play with its experiences; if this Soul seems to be other than God or Spirit, what seems is only a name and a form or, to keep to the aspect of the truth here envisaged, is only movement of Nature, jagat, which God has manifested in Himself for the purpose of various enjoyment in various mansions,—it is an image, a mask, a shape or eidolon created in the divine movement, formed by the divine self-awareness, instrumentalised by the divine activity. Therefore He is “this man and yonder woman, a boy and a girl, that old man leaning on his staff, this blue bird and that scarlet-eyed”. We have, asserted in the comprehensiveness of the phrase, not only an entire essential omnipresence of God in us & in the world, but a direct and a practical omnipresence, possessing and insistent, not vague, abstract or elusive. The language of the Sruti is trenchant and inexorable. We must exclude no living being because it seems to us weak, mean, noxious or vile, no object because it seems to us inert, useless or nauseous. The hideous crawling worm or snake no less than the beautiful winged bird and the strong or gracious forms of four-footed life, the dull stone and foul mire and evil-smelling gas no less than man, the divine fighter and worker, are motions of the supreme Spirit; they contain in themselves and are in their secret reality the living God. This is the second general truth of Vedanta which arises inevitably from the pregnant verse of the Seer and, always present to him in his brief and concentrated thinking, must also

accompany us throughout our pursuit of his sense and doctrine.

God is One; Self, Spirit, Soul is one; even when It presents Itself multitudinously in Its habitations as if It were many souls and so appears in the motion of Nature, Its universality and unity are not abrogated nor infringed. In all there is That which by coming out of its absorption in form of movement, recovers its unity. As the soul in man, though seeming to be bound, is always free and can realise its freedom, so, though seeming divided, limited and many, it is always universal, illimitable and one and can realise its universality and unity.

This creature born in a moment of time and bound in an atom of Space, is really in his secret consciousness the universal Spirit who contains the whole universe of things and dwells as the self of all things in these myriad forms of man & bird & beast, tree & earth & stone which my mind regards as outside me & other than myself. In the name of myself God inhabits this form of my being — but it is God that inhabits and the apparent “I” is but a centre of His personality & a knot in the infinite coilings of His active world existence. My ego is a creation of the Jagati in a form of mind; my Self stands behind, possesses and exceeds the universe.

II

This is Spirit in relation to Nature, one in multiplicity, the Lord of nature and process, free in the bound, conscious in the unconscious, inhabitant, master and enjoyer of all forms and movements of life, mind and body. Nature in relation to Spirit is its motion and the result of its motion, jagatyam jagat, phenomenon and everything that exists as phenomenon, universe and everything that constitutes universe. There are two terms in this brief and puissant formula, jagati and jagat. The second, jagat, is particular and multiple and includes whatsoever is separate existence, individual thing or form of motion, yat kincha; the first, jagati, is general and indicates both the resultant sum and the formative principle of all these particular existences, sarvam idam yat kincha. Sarvam idam is Nature regarded objectively as

the sum of her creations; jagati is Nature regarded subjectively and essentially as that divine principle, expressed in motion of being and observed by us as force or Energy, which generates all these forms and variations. For Existence in itself is existence in a state of repose or stillness; indeterminate, infinite, inactive, it generates nothing: it is movement of energy in Existence which is active, which determines forms, which generates appearances of finite being and brings about phenomena of Becoming as opposed to fixed truth of Being. Therefore every objective existence in the world and all subjective forms, being forms of Existence in motion, being inconstant, being always mutable and always changing, progressing from a past of change to a future of change, are not truly different beings at all, but becomings of the one and only Being; each is the result of its previous motion, stands by its continued motion and if that motion were pretermitted or its rhythm disturbed, must change, disintegrate or transmute itself into some other form of becoming. Spirit or God is eternal Being, Nature in its sum & principle is the becoming of God and in its particulars a mass of His becomings, real as becomings, falsely valued as beings. The knowledge of the Upanishads takes its stand on this supreme distinction of Being and its Becomings; we find, indeed, in this Upanishad itself, another and more convenient collective term used to express all that is here defined as *yat kincha jagatyam jagat*,—one which brings us straight to this great distinction. The soul is Atman,¹ Being; everything else is *sarvabhútáni*, all becomings or, literally, all things that have become. This phrase is the common Sanscrit expression for created beings and though often referring in ordinary parlance to animate and self-conscious existences only, yet must in its philosophical sense and especially in the Upanishads, be accepted as inclusive of all existences whether they are or seem animate or inanimate, self-conscious or veiled in consciousness. The tree, flower & stone no less than the animal, heaven and wind and the sun and rain no less than man, invisible gas and

¹ The scholars hold erroneously that Atman meant first breath, then self; it meant, on the contrary, being, from the old root *â*, to be, still extant in Tamil, and the suffix *tman*, which expresses substance or substantial embodiment.

force & current no less than the things we can see and feel fall within its all-embracing formula.

God is the only Being and all other existences are only His becomings; the souls informing them are but one Spirit individualised in forms and forces by the play and movement of Its own self-consciousness.

We see, then, whose this energy is and of what the universe is the motion. But already from the little we have said there begins to emerge clearly another truth which in the Upanishad itself the Seer leaves in shadow for the present and only shapes into clear statement in his fourth and eighth couplets; he emphasises in the fourth couplet the unity of Soul & Nature, the stillness & the motion are not separate from each other, not one of them Brahman and the other an illusion, but both of them equally the one sole Existence, which moves & yet is still even in its motion, *Tad ejati tanmajati, amejad ekam manaso javiyas.* In the eighth verse he indicates that Brahman & the Lord² are not different from each other or from the motion, but are the reality of the motion as the motion itself is the play of the stillness; for to *Tad ejati*, That moves, comes as an echo & response, *Sa paryagát*, He went abroad. *Nature is motion of the Spirit, the world is motion of God; but also Nature is Spirit in motion, the world is God at play.*

All our inefficient envisagings of the world, all our ignorant questions fall away from this supreme Vedantic conception. We cannot ask ourselves, "Why has God brought about this great flux of things, this enormous and multitudinous world-movement? what can have been His purpose in it? Or is it a law of His nature and was He under an inner compulsion to create? Who then or what compelled Him?" These questions fall away from the decisive & trenchant solution, *Ishá vásyam jagat.* He has no purpose in it except habitation, except delight, an ordered and harmonised delight,—therefore there is what we call universe, law, progression, the appearance of a method

² The Mayavadins hold that God is only the first myth of Maya & not the truth of Brahman,—the language of the Upanishad shows that this was not the view of the old Vedantic Rishis.

and a goal; but the order effected feels always its neighbourhood to the grandiose licence of the infinite and the harmony achieved thrills at once with the touch of the Transcendent's impulse to pass out of every rhythm and exceed every harmony. For this is a self-delight which in no way limits or binds Him; He has brought it about and He conducts it in perfect freedom; there is no compulsion on Him & none can compel Him, for He alone exists and Nature is only a play of time-movement in His being, proceeding from Him, contained in Him, governed by Him, not He by it or proceeding from it or coeval with it and therefore capable of being its subject, victim or instrument. Neither is there any inner compulsion limiting Him either as to the nature of the work or its method. The movement of the universe is not the nature of God, nor are its processes the laws of God's being; for Spirit is absolute and has no fixed or binding nature, God is supreme & transcendent and is not bound by state, law or process,—so free is He, rather, that He is not bound even to His own freedom. The laws of Nature, as we have seen, cannot be laws of being at all, since Nature itself is a becoming; they are processes which regulate the harmonies of becoming, processes which are, in the Vedic image, chhandas, rhythms of the movement and not in their own being rigid, inexorable & eternal because self-existent verities; they are results of the tendency to order & harmony, not sempiternal fetters on Existence. Even the most fundamental laws are only modes of activity conceived & chosen by Spirit in the universe. We arrive then at this farther all-important truth:—

Nature is a divine motion of becoming of which Spirit is the origin, substance and control as well as the inhabitant and enjoyer. Laws of Nature are themselves general movements & developments of becoming and conditions of a particular order, rhythm and harmony of the universe, but not inexorably pre-existent or recognisable as the very grain of existence. The Laws of Evolution are themselves evolutions and progressive creations of the Spirit.

Since Spirit, transcendent and original of the universe, is the sole existence, the motion of the universe can only take place in

the Spirit. Therefore the indwelling of the Spirit in forms is not only a free indwelling rather than an imprisonment, but also it is not the whole or essential truth of this mutual relation of God & Nature; indwelling but not confined, like the presence of the ether in the jar, it is symbolical and a figment of divine conception rather than the essential relation of body and spirit. We get the fuller statement of the truth in the fifth couplet of the Upanishad, Tad antar asya sarvasya tad u sarvasyásya báhyatah; That, the inexpressible Reality of things, is within this universe and each thing it contains, but equally it is outside of this universe and each thing that it contains,— outside it as continent, outside it as transcendent. The omnipresent Inhabitant of the world is equally its all-embracing continent. If form is the vessel in which Spirit dwells, Spirit is the sphere in which form exists & moves. But, essentially, It transcends form and formation, movement and relation, & even while It is inhabitant & continent, stands apart from what It inhabits and contains, self-existent, self-sufficient, divine and eternally free. Spirit is the cause, world is the effect, but this cause is not bound to this effect. Na cha mám tání karmáni nibadhnanti, says the Lord in the Gita; I am not bound by these works that I do, even while I do them. The soul of man, one with God, has the same transcendency and the same freedom.

Spirit contains, dwells in and transcends this body of things. It acts in the world but is not bound by Its actions. The same essential freedom must be true of this soul in the body, even though it may seem to be confined in the body and compelled by Nature's results and its own works. The soul in us has the inherent power not only of becoming in this outward & waking consciousness what it is in reality, the continent of the body which seems to contain it, but of transcending in consciousness all bodily relation and relation with the universe.

From the action of Nature in the Spirit, as from the action of the Spirit in Nature, the same formula of freedom emerges. I have, in God and by God, made myself and my world what we now are; I can, in God and by God, change them and make them what I would have them be. I am not the sport and puppet

of Nature and her laws, but their creator and her master. She accommodates herself to me and pretends to herself & me that she is ruling my whole existence, when she is really following, however late, stumblingly and with feigned reluctance, the motion of my will. Instrument of my actions, she pretends to be the mistress of my being. The identity of the soul and God behind all veils is the Vedantic charter of man's freedom. Science, observing only the movement, seeing fixed process everywhere, is obsessed by what she studies and declares the iron despotism of mechanical Law. Vedanta, studying the Force that makes the movement and its cause, arrives at the perception and experience of Spirit everywhere and declares our eternal and indefeasible freedom. It passes beyond the Law to the Liberty of which the Law itself is the creation & expression.

III

It is not enough, however, to know the inner fact and the outer possibility of our freedom; we must also look at and take into account the apparent actuality of our bondage. The debit side of the human ledger must be taken into the reckoning as well as the credit account. The explanation and seed of this bondage is contained in the formula jagatyam jagat; for, if our freedom results from the action of Spirit in Nature and of Nature in Spirit, our bondage results from the action of Nature on all that she has created and contains. Every mundane existence is jagatyam jagat, not a separate and independent motion by itself, but part of and dependent on the universal movement. From this dependence by inclusion derives the great law that every form of things engendered in the motional universe shall be subject to the processes of that particular stream of movement to which it belongs; each individual body subject to the general processes of matter, each individual life to the general processes of vitality, each individual mind to the general processes of mentality, because the individual is only a whorl of motion in the general motion and its individual variation therefore can only be a speciality of the general motion and not contradictory of it.

The multiplicity of God in the universe is only a circumstance of His unity and is limited and governed by the unity; therefore the animal belongs to its species, the tree, the rock and the star each to its kind and man to humanity. If machinery of existence were all, if there were no Spirit in the motion or that Spirit were not Ish, the Master, origin, continent and living transcendence of the motion, this law is of so pressing a nature that the subjection would be absolute, the materialist's reign of iron Law complete, the Buddhist's rigid chain of causation ineffugable. This generality, this pressure of tyrannous insistence is necessary in order that the harmony of the universe may be assured against all disturbing vibrations. It is the bulwark of cosmos against chaos, of the realised actuality against that inconstant & ever-pulsating material of infinite possibility out of which it started, of the finite against the dangerous call and attraction of the Infinite.

The unity of God governs His multiplicity; therefore the more general motion of Nature as representative of or nearest to that unity governs the multiple individual products of the movement. To each motion its law and to each inhabitant of that motion subjection to the law. Therefore Man, being human in Nature, is bound first by Nature, then by his humanity.

But because God is also the transcendence of Nature & Nature moves towards God, therefore, even in Nature itself a principle of freedom and a way of escape have been provided. Avidyayá mrityum tírtwá. For, in reality, the motion of Nature is only the apparent or mechanical cause of our bondage; the real and essential cause arises from the relation of Spirit to Nature. God having descended into Nature, Spirit cast itself out in motion, allows Himself as part of the play to be bewitched by His female energy and seems to accept on Himself in the principle of mind isolated from the higher spiritual principles, her absorption in her work and her forgetfulness of her reality. The soul in mind identifies itself with its form, allows itself apparently to float on the oceanic stream of Nature and envisages itself as carried away by the current. Spirit veils itself from Mind; Ish wraps Himself up in jagat & seems to its own outer consciousness to be jagat. This is the principle of our bondage; the principle of our freedom

is to draw back from that absorption & recover our real self-consciousness as the containing, constituting and transcendent Spirit.

Spirit, absorbed in the motion and process of Nature, appears to be bound by the process of becoming as if it were law of being; it is therefore said to be bound by Karma, that is to say, by the chain of particular cause and effect, the natural chain of active energy and its results. But by drawing back upon itself & ceasing to identify itself with its form, it can get rid of this appearance and recover its lordship and freedom. Incidentally, the soul of Man by drawing more and more towards God, becomes more & more Ish and can more and more control the processes of becoming in himself and in others, in the subjective and in the objective, in the mental and in the material world.

This final conclusion of freedom & power in the world is of the last importance for our immediate purpose. Merely to draw back from all identification with form is to draw away towards the Stillness, the Infinity & the cessation of all this divine play of motion. Ever since Buddhism conquered Vedic India and assured the definite enthronement of the ideal of Sannyasa in opposition to the ideal of Tyaga, this consummation has been constantly praised and held up before us in this country as the highest ideal of man and his only path to salvation. But even if for the few this goal be admitted, yet for the majority of men it must still & always remain God's ultimate purpose in them to realise Him manifest in the world,—since that is His purpose in manifestation,—& not only & exclusively unmanifest in His transcendental stillness. It must be possible then to find God as freedom & immortality in the world and not only aloof from the world. There must be a way of escape provided in Nature itself out of our bondage to Nature. Man must be able to find in Nature itself and in his humanity a way of escape into divinity & freedom from Nature, avidyayá mrityum tárta. This would not be possible if God and Nature, Brahman and the Universe, were two hostile & incompatible entities, the one real and the other false or non-existent. But Spirit and Universe, God and Nature are one Brahman; therefore there must always be a point at

which the two meet; their apparent divergence in consciousness must be somewhere corrected in consciousness, Nature must at some point become God and the apparently material Universe stand revealed as Spirit.

In the profound analysis of the human soul built by the ancient Vedantic thinkers upon the most penetrating self-observation and the most daring & far-reaching psychological experiments, this point of escape, this bridge of reconciliation was discovered in the two supramental principles, Ideal Consciousness & Bliss Consciousness, both of them disengaged from the confusions of the mind involved in matter. Just as modern Scientists, not satisfied with the ordinary processes & utilities of Nature, not satisfied with the observation of her surface forces & daily activities, penetrated further, analysed, probed, discovered hidden forces & extraordinary activities, not satisfied with Nature's obvious use of wind as a locomotive force, found & harnessed the unutilised propulsive energy of steam, not satisfied with observing the power of electricity in the glare & leap of the thunderflash, disengaged & used it for the lighting of our houses & thoroughfares, for the driving of our engines & printing presses, for the alleviation of disease or for the judicial murder of our fellow-creatures, so the old Vedantic Yogins, not satisfied with observing the surface activities and ordinary processes of our subjective nature, penetrated further, analysed, probed, discovered hidden forces & extraordinary activities by which our whole active mentality could be manipulated and rearranged as one manipulates a machine or rearranges a set of levers; pressing yet farther towards the boundaries of existence they discovered whence this energy proceeded & whitherward this stir and movement tended & worked. They found beyond the manifest & obvious triple bond of body, life & mind, two secret states & powers of consciousness which supported them in their works — beyond this limited, groping and striving mind & life which only fumble after right knowledge & labour after the right use of power & even attaining them can possess & wield them only as indirect & secondhand agents, they discovered a principle of ideal consciousness, *vijnana*, which

saw Truth face to face & unerringly, looking on the sun with unshaded eyes, and a principle of all-blissful power & being which possessed in itself, by the very right of its eternal existence & inalienable nature, right joy, right awareness & right action as the very self-atmosphere of its manifestation in the universe. Above this inferior trilogy of matter, life & mind (Annam Prana Manas), there is a superior trilogy of Infinite Being, Force & Bliss (Sat, Chit, Ananda) accessible to us & working on us inhabitants of the lower spheres from the symbol of divine beatific consciousness, the Anandatattwa, as its throne of world rule, the home & fortress of the divine Master, and employing as its distributing & arranging minister the truth-seeing ideal mind to feed, supply & compel the activities of the lower being. They saw, then, being arranged in seven stairs, seven worlds, seven streams of world movement, seven bodies of things, seven states of consciousness which inform & contain the bodies. They saw this material consciousness & this material world as the lowest stair, the least in plenitude & power & joy of these seven divine rivers. Man they saw as a soul dwelling in matter, deriving his activities from mind & holding them in mind but going back in the roots of his being to the divine trilogy. Earth, in the language of their thought, was the footing & pedestal of the human unit, but the heavens of Ananda concealed the secret & ungrasped crown of his world-existence. This conception of the sevenfold form of our being & of world-being helps to constitute the very kernel of the doctrine in the Upanishads. It is the key to their sense in many passages where there is no direct mention or precise reference to any of its seven terms. It is because we miss these clues that so much in these scriptures comes to our mind as a mystery or even as a vague & confused extravagance of disordered mysticism.

In this septuple system of our Scriptures every individual body obeys the laws of matter, every life the processes of vitality, every mind the processes of mentality, every ideal being the processes of ideality and every free soul the processes of Beatitude. The seven worlds are indeed different kingdoms, each with its own nations & creatures, *prajáh, bhútáni*. But since God is

always one, each separate motion contains in itself the presence and potentiality of all the others; moreover, since it contains the potentiality, it is irresistibly led to develop under its own conditions that which it contains. For this reason Matter in the world tends to manifest Life, Life in Matter to rise into Mind, Mind in vitalised body to be released into Pure Idea, Pure Idea in matter-housed Mind to be consummated in divine Beatitude. The pervading law, therefore, which confines each species to the rule of its kind is only one general rhythm of the movement; it is crossed by a higher upward and liberating movement which leads the becoming we now are to strive for development towards that other, freer & larger scale of becoming which is immediately above it. This fresh rule of Nature, then, appears & constitutes the rule of our freedom as the other was the rule of our servitude.

The principle, “To each motion its law & to each inhabitant of the motion subjection to the law” is crossed and corrected by this other principle, “Each motion contains a tendency towards the motion above it and to each type of becoming, therefore, there comes in the progress of time the impulse to strain beyond the mould it has realised to that which is higher than itself.”

In this complex arrangement of Nature where is man's exact position? He is a mental being housed in a vitalised body & he tends through pure idea towards divine beatitude. Now just as matter informed with life, no longer obeys the processes of matter only, but, even while it affects life-processes, is also affected by them and finds its complete liberation in the conquest of matter by life, just as mind in a life body is affected, limited and hampered by vital & bodily processes, but still governs them and would find its own liberation and theirs in the perfect conquest of life & matter by mind, so, since this mental being is really a soul imprisoned in mind, its perfect liberation comes by rising out of the mould of mind through pure idea into beatitude; escaping into beatitude, this mental existence is able to liberate the whole lower system of being by renewing every part of it in the mould and subjecting every part of it to the process of that which we have now become. The mould and process of Ananda

is freedom, God, bliss, immortality, universality, & these, therefore, are the laws of being, the *dharma*s, the sum of a divine beatific existence which we put on by rising out of mental ego into infinite Ananda. The motion of pure Idea, vijnana, is the door of our escape in Avidya; for it is the kingdom within us of Truth and Illumination, domain, in the Vedic symbol, of the god of the Sun, the prophetic Apollo, the burning and enlightening Surya. Sa no dhiyah prachodayát.

The base of our being is in Matter, its knot is in mentality, its escape into divine Bliss. Our aim as human beings must be to rise through the pure Idea into divine bliss and there freed from mental egoism & vital and material limitations spiritualise and beatify our whole existence from the base to the summit.

We are a double birth, God the Spirit, God in Nature, Ish and Jagat. In Nature we are bound in our consciousness, because we are there a whorl of its motion, a wave in its sea; in Spirit we are free, for there we are a part of nothing, but one with the indivisible Spirit. But this double is really biune. God, unbound by His divisibility, unbound by His indivisibility, weds the One to the Many in the play of His consciousness, in His ineffable beatitude. There God and Nature meet, Vidya and Avidya embrace each other, our real freedom governs and uses consciously our apparent bondage, the bliss of Transcendence joins hands with the bliss of manifestation, God shows Himself in humanity and man realises himself as divine.

The joy of that reconciliation dwells in the Immortality to which the Vedanta is our guide and its starting point is the recognition by mind of the one Lord in all bodies, the one Spiritual Being in all becomings, átmánam sarvabhúteshu. Since it is the all-blissful Lord who dwells within and Nature is for His habitation and enjoyment, then a state of Nature which is a state of bondage, sorrow-pursued, death-besieged, wrestling with limitations, is convicted of being only a temporary mask and a divinely willed starting-point for the Energy confined in the triple bonds of mortal Mind, Life & Matter to work out its own immortal freedom. The object of life is self-liberation, the only aim of human existence consistent with the dignity and

fullness of our being is the escape through Nature to God, out of grief, bondage & death into joy, freedom and immortality. Avidyayá mrityum tírtwá vidyayámritam asnute.

APPENDIX

[The following passage, written on a loose sheet, seems to be related to the above section.]

In our observation of the workings of law & freedom in cosmic Nature we cannot fail to be struck by the principle of gradated and progressive freedom by which she climbs up from an apparent rigidity of law to an apparent elasticity of freedom. We observe that matter inert or informed only by an inert principle of motion is the field of rigid law & of fixed process. We observe next that in proportion as life develops in matter, the principle of variation, of flexible adaptability, even of instinctive, if unconscious self-adaptation manifests & increases in her workings. We observe that in proportion as mind develops in living matter this variation, this flexibility & self-adaptation grow into a conscious struggle with & partial domination of the life & matter in which mind operates. From this we arrive easily at certain large corollaries.

(1) Mind, life & matter are, in all probability, one essence, but not one principle. They are three different principles of Nature, each with its separate rhythm, principle of process & mode of working.

(2) Consciousness is the principle of freedom, form is the principle of law; the necessity of dealing with the rigidity of form and its processes is the cause of the limitations of the freedom inherent in consciousness.

(3) Consciousness and life evolve out of matter; they must then have been all the time inherent & involved in matter.

(4) Life itself seems to be an operation of involved consciousness working itself out of the imprisonment in matter. It is therefore conceivable that matter itself may be only a form of involved consciousness.

(5) Mind is a principle of mental self-conscious sensation, action-comprehension, reaction, attraction-repulsion rising into a luminosity (prakasha) we call knowledge of which thought is only the partial system or formula. In Life we notice in the plant & metal a vital sensation, action-comprehension, reaction, attraction-repulsion, essentially the same as the mental but expressed in a different system of values,—values of involved consciousness. In Matter we do not observe sensation, but we do observe the other common activities of Nature. Experimental Yogic psychologists assert that matter does also receive & store blind sensations & that the mind of man can discover records of past events in material objects & convert them into values of knowledge. Science even goes so far as to assert that all sensations are an activity of matter & are stored in the brain & can always be turned by memory under some stimulus into values of knowledge. We may say therefore that the essence of consciousness is at least present in matter, but it only organises itself by evolution, through life in mind.

We cannot assert that the present state of consciousness [which is] the consciousness of limited freedom & derived knowledge in man is the last possible evolution of consciousness. It is at least possible that an entirely free consciousness bringing with it a spontaneous instead of a derived knowledge & an entirely free mastery instead of a partially free manipulation of mind, life & matter is concealed in Nature & its unveiling is the final goal of her evolution.

If such a free consciousness exists, there must be a principle in Nature superior to mind as mind is superior to life & matter & this can be nothing else than the Vedic principle called vijnana.

This free consciousness, entire mastery, must be a power of cosmic Nature & cannot be acquired by the individual except by breaking down the habits of consciousness & exceeding the fixed processes by which the individual action is separated & differentiated from cosmic action.

The ultimate evolution must therefore end in the openness of the individual for cosmic or infinite consciousness-being, not limited by individual ego-sense, the workings of free infinite

cosmic force, not limited by individual will; possessing entire freedom, knowledge & mastery it must be in its nature an infinite joy & bliss in oneself & in all the cosmic workings which enter into our experience. The highest state of Nature & goal of evolution must be infinite Sacchidananda.

So much we can reasonably infer from the facts of the cosmos as we see them. We then arrive at the Vedanta results without starting from Vedanta; but if we accept the Vedantic premise that all world is only a formation & operation of consciousness, these inferences become inevitable conclusions.

Chapter II

The Golden Rule of Living —
Enjoyment & Renunciation

The first line of the Seer's first couplet has given us very briefly and suggestively the base & starting point of the whole thought of the Upanishad; the second line of the same couplet opens to us, with equal brevity, with equal suggestiveness the summation of the whole thought of the Upanishad. The rest of the eighteen shlokas fill out, complete, play variations; they add much thought that is necessary to avoid error, to perceive supplementary and collateral truths or to guide oneself aright in the path that has been hewn out or to walk with unstumbling footsteps through the doors that have been opened to us; but all the practical need of man and the central gist of the Seer's thought about human life is compressed into these two lines with their few brief words and their thousand echoes.

All the underlying Vedantic conceptions which we have had to bring out in our first chapter, have had reference to the three great practical factors of the human problem as it presented itself to Vedantic thinkers, the reality of spiritual freedom, the appearance of material bondage and the means of escape out of the appearance and into the reality, out of matter into Spirit, out of Nature into God. But these expressions, freedom and bondage, are intellectual, ideal or spiritual terms. This human being though he lays hold on intellect as a guide and aspires to ideality and spirit, does not live centred in those superior movements of consciousness; brain leads his thought when it can, but he lives in the heart & lives in it, too, besieged by the nerves and body. His mentality is, therefore, emotional, sensational and temperamental, not intellectual or ideal, and the practical aspect of his own problem is not limitation or infinity, but the pressure of pain, grief, sorrow and suffering and the possibility of escape from these his ruthless and omnipresent persecutors. He could even be content for a while with death and limitation if, free from this admixture of pain & suffering, his short span of life & circumscribed sphere of

action could be assured of that limited happiness which the race at large is vainly pursuing. It was the agony of this problem that seized on Buddha and drove him from his kingly home & rich domestic joys to wander through the world as a beggar and ascetic; to escape from the insistent pain, grief and suffering of the world the Lord of Pity discovered for man the eightfold path, the law of compassion & self-sacrifice, the heavenly door of renunciation and the silent and blindly luminous haven of Nirvana. The Seer of the Upanishad sets before himself the same problem but arrives at a very different solution; for he proceeds not from pity, but from a clear strength and a steady knowledge, perceiving the problem but not overpowered by it, *samáhita, dhíra*. Dwelling in a world of grief, pain, death and limitation, *anityam asukham imam lokam prápya*, yet irresistibly impelled by Nature to aspire after joy, immortality and freedom, bound not to renounce that apparently impossible ideal on peril of forfeiting our highest, most consoling and most exalting impulses, how are we to reconcile this ineffugable contradiction or to escape from this unending struggle? This is the problem which the Seer solves in three brief words, *tena tyaktena bhunjítháh*, again a monumental phrase whose echoes travel the whole of existence. It is because it provides the true practical basis for the solution he is going to suggest that he has preferred to announce at the outset the immediate and active relation of our twofold existence, God inhabiting Nature, rather than the remoter essential relation, God and Nature one Brahman. For the first practical step towards freedom must always be to distinguish between the Inhabitant and the habitation and withdraw from the motion towards the Lord of the motion. It is in the motion that these shadows of limitation, grief and death appear; the Inhabitant is free, blissful and immortal. To escape, then, we must turn from the world to the Master of the world; in ordinary religious parlance, we must renounce the world in order to find and possess God. So also the Gita, after describing our condition, arrived in this transient and troubled world, *anityam asukham imam lokam prápya*, immediately points out the remedy, *bhajaswa Mám*. Turn & cleave rather to me, the Lord. But the world was made by its Lord for

divine habitation & possession; the object of the renunciation, therefore, cannot be to turn away utterly from the world after abandoning it in itself & in the lower consciousness, but to conquer and repossess it through the divine Krishna and in the supreme & all-blissful conscious being of the Lord. Nivasishyasi mayyeva. Thou shalt dwell in Me utterly, in My illimitable being & not in a limited & mortal experience of the world. To form the basis of the rule of life which the Seer enunciates, we have, then, this practical corollary from the language of his first line:—

To escape from grief, death and limitation we must renounce the world, to enjoy bliss, freedom & immortality we must possess ourselves in the Lord; but since His object in manifesting is habitation of the universe and not its destruction, the bliss must be enjoyed in this universe, through the Lord, and not in the Lord apart from and exclusive of life in the universe.

This is the difference, the capital difference between the Buddhistic solution—with all those later solutions affected & governed by Buddhistic thought, such as Mayavada & monastic Christianity—and the ancient answer of Hinduism to the problem put to man by life. These say, “Abandon life, put away all possession & enjoyment; absolute asceticism is your only salvation”; that said “Abandon the world that you may possess and enjoy it.” One is an escape, the other a recoil and an aggression; one is a divorce, the other a reconciliation. Both solutions are heroic; but one is a mighty heroism of difficult retreat and flight; the other a mightier heroism of self-perfection and conquest. The one is the retreat of the Ten Thousand; the other is Caesar’s movement from Dyrrhachium to [Pharsalus]. One path culminates in Buddha, the other in Janaka and Srikrishna. The language of the Seer is perfectly framed, as in the first line, to bring about a confrontation of two giant opposites. Tyaktena in the instrumental case suggests a means, and the very first word after tyaktena, undivided from it by any other vocable or particle, the word which gives the object and work of this instrument, the word which sets ringing from the outset the conclusive note and culminating cry of the Upanishad and is suggested again and again in jijivishet, in ko mohah kah shokah, in amritam,

in kalyanatamam, in raye, is the magnificent bhunjithah, Thou shouldst enjoy. Tyaga and bhoga, renunciation and enjoyment, have always been presented to us as the two conflicting ideals of human life & thought,—inevitably, for they are the two master impulses of Nature—both of them eternal—and through the ages they have perplexed and tormented humanity by their perpetual companionship in an always unfinished and inconclusive strife, dividing us into Puritan and Pagan, Stoic and Epicurean, worldling and ascetic, & perpetuating an opposition that rests on a false division of a double unity, maintaining a strife that can lead to no final victory. The Seer has deliberately brought these two great opposites & enemies together and using a pointed and unequivocal language, has put them side by side no longer as enemies but as friends and mutual helpers; his aim is by a fearless and puissant confrontation to reconcile and wed them eternally to each other, as he has already in the first line confronted, reconciled and eternally wedded the two apparent opposites, Spirit and world-Nature. Had he said not “Tyaktena” but “Tyagena bhunjithah”, from which we might have concluded that he pointed us to renunciation of the world for the enjoyment of God aloof from the world, there would then have been no real confrontation & no great monumental phrase but only a skilful verbal turn of words pointing a contrast rather than effecting a reconciliation. But the instrument of the enjoyment is not renunciation in itself and for itself but the world we have renounced, tena, & the enjoyment is not the self-sufficient joy of renunciation & escape, but the enjoyment of Spirit in the world, the Lord in the motion. By means of all that is thing of world in this moving universe we are to enjoy God &, through Him, no longer as now apart from Him, to enjoy His universal motion,—all this that is moving thing in her that moves becomes the instrument of a divine delight, because the world is God and part of His totality, so that by possessing & enjoying Him we possess and enjoy world also. Enjoyment is to be reconciled then to renunciation & even wedded to it, made to depend upon it as the effect depends upon the cause, to stand upon it as a statue stands upon its pedestal or the roof of a house on its foundations,

walls and pillars. Renunciation the means, enjoyment the end, but renunciation of the world as mere undivine, ignorant & fettered motion & becoming, enjoyment of God in Himself & of the world only as a symbol, a formal expression of God; this reconciliation founded on a knowledge of the true nature & purpose of existence is the gospel of the Seer.

The ascetic gospel of renunciation is incomplete by itself; the Pagan gospel of enjoyment is incomplete by itself. Renunciation and enjoyment of the world must be reconciled by substituting inward for outward bliss, the bliss that goes from within outward for the pleasure which seeks to appeal from without inward, joy of God in the form & name of things for joy of the finite appearance and the isolated idea. The reconciliation is to be effected through the consummate experience of Ananda, the divine beatitude at which we arrive by true seeing in the kingdom of the pure Idea, satyadharma drishtyā.

Let us examine successively this renunciation and this enjoyment. We see, first, that *tena* refers back to the expression in the first line, so wide, so carefully comprehensive, *idam sarvam yat kincha jagatyam jagat*, by which the absolute unity of the Inhabitant is affirmed. We are to abandon utterly the world; we are to renounce every least or greatest detail of phenomenal existence, whether held by us in possession or aimed at in our desire; we are to surrender everything whatsoever that we have or may hope to possess or dream of possessing in the universe. We see that the demand in this second line is as sweeping and unsparing as the all-comprehensive description in its base & predecessor. We are to keep back nothing; all that is dearest to us in our outward environment, wife, children, home, friends, wealth, country, position, fame, honour, success, the respect of men, the love of those we cherish,—all that is dearest to us in our inward life; our loves, hates, jealousies, ambitions, sins, virtues, principles, opinions, tastes, preferences, ideals,—these and all we are, our body, life, mind, soul, personality, ego, all, all have to be sacrificed and laid upon a single altar. We must keep back nothing either of our outer or of our inner wealth; for if, professing to make the complete surrender, we consciously

& willingly keep back one doit or farthing, we are thieves before God, committing the Biblical sin of Ananias & Sapphira, — stena eva sah, — conscious or half-conscious hypocrites, — mithyáchárah sa uchyate, — and, even if the holding back be unwilling or unconscious, still are we imperfect sadhakas not yet having the right to grasp our crown. For the natural principle of this surrender is precise: —

As one gives so one receives. God is All & he who would gain all, must give all. The final sacrifice admits of no reservation and even a slight defect of renunciation, however seemingly lofty the scruple, vitiates the purity and effectiveness of the sacrifice.

But since the renunciation asked of us is not the objective renunciation, — although that too is not excluded so far as it is necessary for the real surrender, — since it is not an outward process of flight from the objects of pleasure, it can only be, in essence, an inner sacrifice to the Master of the world, to Ish, the Lord. Since there is only One Lord in multitudinous bodies & to Him the entire world belongs, everything that is offered to the enjoyment not of the one Lord of the world, but to the mind, senses, body as part of the motion, the jagat, is an ignorant sacrifice on a false altar. It may be justified by the great cosmic ignorance so long as that principle of consciousness keeps its hold on us, but it can never bring the supreme good or the divine bliss. A perverse & broken movement, it brings a perverse and broken result.³ So long as we feel ourselves to be at all separate existences from God and others, anyán, we are here as His deputies and instruments to receive out of what the world possesses so much as the Lord of the world sends or brings to us, and to offer them up not to our mind and senses but to the Master of the Universe seated in ourselves and in others, bhoktáram yajnatapasám sarvalokamaheshwaram. He is the true enjoyer of all sacrifices and works of askesis, the mighty lord of all the worlds. For this reason the Gita directs us to offer up as an utter sacrifice to the Supreme all our actions, all our efforts, all our enjoyments, yat tapasyasi, yat karoshi yad

³ Gita

aśnāsi. Demanding nothing for ourselves, but receiving for Him all that He wills to give us through the action of others or our own, we are to refer them all to Him again for His acceptance. Even what we do, we are to do not for our sake, but for God's sake, not for our personal & self-regarding aims, but for what we see, rightly or wrongly, in the light we have, to be His aim in us, concentrating on the action, not reaching out to its fruit. This rule of life is the greatest we are capable of while still at work in the ignorance and moving subject to the dualities; but if we wish to go beyond, we must proceed to a yet more unsparing sacrifice. The Gita begins with the sacrifice to God of our desires and the fruits of our action; but it goes on to the giving up *into* God, mayi sannyasya, of action itself and even the least internal or external movement towards action, sarvarambhah; it insists, above all & to the end, on the supreme renunciation of the ego-sense, the ahankara, as the one all-satisfying and divine sacrifice demanded by the ego-transcendent Universal Being from the ego-besieged and ego-ridden human soul. We must, in this consummation, fall perfectly passive in mind, life & body & allow the Divine Power to use them from above, as a man uses a machine, wields a sword or hurls a ball to its mark. These formulae of the Gita are, also, the true sense of the inner sacrifice imposed on the seeker by the Isha Upanishad. It is the sacrifice of the lower or motional parts of our being to the higher or divine part — the offering of jagat into the Lord.

The renunciation demanded of us is an inner sacrifice, effected in the surrender to God of all desire and attachment, of all self-will and self-action, and of all ego-sense and separate personality. Desire & attachment to possessions have to be cast & dissolved into the mould of a desireless and all-possessing bliss (Ananda or Jana); self-will & self-action cast & dissolved into the mould of a divine action of the universal Shakti or World Force (Chit or Tapas) which shall use the mind, body and life as a passive, obedient and perfected instrument; ego-sense cast and dissolved into the mould of divine & undivided being (Sat) which regards itself as one in all things & the multiplicity of minds, lives & bodies as only a varied motion of its own divine

unity. This divine being, force & bliss constitute the higher part of man's being centred in the principle of Ananda; they represent the direct, unveiled and unperverted action of the free & blissful Sacchidananda. To this last and supreme Immortality (Amrita) these lower mortal parts of man must be given up as the victims of a high & ultimate spiritual sacrifice in the upward movement of world-Nature.

Renunciation once determined for us in its spirit & type, we arrive naturally at the other term of this great reconciliation, the enjoyment pointed at in bhunjitháh. To understand the place and relation of the Seer's gospel of divine immortality & bliss in the thought and development of Hinduism, we must return for a moment to the fundamental Hindu idea of sacrifice. For it is in the light of this original idea of sacrifice that we must understand the ancient transition from Veda to Vedanta. Sacrifice to the gods was from the earliest times the central idea of the Hindu religion, under the name of renunciation, sacrifice to God still remains its whole spirit and teaching. The gods, Masters of natural forces, act in Nature under God in the motional being of the Master of all and distribute their energies to individual movements and creatures; from their store, the individual receives whatever he possesses of capacities, desires & enjoyments; at their hands he must seek whatever, not possessing, he desires firmly to acquire. But the principle of Nature, that great motion and complex rhythm, stands in the harmony & interdependence of the individual & general, jagatyam jagat; the individual, therefore, can neither gain what he has not nor keep what he has except by sacrifice of his personal energies & possessions into the world-substance & the world-energies. By expenditure of what he has, offering it into the general stream of the corresponding force or substance in the perpetual flux and movement of Nature, he is kept safe by the gods or he increases. If it is my purpose to improve my muscular strength, I must first consent to an output, an expenditure in exercise of the strength I already have, allowing it to escape as energy into the world-sum of energy, sacrificing to Vayu and Prithivi; I must accept temporary loss of power, weariness and exhaustion, losing a little that I may gain

more; then, what I have given is taken up by the deities in the Jagati and, if the sacrifice has been properly conducted, returned increased, doubled, trebled or even decupled to the giver. As it is in our physical, so it is in our mental & emotional being. I must pour love from myself in feeling & action into the world-stream of love, sacrificing to Mitra; then only what I have given may return to me increased, doubled, trebled, decupled in the love and affection of others or in my own enlarged capacity for loving. The rule, being fundamental & universal, holds good with all internal & external possessions and holdings, the dhanani of the Rigveda. "Foster by sacrifice the gods," says the Gita, "and let those gods foster you; fostering each other ye shall attain the supreme good,— param sreyah." Attaining the supreme good we pass beyond the gods and come to God; we leave Veda to arrive at Vedanta or, rather, fulfil Veda in Vedanta. Then we are no longer content to sacrifice this or that possession, giving a share, making reservations, but offer unreservedly & unconditionally the supreme sacrifice, yielding up on the highest of all altars all that we are and possess; we give no longer to Agni, Indra, Varuna or Mitra, but to the supreme & universal Lord, bhoktáram yajnatapasám. Then, too, we receive in return not wealth, nor cattle nor horses nor lands nor empire, not joys nor powers nor brilliances nor capacities, but God Himself & the world with all these things in them as trifles and playthings for the soul to enjoy as God enjoys, possessing them and yet not possessing, wholly unbound by possession.

Renunciation of some kind, voluntary or involuntary, is the condition of all growth and all existence; by expenditure acquisition, by sacrifice security, by renunciation enjoyment, this is God's universal law of sacrifice. The gods who are Powers of Nature, receiving our due sacrifice, give us the partial gains & enjoyments which come within their jurisdiction; God, receiving our due sacrifice, gives us Himself and in Himself everything that exists in Nature or beyond it.

There is a common agreement in the different schools of Hinduism that to the man who has renounced, God gives Himself in return for his renunciation; our difficulty has been

to settle among our many conflicting conceptions what that is in soul existence which God intends to reveal as His very self and to what, therefore, we are called to aspire. The ascetic sees Him in impersonal Being and actionless peace; he believes therefore that we receive in return for renunciation release from phenomena and the bliss of the unconditioned Brahman. The devotee sees Him in divine Personality; he hopes to get, in return for what he offers, Shiva or Rama, Krishna or Kali. Some aspire to the Pure & Bright Stillness beyond, others like the Tantriks, seeing Him as Universal Power, attempt to acquire & feel Him here in a superior & divine power and mastery, yet others would have God in Himself and yet God playing also in His garden of the universe. The reason of these differences lies in our human variation of temperament—for we live in heart and temperament—and therefore of knowledge and approach—for with us mental being seated in the heart temperament determines our knowledge & action,—variations produced by the differently distributed motion in us of Prakriti, of Jagati, of the process of our world-nature. According to our nature we seek God. It is always, in fact, by some principle in Avidya itself that we are moved to exceed Avidya. Even as a man approaches me, says the Gita, precisely in that spirit & in that way I accept and possess him. Ye yathá mám prapadyante táns tathaiva bhajámyaham. The spirit in which the Seer would have us approach the Lord, is an all-embracing universality and the way he chooses for us is to embrace the all-blissful One in the world and in transcendence of the world, as the unity and as the multiplicity, through Vidya & through Avidya, in the Spirit and in the world, by God above Nature and by Nature in God. Ishwara, Brahman, the Life-principle Matariswan, the Bright and Pure Stillness, the supreme & absolute Personality, the triple Purusha, Surya, Sachchidananda, Agni,—successively he presents to us in the course of his thought these names, aspects or images of the Eternal, not that we may accept one and exclude others, but for our soul experience to embrace them all in a multiple & blissful unity. Everywhere he reconciles, everywhere he includes, seeking to understand and not to divide. In this

world he gives us the supreme felicity and in that world our joy shall not be other. Why should we refuse to God in ourselves any form of His divine sweetness? There is no dragon watching at the gates of God to deny to us any of the fruits of Paradise; the law of divisibility and opposition ceases when we have shaken from our necks His leaden yoke of Avidya. But in these initial couplets the Seer is insisting especially on a divine life in this world, iha, as the necessary basis of the fulfilment which is held in store for us at the end of the utter & perfect sacrifice. All that we have renounced to Him, action and struggle, thought and knowledge, the rose and the breeze and the moonlight, bird and beast & human being, man and woman and children and land and houses and gold and silver and oxen and raiment, books and poetry and learning and science, mind, body and life are, when renounced, to become the material, instrument and medium of a divine enjoyment, objectively, by all that he keeps for us or gives back to us physically during and after the discipline of renunciation, subjectively, by the whole universe and all that it contains, possessed through a man's senses so far as God in him accepts their action and in a man's soul by sympathy and identity with all beings & with universal Nature. Still, these things will always remain the instrument of enjoyment; the object of the enjoyment, the true object of all bhoga, for the liberated soul, is God,—not Nature, although God in Nature & through Nature. We shall enjoy God in & through His universal manifestation, but always God and never the universe falsely experienced as a thing existent & enjoyable for its own sake, apart from God and different from Him.

The possession of God in the world-transcending height of His being does not exclude possession of God in His world-containing wideness. To the liberated soul there is no high and base, but only one equal divine bliss and perfection.

In the ideal of the Seer we do not cast away life and mind and body into an eternal sleep; removal from universe is not prescribed as a necessary condition before we can take possession of the supreme & ineffable bliss of the Brahman. The Seer asserts on the contrary a liberated bliss in the world and

in human life. "He whose Self has become all existences, how shall he be deluded, whence shall he have grief", so rings his cry of triumphant freedom; it does not run "He whose Self is dead to the knowledge of all becomings". The most powerful support and argument of purely ascetic philosophies is the Buddhistic idea, foreign to Vedic Hinduism, that true freedom and true bliss are impossible in the universe and can only become possible if we escape out of it into some world-shunning secrecy of being, whether Nihil or Nirvana. The soul handling objects, it is thought, must be attracted to them; or else the freedom from attraction is so difficult and so rare that it is presumptuous to reckon on it as a practical possibility; in Samadhi the spirit is blissful & free, awaking from Samadhi it is bound to feel or be always susceptible to touches of limitation and of grief; the duality of pain & grief is an irrevocable law of the universe and where there is bliss in the world, there must also be as its companion grief in the world, for unmixed bliss is only possible where mind and its laws are excluded. These are the fundamental ideas of Asceticism and if they were true with this scope and this force, the very foundations of the thought in the Isha Upanishad would be vitiated and annulled; but, although generally held and insisted on by numbers of great saints and lofty thinkers, they are an instance of partial truths, perfectly valid, even perfectly general in their own province, carried in practice beyond their province and so by a false extension becoming, like all exaggerated truths, the foundation of error. They are perfectly true in the field where they apply but they apply only in the limits of mind & so long as the soul is subjected in the world to mind and its processes. But it is not a fact that mind is the supreme principle in the world and its movement & processes the dominant & ineffugable motion and process of the universe. It is only true that mind is the present centre of humanity & to humanity therefore seems, falsely, the supreme principle of the active universe. It is no doubt extremely difficult, without divine aid, for man to escape from mind & living in the world, yet to remain superior to the mental duality of joy & grief, pleasure & pain, which is the

ordinary law of our mundane existence. The difficulty of the escape is the justification of Sannyasa. But the escape, though difficult, is not only possible, it is the one real road to our self-fulfilment as the human type of God-existence upon this earth, evam twayi nányatheto'sti. It is possible because the supreme principle and movement of the universe is not mind; the supreme principle is Sat working out through Chit in Ananda, Infinite Being working out through Infinite Force in Infinite Beatitude. The Upanishads demand of us, and not only the Isha but the Taittiriya & other Upanishads, not to dwell in mind untouched by its laws, which would be a laborious & improbable achievement, but to raise ourselves beyond mind through Surya or pure Idea into Ananda and live centred in that principle. From this superior centre, seated free, imperial, Swarat, Samrat, in the mountain citadel of our existence, we can, remaining in the universe, yet govern our use of a subject and no longer rebellious mind, life & body by the process and laws of our blissful spirit and our divine Nature. The superior movement then controls and uses the lower for its own purposes. But since the principle of the superior movement is unmixed bliss, our purposes and activities also must be purposes & activities of unmixed bliss. If we are released only on the levels of mind, then indeed sleep of Samadhi is our one safe & perfect state, for coming out of that sure refuge & retreat, we are again naked in mind and exposed to the efforts of mind to recover its natural supremacy in its own kingdom. Rising to Ananda, liberated in Ananda, living in Ananda, there is no such peril. The kingdom of heaven imposes the will of God on the kingdom of earth, the parardha takes possession of the aparardha, Sacchidananda seizes & revels in the ecstasies of a liberated Manas, Prana and Annam. In opposition, therefore, to the Buddhistic declaration of the omnipresence of grief & pain outside Nirvana, we have in the Vedanta the soul's declaration of its ultimate & eternal independence:—

To live in the world is not necessarily to live in the duality of grief and joy. The soul seated in Ananda, even though it lives the life of the universe, possesses as its dominant principle unmixed

bliss and can use in this world & this human life mind, life & body, sarvam idam, as instruments of God-enjoyment without enduring the dominion of their dualities.

For the rest, these truths are a matter of experience. Those who have attempted to enjoy the universe before renunciation and, escaping from that error & delusion, have afterwards enjoyed God in the universe after renunciation, know, know with a silent & inexpressible rapture, the alteration & seizing revolution, the immense and ineffable change, the seated sublimity and all-penetrating intensity of that bliss of the Brahman towards which the Upanishad points our faltering and doubt-besieged footsteps. Before renunciation we enjoyed Nature ignorantly as a thing in itself and we worshipped mind and the things of the mind, followed after body and the things of the body, indulged in life and the things of the life; after renunciation we enjoy with knowledge, not the rose, but God in colour and petal and perfume, not a poem but God in the beauty of sound and the beauty of words, not food, but God in taste and in vital satisfaction. That which before renunciation was pleasure, has become after renunciation bliss; pleasure which was transient, mutable and fading, has become bliss lasting and inalienable; pleasure which was uncertain, because dependent on circumstances & objects, has become bliss self-existent and secure; pleasure which was uneven, strained towards preferences, balanced by dislikes, has become bliss equal and universal; pleasure which was even at its highest impure and haunted, held with difficulty and insecurely against a background of loss, deficiency and pain, has become bliss pure, satisfying and perfect as God Himself. Before renunciation we besought objects to yield us a petty joy we did not ourselves possess; after renunciation we perceive in the object & receive from it the immeasurable bliss eternally seated in ourselves. Before renunciation, we enjoyed with desire, seeking and effort; after renunciation we enjoy desirelessly, not in the satisfaction of desire, but in eternal possession, not as *anish*, struggling to gain possession of what does not belong to us, but as *ish*, already possessing all that the world contains. Before renunciation we enjoyed, with egoism, only what the greedy

but easily tired mind and senses could grasp, possessing for ourselves and that too only with our own lame, limited and selfish enjoyment; after renunciation we enjoy, without ego-sense, all that we outwardly possess, all that others possess and all that none but God possesses, and we enjoy it not only with our own enjoyment but with the individual and collective enjoyment of all our fellow beings animate and inanimate and with the divine enjoyment of God in the universe. Finally, we enjoyed before renunciation many separate things all of a limited pleasurableness; after renunciation we enjoy one thing in its multiplicity which is all-blissful everywhere. Such is the enjoyment in the world to which the Seer points us in the word, bhunjítháh; and we have always in addition,—for that transcendence is the condition of this secure universality,—the bliss of the Lord's pure being in His self-existence beyond and above the motion of the universe.

Chapter III

The Golden Rule of Life—
Desire, Egoism and Possession

Ma gridhah kasyaswid dhanam.

Immediately after this great fundamental reconciliation, the Seer proceeds to a phrase which under a form of familiar commonness conceals an immoderate wealth of spiritual suggestion. "Lust not after any man's possession." *Má gridhah kasyaswid dhanam.*

We seem to have stumbled out of deep and strange waters into a very familiar shallow. Read superficially and without an eye to the words that precede or to the whole serried thought of the Upanishad, this closing cadence of the Seer's opening sloka would suggest only a commonplace ethical suggestion identical in form & spirit with the last of the Mosaic commandments,— just as read superficially and apart from the coherent & interwoven thought of the Upanishad *tyaktena bhunjitháh* need not go beyond a rule of moral self-discipline in which the aim of the Epicurean finds itself married to the method of the Stoic. But the Upanishads are never, like Greek epic & Jewish scripture, simply ethical in their intention. Their transcendence of the ethical plane is part of their profounder observation of life & soul-experience. The Greeks sought always for a rule of moral training & self-discipline; the Mosaic Law imposed always a rule of outward conduct; and both aimed at an ethical balance of mind or an ethical balance of action; but the Vedanta rejects all mere balancing and arrangement. The Vedic thinkers went straight towards the soul and an inner rebirth. A radical change of outlook on life was their motive force for the change, if any, of outward conduct; a complete revolution & renovation of the soul was its demand on the inner life of man. Troubling themselves little with the management of conduct & feeling always for the springs of life & action, they left the care of ethics to other Shastras; neglecting comparatively the regulation of temperament, they

searched for that within from which temperament proceeds and by which it can be automatically regulated. When once that secret spring is touched, when once the soul is found & the lord of the temple manifests himself, ethics with its outer intellectual & emotional sanctions becomes superfluous; the outward life then flows spontaneously out of the sweetness, power & fullness of a supreme inner change. To the Vedantin the ethical stage is only important as a preliminary clearing in the jungle of desires & passions which prevents us from even attempting seriously to find our way through to the temple of the Lord.

Is there here the indication of such a preliminary ethical self-preparation? No; for it is the constant literary principle of these inspired writings that each phrase in Veda, as in the motion of the universe itself, lives not to itself but goes back to all that has gone before and reaches out to all that is coming; all moreover obey an unexpressed central unity which once grasped, illumines the whole text, but without which these writings break up into a mass of disconnected thoughts. In this Upanishad the one central thought is multiplicity of existence unified and freed from the sense of the dividing ego. The Seer does not allow himself for a moment either to ignore or to deny the multiple existences of the universe, but neither will he for a moment allow us to forget that all these many are really one, all this variety exists in its own unity, Jagat in Ish, the moving Brahman in the stillness, sarvabutani in Atman, the many Purushas in the One. The present phrase, understood as an ordinary ethical rule, would be a contradiction and not an affirmation of the one ever-present and unifying thought of the Isha Upanishad. It would provide us with a preliminary rule of life founded upon the acceptance & not the denial of the dividing ego-sense. The ethical rule against covetousness is an ordinary human rule and stands on a strong affirmation of the ego-sense & it has no meaning in a gospel of divine life & universal consciousness. The phrase can only stand here, not as an ethical rule, but a rule of the inner life, tending not to the confirmation but to the annulment of the ego.

The Mosaic commandment is consistent in itself & with the spirit of the Decalogue. These Judaic moral Ten Tables start from

an uncompromising dualism; their conception of righteousness is the straight road decreed for our walking by a personal Deity as different from His ephemeral creatures as the great eternal ocean from the soon-dried & inconsiderable puddles in a rainswept highway. The particular prohibition of covetousness stands partly on the idea of the morally seemly, the *epieikes* of the Greeks; much more (and in the Jewish temperament entirely) it rests on the stronger & more mechanical conception of legal justice between man and man, the Greek *dikaion*. In either case, it proceeds, like all ethics, from an original acceptance of the egoistic outlook on the universe; starting from the symbols I and thou, mine and thine, its aim and business is not to get rid of the ego-sense but to regulate and check those of its fierce and disorderly movements which poison individual peace and disturb social well-being. Even altruistic ethics starts from this fundamental recognition of egoism. Except in the Vedantised teachings of the Buddha, it does not seek to annul,—rather altruism lives & satisfies itself by an inverse satisfaction of the ego. But the whole aim and spirit of the Vedanta is to annul, to kill, to root out the ego-sense. Similarly ordinary ethics seeks to check, scold and limit desire, as an unruly servant, but would shrink from killing it as an enemy. We are, indeed, allowed by some systems to extend and pasture this eternal hunger, others permit us to satisfy it under severe restrictions; but always we must satisfy desire ethically, with justice & decency, with the sense of measure of the Greeks, avoiding the *aischron*, the *adikon*, the perversion, or with the religious enthusiasm of the Jews, shunning offence to the Lord of Righteousness. We must indulge it [in] what we possess or can lawfully acquire, our own wives, not the wives of others, our own wealth, not others' gold and silver and horses and cattle. But in Vedanta, it is wholly improbable that we should have any such ethical & social preaching of the *epieikes* & the *dikaion*. The principle of the Vedanta is to make no compromise with the inner enemy, but rather merciless war ending in its utter extinction, *jahi shatrum durásadam*.

In this Upanishad we have just had a tremendous and sweeping exclusion of all desire, an inexorable demand to give up

the whole world spiritually to the Lord. It is incredible that immediately, without transition, warning or explanation of his purpose the Seer, this great master of language & its effects, should immediately weaken his thought & hamstring the great impulse he has created by the intrusion of a shallow and minor injunction, that he should say in effect, "Seeing God everywhere, abandon the whole world in Spirit that thou mayst enjoy the whole of divine existence,—but take care not to lust after other people's property." Such an interjection would be either a grotesquely unneeded warning to a soul free from desire and already enjoying the whole world in a free and pure satisfaction, or the suggestion of a preliminary discipline so awkwardly introduced as to break the effect of the great rule towards which it was intended to lead. We could have understood if the Seer had written, reversing the order of the clauses, "Covet not any man's possession, nay, abandon the whole world and all it contains", or even, though this would be contrary to his effective & cumulative style, "Abandon the whole world &, first of all, abandon the desire for other men's possessions." But he could not have written as it must stand now without link or clue; "Abandoning the whole world, enjoy by the whole world; covet not any man's possession." Even if permissible in any other style, such a vicious stumble is impossible to the divine Muse. The moment we read the line in the light of the whole structure & thought of the Upanishad, the difficulty at once vanishes, the real meaning of the clause emerges. Like all the others it is a smooth and clear surface covering many waters. In the careful structure of the Upanishad it starts naturally from the opening Ishá vásyam and its conclusion tyaktena bhunjítháḥ and points forward to átmaivábhút sarvabhútáni of the seventh couplet.⁴

Thus understood in its right place as a link between this

⁴ I have written on this point at a perhaps disproportionate length as an example of the great care necessary in studying the Upanishads. It is not enough to have a correct verbal rendering, everything must be understood in the spirit of the entire unity, not as a separate text apart from its setting. It is only by a strict adherence to this rule that we can really get the secret of the Upanishads.

starting point and the yet deferred conclusion, the thought of the Seer is seen, as he intended it, perfectly simple & straightforward in substance, admirably rich in suggestion. “All forms are various dwelling-places of one self; sorrow proceeds out of desire and egoism contradicting this truth of oneness, ekatwam, from the consequent lust of possession, from the sense that he is he, I am I, his is not mine, the sense that others are kaschid anyah and objects kasyaswid dhanam. This sorrow misbegotten of desire disappears if the mind’s outlook on world can be remoulded in a form of the truth of things & not their false appearance, if it can be made to see that these others, anye, are not at all others, but entirely myself in the world-supporting reality, &, here in world, becomings of myself. Atmaivábhút sarvabhútáni. The decisive mental step to the true perception and practical sign of the true realisation is the selfless purity of the once impure & desiring heart when, possessing by abandonment of desire and by realisation of the one Inhabitant in all persons & bodies,— for person is only persona, a mask, a dramatic role of the sole & universal Personality,— it has ceased to hunger & thirst after what others have in their keeping from the false idea that they are different from myself and their possessions are not already my possessions.” The difference of ideas between the Jew & the Indian becomes at once palpable. “Lust not after thy neighbour’s goods,” says the Jewish lawgiver in effect, “for he is he, thou thou, and thou hast no righteous claim to another man’s possessions.” “Lust not after thy neighbour’s possessions,” cries the Vedantic Seer, “for he is not thy neighbour other than thou, he is thyself & in him it is thy own self that already possesses. Thou hast no need for this desire & this lust.” The object of the injunction is not to accept right ego-sense & discourage greed as wrong ego-sense, but to persuade & lead us to denial of the whole attitude of egoism implied in the lusting after possessions which this particular mind & body do not in the apparent movement of Nature possess, but which are so possessed by us in another mind & body, another habitation of our indwelling Self. In the words of men the letter is nothing. It is the spirit, the supporting stress of thought & the

temperament behind which give to the spoken symbol its import & its effect.

Let me observe in passing, for the observation is needed in these days of the siege of our religion and philosophy by inadequate European conceptions, that we have here the key to an important difference between Vedantic & Western thought, which is not to the discredit of our great national Scripture. We need not be too sensitive to the reproach that the Vedanta is non-ethical or too eager to vindicate an ethical intention for its teachings. Non-ethical may be either infra-ethical or supra-ethical. Let us beware lest in vindicating the claim of Vedanta to an European eminence & elevation, we bring it down from its own heaven touching domain upon its Asiatic and Himalayan mountain tops. Ancient Indian thought and life regularised in teaching a practical difference which the West admits in practice and denies in theory; it admitted three distinct standards determinant of conduct, the customary law, ethical rule and spiritual state; the mass of our pre-classical literature with its greatness of law & custom, its rich abundance & delicacy of moral aspiration & perfection & its great spiritual altitude faithfully reflects this triple recognition. But in the many provinces, the varying levels of human conduct the Vedanta seeks always the summits; its consistent search is for spiritual truth and spiritual standards. Seeking always that which exceeds & includes the lower life, it exceeded also the limits of ethics, finding Brahman in the all & not in the part, anyatra dharmád anyatrádharmát, otherwhere than in virtue and otherwhere than in unrighteousness, & it fixed its eyes only on so much of conduct as helps us to realise the universality of God, the divine oneness of mankind & the unity of all existences. Avoiding these modern pitfalls, we find the full and profound sense of this final phrase disengaging itself naturally by the light of its surroundings.

In this path the cessation from all lusting after things as the possessions of others is the sign of the dissolution of ego in the heart; for it proceeds from the heart's recognition of the truth that one Lord inhabits all bodies. It shows that the truth is no longer only an idea in the intellect but is being lived in the whole

being. The possessions of the one and only Self in one body are also his possessions in all other bodies; what the self in Shyâma owns, that the self in Râma possesses.

The exhortation to freedom from the desire of the heart, Ma gridhah, is the answer to all practical difficulties that may arise from the initial teaching of the Seer. Enjoyment by the world precludes physical abandonment of the world; yet physical abandonment is what we usually contemplate when we use the term renunciation; for although we are mental beings, yet ours is a mentality emmeshed in matter and impelled by that physical Maya to give a materialised or sensible value and a material expression to all our mental conceptions. We hardly admit a truth until we see it cloaked in an outward form or in an outward event & action. What then is this new rule of abandonment which impels not to denial and cessation of world-life, but to a free and perfect enjoyment? We have, at once, the answer in this phrase of the Seer, Ma gridhah. Thou shalt not have the greed of desire in thy heart,—that is the practical effect of the call to renunciation. Mental beings, souls throned in mind, it is in mind our centre not in matter which is to us a mere case, circumference and result of mind, that we should seek our secret of bondage and our means of deliverance. All outward material action is in itself Maya, a thing without self-existent reality. Action is effected only as the outflow and physical symbol of mind; it has no inherent moral or spiritual value, but is capable only of bearing such values as are put on it by the manomaya purusha, the spirit centred and veiled in mind. Humanity still imprisoned in its surroundings, servilely reflects in its mind the habitual impact of outward things, the bahya-sparshah, & gives to them a fixed & conventional mental value. The more humanity moves towards freedom & perfection, the more it will live in the mind itself, use outward circumstances of life & matter only as symbols of a free mental existence & fix their values by the mentality they express and not by some conventional standard determined by the action itself in its outward appearances. Therefore tyaga, the inner renunciation, is preferable to sannyasa, the physical renunciation; for the latter

takes resignedly account of the present weakness of humanity and its false preoccupation with body and helps indeed that weakness to pass out from itself by the extinction of active existence, freeing us from life, but not freeing life for us; but the inner renunciation leads us through our real nature as mental beings, takes account of our strength and teaches us to insist upon it and realise its perfection in God. Sannyasa is a rapid road of escape for our self-accepted weakness; tyaga is a path of fulfilment, the strait and narrow road, for our slowly-realised divine strength. By this road, supathá, Agni Vaisvanara, God's pure force in man, leads us to our felicity. Nayati ráye asmán.

Bodily action is useful as a pressure on the materialised mind, but the better way is to act from within outwards, not from outwards within. To the man who lives the inner life, mind-state is all-important, bodily action only a variable symbol or a theatrical demonstration. Great spirits have yearned after Santryasa as a symbol of inner renunciation and freedom; but the truth that has to be symbolised is selflessness in God, not renunciation, which is only a means towards that selflessness.

When desire is driven from the heart, the only necessary renunciation is already accomplished; all other self-mortification is, then, a superfluous austerity which may be severely lofty or even gracious, but can no longer be serviceable for the perfect aim of human existence.

The main intellectual difficulties opposed to the practice of renunciation disappear before this but there is also a more concrete obstacle. We have this high doctrine that the soul in itself is free and God, but bound and divided in world-motion; in the sense of division from God and its fellows it is bound and by its realisation of oneness with God and all beings it recovers its freedom,—ekatwam anupashyatah. But in practice some obscure obstacle interposes itself and baffles of their expected results the intellectual recognition and the emotional surge towards unity. Mankind has constantly been groping for this obscure and elusive knot of our bondage; but though it plucks at this twist and loosens that complexity, it reaches no better result than a temporary easing of the strings of that disastrous net in which the

world-Magician has caught our labouring minds. In the midst of our unprofitable labour we hear the inspired voice and receive the illuminating word of the Vedantic Seer, “Má gridhah. Desire founded on egoism is the knot of your bondage; cut through that complexity, undo that twist and you are free.” All other loosening of knots is a fumbling search or an incidental labour; desire and egoism slain, every other knot is of itself dissolved and collapses. We have seen that by our very nature as human beings, the knot must be hidden somewhere in our minds, and, particularly, it should be sought in the emotional part of our minds. For where the centre of our active being is, there must be the knot of our bondage, and there also must we seek for the secret of its unloosing. If we had been material beings or centred in matter, the knot would have been in some material habit and the release dependent on a material adjustment; for the individual, perhaps, Hathayoga and the conquest of the body by the physically effective Will would have been the one effective instrument. If we had been vital beings or centred in vitality, the knot would have been some vital obstruction and the release dependent on a vital adjustment; perhaps, then, Pranayama and the conquest by the vitally effective Will of the dualities which affect the nervous life and energy of man would rather have been the true instrument of our freedom. But our centre is mind and especially that part of mind which is sensational in its reaction to outward things & emotional in its valuation of them & in its moral response. We live in that subtle heart in us which taking up into itself the lower bodily and nervous impacts turns them into objects and media of dislike and desire, pleasure and pain and bringing down into itself the higher formations of thought and reason makes them subservient to the same imperative emotional & sensational dualism. We get therefore this law of disciplinary practice:—

Although ego-sense is the cause of the soul's bondage, yet the knot of the bondage in man is in the subtle heart where his active being is centred and it consists in the emotional egoism of desire. To get rid of ego-sense, we must, practically, labour to get rid of desire, for until that liberation is accomplished, the mere intellectual rejection of ego-sense, from which we have to start,

cannot be perfectly operative upon the lower mentality and the vital and bodily existence.

Desire, the cause of our pain, has itself its cause or rather its secret essence in the ego-sense transferred from the discriminating mind to the responsive heart. Vedantic psychology sums up the motion of the Jagati in our mentality,—the complex thing we call mind,—in a quadruple knot;—the nodus of sense-forming mind reactive to outward impacts, the nodus of discriminating mind receptive and critical of these reactions, the nodus of responsive & formative heart or temperamental mind setting in motion waves of emotional or temperamental consciousness which first forms the stuff of the others & shapes itself out as their reaction and their criticism, the nodus of ego-sense which centralises & relates to one mental self-idea all these functionings;—buddhi, manas, chitta, ahankara. Formed in the discriminating mind, egoism enslaves its creator & descends to dominate the heart. “I am I” cries the discriminating mind, enslaved by egoism, “he is he; mine is mine & not his; his is his & so long as I cannot have or take, I can never regard it as mine.” Thus discriminative ego shuts up man in his one bodily habitation and prevents him from enjoying his proper estate, the rich universe, rájyam samriddham, full of beautiful and noble possessions. Egoistic reason turns man into a sort of monomaniac emperor self-confined & limited who fancies himself a prisoner in his single palace, although, really, & if he chose, the wide earth is freely his and all that it contains. The heart accepts from the discriminating mind this false limitation & delusion, undergoes sense of want, sense of confinement, sense of difference & is tortured by their evil emotional results. While desire is our counsellor, pain and suffering must always be our heritage.

We must always remember that if ego were the truth of our being, limitation would not be painful, grief would not be the reaction of our activity. The heart, incapable of excessive yearnings, would rest in its proper circle. But we are capable of excessive yearnings because we ourselves exceed our bodies & circumstances. We are driven by an infinite stress towards

increase, because we are ourselves elastic and really infinite. There is always something within us which is dissatisfied with the Is & gropes for the May be, something which is soon tired of present accomplishment & possession & reaches out for something larger, better or at the lowest new. It is the universe, it is infinity that the hidden Angel within us seeks. The Self within us knows its own infinity & sees itself as the lord of its [creation] [.....] the heart, more passive & therefore more responsive, receives dimly & without understanding — for it is not its function to understand, but to feel — the silent message. Hence it has this striving, this dissatisfaction, this torture of pain, unease & grief. God puts the heart upon the rack of desire so that it may not be satisfied with smallness. He forces it to aspire towards the greatness & infinity of the Spirit, the mahat, brihat, bhúmá. "Nalpena sukham asti, bhumna sukham asti," cries the Upanishad. There is no abiding happiness in the small; happiness comes by the vast & free.

From the strife of this secret truth & this open falsehood desire in the heart contracts its disquieting double nature of wants terribly unlimited & capacities for enjoyment & satisfaction terribly limited & soon exhausted. The Nature-force available to the individual through his ego-centre is normally confined to the small amount of energy necessary for the maintenance of body, life & mind in their habitual & indispensable activities; there is no real provision in this limited nature for the greater things to which man in his expansion aspires. That he must seek from the infinite; that he must acquire from God or the gods, by effort, by sacrifice. The sound, sane, normal, animal man hardly aspires, perhaps would not aspire at all, but for the stress of hunger, the irritation of other men pressing upon his little share of the world & above all the stimulus of that class of beings just above him whom God has partially or entirely awakened to the beyond. But when we strain beyond the normal circle of our energies,— unless we have sought refuge in God first,— then, after the first fervent joy of struggle and partial success, our instruments begin to fail us, the pleasure we are seeking loses itself or turns into pain, pain of effort, pain of longing, pain of

disappointment, pain of incapacity. We advance by suffering, & water the tree of our growth with our blood & tears.

All this pain would be unnecessary, the journey as well as the goal would be Ananda, not suffering but delight, if the ego-sense had not taken possession of our heart & reason. We seek our infinity not only through the finite, but by insisting on the conditions of the finite & exaggerating them. Physical, vital & mental man, acting & striving under these conditions, must always be limited in his realisation and in his best satisfactions never entirely or permanently satisfied. He reaches towards physical, vital and emotional satisfactions which, in the quantity, range or intensity he covets, are & must be forbidden or opposed by his habitual capacities, by his imprisoning & determining environment and by his constant clash with the equally outreaching egoistic desires of other men. He escapes perhaps into mind and seeks an unlimited satisfaction in the enjoyments belonging to that more elastic principle, in art, science or literature; but there too, though freer & better satisfied, he is both fettered by his nerves and body and hedged in by the limitations of the mind itself. The mind in sensational & vital man, incapable of an universal catholicity of possession and enjoyment, measures, divides, erects standards & hedges, rooted customary habits of capacity, fixed associations of enjoyment and fixed associations of failure in enjoyment, till we have built up a whole system of conventional values of pleasant and unpleasant, good and bad, beautiful and ugly, attractive and repellent, and in this mighty forest of conventions, this jungle of dualities move & live; as the forest is unseen for its trees so the fictions of mind,—mind, the purblind stumbler among details,—obscure from us the truth and real bliss of existence. The mentalised body, too, has its own habitual standards of contacts which it can bear and contacts which it cannot or does not wish to bear; therefore we are divided between bodily pleasure and pain and those neutral sensations which conform decidedly to neither of these values. The mentalised nervous energy has, no less, its standards of contacts which it can assimilate and contacts which it wishes to reject, and we have, therefore, to reckon among the links of our

life-chain vital enjoyments & vital sufferings, these also divided by their neutral borders. Even when busy with its own proper experiences, the mind has its standard of contacts with which it can harmonise itself and contacts with which it is at discord or else remains unattracted,—grief, joy and indifference are the resultant emotional responses. Based upon these standards each individual or species has built up its own system of habitual wants & cravings and its own arrangement of accumulated conventions. So has grown the huge tree of desire and its associations, sanskaras as they are termed in our philosophies, which has grown out of the seed of ego-sense in the heart and conceals that seed in every part of its flowerings and branchings. Nor is the uprooting of that upas tree a facile undertaking. For desire does not perish easily by enjoyment; it seeks always to renew enjoyment or go beyond; hardly it perishes by surfeit, for it revives or it seeks other objects; nor is it, either, readily slain by coercion, for it sulks concealed in some invisible den awaiting for a treacherous or violent re-emergence and revenge. To finish with desire altogether by attacking & destroying its seed of ego-sense in the heart, is our only escape from present pain and our only safety from renewed suffering.

Man desires because he is infinite Self seated in the ego-ridden heart. The self is one in being and its nature is bliss; therefore the heart confined by ego seeks to reach out to the unity & to realise the bliss but it seeks, mistakenly, through physical and emotional enjoyment in the jagat. Man desires illimitably because he is universal and illimitable; he cannot satisfy his desires illimitably because egoistic self-division persuades him to limit himself to his individual mind, life and body. Man desires with pain & weeping because by creating habitual wants, conventional dualistic standards of delight and false values of grief and joy, pleasure and pain he has bound himself not to recognise infinite Ananda in the world, not to perceive that to the secret self, because it is unegoistic, all things are delight, even those touches which to the mind and body present themselves falsely & unnecessarily as grief and pain. While he persists in these conditions, desire, failure, discontent & pain must be always his

portion. He must recognise the Truth, for the Truth only can set him free.

Throughout the human ages we seek an escape or a remedy, but all our solutions fail because either they seek escape from the results of ego by affirming the ego or else deny or unduly limit God's purpose in the ego. "Accept your limitations, work and enjoy as perfectly as you may within boundaries," is the creed of a practical Paganism. For a century or two it may serve man's need indifferently, but he is infinite and universal and after a time Nature in him heaves restlessly and strains out towards its element. She accepted the Greek ideal for a century, then rose up and broke it to pieces. "Recognise that you are yourself, others not yourself, and make a rule of life out of the moral consequences of that distinction; desire only that to which you have a right," — this is the solution of ordinary ethics. But still man remains universal; if egoistic vice is the poison of his life, egoistic virtue is not its fulfilment; he breaks back towards sin and unregulated desire or forwards towards something beyond vice and virtue. "Desire what you please, enjoy what you can, but without violating my laws and conventions," is the dyke raised by society; but man is a universal as well as a social unit and the societies he creates are a Procrustean bed which he moulds and remoulds without ever finding his measure. He supports himself on social conventions, laws & equities, but cannot limit himself by his supports. "Desire is sinful; observe duty and the Shastra, discourage & punish enjoyment," is the Puritan's law of self-repression; but duty is only one instinct of our nature and duty satisfied cannot eradicate the need of bliss. Asceticism digs deeper into the truth of things, "Compromise will not do" it cries; "flee utterly from the objects of desire, escape from the field of ego, shun the world." It is an escape, not a solution; God in man may admit escape for the few, but He denies it to the many, for He will not allow His purpose in life and world to be frustrated. Religion digs still deeper: "Replace many desires by one, drive out the desires of this miserable earth by the desire of God and of a future world not besieged by these unsatisfied yearnings." But to postpone the problem to another

life is not to solve it; and to desire God apart from life and not in life is to divide the unity of His being. He will indulge a few in that evasion, but not the mass of mankind; therefore the many have to return with hearts still hungry from the doors of the temple; therefore the successive moulds of religion fail, lose their virtue and are cast away and broken. For Truth is imperative and demands inexorably its satisfaction. And the truth is always this that man is universal being seeking an universal bliss and self-realisation and cannot repose permanently on the wayside, in hedged gardens, or in any imperfect prison whatsoever or bounded resting place.

Universal Ananda & possession is our secret nature, to move towards it till it is reached, God's inexorable impulse in His creation. All solutions that deny or conflict with our nature, can only be palliatives, evasions or individual remedies.

It remains, therefore, to accept the two factors of the problem in their entirety and work out a solution on the basis of a reconciliation. This is the aim of the Seer. By the enjoyment of the whole of universal being in God, the legitimacy of the secret demand in us is recognised, by the renunciation of the attempt to enjoy through egoistic desire and in physical possession, the stumbling-block in the way of fulfilment is distinguished and removed. Mind and heart desire the universe; Self alone can possess it and already possesses it. Therefore the whole secret is to shift our centre from mind and heart to the all-blissful Self, from Jagat to Ish, from our temporary place in Nature besieged by the movement, to our eternal seat in the Godhead possessing, overtopping and controlling the movement. We can take the universe and all it contains into our self and possess it, — nay, we need not take, for it is already there; we have only to reveal it to ourselves; but we cannot take it into our hands or permanently keep any slightest part of it in our personal possession. It is too vast for our grasp and too slippery. We can possess the joy of the whole world physically, mentally & emotionally only by possessing it in the Spirit and through the Spirit; the desire to possess its form instead of its joy, or to claim it for the heart, mind & body in us and not for God

in heart, mind and body, indriyartham and not atmartham, is the capital error of our egoism. The remedy therefore is to get rid of this desire of false possession and ascend into the truth of real possession. Were we to put this in modern language we should say: Man is evolutionary, not evolved; his present state of mentality in heart guided by reason is a transition, not his final nature; in mentality he is tied to desire, in body to limitation and in both to suffering, but when he evolves from the mental into the spiritual being, he will be free from grief because, living in infinite Spirit, he will have done with desire and limitation. In the true Vedantic view of things we must express it otherwise.

Man is Anandamaya Purusha not yet or always manifested, but in course of manifestation. At present he is manomaya, tied to mind and living by desire; he is besieged therefore by pain and limitation, from which, so long as he remains on the mental level, he can only escape entirely by Sannyasa. But if he has the will, he can even in this life and body manifest his true anandamaya self and become in Nature all-possessing & in life all-blissful.

Since then desire is the knot of our bondage and the seat of our sorrow, the seat must be abolished, the knot cut through or loosened. Chidyate hridaya-granthih, says the Upanishad, speaking of the state of liberation, "the knot of the heart is cut asunder." For the heartstrings are the cords that bind us through emotions of love and hate, attraction and repulsion, to the desire-created falsehoods of the world and hold back the soul from rising to its throne in the Vastness, the natural Righteousness of things, the Love, the Bliss. Desire binds to sorrow because it is the sentinel of egoism, the badge of the soul's subjection to its self-created environment and the veil of our absorption in the limited and fleeting. Egoism is the cause of sorrow, but desire is its seat. "I am I, thou art thou, mine is mine, thine is thine"; this false conception of things is the seed of all evil; but its hold would be transitory, if there were not this compelling emotion of desire which adds, "Thou art not I, therefore thee I must control or possess; mine is mine, therefore mine I must cling to and keep; thine is not mine, therefore thine too I must acquire or seize." If this reaching out to our not-selves is inevitable because

our nature is a seeming particularity reaching out to its own real universality, if desire is the sign of the soul emerging out of matter and articulating, with whatever falsehood and stammering, its secret sense that it is the Lord of the universe, yet must it deny & transform itself, if it is to effect its grandiose object. The mighty Asura, Hiranyakashipu or Ravana, Attila, Alexander, Napoleon or Jenghiz, reaching out to possess the whole world physically as the not-self, is the Godhead in man aiming at self-realisation, but a godhead blind and misdirected. The Seer seeks instead to possess in the Spirit and through the Spirit; afterwards what shall be physically possessed or not possessed, is the Lord's business. The first step therefore must always be to get rid definitely of this craving for objects as the not-self in the possession of not-selves. Má gridhah kasyaswid dhanam.

Egoism, seated in the sense of personal difference, is the first element of the heart's error that has to be eliminated. Kasyaswid in the Seer's phrase is absolute and all-embracing like *yat kincha* and *tena*; there can be no limitation, no casuistry, no question of legal right or social justice, no opposition of legitimate claims and illegitimate covetings. Nor does *dhanam* in the Vedic sense include only physical objects, but all possessions, courage, joy, health, fame, position, capacity, genius as well as land, gold, cattle and houses. If we wish to understand the spirit of the rule, we may recall the example of the great Sannyasin who ran after the frightened thief with the vessels dropped in his flight, crying, "Lord, pardon me & take them; I knew not Thou hadst need of them." It is not, indeed, the form of this action that has to be observed and imitated,—the form is a mere symbol,—but the spirit it symbolises; for it breathes of the sense that there is one Lord only in all these habitations and nothing belongs to this body or to that mind or to the mental ego in which their motions are summed and coordinated; but all only to the Lord, one in all bodies. *Ishá vásyam idam sarvam*. It is immaterial whether a particular object belongs physically to myself or another, is kept with me or stolen from me, surrendered by me or recovered by me; that shall be according to the Lord's play and pleasure. Whether He plays in me outwardly the part of a beggar or the

part of a king, of the philanthropist or the conqueror, is not the essential; the essential is that I should know Him in myself and others and live seated in His being and not in my mental ego. Then instead of coveting, enjoying with egoism & sorrowing over loss and disappointment, I shall desire nothing and possess everything in myself, in God and in others, freely, perfectly and universally.

Subjection, seated in the sense of non-possession, is the second element that has to be eliminated. The Lord, the Ish, does not desire, He possesses; desiring objects, we are anish, not lord, pursued by the false dream of non-possession; we see things withheld, things to be acquired, *anaváptam aváptavyam*. Regarding the object as not-myself, we struggle to possess it, against men, against circumstances, against forces of Nature in the midst of which our body is a straw in a whirlwind, our life an insect fluttering candlewards, our mind a bubble in an eddy. All the while, we are in our souls the Lord and possess everything; all this is our estate. Therefore we have to correct our false idea of not having and, shifting our centre from the anish to the Ish, replace temporary acquisition by eternal possession. *Má gridhah dhanam*. Liberated in Ananda, I cannot fail to possess all things in myself inalienably and eternally, without being bound to possession or loss as are those who seek & acquire only with personal possession & through the physical body.

The concentration of our vision on the form of things & in the outward motion of desire is the third element of error that has to be eliminated. We desire and suffer because we mistake form and name for essential existence; we fix on the perishable parts of things, a rose, a piece of gold, an acre of land, a horse, a picture, fame, lordship, reputation. All this is *jagatyám jagat*, myself an object in Nature reaching out to objects in Nature. But the principle of form and name in Nature is motion, separation, flux; therefore my desire & enjoyment in Nature must necessarily be limited, mutable & transient. It is only by shifting the motion of desire to whatever is eternal in the form and name that I can escape from this limitation and this mutability. But the eternal in the form & name of all objects is the eternal in myself

& need not be desired outside myself, or in each thing separately, since it has only to be found in myself to be possessed in all beings & objects. Once more, the universal spiritual possession proves to be all and to include or render immaterial the particular physical possession. Má gridhah kasyaswid dhanam. The treasure you have to seek is in yourself; its possession includes all other possessions. Not only the kingdom of heaven, but all the riches of the earth are within you.

At the same time we must not from this great & vital truth stride forward by a false rigidity of logic into the error of asceticism. Because universal spiritual possession renders immaterial and dispensable the material possession, we must not presume that material possession is worthless & evil. On the contrary by rendering it dispensable and immaterial, it renders it also good and worth having. For so long as the material possession is to our desires & knowledge indispensable for enjoyment, it becomes a bondage & renders life to us a curse & action in the world an evil; but once spiritual possession becomes the root of the matter to us, we become free in the material enjoyment of the object. It no longer binds us, since we no longer either strain after it or suffer by its absence or loss. By that abandoned we enjoy. Even our pursuit of objects becomes a play, the racing or wrestling of boys in a meadow in which there is no evil thought, no harm intended, no possibility of sorrow experienced. Material possession & enjoyment also is intended by God in the human being; for material enjoyment & possession He created this world and made matter its formal basis; but eventually He intends the enjoyment of the object as a symbol of the spirit in the spirit, freely. God in us is the poet, is the musician who throws out some few forms of the infinite world within him into symbols of word or sound, so that the material enjoyment of the sound ceases to be material & becomes a form of spiritual enjoyment and an extension of spirit into matter. I am free at any moment to begin it, at any moment to suspend it; & even when I throw away the temporary outward form of the enjoyment, I keep always the inward eternal form of it in my spirit. So a man who has once seen the Matterhorn rising into the Swiss heavens,

keeps always that for which he was sent by the spirit within him to the toils & perils of Alpine climbing; he keeps in his soul the image of the white and naked peak, hard, firm and detached, a supreme image of matter which seeks to persist by solidity, yet is transient in the end like the rose and the insect, which rises towards but never attains that vaulted azure form above of the unsubstantial, unseen but eternal ether in which & by which it lives. He has done that for which the world of form was created. He has seen & enjoyed God in the symbol of the material object. He has embraced & possessed in his soul through the material organ one becoming of the only & eternal Being.

Chapter IV

The next stride of the Upanishad brings us to one of the greatest and most resounding controversies in Indian metaphysics, the quarrel between pragmatism & quietism, action and inaction, as the goal of man's existence or the condition of his highest self. Here, as always, the Seer solves the problem by a reconciliation of the two opposites. The substance of his teaching may be summed up in three mutually complementary & indispensable formulae, the one fulfilling utterly the pragmatic instinct in man, the other fulfilling utterly his quietistic instinct, & the third reconciling these ancient enemies.

In enjoyment continuance of action, in renunciation continuation of action; for continuance of action is the continuance of God's will in the universe.

The secret Spirit in man is always infinitely calm and free from the touches of its action; the sphere of disturbance is always on the surface only of the ocean of being in the waking consciousness. We should attain in waking mind, too, to that stillness; for without it there can be no freedom in our outward living. We should be perfectly & consciously still in the soul even though a whirlwind of action outwardly.

Since we are in the spirit inalienably free & untouched by action, but in the mind seemingly bound and subject to its stains, our true and only way is not to renounce action but to vindicate that secret spiritual freedom hidden within us as a possession for our outward and active mental consciousness. So shall a man be free, calm & joyous and yet through action accomplish God's purpose in him in the motional universe.

The strife between quietism and pragmatism in philosophy and religion is the intellectual symbol of an unaccomplished harmony in man. The universe and all things in it are the manifest Brahman and in the manifest Brahman there are always two eternal aspects, the aspect of incessant and all-pervading action and energy and the aspect of sempiternal and inalienable stillness and peace. The world of matter in which the mental being called man finds himself dwelling is a sensible manifestation of the principle

of energy supported by the secret and non-manifest presence of the principle of rest and stability. This world is a manifestation of Force which is never at rest and even the apparent stabilities of Nature prove when analysed to be whorls of motion. All here is jagatyám jagat, motion in her that moves. Yet invisibly filling all her motion, supporting her activities and inspiring them, imposing an essential stability on the apparent flux and reflux of her infinite movement we perceive, not discoverable by the analysing reason, but real enough to the synthetic vision and the perceiving mind, the Sthanu, the eternal, imminuable immutable on which & from which all this motion works and in which all its actions result. Because this Eternal & Immutable is there, the parts & constituents of Nature vary, but its sum is unalterable; its appearances are a whirl of mutable forms, its essence is stable and immutable. Nature herself, manifest to the senses & the material reason only as motion and knowable only in the terms of motion, is equally manifest to the poised & considering soul, dhíra, samáhita, as an infinite power of peace & stillness. On a basis of eternal stability the world exists, to the expression of the stable Eternal it feels itself to be proceeding. Imperfection is its apparent starting point & medium, and the essential term of imperfection is mobility; perfection is its aspiration & goal and the essential term of perfection is acquired status. Through imperfection therefore Nature moves, in perfection it rests. But the perfections which are attainable in the movements of Nature are only perfections of the part and therefore their stability is temporary, illusory and precedent to a fresh motion. Only in an infinite perfection can there be an eternal stability. This perfection is a concealed completeness in us which we have to manifest; we are already an infinite perfection in our being, we have to manifest that hidden thing in our becoming. It is towards this infinite perfection that all things in Nature are, consciously or unconsciously, by her inborn tendency and movement irresistibly impelled. The whole problem of existence therefore resolves itself into some harmony or at least some settlement between these two terms. Whatever ignores either term, be it victorious Science or be it supreme Buddhistic Nihilism, has

not understood the terms of the problem and cannot find its solution.

Man dwelling in Nature is compelled towards action and demands rest, lives in imperfection and progresses towards his ungrasped perfection; for action & motion are convertible terms. Action is the motion of man, motion is the action of Nature. All mobility, all change, all play of cause & effect, whether in the mind or the body, whether in animate or inanimate Nature, is therefore karma, action or work,—work is the essential characteristic of Jagati, universal Nature, infinite Force in its universal play. But where then in Nature shall man find rest? Lassitude is not the rest he seeks, sleep is not the rest he seeks; all lassitude, all inertia is still movement but movement of disintegration; sleep is a mass of dreams, sometimes half lit by fugitive and incoherent perceptions, sometimes shut up in a dark shell of bodily unconsciousness. Neither in his bodily nor in his subjective being is a man ever at rest while he lives in this body; what he calls rest is only a change of occupation or a shifting of the action from the waking to the subliminal sleep-consciousness which is always at work behind the waking self. Neither is death the rest he seeks; for death, like sleep, is only a shifting of the habitation, a transference of activity to another field. It is no more rest than the passing of a labourer reaping in a field of corn to work in a field of barley. His temporary & partial realisations of that he seeks are also not man's rest, for from these halting places he moves forwards towards a new activity and a continued journey. Like everything else in Nature man's motion, known to him or unknown, moves towards rest in a perfection which shall be eternal and really stable, not partial and apparently stable. To seek this higher perfection he is eternally moved and if he ever tries at all to rest in the material and temporary, he is soon driven forward again by the inexorable law of his nature to the old imperative endeavour. The frequent attempt of man to escape from his own soul by plunging his head into the running waters of Matter, is one of the recurrent jests, one of the constantly laughable mysteries of the universe. He cannot keep his head down in that alien medium; after some moments he must come

up gasping for the necessary breath of his natural existence.

Since we cannot find a real & ultimate peace in material world, that great flux & whirl of movement, we are driven to look within for a principle of eternal stability. To look within is to look behind the veil of our material life. The very movement supposes that material existence is not everything, that our waking consciousness is not the whole field of our consciousness, but only one outward movement of our being & there is something more in us that is curtained and can be unveiled. This attempt necessitates in practice our acceptance of all subjective experiences as realities, not hallucinations,—as much realities as our experience, which is after all itself subjective, of life & death, of hunger & thirst, of wind & sun & rain. All experience, called by us subjective or called by us objective, corresponds in this view to some reality whether of this world or of another or of something beyond world, to some fact which it represents or misrepresents, and the truth of which has, in either case, to be discovered. Now in this inward looking, as we proceed from experience to yet deeper experience, we do come across a principle of eternal stability, a principle of eternal peace within ourselves which we perceive also to be omnipresent and pervasive of all time & space & to exceed & go beyond all time & all space, a principle we can not only perceive, feel & possess but in which we can live. Hallucination or no hallucination, this is a thing which can be seen, can be grasped, can be sensed by the mind, can be entered into, can be lived. Fact of material existence or no, it is an indubitable fact of spiritual experience and seems for a time to be the only wholly blissful fact, the one thing of which we can say Anandam Brahma, Delight is the eternal Reality, Bliss is Brahman. It is as described in the Upanishad, shukram akáyam avranam asnáviram shuddham apápaviddham, luminous, bodiless, invulnerable, without sinews of force & action, pure, unpenetrated by evil,—whether evil of sin or evil of suffering. The soul in this state has for the world, at first & inalienably, either a peaceful or a joyous indifference,—not a repugnance, but an equal-souled acceptance or an equal-souled rejection of all things in the world which it regards not as binding fact but as

vision of form and name in itself. What has happened when the soul enters into this stable peace & quiet bliss? It has risen out of action into that principle of Brahman manifest in us which is essentially the principle of transcendent self-stability, Sthanu, anejad, fixed and unmoving, in which & by which this world of apparent motion exists. Passing into that inexpressible peace & stillness, we are liberated from the world; we have entered out of the whirling universe of Nature into Brahman's eternal calm.

The whole of our later Hindu philosophy is full of this mighty realisation of the still, self-luminous & inactive Brahman. In those preBuddhistic ascetics, naked of the world and utterly calm, whom the unresting Macedonian found in the Asiatic ultima Thule of his insatiable march, in the all-conquering soul of Buddha, in the victorious intellect of Shankara, in the aspiration and self-fulfilment of a million saints and hermits before and afterwards our race has aspired with an ultimate and limitless sacrifice, with a sovran self-giving, to the boundless Master of peace. Even the latest of the mighty Ones, the great Vivekananda, who was in outward seeming a storm of speech and thought & force and action, was yet reaching always to the rare, remote & icy-pure linga of Amarnath, the still & silent Mahadeva, as his inmost self & goal; in him too the millennial endeavour, the irresistible yearning endured. But is then this sacrifice really the ultimate sacrifice, this yearning the supreme human tendency, this goal the final & unsurpassable resting-place? If so, the gospel of the Isha Upanishad is either a vain message or a halting place for inferior souls. But the Seer will not have it so. Thou shalt act, he says; for thus has God made thee & not otherwise; other is the fruit of Vidya alone & not the supreme gain, the param sreyah. Nor is he in this insistence departing from the highest teaching of Vedanta. For this sacrifice is not really the ultimate sacrifice; the ultimate sacrifice is the renunciation even of mumukshutva, the giving up to God even of the desire for stillness & peace and of the attachment to inaction and the acceptance in its place, no longer with desire, attachment and passion, but with a free soul, of the Lila as well as the Silence, the great eternal play of the Ishwara no

less than his vast eternal peace, the complex and progressively self-fulfilling movement of the Jagati no less than the single & ever-fulfilled immutability of the Ish, the joy of the ejad as well as the calm of the anejad Brahman. That, say the sages, is the final perception of the Vedantin and the supreme consummation of his knowledge when he discovers that there is none bound, none freed, none desiring freedom, but only Brahman variously manifesting, only God in the infinite rest & play of His own Being & becomings,—God & Brahman whom none can bind & who, therefore, even when figured to Himself as man in this apparent cage of a mind and body is still in Himself free —infinitely and for ever. The yearning towards stillness and peace is not then man's supreme tendency; not peace is his goal but divine Ananda of which peace is only the flooring and the threshold. If our ordinary world-existence is that of the Kshara Brahman, which seems to move & change, to be born & grow and perish, & our ordinary soul-state that of the Kshara Purusha who seems to lose himself in the world and to move and change with it, to be born and grow and pass with the mind and body, if the higher existence beyond the mutability of the world is that of the Akshara Brahman, calm, still, unmoving, indifferent, at peace and the soul-state through which we move subjectively to freedom is that of the Akshara Purusha who sits above all this flux & reflux of world-energy at its work, careless of it & untouched by it, *udásínavad ásínah*, yet is not that the last goal nor the unsurpassable resting-place. Beyond & containing the Kshara and the Akshara Brahman we perceive the supreme existence of the Param Brahma which, transcendent, realises in Itself the harmony of [the] stillness & the movement; beyond and containing the Kshara & the Akshara Purusha we arrive at & inhabit the supreme soul-state of the Purushottama, the Para Purusha, Ishwara & Bhagavan, who, transcendent, is the possessor, user and sovran reality of the movement and the eternal self of the stillness. In Him we find our rest and in Him simultaneously we find our active self-fulfilment; for He alone is our complete and utter being. Buddha and Shankara and our immense ascetic impulse of three thousand years are not the last word of our race

nor of humanity; they are the expression of a salutary and violent necessity seizing on man & driving him to abandon utterly the world in its false appearances, by renunciation of all that here we perceive only as motion of Nature, sarvam idam yat kincha jagatyám jagat, they are a divine inspiration and a compelling impulse which will have us by any means and at any cost open our eyes to the truth that not in besotted attachment to the name and form of things, not in the blind, unillumined or falsely-illumined movements of the Jagati, not in that ignorant state of the soul in which it seems to the mind to be anish & not Ish and acts as anish, not Ish, subject and not Lord of the Jagati, is the ultimate fulfilment God intends for us, but there is a stillness beyond the movement which we have to reach, a self-luminousness of the soul in its true peace, freedom & wideness to which we have to aspire. Anyad áhur Avidyayá. But when we have obeyed the impulse, it should, normally, lead us beyond itself; for when we have conquered & transcended the movement, we have yet to surpass and transcend the stillness. Beyond the Kshara & Akshara we rise into the comprehensive infinity of the uttama; lifted above Buddha & Shankara stand Janaka & Krishna, the supreme Yogin & the entire Avatar; they in full action are in entire possession of peace and, conquerors of desire & ego or eternally superior to them, keep their hold on the real and divine bliss of God's triple self-manifestation; they know and exercise the simultaneous & harmonious enjoyment of His transcendent being, His universal Self and His individual play of becoming.

This then is the fundamental position assumed by the Seer, not denying the realisations of the quietistic sages but exceeding the goal of quietism, not preaching attachment to the world, but fulfilling desirelessly & happily, as eternal inhabitant & possessor, God in the world, it asks us to live in God's peace while embracing God's action. Kurvanneveha karmáni; thou shalt verily do actions in the world and not abstain from them; thou shalt not renounce thy human activity among these many kinds of races of thy fellow beings, for God's will in thee is towards action, kurvanneva, not inaction. Evam twayi nányathásti. Therefore, jijívishet shatam samáh, doing all human actions one should

accept the full term of human life, not seek to flee untimely from the sambhuti, the birth & becoming in this world or in the human body, not, like the Nihilist, mistake freedom for a silent nothingness, not blindly & impatiently cut short by physical or spiritual means one's full term of life or full measure of human activity. For those who do these things are, inasmuch as they maim the fullness of God's intended self-fulfilment in man, átmahano janáh, self-slaying births,—not less, but in a way even more so, bhúya iva, than the more numerous herd of beings who by an ignorant attachment to bodily life and outward objects maim that self-fulfilment on its other necessary side. To renounce the condition of self-fulfilment is no less a blind darkness, andham tamas, than to be bewildered by the condition and by attaching oneself to the path, sacrifice the goal. All exclusive knowledge is a form & manner of ignorance; all narrow seeking is a mutilation of our secret and ultimate vastness and infinity.

The emphasis with which the Seer enounces the necessity of life and action, kurvanneva, nányatheto'sti, is demanded from him by the truth of things as a necessary counterpoise to the emphasis with which he has declared the necessity of renunciation and the abandonment of desire in the immediately precedent phrases. For the first natural result of renunciation and the abandonment of desire is a tendency to pure peace and stillness, a disinclination to action as the source of all grief & disturbance and an attachment to inaction as the condition of peace, the sango akarmani of the Gita. Desire, in the ordinary machinery of our nature, is the motive-spring to action; by the touch on this spring the whole machine is set and kept working. Nor does God slacken or destroy that human spring till the machine has written out for Him in dual letters of pleasure & pain, joy & grief, sin & virtue, success and failure, upward evolution and backward sliding, the harmony of His inferior rhythms and His lila as the Ego in the kingdoms of Ignorance. But if the spring is destroyed or if the divine finger no longer falls upon it, then the machine no longer works. Egoistic action, the only activity to which mortal mind is habituated or which it understands, is

impossible without desire or at least without its essential feature, liking and disliking, emotional, sensational and intellectual preference and rejection. Hence, the first result of unsparing inner renunciation, is not only peace & calm, but inaction. If, departing from that calm of inaction, we seek again to act, the force of habit in past Nature associates with that rhythm of action its old triple gamut, ego, desire and suffering. It is the old keys that again are struck, the old painful music that again quivers through our being. This force of habit in past Nature mistaken for ineluctable law of eternal Nature, this obstinately persistent experience mistaken for ultimate and imperative experience is the root and basis of the quietistic gospel which declares action incompatible with peace & joy in Brahman, the false music of an original Illusion, the morbid throb of a great cosmic disease or, in its law, the ordering link of an incoherent series of sensations and to an unreal soul in its whirl of births a rigorous double chain. It is these phantasms that the Seer of the Isha Upanishad has to conjure, — phantasms of an overhasty metaphysical generalisation, imperfect conclusions of the soul escaping from its fever & mistaking the inactive repose of convalescence for its ultimate state of health. Not inaction & inert repose, but a healthful activity is our final state & release. We escape from this fever and struggle in which we live not by the drastic remedy of extinction but by emergence into right form of action and our true life in God. The Seer justifies God in the world to man by declaring His whole purpose in it, His complete action behind & beyond material appearances and our true infinite & cosmic being. The whole error arises from mistaking the root of our suffering and bondage; the doctors of metaphysics have deluded themselves and us with a false diagnosis. This error the Seer sets right in one of [his] brief, mighty and ample phrases, *Na karma lipyate nare, Action cleaveth not to a man.*

Action is not the cause of our bondage; attachment is the cause of our bondage. Inaction binds as much as action, if it is stained with attachment; action binds no more than inaction, if we are free from attachment to our works.

The constant association of ego & desire with action is due

to the relapse of the mind back into its egoistic workings, sahan-kara, sakama. It is this twin relapse which the seeker after perfection has entirely to overcome. We have not either to descend back from non-ego into ego or to take refuge in world-oblivion, but to ascend into God's infinity whose action is eternally unegotic, cosmic & purely self-fulfilling, nirahankara and nishkama. There we shall find & repeat in our own lives at once the utter reality of His self-collected calm and the perfection of His divine force at work, shama & tapas united in an action which is the fulfilment of a mighty Silence expressing itself in waves of power & bliss. That harmony & oneness of divine calm & divine work is man's ultimate experience & the true nature of God active in the world.

This high teaching of the Seer, na karma lipyate nare, seems to contradict violently the great current doctrine of the bondage of Karma which Buddha found as an important but subordinate tenet of our early Vedantic philosophy and brought forward from the second to the first plane of our current metaphysical ideas, impressing it in the process so forcibly on the general Indian mind that it has left a dominant and indelible mark on all our subsequent thinking. In order, therefore, to recover the early thought of Vedanta, it is necessary to understand precisely the intellectual basis of the great Buddhistic doctrine and the point at which it separated from the lesser idea of Karma we find indicated in the Brahmanas and Upanishads. In the world as we see it, there are two fundamental aspects or faces in which existence presents itself to our ultimate mental perceptions, first, self-conscious, self-governing existence, secondly, mechanical Force. According to our view of the mutual relation of these two grand entities will be the nature of our philosophy and our outlook on life. If we hold the self-conscious, self-governing existence to be subordinate to mechanical Force, contained in it and one of its appearances and results, then we are naturally & inevitably driven towards the conception of a tyrannous self-existent Necessity as the true nature & governing force of existence; the self-conscious, self-governing entity dwindles into a side play of that Necessity, governed by it & not really self-governing;

conscious only of its movement by that movement itself and not inherently, it yet mistakenly erects one nodus or one stream of mechanical Nature into the false idea of a self. This is the attitude towards life and existence of Buddhism, of materialistic Rationalism and, with one all-important modification, of Mayavada. On the other hand, if we hold the mechanical Force to be subordinate to the self-conscious, self-governing existence, contained in it and one of its appearances and conscious creations, then we are naturally & inevitably guided towards the conception of an all-constituting Self-Conscious Existence & Power,—Brahman, Ish, popularly conceived as Bhagavan, as God, which is the true being & governing force of existence,—then the apparent mechanical Force reveals itself as no blind or mechanical movement of dead life, that insoluble riddle, that ultra-Eleusinian mystery of modern Rationalism, but the conscious Will of the Sole Existence, its Tapas, its Atmashakti or Chit-Shakti which formulates itself freely into laws and processes—the daivyá adabdhá vratá of the Rigveda—for the ordering of the universe. This is the attitude towards life & existence of the Veda & Upanishads. All other philosophies are halting-places or compromises between these two master-conceptions of existence. The wide divergence between the Vedic & the Buddhistic conceptions of Karma arises as the inevitable result of this direct opposition between their fundamental conceptions of existence itself. Both admit that all active existence is of the nature of energy or work. Vedanta uses the terms Shakti, Force, Power, or Prakriti, Processive Working, for the energy, Karma, Apas, work, or the plural Karmani, works, for the activities & effects of the energy; Buddha ignores Shakti & Prakriti, because he denies the existence of God and soul or of any essential unity, but he sums up the work done in the general singular word Karma and elevates this ever indeterminate, ever increasing sum of work, into a determining conception which governs & constitutes our phenomenal existence. He is bound to this position by his idea of the world as void of unity & existence as consisting of a successive continuity of habitual subjective sensations,—sanskaras,—not an inherent continuity of self-existent Being,—whether that being be

a self-conscious existence or unconscious Force. For Buddha therefore all phenomenal existence is determined by Karma, the sum of previous works; for the Vedanta all phenomenal existence is determined by the working of Shakti or Prakriti, Force of Nature, under the will & choice of Soul, Self or Spirit. This Soul or Spirit, variously termed Deva, self-luminous conscious Being behind the Force of Nature, or Purusha, informing Male inhabitant and possessor of this female executive Energy, or Ishwara, omnipresent Lord of this Will Power, this Shakti formulated in Force of Nature, is the beginning & end, the continent & inhabitant, the source & material of all objects & existences; for this Shakti, Prakriti or Nature produces all its works, objects & happenings only in the Ishwara's self-extended conscious existence. So, the Swetaswatara Upanishad defines Prakriti as *Devátmashaktim swagunair nigúdhám*, Self-Power of the Divinity concealed by its own modes of working. The Self in Vedanta is not only Swayambhu, self-existent; it is Swarat and Samrat, self-governing and world-governing. The Ishwara is master and user of his works, not Himself their slave, creature or instrument. Therefore, while Vedanta accepts the law of works as a subordinate and external instrument of rebirth and prolonged phenomenal existence, a bond unreal in itself & even in its action many-sided, elastic and flexible, Buddhism imposes it as the one cause of rebirth & a mechanical and in its action an ineluctable Necessity & rigid chain; while Vedanta becomes by its fundamental conception the gospel of a recovery by self-realisation in outward consciousness of an always existing freedom & mastery in a world which is secretly anandamaya, all-blissful, Buddhism becomes by its fundamental conception a gospel of escape by self-extinction from a sorrowful, intolerable & otherwise ineffugable bondage.

When we go behind metaphysical conceptions and look at the concrete facts of existence on which they stand, we shall find that the law of Karma is nothing else than a statement of the soul's entire subjection to the law of cause and effect. The idea belongs both to ancient Buddhism and modern Rationalism, but is stated in either philosophy on different grounds. Buddhism

denies the real existence of soul, Rationalism denies it existence altogether, trenchantly & simply. To the modern rationalist the whole world is simply a working out of material Force and mind itself is a particular working of matter. Mind, in this conception, is a sort of automatical electrical apparatus which receives so many various kinds and degrees of shock, beats out mechanical responses & converts them, also mechanically, into so many forms of sound and idea. Ideas themselves must then be entirely material phenomena, although because they do not assume any of the ordinary visible objectual forms of matter, they falsely appear non-material to our consciousness. That consciousness itself is, indeed, only a subjective & quite subordinate activity of matter. Since the machine is automatic, there is no need to suppose the existence of an intelligent operator. Ego is a fiction of the mind, the soul an ignorant theory invented by the uninformed intellect to explain to itself its own existence. What then is the cause of these thinkings, doings, happenings? Obviously, they must be the workings of material Force of which the chief process is a mechanical causality. Previous workings produce as causes by an unchanging, inherent law of action other workings of Force which stand to them as effects; they in their turn join the general sum of causation, helping to produce new effects. The sum of past workings of Force yet in operation,—so far at least as they are concentrated round the object,—are figured for man as heredity, environment, education, past actions and produce a parent state of things or predisposing condition; its present workings, acting as immediate cause, or the sum of immediate causes, produce out of that condition all new states, actions & events, not intentionally but mechanically, by the joint force or interplay of cumulative and special causes. This is the modern materialistic theory of Karma to which, I presume, the majority of modern thinkers would give some kind of assent. Denying the survival of personality after death, it perceives no need to fathom deeper complexities or enter into more subtle problems. The bondage of Law is inexorable but need not greatly trouble us, since death after a short span of activity acts automatically as a release. To ego in the mind, to our falsely self-imagined soul,

even if that ego be so foolish as to chafe and resent the bondage & limitation which is the law of all being, there is always this consolation of a speedy self-extinction in the sum of Matter. But any such resentment is a morbid folly of our intellect. To accept our chains, manipulate, rearrange and use them for our own welfare & that of the race is the gospel of scientific rationalism.

Buddhism views the same set of facts from the other end of thought. Not self-working material force, but a mass of subjective sensations is its reading of the universe. Material existence & action only exist in sensational consciousness and as terms of sensational consciousness; and sensational consciousness only exists as a phenomenon in the void. But behind this sensation-troubled void, there is another state, entity or what you will, Nirvana, in which there is neither this continual birth in phenomena, nor the sensational activity of which continual birth is the nodus. Later Buddhistic schools have supposed Nirvana itself to be void or Nihil, but it does not appear that this was the actual teaching of the Buddha. He left the ultimate metaphysical question aside and fastened only on the practical fact of this bound & troubled sensational existence and that ineffable bliss of release & escape. To escape, that is the goal & end of man. But who escapes? Buddhism denies God, denies the existence of the Atman. There is no one who escapes, only the escape itself. Buddha avoided always the logical difficulty & seized on the practical fact. There is here, undeniably, the phenomenal existence of something which feels, desires, sins & suffers, and the great principle of divine Compassion in him which far more than reason & logic was the master key of his thinking, compelled him only to take hold of this great sufferer, this tormented self-deluder & turn it into that path by which alone it could escape from its own false existence. The path of escape is that moral & intellectual discipline which leads it out of the dual stream of good and bad Karma. To Buddha also the sum of past workings still operative on us is the great preexisting condition which is causal of continued state, action & happenings, past working as cause produces fresh working as effect which again constitutes itself into fresh cause. From this chain there is no escape in

Nature except by perceiving existence as a streaming activity of successive sensational associations or sanskaras and climbing out of the stream by a supreme act of knowledge. For, unlike the modern Rationalist, Buddha's problem was complicated by the belief inherited from Vedic Hinduism that death is not a release; personality survives & in other states, other births, continues to suffer & enjoy, enjoy & suffer through unending Time unless & until the knot is cut, the renunciation of the self-idea envisaged and effected. Then we escape from these running figments of heaven & earth & hell, pleasure & pain, life & death, self & not-self into the shoreless & streamless peace of Nirvana.

Shankara, one of the mightiest of metaphysical intellects, a far greater intellect than the Buddha, though a less mighty soul, built up by his intuitions and reasonings a third position which reconciles Vedic Brahmanava and the Karmavada of Buddhistic rationalism & Rationalistic materialism. Shankara asserts the real existence of the Atman, self or soul which alone exists and is indeed the essential substratum & continent of this phenomenal universe. But he admits with Buddha the absolute rule of Karma, of the law of works, the law of cause & effect over the conscious soul immersed in the phenomenal universe. Is then the soul eternally coerced by its own phenomena, eternally bound to the revolving wheel of its own phenomenal manifestations? No, for freedom is the ultimate spiritual experience. Where then is the point of escape, the door, the egress? The point of escape is for Shankara, as for Buddha, in an ultimate act of knowledge which denies the real existence of the phenomenal world. He erects a rigid antagonism between essential truth and practical truth, paramartha & vyavahara, the one alone we must admit to be true truth, the other we must reject as only apparent truth. This world is a world of action, of karma, & in a world of action the governing practical truth is the law of karma which drives the soul through the endless chain of birth & death & rebirth, whirling for ever betwixt heaven & earth & hell, tossed from good to evil & evil to good, pain to joy & joy to pain, like a tennis ball kept continually at play between two equally skilful players. But all action depends upon and is only rendered

possible by relation, and all relation depends upon and is only rendered possible by self-division, by bheda, by dwaita, by the false conception in the soul of itself as not one, but many, by Avidya therefore, by Maya, a great original sin of Ignorance, a mighty cosmic self-deception. Where there are many, relation and action are possible; where there is one, there can be no relation and therefore no action. Atman or Soul is one, therefore relationless and actionless, shantam avyavaharyam, therefore free from karma, from rebirth, from Maya. The rest is a phenomenon of creation produced by the play of active consciousness, jagati, & cast by it like a shadow or reflected image on the surface of the still, actionless & relationless soul. This play, this jagati is Maya which is and is not,—is in itself, for its works are there, but is not, for those works are unrealities; they are a mass of self-deceptions starting from an original self-deception rooted in the principle of mind. What the mind sees is a reality, it is Atman, Brahman, but the ideas, the terms in which mind sees it are falsehoods.⁵ All practice therefore, however true for practical purposes in world, is really the plausible & well-arranged play of a falsehood; & practical truth & action are only so far useful that out of them, properly handled, emerges the impulse which leads to cessation from action & the knowledge which denies practical existence. In that cessation, in that denial is man's only escape from his false mental self into the calm essential reality, objectless bliss & relationless self-knowledge of the Atman. We see then that Shankara has practically transmuted or replaced Buddha's vague & undefined Nirvana by this actionless & peaceful Atman, the shanta akriya Sacchidananda, substituted for Buddha's false world of subjective sensations a false world of erroneous ideas starting from the original self-deception of duality, and accepting Buddha's law of karma as applicable only to this false world and Buddha's means of escape

⁵ The explanations given by modern Advaitins of Shankara's views, their interpretations in modern thought of his philosophical formulae, are so various & mutually contradictory, that it is becoming as difficult to know the real truth of his views as to know the real & original teaching of Buddha. I give what seems to me to be his teaching & at any rate it is the only logical basis for Mayavada.

by an ultimate act of knowledge, substituted knowledge of real self for Buddha's knowledge of non-self as the essence of that act & the true culmination of inner experience & meditative reason. Shankara like Buddha refuses to explain or discuss how active consciousness came at all to exist on the surface of a sole Self-existence which is in its very being shanta and inactive; he drives, like Buddha, straight at the actual fact of our bondage, the practical cause of bondage and the most direct path of escape from the bondage. These he states for us as he holds them to be established by Scripture, experience & reason & then, the fact once thus triply established, our business is not to account for its existence, which, moreover, must in the nature of things be inexplicable to the mind, since Maya is an original mystery & therefore incapable of solution, but to grasp at the one means of escape, of release, of the great & final liberation. The intellectual difference between the two systems is immense, their temperamental kinship is close. Yet we have this curious result, due to Buddha's stress on the means of self-denial provided by life & its ethical & altruistic possibilities as a preliminary training, that Shankara's system, less intellectually Nihilistic than Buddha's, has been practically more fatal to the activities of the divine power & joy in life in the nation which has so largely accepted his teachings. By denying God in life, by withdrawing the best souls from life, by discouraging through their thought & example,—the thought & example of the best, yad yad acharati sreshthah,—the sraddha of life, the full confident self-acting of Matariswan even in those who have practically accepted & cling to the burden of worldly existence, he has enlarged the original Vedantic seed of ascetic tendency into a gigantic growth of stillness & world-disgust which has overshadowed for centuries the lives & souls of hundreds of millions of human beings. On one side the race & the world have gained immensely, on the other it has suffered an immense impoverishment. The world-fleeing saint & the hermit have multiplied, the world-helping saint & the divine warrior of life come rarely & fail for want of the right atmosphere & environment. The Avatars of moral purity & devotional love abound, the Avatars of life, Krishna

& Balarama, manifest themselves no more. Gone are Janaka & Ajatashatru, Arjuna & Vyasa, the great scientists, the great lawgivers. The cry of OM Tapas with which God creates has grown faint in the soul of India, the cry of OM Shanti with which He withdraws from life alone arouses & directs the best energies of a national consciousness to whose thought all life is sorrow, self-delusion & an undivine blunder. Chilled is that marvellous & mighty vigour which flowed out from the Veda & Upanishads on the Indian consciousness & produced the grand & colossal forms of life eternally portrayed for us in the fragments of our ancient art & history & in the ideal descriptions of the Epics.

In Buddhism & modern Rationalism we have the denial of God, the grand negation, remedied for the purposes of life by a subordinate or substitutory conception which encourages the active impulses in humanity; in Rationalism the negation is corrected by a covert reaffirmation of Him in the guise of a blindly purposeful Nature full of a supreme mechanical intelligence and working out an evolutionary intention in humanity, in Buddhism, by the strong & fruitful affirmation of Karma and of Dharma or ethical religion as the indispensable first condition of escape from Karma; in Mayavada we get back to the affirmation of God, but an ill-balanced affirmation ending for the purposes of life in a practical negation, since God in the world is presented to us as a dream of Maya and God aloof from the world as the only real reality. To get back to the full affirmation we have to return to the ancient Veda. There, we find stated or indicated in every Upanishad, but most succinctly and practically in the Isha Upanishad, Ish, Purusha, Deva as the supreme good; we recover there the perfect affirmation of God & return to the grand, original & eternal negation of all these succeeding negations. There can be no more direct contradiction to the negative element in Shankara's teaching than the uncompromising phrases of the Isha Upanishad, kurvanneveha karmani, nanyatheto'sti, na karma lipyate nare. Both Shankara and the Seer of the Upanishad start from the same premises, the universality of Brahman, the bondage of desire and ignorance,

the necessity of escape through the dissolution of the dividing ego-sense in our mentality; but the practical conclusions they draw from these premises reveal somewhere an abyss of divergence. Abstain from actions, cries Shankara, except, for a time, from those that are indispensable and Shastra-enjoined,— and even these do with a view to their early cessation; for action is the master-key of the chain of Maya and only by ceasing from action can a man escape from the grand Illusion of things; only by cessation in relationless knowledge & the eternal stillness of the actionless Brahman can there come the great release from good & evil, from joy & pain, from birth & death, from living & non-living. Verily do actions, cries the ancient Seer, accept thy full term of human life and endeavour; for action is not in itself a chain nor a result of ignorance, but rather a manifestation of the Most High. Action cleaveth not to a man. The difference arises from a divergence in the fundamental conception of God in the world. To the Mayavadin, Ishwara, God in relation to the world, is a supreme term of Maya and therefore like all things in Maya existent yet not existent; to the Seer God is an eternal reality standing behind Chit-Shakti in its works, embracing it, possessing it, fulfilling Himself in it through the world rhythm. Action to the Mayavadin can only be motived by individual ignorance and must always be a knot of that ignorance; action to the Seer can even in our outward consciousness be motived & in the secret consciousness of God always is motived by the divine & universal Force & Bliss at free play in the divine & universal Being. The world is to the Mayavadin a freak of knowledge, an error on the surface of Self, a misconception of mind about Brahman; the world to the Seer is a running symbol of God and a means for His phenomenal self-manifestation in His own active being & to His own active knowledge. God, being unbound by His own activity and its free lord & disposer, man also, being one in self with God, is unbound by his works and, in God, their free master and disposer. Na karma lipyate nare.

Yet, in this divergence of views the dominant sense of our later Indian spirituality has been with the conclusion of Shankara and against the conclusion of the early, the inspired,

the suprarational Vedanta. To the modern Indian mind unaffected by European pragmatism it has been untrue that action cleaveth not to a man,— na karma lipyate nare—; & it has been true that all action results imperatively in bondage,— yah karoti sa lipyate, whoever acts is entangled in his action. The reason for this preference is obvious. Bondage & sorrow in the world are a fact of our daily experience, withdrawal from life an obvious and logical escape; freedom & bliss in the world are only a statement of Scripture, an experience abnormal to ordinary humanity and if eternally existent, then existent in our supraliminal self and not in our waking consciousness. Therefore India failing in the ancient power of Vedic tapasya has inertly accepted & combined the Buddhist Law of Karma & Rebirth & Shankara's gospel of cosmic Illusion & actionless Peace.

We have seen that the statement of the law of Karma is, at bottom, an assertion of the supremacy, complete & effectual in all forms of activity, of the grand cosmic principle of cause & effect. It formalises the subjection of the human life or even the human soul, at least in all its active parts, to the ineluctable dominion of an unending causality. If it can be shown that the dominion is not ineluctable or man himself is or may be above causality, its master and not under its control, then the whole elaborate chain forged for us by outward world-appearances crumbles in a moment to pieces. For Indian philosophy the main practical application for man of the chain of causality was the Law of Rebirth,— a law of the Soul in Nature; for modern Science, which denies the soul and knows nothing about rebirth, its practical application for man as for plant & stone & animal is, simply, the invariable working of material Force or, using a more popular language, mechanical Law of Nature. Even if the soul exists & rebirth be proved a fact, the Law of Rebirth can be to modern conceptions nothing but a particular working of Force, one, therefore, of the many subordinate Laws of Nature. As locomotion is the effect, electricity or steam the cause or motive force, so rebirth, continuity of personality in a material form, is the effect, past action is the cause; it is a law of Nature,

on a par in the psychological field with the law of gravitation in physical Nature, that the soul which acts shall be subjected to rebirth as the ineluctable result of its actions.

So stated, and given the necessary premise that individual personality is itself no eternal mystery but only a result and a nodus of natural energies working through the mind, the Buddhists' ineffugable law of Karma becomes a luminous, simple, rational, rigidly logical solution of the problem of personal existence, and like all that is simple and trenchantly logical, it attracts sovereignly at the first glance & tempts the thought to find rest in its symmetry & security. But to a mind on the alert for the infinite surprises of our complex world-existence this simplicity, this rigid logic is itself a danger signal, a warning of error. The more largely & patiently we consider existence, the more we perceive its extraordinary complexity, the multitude of its strands and the variability of its formulae, the more we begin to distrust all simple & onesided conclusions. Even though the world be one in substance and unitarian in principle, it is always infinitely manifold in manifestation and infinitely complex in working. When therefore we have arrived at a conclusion which, attracting by its simplicity, convincing by its force of logical dogmatism, coerces all these complexities to fit a single formula, yet we shall do wisely if we survey our position once again, if we ask ourselves what side of the truth we have omitted from our review of things and whether there are not somewhere incompatible facts which we have too forcefully dismissed or too dexterously got rid of in the haste to reach some goal. As Buddhism by logical dexterity got rid of the human perception of self-existence or Mayavada of the human perception of world-existence or Rationalism of the human perception of a psychic life in us & outside us that overtops our material and bodily activities, our thought can only arrive at the whole truth of things when it learns to ignore and evade nothing, to leave out nothing that God has included but rather to give patiently, justly, dispassionately every fact & every aspect of existence its right value and full place in His scheme of things. If we do not perform the necessary work of self-criticism for ourselves,

mankind will eventually do it for us and cast away as falsehoods those exclusive religions or those onesided philosophies which on their too narrow pedestals we have erected with so much & so immature a fervour of self-satisfaction. For Truth in the end is invincible and gets the better of all mankind's temporarily triumphant violences upon her. There are already signs that the mind of the race in India is beginning to react against the exaggeration of the Buddhistic generalisation of Karma to which modern Hinduism has been so long subjected both in life & in thought. The weakness of the Karma theory lies in its absolutist & exclusive generalisation of a great, a fundamental, but still a partial truth,—its overstress on outward human action as a determining factor of the soul's experiences, its insufficient stress on those vaster & more subtle workings of God in man of which outward action is only the partial symbol and the external machinery. It is here that the Upanishads recall us to a wider & sounder view of God in the world & His purpose in action & birth.

Not action but our past soul-states are the womb of our future; not action but desire, attachment and self-immersion of the individualised Soul in mind in a limited stream of the workings of its own executive Nature form the knot in the bondage of rebirth; action, whether of the thought, the speech or the body, is only an outward mechanical process by which the soul-state shadows out or symbolises itself in material life. It has no essential value of its own, but only the value of what it expresses; it can therefore have no binding power upon the soul which originates & determines it. What it does and can help to alter, are merely the mental & emotional values & terms in which soul-state expresses itself and even this function it performs as a partial agent and not as the real determining factor.

If that be true, then we have been grossly exaggerating the power of our actions over our souls, grossly & wilfully accepting in our mental & outward life the tyranny claimed over us by our individual nature, when our hidden relation to her & God's open ultimate intention in us is the very opposite of such a submission to the brute & despotic control of Matter. The relation of the

Swarat to his being, of the Samrat to his environment is our secret & true relation. To conquer one's own nature & fulfil God in world-nature, standing back from her in the soul, free & desireless, but not turning utterly away from her, is the true divine impulse of God in humanity. Life of Nature is intended to be to the soul of man as the Indian wife to her husband, not all in all, for it is to God that he should turn supremely & live in God perpetually, but yet always the half of himself through whose help alone as his sahadharmini, his comrade in works, he can fulfil the divine purpose of his living. The soul to Prakriti is intended to be as the Indian husband to his wife, the image of God in life, for whom she lives & through whom she arrives at the Divinity. We should seek first & live always in God beyond Nature, but God as Nature we should also cherish & enjoy as His symbol of that which is beyond & the appointed means of His active self-manifestation.

In Vedanta, therefore, the true & early Vedanta, the practical freedom of the soul is not to be gained as in Buddhism by self-abolition,— for the ego alone can be abolished, the soul is eternal, began not and cannot end,— nor, as in Mayavada, only by extinction of its activities in actionless self-knowledge,— for God expresses Himself in action no less than in rest; — but rather the soul is eternally free in its nature and its freedom has only to be entirely realised by the mind in all its parts in order to be possessed, whether in action or in inaction, in withdrawal from life or possession & mastery of life, by this outer consciousness which we call our waking self as it is eternally possessed in our wide & true effulgent spiritual being which lives concealed behind the clouded or twilit shiftings of our mental nature and our bodily existence.

Chapter V

The Soul, Causality and Law of Nature.

What then of this causality that we see everywhere? What then of this law and fixed process in all Nature which is at least the indispensable condition of all human activities? How can the supposed freedom of the soul be reconciled with the actual despotism in fact of an ordered Cosmic Energy?

Vedanta does not deny either Law of Causality or Law of Nature nor their fixity nor their imperative control over individual activities; it rather affirms them categorically and, as we shall see, with an inexorable thoroughness far more unsparing than the affirmations of modern Rationalism. But it states these laws in a formula far wider than the rationalist's; it sees not only law of life & law of matter, but law of mind and law of supermind; and it bases the stability and imperative force of all law in the world on an ultimate truth & source of freedom. It is this ultimate conclusion that gives to the Vedantic conception of Causality and Law of Nature an entirely different force and essential meaning from the vast generalisation of mechanical Energy popularised by modern Science. Law of Nature is to Science the tyranny of a self-existent habit in mechanical World-Force which Intelligence, the indulged & brilliant youngest child of material Energy, can use indeed, can convert in its forms or divert in its processes, but from which it has no door of escape. Law of Nature in Vedanta is the normality of a regular or habitual process in self-intelligent World-Force; in other words,—for Chit-Shakti, self-intelligent World-Force can mean nothing else than this,—in the cosmic Will-Power of universal self-existent Being,—of God, of Brahman. The process of Force, then, however fixed, however imperative, is neither mystically self-existent nor mechanically self-determined. On the contrary it depends upon certain relations, exists in certain conditions, amounts to certain fixed motions of the cosmic Will-Power which have been selected from the beginning in the universal Wisdom and, once selected, are manifested, evolved, established and maintained in

the workings of cosmic Energy until the fixed moment arrives for their variation or for their temporary or final dissolution. Laws of Nature are, in the pregnant phrase of the Rig-Veda, adabdhá vratá dhruvá yá devá akrinvata; they are the rules fixed and unovercome of active world-being which the gods have made and which they maintain eternally against the powers of dissolution. For the world in the old Vedic conception is a rhythm of action and movement in God's conscious being; or rather it is a combination and concord of rhythms; it is chhandas, it is metre, it is a choral symphony of Jagati & Gayatri, Brihati & Pankti, Tristubh & Anustubh; it is Vak, a formation of His Word, a formal harmony of His self-expressive consciousness, a harmony discovered and selected out of God's infinite possibilities and exposed therefore to the perpetual attack of those infinite possibilities. Therefore even the most well-established laws of Nature, the most general, persistent, apparently eternal and unvariable processes of world-Force, being formations of Jagati, being rhythms and harmonies of God's active Energy, truths of recurrent motion and not truths of eternal status, are none of them indestructible like the sempiternal Being out of which they emerge, but alterable and dissoluble and, since alterable and dissoluble, therefore ever attacked by powers of disorder and world-dissolution, ever maintained by the divine Powers consciously obedient to eternal Will & expressive of It through whom Ishwara has manifested Himself in material, moral and spiritual Nature.

Law of Nature is in God's being what social Law is in man's action & experience, not indestructible essence of that being or indispensable condition of that action, but formed, evolved and willed condition of a regular, ordered, complex and intricately combined self-expression in a harmony of various relations and grouped workings of energy. All existing natural conditions express a realised status and frame and base a farther evolution out of realised status.

Nature itself is Prakriti, working (literally, forward working) of world-Force, called by us Shakti, the cosmic or divine Power of cosmic or divine Will. And because that Shakti is,

in the phrase of the Swetáswatara Upanishad, Devátmarshaktih swagunair nigúdhá, the self-power of Divine Being hidden by the modes of its own workings, because it is, to use another Sanscrit formula, Chit-Shakti of the Sat-Purusha, Conscious Power of Conscious Being, & because that Conscious Being is infinite, absolute and unlimited in its possibilities and its Conscious Power infinitely, absolutely and illimitably a Free Will choosing freely Its own harmonies and not bound in their rhythms as though in fetters imposed by an alien will, forming, observing and using Its own laws and not compelled, enslaved and used by them, therefore is Prakriti or working of Nature in its laws a self-imposed system, a mighty and ordered Wisdom and not an eternal and inexplicable mechanical necessity. Its laws are formed & fixed processes of world-Force, selected and “loosed forth” by God, srishta, (created, as we loosely say,) out of the illimitable potentialities of self-existence, brought into play out of the depths of His self-being as a rhythm of music is brought out, manifested and arranged, srishta, vyakta, vihita, out of the infinite possibilities of indefinite sound. Self-luminous conscious being precedes, contains and manifests in self-intelligent & self-effective Force; self-intelligent and self-effective Force at once conceals and manifests itself in the mask of Prakriti, the mask of a motional and mechanical working of Nature. We arrive then at this formula of the conception of Law in Nature.

Law of Nature is a fixed process formed by the universal self-conscious Will of Ishwara; it is in its nature a particular or a general movement of that Force. So long as it is maintained, it is binding on things in Nature, but not binding except by His own Will on Ishwara. Fundamental or “eternal” Laws of Nature are those general processes or movements in Conscious Being in which the rhythm of the universe is framed and they would naturally endure unabrogated so long as that rhythm itself is sustained, as it is, in the Will and Being of God.

The Vedantic conception of Causality is equally determined by this initial and fundamental idea of the relation between mechanical process of Nature and the living Will of God. Cause, to the Vedantin, is nimitta, determining means, special determining

factor; it is the particular manipulation, impact or application of motive force which brings out of a preexistent arrangement or condition of things new or modified condition and arrangement, the difference effected constituting result. Oxygen & hydrogen as separately manifest gases, the atmosphere, the ether,—or to put it in the old concrete symbolical language of Indian philosophy, the combined presence of Agni, Vayu and Akasha, form in their arranged shapes & relations the preexistent condition; contact & mixture of the two forces with the new vibrations set up by the new relation, sparsha and shabda, are the nimitta, the determining means; the new apparent condition of things, the rupa, shape of water, is the result. Agni latent in the ether & atmosphere is the preexistent condition; friction of the two aranis and the resultant vibrations, sparsha & shabda, are the nimitta; the sacrificial fire is the result. A seed planted in favourable ground is the preexistent condition, sun & rain, agni & jala, are the nimitta; the appearance of an oak tree is the result. In each case what has really happened is that in a certain arrangement of the current workings and a certain relation of the worked out shapes of Force—in this case of the active Life-Energy in the material world—a new arrangement was always potential and latent, water involved in hydrogen, fire involved in the tinder-wood, the oak tree involved in the seed and a particular process, that is to say a particular working (karma or apas) of the same Force, the same Life-Energy, has been used to evoke the new shape of things out of latency, out of avyakta, and bring it into manifestation, into vyakta. The previous existence of the oak tree in the seed is not admitted by us because it is not there in realised form and to our erroneous notions realised form is alone reality. But realised form is only the material appearance of a truer reality which is not shaped in matter but only in consciousness: the oak tree is in the seed not in form but in being; for the form is only a circumstance of being and it is contained & latent in the being out of which it is born & which it expresses to formal vision. This latency and this process of manifestation in varying time and place by varying nimitta is, says Vedanta, the whole sense of phenomenal existence.

All cause and result are merely the evocation of a latent and potential shape or condition of things out of the previous condition or status in which it was latent, by some particular movement of a Conscious Force which is progressively passing from status to status and thus manifesting in form all that it holds in itself in being. Cause is only a means of manifestation and not itself a creative power. The real cause is only the Will of God working through its own fixed and chosen processes.

Are we to say, as it is often said, that the preexistent condition of things or arranged sum of force is the real cause out of which the event, the change, the new appearance must inevitably come and the advent of the nimitta a sort of accidental or at least subordinate & variable factor by which the inevitable result happens actually to be induced to manifest itself in outward eventuality? We have no right to say so; for it is not true as a matter of perceived fact that a given preexistent condition of things must lead inevitably in its own nature to a fixed result. In all the cases we have cited the preexistent condition did not necessitate the result and could not have produced it, but for the interference of the nimitta or determining factor, just as the determining factor could not have produced the result but for the preexistent condition. Shall we say, then, that granted a given preexistent condition and a given determining factor we shall have with mechanical certainty a given inevitable result? Again, we have no right to say so. The formula seems at first to hold good where the material of the workings of Force is the most rigid & unpliant and the workings themselves are the most mechanical & regular in their recurrence. But even there the inevitability of things is illusory. The aranis may be to hand, the friction occur, yet the sacrificial fire may never be lit; the seed may be planted, the soil favourable, sun and rain perfectly adjusted in their bounty, but the oak tree may not appear. We cannot even say that any given preexistent condition of things is the sole condition under which a given result can be effected. We say, indeed, taking actual fact for necessary fact, that only by the incubation of favourable soil on the right seed can an oak tree appear; but what we are justified in saying is only that, as yet, we

know no other conditions under which an oak tree has appeared. So also we thought that only by the incubation of the earth on the carbon could the diamond be produced; now, other conditions have been found under which this rare formation can be effected. Where the material which the force of Nature uses is more pliant and flexible, the idea of a mechanical Necessity becomes still less credible, is even more feebly substantiated by facts or is directly contradicted. A nation is in its last stage of moral and material decline; the preexistent conditions are precisely the same as in a score of instances in which destruction has followed or are even worse and more favourable to dissolution; the same determining nimitta is applied; but whereas in the previous score of cases the shock of the new impact has determined the anticipated result of destruction, in this worse case the selfsame shock, baffling anticipation, determines the entirely contrary result of rejuvenation, restored strength, energy of expansion, energy even of domination. Either some new factor has entered in unexpectedly or was already existent and even active, but concealed, or else a latent potentiality, which in the other cases remained latent, has here unexpectedly reacted, risen into the active superficial movement and become its dominant and deciding factor. Looking at these things, we are tempted sometimes to say that the whole sum of the past and the whole sum of the present was necessary for any given result in the world to be brought about; we are tempted to speculate that the whole cumulative stream of past active forces, past Apas or Karma, is the one real and inevitable cause of the future. But this is really only a statement of our ignorance; it is only an assertion that what has been, has been and since it has been, must, in any case, have become. It is an attempt to disguise from ourselves a fact that it really confesses, the fact that an infinite possibility of negation or modification, of non-happening or otherwise happening pursues and surrounds every actuality & eventuality in the universe and that we can relate how and under what conditions a thing has happened once or repeatedly and may be expected, if nothing interferes, to happen again, but we cannot fix inevitable cause to inevitable effect.

All event and all process of event is a selection out of infinite

possibility which surrounds the actual past as the Might Have Been and the actual future as the May Be. Of every cause, process & result we can say justly that the result might have been otherwise or the same result spring from some other cause or be effected by some other process. This perception in mind of an omnipresent infinite possibility is a shadow of the soul's perception of the infinite freedom of God.

What then is it that in any given working of result out of precedent condition by nimitta, fixes the combination of the forces at work, governs their manipulation, selects in one case to be the determining factor a force which in other cases was impotent to decide the eventuality? Is it Chance? Is it Fate? Is it some inexplicable mechanical self-guidance? Or is it supreme intelligent Will, Will that is in its nature Intelligence? Is there a conscious Will or rather a Will-Consciousness which contains, informs, constitutes these apparent forces and objects, but is hidden from our eyes by their multitudinous whirl of motion, by their clamorous demand on the attention of the mind and senses, by their insistent claim that we should submit in thought and act to the tyranny of their workings? This last answer is the solution proposed by Vedanta. It rejects the concept of Chance as only a specious name covering our self-satisfied ignorance of the cause and process of things; Chance is really the free action, not pursuable by us in its details, of a mighty cosmic Providence which is one with cosmic Force. It accepts the reality of Fate, but rejects as a void and baseless imagination the idea of an inexplicable mechanical Necessity; Fate is merely the inevitable working out in itself by a cosmic Will of its own fixed and predetermined self-perceptions. It accepts the idea of a principle of unerring self-guidance in Nature, but is unable to regard that principle as in any way a mysterious agency or an inexplicable birth; Nature guides itself unerringly only because Nature is the self-working of a Self-luminous conscious Existence formulating its Will in fixed processes of things and combined arrangement of event actualised in its own eternal and illimitable being. Nature to Vedanta is only the mask of a divine cosmic Will, devátma-shaktih swagunair nigúdhá; Prakriti of Vedanta is no separate

power, no self-existent mechanical entity, but the executive force of the divine Purusha at once self-revealed and self-concealed in the mechanism of its own workings. Purusha, conscious Soul, is the divine Poet and Maker; Nature, conscious Force, is His poetic faculty; but the material of His works is always Himself and their stage & scene are in His own conscious being.

Pre-ordered selection out of infinite possibility is the real nature of the power we call Fate. Chance is a secret Providence and Providence the constantly active Self-Knowledge of cosmic Existence and cosmic Will always fulfilling in actuality its foreseen selection of event and means,—foreseen in knowledge, —and preventing the pressure of infinite possibility from disturbing that pre-ordered arrangement. So a poet might work out in execution the original plot and characters as arranged in his mind and reject at every step the infinite possible variations which suggest themselves to him as he writes.

Law of Nature is the fixed system of conventional or habitual relations under which the Purusha has agreed with Himself to work out His pre-ordered selection and harmony. Causality is the willed arrangement of successive states & events and the choice of particular means in accordance with this fixed system of relations by which pre-ordered Fate of things is worked out in actual event.

Fate, Law and fixed Causality bind things in the movement of the Jagati; they do not bind the Purusha or conscious Soul but are the modes and instruments of His free self-working.

We must be on our guard against the idea that in this statement of the problem of predestination the infinite possibility we assert is an otiose and practically non-existent conception,—a thing that Is Not, a mere mental perception,—or that because the course of the world is fixed, the infinite freedom of God which supports and contains that fixity, is an abstraction of no practical moment or no practical potency. Among the many superficial fallacies of the practical man, there is none more superficial or fallacious than the assumption that in face of what has been, it is idle to consider what might have been. The Might Have Been in the past is the material out of which much of the

future is shaped. It would not be so if the material life were a self-existent thing, proceeding out of itself, sufficient to itself, ending with itself. But the material life is only a selection, a formation, a last result of an infinite conscious life behind which far exceeds the sum of all that actually exists in form and happens in event. Infinite Possibility is a living entity, a positive force; it is the material out of which God is constantly throwing up the positive and finite actuality. It is therefore all-important for a full and real knowledge of the world to know & see this infinite material as well as the actual finite result and ultimately determined shape of things. God Himself in His foreknowledge foresees the infinite possibilities that surround the event as well as the event itself. The forces that we spend vainly for an unrealised result, have always their ultimate end and satisfaction, and often form the most important determinants of a near or a distant future. The future carries in it all the failures of the past and keeps them for its use and for their success in other time, place and circumstance. Even our attempts to alter fixed process, when that process seems to be a fixed & unalterable law of Nature, are not lost & vain; they modify the active vibrations of the fixed current of things and may even lead to an entire alteration of the long-standing processes of things. The refusal of great minds to accept the idea of impossibility, with which they are not often reproached by the slaves of present actuality, is a just recognition of the omnipotence divinely present in us by right of the one supreme Inhabitant in these forms; nor does their immediate failure to externalise their dreams prove to the eye that sees that their faith was an error or a self-delusion. The attempt is often more important than the success, the victim more potent than the victor, not to the limited narrowly utilitarian human mind fixed on the immediate step, the momentary result, but to God's all-knowing Fate in its universal and millennial workings. From another standpoint, it is the infinite possibilities that surround the act or the event which give to act and event their full meaning and value. It may be said that Arjuna's hesitation and refusal to fight at Kurukshetra was of no practical moment since eventually he did take up his bow and slay the Dhritarashtrians & the otiose

incident might well have been omitted by God in His drama; but if it had not been possible for Arjuna to hesitate, to fling down the bow Gandiva or to have retired from the fight but for the command of the incarnate God beside him, then his subsequent action in fighting & slaying would have had an entirely different value, the battle of Kurukshetra would have meant something entirely different to humanity & its results on the future life of the nation & the world would have been, comparatively, almost a zero. We can see this truth even with regard to slighter incidents. The fatality which in Shakespeare's drama wills the death of Romeo & Juliet as the result of a trivial and easily avoidable accident, receives all its value from the possibilities surrounding the actual event, the possibilities of escape from fate, reconciliation & for these tragic lovers the life of an ordinary conjugal happiness. These unrealised possibilities & the secret inevitability — of Spirit, not of matter, — which prevents their realisation, which takes advantage of every trivial accident and makes use of it for the swift & terrible conclusion, make the soul of the tragedy. A mechanical fatality must always be a thing banal, dead, inert and meaningless. It is their perception of these things behind the veil, their transcendence of the material fact, their inspired presentation of human life that ranks the great poets among the sophoi, kavis, vates, and places poetry next to the Scriptures & the revelations of the Seer and the prophets as one subtle means God has given us of glimpsing His hidden truths.

The unrealised possibility is as much a part of Fate as the actual event. The infinite possibilities surrounding an event are not only the materials out of which the event is made and help to modify or determine the more distant future, but alone give its true & full value to every human or cosmic action.

God or Spirit then is the Master of His processes and their results; He is the law of natural law, therefore free from that law, nityamukta, the cause of Fate, therefore not bound by Fate but its ruler. Action is the free play in His eternal Being, therefore that Being is not bound by the action. Action does not compel in Him any results which He is not free to accept or to avoid;

it does not entail fresh action unless He so chooses, nor does it produce any modification either in His conscious existence or in the modes & phenomena of His conscious existence except so far as He allows those modes or phenomena to be affected or varied. In His essential being God or Spirit is ever immutable, since nothing ever essentially changes even in the universe, much less beyond the universe; and it is only phenomena in the cosmic motion of consciousness that seem to change. Here too sages have perceived that the change is not really a change, but only a successive presentation of ever recurrent phenomena to the Time-governed eye of conscious Mind. These changes are a play of self-ideas in Conscious Being existing for ever beyond Time & Space, but represented for us in the symbols of Time & Space. Such as they are, the succession of these changes affected by action of man or action of Nature are not binding on Spirit, not an inexorable stream of cause & result which Spirit has passively & helplessly to endure, but a harmony or progressive rhythm of successive states which Spirit has freely arranged in itself. Na karma lipyate.

God acts or rather produces action, produces, that is to say, process & succession of manifested energies in His own being without being bound either by the action itself or by its process or by its succession or by its causes or by its results. In action or out of action He is entirely, infinitely & absolutely free.

But then there arises the difficulty caused to our darkened minds by the false conception that God & world, God & the human soul are different entities. From this division of the indivisible there arises the notion, the fatal noumenal error, the illogical logic, that God beyond the world is free but God in the world is bound, bound to action, bound to sorrow, bound to death and birth,— the great fundamental error which seals our eyes & creates needlessly the insoluble problem of suffering & evil and death and limitation,— insoluble because we have created a false first premise for all our conclusions about the world. God in the world is not bound, but only pretends to mind that He is bound. Mind so envisages Him because it sees Him observing freely the arrangements & processes that He has

made &, always associating fixed observance in Nature with inevitable observance, supposes Him to be observing His own laws inevitably, helplessly, not freely. All the more then is man, apparently limited, apparently bound in the meshes of a hundred woven laws, supposed to differ precisely in this from the transcendental Being that That is free & untouched by the world & its works, he a slave and moulded by their pressure into what he is now & will hereafter become. Thence the conclusion of so many philosophies that man here can never be anything but a suffering victim of his works & slave of illusion & only by annulling his existence in cosmos can become free,—free not in the cosmos but from the cosmos. But it is not so. For man is the Lord inhabiting His human temple, enjoying his own play in this mortal mansion built by himself out of his own cosmic being; he has determined what he is and is determining now by his play in works as he has previously determined by his play in internal consciousness what he shall become.

God in the world is not different in nature from God beyond the world but the same. Yad amutra tad eveha. God beyond is eternally free; God here is also eternally free. Spirit in all things & spirit in man are one spirit and not different entities or natures; therefore all spirit being eternally free, the soul of man also is eternally free. Mind in its multiple and dual play is, by its non-illuminated state, the creator of this illusion of bondage.

We have in the Gita a striking illustration of God's workings in man which raises in a concrete instance and drives home to the mind the whole difficulty with an incomparable mastery and vividness. The armies of the Pandava and the Kaurava stand facing each other on the sacred plain of Kurukshetra; the whole military strength of India & all its political future have been thrown down upon that vast battlefield as upon a dice board. On one side we see the eleven mighty armies of Duryodhana, greatly superior in numbers, led by the three most renowned warriors & tacticians of the day; on the other the lesser host of Yudhisthira commanded indeed by notable fighters but fixing all its hope of eventual victory on the strong arm and invincible fortunes of Arjuna with Krishna, the incarnate Lord of the

world, as his charioteer. But Arjuna, their supreme hope, is on the point of failing them; he is overcome by the magnitude of the approaching slaughter, afflicted by the fratricidal nature of the conflict he has cast down his bow; he has refused to fight. In the great colloquy that follows & forms the substance of the Gita, the incarnate Master of things, among a host of profound & subtle reasonings, uses also this striking exhortation which has become a commonplace of Indian thought, Mayaivaite nihatáh púrvam eva, Nimittamátram bhava, Savyasáchin. "By Me are these already slain & dead, do thou become only immediate means & determining cause, O Savyasachin." The Universal Will has seen and arranged from the beginning of this great world-act, this vastly planned cycle of natural happenings, the bodily destruction of Duryodhana and his mighty captains; the bow Gandiva in the hand of Arjuna is only the predestined nimitta. By the stream of successive events it has brought about an arrangement of forces in which the nimitta can become operative. There is the preexisting condition; there is the arranged result; there is the determining factor. But supposing this human instrument Arjuna, rejecting the command of the Lord of all things, preferring some hope of spiritual weal, preferring his own moral self-satisfaction, obstinately refuses to be the engine of God's will in him, in a work so thankless, bloody & terrible. What if he listens only to the natural cry of the human heart, Kim karmani ghore mám niyojayasi Keshava, "Why dost Thou appoint me, O Lord, to a dreadful work?" We say from our human standpoint, that even then the Will of God can & will inevitably be fulfilled by Bhima, by the combined exaltation of the Panchala heroes, by the sudden greatness, even,—for "He makes the dumb man eloquent & the lame to overpass the hills", —of some inferior fighter; and, in the thought & language of the great infinite Potentiaality that stands behind the material actuality of things, this would be the truth,—but not in the actuality itself. For in the God-foreseen actuality of things not only the event, but the nimitta is fixed beforehand. The Cosmic Being is no blind & chance bungler who misses His expected tool & has gropingly to improvise another. Arjuna, too, is the

vessel of the universal Will and can only act as It chooses. "The Lord is seated in the heart of all existences, O Arjuna, and He whirls round all existences mounted upon a machine by Maya." Even if Arjuna's mind resists, even if his heart revolts, even if his members fail him, eventually there is a Force greater than the individual & mental will which will, if so destined, prevail upon his mind, his heart, his members. What is that Force? "Prakriti", answers the Gita, "Prakritis twám niyokshyati." The phrase is nowadays ordinarily interpreted to mean that Arjuna's warrior nature will whip him back to the fight. But the thought of the Gita is more profound & far-reaching. By Prakriti is meant the executive World Force, agent of the will of the Ishwara seated in the heart of all existences, that compels the tree to grow, man to think, the king to rule, the poet to create, the warrior to fight. The character of Arjuna is only one means towards her action, & even that acts not by itself, but in conjunction with the character of Duryodhana, of Karna, of Bhishma, of a million others even to the meanest soldier in either army. Yet left to itself the warrior nature of Arjuna might drive him back indeed to the fight but too late to determine its issue; even, it might be, his personal nature, were that God's will, would abdicate its functions, seized & overcome by universal nature, by pity, by vairagya, by fear of sin, and the fateful battle lose its fated nimitta. What is it that, not in free universal potentiality, but in the fixed fact must inevitably determine his return to his normal action? It is the executive Force of the universal Will which not only fixes personal nature, swabhava or swa-prakriti, but fixes too its working in each individual case, not only prepares the circumstance & the means but determines the action & the event. We seem to have here an overriding Fate, an ineluctable Ananke, even a self-acting mechanism of Nature; but it is not a mechanical inevitability, the result of the sum of our & others' past actions, not even a natural inevitability, the result of either a habitual or an ingrained working of our individual nature moved complexly by internal impulses, outward events & the actions of others; but a willed inevitability, seen beforehand in Its universal pre-knowledge by that sole Existence which is expressing itself

here in mind & body, in event & circumstance, and executed by It as its own Will-Force & universal Nature which works out automatically through arranged process & perfectly managed interaction of individual forces that which was foreseen by It & fixed from the beginning of things, vyadadhách chhásватíbhyah samábhyah.⁶

We see then that working of Law of Nature & succession of cause & effect are the process of fulfilment of a Will, a self-effective Intelligence which is superior to working of law & governs, not obeys, succession of cause & effect. That Will is the Lord who inhabits all these animate & inanimate existences, hriddeshe tishthati, the one universal Soul & is master of the Jagati, not bound by her motions & actions. Na cha mám tání karmáni nibadhnanti Dhananjaya. All these actions, O Arjuna, of which I am the cause, bind me not at all; actions do not cleave to me, na mám karmáni limpanti. Still, in the universal Soul of things, we can understand such a freedom & omnipotence; but the affirmation of the Seer has reference not only to the universal Ishwara, but to the individual soul, na karma lipyate nare, action fastens not on the man. How can it be affirmed that man, the individual soul, has any control over the activity of the universal Prakriti of which his action is a part, if that action is predetermined, as the Gita asserts it to be determined, by a higher all-knowing Will? And if he has no control of any kind, what freedom can he have from his actions, from their subjective pressure, from their objective results except the inner freedom of renunciation, of quietism, of indifference? Man, it would seem, can only be free by sitting still in his soul and allowing the great executive world-Force to act out the predestined Will of God, himself caring not for it & in no way mixing himself in the

⁶ *The following paragraph was written at the top of the manuscript page. Its place of insertion was not marked:*

Causality consists merely in the successive conditions of things in the world, one emerging out of another, & the successive groupings, relations & interactions of forces & processes, by which the Will acts out its rhythm [of] prearranged eventualities. The mechanism is a mechanism of self-possessed & continually waking consciousness that knows its whole future, present & past. The fixity of things & events is merely the term of practical executive wisdom in an original & inalienable freedom.

action. Is it not this freedom that the Gita recommends & is not this the action that the Upanishad enjoins,—action worked out mechanically by Prakriti while the soul watches only & knows that it is not the actor? And as for any other & greater freedom, it can only be the freedom by self-extinction of Nara in Narayana, of the individual man in the universal all-inhabiting Ishwara—if indeed the real goal be not some transcendental Impersonality in which man & world & God are all & for ever extinguished.

We might accept this conclusion but for the distinct injunction of the Seer, bhunjítháh, thou shouldst enjoy. Divine Ananda in God at play & God at rest, not loss of interest and a quietistic indifference is the human fulfilment contemplated by the Upanishads. The first error of the human mind is to suppose that because our emotions, our desires, our personal will have an apparent effect upon event & fruit of action, they are themselves the real determinants of those events & the sufficient winners of that fruit; they are neither of these things; they are only one spring of the machinery, only one subordinate working of the universal Will. It is what the universal Will beyond all mentality decides & works out, not what the personally acting will in the material brain & heart hungers after, that determines event. Karmanye vádhikáras te, says the Gita, má phaleshu kadáchana, Thou hast a right to action, but no claim at all on the fruits of action; for the fruits belong to God, they belong to the world-working, they belong to the universal will, they belong to the great purposes of the cosmos & not to any clamorous individual hunger. The second error of the human mind when it perceives itself to be the instrument only of a supreme universal Force or Will, its action to be only a whorl in the stream of universal energy and result to be a predestined event of universal Will partly executable by us, but not independently governable or alterable by our effort, is to argue falsely, confusing the Purusha with the Prakriti, that because our action is subject to universal Nature, therefore the soul also is subject to law of Nature & its only refuge is in quietistic renunciation, in indifference or in the withdrawal from phenomenal living. The real refuge is altogether different; it is the blissful withdrawal from personal

hunger & desire, it is the detached but joyous contemplation of individual will as a working of divine or universal Will, it is the withdrawal from egoistic being & the perception of the individual as only a convenient term of the universal Ishwara, of the Jiva as only a form in consciousness of the Ishwara, it is the equal enjoyment of the fruits favourable or adverse not only of individual will, but of the universal will, not only our own joys, but the joys of all creatures, not only the gains which come to our minds & bodies, but those which come to the minds and bodies of all existences; it is to make the joy & fulfilment of God in the world our joy & fulfilment, it is to see one Lord seated in all creatures. This is the delight-filled equality of mind, anandamaya samata, that is in the world our ultimate prize & supreme state in mortal nature, fulfilling itself in a divine freedom equally from desire for the fruit of the action and from attachment to the action itself; the fruit is to be what the Lord has willed, the action is God's action in us for His great cosmic purpose. God Himself, the Gita tells us, has essentially this immortal freedom from desire, & yet He acts entirely; He has this divine non-attachment to the work itself & yet He works & enjoys in the universe & the individual, na me karmaphale sprihā, asaktam teshu karmasu, varta eva cha karmani; for in Purusha He contemplates, blissful & free, Himself in Prakriti executing inevitably His own eternal will in the universe known to Him before the ages began in that timeless, time-regarding conscious self of which we all are the habitations. So is the divine attitude towards existence constituted, the attitude of the Ishwara; a perfect & blissful calm & quietism of the divine soul harmonised & become one with a colossal activity of the divine Power driving before it the ordered whirl of a myriad forces occupying limitless Space & Time towards an eternally predestined end.

It may be objected, that while the divine Purusha standing back from the workings of His Prakriti, not only can be the free upholder, enjoyer & giver of an original & continued sanction to the world-workings, bharta bhokta anumanta, but also, by His eternal immanence as Master of the Will everywhere, is the

present Ishwara, the controlling Lord of the action, man, by standing back from the Prakriti as the Soul or Purusha, may be indeed, secondarily to God, the upholder of his individual system,—that formal vessel, adhara, of his soul-states,—may be in some sort sanction-giver to its activities, may be, secretly always & here eventually, the free enjoyer of all world-activities that come within its experience, but is not & because of his individuality cannot be or ever realise in himself the Ishwara, the present Lord and master of Nature. He has freedom, not lordship,—the passive freedom of God in the unmoving Brahman he may indeed acquire or share, but not His active lordship in the moving Brahman. To be mukta but never *ish* would seem to be his destiny. Yet the Gita asserts that the Jivatman also is the Ishwara and the Upanishad declares the identity of the human soul with the divine Lord who inhabits all these motion-built forms of Nature.

In this disparity there is no contradiction. There are two aspects of all existence, the Being & the Becoming, Atman & Sarvabhuṭani. According as the soul of man either stands out in its human becoming & lives in the twisted triple strand of the mind, body & vital being, of which we are conscious now & here, or, on the contrary, stands back in the divine unity of Sacchidananda, it enjoys either of two states of conscious experience, the individual self-consciousness of the separate Jivatman or the universal divine consciousness of the Jivatman merged or dwelling in God. In the former & inferior self-poise, our status is that of a separate soul, different from the Ishwara & always in some personal relation with Him; a type usually of our human connections with each other & the world, connection of child with parent, servant with master, teacher with taught, friend with friend, enemy with enemy, mechanist & instrument, harp & harpist, or a combination of several kinds of interplay at once, answering to the tangled relations we see in our human existence. This relation, created by the fundamental duality of God's play with His becomings, can be realised by us in our waking consciousness or exist unconscious in our secret soul; but in any case it is a condition of subjection, conscious or

unconscious, to the sole Ishwara, since even as enemy or rebel we can act after all only as He chooses, however much, for the delight of the play, He gives us a certain length of rope, a certain range of subjective freedom and lets us believe that we are acting independently of Him or in opposition to His will. But what is it that builds up or constitutes in us these relations of the duality? It is not the soul itself but the activities of the mind, life, body, our thoughts, emotions, sensations; it is not the Purusha but our parts of Nature or parts of Prakriti. The soul or Purusha enjoys these relations because it identifies itself with the activities of Nature working in a special name & form & regards all her other workings from that centre of special consciousness; but since that nature, subject to the universal mechanism and a part of it, is anish, not lord, the soul in mind identifying itself with it is also to its outward consciousness anish, not lord. Nevertheless all the time the soul itself is aware, — not in mind, but beyond it, superconsciously in the veiled, secret & higher parts of our nature where it lives guhahita, — of playing a play, of being itself universal, one with God and lord of Nature as well as its enjoyer. The more we detach ourself from Nature, the more, even in Nature itself, our lordship over her increases, our lordship first over her in our own being, our lordship, secondly, over her in her world-actions. We become more & more in our outward consciousness what the soul really is in the secret caverns of its luminous self-concealment, Swarat Samrat, Self-Ruler & Emperor of existence. Still, until the veil is entirely removed, we are indeed the Ishwara by the present immanence of our will in Life, but partially only, and not only secondarily to God, but in a limited degree. We are indeed always subject entirely to the universal Will or Shakti in Prakriti even when we are increasing our individual control over the processes of her individual and universal working. Still as we become purer channels, more & more of the divine Power pours through us & our motions are invested with a more swift, easy & victorious knowledge & effectiveness upon their environment. But it is only when we stand entirely apart from Nature, yet entirely immanent in her by conscious identification with the universal being,

power & bliss of God that we become also entirely Ishwara; for then all walls break down, then with the false separation of individual being from God-being breaks down also the false separation of individual power from God-power and it becomes possible for that divine Knowledge-Will working in us to fulfil infallibly & inevitably its foreseen & intended result, as it fulfils it in the universal working of Nature — foreseen & intended in our waking consciousness, always indeed with a less extended working but still essentially & typically as God works, with a divine science if not the extended divine omniscience, a partial divine victoriousness if not the extended divine omnipotence.

We shall be able to arrive at the precise & practical meaning of this identification & this separation, this detachment & freedom & shall discover the secret of action & rebirth if we look at the actual facts of material life & then at the Vedantic explanation of our conscious existence. We have, to start with, this fundamental divergence already noted between ordinary psychology & the psychology of Vedanta, — the former recognising only three principles, Mind, Life and Matter, or adding at most a fourth, Soul or Spirit, while the latter, with a deeper inlook, a wider outlook, a firmer foundation of daring experiment and probing analysis, distinguishes between various workings of the supra-mental or spiritual principle and encounters in its search seven in the place of three prime elements of conscious being. Sat, Chit, Ananda, Vijnana are four divine unmodifiable principles; they constitute the divine being, divine nature & divine life, and are called in their sum Amritam, Immortality; Manas, Prana, Annam, Mind, Life & Matter, are inferior & modifying principles constituting in their sum in this material world mortal being, mortal nature, mortal life and are called Mrityu or Martya, mortality. The doctrine and instruction of the possibility, the means and the necessity for man of climbing from Mrityu to Amritam, out of Death into divine Life, — mrityum tárwámritam asnute, is Veda & Vedanta.

The world in which we live seems to our normal experience of it to be a material world; matter is its first term, matter is its last. Life-energy and mind-energy seem to exist as middle

terms; but though their existence and activity cannot be denied or ignored, so omnipresent, insistent & victorious is the original element out of which they have emerged that we are led to view them as terms of matter only; originated out of matter, formulated in matter, resolved back into matter, what else can they be than modifications of the sole-existing material principle? The human mind seeks a unity always, and the one unity which seems reasonably established here, is this unity of matter. Therefore, in the fine & profound apologue of the Taittiriya Upanishad, we are told that when Bhrigu Varuni was bidden by his father Varuna to discover, entering into tapas in his thought, what is Brahman, his first conclusion was naturally & inevitably this that Matter is the Sole Existence,— Annam Brahma. “For verily out of Matter are these existences born, by Matter they live, into Matter they pass away and enter in.” We arrive, then, by reason considering only the forms of things and the changes & developments and disintegrations of form, at the culmination of materialistic Rationalism and a Monism of Matter. Annam Brahmeti vyajánát.

But here we cannot rest; driven by the Tapas, the self-force of the eternal Truth within, to an ever increasing self-knowledge & world-knowledge, we begin to analyse, to sound, to look at the insides of existence as well as its outsides. We then find that Matter seems to be only a term of something else, of Force, we say, or Energy which, the more we analyse it, assumes a more & more subtle immateriality and at last all material objects resolve themselves into constructions & forms of this subtle energy. Hoping to reconcile our old conceptions & our new results, we make, at first, a dualism of Force & Matter, but we know in our hearts that the two are one & we are driven at last to admit that ultimate unity. But what is this energy? It is, says the Vedanta, Prana, Matariswan, Life-Force or Vital Energy, that which organises itself in man as nervous energy & creates & carries on the processes & activities of life in material form. We find this same nervous & vital energy present also in the animal, the plant; it exists obscurely, it has been discovered, even in the metal. We have, therefore, in the world we inhabit, a unity of Life-Energy

in its actions as well as a unity of matter in its formal changes. For modern thinking the problem is complicated by the narrow restriction of the idea of life first, popularly, to the material vessels of a conscious nervous activity, man, the animal, the insect, & then, more widely, to all forms of which organic growth and nervous response are the characteristic activities. Vedantic thought sees, on the contrary, that all energy apparent in matter is one Life-energy; nervous force, electric force, even mental force so far as it works in matter are different forms of one working, which it calls Pranashakti, Energy of Life, formulated force of Existence throwing itself out in the currents & knotting itself into the vessels of its self-adaptive material workings. Life, as we know it, is the characteristic fulfilment of this stream of being. According to the Vedantic idea the characteristic form of any energy is to be recognised by us not in its lowest, but in its highest expression. The higher form is not a new-creation of something previously non-existent out of the lower form,—for such a principle is essentially Nihilistic & leads inexorably to Nothingness as the starting point of existence, and to the Vedantic idea nothing can be created which does not already exist, nothing can be evolved which is not already involved. Life-energy of man is involved in life-energy of plant, metal and sod; it is that which manifests itself by veiled and obscure workings in these more imperfect vessels. We see, then, by closer scrutiny, Matter as only a form of Life, organic or inorganic, perfected in nervous action or obscure in mechanical energies. Obsessed by this discovery, living in this medial term of our consciousness, seeing all things from our new standpoint we come to regard Mind also as a term or working of Life. Bhrigu Varuni, bidden by his father back to his austerities of thought, finds a second and, it would seem, a truer formula. He sees Life as the Sole Existence, Pranam Brahma. "For from the Life, verily, are all these existences born; being born they live by the Life, to the life they pass away and enter in." Our physical body at death is resolved into various forms of energy, the mind which inhabits the nervous system dissolves also and is or seems to be no more, except in its posthumous effect on others, an organised active

force in the material world. We arrive, then, by reason considering the energies of things in their forms & the movement [of] forces that constitute their changes, activities, development & disintegration, at the culmination of Vitalistic Rationalism and a Monism of the Life-Energy. Práno Brahmeti vyajánát.

Here too the mind of man, after finding this second goal of its journeyings, discovers that which it took for a final haven to be only a resting place. Life-Energy & Material Form or Substance of Life-Energy constitute together the outward body of sensible things, the *sthula sharira* or gross body of Brahman. But, as we pursue our analysing and probing, we begin to suspect that Mind is an entity different from either Matter or Life-Energy. Matter & Life reveal themselves to the mind through the senses. Mind, self-existent, self-perceptive, has on the contrary two evidences of its existence; it knows itself by the senses through its own results & outward workings,— it knows itself also both independently of the workings & in their more subtle movements, by itself, in itself, *atmanyatmanam atmana*. We perceive, besides, that man is essentially a mental and not a vital being; he lives for himself in the mind, is aware of his existence through the mind, knows & judges all things only as they form themselves to his mind. The speculation then inevitably arises whether as we found Life to be concealed in apparently inert matter and eventually knew Life to be the parent & constituent of material forms, we shall not, as the next step of knowledge, find Mind to be concealed in apparently unconscious forms of life-matter, the parent, constituent & motor impulse both of all life-energies & of all forms & forces in which Life here is either formulated or embodied. But there are difficulties in the way of this conception. First, mind knows itself by itself only in the individual body which possesses it; it is unable, normally, to watch itself in other bodies or perceive there, directly, its own presence & workings, it only knows itself there by analogy, by deduction, by perceiving through the senses the outward or formal effects of its presence & workings. All that is outside the individual form it inhabits, my mind knows by the senses only, & its own workings seem to consist simply of the nervous reception of this

sense knowledge, the nervous reaction to it, the formulation of this experience in mental values & the various arrangement & rearrangement of the values formulated. Secondly, these values do not appear to be fixed independently by mind, as they would be if mind were the creator of forces and objects; mind appears to us to be not their master but their servant, although sometimes a rebellious servant, not their creator, *poietes*, but their translator and interpreter. Thirdly, mind seems unable to create life or to create or change material forms by its direct action. I cannot, by willing, add to my stature or change my features, much less alter forms external to my own. Just as it knows only by the senses, the *jnanendriyas*, so mind seems able to affect life & matter only through its bodily instruments of action,—the *karmendriyas*. The instances to the contrary are so exceptional, obscure and fragmentary that no conclusion can be formed upon such scattered & ill-understood data.

Nevertheless Vedantic thought insists. Knowledge, taught by experience, distrusts all first appearances & looks always behind them for the true truth of things. What is exceptional we must examine, what is ill-combined we must arrange, what is obscure we must illuminate. For it is often only by pursuing & examining the obscure & exceptional action of a force that we can come to know the real nature of the force itself & the rule of its obvious & ordinary action. It is not through the leap of the lightning, but through the study of the electric wire & the action of the wireless current that we get near to the true nature & the fixed laws of electricity. As life is obscure & imperfect in the plant & metal & its full character only eventually appears in man, so also mind is imperfect, if not obscure in man's present mental workings; its full character can emerge only in a better evolved humanity or else in a more developed &, to present ideas, an abnormal and improbable working of its now hampered forces even in our present humanity. The ancient Vedantins therefore experimented as daringly & insatiably with mind as modern scientists with life-force; they deployed in this research an imaginative audacity & a boundless credulity in the possibilities of mind as extreme as the imaginative audacity &

the boundless credulity in the possibilities of force working in matter deployed by the modern in his more external experiments & researches; they had too the same insatiable appetite for verification & more verification,— for without this harmony of boundless belief & inexorable scrutiny there can be no fruitful science; reason in man cannot accomplish knowledge without force of faith; faith cannot be secure in knowledge without force of reason.

Thus experimenting, the Vedantin discovered above mind in life the principle of pure Mind. He found that mind exists in the cosmos pure & untrammelled, but manifests in material forms imprisoned and trammelled. Mind subject to life & matter, erring in the circle of life & matter, he perceived as mortal mind, martya or manu of the Veda, the human thinker; mind pure & free he perceived as divine mind, deva or daivya ketu of the Veda, the divine seer & knower. He found first that mind really exists in man in its own self-sufficient consciousness, independently of the sense life turned upon the outer material world, even when it can only work or actually only works through the senses. Secondly, he found that mind in one form or body subconsciously & superconsciously knows & can watch mind & mind's working in other bodies directly or by means independent of sense-communication & the watching of speech & action, and can, more or less perfectly, bring this subconscious & superconscious knowledge into the field of our waking or life-consciousness. He found, thirdly, that mind can know external objects also without using the ordinary channel of the senses. He found, fourthly, that the values put by mind upon outer impacts & its reactions to them are determined not by the impacts themselves but by the general formulations & habitual responses of Mind itself in the universal Being and these fixed & formulated values & reactions can be varied by it, can be suspended, can be entirely reversed, can be infinitely combined at will in the individual vessel called the human being. Fifthly, mind can & does by will, ketu can by kratu, used actively or passively, consciously, subconsciously or superconsciously, without the aid of the karmendriyas, modify even life-forms &

action of life-forces, & does it even now, swiftly or slowly, to a greater or less degree,—as is evident from the phenomena of heredity & hypnotism,—can determine directly the action of energy in other bodies, animate or even inanimate, can modify existing forms of things and can even arrive, though with much greater difficulty, at the direct creation of forms by the mental will. All these powers, however, are powers of the pure or divine mind and can only be consciously exercised in our mortality, so long as they are abnormal to it, if & so far as the universal Being originates & sanctions their use in the individual; they can be possessed as normal faculties only by a humanity which has climbed out of its present struggling entanglement in mortal being & the subjection of the motion of mind to the motion of life & matter, by a humanity in other words which has divinised itself & reached the high & free term of its evolution. If these ancient results are at all correct—and the whole trend of modern scientific experiment as soon as it consents at all to dissect practically & analyse and manipulate experimentally mind as a separate force, tends, however dimly and initially, towards their confirmation,—then we can enter on a third stage of the march of knowledge. The intellectual difficulties in the way of our surpassing the vitalistic conception of world have disappeared. We begin to move, at first, towards a noumenistic monism of the universe. For if mind in man can determine, manipulate, modify & create not only the sensational values of forms and forces and impacts, but the forms and forces and impacts themselves, it is because in the universe these values, these forms, these forces have, originally and secretly, been fixed, created and moved by universal mind and are really its evolutions & formations. All forms of life-energy in this world are thus formations of mental force in which the principle of mind broods self-absorbed in work of life and concealed in form of life to emerge in man, the mental being. Just as life, working but form-absorbed and concealed in the clod & metal, has emerged in the plant and the animal to organise its full character and activity, so it is with mind. Mind is omnipresent; it does mechanically the works of intelligence in bodies not organised for its self-conscious workings;

in the animal it is partly self-conscious but not yet perfectly able to stand apart from its works and contemplate them; for the animal has more of sanjna than of prajna, more of sensational perceptive consciousness than of contemplative conceptual consciousness. In man first it stands back, contemplates & becomes truly “prajna”, knowledge working with its forms & forces placed before it as objects of its scrutiny. But this evolution is the result and sign of a previous involution. Mind in the universe precedes, contains & constitutes life-action and material formation. Bhrigu Varuni, once more bidden by his father back to his austerity of thought, perceives a third and profounder formula of things. He sees Mind as that Sole Existence, Mano Brahma. “For from mind these existences are born, being born by mind they live, into mind they pass away & enter in.” For as all forms that dissolve go back into the life-forces that constitute and build their shapes, so all forces that dissolve must go back into the sea of mental being by which and out of which they are formulated, impelled and conducted. We arrive, by reason investigating the essential causes, governance and constituting intelligence of all these energies & forms which determines & manifests in their functions, methods and purposes, at the culmination of pure idealistic Rationalism & the Monism of mind. Mano Brahmeti vyajánát.

But Vedanta is not satisfied with the noumenal conception of being; it journeys yet farther back. Studying & experimenting with mind it perceives that mind, too, is a special force manifested out of being and not itself the ultimate nature of being. Moreover it sees that we have crudely put together in the single confused concept of mind, a number of very different principles of which the one common characteristic is the possession of a luminous instead of a darkened consciousness informing its waters, not hidden in the cell of its own forms & motions. We have then still to analyse & probe the nature & limits of mind, & we have to sound and discern the nature & limits if any of what is beyond mind. Carrying the conception of knowledge far beyond the mental principle, discovering a Force more puissant and essential than mind-force, arriving at an essential existence

other and purer than the mental self-consciousness which is, at present, man's ordinary & common subjective experience of himself, Vedanta finds that Life & Matter are not so much developments of universal Mind, as the subordinate formations and movements,—cooperative with it, although evolved out of it and formed by it,—of a supramental, supravital, supramaterial Something which no terms we have yet understood can describe to our intelligence. In the noumenal conception, the formula of the mental Brahman, we have not, then, yet reached the essential term of the reality of things.

Still, we have already in this triple formula of Mind, Life and Body, corrected by the statement of a more real and potent existence behind them, a sufficient present clue, at least, to the nature, the workings and the goal of mental life in this material universe. The basis of our existence here is Matter, but Matter with life and mind involved in it. Every cell of the human body, every fibre of bark & leaf, every grain of earth treasures in itself a secret life & mind, is the hiding-place of Prajapati, the cocoon of the eternal butterfly. In the lowest inert or inanimate status of matter just so much & such a nature of life-energy has been at work as is sufficient for the creation of its different forms and their maintenance & functioning in the convergent & divergent whirl and shock of all these cosmic forces, and this multiform correlation of an inert substance of energy and an apparently inanimate driving force of energy has constituted material being & established for its purposes both a general nature, swabhava or own being of matter and particular fixed processes of inherent self-action, the vratáni of the Veda, which present themselves to us as the eternal laws of physical Nature.

But since Life is involved in Matter, things cannot rest here: the Truth within things, the pure Idea at work in the world which, secret as well as mind & life in force of matter and form of matter, originates & guides evolution, demands & compels, perhaps by the pull from a higher world where life is the predominant power and basic principle, the evocation of an organised & self-fulfilling Life out of this inert substance and inanimate Life-force. That Life then eventually appears, but naturally &

necessarily, it comes as a stranger into its surrounding. Confronted there with a set of laws imposed by the native sovereign, not at ease with them as it would be with the processes of a world of which it was itself, from the beginning, the sovereign and omnipresent ruler & lawgiver, it has to work on the unfit & rebellious material to raise, vitalise & fit it for its own workings as a slave power or a subordinate energy. It has come in that process, like an alien invader & conqueror, to give and take, to make concessions, to conciliate its stubborn material in order eventually to dominate & use it. By slow processes, by long evolution, by multitudinous experiment Life arrives at the creation of a myriad forms of organised vitality in matter, in which the form has been trained & accustomed to bear & to answer to the workings of life in many varying degrees of intensity or complexity. But, in the end, Life itself has come to be fettered by its material. The processes of matter pursue it, enter into its action, encase and limit its processes. They are intolerant of any attempt to increase the complexity of the life-workings or to raise the intensity of its shocks beyond the limit of the rhythm already established between the form & its inhabitant. As a result of this resistance, the form tends to deteriorate or break in any upward or extensive endeavour. Ordinarily also, it comes about that the more intense & organised the life, the more brittle & easily disturbed in its functions becomes the material form which contains it, unless & until a new harmony is established, a new & higher or subtler rhythm effected.

But the upward evolutionary movement has only begun with the appearance of life; it is not ended. The Truth of things, the pure Idea at work in matter knows that Mind also is involved in Matter & the Truth of things demands & compels its evolution. It procures, again perhaps by the pull from a higher world where mind is the predominant power and basic principle, the liberation of this second and greater prisoner. Mind, like Life, appears but as a stranger and invader in a world in which it has to deal with already established processes of matter and already established processes of life in matter, and is not at ease with them as it would be with the processes of a world in which

it was from the beginning a sovereign and omnipresent ruler. Mind, like Life, has to raise its material, mentalise it & make it fit for its own workings, Mind, like Life, to make concessions & conciliate its material. By long evolution, by slow process & multitudinous experiment it arrives at the creation of manifold forms of organised mind consciousness in vitalised matter, which have been trained to harbour & bear its workings. But in the process Mind, like Life, has become to a large extent a slave to its instruments; the processes of matter & material life enter into its action, encase, condition and limit its workings, are intolerant of increasing complexity & intensity, tend to damage or break the form & the functions when subjected to the increasing demand, resist rapid progress. Here too, ordinarily, the more intense the mental action, the more highly organised its faculties, the more brittle and easily disturbed in their functions become the material form and the nervous life, its case & instruments, unless & until a new harmony is established & a new & higher or subtler rhythm effected.

It is now clear that the entire freedom and lordship in Nature of life over matter or of mind over living body can only come if one or more of three essential conditions is satisfied. The inhabitant principle must either develop such a form or establish such an essential harmony with its case & instruments or else get such a hold upon the lower principles that it can at once maintain them in perfect undisturbed existence and compel them to bear a wide, vast, richly filled, even perhaps an infinite intensity & complexity of the functionings of cosmic life-energy or cosmic mind-energy rushing upon its instrument, informing it and using it for its own delight of self-fulfilment. Such a form, such a harmony, such a hold, life would presumably possess in a world where it was the dominant factor, mind in a world similarly subject to its sovereignty. The Veda supposes such worlds to exist; it perceives several births, dwelling places, kingdoms, jana, kshitayah, rajansi,—to the kingdom of matter it gives the name of Bhu, to the kingdom of Life or Life-Consciousness the name of Bhuvan, to the kingdom of pure Mind the name of Swar. It supposes also that the powers of the higher worlds, figured in

the three & thirty gods of the Veda & their subordinate deities, support their representative and instrumental beings in Bhu and favour their attempt to establish an increasing & ultimately perfect similar mastery here for Life or Mind over the material world. For such a growth, such a perfection, the invasion [and] subjection of the lower by the higher principle is the first necessity. For we see that Matter here only realises its highest and most complex potentialities even of material development & organisation when it is invaded, possessed & raised by life, Life its highest & most complex potentialities even of vital development & organisation when it is invaded, possessed & raised by mind, and,—although, owing to our clumsy conceptions about mind, this is not so apparent to us,—Mind also can realise its highest & most complex potentialities even of mental development & organisation only when it is invaded, possessed & raised by that which is higher than itself.

Man is, here, the typical mental being. Imprisoned in the vitalised matter he has invaded & struggling, with his real being in Swar and aided by the gods of Swar, to impose the mastery of Mind on the material world, he has, for the achievement of his object, two alternative principles to follow, either to conquer matter by matter, life by life or else to get behind both of them, discover pure mind & its powers & apply them to his eternal object. His achievements in the struggle with the laws of physical Nature on the physical plane itself are even now considerable; he has been able to seize on her physical forces & harness them to processes & results which she with all her large & gigantic movements has never attempted,—and these processes & utilities are all of them stamped with the subtlety, regularity, & conscious purposefulness of liberated mind. Modern man has not yet succeeded in discovering or using the laws of Life, but there is no reason to suppose that he will not one day make that discovery also. The day must inevitably come when he will be able even to originate no less than to modify freely both plant life & animal life in matter & govern them for his purposes as he now originates mechanisms of material force and modifies & governs its currents, combinations and separate workings

so as to abridge distance, to invade the air, to economise the expenditure of his own life-energies or to serve a hundred other purposes of human construction, destruction or development. All these efforts are marked, however, by one characteristic & pregnant limitation — they proceed on the assumption that we can only master physical Nature by manipulating & turning against her laws, movements & processes which she herself has originally established for very different objects & to suit a very different status of world-existence. Even, therefore, in conquering, he is compelled to obey and to confine his achievement within the limited capacities of the physical instruments and the physical processes. Having passed in a curiously imperfect & illegitimate fashion beyond his original slavery to her simple & elemental workings, he is menaced with a worse slavery to his own monstrous mechanisms & in danger of missing the path of the Gods, following only the path of the Bhutas. The true process of enfranchisement is rather, having discovered [and] separated the life-principle & its workings from the material processes in which they are fettered so that our vital life & forces may be raised into a sufficient instrument for infinite Mind, having the true pranayama or control of his vital being, to discover & separate also the principle & workings of pure mind from both life & matter and use them for the attainment of an entire mastery over our internal & our external world. In the eyes of the Vedantin a little progress, a minor achievement on the real path is of more value in the end than the vastest & most airy achievements of modern Science. For the latter is only clanking of gymnastics in self-multiplied chains by a strong and agile prisoner, the former is a step, however faltering, on the true path of freedom.

Nevertheless, even if we could so master the laws of mind as to entirely control our vital & physical being & its environment, the end of God in man is not achieved; for we ought not only to control life & matter by mind, but mind by a higher principle. Mind can only become free by self-subjection to God above mind and without freedom there is no true mastery. Samrajya is unreal without Swarajya. Mind that has mastered its inferior

principles without obeying the law of a higher Truth, is figured for us in epos and Puran as the victorious Titan, Hiranyakashipu or Ravana,— victorious but doomed in the end to a sudden successful revolt of the lower principles or to direct destruction by Power descending from on high because the mastery it holds is artificial, mechanical, not the aim of Nature in the world & therefore, if eternalised, bound to obstruct the higher destinies of the race. What though it has enslaved the god to its will and compels fire to come at its need or wind to blow where it lists, what though it can control despotically men & things & events? It is not for all that divine nor free nor supreme. Essentially, it does with higher instruments what modern man is now accomplishing with lower instruments; it is using a mental instead of a physical machinery to establish a precarious, temporary & apparent mastery over Nature which only veils a more subtle & tyrannous form of subjection. The Daedalus who multiplies machines, is dependent on his creations, bound by his engines, often destroyed by them and in any case limited & shackled & his gains of one kind balanced by pauperisation in other directions. Not until we have gone beyond machinery, gained self-power, self-being, self-bliss of God, can we hold ourselves secure in the right path and fulfilled in the right object of our ascension. And for this reason, that mind is in its nature bound up with limitation & form and dependent on the centre from which it works. Universal Manas, like universal Life & universal Matter, exists indeed & contains all things in itself, but it contains without comprehending. Its nature is not comprehension, but division, & what it calls comprehension is merely the seizing on details, on fractions and arriving by addition or multiplication at their sum. The integer as mind sees it is not a true integer, for mind is essentially manas, that which measures, contains & is bound by its function of containing. It can by itself arrive only at a pluralist, not an essential unity, or else at a zero. If it passes out of limitation, out of its form, out of its centre, it must be either dissolved into Nirvana, dispersed into the chaos of its unformed & discriminate mental nature or reduced to quietism & immobility. Mind can either rest voiceless & actionless, lost

to itself, in the shantam Brahma or it can find itself in the ejad Brahma; but it cannot combine the two opposites, it cannot at once live in the silent stability of God & throw itself into the voiceful motion of things. That is a privilege of the divine and not of the mortal nature. Acting, mind must use the machinery of the triloka, the triple system of mind, life & matter & must submit to it while using it; it can get behind life & matter, it cannot get behind itself into the true & essential infinity. Therefore, of the soul seated in the triple principle, Shankara's dictum is entirely true that it can escape from bondage only by actionless quiescence of the mental self; Buddha's dictum is entirely justified that it cannot find any ultimate solution except by denying & annulling itself in an ineffable Nirvana. Bhrigu Varuni was not allowed by his father Varuna to rest in the formula of the mental Brahma. Sent back to the austerity of his self-contemplation he had to arrive at the perception no longer of the mind but of the pure Idea as the Sole Existence, Vijnanam Brahma.

We arrive, now, at states of being, consciousness & living experience which are far remote from ordinary human life & thinking, for the expression of which human language has neither been framed nor yet adapted. These higher states of being are the guha, the cavern or secret place, of Vedic imagery, and to express their knowledge & experience of them men have always been compelled to resort to arbitrarily conventional word symbols, parables or concrete metaphors which can only serve as hints, signposts, hieroglyphic figures, not as a means of adequate expression. Those who can divine & follow these signposts find the path for themselves & arrive in experience at the truths the figures are meant to indicate. We can only form some idea of the Vijnana by the use of language & terms which properly belong to mental being and thinking and may therefore when applied to another order of facts quite as easily mislead as help to right understanding. Experience is here the only sure means of knowledge; for we have reached a kingdom of being where already nature of knowledge is beginning to pass into nature of identity, separate consciousness of things into luminous oneness with things, basis of external or sensuous observation into basis

of internal self-identification and comprehension in a common self-existent & self-same truth of things.

Vijnana, like mind, is a principle fundamentally of knowledge, & not like life a principle of force, or like matter, a principle of substance. Force, knowledge & substance of being are the trinity constituting the activity of the divine Bliss of Being & Will to Becoming in the universe. In the system of Vedanta, pure Being exists as the background, beginning & foundation of all cosmic existence, containing in itself in eternal latency & potentiality of becoming all things that become or do not become in this universe. Becoming, or becoming of any form or force in the cosmos, is subject to the will of God or Brahman, that Unknowable which has manifested Itself in this fundamental term of Atman, Pure Being, Sad Brahman. Pure Being is Pure-Self-Awareness; Sat = Chit, — this is the first formula on which becoming depends. Atman extends itself in the secondary terms of Space & Time, which are conscious values of this biune Being that is Consciousness, Space in this formula representing the term of Being, Time the term of Consciousness; but when analysed or realised, they inevitably reduce themselves back into mere figures of extension of this Being-Consciousness & are seen to have no real existence in themselves. In an universe of consciousness-symbols, they are the first symbols. Chit or Self-Awareness of Brahman has again a double status, a status of rest in self-conscious being and a status of apparent motion in self-conscious being. In this double status it has the value in Conscious Being of a self-existent omnipotent Will manifesting in the extension of Brahman or retaining concealed in its unextension whatever it chooses in whatever process or order of things it prefers. Nimitta,⁷ process or order, figured in relation, succession & causality, is the third symbol of consciousness by which cosmos is rendered possible; for it makes possible arrangement of things in the idea of Space & arrangement of happenings in the idea of Time. Will is in its nature Power of Knowledge or Act of Knowledge; therefore,

⁷ The word nimitta means literally, measured arrangement; ordering in time & space is the essence of the concept of nimitta.

when analysed and realised, divine or cosmic Will is perceived to be Chid Brahman, self-conscious Being, Chaitanya, conscious Spirit, which takes into its possession in being of cosmic self-knowledge and effects in force of self-knowledge figures of Its own concealed & unknowable reality. We see, then, that all becoming in universe is a formal or symbolic manifestation of unknowable God or Brahman effected by Tapas, by the dwelling of self-knowledge on latent truth of being & the consequent forcing it out of its latency in figure of truth for the joy of God's cosmic self-knowledge. That which is to us unknowable X beyond thought & sensation is expressed here by Tapas of cosmic consciousness in theorem & formula of progression constituting the order of forms in the universe. The loosing of the latent out of latency by Tapas is the whole nature of creation in the idea of the Vedantin. The symbol of the creative Ishwara is always the Kavi, the poet-seer who by Tapas, by concentration of self-knowledge figured as creative Will, brings out from latency in his infinite unmanifest consciousness varied forms of himself. Therefore, it is said that when Brahma the Creator was born on the sea of essential substance, the kshirasamudra, it was in answer to a cry of OM Tapas, pealing out over the moveless ocean, that he set himself to the work of creation. The Kavi creates for his self-delight in self-expression and for no other reason. For when we say that the Will chooses, the Will prefers, when we speak of the icchashakti or omnipotent Will of God, we are expressing in terms of Force what is fundamentally in consciousness a movement of Delight or Ananda. For the nature of conscious-Being is bliss. That which the pure unrelated Sad Brahman, not looking towards cosmic self-expression, is aware of about Itself is unrelated self-Bliss; that which the creative Chid Brahman, looking towards cosmos, is aware of in the Sat, is the cosmic delight of self-expression in general & in particular symbols of consciousness, in extension of infinite being & conscious force & in their concentration into determined form of being & determined action of force. When we say that Brahman as Chaitanya, as Consciousness, dwells upon a figure of Itself & brings it out of its latency there where it dwells cavern-housed, guhahita, we

imply,— Chaitanya & Ananda, Consciousness & Bliss being one entity,— that Brahman as Ananda, as Self-Delight, fixes on that figure for Its symbolic self-expression. What God delights in, that is His will-to-be in cosmos, that becomes. In the more ancient Vedic terminology this divine principle of Ananda was designated sometimes as mayas, a word which means both love or joy and creative comprehension and sometimes as jana, a word which means at once delight, especially the delight of procreation, productiveness, birth and world. God's delight in things is their birth, their seed of production, their coming into world. Chit Tapas, Consciousness working as Will is the condition & agent of cosmic existence, Ananda is its cause.

Still, we do not yet see clearly what it is that brings about the difference between self-being & symbolic being or becoming. Where is the principle that bridges the gulf between the pure & the figured Brahman? Or what power of consciousness enables the formless to pour itself into forms? It is, says Vedanta, a special principle, a selective power of pure consciousness which all Being possesses, the principle, the faculty of Vijnana. Sacchidananda is a Trinity; Being is in its very essence Bliss [&] Consciousness, Consciousness is in its very essence Being & Bliss, Bliss is in its very essence Consciousness & Being. It is the faculty of Vijnana which, while always resting in their eternal, indefeasible & indivisible oneness, yet casts them into triune figures of being & originates in world their mutual play & their multiplicity. It is vijnana that expresses & arranges the cosmic self-expression of being by looking at Brahman now predominantly in one aspect, now predominantly in another aspect even while it perceives all the others inherently contained in the predominant self-conception. When the vijnana in us dwells thus on the principle of divine Ananda, we see & we work out all things in terms of Ananda; still we are aware all the time of the nature of Ananda as infinite Conscious-Being and the ideas of Consciousness & Being attend & support the Ananda & work themselves out through its workings. When the divine Idea dwells rather on the principle of divine Force or Will in us, then we see & we work out all things in the

terms of Force or Will; still the ideas of Consciousness & Bliss always attend & support Will & work themselves out through its workings. We see, then, that essentially Vijnana when analysed & realised reduces itself to the selective & disposing self-action of Chit-Tapas omnisciently aware of the eternally stable unity & eternally potential multiplicity of Brahman and omnipotently able to arrange the terms of that multiplicity from any & every standpoint of Brahman's self-consciousness. It is essential act of knowledge in an essential status of knowledge; its movement is not in the veiled objective manner of mental knowing, but a primary & comprehensive subjective movement in which universal Knowledge sees objects of itself within itself without any veil by reason of an essential identity in motional difference, self-aware self-existent inalienable identity manifested & not contradicted or abrogated [by] difference of form and action, just as a man sees his thoughts & his actions as movements of himself, as self-expression of himself in his own being. There are therefore three essential attributes of the Vedantic conception of vijnana. Vijnana is satyam; it is knowledge proceeding out of an essential identity of being & consciousness between the known & the knower,—the true ideal knowledge may come to a man either through identity of being with the object contemplated or through unity in consciousness with the object or through self-delight in the object, but always it will be self-revealing truth of fact, self-existent truth of being & not formed truth of thought or opinion. Vijnana is also brihat; it is knowledge comprehensive of & containing the object of knowledge in the knower; it possesses, it does not approach —its process moves from the essence to the appearance, from the unit to the parts, from the greater unit to the lesser unit, not from the attribute to the thing, from the fraction to the integer. Vijnana is ritam, is knowledge perfectly self-arranged & self-guided; spontaneously self-arranged in perception & in action spontaneously self-fulfilled through the law of inevitable manifestation of the Truth in its own nature & by its own force, it is the faultless instrument of an unerring omnipotence & omniscience. Satyam ritam brihat, the True, the Right, the

Large, describes God in His being of pure ideal knowledge and self-efficiency.

What is the practical value of this conception of vijnana? The thing we call mind is the knowledge of the individual about himself and of the world only as it affects or reaches his individual consciousness. It is the view of things which a man shut up in a dungeon with glazed & coloured windows may have about the world and his own dwelling place. In the colours of the senses he sees the objects outside, in the light of the few objects it sees through its small & scanty windows & by reasoning from their appearances mind forms its idea of the world; even of this house which it inhabits, it knows only one room with a locked door & all that is outside that door it can only guess at by analogy or infer from the sounds, smells, vibrations which come to its senses from the rest of the building or the occasional visits, messages & descriptions which it may receive from its other inhabitants. For it is now an ascertained truth even to modern psychological observation & experiment,— and was known thousands of years ago to the Vedantin,— that only a small part of our active conscious being is revealed to our waking mental consciousness; a vast amount of work of action, work of impulse, work of knowledge goes either under or above the lower & the upper level of our waking existence and faculty. In the nature of things, therefore, mental knowledge starts from limitation, lives in limitation & ends in limitation. It is dabhrām, alpam, says the Veda, not, like the vijnana, brihat; in its nature truncated, oppressed, little. We know nothing certainly except that certain phenomena present themselves in a certain regular way to our senses and are valid within certain limits for our life; on the basis of that sensational experience we can make out a practical rule and order of living. All the rest of mental knowledge may be described [as] a selection of probabilities out of a mass of possibilities. But because mental knowledge is limited & subject to mixed truth & error, therefore also the feelings & impulses of mind in man are subject to falsehood, error, wrong placement, corruption & perversion; in a word, to evil & sin. And since action is only a mechanical expression of mind and

feeling, his action also is subject to a resulting falsehood and wrong placement, to evil and sin. Ignorance of self & world is the original error; out of that seed proceeds all evil & suffering. Man, born as a mental being, cannot arrive at right action, right feeling, right knowledge; he can only struggle towards them and approximate to some blundering, limited & imperfect standard of right & truth formed by him out of his fixed notions and habitual feelings. These standards he is continually changing according to the shiftings of his knowledge & the circlings of his knowledge in pursuit of that eternal self-existent Truth & Right which the soul in him knows to exist but the mind & body in him fail to find and accomplish. For mind cannot see the Truth,—the goal & the condition of our journey,—it has to grope after it & feel it; for it has sense of things but not vision of things, mati, not drishti. It does not know the Right, the way of our journey, but has to seek for it; therefore it cannot proceed straight to its goal, but follows a devious & wandering journey. The lower mental life is not only dabhrām & alpam, says the Veda, but it is hvaram & vriyinam, in action of knowledge & action of heart & action of body a crooked going, not like the action of vijnana, riju, straight-moving.

We distinguish then between vijnana & manas. Vijnana is brihat, limitless & comprehensive in its nature and process, because free from individuality, apaurusheya, and universal in its movement and origin; therefore it is true, satyam, in essence and true, ritam, in arrangement. Mind is alpam, limited in its nature because proceeding from an individual centre [and] standpoint and bound in its movement and origin; therefore it admits of asatyam and anritam, error & falsehood or misplacement,—for all falsehood & error is misplacement of truth, all manas diverted action of vijnanam—in the essence & arrangement. Vijnana is, because ritam, therefore riju, right or rectum, the straight—because it is in its nature right arrangement in right being, therefore it proceeds straight by the right way to the right goal with an assured, luminous & self-existent rightness of impulse, rightness of feeling & rightness of action. Mind is hvara; not knowing but seeking, it gropes & circles through falsehood

either to truth or a worse falsehood; through sin & stumbling either to righteousness or to a worse sinfulness. Vijnana has for its process of knowledge drishti; thought of vijnana sees, it does not search; it starts from knowledge, it does not start from ignorance; it starts from the essence, not from the appearance; it begins with the essential truth, Brahman, & sees in it the general truth, the idea, the kavya of the kavi, which creates the mental, vital & material symbol, from the general truth it proceeds to detail & particular, from the idea to the working out of the idea in process, attribute, quality & variation. Reasoning in vijnana is only an arranged statement of already possessed knowledge; it is not a means of arriving at truth, but only of orderly stating of truth. Mind has for its process, mati; mind feels & senses, it does not see, for what it calls sight is only a form of touch or contact with its object from outside, not the internal knowledge of the object as a thing contained in the knower. It starts from ignorance & struggles towards knowledge, it grasps only appearance and can do no more than speculate about essence; starts from the fragments & pieces the whole, starts from the particular & perceives the general as a mental abstraction, not a living reality; proceeds from its abstract generalisation & infers essence but cannot come into the real presence of Being. Reasoning in mind is a statement of successive perceptions of data to arrive at a conditionally valid inference, not at a self-existent and for ever indubitable truth. Mind starts with a dark ignorance in the shape of non-knowledge or false knowledge & ends with a twilit ignorance in the shape of agnostic uncertainty.

Clearly, then, if this faculty of vijnana exists, is of this nature & has these relations to mind, then the path of our evolution and, consequently, also the right direction of our efforts is clear; it is, having exceeded nervous life & body, to exceed mind also and arrive at the culmination of right knowledge, right feeling, right works in the spontaneous & infinite mastery & liberty of the vijnana. It is rational to suppose that such a principle exists; for, given the existence of a self-existent Truth at all, supposing that all is not, as the Nihilistic Buddhist contends, a sensation-troubled void, then a self-acting faculty of knowledge

responding to & perceptive of the self-existent Truth is at least probable and seems to be demanded. If, moreover, we consent to the Vedantic idea of the world as a creative form & rhythm of consciousness, this logical probability becomes an obvious and inevitable necessity. Self-existent Truth of things can in that theory be nothing else than self-perceptive Truth of conscious being. The existence of a world of objects of universal consciousness arranged in fixed relations & processes presupposes the existence of this principle of Vijnana & therefore of the faculty of Vijnana. It may, however, be reasonably questioned whether, even if the faculty exists, it is not a divine privilege denied to man as much as to the tree and the insect. Is not man unchangeably a mental being, not only at present fixed in mind as his centre, but eternally imprisoned in it as his element, continent and condition of existence? But such a rigid limitation is inconsistent with what we know of man and of Nature. Nature moves by steps & gradations out of one stream of her movement into a higher law. She has established a rudimentary reason in the animal which has perfected itself in the supreme animal, man. Equally she has established a rudimentary form of vijnana in man which has to be perfected in the inevitable course of her evolution, and must perforce be perfected here in no other being than a supreme humanity or supreme man. She has first arranged an illegitimate form of vijnana in the intellect, the mental buddhi or human reason, which has all the movements of the vijnana, perception, arrangement, synthesis, analysis, but is unable to arrive at its proper methods & results because it limits itself to the province of the senses and has for its one right function to train these mental servants & purify them from the control of yet lower elements of our being, the grosser life functions, the body, the nervous heart-movements. Above the reason & sending down its higher rays into the human intellect she has seated the vijnana-buddhi, the intuitional mind. Animals have an intuitional sense, they have not the intuitional intellect; man has access to a true intuitional mentality, and there is his right door to release from subjection to the sensational mentality he shares with the lower creatures. When he has fulfilled reason,

— not before, — he has to surmount reason, to silence it just as reason has silenced the brute passions, and lift up its faculties nearer to their true nature, mode and function, to the intuitive mind, which then, unbesieged by the sense mind & the erring intellect, can receive the pure rays from above of the luminous & divine Vijnana.

The evolution of vijnana out of mind is inevitable for the same reason that the evolution of life out of matter was inevitable or the evolution of mind out of life, because the vijnana or pure Idea, already involved in matter, life and mind, demands & will procure, perhaps by the pull from a higher world where the Idea would be the dominant power & basic principle, its own release out of the limitations of sensational mentality. Just as we found matter to be a formation out of life-energy, & life-energy to be a formation out of mind, so mind is a formation out of vijnana. That which has constituted & governs stone or tree, animal or man, is not matter, nor life, nor mind, but the Idea involved in these three masks of conscious being. The idea of the tree in Brahman's consciousness is hidden involved in that form of life-energy which our senses see as a seed. In reality, the seed of the oak tree holds at the back of its intended evolution the potential seminality of all trees that have existed or can exist, because the Idea, the Brihat, by which it exists, is the Brahman in all Its vastness, Brahman whose process in Nature is to dispose variously one seed of things so as to form a myriad various existences. Ekam bijam bahudhá vidadháti. But by successive selective processes of vijnana the form specially fixed in the seed, inherent & latent in it & bound to develop out of it, is first tree and then oak tree. For this reason and no other, an oak tree & no other existence must develop out of the seed the earth has received. It is the involved Idea, is the Vijnana Consciousness of God, which dwells in the seed, has chosen and prepared this form and supports, governs & directs by the mere fact of its inherent existence there the processes, arrangements, life & functionings of the oak tree. We do not see this truth because the form God takes is still a material form without an organised mental consciousness. It is only when we arrive at

human life that, a little more clearly, & yet still very dimly, this truth begins to show itself. To our lower or material mind, for instance, a nation is an intellectual fiction; the reality is only a number of men agreeing for certain material ends to call itself a nation and living in an artificial idea of unity created by the associations born of a mere word. But, first, the intuition-sense we share with the animals by means of the emotional heart, then the reason seeking to find a cause, a formula and justification for the vitality of the nation-idea and, finally, the intuitive mind, looking behind the phenomena of the senses, begin to draw near to the real truth. In real truth a nation is an existence in the universal Consciousness, an Idea-Force in the universal Will that is knowledge, not constituted by geographical boundaries, nor by a given sum or combination of human units, nor by a common language, religion, custom, laws, government,—for all these conditions may be satisfied without a nation existing or dispensed with or exceeded without the nation ceasing to exist,—but created by the idea & living in the idea. Born of the idea in the Brahman, it exists by the force of the idea and only so long as that force supports it & needs the form for its self-fulfilment; the force withdrawn, the form departs into the general Idea force which is constantly grouping men and animals, plants & worlds into figures of corporative Brahman-consciousness, and entering into it either there dissolves or waits for fresh emergence in other time, place & conditions. What is true of the corporate mind-life of the nation is true of the individual mind-life also, of man, the animal, tree, stone, insect. “From the Idea all these existences were born; being born, by the idea they live; to the idea they pass away & enter in.” But not till man appears in the material world, does it begin to be possible for the Idea to produce a form of mind, life and body which will be able to house & express the vijnanamaya ideal being, the god in the universe and can be prepared to bear the activity of a divine force & divine joy and, breaking the walls of the mental ego, enlarge into the wideness of a cosmic consciousness. The gods, it is said in the Upanishad, presented by the Spirit with successive forms of animal life for their habitation, returned always the answer, “This is not enough

for us." Only when human life appeared, did they utter the cry of assent, "This indeed is well & wonderfully made," and enter satisfied into their fit dwelling. But to fulfil the great purpose of its being, humanity has first to learn how to break down the dungeon of mind and unlocking the doors of the one room in its dwelling-place vindicate for himself a free movement in his seven storied mansion. By passing from mind to vijnana, he will possess in his nature that toward which he now only gropes & aspires, a being that has conquered the limitations of ego, a cosmic knowledge that looks at truth direct & unveiled, a perfectly tuned heart whose emotions & impulses are in harmony with the diviner truth of things, an inner & outer action which, free from the duality of sin & virtue, is unstumbling in its spontaneous movement, confident in its pure & inalienable joy, self-effective of its own God-given objects without passing through the pangs of personal desire, straining and disappointment born of wrong aim, wrong method or wrong emotional reaction. Human life & being will then be moulded into the forms of the satyam, ritam, brihat. For man knowing himself & the world, man will work out his life spontaneously as the sun moves or the oak tree grows, by the force of the idea working out the swabhava, own nature, own or proper becoming. For dharma, right life & action in man and in every other existence, is swabhavaniyatam karma, works directed & governed by the inborn nature to fulfil the divine idea symbolised in the type & embodied in the individual. But in the sun & oak tree it works mechanically without an organised consciousness & joy of the work expressed in the form inhabited. Man fulfilled will enjoy consciously the perfect workings of God's Prakriti in him.

The Life Divine

[Draft C]

Chapter II

The perfect truth of the Veda, where it is now hidden, can only be recovered by the same means by which it was originally possessed. Revelation and experience are the doors of the Spirit. It cannot be attained either by logical reasoning or by scholastic investigation,— na pravachanena, na bahuná srutena . . . na tarkenaishá matir apaneyá. “Not by explanation of texts nor by much learning” . . . “not by logic is this realisation attainable.” Logical reasoning and scholastic research can only be aids useful for confirming to the intellect what has already been acquired by revelation and spiritual experience. This limitation, this necessity are the inexorable results of the very nature of Veda.

It is ordinarily assumed by the rationalistic modern mind, itself accustomed to arrive at its intellectual results either by speculation or observation, the metaphysical method or the scientific, that the sublime general ideas of the Upanishads, which are apparently of a metaphysical nature, must have been the result of active metaphysical speculation emerging out of an attempt to elevate and intellectualise the primitively imaginative and sensational religious concepts of the Veda. I hold this theory to be an error caused by the reading of our own modern mental processes into the very different mentality of the Vedic Rishis. The higher mental processes of the ancient world were not intellectual, but intuitive. Those inner operations, the most brilliant, the most effective, the most obscure, are our grandest and most powerful sources of knowledge, but to the logical reason, have a very obscure meaning and doubtful validity. Revelation, inspiration, intuition, intuitive discrimination, were the capital processes of ancient enquiry. To the logical reason of

modern men revelation is a chimera, inspiration only a rapid intellectual selection of thoughts or words, intuition a swift and obscure process of reasoning, intuitive discrimination a brilliant and felicitous method of guessing. But to the Vedic mind they were not only real and familiar, but valid processes; our Indian ancients held them to be the supreme means of arriving at truth, and, if any Vedic Rishi had composed, after the manner of Kant, a Critique of Veda, he would have made the ideas underlying the ancient words drishti, sruti, smriti, ketu, the principal substance of his critique; indeed, unless these ideas are appreciated, it is impossible to understand how the old Rishis arrived so early in human history at results which, whether accepted or questioned, excite the surprise and admiration even of the self-confident modern intellect. I shall try to show at a later stage what I hold to be, in the light of the psychological experience of Yoga, the exact processes involved in these ancient terms and their practical and philosophical justification. But, whatever the validity attached to them or the lack of validity, it is only by reproducing the Vedic processes and recovering the original starting point that we can recover also whatever is, to the intellect, hopelessly obscure in the Veda and Vedanta. If we know of the existence of a buried treasure, but have no proper clue to its exact whereabouts, there are small chances of our enjoying those ancient riches; but if we have a clue, however cryptic, left behind them by the original possessors, the whole problem is then to recover the process of their cryptogram, set ourselves at the proper spot and arrive at their secret cache by repeating the very paces trod out by them in their lost centuries.

All processes of intellectual discovery feel the necessity of reposing upon some means of confirmation and verification which will safeguard their results, deliver us from the persistent questioning of intellectual doubt & satisfy, however incompletely, its demand for a perfectly safe standing-ground, for the greatest amount of surety. Each therefore has a double movement, one swift, direct, fruitful, but unsafe, the other more deliberate and certain. The direct process of metaphysics is speculation, its confirmatory process is reasoning under strict

rules of verbal logic; the direct process of science is hypothesis, its confirmatory process is proof by physical experiment or by some kind of sensational evidence or demonstration. The method of Veda may be said to have in the same way a double movement; the revelatory processes are its direct method, experience by the mind and body is the confirmatory process. The relation between them cannot, indeed, be precisely the same as in the intellectual methods of metaphysics & science; for the revelatory processes are supposed to be self-illuminating and self-justifying. The very nature of revelation is to be a supra-intellectual activity occurring on the plane of that self-existent, self-viewing Truth, independent of our searching & finding, the presumed existence of which is the sole justification for the long labour of the intellect to arrive at truth. In Veda drishti & sruti illumine & convey, the intellect has only to receive & understand. Experience by the mind & body is necessary not for confirmation, but for realisation in the lower plane of consciousness on which we mental and physical beings live. We see a truth self-existent above this plane, self-existent in the satyam ritam brihat of the Veda, the True, the Right, the Vast which is the reality behind phenomena, but we have to actualise it on the levels on which we live, levels of imperfection & uncertainty, striving & seeking; otherwise it does not become serviceable to us; it remains merely a truth seen and does not become a truth lived. But when we moderns attempt to repeat the Vedic revelatory processes, experience by the mind and body becomes an indispensable confirmatory process, even a necessary preliminary process for their acquisition; for the use of these supreme instruments of intuitive & revelatory knowledge is naturally attended, for those to whom the intellect is and has always been the chief and ordinary mental organ, by dangers and difficulties which did not to the same extent pursue the knowledge of the ancient Rishis. To them it was natural in its possession, easily purified in its use; to us it is a difficult acquisition, hampered in its use by the interference of the lower movements. Experience is, for us, indispensable; we may not be certain of excluding by its means all false sight and false intuition, but we can correct much that has been imperfectly seen

and confirm beyond the possibility of all intellectual scepticism that which does clearly come down to us as illumination from our Higher self to be confirmed in life & experience, constantly and regularly, by our lower instruments.

We have, for instance, the remarkable passages in the Isha Upanishad about the sunless worlds, the luminous lid concealing Truth, the marshalling & concentration of the rays of Surya & his goodliest form of all, that form which, once seen, leads direct to the supreme realisation of oneness, So'ham asmi. Our intellect sees in these expressions a brilliant poetry, but no determinable philosophical sense; yet no one can follow thoughtfully the succession of the phrases without feeling that the Seer of the Upanishad did not really intend to lead up to the direct clarity of his supreme philosophical statement by a flight of vague poetical images; he has a more serious meaning, detailed, definite, precise, pregnant, in the carefully arranged procession of these splendid images. How are we to discover it? Using the scholastic method we may hunt for a clue in the other Upanishads; we may find it or imagine we have found it and by the aid of speculative inference and a liberal dose of fancy we may construct a brilliant or even a plausible theory of the Rishi's meaning. Or, without any such clue, by the aid of a clear intelligence and putting together of the ascertainable ideas of Veda or Vedanta, we may fix a meaning which will adequately explain the text, fit into the course of the argument and, in addition, justify itself by shedding light on other passages where there is a reference to the Sun, to its rays or to its revelatory function. These means, however, can only conduct us to a plausible hypothesis, a twilight certainty, or at most a convincing probability. Nor, in this passage at least, will the metaphysical methods of Shankara at all assist us; for it is a question not of metaphysical logic but of the meaning of an ancient symbol, the connotation of certain antique figures. On the other hand, if we have been able to revive by Yoga the old methods used by the ancients themselves, we may, either in the ordinary course of our experiments or guided by the suggestion of the Upanishad, arrive at the actual experiences on which, in Vedic times, the use of this symbol and

these figures was founded. We may perceive in our own selves the interposition of the golden vessel, the action of the rays, their disposition, their concentration; we may have the vision of the goodliest form of all, tejo yat te rupam kalyanatamam, and know, by luminous experience, the link between that vision and the realisation of the supreme Vedantic truth, So'ham asmi. We shall then be certain of our knowledge, our unity with the one & only existence. If the ancient ideas of our psychology are correct, by process of revelation and intuition we could have arrived at the same results; the old Rishis, accustomed to use that process habitually and follow its progressive action with as much surety and confidence as we follow the steps of a logician, would have needed nothing more for certainty, though much more for realisation; but we, habitually intellectual, pursued into the higher processes, when we can arrive at them, by those more brilliant and specious movements of the intellect which ape their luminosity & certainty, could not feel entirely safe & even, one might say, ought not to feel entirely safe against the possibility of error. The confirmation of experience is needed for our intellectual security.

This method, by which, as I hold, the meaning of Veda can alone be entirely recovered, is, then, a process of psychological experiment and spiritual experience aided by the higher intuitive or revelatory faculties,—the vijnana of Hindu psychology,—of which mankind has not yet, indeed, anything but a fitful and disordered use, but which are capable of being, within certain limits, educated and put into action even in our present transitional & unsatisfactory stage of evolution. It differs from the method by which the ancient Rishis received Vedic truth,—revelation confirmed by experience,—only by the side of approach which must be for us from below, not from above, and the weight of the emphasis which must rest for a mentality preponderatingly intellectual and only subordinately intuitive, on experience more than on intuition. For the rest, the common consent of humanity has agreed that only by higher than intellectual faculties can the truths of a supra-human or supersensuous order, if at all they exist, be really known. Religion,

except in ethical & rationalistic creeds like Buddhism and Confucianism which have put aside all such questionings as outside the human domain, has always insisted that revelation is the indispensable angel and intermediary and the intellect at best only its servant, assistant and pupil. Science & rationalism have virtually agreed to this distinction; they have accepted the idea that all knowledge, which does not reach us through the doors of the senses and, on its arrival, submit its pretensions to the judgment of the reason, is incapable of solution by the intellect; but they add that, for this very reason, precisely because the senses are our only doors of experience and the reason our only safe counsellor, the questions raised by religion and metaphysics are utterly vain and insoluble; they relate either to the unknowable or the non-existent; either the material only exists, or, if there is any other existence, the material only can be known and therefore alone exists for the purview of humanity. As man marches upon the dust and is circumscribed by the pressure of the terrestrial atmosphere, so also his thought moves only in the material ether and is circumscribed within the laws & results of material form and motion. Recently we see, even in Europe or chiefly in Europe,—for Asia is too busy imitating Europe of yesterday to perceive whither Europe of today is tending,—a revolt against this arbitrary denial of the rarest parts of human experience. The existence of the supra-sensuous & the infinite is reconquering belief and, at the same time, it is coming again to be admitted that there are faculties of intuitive & supra-rational knowledge which answer in the domain of Consciousness to these supra-sensuous facts of the domain of Being. The belief & the admission go together rationally. For to every order of facts in Nature there should be in the same Nature, inevitably, a corresponding order of faculties in knowledge by which they can be comprehended; if we have no certain knowledge of the facts, it is because we have not as yet the clear and steady use of the faculties.

In three of the external aids by which Veda has been perpetuated in India, religion, Yoga, the guru-parampara, this fundamental principle is amply admitted. Religion starts from

revelation; it rests upon spiritual and moral experience. Yoga, admitting the truth of verbal revelation, the word of God & the word of the Master, yet starts from experience and rises, as a result of experimental development by fixed methods, to the use of intuitive and revelatory knowledge. The Guru-parampara starts with the word of the Guru, accepted as the knowledge of one who has seen, and proceeds to personal mastery by the experience of the disciple who may indeed go beyond his master & even modify his knowledge, but is not allowed to disown his starting-point. But there is one of our great Indian spiritual activities which has developed progressively in the direction of rationalistic methods and given the responsibility for nine-tenths of its work in these supra-sensuous fields to the very organ, pronounced by the consensus of human opinion insufficient for such inquiries,—the intellect. It is in Darshana, in the path of metaphysics, that this paradoxical phenomenon has been permitted. It is true that our metaphysical thinkers, unlike the European, do not launch themselves into the full flood of metaphysical rationalism; they hug the coast. They admit the supreme authority of revelation, but only of verbal revelation, of the spoken Veda. But the sense and the bearing of the Vedic text has long been doubtful and warring philosophies have founded themselves on the sacred Word; how is doubt to be resolved, dispute to be decided? By appeal to other texts? But if there is still dissonance, not entire consonance? By the aptavakya, the word of the fit authority. If that fails or there is, here also, a conflict? By logic; the intellect is called in as the arbiter of the sense of the Sruti. The word of the adept, the aptavakya, is admitted; but different Masters seem to have taught different doctrines. Who or what is to decide? Let it be settled by logical argument. Once more the intellect is called in as supreme judge; neither the Sruti, nor aptavakya, but logical judgment becomes the real master of our knowledge. Psychological experience also is admitted in certain fields of the argument; but men have different experiences, even different ultimate experiences. Adwaita asserts the pure self as an ultimate experience of consciousness; Buddhism denies it, holds it to be an illusion and goes beyond to the experience of

psychological Nothingness. Yet again, logical argument is called in to decide the question. Therefore we find that our metaphysical method of arriving at the higher truth is practically,—though in theory this is subject to certain qualifications,—as much an intellectual & logical method as the method of European metaphysics or the method of scientific rationalism. Only, the Indian metaphysician admits certain data, values certain orders of evidence, which are ruled out of court as invalid or irrelevant by European thinkers. The scientific rationalist observes the sensible facts of life & Nature; these are the data on which alone he feels himself entitled to build his conclusions. The European metaphysician observes the general facts of sensible existence and adds to them the study of words, abstract concepts & categories which answer to no concrete existence, but are the general forms into which human thought has cast itself; these vast nebulae are the metaphysician's data. It is in this ethereal void that he disports himself in a grandiose freedom. The Indian thinker adds to the generalities of natural phenomenon and the abstractions of thought two other classes of evidence, the facts of psychological experience and the word of the revealed Scripture or of competent authorities. But he uses them sparingly & as a last resort. All that is really solid in our metaphysics (I except Patanjali's Yoga Shastra which stands by itself in the six Darshanas,) consists in its parts of logical inference and analogy;—we value in it not what it builds on revelation & experience, but its strenuous manner of justifying certain great assertions of Veda & high experiences of spiritual seekers by the reason and by logical disputation. The method of Darshana, the way of Shankara and Buddha, although it works round and upon certain grand psychological experiences, Maya, Nirvana, is essentially speculative and logical, not intuitive and experiential.

How came this method to be substituted for the old Vedic tradition and what is its real validity? The question has a great practical importance; for every Indian thinker¹ who approaches

¹ The only exception, to my knowledge, is Swami Vivekananda and even he has not entirely escaped the necessity of his environment.

these questions feels himself naturally impelled to be metaphysical in his method or his atmosphere and follow, with whatever modern variations, the path of Shankara, Buddha and the Sankhyas. The way of knowledge has become in India the way of metaphysical disquisition. Are we really bound to continue this tradition or is the more ancient method also the right method, to which humanity must eventually return; and, if so, what have we gained or lost by this more than millennial substitution of speculation for revelation and verbal logic for actual experience? The substitution itself has come about by a powerful general movement of humanity, simultaneous throughout the world, although it most thoroughly affected Greece and through Greece extended to the general temperament & thought of modern Europe. It cannot quite be said that Greece invented the intellect or the intellectual temperament, but it is certain that the Hellenic race first began the application of reason, inexorably, to the remoulding of thought & life in the temperament of intellectuality. Mankind can never be wholly rational, because our race is essentially built up of various elements, none of which can be eliminated from its system of being. It is our nature to be physical, animal, emotional & sensational as well as intellectual and the coldest thinker or most inexorable rationalist cannot escape from the constitution of our common nature. But mankind, under the great impulse which overtook it at a certain stage of its conscious activity, felt the need of rationalising, as far as that could with safety be done, its other irrational members, the heart, the senses, the life-action, even the body. This tendency, pursued simultaneously by Graeco-Roman civilisation, by Confucian China, by philosophical & Post-Buddhist India, combated in India by the vitality of Yoga and religion, in Europe by the great united floods of barbarism and Catholic Christianity, has finally triumphed and reached a pitch of success, an extent of victorious propagation which, in human movements, is usually the precursor of arrest and decay. The movement of pure intellectualism has itself, indeed, no clear premonition of its own end. It hopes to conquer, to perpetualise itself, to bring under its sway the nations that are still exempt from its yoke

or only imperfectly subdued to it; outwardly it seems to be on the point of success. It still holds the mind of Europe, although the soul of Europe begins to attempt uneasily an escape from its narrowing rigidity & dryness; it has seized on Mongolian Japan & is revivifying the traditional intellectualism of China by a flood of fresh ideas, by the inspiration of a new & wider horizon; it has touched already the Mahomedan world; the political subjugation of India has been followed by a pervasive invasion of European intellectualism which is striving hard to substitute itself progressively for the ancient law & nature of our Indian temperament and being. But these manifestations, however overwhelming in appearance, however conclusive they seem of approaching victory, conceal the seeds of a profound revolution in the inverse sense. An outward conquest is often the means of an inward defeat. What is happening now, has happened before on a smaller scale and under less developed conditions. When the combined intellectuality of Greece and practical materialism of the Latins, supported by the conquering military force of the Roman Republic and Empire, came into contact with the old tradition of Asia, the result was the collapse of the politically victorious civilisation under the assault of an Oriental religion which in its tenets & methods not only exceeded but trampled alike on the vital force of the body & on the free play of the intellect, alike on Greece & on Rome. And it was from a part of Asia which underwent directly the Roman yoke, but persisted with the most deep-rooted perseverance in its spiritual traditions that the revanche proceeded; conquered Judaea took captive the victorious civilisation. Once more Europe, much more profoundly intellectualised, much more profoundly materialised in its intellectualism, throws itself upon Asia with a yet more supreme military force, compelling a yet more widespread political subjugation; once more a penetrating eye can discover the preparation of the same result obscurely outlining itself behind the deceptive appearances of the moment. The first effect on the West from this impingement of the mental atmosphere of Europe on the mental atmosphere of Asia and the breaking down of the walls that separated them has been the

revival of the invincible intuitionism of the Aryan or Aryanised races. The philological tripartite division of the Old World into the Aryan, Semitic & Mongolian peoples, even if it be ethnologically untenable, does correspond roughly to real divisions in the cultural temperament of the human race, the result much less of original race than of historical formations & past influences. The Mongolian is predominantly intellectual, his lower nature is largely tamed & rationalised, the intuitive parts of his mind are slow and their beats tepid in their impulse; there is much less in his temperament to resist the intellectualising process of rationalism than in any other portion of humanity; in the Semite intellect is subordinated, he is intuitive, but intuitive through his lower members only, with as much of the higher activity as the heart & senses allow; the Aryan is intuitive either directly or through and by the heart and the intellect. The Aryan is therefore unfitted by his temperament to persevere in the relentless rationalising of our whole being; always there comes a time when he pauses, listens to a voice within that he has disregarded and, convinced by that inner daemon, departs from the paths hewn for him by the sceptical intellect with the same speed and enthusiasm with which he has followed their straight & level vistas. The very nations which are today the hope of a purely intellectual civilisation, hold in themselves that which can never remain satisfied with the pure reason, and this ineradicable betraying force is now being powerfully stimulated by the mental currents which for almost a century have been consciously or subconsciously reaching Europe with a slowly increasing force from the East. Therefore, the repetition, no doubt in a very different form & to very different issues, of the miracle of Christianity is psychologically inevitable.

If indeed, as modern thought imagines, intellectual reason were the last & highest term of evolution, this consummation need not have been inevitable, or, if inevitable, it would have been deplorable; for perfection depends on the rule of our highest member over its inferior cohabitants. But our evolution is only the progressive unfolding of our nature and faculties, & in the list of those faculties reason does not hold the highest

place; it is not even a separate and independent power, but a link, servant and intermediary. Its business, when it is allowed to rule, is to train the lower man so as to make him a fit vessel for an activity higher than its own. The animal is content to follow his impulses under the flashlight of instinct. If ever, as is likely, there was a time when man also was a supreme animal, he must have been guided by an instinct different, perhaps, in its special kind but as trustworthy as animal instinct & of the same essential nature. It was, then, the development in us of that reason which we see ill developed in the animal which deprived man of his sure animal instinct & compelled him to seek for a higher guide. Everything goes to show that he must have sought it at first in the lower intuition & revelation which works in the heart, the aesthetic impulses, the senses. Again, it is the insistent development of reason that has served to make him dissatisfied with these powerful, but still inferior guides. But not until reason, without lapsing back to the lower movements, yet becomes permanently dissatisfied with its own limitations, can it fulfil its work of preparation. For there is a faculty in us superior to the rational, there is that direct seeing & touch of things which shows itself in the higher revelation & intuition & works obscurely, like a fire enveloped in smoke, in the phenomena of intellectual genius & unusual personality. Beyond direct seeing there is a faculty of direct being, if I may so express it, which, if we can entirely reach & hold to it, makes us one with God, brahmabhúta, can reveal in this material life the perfection of Brahman as it is intended to be manifested in humanity, so that man on the human level, in the human cadre, becomes perfect as God is perfect. The intellect itself cannot reach these heights. It can only discipline, chasten & prepare the lower members to receive & hold without harm or disintegration that higher force which has alone the power to raise us to the summits. In the intellectual ages of mankind, reason forgets these limitations; it tries to do a double work, to judge correctly all the knowledge which presents itself to the sensorium & its instruments and also to know things directly & in their essence. The former is its legitimate work & deserves the name of Science; the latter is

an illegitimate attempt to go beyond its sphere and conceals an error under the name of Metaphysics. The intellect can know & judge phenomena; by its labour in examining them it arrives, in spite of much presumption & error, at a considerable number of phenomenal certainties; but it cannot know & judge the essence of things; by attempting to examine that field, whether unaided or as the principal inquirer, it only arrives, if it is honest with itself, at this one truth, that it can be certain of nothing; — all the rest is appearance, asseveration or opinion. We can know things as they seem to be in the order of the physical Nature in which they live; by the reason we cannot be sure what anything is, in itself, in that order of realities of which physical Nature is only the external seeming. Therefore the last refuge of reason, when it becomes conscious of its blunder, is to deny that such an order of realities exists at all, & to confine itself to the knowledge of material & phenomenal certainties. But such a restriction of knowledge brings with it a lowering, narrowing & petrifying of our humanity, because contrary to the whole nature and ineradicable tendency of our kind & sure therefore to falsify & slow down the springs of our action & being. Therefore Nature, mightier & wiser than the Scientist, compels man to revolt against the cold & debasing tyranny of a negative scepticism. She compels him back to the way to his internal skies & compels him to recover, in whatever new terms, the promise of his Scriptures & his Gospels. She makes him listen again for some indirect echo, if not for the actual resonance of the eternal, immutable chant, the ever-rhythmic unwritten Veda.

The European attempt must, therefore, come to nought the moment it is brought face to face, as daily it is being brought more & more nearly face to face with its own inalienable insufficiency. The tradition of Asia will again impose itself on humanity, & it is probable that it will be again a country politically subject to Europe but more than any other tenacious of its spiritual temperament & tradition, which will be the instrument of the revanche. But the revelation that will conquer this time the forces of material rationalism must be one which includes the intellect in exceeding it, fulfils, not annuls it; for the conditions

demand this greater consummation. In the Roman days the intellect was attacked before its constructive work had proceeded beyond the first insufficient paces; today the intellect has done its constructive work and the work must be accepted. It is India alone that can satisfy this double claim of the human reason & the divine intelligence; & the new reconquest will differ as much and in the same way from the old as India differs from old Judaea.

It is true that in this country the reason has never fulfilled itself, triumphed & held undisputed sway to the same extent as in modern Europe. If we take in its general results in India the great intellectual movement of humanity, we see that it broke up & scattered about in fragments the ancient catholic tradition & knowledge, placed its stamp on much that yet remains, destroyed a great deal which it could not assimilate, left a little surviving under veils & in our remote & secret places. On the mental temperament of our people, the long struggle had a disastrous effect; for it has deprived all except the few of the higher supra-intellectual inner life of our forefathers, it has made impossible any general resort to that discipline which gave them the use to a certain extent, at least, of the higher intuitive mentality, the satyadrishti, the direct sight, and has driven the many to be content rather with the irregular intuitions of the heart, the aesthetic faculties & the senses; we have kept those faculties which receive the actual touch of the higher truth obscurely, with the eyes of the intellect closed but lost those which receive them directly, with the eyes of the intellect open and luminously transmitting them to the mind imprisoned in matter. We have therefore neither been able to organise the intellectual efficiency of the Europeans, nor retain the principles of inner greatness known to our forefathers. Nevertheless, we still have among us important remnants of the old knowledge & discipline & we have firm hold in our schools of Yoga on the supreme means by which its lost parts can be recovered. The key of a divine life upon earth lies, rusted indeed in an obscure corner of our mansion, used only by a few, but still it lies there & is still used. It has to be singled out from amid much waste matter, made

fit for complete & general use and given freely to mankind. We have kept, fortunately, the intuitionist temperament to which its use is easy & natural. The failure of the intellect to assume complete sway and entirely rationalise our life, was a necessary condition for the preservation of that temperament, itself necessary for the appointed work & God-decreed life of our nation. On the other hand, the indispensable work of Buddha and his predecessors & successors has not been entirely lost on our nation. Their great movement which denied, limiting itself in rationality, the capacity or the need of the human mind to know beyond the laws of phenomena, seized in metaphysical philosophy upon only so much as was necessary for conduct, sought to establish on pure logic & reason the few fundamental principles it needed and, feeling obscurely the necessity of completing itself by physical science, as soon as it entered that field, far outpaced the accomplishment of Europe or Arabia, ended in a defeat & collapse necessary for the final salvation of humanity. Its defeat necessitated in the divine scheme the later arrival in India of an intellectual & rationalistic civilisation, armed, organised, politically dominant, culturally aggressive, so that we might be forced, against our will & natural tendency, to hear from the rational intellect that which it was entitled to say to us & to perceive at last that the indirect & inferior intuition, great, divine & inspiring as it is in its more intense individual results, is still insufficient for humanity & that we must turn back to a higher guide & recover a lost & superior state. When, without falling into the European error, we have recognised this truth,—and the logical & rationalistic capacity developed in us by Buddha & Shankara gives us the power to recognise it & the tendency,—we shall be ready both for our national survival and for that greater world-work for which, alone among the nations, we keep still the necessary materials and the necessary capacity. Children of the Rishis, not entirely disinherited, repositories of the Veda, still clinging to our trust, we alone can recover in our experience its half lost truths for the growing need of humanity. We have acquired, too, by our long philosophical discipline, the power of stating supra-intellectual knowledge in that language

of the intellect on which the modern world insists as the proper vehicle of understanding and the first condition of acceptance.

We can see, from this point of view, the causes of the general substitution of the logical & speculative method for the intuition & experiential; it was an incident in the inevitable recurrence of one of those periods in which pure intellectuality dominates & which have for their function to refine & chasten the lower nature in the general mass of humanity. We can see what we have gained,—the power of ratiocination, the openness to the processes of reason, the ability to express intellectually—so far as that is possible—supra-intellectual knowledge & experience, the control of the lower members by the reason. We can see, too, the natural limitations of the intellect & the inevitably inferior validity of the metaphysical method to the experiential in the attempt to grasp the truths of Veda, in that the certainty of these truths cannot be acquired either by speculation or logic. We can see how this inferiority has worked for the obscuration or elimination of much that was potent, active & living in the more ancient knowledge; for the intellect tends to reject in its self-confidence what it cannot grasp & define, just as the heart tends to reject in its self-will what it does not desire or enjoy; yet what the intellect cannot grasp & define, includes often the most valuable parts of experience and knowledge.

The seeds of this movement of the intellect are contained in the Sanhitas & Upanishads themselves, although the movement itself is foreign to the Scriptures. The Sanhitas are Karmakanda; their object is not the enunciation of the general Truths of Brahman, but the practice of its particulars; they are the perfect monuments, sufficient to themselves, of especial moments, stages, movements in the progress of the individual towards his divine goal; they are instruments by thought & speech for the stabilisation of his increasing gains in light, force & joy; they are the praise & invocation of the gods who preside over particular functioning in our nature & in world-nature; they are statements of experience packed full of psychological detail and minute spiritual realisation, which confirm the seer & help the seeker. They are truth of experience & have therefore no room

for speculation; they are ascertained truth & give therefore no room to doubt, debate & logical reasoning. But there are passages, rare seeds of the method pursued by the Upanishads, in which a general question is put and the suggestion of an answer offered. The Upanishads, on the contrary, are Jnanakanda; they have for their object the enunciation of the Truth of Brahman & the fundamental principles of Brahman's self-manifestation in universe. But with one remarkable exception they do not use, in order to arrive at this truth, these principles, the method of logical reasoning. Unlike the Sanhitas, they admit, not so much of doubt, as of debate; they move by positive questioning and the positive answer to questioning. But, again, the answer to questioning does not move by logic either in its inception, in its process or in its consummation. When Yajnavalkya holds his grand debate with the Brahmavadins at the court of King Janaka, when the proud Balaki vails his pride to the superior knowledge of King Ajatashatru, it is not by the field of logic or with the arms of metaphysic disquisition that they encounter each other. The question one puts to another is not "What thinkest thou of this?" but "What dost thou know?" and he whose knowledge proves to be deeper than his adversary's, is the conqueror in the discussion. Nor has this superior knowledge been arrived at by a more just or a more brilliant speculation, but by deeper sight, by a more powerful concentration. He has arrived at it, tapas taptwa; that is the method laid down by Varuna to his son Bhrigu in the Taittiriya Upanishad; for, he adds, tapo Brahma, Tapas is Brahman. Tapas, in other words, is the dwelling of the soul on its object, by which Brahman originally created the world through vision — sa ikshata — saw Itself, that is to say, as world & what It saw, became, — the dwelling of the soul on its object whether, prospectively, in creative vision, outwardly realising, as the poet & the genius of action dwells, or, retrospectively, in perceptive vision of the thing created, inwardly realising, as the prophet dwells; tapas is the very foundation of the method of revelation & intuition. Therefore, as in the acquisition of knowledge, speculation & logic are not used, so also in the imparting of knowledge, disquisition and logic are not used.

The thing has been seen by the seer, he is the drashta & to him Veda is drishti; it is spoken to the hearer & he sees, indirectly, through the medium of the word what the seer has seen by the self-vision, directly; to the hearer, Veda is Sruti. Yajnavalkya speaks his knowledge, his adversaries do not dispute it; they, too, see, being themselves habituated to these supreme processes, and the thing seen they silently & without debate acknowledge. If they are to dispute, since dispute is only a comparison of knowledge, of sight, of Veda, of drishti,² they must themselves first see farther, more profoundly, more subtly; and to see farther, they must first plunge into farther tapas, remain long constant in a farther dwelling of the soul on its object.

Still, just as in the Sanhitas there is the seed of the Upanishadic method, so in the Upanishads there is the seed of the later philosophical & intellectual method; we have, very occasionally, an obscure & casual preparation for the Darshanas. One passage, indeed a line, entirely typifies this secret bridging of the two methods; by a slight glance at it we can see how the mighty many-branched tree of the metaphysical philosophies burgeoned out from a very insignificant grain of tendency. Gautama in the Chhandogya, declares to his son Swetaketu the fundamental principle that all existence apparent to us here comes out of one anterior & ultimate existence, and he immediately notices the opposite appreciation, accepted as a starting point in the Aitareya, that existence originally emerges out of an original state of non-being, but only to reject it on the ground of a logical difficulty, "How could existence be created or create itself out of the non-existent";³ it is the earliest statement of the metaphysical principle common to all our positive & orthodox philosophies that nothing comes out of Nothing. The logic is large, axiomatic & elemental; we have a perception of logic

² The word for knowledge, vid, veda, is the Latin word for sight &, for the early Rishis, had probably not yet lost entirely all colour of its physical & more primitive meaning.

³ The language of the Sruti is remarkable, Asat ekam evadwitiyam, Non-Being one without a second, & shows that the old use of not-being differs essentially from our idea of nothingness.

rather than a process of logic or a generalisation from one perception & a priori exclusion of another as evidently impossible, not a logical demonstration of the impossibility. We are still within the four walls of the Upanishadic process, but stand already in the cadre of the doorway leading out into metaphysical disquisition. When we come to the sermons of Buddha, one knows not how many centuries later, and the formal foundation of the six orthodox philosophies we see, in spite of an immense logical & rationalistic development, that they proceed, initially, on this method of Gautama; they start from an act of logical discrimination, the acceptance of one statement of general perception & the rejection of another which seems to be inconsistent with the first or its contrary. All the ancient philosophies refer back to the Veda for the justification of the fundamental formulas in which they differ most obstinately & irreconcilably from each other. They are right in their positive claim; where they are wrong, where Shankara himself goes so hopelessly astray, is in founding on the same authority not only their own ultimate justification, but the confutation of their adversaries. The Veda is not logical, does not really confute anything; its method is experiential, intuitionist; its principle is to receive all experiences, all perceptions of truth about the Brahman, and either to place them side by side in order of experience & occasional relation, as in the Sanhitas, or to arrange them in order of perception and fundamental relation, as in the Upanishads, putting each in its place, correcting misplacement & exaggeration, but not excluding, not destroying. This is admirably seen in the colloquy of Ajatashatru & the proud Balaki; Ajatashatru does not deny the experiences & perceptions of Balaki; he accepts them, denies only their claim to represent the ultimate truth, gives them their true character, puts them in their right place & leads up by this purificatory process to his own deeper knowledge. Harmony, synthesis is the law of the Veda, not discord & a disjunction of the members of truth in order to replace the manysided reality of existence by a narrower logical symmetry. But the metaphysical philosophies are compelled by the law of their being to effect precisely this disjunction. Veda can admit two propositions that

are logically contradictory, so long as they are statements of fundamental experience & perception; it does not get rid of the contradiction by denying experience but seeks instead the higher truth in which the apparent contradiction is reconciled. Logic, by its very nature, is intolerant even of apparent contradiction; its method is verbal, ideative; it accepts words & thoughts as rigid & iron facts instead of what they really are, imperfect symbols & separate sidelights on truth. Being & Non-Being are ideas opposed to each other; therefore, in logic, one or the other must be excluded. The One cannot be at the same time the many; therefore, in logic, either the Many is an illusion, or Duality is the fundamental reality of things. Brahman is Nirguna, without qualities, beyond definition; therefore, to the rigid Adwaitins, the Saguna Brahman, the Infinite Personality of God becomes a supreme myth of Maya, a basic & effective fact indeed, but basic & effective only in and of the grand cosmic illusion which It directs. Logic, the tyrant of the metaphysician, is satisfied by these abstract processes, but Truth is hurt & dismembered. Illusions of truth, dogmas of syllogism, take its place, and war upon each other, as indeed, so long as they live, they must go on warring for ever, since none can ever be established as undisputedly true, resting, as they do, on pure opinion of Smriti poured into the mould of Opinion, having, as they all have, a part only of Truth which they pretend vainly to be the whole.

We see, as a result, a progressive disjunction of the fundamental truths of Veda, &, curiously enough, a disjunction of the various parts of method which make up the totality of the Veda. The totality of Vedantic knowledge consists of several processes; first, Vedanta, the direct perception of the fundamental reality out of which all emerges & to which all returns; secondly, Sankhya, the analysis, by the discriminating perception, of the fundamental principles of being & knowledge in which the Reality manifests itself as world, as subject, & as object; thirdly, Yoga, the psychological basis of experience, experiment, practical analysis, synthesis which verifies the discriminative analysis; fourthly, Vaisheshika, the physical analysis of the form or matter in which the manifesting world-energy

is expressed & established to our outgoing perceptions; fifthly, Nyaya, the analysis of the processes of discrimination whether by the intellect or by higher functions; sixthly, Karma of Veda, the application of the knowledge acquired in formulas of life-action by which the individual & the community can ensure the highest phenomenal expression of the fundamental Reality of which their special nature is capable,— by which, let us say, man can express Brahman in his superior & more plastic kind as the bee or the ant expresses Brahman in its inferior & more rigid & limited nature;— these six rank among other processes,— for life of Veda is supple, flexible and wide,— some of which are the foundation of Purana & Itihasa. The fundamental perception, separating, narrowed itself and became the Uttara Mimansa of Badarayana; the discriminative analysis, separating, narrowed itself and became Sankhya of Kapila; the psychological experimentation, separating, narrowed itself & became Yoga of Patanjali; the physical analysis, separating, narrowed itself and became Vaisheshika of Kanada; the analysis of discriminative processes, separating, narrowed itself and became Nyaya of Gautama; the application in formulas of life-action, separating, narrowed itself extremely & became the Purva Mimansa of Jaimini; yet each of the six arrogated to itself the functions & the sufficiency of the other five. Other parts of knowledge & process, ejected by the ever-narrowing tendency of logical exclusiveness, established themselves in other philosophies and branches of practice & knowledge and have come down to us, changed, often disfigured, in Shastra, in Purana, in legend & history, in different schools of Yoga.

The original method of all these differences was the method of Gautama in the episode of the Chhandogya, the exclusive affirmation of one's own seeing, the logical exclusion, by process of verbal & ideative distinction, of that which has [been] seen by others. We perceive very well this root of the evil in the grand example, supreme in its kind, of the Buddha. Unhelped by the conflicting philosophies of the schools, dissatisfied with the too rigorously materialised methods of the Yogins, he takes the right, the supreme step, he retires into himself & gives his soul

the charge of the Truth. Sa tapo atapyata. He emerges from this concentration of soul, tapas taptwa, with the great illumination received in the ever-memorable night under the Bo tree. What is this illumination of Buddha? It is the perception of the chain of Karma, of the impermanence of sanskaras, of the illusoriness of the mental ego, of the release into the motionless peace of Nirvana. There was nothing new in these things considered merely as tenets; they belong, in one form or another, to Vedanta; they cannot have been unknown to the philosophers of the age. What was new in them was their puissant revivification in a supreme soul and a great personality, their removal from the category of metaphysical dogmas & abstractions, into realities of life, concrete, human, vivid, which could once more be pursued by all, realised, practised and lived. It was this return to the sources, this puissant reconnection of Vedanta with ordinary life which was the secret of the Buddha's tremendous effectuality. New also was the particular connection & interlinking of all these central ideas in the thought of the Buddha, the singular cast given to them by his unique, yet universal temperament & the formulation in the mould of that temperament of a system of Vedantic ethics. Still, in his fundamental method, in his approach to truth & his handling of truth, Buddha had not, so far, gone beyond the method of the Vedantic Rishis; Yajnavalkya or Pippalada would have so sought in themselves for the truth, received illumination in the same fashion, equally cast that knowledge into well-linked formulae of experience which could be lived and practised. But Yajnavalkya or Pippalada would not have shot the iron bolt of logic on the knowledge they had gained and shut themselves in a prison of ratiocination to the experiences of others and to fresh vision. It was here that, owing, perhaps, to the very strenuousness of Buddha's search as well as to the limits of the question with which he had started, "How shall one escape from the pain & grief of the world," he turned from the ancient path and allowed the metaphysical & logical training of his past [to] lay its heavy hand upon him. He built up walls of logic; he shut himself up in a creed. Thus it came about that this great destroyer of the ego, sanctioned in his disciples the supreme act

of intellectual egoism and this giant render of chains imposed on his Sangha, without positively intending it, deprecating it indeed, the bondage to a single personality & the chain of a specific formula of thought. The movement of the metaphysical philosophies, more purely intellectual, far less temperamental & personal than the Buddha's, yet followed the same limiting process. They obeyed not a personal illumination, but the logic of their starting point. Sankhya, for instance, proceeded on a discriminative analysis of the world, proceeded indeed to the last limit of that analysis and found that, fundamentally, Existence starts & maintains its manifestation of world on the basis, first, of the Unity of Nature,—the unity, the Yогin would say, of the energy of the Lord,—and, secondly, of the multiplicity of souls observing & reflecting the works of Nature,—the multiplicity, the Vedantin would say, of the individual souls, in which Brahman, the Lord, the one Supreme soul, puts Himself forth to enjoy the works of His energy. Of these two fundamental principles the Sankhya metaphysician made a formula, an ultimate perception; he refused to go beyond; he built up a wall of logical disquisition to shelter himself from wider perceptions and a more complex experience. Such was the method of all these schools, the developed method of which we find so indistinct a seed in the Upanishads.

Still, it was from some fundamental experience or revelation that the metaphysicians started; the logical element intervened only as a second term of knowledge. Moreover, the method of the aphorism preserved the suggestive profundity of the intuition or revelatory experience & tended to maintain in the practice of knowledge the original closeness of the intellectual concept to that vision in the soul which thought can only translate very imperfectly to the reason. But about a thousand years later we find a new movement of the intellect in force, illustrated by the names of Shankara, Ramanuja, Madhwa, in which logic covers the whole field, leaving only a narrow corner to experience & intuition; but, for that very reason, the experience, the intuition assumes a character of much more eager intensity, exclusiveness, monotone of emphasis and steeps itself more fervently in the

personality & temperament of the thinker. Hence a passion of dispute, an intolerance in logomachy which leaves far behind the measure of more ancient disputants. The battle is, finally, a civil strife between Vedantist & Vedantist; temporarily victorious over rival schools, they turn to rend each other; but the strife is still mainly about fundamental perceptions. The great question now is the fundamental unity or difference between the supreme soul & the individual or another, which would have astonished greatly the ancient Rishis, the question whether the world is false or real,—false, not only in its appearance to the senses, but per se, in itself, in its essence & its being. In the Mayavada of Shankara, Buddha, the rationalist, completes his work in India. He has led the reason to a great act of self-slaughter, the denial of existence to the world which alone it can study, more, the denial of Brahman in the world on the authority of that very Veda which spends so much time in affirming & elaborately explaining Brahman in the world. In other countries, in other ages, the Buddhistic agnostic train of thought led to a still more supreme suicide of reason; for it came to the denial of its own power to know anything real & fundamental, came almost, like Buddhistic Nihilism, to deny the existence of anything real & fundamental. In India the farther advance after Shankara & his successors has been mechanical & practical rather than theoretic; it has led towards the final divorce of intellect from experience. The metaphysician, devoted to intellect, has abandoned experience in favour of the authority of departed Acharyas. The schools of Yoga devoted to experience, have practised their psychological methods according to a fixed tradition without the harmonising touch, the generalising light; Sankhya dispensed with Yoga, Yoga divided itself from Sankhya. Thus has the spiritual life of India, by a misplaced & intolerant action of Intellect & its servant, rash-moving, light-winged,—the chameleon-hued phantasm Opinion, been shredded, parcelled out, narrowed into many streams & shallows, like the Oxus of the poet. Thus has it come down to our own age, ever narrowing more & more, shorn of its victorious streams, awaiting its return to a wider flood and a more grandiose motion.

Chapter III

We have, then, to choose between two methods, one historic & modern, in possession of the field, easily applied in its fullness, the other ancient, difficult to employ, impossible indeed for us to utilise safely except by an inversion of the process of knowledge known to the Rishis. According as we choose the one or the other, we shall arrive at a logical and symmetrical result, a private room hired for ourselves in the mansion of Truth & marked out by us as her sole temple, or shall be free to range in all her domain, gleaning wide & various results, but not soon or easily sure of possessing her entirety. I have indicated the disadvantages of the intellectual & logical method for the interpretation of Vedanta, but, in view of its long dominion & wide acceptance, it will be as well to consider & convince ourselves of the more important of them clearly and in some detail before we proceed.

In the first place, by the method of intellectual reasoning we are compelled to apply the processes of logic to entities which are beyond the grasp of logic. A single instance will suffice. We find, as a matter of experience, that existence is one and yet existence is multiple; everywhere, to whatever nook or corner of being we penetrate, we find this riddle presenting itself, undeniable & ineffugable, of a multiplicity which appears, a unity concealed which yet the mind insists on as the sole truth of the multiplicity. Nor is the unity which our mind thus asks us to perceive, a sum of factors; that oneness exists, but behind it there is an essential unity out of which both the sum & its factors emerge. Yet, divorce that essential unity from all notion of multiplicity expressed or latent, & it ceases to be unity; it becomes something else of which unity & multiplicity are mutually related aspects. But when we have arrived at this coexistent & coincident unity & multiplicity, before we can proceed to the something else which is neither one nor many, logic has already taken alarm. It cannot be, it says, that two opposites really coexist & coincide as the nature of Being. If we ask why not,—since after all, it is an universal experience,—the answer is that the thing is

illogical & irrational;—unintelligible & contradictory to the view of logic & reason, it is, therefore, to them impossible of credence. A sum and its factors, may & must coexist, but not a thing which is at once one and many. Therefore Logic sets to work to get rid of one or both of the two irreconcilable, yet strangely reconciled opposites. Buddhism dismisses the Many as phenomena of sensation, the One as an ideative illusion of sensation; it gets rid of the unity in sum as a mere combination of sensational factors in the figure of the chariot and its parts, having no existence apart from the factors, no real existence at all; it gets rid of the essential unity as a mere illusion of continuity created by the uninterrupted succession of sensations, in the figure of the flame & the wick. It drives by logical process towards a Nullity, although not all its schools are bold enough to arrive at that void & yawning haven. For the rest, its final conclusion is illogical, for though it claims to be the pure concept of Nullity, it is in reality, when examined, a something that is nothing. Therefore, originally, Buddha seems to have turned aside from the problem and declared to his disciples, Seek not to know, for to know, even if it be possible, helps not at all & leads to no useful result. Buddhism was satisfied with having got rid of the original, actual & pressing contradiction in this world here & now which it had set out to destroy. Adwaita asserts the One on the ground of ultimate experience; it dismisses the Many as an illusion; yet since both are ineffugable, since the soul escaping from the illusion, escapes from it merely & does not destroy it, it has to be admitted that the substratum of multiplicity exists eternally. Here again we are led by logical process to a result which is illogical; we have, in the end, a Maya that at once exists and does not exist. This difficulty is at once put aside as beyond enquiry; the contradiction exists, inexplicable but true; we need not enquire farther, for we have got rid of the original contradiction in which we were entangled & cutting through this Gordian knot of Nature, we have released the individual soul from the illusion of multiplicity & therefore from the necessity of phenomenal existence. In both cases the process & result are similar & a like subterfuge is utilised. In both cases Logic, like

Cato at Utica, has committed suicide in order to assert its rights & liberties; but it has died, as the patients of Molière's doctors had the felicity of dying, according to the rules of the science; therefore it is satisfied. It is not, however, Buddhism & Adwaita alone, but every logical philosophy that arrives at a similar result; we find always that when we would explain existence in an ultimate term which shall be subject to logic, we fail; we arrive either at a term which is plainly illogical, or at an explanation which fails to explain or a success which seems to succeed only because it ignores or suppresses or juggles away an important part of the data. The suggestion irresistibly arises whether this is not so, whether it must not be always so merely because the formulae of logic, a creature as it is & a limited movement of intellectual ideation, which is itself a creature and a limited movement of existence, useful enough within the sphere of their birth & movement, & in the circle of their jurisdiction, cannot control that which is beyond & wider than ideation, yet farther beyond & wider than its creature logic? Invaluable in relating correctly the particulars of the universe and purging our ideas about them, it may be of less sovereign efficacy in dealing with the fundamental things which underlie phenomena and of no efficacy at all in discovering the Reality which lies farther back behind phenomena.

Much of the luminous confusion of Metaphysics is due to the self-satisfied content with which it leans upon words & abstract ideas & uses them not merely as instruments, but as data, forgetting that these are merely useful to symbolise & formulate very imperfectly truths of experience & perception. Therefore in dealing with abstract ideas & conceptions we are unsafe unless we insist always on returning to the thing itself which they symbolise. Otherwise we lose ourselves in facile words or in confusing abstractions. For instance, in order to get rid of the anomaly of a Maya that exists & exists not, we say sometimes that the Many have a relative reality, but no essential reality. But what have we said, after all? Merely this, that we do not find the Many existing except in some relation to a unity behind, established in that Unity and, as far as we can see, existent by

that unity, as indeed the unity itself exists in a certain relation to the eternally existent Many either in their manifestation or in their substratum of Maya. How much farther have we got by this manipulation of words? We have found a fresh formula which expresses the difficulty, but does not solve the difficulty. We have taken refuge in a disingenuous phrase which suggests [to] us that phenomena are unreal, but tries to escape from the consequences of its admission. As well may we say, that water is in any sense unreal because it only exists by the mixture of oxygen & hydrogen; oxygen & hydrogen unreal, because they only exist by the congregation of atoms; atoms unreal because they only exist by some obscure principle of the transformation of energy into forms; energy unreal because it exists to us only in its works & manifestations. In all this we are playing with words, we are making an argument of our own ideative limitations. So again, in a different way, with the question of the Personality & Impersonality of God. Personality is to us a word which we use too lightly without fathoming the depth of the thing which it indicates. We confuse it perhaps with the idea of a separate ego, we imagine God in His personality as one Ego among millions separate from all the others, superior & anterior to them; we refuse to extend or to subtilise our conception, and according to our personal predilections we argue that such a Personal God cannot exist or that He must exist. But the whole method was illegitimate. We ought rather to fathom in experience all the possibilities of human personality & of divine personality, if such a thing exists, in order to know them & arrive at sure results about them instead of battling over a verbal symbol or an arbitrary abstraction & ending only in an eternal war of ill-grounded opinions.

This danger of intellectual predilections thrusting out Truth is the third disadvantage of the logical method. Logic claims & even honestly attempts to get rid of predilection and to see things in the sure light of truth, but it is not equal to its task; our nature is full of subtle disguises and, the moment we form an opinion, attaches itself to it & secretly takes it under its protection under pretence of an exclusive attachment to Truth or a militant zeal

for reason & the right opinion. We come to our subject with a predisposition towards a particular kind of solution established either in our feelings, in our previous education & formed ways of thinking or in our temperament & very cast of character. We seize passionately or we select deliberately & reasonably the arguments that favour our conclusion; we reject, whether with impatience or after scrupulous & fair attention, the arguments that would shake it. Logic, a malleable & pliant servitor behind all its air of dry & honest rigidity, asks only that it should be provided with suitable premises, unsuitable premises excluded or explained away, & its conscience is entirely satisfied. We perform the comedy with perfect sincerity, but it is still a comedy which Nature plays with us; our garb of intellectual stoicism has concealed from ourselves, the epicure of his own dish of thoughts, the mind enamoured of its favourite ideas. Shankara comes to the Upanishads with a judgment already formed; he is an Adwaitin, his temperament predisposes him to Mayavada. But the Sruti does not contain the Mayavada, at least explicitly; it does contain, side by side with the fundamental texts of Adwaita, a mass of texts which foster the temper & views of the Dualist. But the Sruti is the supreme & infallible authority; it contains nothing but truth; it can inculcate, therefore, nothing but Adwaita. Obviously, then, these dualistic texts must have a meaning & a bearing different from their surface meaning or their apparent bearing; it is Shankara's business, as a commentator in search of truth, to put always the right, that is to say always the Adwaitic interpretation on Sruti. Watch him then seize the text in his mighty hands and, with a swift effort, twist & shape & force it to assume a meaning or a bearing which will either support or at least be consistent with Adwaita,—a giant victoriously wrestling with & twisting into a shape a mass of obstinate iron! There is no insincerity in the process, rather the fervour of a too passionate sincerity. Still, Truth often veils her face with a tear or a smile, when Shankara comments on the Sruti. He is the greatest; the others are not likely to escape from the snare into which he casts himself headlong. Nor do I think the philosopher has yet been born who has escaped from these

original meshes of intellectual preference, predestined belief & ineffugable personal temperament.

In fact, the supreme failing of the metaphysical method is that, owing to the paucity, abstract uncertainty and doubtful bearing of its most essential data, it becomes almost entirely a domain of opinion. The absolute contempt of scientific rationalism for metaphysics which for a long time past has conquered general opinion in Europe & put an end to fruitful philosophical thinking, is almost certainly exaggerated & unjustified. The emergence of a new metaphysical thinking, more practical & realistic than the old abstract philosophies, presaged by Nietzsche, fulfilled in James & Bergson, is a sign at once of the return of Europe upon this dangerous error and of a perception, subconscious perhaps, of that real defect in the character of metaphysics which gave a hold to the destructive criticisms of modern realism. The long and imposing labours of the highest human intellects in the region of metaphysics, has not been a vain waste of priceless energy. Nature makes no such mistakes; her glance, though it seems to rove & fall at random and vary capriciously, is surer & more infallible in its selection than our human reason. Metaphysics have fulfilled a necessary and, when all has been said, a right & true function in our evolution; the materials of the great systems she has built have been general truths and not abstract errors. But the systems themselves are not final expressions of truth; they are the mould of the philosopher's personality, the stamp of his temperament and type of intellect. If we examine the method & substance of our own philosophies, we shall see why this must be so and cannot be otherwise. Their most important data are vast & vague conceptions, infinite in their nature, Being, Non-Being, Consciousness, Prakriti & Purusha (Nature & Soul), Mind, Matter. How can these entities be compelled to give us their secret except by a profound & exhaustive interrogatory such as modern Science has applied to the lowest principle of Being, analysing & experimenting in every possible way with Matter? But the metaphysician does not base his process on the sure steps of experience. He starts with an ideal definition of these great indefinables and he argues logically

from the abstract idea to results which are faultless, indeed, in logic;—but how can we be sure of an equal faultlessness in the reality of things which is after all our proper business? We cannot be; for each thinker handles according to his own light this vague & plastic material of ideas: there is nothing to check him; he asserts his opinion & his opinion is dominated by his education or his temperament. Shankara asserts that works are incompatible with salvation, Jaimini that works are indispensable to salvation. Who shall decide, when each proceeds with a perfect logic from his premises? Therefore, a second class of data have to be called in, the texts of the Sruti. But Jaimini & Shankara appeal equally to the texts of the Sruti; for there are some which, if pressed in their separate meaning, seem to declare the inutility of works, there are others which, if pressed in their separate meaning, seem to declare the indispensability of works. It is a question of interpretation and, where different interpretations are possible, we interpret, again, according to our opinion which is decided, as we have seen, by our education or our temperament. Even when an interpretation in the sense of our opinion seems to be impossible, an ingenious scholarship, a curious & intrepid learning can make it possible. Sa atma tattwamasi Swetaketo, cries Gautama to his son; "That is the Truth, that is the Self, that art thou, O Swetaketu." The evidence of Revealed Scripture seems to be conclusive for the Adwaitic view of existence. No, cries the Dualist, you have read it wrongly, you have separated átmátattwam into three distinct uncompounded words when there is really an euphonic combination of átmá atat twam, which gives us this result, "Thou art *not* that, O Swetaketu." Our inalienable perception of right, the satyam ritam in us, tells us that the Dualist's device is wrong, a desperate expedient only; but how shall we convince the Dualist, whose business it is, as a dualist, not to be convinced? For grammatically, textually, he is within his rights. Nor can Shankara at least complain of this amazing tour-de-force; for he himself has used the very same device, in his commentary on the Isha Upanishad, in order to read, for the convenience of his philosophy, asambhútyá, by the not coming into birth, where tradition, metre, sentence-

structure & context demand sambhútyá, by the coming into birth. In this confusion, is there any other class of data handled by metaphysics which will help us out of the difficulty? Certain psychological experiences are so handled; notably, the phenomena of sleep, the phenomena of samadhi, the phenomena of ultimate experience in consciousness. But how are we to know that these experiences bear the construction put on them or justify the conclusions drawn from them? how are we to know, for instance, that the experiences in consciousness which we find advanced as ultimate are really ultimate or even that they are not entirely illusory & deceptive? As metaphysics handles them, isolating them from each other, advancing them to demonstrate particular views & opinions, we cannot have any certainty. And, indeed, we find that each builder of a metaphysical system has a different formula of ultimate consciousness, ultimate to him, from which he starts; this difference of the ultimate step in experience which is also the starting-point for the chain of our logical systematising, is the strong foundation of all these age long jarrings in religious sect and school of philosophy. Here again opinion is master, very clearly founded not on data, not on pure truth, but on truth as seen in the colouring & with the limitation of our education & temperament. We can see from examples in modern Science how these differences work out & where their remedy is to be found. Physicists & geologists have disagreed in their view of the age of the earth; the geologists had certain data of experience before them which pointed to one conclusion, the physicists had a different set of data before them which pointed to a different conclusion. The difference here [is] a difference of education; the education of each had trained his mind to look only at a certain set of considerations, to move only in a certain way of thinking & reasoning. If physicist & geologist are combined in one mind, the age of the earth will not even then be indisputably fixed, for the necessary data are still wanting, but a juster perception will be gained, a better preparation for considering the problem, a superior chance of arriving as near to the truth as is now possible. Again, we see two scientists, absolutely agreed on all positive physical problems, confronted

with the phenomena of the psychical world, partly true, partly the conscious or half conscious frauds of exploiters & illusions of enthusiasts. One turns eagerly to the new subject, examines widely, believes readily, is discouraged by no disappointments; the other refuses contemptuously to investigate or, if he investigates, hastens as rapidly as he can to the conclusion that the whole business is a sink of fraud, imposture & mystification. It is difference of temperament, not of the facts, that has determined these conflicting opinions. In the positive questions on which they are agreed, in the conclusions of their respective sciences where the geologist & physicist would not dream of disputing each other's conclusions, intellectual type & temperament are by no means entirely banished as factors, but their play is restricted, a mass of actual fact & experience is there to check them & keep them in order. It is this check that is wanting to the method of the metaphysicians.

If, then, our object is to take a number of general truths, a number of abstract conceptions, a few general statements of Vedanta and wide facts of consciousness, and out of these materials build ourselves a bright, aerial house of speculation in which our intellect can live satisfied with the sense of finality and our personal temperament assert itself as the ultimate truth of things, the method of abstract speculation supporting itself on logic will be sufficient for our purpose. But if we wish rather to know anything for certain about God & the ultimate reality of the world and the foundations of our life & existence, it is not by logic and speculation that we shall arrive at our desire. Experience is the first necessity; an experiential method, not a speculative & logical method. What is the utility of logical discussion & the marshalling of Vedic texts to decide whether works are incompatible with salvation or indispensable to it or neither incompatible nor indispensable, but only useful & permissible? What we need is experience. If once it is established by the experience of the Jivanmuktas that works & salvation are compatible, by the experience of the Karmayogins that works also lead to freedom in the Infinite & Divine Existence,—although they need not be the only path, nor the only requisite,

although, even, it may be difficult to harmonise an active existence with the calm & peace of Infinity,—then no amount of logic to the contrary can be of any avail. Nor will Vedic texts avail, since the bearing of the texts has itself to be first decided. And what is the use of proving by logic & a curious scholarship that Tattwam asi should be read atattwam asi or that Vidya & Avidya in a particular Upanishad do not mean what they mean in every other Upanishad or that amritatwam in one text means the state of the gods & in others the state of Brahman? We need rather to experience always, to experience our unity with the One Truth of things and our difference from it and the relations of the unity to the difference; having experienced we shall understand. We need by practice & experiment, under a fit human guide or guided by the Divinity within, if we have strength & faith in Him, to fathom the outer dissonances & the secret harmonies of Vidya & Avidya, to achieve & enjoy immortality instead of arguing about immortality, to realise the thing the Veda speaks instead of disputing about the words of the text. In the absence of knowledge of the object, touch with the object, direct experience of the object, argument tends to become a vain jangling and speculation a high sounding jargon. These things may be useful to awaken our intellectual interest in the subject and move us to the acquisition of knowledge, but only if we become dissatisfied with them & see the necessity of proceeding farther. The Greek philosophers argued, of old, that the world was made out of water or made out of fire, and their speculations & the logical ingenuities of the sophists awakened a widespread curiosity on the subject; but the moment the experimental methods of physical science give us actual experience of the constituents of the material world, such speculations become valueless; the simple relation of connected facts takes the place of abstract logic. No one would dream of trying to settle the constituents of water or the processes of water by speculative logic; the experiential method is there to forbid that inutility. Even if the right experiential method has to be found, it is still by progressive experience step after step aided by the eye of intuition that it has to be discovered. Argument from first principles

can only be of a minor and almost an accidental assistance; its function is always to awaken the mind & attach it to the object, so that the intuition attracted by the mental demand may fall upon the point desired with its light & bright electric shock and its divinely illuminating swiftness.

It might seem to follow that as the scientific method has been used to elucidate the problems of matter, so it should be used to elucidate the problems of mind & spirit. Certainly, in the absence of another, the scientific method would be the best,—the method of patient and courageous experiment & observation aided by a scrupulous use of hypothesis & exact reasoning. A beginning has been made in this direction in Europe by the examination of the abnormal conditions of hypnosis, divided personality & rare mental & psychic phenomena as well as in the tendency of psychology towards the abandonment of the superficial, academic and unfruitful methods of the past. But it is doubtful whether the scientific method will bear as great fruit in the things of mind as it has borne in the things of matter; it is certain that it is wholly unsuited to the investigation of the things of the spirit, because here we come into touch with Infinity & even cross the borders that divide the definite from the indefinable. The more we progress in that direction, the more the methods of scientific reasoning become inapplicable, unfruitful & misleading. Even the Mind gives a very limited hold to the scientist. In the first place, experiment is much more dangerous & difficult than in the physical sciences; in the latter we risk death & suffering, in the former we have to go out of the normal, face the dangers of the beyond from which man draws back shuddering, risk even the loss of that very reason which we have chosen for our instrument. The repugnance of mankind to take this step is much greater than that fear & repugnance which set the mass of mankind against the early experiments of science as diabolical sorcery & magic. Similarly, we find denounced as quackery, dupery, hallucination, superstition, the modern attempts to deal with the obscure phenomena of mind,—those in which observation of the familiar & normal is not enough & experiment with the abnormal is necessary. But the difficulty of

convincing the ignorant or the reluctant is here infinitely greater, because of the elusive nature of mind as compared with matter. This is the second capital disadvantage of the scientific method, —that our only field for full experiment is ourselves. In matter we can examine any object by bringing it sufficiently near to be within the vicinity of our senses; but in mind we are unable to see the movements & processes of the minds of others except in so far as we can judge them from their gestures, action & physical expression,—indices unutterably perilous to the reasoner, inconceivably misleading. Unless, therefore, we can discover & use mental instruments, answering to the microscope, telescope, retorts of the astronomer, chemist & physicist, by which we can see, study & analyse the mental processes of thought, feeling & sensation in others as well as in ourselves, we may know indeed the physical movements & organs corresponding to some of the motions of mind, but we shall never know mind itself. It is an obscure perception of this truth that explains the powerful revival in our own day of the occult. Erratic & ignorant as much of it is, it was inevitable & it is salutary. Nature, unerring in her action, is filling mankind with an instinctive sense, a sort of dim subterranean intuition that, now that Science has almost completed its analysis of Matter, the next subject of inquiry must be Mind & Mind cannot be known except by as yet undiscovered or little-used introscopic instruments. Even if these are found, the most dangerous, intricate, difficult & varied experiments will be necessary; for mind is infinitely more elusive & elastic than matter. Where physical Nature confines herself rigidly & stubbornly to a single process, psychical Nature uses, versatiley & intricately, a hundred. To have sufficient experience, to be sure of one's results, one must take oneself & others experimentally to pieces, combine & recombine, put in order & put in disorder one's mental & emotional functions in a way & to an extent which humanity of the present day would pronounce chimerical and impossible. Still our own philosophy founding itself on experiments repeated continually through many millenniums declares that it is possible. Our Yoga, if its pretensions are true, enables us to do these things &, given certain difficult

precautions, to do them with an eventual impunity; it separates the various functions, keeps some inactive while others are acting, experimentally analyses & creates new syntheses of mind and feeling, so that we are able to know the constituents, process & function at least of our own internal forces, with some perfection. Certain forms of Yoga claim to develop faculties by which we can not only know & watch the internal processes of others, but silently control them. If these pretensions are found to be justified, if we can really master & use such methods & instruments, a scientific knowledge & control of the forces of mind may become as possible as our present scientific knowledge & control of the forces of Nature. But how much shall we have gained? A knowledge of constituents, processes, functions we shall have, not, any more than in physical nature, a knowledge of things in themselves. The reality & spirit of objects & forces will still escape us, leaving us only their forms & phenomena. Reason will once more find herself baffled; with regard to the one thing that really matters, the one thing humanity is driven eternally to seek as necessary, supreme & the highest good, we shall have to return, as now, to the sterile result of agnosticism.

Experience, yes; but experience illumined by Veda & vijnana. We must by experiment & experience develop those faculties which see the Truth face to face & do not have to approach it indirectly & by inference only. The results of experience will then be illumined by this higher truth; the truth acquired will be confirmed & enlarged by experience. We shall be able to recover our lost kingdoms of the spirit, know the unknowable, enter into relations with the Infinite, be ourselves the reality of the Infinite as well as, if we so choose, its expression in the apparent Finite. We shall not be confined to the silver & copper of mind & matter, but handle also the gold of the Spirit. We shall use indeed the smaller currency in which the Spirit makes itself negotiable in material form & mental impression, not despising even the most apparently insignificant cent or cowrie, since all are divine, but shall use them only as lesser symbols of the higher currency which is alone of a true & self-determined value. This knowledge & possession of the things of the Spirit is the promise of Veda &

Vedanta,—a promise not delayed for its fulfilment to another life & world, but offered, ihaiva, in the present life & in this perishable body, nor only offered, but continually realised since prehistoric times by elect spirits in our Indian generations. Yoga, which offers us the knowledge & control of mental processes & forces in ourselves & others, offers us what is infinitely more valuable & the one thing worth pursuing for its own sake, the knowledge & possession of the truth of forms mental & material in the reality of the Self and the realisation of life in the world as the phenomena of a divine epiphany. We can know God, we can become the Brahman.

This promise long confined to the few, to the initiates in India, is once more being placed before the whole world for its acceptance. Of this supreme offer a life recently lived in an obscure corner of the earth seems to me to be the very incarnation & illuminating symbol,—the life of the Paramhansa Ramakrishna of Dakshineswar. Not for any body of teachings that he left behind, not for any restricted type of living, peculiar system of ethics or religious panacea for the ills of existence,—but because it brought once more into the world with an unexampled thoroughness & liberality the great Vedantic method of experience & inner revelation & showed us its possibilities. An illiterate, poor & obscure Bengali peasant, one who to the end of his life used a patois full of the most rustic forms & expressions, ignorant of Sanscrit, of any language but his own provincial dialect, ignorant of philosophy & science, ignorant of the world, yet realised in himself all the spiritual wisdom of the ages, shed in his brief sayings a light so full, so deep on the most difficult profundities of our inner being, the most abstruse questions of metaphysics that the most strenuous thinkers & the most learned Pandits were impressed by his superiority. By what process did he arrive at this great store of living knowledge? Never by any intellectual process, by any steps of reasoning. In all the things of the intellect, even the most elementary, he was as simple as a child, more unsophisticated than the most ignorant peasant of his native village. He could turn indeed an eye of infallible keenness on the hearts & intentions of men, but

it was the eye of vision, not the eye of thought. Never indeed, in modern times or since the intellectualising of mankind began were reasoning & intellectual processes so rigidly excluded from the process of knowledge with such astonishing results. The secret of his success was that always he lived & saw; where most men only reason and translate thought into sentiment, feel and translate emotion into terms of thinking, he saw with the heart or a higher faculty & threw out his vision into experience with a power of realisation of which modern men have long ceased to be capable; thus living everything to its full conclusion of mental & physical experience his soul opened more & more to knowledge, to direct truth, to the Satyam in things, until the depths hid nothing from him & the heights became accessible to his tread. He first has shown us clearly, entirely & without reserve or attenuating circumstance, the supreme importance of being over thinking, but being, not in terms of the body & life merely, like the sensational & emotional man or the man of action, but in the soul as well and the soul chiefly, in the central entity of this complex human symbol. Therefore he was able to liberate us from the chains imposed by the makeshifts of centuries. He broke through the limitations of the Yogic schools, practised each of them in turn & would reach in three days the consummation which even to powerful Yogins is the accomplishment of decades or even of more lives than one; broke through the limitations of religion and fulfilled himself in experience as a worshipper of Christ and of Allah while all the time remaining in the individual part of him a Hindu of the sect of the Shaktas; broke through the limitations of the Guruparampara, &, while using human teachers for outward process & discipline, yet received his first & supreme initiation from the eternal Mother herself and all his knowledge from the World-Teacher within; broke through the logical limitations of the metaphysical schools and showed us Dwaita & Adwaita inextricably yet harmoniously one in experience, even as they are shown to us in Veda & Vedanta. All that at the time still governed our spiritual life he took typically into his soul & into his mental & physical experience, swallowed up its defects &

imperfections in the infinite abyss of his personality and brought out through these masks & forms always the something beyond that is perfect and supreme. Thus establishing experience and inward revelation as the supreme means of the highest knowledge, he became one of the seed-lives of humanity; and the seed it held was the loosening of the bonds of the rational intellect & the return of humanity's journey from its long detour on the mid-plateaus of reason towards the footpath that winds up to the summits of the spirit.

Note on the Texts

Note on the Texts

ISHA UPANISHAD comprises Sri Aurobindo's translations of and commentaries on the Isha Upanishad. His translations of and commentaries on other Upanishads, as well as his translations of later Vedantic texts and writings on the Upanishads and Vedanta in general, are published in *Kena and Other Upanishads*, volume 18 of THE COMPLETE WORKS OF SRI AUROBINDO.

Sri Aurobindo had a special interest in the Isha Upanishad, whose principle of “uncompromising reconciliation of uncompromising extremes” (p. 83) underlies his own philosophy as well. He first translated the Isha around 1900, and over the next fourteen years returned to it again and again, citing, translating, and writing commentaries on this eighteen-verse text. None of these commentaries was completed, but each served as a step in the development of his interpretation.

Between August 1914 and May 1915 Sri Aurobindo published a translation and analysis of the Isha in the monthly review *Arya*. These were issued as a book in 1920 or 1921; a revised edition came out in 1924. This work contains Sri Aurobindo's last word on the Isha Upanishad; it may also be said to represent the quintessence of his Upanishadic interpretation. His final translation and analysis are published in Part One of the present volume. Part Two contains the various incomplete commentaries he wrote before August 1914.

PART ONE: TRANSLATION AND COMMENTARY
PUBLISHED BY SRI AUROBINDO

This part comprises Sri Aurobindo's final translation and analysis of the Isha Upanishad.

Isha Upanishad. This work, consisting of a translation (with Sanskrit text) and an analysis in four “movements”, was published in the monthly review *Arya* in ten instalments between August 1914 (the

Arya's first issue) and May 1915. It was brought out as a book around 1921. New editions appeared in 1924, 1941, 1945, and subsequently. The 1924 edition contained some comparatively minor revisions by the author.

PART TWO: INCOMPLETE COMMENTARIES FROM MANUSCRIPTS

Before publishing his final translation and analysis in 1914–15, Sri Aurobindo made ten different efforts to write commentaries on the *Isha Upanishad*. The earliest dates from around 1902, the last from mid-1914, that is, just before the time he started publishing his final translation and analysis in the *Arya*. They are arranged here in approximate chronological order. Some of them are of considerable length but none was completed or revised for publication. All were discovered among his manuscripts after his passing and subsequently transcribed and published in various journals and books.

Isha Upanishad: All that is world in the Universe. Circa 1902. Sri Aurobindo abandoned this work after a few pages. There is no full stop after the last word written.

The Ishavasyopanishad with a commentary in English. Circa 1905. The title page of this work reads in full: “Materials for Bhavani Grantha-/Mala./1. The Ishavasyopanishad/with a commentary in English.” The Sanskrit phrase “Bhavani Grantha-Mala” means “Garland of books for the goddess Bhavani”. This commentary apparently was intended to be the first of a series of works for the use of students of Bhawani Mandir, a “temple to the goddess Bhawani” where young men would be trained to do selfless work for Mother India. The idea of Bhawani Mandir was primarily that of Barindra Kumar Ghose, Sri Aurobindo’s younger brother, though Sri Aurobindo did write a manifesto setting forth its ideals around 1905 (see *Bhawani Mandir* in *Bande Mataram: Political Writings 1890–1908*, volume 6 of THE COMPLETE WORKS OF SRI AUROBINDO). Shortly after writing the pamphlet, Sri Aurobindo lost interest in the project, and does not appear to have written any other works for the proposed “Grantha-Mala”.

The text of the commentary ends abruptly at the bottom of the last page of the notebook. It may have been continued in another notebook

that has been lost. Inside the back cover, facing the last page of text, Sri Aurobindo wrote the following: “Hunger is in its nature cannibal, you eat protoplasm & nothing else because you are protoplasm”.

The Karmayogin: A Commentary on the Isha Upanishad. Circa 1905–6. This lengthy but still incomplete commentary was written sometime after Sri Aurobindo took up the practice of yoga in 1905, and no later than May 1908, when the second of the two notebooks in which it is written was seized by the Calcutta police at the time of his arrest in connection with the Alipore Bomb Conspiracy. He began it, as he had begun “The Ishavasyopanishad”, as a guru-student dialogue, but dropped this form after the first page. The commentary contains several passages, totalling around 400 lines or ten printed pages, that are the same as or very similar to passages in “The Ishavasyopanishad”. He apparently copied them from that work while writing this one.

Sri Aurobindo modified the structure of the commentary while he was working on it. See the note on page 170 for details. The first two “Chapters”, dealing with verses 1 to 3 of the Upanishad, occupy the first of the two manuscript notebooks that were used for writing the commentary. (For some reason Sri Aurobindo wrote “Chapters I to III” on the first page of this notebook. This may explain why the first “Chapter” in the second notebook is numbered “IV”.) This second notebook contains the second “Part”, which deals with verses 4 to 6 of the Upanishad.

Ish and Jagat. Circa 1912. Editorial title. This piece is quite incomplete. **The Secret of the Isha.** Circa 1912. In the manuscript, “Chapter I” is written above the title. Only this fragmentary first chapter was written. **Chapters for a Work on the Isha Upanishad.** Circa 1912. Editorial title. These six draft chapters for a proposed “book” (see the last paragraph of chapter [2]) have been reproduced in the order in which they occur in Sri Aurobindo’s notebook. The chapters are numbered editorially [1] to [6]. Sri Aurobindo’s own working titles and numbers are given. Although headed “The Isha Upanishad”, the piece deals with the text of the Upanishad only in chapter [3] and more briefly in chapter [6]. Elsewhere it deals, among other things, with Puranic cosmology, the savage and the ascent of the human being, philology, the Veda, and Sri Aurobindo’s method of Vedic and Vedantic exegesis. The suggestion on the scope of “dhanam” in chapter [3] may refer to

Sri Aurobindo's discussion of this word in Appendix [3] of Draft A of "The Life Divine" (see below). This would indicate that this chapter was written after that draft.

The Upanishad in Aphorism: The Isha Upanishad. Circa 1913–14 (placed before the next piece in order to keep the three drafts of "The Life Divine" together). The first paragraph of this "commentary" consists of a translation of the first verse of the Isha Upanishad. The rest is an exploration, in aphorisms, of various related ideas.

The Life Divine: A Commentary on the Isha Upanishad [Draft A]. Circa 1912. Sri Aurobindo wrote this draft in pencil on unused pages or parts of pages of two notebooks that he had used a number of years earlier to make fair copies of literary works. He originally headed the piece "The Isha Upanishad". Later he changed the heading to "The Secret of Divine Life/A Commentary on the Isha Upanishad", and still later to "The Life Divine/A Commentary on the Isha Upanishad". "Introduction", written below the heading, was at one point changed to "Foreword". In the 18 July 1912 entry of *Record of Yoga*, his yogic diary, Sri Aurobindo wrote: "the Life Divine commenced". It was probably to this draft that he was referring. Note also the indirect reference to the *Titanic* disaster, which took place in April 1912. Several passages written for this piece but not worked into the text are reproduced in an appendix published at the end of the text.

The Life Divine [Draft B]. Circa 1913–14. Sri Aurobindo wrote this draft in pen in three notebooks. The five chapters of which it is composed are the beginning of "Part II / The First Movement" of a planned complete commentary. The following outline, written on the first page of the manuscript, shows the structure of this proposed work:

- Part I. The Upanishad
- Part II The First Movement—God, Life & Nature
- Part III The Second Movement—Brahman Self Blissful and All-Blissful
- Part [IV] The Third Movement—God in World—Vidya & Avidya
- Part [V] The Fourth Movement—Surya & Agni
- Part [VI] The Divine Life

Of these six parts, only "Part II The First Movement" was worked on.
The Life Divine [Draft C]. 1914. This draft consists of two chapters, numbered II and III by the author. Although they have the same heading

as “Draft A” and “Draft B”, they seem to be destined not so much for a commentary on the Isha Upanishad as for an independent philosophical writing. (They contain no direct commentary on the Upanishad but occasionally mention it.) They seem in fact to represent a transitional stage between the “Life Divine” commentary on the Isha Upanishad and *The Life Divine*, Sri Aurobindo’s principal philosophical work, which began to be published in the *Arya* in August 1914. The first instalment of Sri Aurobindo’s final translation and analysis of the Isha Upanishad (see Part One above) appeared in the same issue.

PUBLISHING HISTORY

Sri Aurobindo published a translation of the Isha Upanishad on 19 June 1909 in the first issue of the *Karmayogin*, a weekly review of politics and culture. This was a revised version of a translation he had completed and typed around 1900. He published his final translation and analysis in the *Arya* between August 1914 and May 1915. Around 1921, the *Arya* text was reprinted by the Arya Publishing House, Calcutta. The same publisher brought out an “authorised edition”, which was said to be “revised and enlarged”, in 1924. That edition in fact contained no real enlargement (other than the restoration of the analysis of verses 4–5, which had inadvertently been omitted in 1921) and only slight authorial revision. Two more editions were brought out by the Arya Publishing House during Sri Aurobindo’s lifetime, in 1941 and 1945. These contained a few minor changes. Several more editions were brought out after 1950. In 1971 the work was included in *The Upanishads*, volume 12 of the Sri Aurobindo Birth Centenary Library. The text in the present volume has been checked against the texts printed in the *Arya* and in the first four editions.

None of the ten incomplete commentaries published in Part Two appeared during Sri Aurobindo’s lifetime. All have been transcribed from his manuscripts. Four were published in 1971 in *The Upanishads*, one in the *Supplement* to the Sri Aurobindo Birth Centenary Library (1973), and the other five in the journal *Sri Aurobindo: Archives and Research* between 1977 and 1983.

Kena and Other Upanishads

Publisher's Note

This volume comprises Sri Aurobindo's translations of and commentaries on Upanishads other than the Isha Upanishad. (His writings on that Upanishad appear in *Isha Upanishad*, volume 17 of THE COMPLETE WORKS OF SRI AUROBINDO.) It also includes his translations of later Vedantic texts and writings on the Upanishads and Vedanta philosophy in general.

The volume is divided into three parts. The first consists of translations and commentaries that were published during Sri Aurobindo's lifetime. The pieces in this part, along with his final translation of and commentary on the Isha Upanishad, are his most mature works of Upanishadic interpretation. The second and third parts consist of material from Sri Aurobindo's manuscripts. The second includes early translations of the Prashna, Mandukya, Aitareya and Taittiriya Upanishads, and incomplete translations of and commentaries on some other Upanishads and Vedantic texts. The third part comprises incomplete and fragmentary writings on the Upanishads and Vedanta in general.

All the texts have been checked against the relevant manuscript and printed versions.

Guide to Editorial Notation

The contents of Parts Two and Three of this volume were never prepared by Sri Aurobindo for publication. They have been transcribed from manuscripts that sometimes present textual difficulties. In this edition these problems have been indicated as far as possible by means of the notation shown below.

Notation	Textual Problem
[.....]	Word(s) lost through damage to the manuscript (at the beginning of a piece, sometimes indicates that a page or pages of the manuscript have been lost)
[word]	Word(s) omitted by the author or lost through damage to the manuscript that are required by grammar or sense, and that could be supplied by the editors
[]	Blank left by the author to be filled in later but left unfilled, which the editors were not able to fill
<i>[note]</i>	Situations requiring textual explication; all such information is printed in italics

Kena Upanishad

The Kena Upanishad

FIRST PART

केनेषितं पतति प्रेषितं मनः केन प्राणः प्रथमः प्रैति युक्तः।
केनेषितां वाचमिमां वदन्ति चक्षुः श्रोत्रं क उ देवो युनक्ति ॥१॥

1. By whom missioned falls the mind shot to its mark? By whom yoked moves the first life-breath forward on its paths? By whom impelled is this word that men speak? What god set eye and ear to their workings?

श्रोत्रस्य श्रोत्रं मनसो मनो यद् वाचो ह वाचं स उ प्राणस्य प्राणः।
चक्षुषश्चक्षुरतिमुच्य धीरा: प्रेत्यास्माप्नोकादमृता भवन्ति ॥२॥

2. That which is hearing of our hearing, mind of our mind, speech of our speech, that too is life of our life-breath and sight of our sight. The wise are released beyond and they pass from this world and become immortal.

न तत्र चक्षुर्गच्छति न वाग् गच्छति नो मनः।
न विद्मो न विजानीमो यथैतदनुशिष्यात्।
अन्यदेव तद्विदितादथो अविदितादधि।
इति शुश्रुम पूर्वेषां ये नस्तद् व्याचचक्षिरे ॥३॥

3. There sight travels not, nor speech, nor the mind. We know It not nor can distinguish how one should teach of It: for It is other than the known; It is there above the unknown. It is so we have heard from men of old who declared That to our understanding.

यद्वाचानभ्युदितं येन वागभ्युद्यते।
तदेव ब्रह्म त्वं विद्धि नेदं यदिदमुपासते ॥४॥

4. That which is unexpressed by the word, that by which the

word is expressed, know That to be the Brahman and not this which men follow after here.

यन्मनसा न मनुते येनाहुर्मनो मतम् ।
तदेव ब्रह्म त्वं विद्धि नेदं यदिदमुपासते ॥ ५ ॥

5. That which thinks not by the mind,¹ that by which the mind is thought, know That to be the Brahman and not this which men follow after here.

यच्चक्षुषा न पश्यति येन चक्षुषि पश्यति ।
तदेव ब्रह्म त्वं विद्धि नेदं यदिदमुपासते ॥ ६ ॥

6. That which sees not with the eye,² that by which one sees the eye's seeings, know That to be the Brahman and not this which men follow after here.

यच्छ्वेत्रेण न शृणोति येन ओत्रमिदं श्रुतम् ।
तदेव ब्रह्म त्वं विद्धि नेदं यदिदमुपासते ॥ ७ ॥

7. That which hears not with the ear,³ that by which the ear's hearing is heard, know That to be the Brahman and not this which men follow after here.

यत्प्राणेन न प्राणिति येन प्राणः प्रणीयते ।
तदेव ब्रह्म त्वं विद्धि नेदं यदिदमुपासते ॥ ८ ॥

8. That which breathes not with the breath,⁴ that by which the life-breath is led forward in its paths, know That to be the Brahman and not this which men follow after here.

¹ Or, “that which one thinks not with the mind”.

² Or, “that which one sees not with the eye”.

³ Or, “that which one hears not with the ear”.

⁴ Or, “that which one breathes not (i.e. smells not) with the breath”.

SECOND PART

यदि मन्यसे सुवेदेति दग्धमेवापि नूनं त्वं वेत्थ ब्रह्मणो रूपम् ।
यदस्य त्वं यदस्य देवेष्वथ नु मीमांस्यमेव ते मन्ये विदितम् ॥ १ ॥

1. If thou thinkest that thou knowest It well, little indeed dost thou know the form of the Brahman. That of It which is thou, that of It which is in the gods, this thou hast to think out. I think It known.

नाहं मन्ये सुवेदेति नो न वेदेति वेद च ।
यो नस्तद्वेद तद्वेद नो न वेदेति वेद च ॥ २ ॥

2. I think not that I know It well and yet I know that It is not unknown to me. He of us who knows It, knows That; he knows that It is not unknown to him.

यस्यामतं तस्य मतं मतं यस्य न वेद सः ।
अविज्ञातं विज्ञानतां विज्ञातमविज्ञानताम् ॥ ३ ॥

3. He by whom It is not thought out, has the thought of It; he by whom It is thought out, knows It not. It is unknown to the discernment of those who discern of It, by those who seek not to discern of It, It is discerned.

प्रतिबोधविदितं मतममृतत्वं हि विन्दते ।
आत्मना विन्दते वीर्यं विद्यया विन्दतेऽमृतम् ॥ ४ ॥

4. When It is known by perception that reflects It, then one has the thought of It, for one finds immortality; by the self one finds the force to attain and by the knowledge one finds immortality.

इह चेदवेदीदथ सत्यमस्ति न चेदिहावेदीन्महती विनष्टिः ।
भूतेषु भूतेषु विचित्य धीराः प्रेत्यास्माल्लोकादमृता भवन्ति ॥ ५ ॥

5. If here one comes to that knowledge, then one truly is; if here one comes not to the knowledge, then great is the perdition.

The wise distinguish That in all kinds of becomings and they pass forward from this world and become immortal.

THIRD PART

ब्रह्म ह देवेभ्यो विजिये तस्य ह ब्रह्मणो विजये देवा अमहीयन्त ।
त ऐक्षन्तास्माकमेवायं विजयोऽस्माकमेवायं महिमेति ॥ १ ॥

1. The Eternal conquered for the gods and in the victory of the Eternal the gods grew to greatness. They saw, “Ours the victory, ours the greatness.”

तद्वैषां विजज्ञौ तेभ्यो ह प्रादुर्बभूव तन्न व्यजानत किमिदं यक्ष-
मिति ॥ २ ॥

2. The Eternal knew their thought and appeared before them; and they knew not what was this mighty Daemon.

तेऽग्निमब्रुवञ्जातवेद एतद्विजानीहि किमेतद्यक्षमिति तथेति ॥ ३ ॥

3. They said to Agni, “O thou that knowest all things born, learn of this thing, what may be this mighty Daemon,” and he said, “So be it.”

तदभ्यद्रवत् तमभ्यवदत् कोऽसीत्यग्निर्वा अहमस्मीत्यब्रवीज्जातवेदा
वा अहमस्मीति ॥ ४ ॥

4. He rushed towards the Eternal and It said to him, “Who art thou?” “I am Agni,” he said, “I am he that knows all things born.”

तस्मिंस्त्वयि किं वीर्यमित्यपीदं सर्वं दहेयं यदिदं पृथिव्यामिति ॥ ५ ॥

5. “Since such thou art, what is the force in thee?” “Even all this I could burn, all that is upon the earth.”

तस्मै तृणं निदधावेतद्हेति तदुपप्रेयाय सर्वजवेन तन्न शशाक दग्धुं स
तत एव निवृते नैतदशकं विज्ञातुं यदेतद्यक्षमिति ॥ ६ ॥

6. The Eternal set before him a blade of grass; “This burn;” and he made towards it with all his speed, but could not burn it. There he ceased, and turned back; “I could not know of It, what might be this mighty Daemon.”

अथ वायुमबृवन् वायवेतद्विजानीहि किमेतद्यक्षमिति तथेति ॥ ७ ॥

7. Then they said to Vayu, “O Vayu, this discern, what is this mighty Daemon.” He said, “So be it.”

तदभ्यद्रवत् तमभ्यवदत् कोऽसीति वायुर्वा अहमस्मीत्यब्रवीन्मातरिश्चा
वा अहमस्मीति ॥ ८ ॥

8. He rushed upon That; It said to him, “Who art thou?” “I am Vayu,” he said, “and I am he that expands in the Mother of things.”

तस्मिंस्त्वयि किं वीर्यमित्यपीदं सर्वमाददीय यदिदं पृथिव्यामिति ॥ ९ ॥

9. “Since such thou art, what is the force in thee?” “Even all this I can take for myself, all this that is upon the earth.”

तस्मै तृणं निदधावेतदादत्त्वेति तद्वपप्रेयाय सर्वज्वेन तत्र शशाकादातुं
स तत एव निवृते नैतदशकं विज्ञातुं यदेतद्यक्षमिति ॥ १० ॥

10. That set before him a blade of grass; “This take.” He went towards it with all his speed and he could not take it. Even there he ceased, even thence he returned; “I could not discern of That, what is this mighty Daemon.”

अथेन्द्रमबृवन् मघवन्नेतद्विजानीहि किमेतद्यक्षमिति तथेति तदभ्यद्रवत्
तस्मात्तिरोदधे ॥ ११ ॥

11. Then they said to Indra, “Master of plenitudes, get thou the knowledge, what is this mighty Daemon.” He said, “So be it.” He rushed upon That. That vanished from before him.

स तस्मिन्नेवाकाशे स्त्रियमाजगाम बहुशोभमानामुमां हैमवर्तीं तां
होवाच किमेतद्यक्षमिति ॥ १२ ॥

12. He in the same ether came upon the Woman, even upon Her who shines out in many forms, Uma daughter of the snowy summits. To her he said, “What was this mighty Daemon?”

FOURTH PART

सा ब्रह्मेति होवाच ब्रह्मणो वा एतद्विजये महीयध्वमिति ततो हैव
विदांचकार ब्रह्मेति ॥ १ ॥

1. She said to him, “It is the Eternal. Of the Eternal is this victory in which ye shall grow to greatness.” Then alone he came to know that this was the Brahman.

तस्माद्वा एते देवा अतितरामिवान्यान् देवान् यदग्निर्वायुरिन्द्रस्ते
ह्येनन्नेदिष्टं पस्पर्शस्ते ह्येनत्प्रथमो विदांचकार ब्रह्मेति ॥ २ ॥

2. Therefore are these gods as it were beyond all the other gods, even Agni and Vayu and Indra, because they came nearest to the touch of That...⁵

तस्माद्वा इन्द्रोऽतितरामिवान्यान्देवान् स ह्येनन्नेदिष्टं पस्पर्शं स ह्येनत्
प्रथमो विदांचकार ब्रह्मेति ॥ ३ ॥

3. Therefore is Indra as it were beyond all the other gods because he came nearest to the touch of That, because he first knew that it was the Brahman.

तस्येष आदेशो यदेतद्विद्युतो व्यद्युतदाः इतीन्यमीमिषदाः इत्यधि-
दैवतम् ॥ ४ ॥

4. Now this is the indication of That,—as is this flash of the lightning upon us or as is this falling of the eyelid, so in that which is of the gods.

⁵ By some mistake of early memorisers or later copyists the rest of the verse has become hopelessly corrupted. It runs, “They he first came to know that it was the Brahman,” which is neither fact nor sense nor grammar. The close of the third verse has crept into and replaced the original close of the second.

अथाध्यात्मं यदेतन्नच्छतीव च मनोऽनेन चैतदुपस्मरत्यभीक्षणं सं-
कल्पः ॥ ५ ॥

5. Then in that which is of the Self,—as the motion of this mind seems to attain to That and by it afterwards the will in the thought continually remembers It.

तद्व तद्वनं नाम तद्वन्मित्युपासितव्यं स य एतदेवं वेदाभि हैनं सर्वाणि
भूतानि संवाच्छन्ति ॥ ६ ॥

6. The name of That is “That Delight”; as That Delight one should follow after It. He who so knows That, towards him verily all existences yearn.

उपनिषदं भो ब्रह्मीत्युक्ता त उपनिषद् ब्राह्मीं वाव त उपनिषदमबू-
मेति ॥ ७ ॥

7. Thou hast said “Speak to me Upanishad”;⁶ spoken to thee is Upanishad. Of the Eternal verily is the Upanishad that we have spoken.

तस्यै तपो दमः कर्मेति प्रतिष्ठा वेदाः सर्वाङ्गानि सत्यमायतनम् ॥ ८ ॥

8. Of this knowledge austerity and self-conquest and works are the foundation, the Vedas are all its limbs, truth is its dwelling place.

यो वा एतामेवं वेदापहत्य पाप्मानमनन्ते स्वर्गे लोके ज्येये प्रतितिष्ठति
प्रतितिष्ठति ॥ ९ ॥

9. He who knows this knowledge, smites evil away from him and in that vaster world and infinite heaven finds his foundation, yea, he finds his foundation.

⁶ Upanishad means inner knowledge, that which enters into the final Truth and settles in it.

Commentary

I

The Subject of the Upanishad

THE TWELVE great Upanishads are written round one body of ancient knowledge; but they approach it from different sides. Into the great kingdom of the Brahnavidya each enters by its own gates, follows its own path or detour, aims at its own point of arrival. The Isha Upanishad and the Kena are both concerned with the same grand problem, the winning of the state of Immortality, the relations of the divine, all-ruling, all-possessing Brahman to the world and to the human consciousness, the means of passing out of our present state of divided self, ignorance and suffering into the unity, the truth, the divine beatitude. As the Isha closes with the aspiration towards the supreme felicity, so the Kena closes with the definition of Brahman as the Delight and the injunction to worship and seek after That as the Delight. Nevertheless there is a variation in the starting-point, even in the standpoint, a certain sensible divergence in the attitude.

For the precise subject of the two Upanishads is not identical. The Isha is concerned with the whole problem of the world and life and works and human destiny in their relation to the supreme truth of the Brahman. It embraces in its brief eighteen verses most of the fundamental problems of Life and scans them swiftly with the idea of the supreme Self and its becomings, the supreme Lord and His workings as the key that shall unlock all gates. The oneness of all existences is its dominating note.

The Kena Upanishad approaches a more restricted problem, starts with a more precise and narrow inquiry. It concerns itself only with the relation of mind-consciousness to Brahman-consciousness and does not stray outside the strict boundaries of its subject. The material world and the physical life are taken for granted, they are hardly mentioned. But the material world and the physical life exist for us only by virtue of our internal

self and our internal life. According as our mental instruments represent to us the external world, according as our vital force in obedience to the mind deals with its impacts and objects, so will be our outward life and existence. The world is for us, not fundamentally but practically at any rate, what our mind and senses declare it to be; life is what our mentality or at least our half-mentalised vital being determines that it shall become. The question is asked by the Upanishad, what then are these mental instruments? what is this mental life which uses the external? Are they the last witnesses, the supreme and final power? Are mind and life and body all or is this human existence only a veil of something greater, mightier, more remote and profound than itself?

The Upanishad replies that there is such a greater existence behind, which is to the mind and its instruments, to the life-force and its workings what they are to the material world. Matter does not know Mind, Mind knows Matter; it is only when the creature embodied in Matter develops mind, becomes the mental being that he can know his mental self and know by that self Matter also in its reality to Mind. So also Mind does not know That which is behind it, That knows Mind; and it is only when the being involved in Mind can deliver out of its appearances his true Self that he can become That, know it as himself and by it know also Mind in its reality to that which is more real than Mind. How to rise beyond the mind and its instruments, enter into himself, attain to the Brahman becomes then the supreme aim for the mental being, the all-important problem of his existence.

For given that there is a more real existence than the mental existence, a greater life than the physical life, it follows that the lower life with its forms and enjoyments which are all that men here ordinarily worship and pursue, can no longer be an object of desire for the awakened spirit. He must aspire beyond; he must free himself from this world of death and mere phenomena to become himself in his true state of immortality beyond them. Then alone he really exists when here in this mortal life itself he can free himself from the mortal consciousness and know and

be the Immortal and Eternal. Otherwise he feels that he has lost himself, has fallen from his true salvation.

But this Brahman-consciousness is not represented by the Upanishad as something quite alien to the mental and physical world, aloof from it and in no way active upon it or concerned with its activities. On the contrary, it is the Lord and ruler of all the world; the energies of the gods in the mortal consciousness are its energies; when they conquer and grow great, it is because Brahman has fought and won. This world therefore is an inferior action, a superficial representation of something infinitely greater, more perfect, more real than itself.

What is that something? It is the All-Bliss which is infinite being and immortal force. It is that pure and utter bliss and not the desires and enjoyments of this world which men ought to worship and to seek. How to seek it is the one question that matters; to follow after it with all one's being is the only truth and the only wisdom.

II

The Question. *What Godhead?*

MIND IS the principal agent of the lower or phenomenal consciousness; vital force or the life-breath, speech and the five senses of knowledge are the instruments of the mind. Prana, the life-force in the nervous system, is indeed the one main instrument of our mental consciousness; for it is that by which the mind receives the contacts of the physical world through the organs of knowledge, sight, hearing, smell, touch and taste, and reacts upon its object by speech and the other four organs of action; all these senses are dependent upon the nervous Life-force for their functioning. The Upanishad therefore begins by a query as to the final source or control of the activities of the Mind, Life-Force, Speech, Senses.

The question is, *kena*, by whom or what? In the ancient conception of the universe our material existence is formed from the five elemental states of Matter, the ethereal, aerial, fiery, liquid and solid; everything that has to do with our material existence is called the elemental, *adhibhūta*. In this material there move non-material powers manifesting through the Mind-Force and Life-Force that work upon Matter, and these are called Gods or devas; everything that has to do with the working of the non-material in us is called *adhidaiva*, that which pertains to the Gods. But above the non-material powers, containing them, greater than they is the Self or Spirit, *ātman*, and everything that has to do with this highest existence in us is called the spiritual, *adhyātma*. For the purpose of the Upanishads the *adhidaiva* is the subtle in us; it is that which is represented by Mind and Life as opposed to gross Matter; for in Mind and Life we have the characteristic action of the Gods.

The Upanishad is not concerned with the elemental, the *adhibhūta*; it is concerned with the relation between the subtle existence and the spiritual, the *adhidaiva* and *adhyātma*. But the

Mind, the Life, the speech, the senses are governed by cosmic powers, by Gods, by Indra, Vayu, Agni. Are these subtle cosmic powers the beginning of existence, the true movers of mind and life, or is there some superior unifying force, one in itself behind them all?

By whom or what is the mind missioned and sent on its errand so that it falls on its object like an arrow shot by a skilful archer at its predetermined mark, like a messenger, an envoy sent by his master to a fixed place for a fixed object? What is it within us or without us that sends forth the mind on its errand? What guides it to its object?

Then there is the Life-force, the Prana, that works in our vital being and nervous system. The Upanishad speaks of it as the first or supreme Breath; elsewhere in the sacred writings it is spoken of as the chief Breath or the Breath of the mouth, *mukhya, āsanya*; it is that which carries in it the Word, the creative expression. In the body of man there are said to be five workings of the life-force called the five Pranas. One specially termed Prana moves in the upper part of the body and is preeminently the breath of life, because it brings the universal Life-force into the physical system and gives it there to be distributed. A second in the lower part of the trunk, termed Apana, is the breath of death; for it gives away the vital force out of the body. A third, the Samana, regulates the interchange of these two forces at their meeting-place, equalises them and is the most important agent in maintaining the equilibrium of the vital forces and their functions. A fourth, the Vyana, pervasive, distributes the vital energies throughout the body. A fifth, the Udana, moves upward from the body to the crown of the head and is a regular channel of communication between the physical life and the greater life of the spirit. None of these are the first or supreme Breath, although the Prana most nearly represents it; the Breath to which so much importance is given in the Upanishads, is the pure life-force itself,—first, because all the others are secondary to it, born from it and only exist as its special functions. It is imaged in the Veda as the Horse; its various energies are the forces that draw the chariots of the Gods. The Vedic image is recalled

by the choice of the terms employed in the Upanishad, *yukta*, yoked, *praiti*, goes forward, as a horse driven by the charioteer advances in its path.

Who then has yoked this Life-force to the many workings of existence or by what power superior to itself does it move forward in its paths? For it is not primal, self-existent or its own agent. We are conscious of a power behind which guides, drives, controls, uses it.

The force of the vital breath enables us to bring up and speed outward from the body this speech that we use to express, to throw out into a world of action and new-creation the willings and thought-formations of the mind. It is propelled by Vayu, the life-breath; it is formed by Agni, the secret will-force and fiery shaping energy in the mind and body. But these are the agents. Who or what is the secret Power that is behind them, the master of the word that men speak, its real former and the origin of that which expresses itself?

The ear hears the sound, the eye sees the form; but hearing and vision are particular operations of the life-force in us used by the mind in order to put itself into communication with the world in which the mental being dwells and to interpret it in the forms of sense. The life-force shapes them, the mind uses them, but something other than the life-force and the mind enables them to shape and to use their objects and their instruments. What God sets eye and ear to their workings? Not Surya, the God of light, not Ether and his regions; for these are only conditions of vision and hearing.

The Gods combine, each bringing his contribution, the operations of the physical world that we observe as of the mental world that is our means of observation; but the whole universal action is one, not a sum of fortuitous atoms; it is one, arranged in its parts, combined in its multiple functioning by virtue of a single conscient existence which can never be constructed or put together (*akṛta*) but is for ever, anterior to all these workings. The Gods work only by this Power anterior to themselves, live only by its life, think only by its thought, act only for its purposes. We look into ourselves and all things and become aware

of it there, an “I”, an “Is”, a Self, which is other, firmer, vaster than any separate or individual being.

But since it is not anything that the mind can make its object or the senses throw into form for the mind, what then is it—or who? What absolute Spirit? What one, supreme and eternal Godhead? *Ko devah*.

III

The Supramental Godhead

THE ETERNAL question has been put which turns man's eyes away from the visible and the outward to that which is utterly within, away from the little known that he has become to the vast unknown he is behind these surfaces and must yet grow into and be because that is his Reality and out of all masquerade of phenomenon and becoming the Real Being must eventually deliver itself. The human soul once seized by this compelling direction can no longer be satisfied with looking forth at mortalities and seemings through those doors of the mind and sense which the Self-existent has made to open outward upon a world of forms; it is driven to gaze inward into a new world of realities.

Here in the world that man knows, he possesses something which, however imperfect and insecure, he yet values. For he aims at and to some extent he procures enlarged being, increasing knowledge, more and more joy and satisfaction and these things are so precious to him that for what he can get of them he is ready to pay the price of continual suffering from the shock of their opposites. If then he has to abandon what he here pursues and clasps, there must be a far more powerful attraction drawing him to the Beyond, a secret offer of something so great as to be a full reward for all possible renunciation that can be demanded of him here. This is offered,—not an enlarged becoming, but infinite being; not always relative piecings of knowledge mistaken in their hour for the whole of knowledge, but the possession of our essential consciousness and the flood of its luminous realities; not partial satisfactions, but *the* delight. In a word, Immortality.

The language of the Upanishad makes it strikingly clear that it is no metaphysical abstraction, no void Silence, no indeterminate Absolute which is offered to the soul that aspires, but rather

the absolute of all that is possessed by it here in the relative world of its sojourning. All here in the mental is a growing light, consciousness and life; all there in the supramental is an infinite life, light and consciousness. That which is here shadowed, is there found; the incomplete here is there the fulfilled. The Beyond is not an annulation, but a transfiguration of all that we are here in our world of forms; it is sovereign Mind of this mind, secret Life of this life, the absolute Sense which supports and justifies our limited senses.

We renounce ourselves in order to find ourselves; for in the mental life there is only a seeking, but never an ultimate finding till mind is overpassed. Therefore there is behind all our mentality a perfection of ourselves which appears to us as an antinomy and contrast to what we are. For here we are a constant becoming; there we possess our eternal being. Here we conceive of ourselves as a changeful consciousness developed and always developing by a hampered effort in the drive of Time; there we are an immutable consciousness of which Time is not the master but the instrument as well as the field of all that it creates and watches. Here we live in an organisation of mortal consciousness which takes the form of a transient world; there we are liberated into the harmonies of an infinite self-seeing which knows all world in the light of the eternal and immortal. The Beyond is our reality; that is our plenitude; that is the absolute satisfaction of our self-existence. It is immortality and it is “That Delight”.

Here in our imprisoned mentality the ego strives to be master and possessor of its inner field and its outer environment, yet cannot hold anything to enjoy it, because it is not possible really to possess what is not-self to us. But there in the freedom of the eternal our self-existence possesses without strife by the sufficient fact that all things are itself. Here is the apparent man, there the real man, the Purusha: here are gods, there is the Divine: here is the attempt to exist, Life flowering out of an all-devouring death, there Existence itself and a dateless immortality.

The answer that is thus given is involved in the very form of the original question. The Truth behind Mind, Life, Sense

must be that which controls by exceeding it; it is the Lord, the all-possessing Deva. This was the conclusion at which the Isha Upanishad arrived by the synthesis of all existences; the Kena arrives at it by the antithesis of one governing self-existence to all this that exists variously by another power of being than its own. Each follows its own method for the resolution of all things into the one Reality, but the conclusion is identical. It is the All-possessing and All-enjoying, who is reached by the renunciation of separate being, separate possession and separate delight.

But the Isha addresses itself to the awakened seeker; it begins therefore with the all-inhabiting Lord, proceeds to the all-becoming Self and returns to the Lord as the Self of the cosmic movement, because it has to justify works to the seeker of the Uncreated and to institute a divine life founded on the joy of immortality and on the unified consciousness of the individual made one with the universal. The Kena addresses itself to the soul still attracted by the external life, not yet wholly awakened nor wholly a seeker; it begins therefore with the Brahman as the Self beyond Mind and proceeds to the Brahman as the hidden Lord of all our mental and vital activities, because it has to point this soul upward beyond its apparent and outward existence. But the two opening chapters of the Kena only state less widely from this other view-point the Isha's doctrine of the Self and its becomings; the last two repeat in other terms of thought the Isha's doctrine of the Lord and His movement.

IV

The Eternal Beyond the Mind

THE UPANISHAD first affirms the existence of this profounder, vaster, more puissant consciousness behind our mental being. That, it affirms, is Brahman. Mind, Life, Sense, Speech are not the utter Brahman; they are only inferior modes and external instruments. Brahman-consciousness is our real self and our true existence.

Mind and body are not our real self; they are mutable formations or images which we go on constructing in the drive of Time as a result of the mass of our past energies. For although those energies seem to us to lie dead in the past because their history is behind us, yet are they still existent in their mass and always active in the present and the future.

Neither is the ego-function our real self. Ego is only a faculty put forward by the discriminative mind to centralise round itself the experiences of the sense-mind and to serve as a sort of lynch-pin in the wheel which keeps together the movement. It is no more than an instrument, although it is true that so long as we are limited by our normal mentality, we are compelled by the nature of that mentality and the purpose of the instrument to mistake our ego-function for our very self.

Neither is it the memory that constitutes our real self. Memory is another instrument, a selective instrument for the practical management of our conscious activities. The ego-function uses it as a rest and support so as to preserve the sense of continuity without which our mental and vital activities could not be organised for a spacious enjoyment by the individual. But even our mental self comprises and is influenced in its being by a host of things which are not present to our memory, are subconscious and hardly grasped at all by our surface existence. Memory is essential to the continuity of the ego-sense, but it is not the constituent of the ego-sense, still less of the being.

Neither is moral personality our real self. It is only a changing formation, a pliable mould framed and used by our subjective life in order to give some appearance of fixity to the constantly mutable becoming which our mental limitations successfully tempt us to call ourselves.

Neither is the totality of that mutable conscious becoming, although enriched by all that subconsciously underlies it, our real self. What we become is a fluent mass of life, a stream of experience pouring through time, a flux of Nature upon the crest of which our mentality rides. What we are is the eternal essence of that life, the immutable consciousness that bears the experience, the immortal substance of Nature and mentality.

For behind all and dominating all that we become and experience, there is something that originates, uses, determines, enjoys, yet is not changed by its origination, not affected by its instruments, not determined by its determinations, not worked upon by its enjoyings. What that is, we cannot know unless we go behind the veil of our mental being which knows only what is affected, what is determined, what is worked upon, what is changed. The mind can only be aware of that as something which we indefinably are, not as something which it definably knows. For the moment our mentality tries to fix this something, it loses itself in the flux and the movement, grasps at parts, functions, fictions, appearances which it uses as planks of safety in the welter or tries to cut out a form from the infinite and say "This is I." In the words of the Veda, "when the mind approaches That and studies it, That vanishes."

But behind the Mind is this other or Brahman-consciousness, Mind of our mind, Sense of our senses, Speech of our speech, Life of our life. Arriving at that, we arrive at Self; we can draw back from mind the image into Brahman the Reality.

But what differentiates that real from this apparent self? Or — since we can say no more than we have said already in the way of definition, since we can only indicate that "That" is not what "this" is, but is the mentally inexpressible absolute of all that is here,—what is the relation of this phenomenon to that reality? For it is the question of the relation that the Upanishad

makes its starting-point; its opening question assumes that there is a relation and that the reality originates and governs the phenomenon.

Obviously, Brahman is not a thing subject to our mind, senses, speech or life-force; it is no object seen, heard, expressed, sensed, formed by thought, nor any state of body or mind that we become in the changing movement of the life. But the thought of the Upanishad attempts to awaken deeper echoes from our gulfs than this obvious denial of the mental and sensuous objectivity of the Brahman. It affirms that not only is it not an object of mind or a formation of life, but it is not even dependent on our mind, life and senses for the exercise of its lordship and activity. It is that which does not think by the mind, does not live by the life, does not sense by the senses, does not find expression in the speech, but rather makes these things themselves the object of its superior, all-comprehending, all-knowing consciousness.

Brahman thinks out the mind by that which is beyond mind; it sees the sight and hears the hearing by that absolute vision and audition which are not phenomenal and instrumental but direct and inherent; it forms our expressive speech out of its creative word; it speeds out this life we cling to from that eternal movement of its energy which is not parcelled out into forms but has always the freedom of its own inexhaustible infinity.

Thus the Upanishad begins its reply to its own question. It first describes Brahman as Mind of the mind, Sight of the sight, Hearing of the hearing, Speech of the speech, Life of the life. It then takes up each of these expressions and throws them successively into a more expanded form so as to suggest a more definite and ample idea of their meaning, so far as that can be done by words. To the expression "Mind of the mind" corresponds the expanded phrase "That which thinks not with the mind, that by which mind is thought" and so on with each of the original descriptive expressions to the closing definition of the Life behind this life as "That which breathes not with the life-breath, that by which the life-power is brought forward into its movement."

And each of these exegetic lines is emphasised by the reiterated admonition, “That Brahman seek to know and not this which men follow after here.” Neither Mind, Life, Sense and Speech nor their objects and expressions are the Reality which we have to know and pursue. True knowledge is of That which forms these instruments for us but is itself independent of their utilities. True possession and enjoyment is of that which, while it creates these objects of our pursuit, itself makes nothing the object of its pursuit and passion, but is eternally satisfied with all things in the joy of its immortal being.

V

The Supreme Word

THE UPANISHAD, reversing the usual order of our logical thought which would put Mind and Sense first or Life first and Speech last as a subordinate function, begins its negative description of Brahman with an explanation of the very striking phrase, Speech of our speech. And we can see that it means a Speech beyond ours, an absolute expression of which human language is only a shadow and as if an artificial counterfeit. What idea underlies this phrase of the Upanishad and this precedence given to the faculty of speech?

Continually, in studying the Upanishads, we have to divest ourselves of modern notions and to realise as closely as possible the associations that lay behind the early Vedantic use of words. We must recollect that in the Vedic system the Word was the creatrix; by the Word Brahma creates the forms of the universe. Moreover, human speech at its highest merely attempts to recover by revelation and inspiration an absolute expression of Truth which already exists in the Infinite above our mental comprehension. Equally, then, must that Word be above our power of mental construction.

All creation is expression by the Word; but the form which is expressed is only a symbol or representation of the thing which is. We see this in human speech which only presents to the mind a mental form of the object; but the object it seeks to express is itself only a form or presentation of another Reality. That reality is Brahman. Brahman expresses by the Word a form or presentation of himself in the objects of sense and consciousness which constitute the universe, just as the human word expresses a mental image of those objects. That Word is creative in a deeper and more original sense than human speech and with a power of which the utmost creativeness of human speech can be only a far-off and feeble analogy.

The word used here for utterance means literally a raising up to confront the mind. Brahman, says the Upanishad, is that which cannot be so raised up before the mind by speech.

Human speech, as we see, raises up only the presentation of a presentation, the mental figure of an object which is itself only a figure of the sole Reality, Brahman. It has indeed a power of new creation, but even that power only extends to the creation of new mental images, that is to say of adaptive formations based upon previous mental images. Such a limited power gives no idea of the original creative puissance which the old thinkers attributed to the divine Word.

If, however, we go a little deeper below the surface, we shall arrive at a power in human speech which does give us a remote image of the original creative Word. We know that vibration of sound has the power to create—and to destroy—forms; this is a commonplace of modern Science. Let us suppose that behind all forms there has been a creative vibration of sound.

Next, let us examine the relation of human speech to sound in general. We see at once that speech is only a particular application of the principle of sound, a vibration made by pressure of the breath in its passage through the throat and mouth. At first, beyond doubt, it must have been formed naturally and spontaneously to express the sensations and emotions created by an object or occurrence and only afterwards seized upon by the mind to express first the idea of the object and then ideas about the object. The value of speech would therefore seem to be only representative and not creative.

But, in fact, speech is creative. It creates forms of emotion, mental images and impulses of action. The ancient Vedic theory and practice extended this creative action of speech by the use of the Mantra. The theory of the Mantra is that it is a word of power born out of the secret depths of our being where it has been brooded upon by a deeper consciousness than the mental, framed in the heart and not originally constructed by the intellect, held in the mind, again concentrated on by the waking mental consciousness and then thrown out silently or vocally—the silent word is perhaps held to be more potent than the

spoken — precisely for the work of creation. The Mantra can not only create new subjective states in ourselves, alter our psychical being, reveal knowledge and faculties we did not before possess, can not only produce similar results in other minds than that of the user, but can produce vibrations in the mental and vital atmosphere which result in effects, in actions and even in the production of material forms on the physical plane.

As a matter of fact, even ordinarily, even daily and hourly we do produce by the word within us thought-vibrations, thought-forms which result in corresponding vital and physical vibrations, act upon ourselves, act upon others, and end in the indirect creation of actions and of forms in the physical world. Man is constantly acting upon man both by the silent and the spoken word and he so acts and creates though less directly and powerfully even in the rest of Nature. But because we are stupidly engrossed with the external forms and phenomena of the world and do not trouble to examine its subtle and non-physical processes, we remain ignorant of all this field of science behind.

The Vedic use of the Mantra is only a conscious utilisation of this secret power of the word. And if we take the theory that underlies it together with our previous hypothesis of a creative vibration of sound behind every formation, we shall begin to understand the idea of the original creative Word. Let us suppose a conscious use of the vibrations of sound which will produce corresponding forms or changes of form. But Matter is only, in the ancient view, the lowest of the planes of existence. Let us realise then that a vibration of sound on the material plane presupposes a corresponding vibration on the vital without which it could not have come into play; that again presupposes a corresponding originative vibration on the mental; the mental presupposes a corresponding originative vibration on the supramental at the very root of things. But a mental vibration implies thought and perception and a supramental vibration implies a supreme vision and discernment. All vibration of sound on that higher plane is, then, instinct with and expressive of this supreme discernment of a truth in things and is at the same time creative, instinct with

a supreme power which casts into forms the truth discerned and eventually, descending from plane to plane, reproduces it in the physical form or object created in Matter by etheric sound. Thus we see that the theory of creation by the Word which is the absolute expression of the Truth, and the theory of the material creation by sound-vibration in the ether correspond and are two logical poles of the same idea. They both belong to the same ancient Vedic system.

This, then, is the supreme Word, Speech of our speech. It is vibration of pure Existence, instinct with the perceptive and originative power of infinite and omnipotent consciousness, shaped by the Mind behind mind into the inevitable word of the Truth of things; out of whatever substance on whatever plane, the form or physical expression emerges by its creative agency. The Supermind using the Word is the creative Logos.

The Word has its seed-sounds — suggesting the eternal syllable of the Veda, A U M, and the seed-sounds of the Tantriks — which carry in them the principles of things; it has its forms which stand behind the revelatory and inspired speech that comes to man's supreme faculties, and these compel the forms of things in the universe; it has its rhythms, — for it is no disordered vibration, but moves out into great cosmic measures, — and according to the rhythm is the law, arrangement, harmony, processes of the world it builds. Life itself is a rhythm of God.

But what is it that is expressed or raised up before the mental consciousness by the Word in the phenomenal world? Not Brahman, but truths, forms and phenomena of Brahman. Brahman is not, cannot be expressed by the Word; he does not use the word here to express his very self, but is known only to his own self-awareness. And even the truths of himself that stand behind the forms of cosmic things are in their true reality always self-expressed to his eternal vision in a higher than the mental vibration, a rhythm and voice of themselves that is their own very soul of movement. Speech, a lesser thing, creates, expresses, but is itself only a creation and expression. Brahman is not expressed by speech, but speech is itself expressed by Brahman. And that which expresses speech in us, brings it up out of our

consciousness with its strivings to raise up the truth of things to our mind, is Brahman himself as the Word, a Thing that is in the supreme superconscience. That Word, Speech of our speech, is in its essence of Power the Eternal himself and in its supreme movements a part of his very form and everlasting spiritual body, *brahmaṇo rūpam*.

Therefore it is not the happenings and phenomena of the world that we have to accept finally as our object of pursuit, but That which brings out from itself the Word by which they were thrown into form for our observation by the consciousness and for our pursuit by the will. In other words, the supreme Existence that has originated all.

Human speech is only a secondary expression and at its highest a shadow of the divine Word, of the seed-sounds, the satisfying rhythms, the revealing forms of sound that are the omniscient and omnipotent speech of the eternal Thinker, Harmonist, Creator. The highest inspired speech to which the human mind can attain, the word most unanalysably expressive of supreme truth, the most puissant syllable or mantra can only be its far-off representation.

The Necessity of Supermind

AS THE Upanishad asserts a speech behind this speech, which is the expressive aspect of the Brahman-consciousness, so it asserts a Mind behind this mind which is its cognitive aspect. And as we asked ourselves what could be the rational basis for the theory of the divine Word superior to our speech, so we have now to ask ourselves what can be the rational basis for this theory of a cognitive faculty or principle superior to Mind. We may say indeed that if we grant a divine Word creative of all things, we must also grant a divine Mind cognitive of the Word and of all that it expresses. But this is not a sufficient foundation; for the theory of the divine Word presents itself only as a rational possibility. A cognition higher than Mind presents itself on the other hand as a necessity which arises from the very nature of Mind itself, a necessity from which we cannot logically escape.

In the ancient system which admitted the soul's survival of the body, Mind was the man, in a very profound and radical sense of the phrase. It is not only that the human being is the one reasoning animal upon earth, the thinking race; he is essentially the mental being in a terrestrial body, the *manu*. Quite apart from the existence of a soul or self one in all creatures, the body is not even the phenomenal self of man; the physical life also is not himself; both may be dissolved, man will persist. But if the mental being also is dissolved, man as man ceases to be; for this is his centre and the nodus of his organism.

On the contrary, according to the theory of a material evolution upheld by modern Science, man is only matter that has developed mind by an increasing sensibility to the shocks of its environment; and matter being the basis of existence there is nothing, except the physical elements, that can survive the dissolution of the body. But this formula is at most the obverse and

inferior side of a much larger truth. Matter could not develop Mind if in or behind the force that constitutes physical forms there were not already a principle of Mind striving towards self-manifestation. The will to enlighten and consciously govern the life and the form must have been already existent in that which appears to us inconscient; it must have been there before mind was evolved. For, if there were no such necessity of Mind in Matter, if the stuff of mentality were not there already and the will to mentalise, Mind could not possibly have come into being out of inconscient substance.

But in the mere chemical elements which go to constitute material forms or in electricity or in any other purely physical factor, whatever unconscious will or sensation they may be possessed by or possess, we can discover nothing which could explain the emergence of conscious sensation, which could constitute a will towards the evolution of thought or which could impose the necessity of such an evolution on inconscient physical substance. It is not then in the form of Matter itself, but in the Force which is at work in Matter, that we must seek the origin of Mind. That Force must either be itself conscious or contain the grain of mental consciousness inherent in its being and therefore the potentiality and indeed the necessity of its emergence. This imprisoned consciousness, though originally absorbed in the creation first of forms and then of physical relations and reactions between physical forms, must still have held in itself from the beginning, however long kept back and suppressed, a will to the ultimate enlightenment of these relations by the creation of corresponding conscious or mental values. Mind is then a concealed necessity which the subconscious holds in itself from the commencement of things; it is the thing that must emerge once the attractions and repulsions of Matter begin to be established; it is the suppressed secret and cause of the reactions of life in the metal, plant and animal.

If on the other hand we say that Mind in some such secret and suppressed form is not already existent in Matter, we must then suppose that it exists outside Matter and embraces it or enters into it. We must suppose a mental plane of existence

which presses upon the physical and tends to possess it. In that case the mental being would be in its origin an entity which is formed outside the material world; but it prepares in that world bodies which become progressively more and more able to house and express Mind. We may image it forming, entering into and possessing the body, breaking into it, as it were,—as the Purusha in the Aitareya Upanishad is said to form the body and then to enter in by breaking open a door in Matter. Man would in this view be a mental being incarnate in the living body who at its dissolution leaves it with full possession of his mentality.

The two theories are far from being incompatible with each other; they can be viewed as complements forming a single truth. For the involution of Mind, its latency in the material Force of the physical universe and in all its movements does not preclude the existence of a mental world beyond and above the reign of the physical principle. In fact, the emergence of such a latent Mind might well depend upon and would certainly profit by the aid and pressure of forces from a supra-physical kingdom, a mental plane of existence.

There are always two possible views of the universe. The one supposes, with modern Science, Matter to be the beginning of things and studies everything as an evolution from Matter; or, if not Matter, then, with the Sankhya philosophy, an indeterminate inconscient active Force or Prakriti of which even mind and reason are mechanical operations,—the Conscious Soul, if any exists, being a quite different and, although conscient, yet inactive entity. The other supposes the conscious soul, the Purusha, to be the material as well as the cause of the universe and Prakriti to be only its Shakti or the Force of its conscious being which operates upon itself as the material of forms.¹ The latter is the view of the Upanishads. Certainly if we study the material world only, excluding all evidence of other planes as a dream or a hallucination, if we equally exclude all evidence of operations

¹ Cf. for example, the Aitareya Upanishad which shows us the Atman or Self using the Purusha as that in which all the operations of Nature are formed.

in mind which exceed the material limitation and study only its ordinary equation with Matter, we must necessarily accept the theory of Matter as the origin and as the indispensable basis and continent. Otherwise, we shall be irresistibly led towards the early Vedantic conclusions.

However this may be, even from the standpoint of the sole material world Man in the substance of his manhood is a mind occupying and using the life of the body — a mind that is greater than the Matter in which it has emerged. He is the highest present expression of the will in the material universe; the Force that has built up the worlds, so far as we are able to judge of its intention from its actual operations as we see them in their present formula upon earth, arrives in him at the thing it was seeking to express. It has brought out the hidden principle of Mind that now operates consciously and intelligently on the life and the body. Man is the satisfaction of the necessity which Nature bore secretly in her from the very commencement of her works; he is the highest possible Name or Numen on this planet; he is the realised terrestrial godhead.

But all this is true only if we assume that for Nature's terrestrial activities Mind is the ultimate formula. In reality and when we study more deeply the phenomena of consciousness, the facts of mentality, the secret tendency, aspiration and necessity of man's own nature, we see that he cannot be the highest term. He is the highest realised here and now; he is not the highest realisable. As there is something below him, so there is something, if even only a possibility, above. As physical Nature concealed a secret beyond herself which in him she has released into creation, so he too conceals a secret beyond himself which he in turn must deliver to the light. That is his destiny.

This must necessarily be so because Mind too is not the first principle of things and therefore cannot be their last possibility. As Matter contained Life in itself, contained it as its own secret necessity and had to be delivered of that birth, and as Life contained Mind in itself, contained it as its own secret necessity and had to be delivered of the birth it held, so Mind too contains in itself that which is beyond itself, contains it as its own secret

necessity and presses to be delivered, it also, of this supreme birth.

What is the rational necessity which forbids us to suppose Mind to be Nature's last birth and compels us to posit something beyond it of which itself is the indication? A consideration of the nature and working of mentality supplies us with the answer. For mentality is composed of three principal elements, thought, will and sensation. Sensation may be described as an attempt of divided consciousness to seize upon its object and enjoy it, thought as its attempt to seize upon the truth of the object and possess it, will as its attempt to seize upon the potentiality of the object and use it. At least these three things are such an attempt in their essentiality, in their instinct, in their subconscious purpose. But obviously the attempt is imperfect in its conditions and its success; its very terms indicate a barrier, a gulf, an incapacity. As Life is limited and hampered by the conditions of its synthesis with Matter, so Mind is limited and hampered by the conditions of its synthesis with Life in Matter. Neither Matter nor Life has found anything proper to their own formula which could help to conquer or sufficiently expand its limitations; they have been compelled each to call in a new principle, Matter to call into itself Life, Life to call into itself Mind. Mind also is not able to find anything proper to its own formula which can conquer or sufficiently expand the limitations imposed upon its workings; Mind also has to call in a new principle beyond itself, freer than itself and more powerful.

In other words, Mind does not exhaust the possibilities of consciousness and therefore cannot be its last and highest expression. Mind tries to arrive at Truth and succeeds only in touching it imperfectly with a veil between; there must be in the nature of things a faculty or principle which sees the Truth unveiled, an eternal faculty of knowledge which corresponds to the eternal fact of the Truth. There is, says the Veda, such a principle; it is the Truth-Consciousness which sees the truth directly and is in possession of it spontaneously. Mind labours to effect the will in it and succeeds only in accomplishing partially, with difficulty and insecurely the potentiality at which it works; there must be

a faculty or principle of conscious effective force which corresponds to the unconscious automatic principle of self-fulfilment in Nature, and this principle must be sought for in the form of consciousness that exceeds Mind. Mind, finally, aspires to seize and enjoy the essential delight-giving quality, the *rasa* of things, but it succeeds only in attaining to it indirectly, holding it in an imperfect grasp and enjoying it externally and fragmentarily; there must be a principle which can attain directly, hold rightly, enjoy intimately and securely. There is, says the Veda, an eternal Bliss-consciousness which corresponds to the eternal *rasa* or essential delight-giving quality of all experience and is not limited by the insecure approximations of the sense in Mind.

If, then, such a deeper principle of consciousness exists, it must be that and not mind which is the original and fundamental intention concealed in Nature and which eventually and somewhere must emerge. But is there any reason for supposing that it must emerge here and in Mind, as Mind has emerged in Life and Life in Matter? We answer in the affirmative because Mind has in itself, however obscurely, that tendency, that aspiration and, at bottom, that necessity. There is one law from the lowest to the highest. Matter, when we examine it closely, proves to be instinct with the stuff of Life—the vibrations, actions and reactions, attractions and repulsions, contractions and expansions, the tendencies of combination, formation and growth, the seekings and responses which are the very substance of life; but the visible principle of life can only emerge when the necessary material conditions have been prepared which will permit it to organise itself in Matter. So also Life is instinct with the stuff of Mind, abounds with an unconscious² sensation, will, intelligence, but the visible principle of Mind can only emerge when the necessary vital conditions have been prepared which will permit it to organise itself in living Matter. Mind too is instinct with the stuff of supermind—sympathies, unities, intuitions, emergences of preexistent knowledge, instincts, imperative lights and movements, inherent self-effectivities of will which disguise

² I use the language of the materialist Haeckel in spite of its paradoxical form.

themselves in a mental form; but the visible principle of supermind can only emerge when the necessary mental conditions are prepared which will permit it to organise itself in man, the mental living creature.

This necessary preparation is proceeding in human development as the corresponding preparations were developed in the lower stages of the evolution,—with the same gradations, retardations, inequalities; but still it is more enlightened, increasingly self-conscious, nearer to a conscious sureness. And the very fact that this progress is attended by less absorption in the detail, less timidity of error, a less conservative attachment to the step gained suggests as much as it contradicts the hope and almost the assurance that when the new principle emerges it will not be by the creation of a new and quite different type which, separated after its creation, will leave the rest of mankind in the same position to it as are the animals to man, but, if not by the elevation of humanity as a whole to a higher level, yet by an opening of the greater possibility to all of the race who have the will to rise. For Man, first among Nature's children, has shown the capacity to change himself by his own effort and the conscious aspiration to transcend.

These considerations justify to the reason the idea of a Mind beyond our mind, but only as a final evolution out of Matter. The Upanishad, however, enthrones it as the already existing creator and ruler of Mind; it is a secret principle already conscient and not merely contained inconsciously in the very stuff of things. But this is the natural conclusion—even apart from spiritual experience—from the nature of the supramental principle. For it is at its highest an eternal knowledge, will, bliss and conscious being and it is more reasonable to conclude that it is eternally conscious, though we are not conscious of it, and the source of the universe, than that it is eternally unconscious and only becomes conscious in Time as a result of the universe. Our unconsciousness of it is no proof that it is unconscious of us: and yet our own incapacity is the only real basis left for the denial of an eternal Mind beyond mind superior to its creations and originative of the cosmos.

All other foundations for the rejection of this ancient wisdom have disappeared or are disappearing before the increasing light of modern knowledge.

Mind and Supermind

WE ARRIVE then at this affirmation of an all-cognitive Principle superior to Mind and exceeding it in nature, scope and capacity. For the Upanishad affirms a Mind beyond mind as the result of intuition and spiritual experience and its existence is equally a necessary conclusion from the facts of the cosmic evolution. What then is this Mind beyond mind? how does it function? or by what means shall we arrive at the knowledge of it or possess it?

The Upanishad asserts about this supreme cognitive principle, first, that it is beyond the reach of mind and the senses; secondly, that it does not itself think with the mind; thirdly, that it is that by which mind itself is thought or mentalised; fourthly, that it is the very nature or description of the Brahman-consciousness.

When we say, however, that "Mind of mind" is the nature or description of the Brahman-consciousness, we must not forget that the absolute Brahman in itself is held to be unknowable and therefore beyond description. It is unknowable, not because it is a void and capable of no description except that of nothingness, nor because, although positive in existence, it has no content or quality, but because it is beyond all things that our present instruments of knowledge can conceive and because the methods of ideation and expression proper to our mentality do not apply to it. It is the absolute of all things that we know and of each thing that we know and yet nothing nor any sum of things can exhaust or characterise its essential being. For its manner of being is other than that which we call existence; its unity resists all analysis, its multiple infinities exceed every synthesis. Therefore it is not in its absolute essentiality that it can be described as Mind of the mind, but in its fundamental nature in regard to our mental existence.

Brahman-consciousness is the eternal outlook of the Absolute upon the relative.

But even of this outlook we may say that it is beyond the reach of mind and speech and senses. Yet mind, speech and senses seem to be our only available means for acquiring and expressing knowledge. Must we not say then that this Brahman-consciousness also is unknowable and that we can never hope to know it or possess it while in this body? Yet the Upanishad commands us to *know* this Brahman and by knowledge to possess it — for the knowledge intended by the words *viddhi, avedit*, is a knowledge that discovers and takes possession, — and it declares later on that it is here, in this body and on this earth that we must thus possess Brahman in knowledge, otherwise great is the perdition. A good deal of confusion has been brought into the interpretation of this Upanishad by a too trenchant dealing with the subtlety of its distinctions between the knowability and the unknowability of the Brahman. We must therefore try to observe exactly what the Upanishad says and especially to seize the whole of its drift by synthetic intuition rather than cut up its meaning so as to make it subject to our logical mentality.

The Upanishad sets out by saying that this Ruler of the mind, senses, speech and life is Mind of our mind, Life of our life, Sense of our senses, Speech of our speech; and it then proceeds to explain what it intends by these challenging phrases. But it introduces between the description and the explanation a warning that neither the description nor the explanation must be pushed beyond their proper limits or understood as more than guide-posts pointing us towards our goal. For neither Mind, Speech nor Sense can travel to the Brahman; therefore Brahman must be beyond all these things in its very nature, otherwise it would be attainable by them in their function. The Upanishad, although it is about to teach of the Brahman, yet affirms, “we know It not, we cannot distinguish how one should teach of It.” The two Sanskrit words that are here used, *vidmaḥ* and *vijānīmaḥ*, seem to indicate the one a general grasp and possession in knowledge, the other a total and exact comprehension in whole and detail, by synthesis and analysis. The reason of this entire inability

is next given, "because Brahman is other than the known and It is there over the unknown," possessing it and, as it were, presiding over it. The known is all that we grasp and possess by our present mentality; it is all that is not the supreme Brahman but only form and phenomenon of it to our sense and mental cognition. The unknown is that which is beyond the known and though unknown is not unknowable if we can enlarge our faculties or attain to others that we do not yet possess.

Yet the Upanishad next proceeds to maintain and explain its first description and to enjoin on us the knowledge of the Brahman which it so describes. This contradiction is not at once reconciled; it is only in the second chapter that the difficulty is solved and only in the fourth that the means of knowledge are indicated. The contradiction arises from the nature of our knowledge itself which is a relation between the consciousness that seeks and the consciousness that is sought; where that relation disappears, knowledge is replaced by sheer identity. In what we call existence, the highest knowledge can be no more than the highest relation between that which seeks and that which is sought, and it consists in a modified identity through which we may pass beyond knowledge to the absolute identity. This metaphysical distinction is of importance because it prevents us from mistaking any relation in knowledge for the absolute and from becoming so bound by our experience as to lose or miss the fundamental awareness of the absolute which is beyond all possible description and behind all formulated experience. But it does not render the highest relation in our knowledge, the modified identity in experience worthless or otiose. On the contrary, it is that we must aim at as the consummation of our existence in the world. For if we possess it without being limited by it,— and if we are limited by it we have not true possession of it,— then in and through it we shall, even while in this body, remain in touch with the Absolute.

The means for the attainment of this highest knowledge is the constant preparation of the mind by the admission into it of a working higher than itself until the mind is capable of giving itself up to the supramental action which exceeds it and

which will finally replace it. In fact, Mind also has to follow the law of natural progression which has governed our evolution in this world from matter into life and life into mind. For just as life-consciousness is beyond the imprisoned material being and unattainable by it through its own instruments, just as mind-consciousness is beyond the first inconscient movements of life, so too this supramental consciousness is beyond the divided and dividing nature of Mind and unattainable by it through its own instruments. But as Matter is constantly prepared for the manifestation of Life until Life is able to move in it, possess it, manage in it its own action and reaction, and as Life is constantly prepared for the manifestation of Mind until Mind is able to use it, enlighten its actions and reactions by higher and higher mental values, so must it be with Mind and that which is beyond Mind.

And all this progression is possible because these things are only different formations of one being and one consciousness. Life only reveals in Matter that which is involved in Matter, that which is the secret meaning and essence of Matter. It reveals, as it were, to material existence its own soul, its own end. So too Mind reveals in Life all that Life means, all that it obscurely is in essence but cannot realise because it is absorbed in its own practical motion and its own characteristic form. So also Supermind must intervene to reveal Mind to itself, to liberate it from its absorption in its own practical motion and characteristic form and enable the mental being to realise that which is the hidden secret of all its formal practice and action. Thus shall man come to the knowledge of that which rules within him and missions his mind to its mark, sends forth his speech, impels the life-force in its paths and sets his senses to their workings.

This supreme cognitive Principle does not think by the mind. Mind is to it an inferior and secondary action, not its own proper mode. For Mind, based on limitation and division, can act only from a given centre in the lower and obscured existence; but Supermind is founded on unity and it comprehends and pervades; its action is in the universal and is in conscious communion with a transcendent source eternal and beyond the formations of the universe. Supermind regards the individual in the

universal and does not begin with him or make of him a separate being. It starts from the Transcendent and sees the universal and individual as they are in relation to it, as its terms, as its formulas; it does not start from the individual and universal to arrive at the Transcendent. Mind acquires knowledge and mastery; it reaches it by a constant mentalising and willing: Supermind possesses knowledge and mastery; possessing, it throws itself out freely in various willing and knowing. Mind gropes by divided sensation; it arrives at a sort of oneness through sympathy: Supermind possesses by a free and all-embracing sense; it lives in the unity of which various love and sympathy are only a secondary play of manifestation. Supermind starts from the whole and sees in it its parts and properties, it does not build up the knowledge of the whole by an increasing knowledge of the parts and properties; and even the whole is to it only a unity of sum, only a partial and inferior term of the higher unity of infinite essence.

We see, then, that these two cognitive Principles start from two opposite poles and act in opposite directions by opposite methods. Yet it is by the higher cognitive that the lower is formed and governed. Mind is thought by that which is beyond Mind; the mentalising consciousness shapes and directs its movement according to the knowledge and impulse it receives from this higher Supermind and even the stuff of which it is formed belongs to that Principle. Mentality exists because that which is beyond Mind has conceived an inverse action of itself working in a thinner, poorer, darker, less powerful substance of conscious being and founded upon its self-concentration on different points in its own being and in different forms of its own being. Supermind fixes these points, sees how consciousness must act from them on other forms of itself and in obedience to the pressure of those other forms, once a particular rhythm or law of universal action is given; it governs the whole action of mentality according to what it thus fixes and sees. Even our ignorance is only the distorted action of a truth projected from the Supermind and could not exist except as such a distortion; and so likewise all our dualities of knowledge, sensation, emotion, force proceed from that higher vision, obey it and are a secondary and, as one

might say, perverse action of the concealed Supermind itself which governs always this lower action in harmony with its first conception of a located consciousness, divided indeed and therefore not in possession of its world or itself, but feeling out towards that possession and towards the unity which, because of the Supermind in us, it instinctively, if obscurely, knows to be its true nature and right.

But, for this very reason, the feeling out, the attempt at acquisition can only succeed in proportion as the mental being abandons his characteristic mentality and its limitations in order to rise beyond to that Mind of the mind which is his origin and his secret governing principle. His mentality must admit Supramentality as Life has admitted Mind. So long as he worships, follows after, adheres to all this that he now accepts as the object of his pursuit, to the mind and its aims, to its broken methods, its constructions of will and opinion and emotion dependent on egoism, division and ignorance, he cannot rise beyond this death to that immortality which the Upanishad promises to the seeker. That Brahman we have to know and seek after and not this which men here adore and pursue.

VIII

The Supreme Sense

THE UPANISHAD is not satisfied with the definition of the Brahman-consciousness as Mind of the mind. Just as it has described it as Speech of the speech, so also it describes it as Eye of the eye, Ear of the ear. Not only is it an absolute cognition behind the play of expression, but also an absolute Sense behind the action of the senses. Every part of our being finds its fulfilment in that which is beyond its present forms of functioning and not in those forms themselves.

This conception of the all-governing supreme consciousness does not fall in with our ordinary theories about sense and mind and the Brahman. We know of sense only as an action of the organs through which embodied mind communicates with external Matter, and these sense-organs have been separately developed in the course of evolution; the senses therefore are not fundamental things, but only subordinate conveniences and temporary physical functionings of the embodied Mind. Brahman, on the other hand, we conceive of by the elimination of all that is not fundamental, by the elimination even of the Mind itself. It is a sort of positive zero, an *x* or unknowable which corresponds to no possible equation of physical or psychological quantities. In essence this may or may not be true; but we have now to think not of the Unknowable but of its highest manifestation in consciousness; and this we have described as the outlook of the Absolute on the relative and as that which is the cause and governing power of all that we and the universe are. There in that governing cause there must be something essential and supreme of which all our fundamental functionings here are a rendering in the terms of embodied consciousness.

Sense, however, is not or does not appear to be fundamental; it is only an instrumentation of Mind using the nervous system. It is not even a pure mental functioning, but depends so much upon

the currents of the Life-force, upon its electric energy vibrating up and down the nerves, that in the Upanishads the senses are called Pranas, powers or functionings of the Life-force. It is true that Mind turns these nervous impressions when communicated to it into mental values, but the sense-action itself seems to be rather nervous than mental. In any case there would, at first sight, appear to be no warrant in reason for attributing a Sense of the sense to that which is not embodied, to a supramental consciousness which has no need of any such instrumentation.

But this is not the last word about sense; this is only its outward appearance behind which we must penetrate. What, not in its functioning, but in its essence, is the thing we call sense? In its functioning, if we analyse that thoroughly, we see that it is the contact of the mind with an eidolon of Matter,—whether that eidolon be of a vibration of sound, a light-image of form, a volley of earth-particles giving the sense of odour, an impression of *rasa* or sap that gives the sense of taste, or that direct sense of disturbance of our nervous being which we call touch. No doubt, the contact of Matter with Matter is the original cause of these sensations; but it is only the eidolon of Matter, as for instance the image of the form cast upon the eye, with which the mind is directly concerned. For the mind operates upon Matter not directly, but through the Life-force; that is its instrument of communication and the Life-force, being in us a nervous energy and not anything material, can seize on Matter only through nervous impressions of form, through contactual images, as it were, which create corresponding values in the energy-consciousness called in the Upanishads the Prana. Mind takes these up and replies to them with corresponding mental values, mental impressions of form, so that the thing sensed comes to us after a triple process of translation, first the material eidolon, secondly the nervous or energy-image, third the image reproduced in stuff of mind.

This elaborate process is concealed from us by the lightning-like rapidity with which it is managed,—rapidity in our impressions of Time; for in another notation of Time by a creature differently constituted each part of the operation might

be distinctly sensible. But the triple translation is always there, because there are really three sheaths of consciousness in us, the material, *annakoṣa*, in which the physical contact and image are received and formed, the vital and nervous, *prāṇakoṣa*, in which there is a nervous contact and formation, the mental, *manahkoṣa*, in which there is mental contact and imaging. We dwell centred in the mental sheath and therefore the experience of the material world has to come through the other two sheaths before it can reach us.

The foundation of sense, therefore, is contact, and the essential contact is the mental without which there would not be sense at all. The plant, for instance, feels nervously, feels in terms of life-energy, precisely as the human nervous system does, and it has precisely the same reactions; but it is only if the plant has rudimentary mind that we can suppose it to be, as we understand the word, sensible of these nervous or vital impressions and reactions. For then it would feel not only nervously, but in terms of mind. Sense, then, may be described as in its essence mental contact with an object and the mental reproduction of its image.

All these things we observe and reason of in terms of this embodiment of mind in Matter; for these sheaths or *kōṣas* are formations in a more and more subtle substance reposing on gross Matter as their base. Let us imagine that there is a mental world in which Mind and not Matter is the base. There sense would be quite a different thing in its operation. It would feel mentally an image in Mind and throw it out into form in more and more gross substance; and whatever physical formations there might already be in that world would respond rapidly to the Mind and obey its modifying suggestions. Mind would be masterful, creative, originative, not as with us either obedient to Matter and merely reproductive or else in struggle with it and only with difficulty able to modify a material predetermined and dully reluctant to its touch. It would be, subject to whatever supramental power might be above it, master of a ductile and easily responsive material. But still Sense would be there, because contact in mental consciousness and formation of images would still be part of the law of being.

Mind, in fact, or active consciousness generally has four necessary functions which are indispensable to it wherever and however it may act and of which the Upanishads speak in the four terms, *vijñāna*, *prajñāna*, *samjñāna* and *ājñāna*. *Vijñāna* is the original comprehensive consciousness which holds an image of things at once in its essence, its totality and its parts and properties; it is the original, spontaneous, true and complete view of it which belongs properly to the supermind and of which mind has only a shadow in the highest operations of the comprehensive intellect. *Prajñāna* is the consciousness which holds an image of things before it as an object with which it has to enter into relations and to possess by apprehension and a combined analytic and synthetic cognition. *Samjñāna* is the contact of consciousness with an image of things by which there is a sensible possession of it in its substance; if *prajñāna* can be described as the outgoing of apprehensive consciousness to possess its object in conscious energy, to know it, *samjñāna* can be described as the inbringing movement of apprehensive consciousness which draws the object placed before it back to itself so as to possess it in conscious substance, to feel it. *Ājñāna* is the operation by which consciousness dwells on an image of things so as to hold, govern and possess it in power. These four, therefore, are the basis of all conscious action.

As our human psychology is constituted, we begin with *samjñāna*, the sense of an object in its image; the apprehension of it in knowledge follows. Afterwards we try to arrive at the comprehension of it in knowledge and the possession of it in power. There are secret operations in us, in our subconscious and superconscious selves, which precede this action, but of these we are not aware in our surface being and therefore for us they do not exist. If we knew of them, our whole conscious functioning would be changed. As it is what happens is a rapid process by which we sense an image and have of it an apprehensive percept and concept, and a slower process of the intellect by which we try to comprehend and possess it. The former process is the natural action of the mind which has entirely developed in us; the latter is an acquired action, an action of the intellect and the intelligent

will which represent in Mind an attempt of the mental being to do what can only be done with perfect spontaneity and mastery by something higher than Mind. The intellect and intelligent will form a bridge by which the mental being is trying to establish a conscious connection with the supramental and to prepare the embodied soul for the descent into it of a supramental action. Therefore the first process is comparatively easy, spontaneous, rapid, perfect; the second slow, laboured, imperfect. In proportion as the intellectual action becomes associated with and dominated by a rudimentary supramental action,—and it is this which constitutes the phenomenon of genius,—the second process also becomes more and more easy, spontaneous, rapid and perfect.

If we suppose a supreme consciousness, master of the world, which really conducts behind the veil all the operations the mental gods attribute to themselves, it will be obvious that that consciousness will be the entire Knower and Lord. The basis of its action or government of the world will be the perfect, original and all-possessing *vijnāna* and *ajñāna*. It will comprehend all things in its energy of conscious knowledge, control all things in its energy of conscious power. These energies will be the spontaneous inherent action of its conscious being creative and possessive of the forms of the universe. What part then will be left for the apprehensive consciousness and the sense? They will be not independent functions, but subordinate operations involved in the action of the comprehensive consciousness itself. In fact, all four there will be one rapid movement. If we had all these four acting in us with the unified rapidity with which the *prajñāna* and *samjñāna* act, we should then have in our notation of Time some inadequate image of the unity of the supreme action of the supreme energy.

If we consider, we shall see that this must be so. The supreme consciousness must not only comprehend and possess in its conscious being the images of things which it creates as its self-expression, but it must place them before it—always in its own being, not externally—and have a certain relation with them by the two terms of apprehensive consciousness. Otherwise the

universe would not take the form that it has for us; for we only reflect in the terms of our organisation the movements of the supreme Energy. But by the very fact that the images of things are there held in front of an apprehending consciousness within the comprehending conscious being and not externalised as our individual mind externalises them, the supreme Mind and supreme Sense will be something quite different from our mentality and our forms of sensation. They will be terms of an entire knowledge and self-possession and not terms of an ignorance and limitation which strives to know and possess.

In its essential and general term our sense must reflect and be the creation of this supreme Sense. But the Upanishad speaks of a Sight behind our sight and a Hearing behind our hearing, not in general terms of a Sense behind our sense. Certainly eye and ear are only taken as typical of the senses, and are chosen because they are the highest and subtlest of them all. But still the differentiation of sense which forms part of our mentality is evidently held to correspond with a differentiation of some kind in the supreme Sense. How is this possible? It is what we have next to unravel by examining the nature and source of the functioning of the separate senses in ourselves,—their source in our mentality and not merely their functioning in the actual terms of our life-energy and our body. What is it in Mind that is fundamental to sight and hearing? Why do we see and hear and not simply sense with the mind?

IX

Sense of Our Senses

MIND WAS called by Indian psychologists the eleventh and ranks as the supreme sense. In the ancient arrangement of the senses, five of knowledge and five of action, it was the sixth of the organs of knowledge and at the same time the sixth of the organs of action. It is a commonplace of psychology that the effective functioning of the senses of knowledge is inoperative without the assistance of the mind; the eye may see, the ear may hear, all the senses may act, but if the mind pays no attention, the man has not heard, seen, felt, touched or tasted. Similarly, according to psychology, the organs of action act only by the force of the mind operating as will or, physiologically, by the reactive nervous force from the brain which must be according to materialistic notions the true self and essence of all will. In any case, the senses or all senses, if there are other than the ten,—according to a text in the Upanishad there should be at least fourteen, seven and seven,—all senses appear to be only organisations, functionings, instrumentations of the mind-consciousness, devices which it has formed in the course of its evolution in living Matter.

Modern psychology has extended our knowledge and has admitted us to a truth which the ancients already knew but expressed in other language. We know now or we rediscover the truth that the conscious operation of mind is only a surface action. There is a much vaster and more potent subconscious mind which loses nothing of what the senses bring to it; it keeps all its wealth in an inexhaustible store of memory, *akṣitam śravah*. The surface mind may pay no attention, still the subconscious mind attends, receives, treasures up with an infallible accuracy. The illiterate servant-girl hears daily her master reciting Hebrew in his study; the surface mind pays no attention to the unintelligible gibberish, but the subconscious mind hears, remembers and,

when in an abnormal condition it comes up to the surface, reproduces those learned recitations with a portentous accuracy which the most correct and retentive scholar might envy. The man or mind has not heard because he did not attend; the greater man or mind within has heard because he always attends, or rather sub-tends, with an infinite capacity. So too a man put under an anaesthetic and operated upon has felt nothing; but release his subconscious mind by hypnosis and he will relate accurately every detail of the operation and its appropriate sufferings; for the stupor of the physical sense-organ could not prevent the larger mind within from observing and feeling.

Similarly we know that a large part of our physical action is instinctive and directed not by the surface but by the subconscious mind. And we know now that it is a mind that acts and not merely an ignorant nervous reaction from the brute physical brain. The subconscious mind in the caterpillar insect knows the anatomy of the victim it intends to immobilise and make food for its young and it directs the sting accordingly, as unerringly as the most skilful surgeon, provided the more limited surface mind with its groping and faltering nervous action does not get in the way and falsify the inner knowledge or the inner will-force.

These examples point us to truths which western psychology, hampered by past ignorance posing as scientific orthodoxy, still ignores or refuses to acknowledge. The Upanishads declare that the Mind in us is infinite; it knows not only what has been seen but what has not been seen, not only what has been heard but what has not been heard, not only what has been discriminated by the thought but what has not been discriminated by the thought. Let us say, then, in the tongue of our modern knowledge that the surface man in us is limited by his physical experiences; he knows only what his nervous life in the body brings to his embodied mind; and even of those bringings he knows, he can retain and utilise only so much as his surface mind-sense attends to and consciously remembers; but there is a larger subliminal consciousness within him which is not thus limited. That consciousness senses what has not been sensed by the surface mind and its organs and knows what the surface mind has not

learned by its acquisitive thought. That in the insect knows the anatomy of its victim; that in the man outwardly insensible not only feels and remembers the action of the surgeon's knife, but knows the appropriate reactions of suffering which were in the physical body inhibited by the anaesthetic and therefore non-existent; that in the illiterate servant-girl heard and retained accurately the words of an unknown language and could, as Yogic experience knows, by a higher action of itself understand those superficially unintelligible sounds.

To return to the Vedantic words we have been using, there is a vaster action of the Sanjnana which is not limited by the action of the physical sense-organs; it was this which sensed perfectly and made its own through the ear the words of the unknown language, through the touch the movements of the unfeet surgeon's knife, through the sense-mind or sixth sense the exact location of the centres of locomotion in the victim insect. There is also associated with it a corresponding vaster action of Prajnana, Ajnana and Vijnana not limited by the smaller apprehensive and comprehensive faculties of the external mind. It is this vaster Prajnana which perceived the proper relation of the words to each other, of the movement of the knife to the unfeet suffering of the nerves and of the successive relation in space of the articulations in the insect's body. Such perception was inherent in the right reproduction of the words, the right narration of the sufferings, the right successive action of the sting. The Ajnana or Knowledge-Will originating all these actions was also vaster, not limited by the faltering force that governs the operations directed by the surface mind. And although in these examples the action of the vaster Vijnana is not so apparent, yet it was evidently there working through them and ensuring their coordination.

But at present it is with the Sanjnana that we are concerned. Here we should note, first of all, that there is an action of the sense-mind which is superior to the particular action of the senses and is aware of things even without imaging them in forms of sight, sound, contact, but which also as a sort of subordinate operation, subordinate but necessary to completeness

of presentation, does image in these forms. This is evident in psychical phenomena. Those who have carried the study and experimentation of them to a certain extent, have found that we can sense things known only to the minds of others, things that exist only at a great distance, things that belong to another plane than the terrestrial but have here their effects; we can both sense them in their images and also feel, as it were, all that they are without any definite image proper to the five senses.

This shows, in the first place, that sight and the other senses are not mere results of the development of our physical organs in the terrestrial evolution. Mind, subconscious in all Matter and evolving in Matter, has developed these physical organs in order to apply its inherent capacities of sight, hearing etc., on the physical plane by physical means for a physical life; but they are inherent capacities and not dependent on the circumstance of terrestrial evolution and they can be employed without the use of the physical eye, ear, skin, palate. Supposing that there are psychical senses which act through a psychical body and we thus explain these psychical phenomena, still that action also is only an organisation of the inherent functioning of the essential sense, the Sanjnana, which in itself can operate without bodily organs. This essential sense is the original capacity of consciousness to feel in itself all that consciousness has formed and to feel it in all the essential properties and operations of that which has form, whether represented materially by vibration of sound or images of light or any other physical symbol.

The trend of knowledge leads more and more to the conclusion that not only are the properties of form, even the most obvious such as colour, light etc., merely operations of Force, but form itself is only an operation of Force. This Force again proves to be self-power of conscious-being¹ in a state of energy and activity. Practically, therefore, all form is only an operation of consciousness impressing itself with presentations of its own workings. We see colour because that is the presentation which

¹ *Devātmaśaktinī svaguṇair nigūḍhām*, self-power of the divine Existent hidden by its own modes. Swetasvatara Upanishad.

consciousness makes to itself of one of its own operations; but colour is only an operation of Force working in the form of Light, and Light again is only a movement, that is to say an operation of Force. The question is what is essential to this operation of Force taking on itself the presentation of form? For it is this that must determine the working of Sanjnana or Sense on whatever plane it may operate.

Everything begins with vibration or movement, the original *kṣobha* or disturbance. If there is no movement of the conscious being, it can only know its own pure static existence. Without vibration² or movement of being in consciousness there can be no act of knowledge and therefore no sense; without vibration or movement of being in force there can be no object of sense. Movement of conscious being as knowledge becoming sensible of itself as movement of force, in other words the knowledge separating itself from its own working to watch that and take it into itself again by feeling,—this is the basis of universal Sanjnana. This is true both of our internal and external operations. I become anger by a vibration of conscious force acting as nervous emotion and I feel the anger that I have become by another movement of conscious force acting as light of knowledge. I am conscious of my body because I have myself become the body; that same force of conscious being which has made this form of itself, this presentation of its workings, knows it in that form, in that presentation. I can know nothing except what I myself am; if I know others, it is because they also are myself, because my self has assumed these apparently alien presentations as well as that which is nearest to my own mental centre. All sensation, all action of sense is thus the same in essence whether external or internal, physical or psychical.

But this vibration of conscious being is presented to itself by various forms of sense which answer to the successive operations of movement in its assumption of form. For first

² The term is used not because it is entirely adequate or accurate, no physical term can be, but because it is most suggestive of the original outgoing of consciousness to seek itself.

we have intensity of vibration creating regular rhythm which is the basis or constituent of all creative formation; secondly, contact or intermiscence of the movements of conscious being which constitute the rhythm; thirdly, definition of the grouping of movements which are in contact, their shape; fourthly, the constant welling up of the essential force to support in its continuity the movement that has been thus defined; fifthly, the actual enforcement and compression of the force in its own movement which maintains the form that has been assumed. In Matter these five constituent operations are said by the Sankhyas to represent themselves as five elemental conditions of substance, the etheric, atmospheric, igneous, liquid and solid; and the rhythm of vibration is seen by them as *sabda*, sound, the basis of hearing, the intermiscence as contact, the basis of touch, the definition as shape, the basis of sight, the upflow of force as *rasa*, sap, the basis of taste, and the discharge of the atomic compression as *gandha*, odour, the basis of smell. It is true that this is only predicated of pure or subtle matter; the physical matter of our world being a mixed operation of force, these five elemental states are not found there separately except in a very modified form. But all these are only the physical workings or symbols. Essentially all formation, to the most subtle and most beyond our senses such as form of mind, form of character, form of soul, amount when scrutinised to this five-fold operation of conscious-force in movement.

All these operations, then, the Sanjnana or essential sense must be able to seize, to make its own by that union in knowledge of knower and object which is peculiar to itself. Its sense of the rhythm or intensity of the vibrations which contain in themselves all the meaning of the form, will be the basis of the essential hearing of which our apprehension of physical sound or the spoken word is only the most outward result; so also its sense of the contact or intermiscence of conscious force with conscious force must be the basis of the essential touch; its sense of the definition or form of force must be the basis of the essential sight; its sense of the upflow of essential being in the form, that which is the secret of its self-delight, must be the basis of the

essential taste; its sense of the compression of force and the self-discharge of its essence of being must be the basis of the essential inhalation grossly represented in physical substance by the sense of smell. On whatever plane, to whatever kind of formation these essentialities of sense will apply themselves and on each they will seek an appropriate organisation, an appropriate functioning.

This various sense will, it is obvious, be in the highest consciousness a complex unity, just as we have seen that there the various operation of knowledge is also a complex unity. Even if we examine the physical senses, say, the sense of hearing, if we observe how the underlying mind receives their action, we shall see that in their essence all the senses are in each other. That mind is not only aware of the vibration which we call sound; it is aware also of the contact and interchange between the force in the sound and the nervous force in us with which that intermixes; it is aware of the definition or form of the sound and of the complex contacts or relations which make up the form; it is aware of the essence or outwelling conscious force which constitutes and maintains the sound and prolongs its vibrations in our nervous being; it is aware of our own nervous inhalation of the vibratory discharge proceeding from the compression of force which makes, so to speak, the solidity of the sound. All these sensations enter into the sensitive reception and joy of music which is the highest physical form of this operation of force,—they constitute our physical sensitiveness to it and the joy of our nervous being in it; diminish one of them and the joy and the sensitiveness are to that extent dulled. Much more must there be this complex unity in a higher than the physical consciousness and most of all must there be unity in the highest. But the essential sense must be capable also of seizing the secret essence of all conscious being in action, in itself and not only through the results of the operation; its appreciation of these results can be nothing more than itself an outcome of this deeper sense which it has of the essence of the Thing behind its appearances.

If we consider these things thus subtly in the light of our

own deeper psychology and pursue them beyond the physical appearances by which they are covered, we shall get to some intellectual conception of the sense behind our senses or rather the Sense of our senses, the Sight of our sight and the Hearing of our hearing. The Brahman-consciousness of which the Upanishad speaks is not the Absolute withdrawn into itself, but that Absolute in its outlook on the relative; it is the Lord, the Master-Soul, the governing Transcendent and All, He who constitutes and controls the action of the gods on the different planes of our being. Since it constitutes them, all our workings can be no more than psychical and physical results and representations of something essential proper to its supreme creative outlook, our sense a shadow of the divine Sense, our sight of the divine Sight, our hearing of the divine Hearing. Nor are that divine sight and hearing limited to things physical, but extend themselves to all forms and operations of conscious being.

The supreme Consciousness does not depend on what we call sight and hearing for its own essential seeing and audition. It operates by a supreme Sense, creative and comprehensive, of which our physical and psychical sight and hearing are external results and partial operations. Neither is it ignorant of these, nor excludes them; for since it constitutes and controls, it must be aware of them but from a supreme plane, *param dhāma*, which includes all in its view; for its original action is that highest movement of Vishnu which, the Veda tells us, the seers behold like an eye extended in heaven. It is that by which the soul sees its seeings and hears its hearings; but all sense only assumes its true value and attains to its absolute, its immortal reality when we cease to pursue the satisfactions of the mere external and physical senses and go beyond even the psychical being to this spiritual or essential which is the source and fountain, the knower, constituent and true valuer of all the rest.

This spiritual sense of things, secret and superconscient in us, alone gives their being, worth and reality to the psychical and physical sense; in themselves they have none. When we attain to it, these inferior operations are as it were taken up into it and the whole world and everything in it changes to us and takes on a

different and a non-material value. That Master-consciousness in us senses our sensations of objects, sees our seeings, hears our hearings no longer for the benefit of the senses and their desires, but with the embrace of the self-existent Bliss which has no cause, beginning or end, eternal in its own immortality.

X

The Superlife — Life of Our Life

BUT THE Brahman-consciousness is not only Mind of our mind, Speech of our speech, Sense of our sense; it is also Life of our life. In other words, it is a supreme and universal energy of existence of which our own material life and its sustaining energy are only an inferior result, a physical symbol, an external and limited functioning. That which governs our existence and its functionings, does not live and act by them, but is their superior cause and the supra-vital principle out of which they are formed and by which they are controlled.

The English word life does duty for many very different shades of meaning; but the word Prana familiar in the Upanishad and in the language of Yoga is restricted to the life-force whether viewed in itself or in its functionings. The popular significance of Prana was indeed the breath drawn into and thrown out from the lungs and so, in its most material and common sense, the life or the life-breath; but this is not the philosophic significance of the word as it is used in the Upanishads. The Prana of the Upanishads is the life-energy itself which was supposed to occupy and act in the body with a fivefold movement, each with its characteristic name and each quite as necessary to the functioning of the life of the body as the act of respiration. Respiration in fact is only one action of the chief movement of the life-energy, the first of the five,—the action which is most normally necessary and vital to the maintenance and distribution of the energy in the physical frame, but which can yet be suspended without the life being necessarily destroyed.

The existence of a vital force or life-energy has been doubted by western Science, because that Science concerns itself only with the most external operations of Nature and has as yet no true knowledge of anything except the physical and outward. This Prana, this life-force is not physical in itself; it is not material

energy, but rather a different principle supporting Matter and involved in it. It supports and occupies all forms and without it no physical form could have come into being or could remain in being. It acts in all material forces such as electricity and is nearest to self-manifestation in those that are nearest to pure force; material forces could not exist or act without it, for from it they derive their energy and movement and they are its vehicles. But all material aspects are only field and form of the Prana which is in itself a pure energy, their cause and not their result. It cannot therefore be detected by any physical analysis; physical analysis can only resolve for us the combinations of those material happenings which are its results and the external signs and symbols of its presence and operation.

How then do we become aware of its existence? By that purification of our mind and body and that subtilisation of our means of sensation and knowledge which become possible through Yoga. We become capable of analysis other than the resolution of forms into their gross physical elements and are able to distinguish the operations of the pure mental principle from those of the material and both of these from the vital or dynamic which forms a link between them and supports them both. We are then able to distinguish the movements of the Pranic currents not only in the physical body which is all that we are normally aware of, but in that subtle frame of our being which Yoga detects underlying and sustaining the physical. This is ordinarily done by the process of Pranayama, the government and control of the respiration. By Pranayama the Hathayogin is able to control, suspend and transcend the ordinary fixed operation of the Pranic energy which is all that Nature needs for the normal functioning of the body and of the physical life and mind, and he becomes aware of the channels in which that energy distributes itself in all its workings and is therefore able to do things with his body which seem miraculous to the ignorant, just as the physical scientist by his knowledge of the workings of material forces is able to do things with them which would seem to us magic if their law and process were not divulged. For all the workings of life in the physical form are governed

by the Prana and not only those which are normal and constant and those which, being always potential, can be easily brought forward and set in action, but those which are of a more remote potentiality and seem to our average experience difficult or impossible.

But the Pranic energy supports not only the operations of our physical life, but also those of the mind in the living body. Therefore by the control of the Pranic energy it is not only possible to control our physical and vital functionings and to transcend their ordinary operation, but to control also the workings of the mind and to transcend its ordinary operations. The human mind in fact depends always on the pranic force which links it with the body through which it manifests itself, and it is able to deploy its own force only in proportion as it can make that energy available for its own uses and subservient to its own purposes. In proportion, therefore, as the Yогin gets back to the control of the Prana, and by the direction of its batteries opens up those nervous centres (*cakras*) in which it is now sluggish or only partially operative, he is able to manifest powers of mind, sense and consciousness which transcend our ordinary experience. The so-called occult powers of Yoga are such faculties which thus open up of themselves as the Yогin advances in the control of the Pranic force and, purifying the channels of its movement, establishes an increasing communication between the consciousness of his subtle subliminal being and the consciousness of his gross physical and superficial existence.

Thus the Prana is vital or nervous force which bears the operations of mind and body, is yoked by them as it were like a horse to a chariot and driven by the mind along the paths on which it wishes to travel to the goal of its desire. Therefore it is described in this Upanishad as yoked and moving forward and again as being led forward, the images recalling the Vedic symbol of the Horse by which the pranic force is constantly designated in the Rig Veda. It is in fact that which does all the action of the world in obedience to conscious or subconscious mind and in the conditions of material force and material form. While the mind is that movement of Nature in us which represents in the mould

of our material and phenomenal existence and within the triple term of the Ignorance the knowledge aspect of the Brahman, the consciousness of the knower, and body is that which similarly represents the being of the existent in the mask of phenomenally divisible substance, so Prana or life-energy represents in the flux of phenomenal things the force, the active dynamis of the Lord who controls and enjoys the manifestation of His own being.¹ It is a universal energy present in every atom and particle of the universe and active in every stirring and current of the constant flux and interchange which constitutes the world.

But just as mind is only an inferior movement of the supreme Conscious-Being and above mind there is a divine and infinite principle of consciousness, will and knowledge which controls the ignorant action of mind, and it is by this superior principle and not by mind that Brahman cognises His own being whether in itself or in its manifestation, so also it must be with this Life-force. The characteristics of the life-force as it manifests itself in us are desire, hunger, an enjoyment which devours the object enjoyed and a sensational movement and activity of response which gropes after possession and seeks to pervade, embrace, take into itself the object of its desire.² It is not in this breath of desire and mortal enjoyment that the true life can consist or the highest, divine energy act, any more than the supreme knowledge can think in the terms of ignorant, groping, limited and divided mind. As the movements of mind are merely representations in the terms of the duality and the ignorance, reflections of a supreme consciousness and knowledge, so the movements of this life-force can only be similar representations of a supreme energy expressing a higher and truer existence possessed of that consciousness and knowledge and therefore free from desire, hunger, transient enjoyment and hampered activity. What is desire here must there be self-existent Will or Love; what is hunger

¹ The three are the reverse aspects of Chit, Sat and Chit-Tapas.

² All these significances are intended by the Vedic Rishis in their use of the word Ashwa, Horse, for the Prana, the root being capable of all of them as we see from the words *āśā*, hope; *āśanā*, hunger; *āś*, to eat; *āś*, to enjoy; *āśu*, swift; *āś*, to move, attain, pervade, etc.

here must there be desireless satisfaction; what is here enjoyment must there be self-existent delight; what is here a groping action and response, must be there self-possessing and all-possessing energy,— such must be the Life of our life by which this inferior action is sustained and led to its goal. Brahman does not breathe with the breath, does not live by this Life-force and its dual terms of birth and death.

What then is this Life of our life? It is the supreme Energy³ which is nothing but the infinite force in action of the supreme conscious Being in His own illumined self. The Self-existent is luminously aware of Himself and full of His own delight; and that self-awareness is a timeless self-possession which in action reveals itself as a force of infinite consciousness omnipotent as well as omniscient; for it exists between two poles, one of eternal stillness and pure identity, the other of eternal energy and identity of All with itself, the stillness eternally supporting the energy. That is the true existence, the Life from which our life proceeds; that is the immortality, while what we cling to as life is “hunger that is death”. Therefore the object of the wise must be to pass in their illumined consciousness beyond the false and phenomenal terms of life and death to this immortality.

Yet is this Life-force, however inferior its workings, instinct with the being, will, light of that which it represents, of that which transcends it; by That it is “led forward” on its paths to a goal which its own existence implies by the very imperfection of its movements and renderings. This death called life is not only a dark figure of that light, but it is the passage by which we pass through transmutation of our being from the death-sleep of Matter into the spirit’s infinite immortality.

³ Tapas or Chit-Shakti.

The Great Transition

THE THOUGHT of the Upanishad, as expressed in its first chapter in the brief and pregnant sentences of the Upani-shadic style, amounts then to this result that the life of the mind, senses, vital activities in which we dwell is not the whole or the chief part of our existence, not the highest, not self-existent, not master of itself. It is an outer fringe, a lower result, an inferior working of something beyond; a superconscious Existence has developed, supports and governs this partial and fragmentary, this incomplete and unsatisfying consciousness and activity of the mind, life and senses. To rise out of this external and surface consciousness towards and into that superconscious is our progress, our goal, our destiny of completeness and satisfaction.

The Upanishad does not assert the unreality, but only the incompleteness and inferiority of our present existence. All that we follow after here is an imperfect representation, a broken and divided functioning of what is eternally in an absolute perfection on that higher plane of existence. This mind of ours unpossessed of its object, groping, purblind, besieged by error and incapacity, its action founded on an external vision of things, is only the shadow thrown by a superconscious Knowledge which possesses, creates and securely uses the truth of things because nothing is external to it, nothing is other than itself, nothing is divided or at war within its all-comprehensive self-awareness. That is the Mind of our mind. Our speech, limited, mechanical, imperfectly interpretative of the outsides of things, restricted by the narrow circle of the mind, based on the appearances of sense is only the far-off and feeble response, the ignorant vibration returned to a creative and revelatory Word which has built up all the forms which our mind and speech seek to comprehend and express. Our sense, a movement in stuff of consciousness vibratory to outward impacts, attempting imperfectly to grasp

them by laboured and separately converging reactions, is only the faulty image of a supreme Sense which at once, fully, harmoniously unites itself with and enjoys all that the supreme Mind and Speech create in the self-joyous activity of the divine and infinite existence. Our life, a breath of force and movement and possession attached to a form of mind and body and restricted by the form, limited in its force, hampered in its movement, besieged in its possession and therefore a thing of discords at war with itself and its environment, hungering and unsatisfied, moving inconstantly from object to object and unable to embrace and retain their multiplicity, devouring its objects of enjoyment and therefore transient in its enjoyments, is only a broken movement of the one, undivided, infinite Life which is all-possessing and ever satisfied because in all it enjoys its eternal self unimprisoned by the divisions of space, unoccupied by the moments of Time, undeluded by the successions of Cause and Circumstance.

This superconscious Existence, one, conscious of itself, conscious both of its eternal peace and its omniscient and omnipotent force, is also conscious of our cosmic existence which it holds in itself, inspires secretly and omnipotently governs. It is the Lord of the Isha Upanishad who inhabits all the creations of His Force, all form of movement in the ever mobile principle of cosmos. It is our self and that of which and by which we are constituted in all our being and activities, the Brahman. The mortal life is a dual representation of That with two conflicting elements in it, negative and positive. Its negative elements of death, suffering, incapacity, strife, division, limitation are a dark figure which conceal and serve the development of that which its positive elements cannot yet achieve,—immortality hiding itself from life in the figure of death, delight hiding itself from pleasure in the figure of suffering, infinite force hiding itself from finite effort in the figure of incapacity, fusion of love hiding itself from desire in the figure of strife, unity hiding itself from acquisition in the figure of division, infinity hiding itself from growth in the figure of limitation. The positive elements suggest what the Brahman is, but never are what the Brahman is, although their victory, the victory of the gods, is always the

victory of the Brahman over its own self-negations, always the self-affirmation of His vastness against the denials of the dark and limiting figure of things. Still, it is not this vastness merely, but the absolute infinity which is Brahman itself. And therefore within this dual figure of things we cannot attain to our self, our Highest; we have to transcend in order to attain. Our pursuit of the positive elements of this existence, our worship of the gods of the mind, life, sense is only a preparatory to the real travail of the soul, and we must leave this lower Brahman and know that Higher if we are to fulfil ourselves. We pursue, for instance, our mental growth, we become mental beings full of an accomplished thought-power and thought-acquisition, *dhirāḥ*, in order that we may by thought of mind go beyond mind itself to the Eternal. For always the life of mind and senses is the jurisdiction of death and limitation; beyond is the immortality.

The wise, therefore, the souls seated and accomplished in luminous thought-power put away from them the dualities of our mind, life and senses and go forward from this world; they go beyond to the unity and the immortality. The word used for going forward is that which expresses the passage of death; it is also that which the Upanishad uses for the forward movement of the Life-force yoked to the car of embodied mind and sense on the paths of life. And in this coincidence we can find a double and most pregnant suggestion.

It is not by abandoning life on earth in order to pursue immortality on other more favourable planes of existence that the great achievement becomes possible. It is here, *ihaiva*, in this mortal life and body that immortality must be won, here in this lower Brahman and by this embodied soul that the Higher must be known and possessed. "If here one find it not, great is the perdition." This life-force in us is led forward by the attraction of the supreme Life on its path of constant acquisition through types of the Brahman until it reaches a point where it has to go entirely forward, to go across out of the mortal life, the mortal vision of things to some Beyond. So long as death is not entirely conquered, this going beyond is represented in the terms of death and by a passing into other worlds where death is

not present, where a type of immortality is tasted corresponding to that which we have found here in our soul-experience; but the attraction of death and limitation is not overpassed because they still conceal something of immortality and infinity which we have not yet achieved; therefore there is a necessity of return, an insistent utility of farther life in the mortal body which we do not overcome until we have passed beyond all types to the very being of the Infinite, One and Immortal.

The worlds of which the Upanishad speaks are essentially soul-conditions and not geographical divisions of the cosmos. This material universe is itself only existence as we see it when the soul dwells on the plane of material movement and experience in which the spirit involves itself in form, and therefore all the framework of things in which it moves by the life and which it embraces by the consciousness is determined by the principle of infinite division and aggregation proper to Matter, to substance of form. This becomes then its world or vision of things. And to whatever soul-condition it climbs, its vision of things will change from the material vision and correspond to that other condition, and in that other framework it will move in its living and embrace it in its consciousness. These are the worlds of the ancient tradition.

But the soul that has entirely realised immortality passes beyond all worlds and is free from frameworks. It enters into the being of the Lord; like this supreme superconscious Self and Brahman, it is not subdued to life and death. It is no longer subject to the necessity of entering into the cycle of rebirth, of travelling continually between the imprisoning dualities of death and birth, affirmation and negation; for it has transcended name and form. This victory, this supreme immortality it must achieve here as an embodied soul in the mortal framework of things. Afterwards, like the Brahman, it transcends and yet embraces the cosmic existence without being subject to it. Personal freedom, personal fulfilment is then achieved by the liberation of the soul from imprisonment in the form of this changing personality and by its ascent to the One that is the All. If afterwards there is any assumption of the figure of mortality, it is an assumption and

not a subjection, a help brought to the world and not a help to be derived from it, a descent of the ensouled superconscious existence not from any personal necessity, but from the universal need in the cosmic labour for those yet unfree and unfulfilled to be helped and strengthened by the force that has already described the path up to the goal in its experience and achieved under the same conditions the Work and the Sacrifice.

Mind and the Brahman

BEFORE we can proceed to the problem how, being what we are and the Brahman being what it is, we can effect the transition from the status of mind, life and senses proper to man over to the status proper to the supreme Consciousness which is master of mind, life and senses, another and prior question arises. The Upanishad does not state it explicitly, but implies and answers it with the strongest emphasis on the solution and the subtlest variety in its repetition of the apparent paradox that is presented.

The Master-Consciousness of the Brahman is that for which we have to abandon this lesser status of the mere creature subject to the movement of Nature in the cosmos; but after all this Master-Consciousness, however high and great a thing it may be, has a relation to the universe and the cosmic movement; it cannot be the utter Absolute, Brahman superior to all relativities. This Conscious-Being who originates, supports and governs our mind, life, senses is the Lord; but where there is no universe of relativities, there can be no Lord, for there is no movement to transcend and govern. Is not then this Lord, as one might say in a later language, not so much the creator of Maya as himself a creation of Maya? Do not both Lord and cosmos disappear when we go beyond all cosmos? And is it not beyond all cosmos that the only true reality exists? Is it not this only true reality and not the Mind of our mind, the Sense of our sense, the Life of our life, the Word behind our speech, which we have to know and possess? As we must go behind all effects to the Cause, must we not equally go beyond the Cause to that in which neither cause nor effects exist? Is not even the immortality spoken of in the Veda and Upanishads a petty thing to be overpassed and abandoned? and should we not reach towards the utter Ineffable where mortality and immortality cease to have any meaning?

The Upanishad does not put to itself the question in this form and language which only became possible when Nihilistic Buddhism and Vedantic Illusionism had passed over the face of our thought and modified philosophical speech and concepts. But it knows of the ineffable Absolute which is the utter reality and absoluteness of the Lord even as the Lord is the absolute of all that is in the cosmos. Of That it proceeds to speak in the only way in which it can be spoken of by the human mind.

Its answer to the problem is that That is precisely the Unknowable¹ of which no relations can be affirmed² and about which therefore our intellect must for ever be silent. The injunction to know the utterly Unknowable would be without any sense or practical meaning. Not that That is a Nihil, a pure Negative, but it cannot either be described by any of the positives of which our mind, speech or perception is capable, nor even can it be indicated by any of them. It is only a little that we know; it is only in the terms of the little that we can put the mental forms of our knowledge. Even when we go beyond to the real form of the Brahman which is not this universe, we can only indicate, we cannot really describe. If then we think we have known it perfectly, we betray our ignorance; we show that we know very little indeed, not even the little that we can put into the forms of our knowledge. For the universe seen as our mind sees it is the little, the divided, the parcelling out of existence and consciousness in which we know and express things by fragments, and we can never really cage in our intellectual and verbal fictions that infinite totality. Yet it is through the principles manifested in the universe that we have to arrive at That, through the life, through the mind and through that highest mental knowledge which grasps at the fundamental Ideas that are like doors concealing behind them the Brahman and yet seeming to reveal Him.

Much less, then, if we can only thus know the Master-Consciousness which is the form of the Brahman, can we pretend to know its utter ineffable reality which is beyond all knowledge.

¹ *Ajñeyam atarkyam.*

² *Avyavahāryam.*

But if this were all, there would be no hope for the soul and a resigned Agnosticism would be the last word of wisdom. The truth is that though thus beyond our mentality and our highest ideative knowledge, the Supreme does give Himself both to this knowledge and to our mentality in the way proper to each and by following that way we can arrive at Him, but only on condition that we do not take our mentalising by the mind and our knowing by the higher thought for the full knowledge and rest in that with a satisfied possession.

The way is to use our mind rightly for such knowledge as is open to its highest, purified capacity. We have to know the form of the Brahman, the Master-Consciousness of the Lord through and yet beyond the universe in which we live. But first we must put aside what is mere form and phenomenon in the universe; for that has nothing to do with the form of the Brahman, the body of the Self, since it is not His form, but only His most external mask. Our first step therefore must be to get behind the forms of Matter, the forms of Life, the forms of Mind and go back to that which is essential, most real, nearest to actual entity. And when we have gone on thus eliminating, thus analysing all forms into the fundamental entities of the cosmos, we shall find that these fundamental entities are really only two, ourselves and the gods.

The gods of the Upanishad have been supposed to be a figure for the senses, but although they act in the senses, they are yet much more than that. They represent the divine power in its great and fundamental cosmic functionings whether in man or in mind and life and matter in general; they are not the functionings themselves but something of the Divine which is essential to their operation and its immediate possessor and cause. They are, as we see from other Upanishads, positive self-representations of the Brahman leading to good, joy, light, love, immortality as against all that is a dark negation of these things. And it is necessarily in the mind, life, senses, and speech of man that the battle here reaches its height and approaches to its full meaning. The gods seek to lead these to good and light; the Titans, sons of darkness, seek to pierce them with ignorance

and evil.³ Behind the gods is the Master-Consciousness of which they are the positive cosmic self-representations.

The other entity which represents the Brahman in the cosmos is the self of the living and thinking creature, man. This self also is not an external mask; it is not form of the mind or form of the life or form of the body. It is something that supports these and makes them possible, something that can say positively like the gods, "I am" and not only "I seem". We have then to scrutinise these two entities and see what they are in relation to each other and to the Brahman; or, as the Upanishad puts it, "That of it which is thou, that of it which is in the gods, *this* is what thy mind has to resolve." Well, but what then of the Brahman is myself? and what of the Brahman is in the Gods? The answer is evident. I am a representation in the cosmos, but for all purposes of the cosmos a real representation of the Self; and the gods are a representation in the cosmos—a real representation since without them the cosmos could not continue—of the Lord. The one supreme Self is the essentiality of all these individual existences; the one supreme Lord is the Godhead in the gods.

The Self and the Lord are one Brahman, whom we can realise through our self and realise through that which is essential in the cosmic movement. Just as our self constitutes our mind, body, life, senses, so that Self constitutes all mind, body, life, senses; it is the origin and essentiality of things. Just as the gods govern, supported by our self, the cosmos of our individual being, the action of our mind, senses and life, so the Lord governs as Mind of the mind, Sense of the sense, Life of the life, supporting His active divinity by His silent essential self-being, all cosmos and all form of being. As we have gone behind the forms of the cosmos to that which is essential in their being and movement and found our self and the gods, so we have to go behind our self and the gods and find the one supreme Self and the one supreme Godhead. Then we can say, "I think that I know."

³ Chhandogya and Brihadaranyaka Upanishads.

But at once we have to qualify our assertion. I think not that I know perfectly, for that is impossible in the terms of our instruments of knowledge. I do not think for a moment that I know the Unknowable, that that can be put into the forms through which I must arrive at the Self and Lord; but at the same time I am no longer in ignorance, I know the Brahman in the only way in which I can know Him, in His self-revelation to me in terms not beyond the grasp of my psychology, manifest as the Self and the Lord. The mystery of existence is revealed in a way that utterly satisfies my being because it enables me first to comprehend it through these figures as far as it can be comprehended by me and, secondly, to enter into, to live in, to be one in law and being with and even to merge myself in the Brahman.

If we fancy that we have grasped the Brahman by the mind and in that delusion fix down our knowledge of Him to the terms our mentality has found, then our knowledge is no knowledge; it is the little knowledge that turns to falsehood. So too those who try to fix Him into our notion of the fundamental ideas in which we discern Him by the thought that rises above ordinary mental perception, have no real discernment of the Brahman, since they take certain idea-symbols for the Reality. On the other hand if we recognise that our mental perceptions are simply so many clues by which we can rise beyond mental perception and if we use these fundamental idea-symbols and the arrangement of them which our uttermost thought makes in order to go beyond the symbol to that reality, then we have rightly used mind and the higher discernment for their supreme purpose. Mind and the higher discernment are satisfied of the Brahman even in being exceeded by Him.

The mind can only reflect in a sort of supreme understanding and experience the form, the image of the supreme as He shows Himself to our mentality. Through this reflection we find, we know; the purpose of knowledge is accomplished, for we find immortality, we enter into the law, the being, the beatitude of the Brahman-consciousness. By self-realisation of Brahman as our self we find the force, the divine energy which lifts us beyond

the limitation, weakness, darkness, sorrow, all-pervading death of our mortal existence; by the knowledge of the one Brahman in all beings and in all the various movement of the cosmos we attain beyond these things to the infinity, the omnipotent being, the omniscient light, the pure beatitude of that divine existence.

This great achievement must be done here in this mortal world, in this limited body; for if we do it, we arrive at our true existence and are no longer bound down to our phenomenal becoming. But if here we find it not, great is the loss and perdition; for we remain continually immersed in the phenomenal life of the mind and body and do not rise above it into the true supramental existence. Nor, if we miss it here, will death give it to us by our passage to another and less difficult world. Only those who use their awakened self and enlightened powers to distinguish and discover that One and Immortal in all existences, the all-originating self, the all-inhabiting Lord, can make the real passage which transcends life and death, can pass out of this mortal status, can press beyond and rise upward into a world-transcending immortality.

This, then, and no other is the means to be seized on and the goal to be reached. "There is no other path for the great journey." The Self and the Lord are that indeterminable, unknowable, ineffable Parabrahman and when we seek rather that which is indeterminable and unknowable to us, it is still the Self and the Lord always that we find, though by an attempt which is not the straight and possible road intended for the embodied soul seeking here to accomplish its true existence.⁴ They are the self-manifested Reality which so places itself before man as the object of his highest aspiration and the fulfilment of all his activities.

⁴ Gita.

XIII

The Parable of the Gods

FROM its assertion of the relative knowableness of the unknowable Brahman and the justification of the soul's aspiration towards that which is beyond its present capacity and status the Upanishad turns to the question of the means by which that high-reaching aspiration can put itself into relation with the object of its search. How is the veil to be penetrated and the subject consciousness of man to enter into the master-consciousness of the Lord? What bridge is there over this gulf? Knowledge has already been pointed out as the supreme means open to us, a knowledge which begins by a sort of reflection of the true existence in the awakened mental understanding. But Mind is one of the gods; the Light behind it is indeed the greatest of the gods, Indra. Then, an awakening of all the gods through their greatest to the essence of that which they are, the one Godhead which they represent. By the mentality opening itself to the Mind of our mind, the sense and speech also will open themselves to the Sense of our sense and to the Word behind our speech and the life to the Life of our life. The Upanishad proceeds to develop this consequence of its central suggestion by a striking parable or analogue.

The gods, the powers that affirm the Good, the Light, the Joy and Beauty, the Strength and Mastery have found themselves victorious in their eternal battle with the powers that deny. It is Brahman that has stood behind the gods and conquered for them; the Master of all who guides all has thrown His deciding will into the balance, put down his darkened children and exalted the children of Light. In this victory of the Master of all the gods are conscious of a mighty development of themselves, a splendid efflorescence of their greatness in man, their joy, their light, their glory, their power and pleasure. But their vision is as yet sealed to their own deeper truth; they know of themselves,

they know not the Eternal; they know the godheads, they do not know God. Therefore they see the victory as their own, the greatness as their own. This opulent efflorescence of the gods and uplifting of their greatness and light is the advance of man to his ordinary ideal of a perfectly enlightened mentality, a strong and sane vitality, a well-ordered body and senses, a harmonious, rich, active and happy life, the Hellenic ideal which the modern world holds to be our ultimate potentiality. When such an efflorescence takes place whether in the individual or the kind, the gods in man grow luminous, strong, happy; they feel they have conquered the world and they proceed to divide it among themselves and enjoy it.

But such is not the full intention of Brahman in the universe or in the creature. The greatness of the gods is His own victory and greatness, but it is only given in order that man may grow nearer to the point at which his faculties will be strong enough to go beyond themselves and realise the Transcendent. Therefore Brahman manifests Himself before the exultant gods in their well-ordered world and puts to them by His silence the heart-shaking, the world-shaking question, "If ye are all, then what am I? for see, I am and I am here." Though He manifests, He does not reveal Himself, but is seen and felt by them as a vague and tremendous presence, the Yaksha, the Daemon, the Spirit, the unknown Power, the Terrible beyond good and evil for whom good and evil are instruments towards His final self-expression. Then there is alarm and confusion in the divine assembly; they feel a demand and a menace; on the side of the evil the possibility of monstrous and appalling powers yet unknown and unmastered which may wreck the fair world they have built, upheave and shatter to pieces the brilliant harmony of the intellect, the aesthetic mind, the moral nature, the vital desires, the body and senses which they have with such labour established; on the side of the good the demand of things unknown which are beyond all these and therefore are equally a menace, since the little which is realised cannot stand against the much that is unrealised, cannot shut out the vast, the infinite that presses against the fragile walls we have erected to define and shelter

our limited being and pleasure. Brahman presents itself to them as the Unknown; the gods knew not what was this Daemon.

Therefore Agni first arises at their bidding to discover its nature, limits, identity. The gods of the Upanishad differ in one all-important respect from the gods of the Rig Veda; for the latter are not only powers of the One, but conscious of their source and true identity; they know the Brahman, they dwell in the supreme Godhead, their origin, home and proper plane is the superconscious Truth. It is true they manifest themselves in man in the form of human faculties and assume the appearance of human limitations, manifest themselves in the lower cosmos and assume the mould of its cosmic operations; but this is only their lesser and lower movement and beyond it they are for ever the One, the Transcendent and Wonderful, the Master of Force and Delight and Knowledge and Being. But in the Upanishads the Brahman idea has grown and cast down the gods from this high preeminence so that they appear only in their lesser human and cosmic workings. Much of their other Vedic aspects they keep. Here the three gods Indra, Vayu, Agni represent the cosmic Divine on each of its three planes, Indra on the mental, Vayu on the vital, Agni on the material. In that order, therefore, beginning from the material they approach the Brahman.

Agni is the heat and flame of the conscious force in Matter which has built up the universe; it is he who has made life and mind possible and developed them in the material universe where he is the greatest deity. Especially he is the primary impeller of speech of which Vayu is the medium and Indra the lord. This heat of conscious force in Matter is Agni Jatavedas, the knower of all births: of all things born, of every cosmic phenomenon he knows the law, the process, the limit, the relation. If then it is some mighty Birth of the cosmos that stands before them, some new indeterminate developed in the cosmic struggle and process, who shall know him, determine his limits, strength, potentialities if not Agni Jatavedas?

Full of confidence he rushes towards the object of his search and is met by the challenge “Who art thou? What is the force in thee?” His name is Agni Jatavedas, the Power that is at the basis

of all birth and process in the material universe and embraces and knows their workings and the force in him is this that all that is thus born, he as the flame of Time and Death can devour. All things are his food which he assimilates and turns into material of new birth and formation. But this all-devourer cannot devour with all his force a fragile blade of grass so long as it has behind it the power of the Eternal. Agni is compelled to return, not having discovered. One thing only is settled that this Daemon is no Birth of the material cosmos, no transient thing that is subject to the flame and breath of Time; it is too great for Agni.

Another god rises to the call. It is Vayu Matarishwan, the great Life-Principle, he who moves, breathes, expands infinitely in the mother element. All things in the universe are the movement of this mighty Life; it is he who has brought Agni and placed him secretly in all existence; for him the worlds have been upbuilt that Life may move in them, that it may act, that it may riot and enjoy. If this Daemon be no birth of Matter, but some stupendous Life-force active whether in the depths or on the heights of being, who shall know it, who shall seize it in his universal expansion if not Vayu Matarishwan?

There is the same confident advance upon the object, the same formidable challenge "Who art thou? What is the force in thee?" This is Vayu Matarishwan and the power in him is this that he, the Life, can take all things in his stride and growth and seize on them for his mastery and enjoyment. But even the veriest frailest trifle he cannot seize and master so long as it is protected against him by the shield of the Omnipotent. Vayu too returns, not having discovered. One thing only is settled that this is no form or force of cosmic Life which operates within the limits of the all-grasping vital impulse; it is too great for Vayu.

Indra next arises, the Puissant, the Opulent. Indra is the power of the Mind; the senses which the Life uses for enjoyment, are operations of Indra which he conducts for knowledge and all things that Agni has upbuilt and supports and destroys in the universe are Indra's field and the subject of his functioning. If then this unknown Existence is something that the senses can grasp or, if it is something that the mind can envisage, Indra

shall know it and make it part of his opulent possessions. But it is nothing that the senses can grasp or the mind envisage, for as soon as Indra approaches it, it vanishes. The mind can only envisage what is limited by Time and Space and this Brahman is that which, as the Rig Veda has said, is neither today nor tomorrow and though it moves and can be approached in the conscious being of all conscious existences, yet when the mind tries to approach it and study it in itself, it vanishes from the view of the mind. The Omnipresent cannot be seized by the senses, the Omniscient cannot be known by the mentality.

But Indra does not turn back from the quest like Agni and Vayu; he pursues his way through the highest ether of the pure mentality and there he approaches the Woman, the many-shining, Uma Haimavati; from her he learns that this Daemon is the Brahman by whom alone the gods of mind and life and body conquer and affirm themselves, and in whom alone they are great. Uma is the supreme Nature from whom the whole cosmic action takes its birth; she is the pure summit and highest power of the One who here shines out in many forms. From this supreme Nature which is also the supreme Consciousness the gods must learn their own truth; they must proceed by reflecting it in themselves instead of limiting themselves to their own lower movement. For she has the knowledge and consciousness of the One, while the lower nature of mind, life and body can only envisage the many. Although therefore Indra, Vayu and Agni are the greatest of the gods, the first coming to know the existence of the Brahman, the others approaching and feeling the touch of it, yet it is only by entering into contact with the supreme consciousness and reflecting its nature and by the elimination of the vital, mental, physical egoism so that their whole function shall be to reflect the One and Supreme that Brahman can be known by the gods in us and possessed. The conscious force that supports our embodied life must become simply and purely a reflector of that supreme Consciousness and Power of which its highest ordinary action is only a twilight figure; the Life must become a passively potent reflection and pure image of that supreme Life which is greater than all our utmost actual and

potential vitality; the Mind must resign itself to be no more than a faithful mirror of the image of the superconscious Existence. By this conscious surrender of mind, life and senses to the Master of our senses, life and mind who alone really governs their action, by this turning of the cosmic existence into a passive reflection of the eternal being and a faithful reproductor of the nature of the Eternal we may hope to know and through knowledge to rise into that which is superconscious to us; we shall enter into the Silence that is master of an eternal, infinite, free and all-blissful activity.

The Transfiguration of the Self and the Gods

THE MEANS of the knowledge of Brahman are, we have seen, to get back behind the forms of the universe to that which is essential in the cosmos — and that which is essential is twofold, the gods in Nature and the self in the individual, — and then to get behind these to the Beyond which they represent. The practical relation of the gods to Brahman in this process of divine knowledge has been already determined. The cosmic functionings through which the gods act, mind, life, speech, senses, body, must become aware of something beyond them which governs them, by which they are and move, by whose force they evolve, enlarge themselves and arrive at power and joy and capacity; to that they must turn from their ordinary operations; leaving these, leaving the false idea of independent action and self-ordering which is an egoism of mind and life and sense they must become consciously passive to the power, light and joy of something which is beyond themselves. What happens then is that this divine Unnameable reflects Himself openly in the gods. His light takes possession of the thinking mind, His power and joy of the life, His light and rapture of the emotional mind and the senses. Something of the supreme image of Brahman falls upon the world-nature and changes it into divine nature.

All this is not done by a sudden miracle. It comes by flashes, revelations, sudden touches and glimpses; there is as if a leap of the lightning of revelation flaming out from those heavens for a moment and then returning into its secret source; as if the lifting of the eyelid of an inner vision and its falling again because the eye cannot look long and steadily on the utter light. The repetition of these touches and visitings from the Beyond fixes the

gods in their upward gaze and expectation, constant repetition fixes them in a constant passivity; not moving out any longer to grasp at the forms of the universe mind, life and senses will more and more be fixed in the memory, in the understanding, in the joy of the touch and vision of that transcendent glory which they have now resolved to make their sole object; to that only they will learn to respond and not to the touches of outward things. The silence which has fallen on them and which is now their foundation and status will become their knowledge of the eternal silence which is Brahman; the response of their functioning to a supernal light, power, joy will become their knowledge of the eternal activity which is Brahman. Other status, other response and activity they will not know. The mind will know nothing but the Brahman, think of nothing but the Brahman, the Life will move to, embrace, enjoy nothing but the Brahman, the eye will see, the ear hear, the other senses sense nothing but the Brahman.

But is then a complete oblivion of the external the goal? Must the mind and senses recede inward and fall into an unending trance and the life be for ever stilled? This is possible, if the soul so wills, but it is not inevitable and indispensable. The Mind is cosmic, one in all the universe; so too are the Life, and the Sense, so too is Matter of the body; and when they exist in and for the Brahman only, they will not only know this but will sense, feel and live in that universal unity. Therefore to whatever thing they turn which to the individual sense and mind and life seems now external to them, there also it is not the mere form of things which they will know, think of, sense, embrace and enjoy, but always and only the Brahman. Moreover, the external will cease to exist for them, because nothing will be external but all things internal to us, even the whole world and all that is in it. For the limit of ego, the wall of individuality will break; the individual Mind will cease to know itself as individual, it will be conscious only of universal Mind one everywhere in which individuals are only knots of the one mentality; so the individual life will lose its sense of separateness and live only in and as the one life in which all individuals are simply whirls of the indivisible flood of pranic

activity; the very body and senses will be no longer conscious of a separated existence, but the real body which the man will feel himself to be physically will be the whole Earth and the whole universe and the whole indivisible form of things wheresoever existent, and the senses also will be converted to this principle of sensation so that even in what we call the external, the eye will see Brahman only in every sight, the ear will hear Brahman only in every sound, the inner and outer body will feel Brahman only in every touch and the touch itself as if internal in the greater body. The soul whose gods are thus converted to this supreme law and religion, will realise in the cosmos itself and in all its multiplicity the truth of the One besides whom there is no other or second. Moreover, becoming one with the formless and infinite, it will exceed the universe itself and see all the worlds not as external, not even as commensurate with itself, but as if within it.

And in fact, in the higher realisation it will not be Mind, Life, Sense of which even the mind, life and sense themselves will be originally aware, but rather that which constitutes them. By this process of constant visiting and divine touch and influence the Mind of the mind, that is to say, the superconscious Knowledge will take possession of the mental understanding and begin to turn all its vision and thinking into luminous stuff and vibration of light of the Supermind. So too the sense will be changed by the visitings of the Sense behind the sense and the whole sense-view of the universe itself will be altered so that the vital, mental and supramental will become visible to the senses with the physical only as their last, outermost and smallest result. So too the Life will become a superlife, a conscious movement of the infinite Conscious-Force; it will be impersonal, unlimited by any particular acts and enjoyment, unbound to their results, untroubled by the dualities or the touch of sin and suffering, grandiose, boundless, immortal. The material world itself will become for these gods a figure of the infinite, luminous and blissful Superconscious.

This will be the transfiguration of the gods, but what of the self? For we have seen that there are two fundamental entities,

the gods and the self, and the self in us is greater than the cosmic Powers, its God-ward destination more vital to our perfection and self-fulfilment than any transfiguration of these lesser deities. Therefore not only must the gods find their one Godhead and resolve themselves into it; that is to say, not only must the cosmic principles working in us resolve themselves into the working of the One, the Principle of all principles, so that they shall become only a unified existence and single action of That in spite of all play of differentiation, but also and with a more fundamental necessity the self in us which supports the action of the gods must find and enter into the one Self of all individual existences, the indivisible Spirit to whom all souls are no more than dark or luminous centres of its consciousness.

This the self of man, since it is the essentiality of a mental being, will do through the mind. In the gods the transfiguration is effected by the Superconscious itself visiting their substance and opening their vision with its flashes until it has transformed them; but the mind is capable of another action which is only apparently movement of mind, but really the movement of the self towards its own reality. The mind seems to go to That, to attain to it; it is lifted out of itself into something beyond and, although it falls back, still by the mind the will of knowledge in the mental thought continually and at last continuously remembers that into which it has entered. On this the Self through the mind seizes and repeatedly dwells and so doing it is finally caught up into it and at last able to dwell securely in that transcendence. It transcends the mind, it transcends its own mental individualisation of the being, that which it now knows as itself; it ascends and takes foundation in the Self of all and in the status of self-joyous infinity which is the supreme manifestation of the Self. This is the transcendent immortality, this is the spiritual existence which the Upanishads declare to be the goal of man and by which we pass out of the mortal state into the heaven of the Spirit.

What then happens to the gods and the cosmos and all that the Lord develops in His being? Does it not all disappear? Is not the transfiguration of the gods even a mere secondary state

through which we pass towards that culmination and which drops away from us as soon as we reach it? And with the disappearance of the gods and the cosmos does not the Lord too, the Master-Consciousness, disappear so that nothing is left but the one pure indeterminate Existence self-blissful in an eternal inaction and non-creation? Such was the conclusion of the later Vedanta in its extreme monistic form and such was the sense which it tried to read into all the Upanishads; but it must be recognised that in the language whether of the Isha or the Kena Upanishad there is absolutely nothing, not even a shade or a nuance pointing to it. If we want to find it there, we have to put it in by force; for the actual language used favours instead the conclusion of other Vedantic systems, which considered the goal to be the eternal joy of the soul in a Brahmaloka or world of the Brahman in which it is one with the infinite existence and yet in a sense still a soul able to enjoy differentiation in the oneness.

In the next verse we have the culmination of the teaching of the Upanishad, the result of the great transcendence which it has been setting forth and afterwards the description of the immortality to which the souls of knowledge attain when they pass beyond the mortal status. It declares that Brahman is in its nature "That Delight", Tadvanam. "Vana" is the Vedic word for delight or delightful, and "Tadvanam" means therefore the transcendent Delight, the all-blissful Ananda of which the Taittiriya Upanishad speaks as the highest Brahman from which all existences are born, by which all existences live and increase and into which all existences arrive in their passing out of death and birth. It is as this transcendent Delight that the Brahman must be worshipped and sought. It is this beatitude therefore which is meant by the immortality of the Upanishads. And what will be the result of knowing and possessing Brahman as the supreme Ananda? It is that towards the knower and possessor of the Brahman is directed the desire of all creatures. In other words, he becomes a centre of the divine Delight shedding it on all the world and attracting all to it as to a fountain of joy and love and self-fulfilment in the universe.

This is the culmination of the teaching of the Upanishad;

there was a demand for the secret teaching that enters into the ultimate truth, for the "Upanishad", and in response this doctrine has been given. It has been uttered, the Upanishad of the Brahman, the hidden ultimate truth of the supreme Existence; its beginning was the search for the Lord, Master of mind, life, speech and senses in whom is the absolute of mind, the absolute of life, the absolute of speech and senses and its close is the finding of Him as the transcendent Beatitude and the elevation of the soul that finds and possesses it into a living centre of that Delight towards which all creatures in the universe shall turn as to a fountain of its ecstasies.

*
* * *

The Upanishad closes with two verses which seem to review and characterise the whole work in the manner of the ancient writings when they have drawn to their close. This Upanishad or gospel of the inmost Truth of things has for its foundation, it is said, the practice of self-mastery, action and the subdual of the sense-life to the power of the Spirit. In other words, life and works are to be used as a means of arriving out of the state of subjection proper to the soul in the ignorance into a state of mastery which brings it nearer to the absolute self-mastery and all-mastery of the supreme Soul seated in the knowledge. The Vedas, that is to say, the utterances of the inspired seers and the truths they hold, are described as all the limbs of the Upanishad; in other words, all the convergent lines and aspects, all the necessary elements of this great practice, this profound psychological self-training and spiritual aspiration are set forth in these great Scriptures, channels of supreme knowledge and indicators of a supreme discipline. Truth is its home; and this Truth is not merely intellectual verity,— for that is not the sense of the word in the Vedic writings,— but man's ultimate human state of true being, true consciousness, right knowledge, right works, right joy of existence, all indeed that is contrary to the falsehood of egoism and ignorance. It is by these means, by

using works and self-discipline for mastery of oneself and for the generation of spiritual energy, by fathoming in all its parts the knowledge and repeating the high example of the great Vedic seers and by living in the Truth that one becomes capable of the great ascent which the Upanishad opens to us.

The goal of the ascent is the world of the true and vast existence of which the Veda speaks as the Truth that is the final goal and home of man. It is described here as the greater infinite heavenly world, (Swargaloka, Swarloka of the Veda), which is not the lesser Swarga of the Puranas or the lesser Brahmaloka of the Mundaka Upanishad, its world of the sun's rays to which the soul arrives by works of virtue and piety, but falls from them by the exhaustion of their merit; it is the higher Swarga or Brahman-world of the Katha which is beyond the dual symbols of birth and death, the higher Brahman-worlds of the Mundaka which the soul enters by knowledge and renunciation. It is therefore a state not belonging to the Ignorance, but to Knowledge. It is, in fact, the infinite existence and beatitude of the soul in the being of the all-blissful existence; it is too the higher status, the light of the Mind beyond the mind, the joy and eternal mastery of the Life beyond the life, the riches of the Sense beyond the senses. And the soul finds in it not only its own largeness but finds too and possesses the infinity of the One and it has firm foundation in that immortal state because there a supreme Silence and eternal Peace are the secure foundation of eternal Knowledge and absolute Joy.

A Last Word

WE HAVE now completed our review of this Upanishad; we have considered minutely the bearings of its successive utterances and striven to make as precise as we can to the intelligence the sense of the puissant phrases in which it gives us its leading clues to that which can never be entirely expressed by human speech. We have some idea of what it means by that Brahman, by the Mind of mind, the Life of life, the Sense of sense, the Speech of speech, by the opposition of ourselves and the gods, by the Unknowable who is yet not utterly unknowable to us, by the transcendence of the mortal state and the conquest of immortality.

Fundamentally its teaching reposes on the assertion of three states of existence, the human and mortal, the Brahman-consciousness which is the absolute of our relativities, and the utter Absolute which is unknowable. The first is in a sense a false status of misrepresentation because it is a continual term of apparent opposites and balancings where the truth of things is a secret unity; we have here a bright or positive figure and a dark or negative figure and both are figures, neither the Truth; still in that we now live and through that we have to move to the Beyond. The second is the Lord of all this dual action who is beyond it; He is the truth of Brahman and not in any way a falsehood or misrepresentation, but the truth of it as attained by us in our eternal supramental being; in Him are the absolutes of all that here we experience in partial figures. The Unknowable is beyond our grasp because though it is the same Reality, yet it exceeds even our highest term of eternal being and is beyond Existence and Non-existence; it is therefore to the Brahman, the Lord who has a relation to what we are that we must direct our search if we would attain beyond what temporarily seems to what eternally is.

The attainment of the Brahman is our escape from the mortal status into Immortality, by which we understand not the survival of death, but the finding of our true self of eternal being and bliss beyond the dual symbols of birth and death. By immortality we mean the absolute life of the soul as opposed to the transient and mutable life in the body which it assumes by birth and death and rebirth and superior also to its life as the mere mental being who dwells in the world subjected helplessly to this law of death and birth or seems at least by his ignorance to be subjected to this and to other laws of the lower Nature. To know and possess its true nature, free, absolute, master of itself and its embodiments is the soul's means of transcendence, and to know and possess this is to know and possess the Brahman. It is also to rise out of mortal world into immortal world, out of world of bondage into world of largeness, out of finite world into infinite world. It is to ascend out of earthly joy and sorrow into a transcendent Beatitude.

This must be done by the abandonment of our attachment to the figure of things in the mortal world. We must put from us its death and dualities if we would compass the unity and immortality. Therefore it follows that we must cease to make the goods of this world or even its right, light and beauty our object of pursuit; we must go beyond these to a supreme Good, a transcendent Truth, Light and Beauty in which the opposite figures of what we call evil disappear. But still, being in this world, it is only through something in this world itself that we can transcend it; it is through its figures that we must find the absolute. Therefore, we scrutinise them and perceive that there are first these forms of mind, life, speech and sense, all of them figures and imperfect suggestions, and then behind them the cosmic principles through which the One acts. It is to these cosmic principles that we must proceed and turn them from their ordinary aim and movement in the world to find their own supreme aim and absolute movement in their own one God-head, the Lord, the Brahman; they must be drawn to leave the workings of ordinary mind and find the superconscious Mind, to leave the workings of ordinary speech and sense and find the

supra-mental Sense and original Word, to leave the apparent workings of mundane Life and find the transcendent Life.

Besides the gods, there is our self, the spirit within who supports all this action of the gods. Our spirit too must turn from its absorption in its figure of itself as it sees it involved in the movement of individual life, mind, body and subject to it and must direct its gaze upward to its own supreme Self who is beyond all this movement and master of it all. Therefore the mind must indeed become passive to the divine Mind, the sense to the divine Sense, the life to the divine Life and by receptivity to constant touches and visitings of the highest be transfigured into a reflection of these transcendences; but also the individual self must through the mind's aspiration upwards, through upliftings of itself beyond, through constant memory of the supreme Reality in which during these divine moments it has lived, ascend finally into that Bliss and Power and Light.

But this will not necessarily mean the immersion into an all-oblivious Being eternally absorbed in His own inactive self-existence. For the mind, sense, life going beyond their individual formations find that they are only one centre of the sole Mind, Life, Form of things and therefore they find Brahman in that also and not only in an individual transcendence; they bring down the vision of the superconscious into that also and not only into their own individual workings. The mind of the individual escapes from its limits and becomes the one universal mind, his life the one universal life, his bodily sense the sense of the whole universe and even more as his own indivisible Brahman-body. He perceives the universe in himself and he perceives also his self in all existences and knows it to be the one, the omnipresent, the single-multiple all-inhabiting Lord and Reality. Without this realisation he has not fulfilled the conditions of immortality. Therefore it is said that what the sages seek is to distinguish and see the Brahman in all existences; by that discovery, realisation and possession of Him everywhere and in all they attain to their immortal existence.

Still although the victory of the gods, that is to say, the progressive perfection of the mind, life, body in the positive

terms of good, right, joy, knowledge, power is recognised as a victory of the Brahman and the necessity of using life and human works in the world as a means of preparation and self-mastery is admitted, yet a final passing away into the infinite heavenly world or status of the Brahman-consciousness is held out as the goal. And this would seem to imply a rejection of the life of the cosmos. Well then may we ask, we the modern humanity more and more conscious of the inner warning of that which created us, be it Nature or God, that there is a work for the race, a divine purpose in its creation which exceeds the salvation of the individual soul, because the universal is as real or even more real than the individual, we who feel more and more, in the language of the Koran, that the Lord did not create heaven and earth in a jest, that Brahman did not begin dreaming this world-dream in a moment of aberration and delirium,—well may we ask whether this gospel of individual salvation is all the message even of this purer, earlier, more catholic Vedanta. If so, then Vedanta at its best is a gospel for the saint, the ascetic, the monk, the solitary, but it has not a message which the widening consciousness of the world can joyfully accept as the word for which it was waiting. For there is evidently something vital that has escaped it, a profound word of the riddle of existence from which it has turned its eyes or which it was unable or thought it not worth while to solve.

Now certainly there is an emphasis in the Upanishads increasing steadily as time goes on into an over-emphasis, on the salvation of the individual, on his rejection of the lower cosmic life. This note increases in them as they become later in date, it swells afterwards into the rejection of all cosmic life whatever and that becomes finally in later Hinduism almost the one dominant and all-challenging cry. It does not exist in the earlier Vedic revelation where individual salvation is regarded as a means towards a great cosmic victory, the eventual conquest of heaven and earth by the superconscious Truth and Bliss and those who have achieved the victory in the past are the conscious helpers of their yet battling posterity. If this earlier note is missing in the Upanishads, then,—for great as are these Scriptures, luminous,

profound, sublime in their unsurpassed truth, beauty and power, yet it is only the ignorant soul that will make itself the slave of a book,—then in using them as an aid to knowledge we must insistently call back that earlier missing note, we must seek elsewhere a solution for the word of the riddle that has been ignored. The Upanishad alone of extant scriptures gives us without veil or stinting, with plenitude and a noble catholicity the truth of the Brahman; its aid to humanity is therefore indispensable. Only, where anything essential is missing, we must go beyond the Upanishads to seek it,—as for instance when we add to its emphasis on divine knowledge the indispensable ardent emphasis of the later teachings upon divine love and the high emphasis of the Veda upon divine works.

The Vedic gospel of a supreme victory in heaven and on earth for the divine in man, the Christian gospel of a kingdom of God and divine city upon earth, the Puranic idea of progressing Avatars ending in the kingdom of the perfect and the restoration of the golden Age, not only contain behind their forms a profound truth, but they are necessary to the religious sense in mankind. Without it the teaching of the vanity of human life and of a passionate fleeing and renunciation can only be powerful in passing epochs or else on the few strong souls in each age that are really capable of these things. The rest of humanity will either reject the creed which makes that its foundation or ignore it in practice while professing it in precept or else must sink under the weight of its own impotence and the sense of the illusion of life or of the curse of God upon the world as mediaeval Christendom sank into ignorance and obscurantism or later India into stagnant torpor and the pettiness of a life of aimless egoism. The promise for the individual is well but the promise for the race is also needed. Our father Heaven must remain bright with the hope of deliverance, but also our mother Earth must not feel herself for ever accursed.

It was necessary at one time to insist even exclusively on the idea of individual salvation so that the sense of a Beyond might be driven into man's mentality, as it was necessary at one time to insist on a heaven of joys for the virtuous and pious so that

man might be drawn by that shining bait towards the practice of religion and the suppression of his unbridled animality. But as the lures of earth have to be conquered, so also have the lures of heaven. The lure of a pleasant Paradise of the rewards of virtue has been rejected by man; the Upanishads belittled it ages ago in India and it is now no longer dominant in the mind of the people; the similar lure in popular Christianity and popular Islam has no meaning for the conscience of modern humanity. The lure of a release from birth and death and withdrawal from the cosmic labour must also be rejected, as it was rejected by Mahayanist Buddhism which held compassion and helpfulness to be greater than Nirvana. As the virtues we practise must be done without demand of earthly or heavenly reward, so the salvation we seek must be purely internal and impersonal; it must be the release from egoism, the union with the Divine, the realisation of our universality as well as our transcendence, and no salvation should be valued which takes us away from the love of God in his manifestation and the help we can give to the world. If need be, it must be taught for a time, "Better this hell with our other suffering selves than a solitary salvation."

Fortunately, there is no need to go to such lengths and deny one side of the truth in order to establish another. The Upanishad itself suggests the door of escape from any over-emphasis in its own statement of the truth. For the man who knows and possesses the supreme Brahman as the transcendent Beatitude becomes a centre of that delight to which all his fellows shall come, a well from which they can draw the divine waters. Here is the clue that we need. The connection with the universe is preserved for the one reason which supremely justifies that connection; it must subsist not from the desire of personal earthly joy, as with those who are still bound, but for help to all creatures. Two then are the objects of the high-reaching soul, to attain the Supreme and to be for ever for the good of all the world,—even as Brahman Himself; whether here or elsewhere, does not essentially matter. Still where the struggle is thickest, there should be the hero of the spirit, that is surely the highest choice of the son of Immortality; the earth calls most, because it

has most need of him, to the soul that has become one with the universe.

And the nature of the highest good that can be done is also indicated,—though other lower forms of help are not therefore excluded. To assist in the lesser victories of the gods which must prepare the supreme victory of the Brahman may well be and must be in some way or other a part of our task; but the greatest helpfulness of all is this, to be a human centre of the Light, the Glory, the Bliss, the Strength, the Knowledge of the Divine Existence, one through whom it shall communicate itself lavishly to other men and attract by its magnet of delight their souls to that which is the Highest.

Katha Upanishad

The Katha Upanishad

of the Black Yajurveda

THE FIRST CYCLE; FIRST CHAPTER

उशन् है वाजश्रवसः सर्वेदसं ददो। तस्य ह नचिकेता नाम पुत्र
आस ॥ १ ॥

1. Vajasravasa, desiring, gave all he had. Now Vajasravasa had a son named Nachiketas.

तं ह कुमारं सन्तं दक्षिणासु नीयमानासु श्रद्धाविवेश सोऽमन्यत ॥ २ ॥

2. As the gifts were led past, faith took possession of him who was yet a boy unwed and he pondered:

पीतोदका जग्धतृणा दुग्धदोहा निरन्द्रियाः ।
अनन्दा नाम ते लोकास्तान् स गच्छति ता ददत् ॥ ३ ॥

3. “Cattle that have drunk their water, eaten their grass, yielded their milk, worn out their organs, of undelight are the worlds which he reaches who gives such as these.”

स होवाच पितरं तत कस्मै मां दास्यसीति । द्वितीयं तृतीयं तं होवाच
मृत्यवे त्वा ददामीति ॥ ४ ॥

4. He said to his father, “Me, O my father, to whom wilt thou give?” A second time and a third he said it, and he replied, “To Death I give thee.”

बहूनामेमि प्रथमो बहूनामेमि मध्यमः ।
किं स्वद्यमस्य कर्तव्यं यन्मयाद्य करिष्यति ॥ ५ ॥

5. “Among many I walk the first, among many I walk the midmost; something Death means to do which today by me he will accomplish.

अनुपश्य यथा पूर्वे प्रतिपश्य तथापरे ।
सस्यमिव मर्त्यः पच्यते सस्यमिवाजायते पुनः ॥ ६ ॥

6. “Look back and see, even as were the men of old,—look round! — even so are they that have come after. Mortal man withers like the fruits of the field and like the fruits of the field he is born again.”

वैश्वानरः प्रविशत्यतिथिब्राह्मणो गृहान् ।
तस्यैतां शान्तिं कुर्वन्ति हर वैवस्वतोदकम् ॥ ७ ॥

His attendants say to Yama:

7. “Fire is the Brahmin who enters as a guest the houses of men; him thus they appease. Bring, O son of Vivasvan,¹ the water of the guest-rite.

आशाप्रतीक्षे संगतं सूनृतां चेष्टापूर्ते पुत्रपशूंश्च सर्वान् ।
एतद वृङ्के पुरुषस्यात्प्रेधसो यस्यानश्चन् वसति ब्राह्मणो गृहे ॥ ८ ॥

8. “That man of little understanding in whose house a Brahmin dwells fasting, all his hope and his expectation and all he has gained and the good and truth that he has spoken and the wells he has dug and the sacrifices he has offered and all his sons and his cattle are torn from him by that guest unhonoured.”

तिस्रो रात्रीर्यदवात्सीर्गृहे मेऽनश्चन् ब्रह्मन्नतिथिर्नमस्यः ।
नमस्तेऽस्तु ब्रह्मन् स्वस्ति मेऽस्तु तस्मात्प्रति त्रीन्वरान्वृणीष्व ॥ ९ ॥

9. “Because for three nights thou hast dwelt in my house, O Brahmin, a guest worthy of reverence,—salutation to thee, O Brahmin, on me let there be the weal,—therefore three boons do thou choose; for each night a boon.”

¹ Yama, lord of death, is also the master of the Law in the world, and he is therefore the child of the Sun, luminous Master of Truth from which the Law is born.

शान्तसंकल्पः सुमना यथा स्याद् वीतमन्युगौत्मो माभि मृत्यो ।
त्वत्प्रसृष्टं माभिवदेत्प्रतीत एतत् त्रयाणां प्रथमं वरं वृणे ॥ १० ॥

10. “Tranquillised in his thought and serene of mind be the Gautama, my father, let his passion over me pass away from him; assured in heart let him greet me from thy grasp delivered; this boon I choose, the first of three.”

यथा पुरस्ताद् भविता प्रतीत औद्दालकिरारुणिर्मत्रसृष्टः ।
सुखं रात्रीः शयिता वीतमन्युस्त्वां ददृशिवान्मृत्युमुखात्प्रमुक्तम् ॥ ११ ॥

11. “Even as before assured in heart and by me released shall he be, Auddalaki Aruni, thy father; sweetly shall he sleep through the nights and his passion shall pass away from him, having seen thee from death’s jaws delivered.”

स्वर्गे लोके न भयं किञ्चनास्ति न तत्र त्वं न जरया विभेति ।
उभे तीर्त्वाशनायापिपासे शोकातिगो मोदते स्वर्गलोके ॥ १२ ॥

12. “In heaven fear is not at all, in heaven, O Death, thou art not, nor old age and its terrors; crossing over hunger and thirst as over two rivers, leaving sorrow behind the soul in heaven rejoices.

स त्वमग्निं स्वर्गर्थमध्येषि मृत्यो प्रबूहि त्वं श्रद्धानाय मह्यम् ।
स्वर्गलोका अमृतत्वं भजन्त एतद् द्वितीयेन वृणे वरेण ॥ १३ ॥

13. “Therefore that heavenly Flame² which thou, O Death, studiest, expound unto me, for I believe. They who win their world of heaven, have immortality for their portion. This for the second boon I have chosen.”

प्र ते ब्रवीमि तदु मे निबोध स्वर्गर्थमग्निं नचिकेतः प्रजानन् ।
अनन्तलोकास्मिथो प्रतिष्ठां विद्धि त्वमेतं निहितं गुहायाम् ॥ १४ ॥

² The celestial force concealed subconsciously in man’s mortality by the kindling of which and its right ordering man transcends his earthly nature; not the physical flame of the external sacrifice to which these profound phrases are inapplicable.

14. "Hearken to me and understand, O Nachiketas; I declare to thee that heavenly Flame, for I know it. Know this to be the possession of infinite existence and the foundation and the thing hidden in the secret cave of our being."

लोकादिमग्निं तमुवाच तस्मै या इष्टका यावतीर्वा यथा वा ।
स चापि तत्प्रत्यवदद् यथोक्तमथास्य मृत्युः पुनरेवाह तुष्टः ॥ १५ ॥

15. Of the Flame that is the world's beginning³ he told him and what are the bricks to him and how many and the way of their setting; and Nachiketas too repeated it even as it was told; then Death was pleased and said to him yet farther;

तमब्रवीत्रीयमाणो महात्मा वरं तवेहाद्य ददामि भूयः ।
तवैव नाम्ना भवितायमग्निः सृङ्गां चेमामनेकरूपां गृहण ॥ १६ ॥

16. Yea; the Great Soul was gratified and said to him, "Yet a farther boon today I give thee; for even by thy name shall this Fire be called; this necklace also take unto thee, a necklace⁴ of many figures.

त्रिणाच्चिकेतस्त्रिभिरेत्य संधिं त्रिकर्मकृत् तरति जन्ममृत्यू ।
ब्रह्मजज्ञं देवमीड्यं विदित्वा निचाय्येमां शान्तिमत्यन्तमेति ॥ १७ ॥

17. "Whoso lights the three fires⁵ of Nachiketas and comes to union with the Three⁶ and does the triple works,⁷ beyond birth and death he crosses; for he finds the God of our

³ The Divine Force concealed in the subconscious is that which has originated and built up the worlds. At the other end in the superconscious it reveals itself as the Divine Being, Lord and Knower who has manifested Himself out of the Brahman.

⁴ The necklace of many figures is Prakriti, creative Nature which comes under the control of the soul that has attained to the divine existence.

⁵ Probably, the divine force utilised to raise to divinity the triple being of man.

⁶ Possibly, the three Purushas, soul-states or Personalities of the divine Being, indicated by the three letters AUM. The highest Brahman is beyond the three letters of the mystic syllable.

⁷ The sacrifice of the lower existence to the divine, consummated on the three planes of man's physical, vital and mental consciousness.

adoration, the Knower⁸ who is born from the Brahman, whom having beheld he attains to surpassing peace.

त्रिणाचिकेतस्त्रयमेतद् विदित्वा य एवं विद्वांश्चिनुते नाचिकेतम् ।
स मृत्युपाशान्पुरतः प्रणोद्य शोकातिगो मोदते स्वर्गलोके ॥ १८ ॥

18. “When a man has the three flames of Nachiketas and knows this that is Triple, when so knowing he beholds the Flame of Nachiketas, then he thrusts from in front of him the meshes of the snare of death; leaving sorrow behind him he in heaven rejoices.

एष तेऽग्निर्नचिकेतः स्वर्यो यमवृणीथा द्वितीयेन वरेण ।
एतमग्निं तवैव प्रवक्ष्यन्ति जनासस्तृतीयं वरं नचिकेतो वृणीष्व ॥ १९ ॥

19. “This is the heavenly Flame, O Nachiketas, which thou hast chosen for the second boon; of this Flame the peoples shall speak that it is thine indeed. A third boon choose, O Nachiketas.”

येयं प्रेते विचिकित्सा मनुष्येऽस्तीत्येके नायमस्तीति चैके ।
एतद् विद्यामनुशिष्टस्त्वयाहं वराणामेष वरस्तृतीयः ॥ २० ॥

20. “This debate that there is over the man who has passed and some say ‘This he is not’ and some that he is, that, taught by thee, I would know; this is the third boon of the boons of my choosing.”

देवैरत्रापि विचिकित्सितं पुरा न हि सुज्ञेयमणुरेष धर्मः ।
अन्यं वरं नचिकेतो वृणीष्व मा मोपरोत्सीरति मा सृजैनम् ॥ २१ ॥

21. “Even by the gods was this debated of old; for it is not easy of knowledge, since very subtle is the law of it. Another boon choose, O Nachiketas; importune me not, nor urge me; this, this abandon.”

⁸ The Purusha or Divine Being, Knower of the Field, who dwells within all and for whose pleasure Prakriti fulfils the cosmic play.

देवैरत्रापि विचिकित्सितं किल त्वं च मृत्यो यन्न सुज्ञेयमात्थ ।
वक्ता चास्य त्वादृगन्यो न लभ्यो नान्यो वरस्तुल्य एतस्य
कश्चित् ॥ २२ ॥

22. “Even by the gods was this debated, it is sure, and thou thyself hast said that it is not easy of knowledge; never shall I find another like thee⁹ to tell of it, nor is there any other boon that is its equal.”

शतायुषः पुत्रपौत्रान्वृणीष्व बहून्पशून् हस्तिहिरण्यमश्वान् ।
भूमेर्महदायतनं वृणीष्व स्वयं च जीव शरदो यावदिच्छसि ॥ २३ ॥

23. “Choose sons and grandsons who shall live each a hundred years, choose much cattle and elephants and gold and horses; choose a mighty reach of earth and thyself live for as many years as thou listest.

एतच्चुल्यं यदि मन्यसे वरं वृणीष्व वित्तं चिरजीविकां च ।
महाभूमौ नचिकेतस्त्वमेधि कामानां त्वा कामभाजं करोमि ॥ २४ ॥

24. “This boon if thou deemest equal to that of thy asking, choose wealth and long living; possess thou, O Nachiketas, a mighty country; I give thee thy desire of all desirable things for thy portion.

ये ये कामा दुर्लभा मर्त्यलोके सर्वान्कामांश्छन्दतः प्रार्थयस्व ।
इमा रामाः सरथाः सतूर्या न हीदृशा लम्भनीया मनुष्यैः ।
आभिर्मत्रताभिः परिचारयस्व नचिकेतो मरणं मानुप्राक्षीः ॥ २५ ॥

25. “Yea, all desires that are hard to win in the world of mortals, all demand at thy pleasure; lo, these delectable women with their chariots and their bugles, whose like are not to be won by men, these I will give thee; live with them for thy handmaidens. But of death question not, O Nachiketas.”

⁹ Yama is the knower and keeper of the cosmic Law through which the soul has to rise by death and life to the freedom of Immortality.

श्वोभावा मर्त्यस्य यदन्तकैतत् सर्वेन्द्रियाणां जरयन्ति तेजः ।
अपि सर्वं जीवितमल्पमेव तवैव वाहास्तव नृत्यगीते ॥ २६ ॥

26. “Until the morrow mortal man has these things, O Ender, and they wear away all this keenness and glory of his senses; nay, all life is even for a little. Thine are these chariots and thine the dancing of these women and their singing.

न वित्तेन तर्पणीयो मनुष्यो लप्यामहे वित्तमदाक्षम चेत्त्वा ।
जीविष्यामो यावदीशिष्यसि त्वं वरस्तु मे वरणीयः स एव ॥ २७ ॥

27. “Man is not to be satisfied by riches, and riches we shall have if we have beheld thee and shall live as long as thou shalt be lord of us.¹⁰ This boon and no other is for my choosing.

अजीर्यताममृतानामुपेत्य जीर्यन्मर्त्यः क्वधःस्थः प्रजानन् ।
अभिध्यायन् वर्णरतिप्रमोदानतिदीर्घं जीविते को रमेत ॥ २८ ॥

28. “Who that is a mortal man and grows old and dwells down upon the unhappy earth, when he has come into the presence of the ageless Immortals and knows, yea, who when he looks very close at beauty and enjoyment and pleasure, can take delight in overlong living?

यस्मिन्निदं विचिकित्सन्ति मृत्यो यत्सांपराये महति ब्रह्म नस्तत् ।
योऽयं वरो गृद्धमनुप्रविष्टो नान्यं तस्मान्नचिकेता वृणीते ॥ २९ ॥

29. “This of which they thus debate, O Death, declare to me, even that which is in the great passage; than this boon which enters in into the secret that is hidden from us, no other chooses Nachiketas.”

¹⁰ Life being a figure of death and Death of life, the only true existence is the infinite, divine and immortal.

THE FIRST CYCLE; SECOND CHAPTER

अन्यच्छ्रेयोऽन्यदुतैव प्रेयस्ते उमे नानार्थे पुरुषं सिनीतः ।
तयोः श्रेय आददानस्य साधु भवति हीयतेऽर्थाद्य उ प्रेयो वृणीते ॥ १ ॥

Yama speaks:

1. One thing is the good and quite another thing is the pleasant, and both seize upon a man with different meanings. Of these whoso takes the good, it is well with him; he falls from the aim of life who chooses the pleasant.

श्रेयश्च प्रेयश्च मनुष्यमेतस्तौ संपरीत्य विविनक्ति धीरः ।
श्रेयो हि धीरोऽभि प्रेयसो वृणीते प्रेयो मन्दो योगक्षेमाद् वृणीते ॥ २ ॥

2. The good and the pleasant come to a man and the thoughtful mind turns all around them and distinguishes. The wise chooses out the good from the pleasant, but the dull soul chooses the pleasant rather than the getting of his good and its having.

स त्वं प्रियान्प्रियरूपांश्च कामानभिध्यायन् नचिकेतोऽत्यस्राक्षीः ।
नैतां सृङ्गां वित्तमयीमवासो यस्यां मज्जन्ति बहवो मनुष्याः ॥ ३ ॥

3. And thou, O Nachiketas, hast looked close at the objects of desire, at pleasant things and beautiful, and thou hast cast them from thee; thou hast not entered into the net of riches in which many men sink to perdition.

द्वारमेते विपरीते विषृची अविद्या या च विद्येति ज्ञाता ।
विद्याभीप्सिनं नचिकेतसं मन्ये न त्वा कामा बहवोऽलोतुपन्त ॥ ४ ॥

4. For far apart are these, opposite, divergent, the one that is known as the Ignorance and the other the Knowledge. But Nachiketas I deem truly desirous of the knowledge whom so many desirable things could not make to lust after them.

अविद्यायामन्तरे वर्तमानाः स्वयं धीराः पण्डितमन्यमानाः ।
दन्दम्यमाणाः परिशन्ति मूढा अन्धेनैव नीयमाना यथान्धाः ॥ ५ ॥

5. They who dwell in the ignorance, within it, wise in their own wit and deeming themselves very learned, men bewildered are they who wander about round and round circling like blind men led by the blind.

न सांपरायः प्रतिभाति बालं प्रमाद्यन्तं वित्तमोहेन मूढम् ।
अयं लोको नास्ति पर इति मानी पुनः पुनर्वशमापद्यते मे ॥ ६ ॥

6. The childish wit bewildered and drunken with the illusion of riches cannot open its eyes to see the passage to heaven; for he that thinks this world is and there is no other, comes again and again into Death's thraldom.

श्रवणायापि बहुभिर्यो न लभ्यः शृणवन्तोऽपि बहवो यं न विद्युः ।
आश्चर्यो वक्ता कुशलोऽस्य लब्धाऽश्चर्यो ज्ञाता कुशलानुशिष्टः ॥ ७ ॥

7. He that is not easy even to be heard of by many, and even of those that have heard they are many who have not known Him,—a miracle is the man that can speak of Him wisely or is skilful to win Him, and when one is found, a miracle is the listener who can know God even when taught of Him by the knower.

न नरेणावरेण प्रोक्त एष सुविज्ञेयो बहुधा चिन्त्यमानः ।
अनन्यप्रोक्ते गतिरत्र नास्त्यणीयान् ह्यतर्क्यमणुप्रमाणात् ॥ ८ ॥

8. An inferior man cannot tell you of Him; for thus told thou canst not truly know Him, since He is thought of in many aspects. Yet unless told of Him by another thou canst not find thy way there to Him; for He is subtler than subtlety and that which logic cannot reach.

नैषा तर्केण मतिरापनेया प्रोक्तान्येनैव सुज्ञानाय प्रेष्ट ।
यां त्वमापः सत्यधृतिर्बतासि त्वादृद्ग नो भूयान्नचिकेतः प्रष्टा ॥ ९ ॥

9. This wisdom is not to be had by reasoning, O beloved Nachiketas; only when told thee by another it brings real knowledge,—the wisdom which thou hast gotten. Truly thou art steadfast in the Truth! Even such a questioner as thou art may I meet with always.

जानाम्यहं शेवधिरित्यनित्यं न ह्यध्वैः प्राप्यते हि धृवं तत् ।
ततो मया नाचिकेतश्चितोऽग्निरनित्यैर्द्वयैः प्राप्सवानस्मि नित्यम् ॥१०॥

Nachiketas speaks:

10. I know of treasure that it is not for ever; for not by things unstable shall one attain That which is stable; therefore I heaped the fire of Nachiketas, and by the sacrifice of transitory things I won the Eternal.

कामस्यासि जगतः प्रतिष्ठां क्रतोरनन्त्यमभयस्य पारम् ।
स्तोमं महदुरुगायं प्रतिष्ठां दृष्ट्वा धृत्या धीरो नचिकेतोऽत्यस्त्राक्षीः ॥११॥

Yama speaks:

11. When thou hast seen in thy grasp, O Nachiketas, the possession of desire and firm foundation of this world and an infinity of power and the other shore of security and praise and scope and wide moving and firm foundation,¹¹ wise and strong in steadfastness thou didst cast these things from thee.

तं दुर्दर्शं गूढमनुप्रविष्टं गुहाहितं गद्धरेष्टं पुराणम् ।
अथ्यात्मयोगाधिगमेन देवं मत्वा धीरो हर्षशोकौ जहाति ॥१२॥

12. Realising God by attainment to Him through spiritual Yoga, even the Ancient of Days who hath entered deep into that which is hidden and is hard to see, for he is established in our secret being and lodged in the cavern heart of things, the wise and steadfast man casts far from him joy and sorrow.

¹¹ Or, “and great fame chanted through widest regions”.

एतच्छृत्वा संपरिगृह्य मर्त्यः प्रवृह्य धर्म्यमणुमेतमाप्य ।
स मोदते मोदनीयं हि लब्ध्वा विवृतं सश्च नचिकेतसं मन्ये ॥ १३ ॥

13. When mortal man has heard, when he has grasped, when he has forcefully separated the Righteous One from his body and won that subtle Being, then he has delight, for he has got that which one can indeed delight in. Verily I deem of Nachiketas as a house wide open.

अन्यत्र धर्मादन्यत्राधर्मादन्यत्रास्मात् कृताकृतात् ।
अन्यत्र भूताच्च भव्याच्च यत्तत्पश्यसि तद्वद् ॥ १४ ॥

Nachiketas speaks:

14. Tell me of That which thou seest otherwhere than in virtue and otherwhere than in unrighteousness, otherwhere than in the created and the uncreated, otherwhere than in that which has been and that which shall be.

सर्वे वेदा यत्पदमामनन्ति तपांसि सर्वाणि च यद्वदन्ति ।
यदिच्छन्तो ब्रह्मचर्यं चरन्ति तत्ते पदं संग्रहेण ब्रवीम्योमित्येतत् ॥ १५ ॥

Yama speaks:

15. The seat and goal that all the Vedas glorify and which all austerities declare, for the desire of which men practise holy living, of That will I tell thee in brief compass. OM is that goal, O Nachiketas.

एतद्वेवाक्षरं ब्रह्म एतद्वेवाक्षरं परम् ।
एतद्वेवाक्षरं ज्ञात्वा यो यदिच्छति तस्य तत् ॥ १६ ॥

16. For this Syllable is Brahman, this Syllable is the Most High: this Syllable if one know, whatsoever one shall desire, it is his.

एतदालम्बनं श्रेष्ठमेतदालम्बनं परम् ।
एतदालम्बनं ज्ञात्वा ब्रह्मलोके महीयते ॥ १७ ॥

17. This support is the best, this support is the highest, knowing

this support one grows great in the world of the Brahman.

न जायते म्रियते वा विपश्चिन्नायं कुतश्चिन्न बभूव कश्चित्।
अजो नित्यः शाश्वतोऽयं पुराणो न हन्यते हन्यमाने शरीरे ॥ १८ ॥

18. That Wise One is not born, neither does he die; he came not from anywhere, neither is he anyone; he is unborn, he is everlasting, he is ancient and sempiternal, he is not slain in the slaying of the body.

हन्ता चेन्मन्यते हन्तुं हतश्चेन्मन्यते हतम्।
उभौ तौ न विजानीतो नायं हन्ति न हन्यते ॥ १९ ॥

19. If the slayer think that he slays, if the slain think that he is slain, both of these have not the knowledge. This slays not, neither is He slain.

अणोरणीयान्महतो महीयानात्मास्य जन्तोर्निहितो गुहायाम्।
तमक्रतुः पश्यति वीतशोको धातुप्रसादान्महिमानमात्मनः ॥ २० ॥

20. Finer than the fine, huger than the huge the Self hides in the secret heart of the creature: when a man strips himself of will and is weaned from sorrow, then he beholds Him, purified from the mental elements he sees the greatness of the Self-being.

आसीनो दूरं व्रजति शयानो याति सर्वतः।
कस्तं मदामदं देवं मदन्यो ज्ञातुमर्हति ॥ २१ ॥

21. Seated He journeys far off, lying down He goes everywhere. Who other than I is fit to know God, even Him who is rapture and the transcendence of rapture?

अशरीरं शरीरेष्वनवस्थेष्वस्थितम्।
महान्तं विभुमात्मानं मत्वा धीरो न शोचति ॥ २२ ॥

22. Realising the Bodiless in bodies, the Established in things unsettled, the Great and Omnipresent Self, the wise and steadfast soul grieves no longer.

नायमात्मा प्रवचनेन लभ्यो न मेधया न बहुना श्रुतेन ।
यमेवैष वृणुते तेन लभ्यस्तस्यैष आत्मा विवृणुते तद्गुं स्वाम् ॥ २३ ॥

23. The Self is not to be won by eloquent teaching, nor by brain power, nor by much learning: but only he whom this being chooses can win Him, for to him this Self bares His body.

नाविरतो दुश्चरितान्नाशान्तो नासमाहितः ।
नाशान्तमानसो वापि प्रज्ञानेनैनमाप्नुयात् ॥ २४ ॥

24. None who has not ceased from doing evil, or who is not calm, or not concentrated in his being, or whose mind has not been tranquillised, can by wisdom attain to Him.

यस्य ब्रह्म च क्षत्रं च उभे भवत ओदनः ।
मृत्युर्यस्योपसेचनं क इत्था वेद यत्र सः ॥ २५ ॥

25. He to whom the sages are as meat and heroes as food for His eating and Death is an ingredient of His banquet, how thus shall one know of Him where He abideth?

THE FIRST CYCLE; THIRD CHAPTER

ऋतं पिवन्तौ सुकृतस्य लोके गुहां प्रविष्टौ परमे परार्धे ।
छायातपौ ब्रह्मविदो वदन्ति पञ्चाग्नयो ये च त्रिणाचिकेताः ॥ १ ॥

Yama speaks:

1. There are two that drink deep of the Truth in the world of work well accomplished: they are lodged in the secret plane of being and in the highest kingdom of the most High is their dwelling: as of light and shade the knowers of the Brahman speak of them and those of the five fires and those who have the three fires of Nachiketas.

यः सेतुरीजानानामक्षरं ब्रह्म यत्परम् ।
अभयं तितीर्षतां पारं नाचिकेतं शकेमहि ॥ २ ॥

2. May we have strength to kindle Agni Nachiketas, for he is the bridge of those who do sacrifice and he is Brahman supreme and imperishable, and the far shore of security to those who would cross this ocean.

आत्मानं रथिनं विद्धि शरीरं रथमेव तु ।
बुद्धिं तु सारथिं विद्धि मनः प्रग्रहमेव च ॥ ३ ॥

3. Know the body for a chariot and the soul for the master of the chariot: know Reason for the charioteer and the mind for the reins only.

इन्द्रियाणि हयानाहुर्विषयांस्तेषु गोचरान् ।
आत्मेन्द्रियमनोयुक्तं भोक्तेत्याहुर्मनीषिणः ॥ ४ ॥

4. The senses they speak of as the steeds and the objects of sense as the paths in which they move; and One yoked with Self and the mind and the senses is the enjoyer, say the thinkers.

यस्त्वविज्ञानवान् भवत्ययुक्तेन मनसा सदा ।
तस्येन्द्रियाण्यवश्यानि दुष्टाश्वा इव सारथेः ॥ ५ ॥

5. Now he that is without knowledge with his mind ever unapplied, his senses are to him as wild horses and will not obey the driver of the chariot.

यस्तु विज्ञानवान् भवति युक्तेन मनसा सदा ।
तस्येन्द्रियाणि वश्यानि सदश्वा इव सारथेः ॥ ६ ॥

6. But he that has knowledge with his mind ever applied, his senses are to him as noble steeds and they obey the driver.

यस्त्वविज्ञानवान् भवत्यमनस्कः सदाऽशुचिः ।
न स तत्पदमाप्नोति संसारं चाधिगच्छति ॥ ७ ॥

7. Yea, he that is without knowledge and is unmindful and is ever unclean, reaches not that goal, but wanders in the cycle of phenomena.

यस्तु विज्ञानवान् भवति समनस्कः सदा शुचिः ।
स तु तत्पदमाप्नोति यस्माद् भूयो न जायते ॥ ८ ॥

8. But he that has knowledge and is mindful and pure always, reaches that goal whence he is not born again.

विज्ञानसारथिर्यस्तु मनःप्रग्रहवान् नरः ।
सोऽध्वनः पारमाप्नोति तद्विष्णोः परमं पदम् ॥ ९ ॥

9. That man who uses the mind for reins and the knowledge for the driver, reaches the end of his road, the highest seat of Vishnu.

इन्द्रियेभ्यः परा ह्यर्था अर्थेभ्यश्च परं मनः ।
मनसस्तु परा बुद्धिर्बुद्धेरात्मा महान्परः ॥ १० ॥

10. Than the senses the objects of sense are higher; and higher than the objects of sense is the Mind; and higher than the Mind is the faculty of knowledge; and than that is the Great Self higher.

महतः परमव्यक्तमव्यक्तात् पुरुषः परः ।
पुरुषान्न परं किंचित्सा काष्ठा सा परा गतिः ॥ ११ ॥

11. And higher than the Great Self is the Unmanifest and higher than the Unmanifest is the Purusha: than the Purusha there is none higher: He is the culmination, He is the highest goal of the journey.

एष सर्वेषु भूतेषु गूढोऽत्मा न प्रकाशते ।
दृश्यते त्वग्यया बुद्धा सूक्ष्मया सूक्ष्मदर्शिभिः ॥ १२ ॥

12. The secret Self in all existences does not manifest Himself to the vision: yet is He seen by the seers of the subtle by a subtle and perfect understanding.

यच्छेद वाङ्मनसी प्राज्ञस्तद्यच्छेज्ञान आत्मनि ।
ज्ञानमात्मनि महति नियच्छेत् तद्यच्छेच्छान्त आत्मनि ॥ १३ ॥

13. Let the wise man restrain speech in his mind and mind in his self of knowledge, and knowledge in the Great Self, and that again let him restrain in the Self that is at peace.

उत्तिष्ठत जाग्रत प्राप्य वरान्निबोधत ।
क्षुरस्य धारा निशिता दुरत्यया दुर्गं पथस्तत् कवयो वदन्ति ॥ १४ ॥

14. Arise, awake, find out the great ones and learn of them; for sharp as a razor's edge, hard to traverse, difficult of going is that path, say the sages.

अशब्दमस्पर्शमरूपमव्ययं तथारसं नित्यमगन्धवच्च यत् ।
अनाद्यनन्तं महतः परं ध्रुवं निचाय्य तन्मृत्युमुखात् प्रमुच्यते ॥ १५ ॥

15. That in which sound is not, nor touch, nor shape, nor diminution, nor taste, nor smell, that which is eternal, and It is without end or beginning, higher than the Great Self and stable,—that having seen, from the mouth of death there is deliverance.

नाचिकेतमुपास्यानं मृत्युप्रोक्तं सनातनम् ।
उक्त्वा श्रुत्वा च मेधावी ब्रह्मलोके महीयते ॥ १६ ॥

16. The man of intelligence having spoken or heard the eternal story of Nachiketas wherein Death was the speaker, grows great in the world of the Brahman.

य इमं परमं गुह्यं आवयेद् ब्रह्मसंसदि ।
प्रयतः आद्वकाले वा तदानन्त्याय कल्पते ।
तदानन्त्याय कल्पत इति ॥ १७ ॥

17. He who being pure recites this supreme secret at the time of the Shraddha in the assembly of the Brahmins, that turns for him to infinite existence.

THE SECOND CYCLE; FIRST CHAPTER

पराज्ञं खानि व्यतृणत् स्वयम्भूस्तस्मात्पराङ् पश्यति नान्तरात्मन् ।
कश्चिद्दीरः प्रत्यगात्मानमैक्षदावृत्तचक्षुरमृतत्वमिच्छन् ॥ १ ॥

Yama said:

1. The Self-born hath set the doors of the body to face outward, therefore the soul of a man gazeth outward and not at the Self within; hardly a wise man here and there desiring immortality turneth his eyes inward and seeth the Self within him.

पराचः कामाननुयन्ति बालास्ते मृत्योर्यन्ति विततस्य पाशम् ।
अथ धीरा अमृतत्वं विदित्वा ध्रुवमध्वरेष्विह न प्रार्थयन्ते ॥ २ ॥

2. The rest childishly follow after desire and pleasure and walk into the snare of Death who gapeth wide for them. But calm souls having learned of immortality seek not for permanence in the things of this world that pass and are not.

येन रूपं रसं गन्धं शब्दान् स्पर्शाश्च मैथुनान् ।
एतेनैव विजानाति किमत्र परिशिष्यते । एतद्वै तत् ॥ ३ ॥

3. By the Self one knoweth taste and form and smell, by the Self one knoweth sound and touch and the joy of man with woman; what is there left in this world of which the Self not knoweth? This is the thing thou seekest.

स्वप्नान्तं जागरितान्तं चोभौ येनानुपश्यति ।
महान्तं विभुमात्मानं मत्वा धीरो न शोचति ॥ ४ ॥

4. The calm soul having comprehended the great Lord, the omnipresent Self by whom one beholdeth both to the end of dream and to the end of waking, ceaseth from grieving.

य इमं मध्वदं वेद आत्मानं जीवमन्तिकात् ।
ईशानं भूतभव्यस्य न ततो विज्ञुगुप्तते । एतद्वै तत् ॥ ५ ॥

5. He that hath known from very close this Eater of sweetness, the Jiva, the Self within that is lord of what was and what shall be, shrinketh not thereafter from aught nor abhorreth any. This is the thing thou seekest.

यः पूर्वं तपसो जातमदभ्यः पूर्वमजायत ।
गुहां प्रविश्य तिष्ठन्तं यो भूतेभिर्व्यपश्यत । एतद्वै तत् ॥ ६ ॥

6. He is the seer that seeth Him who came into being before austerity and was before the waters; deep in the heart of the creature he seeth Him, for there He standeth by the mingling of the elements. This is the thing thou seekest.

या प्राणेन संभवत्यदितिर्देवतामयी ।
गुहां प्रविश्य तिष्ठन्तीं या भूतेभिर्व्यजायत । एतद्वै तत् ॥ ७ ॥

7. This is Aditi, the mother of the Gods, who was born through the Prana and by the mingling of the elements had her being; deep in the heart of things she has entered, there she is seated. This is the thing thou seekest.

अरण्योर्निहितो जातवेदा गर्भं इव सुभूतो गर्भिणीभिः ।
दिवे दिव ईड्यो जागृवद्भिर्विष्मदिभर्मनुष्येभिरग्निः ।
एतद्वै तत् ॥ ८ ॥

8. As a woman carrieth with care the unborn child in her womb, so is the Master of knowledge lodged in the tinders, and day by day should men worship him who live their waking life and stand before him with sacrifice; for he is that Agni. This is the thing thou seekest.

यतश्चोदेति सूर्योऽस्तं यत्र च गच्छति ।
तं देवाः सर्वेऽपितास्तदु नात्येति कश्चन । एतद्वै तत् ॥ ९ ॥

9. He from whom the sun riseth and to whom the sun returneth, and in Him are all the Gods established,—none passeth beyond Him. This is the thing thou seekest.

यदेवेह तदमुत्र यदमुत्र तदन्विह ।
मृत्योः स मृत्युमान्योति य इह नानेव पश्यति ॥ १० ॥

10. What is in this world is also in the other, and what is in the other, that again is in this; who thinketh he sees difference here, from death to death he goeth.

मनसैवेदमासव्यं नेह नानास्ति किंचन ।
मृत्योः स मृत्युं गच्छति य इह नानेव पश्यति ॥ ११ ॥

11. Through the mind must we understand that there is nothing in this world that is really various; who thinketh he sees difference here, from death to death he goeth.

अङ्गुष्ठमात्रः पुरुषो मध्य आत्मनि तिष्ठति ।
ईशानो भूतभव्यस्य न ततो विजुगुप्सते । एतद्वै तत् ॥ १२ ॥

12. The Purusha who is seated in the midst of ourself is no larger than the finger of a man. He is the lord of what was and what shall be; Him having seen one shrinketh not from aught nor abhorreth any. This is the thing thou seekest.

अङ्गुष्ठमात्रः पुरुषो ज्योतिरिवाधूमकः ।
ईशानो भूतभव्यस्य स एवाद्य स उ श्वः । एतद्वै तत् ॥ १३ ॥

13. The Purusha that is within is no larger than the finger of a man; He is like a blazing fire that is without smoke, He is lord of His past and His future. He alone is today and He alone shall be tomorrow. This is the thing thou seekest.

यथोदकं दुर्गे वृष्टं पर्वतेषु विधावति ।
एवं धर्मान्वृथक् पश्यस्तानेवानुविधावति ॥ १४ ॥

14. As water that raineth in the rough and difficult places, runneth to many sides on the mountain-tops, so he that seeth separate law and action of the one Spirit, followeth in the track of what he seeth.

यथोदकं शुद्धे शुद्धमासिक्तं तादृगेव भवति ।
एवं मुनेर्विजानत आत्मा भवति गौतम ॥ ३५ ॥

15. But as pure water that is poured into pure water, even as it was such it remaineth, so is it with the soul of the thinker who knoweth God, O seed of Gotama.

THE SECOND CYCLE; SECOND CHAPTER

पुरमेकादशद्वारमजस्यावकचेतसः ।
अनुष्टाय न शोचति विमुक्तश्च विमुच्यते । एतद्वै तत् ॥ १ ॥

Yama said:

1. The Unborn who is not devious-minded hath a city with eleven gates; when He taketh up his abode in it, He grieveth not, but when He is set free from it, that is His deliverance. This is the thing thou seekest.

हंसः शुचिषद् वसुरन्तरिक्षसद्गोता वेदिषदतिथिर्दुरोणसत् ।
नृषद्वरसदृतसद् व्योमसदब्जा गोजा ऋतजा अद्रिजा ऋतं बृहत् ॥ २ ॥

2. Lo, the Swan whose dwelling is in the purity, He is the Vasu in the interregions, the Sacrificer at the altar, the Guest in the vessel of the drinking; He is in man and in the Great Ones and His home is in the Law and His dwelling is in the firmament; He is all that is born of water and all that is born of earth and all that is born of the mountains. He is the Truth and He is the Mighty One.

ऊर्ध्वं प्राणमुन्नयत्यपानं प्रत्यगस्यति ।
मध्ये वामनमासीनं विश्वे देवा उपासते ॥ ३ ॥

3. This is He that draweth the main breath upward and casteth the lower breath downward. The Dwarf that sitteth in the centre, to Him all the Gods do homage.

अस्य विस्रंसमानस्य शरीरस्थस्य देहिनः ।
देहाद् विमुच्यमानस्य किमत्र परिशिष्यते । एतद्वै तत् ॥ ४ ॥

4. When this encased spirit that is in the body falleth away from it, when He is freed from its casing, what is there then that remaineth? This is the thing thou seekest.

न प्राणेन नापानेन मत्योर्जीवति कश्चन ।
इतरेण तु जीवन्ति यस्मिन्नेतावुपाश्रितौ ॥ ५ ॥

5. Man that is mortal liveth not by the breath, no, nor by the lower breath; but by something else we live in which both these have their being.

हन्त त इदं प्रवक्ष्यामि गुह्यं ब्रह्म सनातनम् ।
यथा च मरणं प्राप्य आत्मा भवति गौतम ॥ ६ ॥

6. Surely, O Gautama, I will tell thee of this secret and eternal Brahman and likewise what becometh of the soul when one dieth.

योनिमन्ये प्रपद्यन्ते शरीरत्वाय देहिनः ।
स्थाणुमन्येऽनुसंयन्ति यथाकर्म यथाश्रुतम् ॥ ७ ॥

7. For some enter a womb to the embodying of the Spirit and others follow after the Immovable; according to their deeds is their goal and after the measure of their revealed knowledge.

य एष सुसेषु जागर्ति कामं कामं पुरुषो निर्मिमाणः ।
तदेव शुक्रं तद् ब्रह्म तदेवामृतमुच्यते ।
तस्मिंलोकाः श्रिताः सर्वे तदु नात्येति कश्चन । एतद्वै तत् ॥ ८ ॥

8. This that waketh in the sleepers creating desire upon desire, this Purusha, Him they call the Bright One, Him Brahman, Him Immortality, and in Him are all the worlds established; none goeth beyond Him. This is the thing thou seekest.

अग्निर्यथैको भुवनं प्रविष्टो रूपं रूपं प्रतिरूपो बभूव ।
एकस्तथा सर्वभूतान्तरात्मा रूपं रूपं प्रतिरूपो बहिश्च ॥ ९ ॥

9. Even as one Fire hath entered into the world but it shapeth itself to the forms it meeteth, so there is one Spirit within all creatures but it shapeth itself to form and form; it is likewise outside these.

वायुर्यथैको भुवनं प्रविष्टो रूपं रूपं प्रतिरूपो बभूव ।
एकस्तथा सर्वभूतान्तरात्मा रूपं रूपं प्रतिरूपो बहिश्च ॥ १० ॥

10. Even as one Air hath entered into the world but it shapeth itself to the forms it meeteth, so there is one Spirit within all creatures but it shapeth itself to form and form; it is likewise outside these.

सूर्यो यथा सर्वलोकस्य चक्षुर्न लिप्यते चाक्षुषैर्बाह्यदोषैः ।
एकस्तथा सर्वभूतान्तरात्मा न लिप्यते लोकदुःखेन बाह्यः ॥ ११ ॥

11. Even as the Sun is the eye of all this world, yet it is not soiled by the outward blemishes of the visual, so there is one Spirit within all creatures, but the sorrow of this world soils it not, for it is beyond grief and his danger.

एको वशी सर्वभूतान्तरात्मा एकं रूपं बहुधा यः करोति ।
तमात्मस्थं येऽनुपश्यन्ति धीरास्तेषां सुखं शाश्वतं नेतरेषाम् ॥ १२ ॥

12. One calm and controlling Spirit within all creatures that maketh one form into many fashions; the calm and strong who see Him in the self as in a mirror, theirs is eternal felicity and 'tis not for others.

नित्योऽनित्यानां चेतनश्चेतनानामेको बहुनां यो विदधाति कामान् ।
तमात्मस्थं येऽनुपश्यन्ति धीरास्तेषां शान्तिः शाश्वती नेतरेषाम् ॥ १३ ॥

13. The One Eternal in many transient, the One Conscious in many conscious beings, who being One ordereth the desires of many; the calm and strong who behold Him in the self as in a mirror, theirs is eternal peace and 'tis not for others.

तदेतदिति मन्यन्तेऽनिर्देशं परमं सुखम् ।
कथं नु तद्विजानीयां किमु भाति विभाति वा ॥१४॥

14. “This is He,” is all they can realise of Him, a highest felicity which none can point to nor any define it. How shall I know of Him whether He shineth or reflecteth one light and another?

न तत्र सूर्यो भाति न चन्द्रतारकं नेमा विद्युतो भान्ति कुतोऽयमग्निः ।
तमेव भान्तमनुभाति सर्वं तस्य भासा सर्वमिदं विभाति ॥१५॥

15. There the Sun cannot shine and the moon has no lustre; all the stars are blind; there our lightnings flash not, neither any earthly fire. For all that is bright is but the shadow of His brightness and by His shining all this shineth.

THE SECOND CYCLE; THIRD CHAPTER

ऊर्ध्वमूलोऽवाकशाख एषोऽश्वत्थः सनातनः ।
तदेव शुक्रं तद् ब्रह्म तदेवामृतमुच्यते ।
तस्मैङ्गोकाः श्रिताः सर्वे तदु नात्येति कश्चन । एतद्वै तत् ॥१॥

Yama said:

1. This is the eternal uswattha tree whose roots are aloft, but its branches are downward. It is He that is called the Bright One and Brahman and Immortality, and in Him are all the worlds established; none goeth beyond Him. This is the thing thou seekest.

यदिदं किंच जगत्सर्वं प्राण एजति निःसृतम् ।
महद् भयं वज्रमुद्यतं य एतद् विद्वरमृतास्ते भवन्ति ॥२॥

2. All this universe of motion moveth in the Prana and from the Prana also it proceeded; a mighty terror is He, yea, a thunderbolt uplifted. Who know Him are the immortals.

भयादस्याग्निस्तपति भयात्तपति सूर्यः।
भयादिन्द्रश्च वायुश्च मृत्युर्धावति पञ्चमः॥३॥

3. For fear of Him the fire burneth, for fear of Him the sun giveth heat, for fear of Him Indra and Vayu and Death hasten in their courses.

इह चेदशकद्वोद्धुं प्राक् शरीरस्य विस्रसः।
ततः सर्गेषु लोकेषु शरीरत्वाय कल्पते॥४॥

4. If in this world of men and before thy body fall from thee, thou art able to apprehend it, then thou availest for embodiment in the worlds that are His creations.

यथादर्शे तथात्मनि यथा स्वप्ने तथा पितृलोके।
यथाप्सु परीव ददृशे तथा गन्धर्वलोके छायातपयोरिव ब्रह्मलोके॥५॥

5. In the self one seeth God as in a mirror but as in a dream in the world of the fathers, and as in water one seeth the surface of an object, so one seeth Him in the world of the Gandharvas; but He is seen as light and shade in the heaven of the Spirit.

इन्द्रियाणां पृथग्भावमुदयास्तमयौ च यत्।
पृथगुत्पद्यमानानां मत्वा धीरो न शोचति॥६॥

6. The calm soul having comprehended the separateness of the senses and the rising of them and their setting and their separate emergence putteth from him pain and sorrow.

इन्द्रियेभ्यः परं मनो मनसः सत्त्वमुत्तमम्।
सत्त्वादधि महानात्मा महतोऽव्यक्तमुत्तमम्॥७॥

7. The mind is higher than the senses, and above the mind is the thought, and above the thought is the mighty Spirit, and above the Mighty One is the Unmanifest.

अव्यक्तात् परः पुरुषो व्यापकोऽलिङ्गं एव च ।
यं ज्ञात्वा मुच्यते जन्मुरमृतत्वं च गच्छति ॥ ८ ॥

8. But highest above the Unmanifest is the Purusha who per vadeth all and alone hath no sign nor feature. Mortal man knowing Him is released into immortality.

न संदृशे तिष्ठति रूपमस्य न चक्षुषा पश्यति कश्चनैनम् ।
हृदा मनीषा मनसाभिक्षुसो य एतद् विद्वरमृतास्ते भवन्ति ॥ ९ ॥

9. He hath not set His body within the ken of seeing, neither doth any man with the eye behold Him, but to the heart and mind and the supermind He is manifest. Who know Him are the immortals.

यदा पञ्चावतिष्ठन्ते ज्ञानानि मनसा सह ।
बुद्धिश्च न विचेष्टति तामाहुः परमां गतिम् ॥ १० ॥

10. When the five senses cease and are at rest and the mind resteth with them and the Thought ceaseth from its workings, that is the highest state, say thinkers.

तां योगमिति मन्यन्ते स्थिरामिन्द्रियधारणाम् ।
अप्रमत्तस्तदा भवति योगो हि प्रभवाप्ययौ ॥ ११ ॥

11. The state unperturbed when the senses are imprisoned in the mind, of this they say “it is Yoga”. Then man becomes very vigilant, for Yoga is the birth of things and their ending.¹²

नैव वाचा न मनसा प्राप्तुं शक्यो न चक्षुषा ।
अस्तीति ब्रुवतोऽन्यत्र कथं तदुपलभ्यते ॥ १२ ॥

12. Not with the mind hath man the power to see God, no, nor by speech nor with the eye. Unless one saith “He is,” how can one become sensible of Him?

¹² Shankara interprets, “As Yoga hath a beginning (birth) so hath it an ending.” But this is not what the Sruti says.

अस्तीत्येवोपलब्धव्यस्तत्वभावेन चोभयोः ।
अस्तीत्येवोपलब्धस्य तत्त्वभावः प्रसीदति ॥ १३ ॥

13. One must apprehend Him in the concept “He is” and also in His essential principle, but when he hath grasped Him as the Is, then the essential of Him dawneth upon a man.

यदा सर्वे प्रमुच्यन्ते कामा येऽस्य हृदि श्रिताः ।
अथ मर्त्योऽमृतो भवत्यत्र ब्रह्म समश्नुते ॥ १४ ॥

14. When every desire that harboureth in the heart of a man hath been loosened from its moorings, then this mortal putteth on immortality; even here he enjoyeth Brahman in this human body.

यदा सर्वे प्रभिद्यन्ते हृदयस्येह ग्रन्थयः ।
अथ मर्त्योऽमृतो भवत्येतावद्भुनुशासनम् ॥ १५ ॥

15. When all the strings of the heart are rent asunder, even here in this human birth, then the mortal becometh immortal. This is the whole teaching of the Scriptures.

शतं चैका च हृदयस्य नाइयस्तासां मूर्धनमभिनिःसृतैका ।
तयोर्ध्वमायन्नमृतत्वमेति विश्वङ्गुन्या उत्कमणे भवन्ति ॥ १६ ॥

16. A hundred and one are the nerves of the heart and of all these only one issueth out through the head of a man; by this the soul mounteth up to its immortal home but the rest lead him to all sorts and conditions of births in his passing.

अङ्गुष्ठमात्रः पुरुषोऽन्तरात्मा सदा जनानां हृदये संनिविष्टः ।
तं स्वाच्छरीरात् प्रवृहेन्मुज्जादिवेषीकां धैर्येण ।
तं विद्याच्छुक्रममृतं तं विद्याच्छुक्रममृतमिति ॥ १७ ॥

17. The Purusha, the Spirit within, who is no larger than the finger of a man is seated for ever in the heart of creatures; one must separate Him with patience from one's own body. Thou as one separates from a blade of grass its main fibre. Thou

shalt know Him for the Bright Immortal, yea, for the Bright Immortal.

मृत्युप्रोक्तां नचिकेतोऽथ लब्ध्वा विद्यामेतां योगविधिं च कृत्प्लम् ।
ब्रह्मप्राप्तो विरजोऽभूद् विमृत्युरन्योऽप्येवं यो विदध्यात्ममेव ॥ १८ ॥

18. Thus did Nachiketas with Death for his teacher win the God-knowledge; he learned likewise the whole ordinance of the Yoga: thereafter he obtained Brahman and became void of stain and void of death. So shall another be who cometh likewise to the science of the Spirit.

Mundaka Upanishad

Mundaka Upanishad

CHAPTER ONE: SECTION I

ब्रह्मा देवानां प्रथमः संबूत् विश्वस्य कर्ता भुवनस्य गोप्ता ।
स ब्रह्मविद्यां सर्वविद्याप्रतिष्ठामर्थर्वाय ज्येष्ठपुत्राय प्राह ॥ १ ॥

1. Brahma first of the Gods was born, the creator of all, the world's protector; he to Atharvan, his eldest son, declared the God-knowledge in which all sciences have their foundation.

अर्थर्वणे यां प्रवदेत ब्रह्माथर्वा तां पुरोवाचाङ्गिरे ब्रह्मविद्याम् ।
स भारद्वाजाय सत्यवहाय प्राह भारद्वाजोऽङ्गिरसे परावराम् ॥ २ ॥

2. The God-knowledge by Brahma declared to Atharvan, Atharvan of old declared to Angir; he to Satyavaha the Bharadwaja told it, the Bharadwaja to Angiras, both the higher and the lower knowledge.

शौनको ह वै महाशालोऽङ्गिरसं विधिवदुपसन्नः पप्रच्छ । कस्मिन्नु
भगवो विज्ञाते सर्वमिदं विज्ञातं भवतीति ॥ ३ ॥

3. Shaunaka, the great house-lord, came to Angiras in the due way of the disciple and asked of him, "Lord, by knowing what does all this that is become known?"

तस्मै स होवाच । द्वे विद्ये वेदितव्ये इति ह स्म यद् ब्रह्मविदो वदन्ति
परा चैवापरा च ॥ ४ ॥

4. To him thus spoke Angiras: Twofold is the knowledge that must be known of which the knowers of the Brahman tell, the higher and the lower knowledge.

तत्रापरा क्रवेदो यजुर्वेदः सामवेदोऽथर्ववेदः शिक्षा कल्पो व्याकरणं
निरुक्तं छन्दो ज्योतिषमिति । अथ परा यया तदक्षरमधिगम्यते ॥ ५ ॥

5. Of which the lower, the Rig Veda and the Yajur Veda and the Sama Veda and the Atharva Veda, chanting, ritual, grammar, etymological interpretation, and prosody and astronomy. And then the higher by which is known the Immutable.

यत् तददेश्यमग्राह्यमगोत्रमवर्णमचक्षुःश्रोत्रं तदपाणिपादम् । नित्यं विभुं
सर्वगतं सुसूक्ष्मं तदव्ययं यद् भूतयोनिं परिपश्यन्ति धीरा: ॥ ६ ॥

6. That the invisible, that the unseizable, without connections, without hue, without eye or ear, that which is without hands or feet, eternal, pervading, which is in all things and impalpable, that which is Imperishable, that which is the womb of creatures sages behold everywhere.

यथोर्णनाभिः सृजते गृह्णते च यथा पृथिव्यामोषधयः संभवन्ति ।
यथा सतः पुरुषात्केशलोमानि तथाक्षरात्संभवतीह विश्वम् ॥ ७ ॥

7. As the spider puts out and gathers in, as herbs spring up upon the earth, as hair of head and body grow from a living man, so here all is born from the Immutable.

तपसा चीयते ब्रह्म ततोऽन्नमभिजायते ।
अन्नात्प्राणो मनः सत्यं लोकाः कर्मसु चामृतम् ॥ ८ ॥

8. Brahman grows by his energy at work, and then from Him is Matter born, and out of Matter life, and mind and truth and the worlds, and in works immortality.

यः सर्वज्ञः सर्वविद् यस्य ज्ञानमयं तपः ।
तस्मादेतद् ब्रह्म नाम रूपमन्तं च जायते ॥ ९ ॥

9. He who is the Omniscient, the all-wise, He whose energy is all made of knowledge, from Him is born this that is Brahman here, this Name and Form and Matter.

CHAPTER ONE: SECTION II

तदेतत्सत्यं मन्त्रेषु कर्माणि कवयो यान्यपश्यंस्तानि त्रेतायां बहुधा
संतानि ।
तान्याचरथ नियं सत्यकामा एष वः पन्थाः सुकृतस्य लोके ॥ १ ॥

1. This is That, the Truth of things: works which the sages beheld in the Mantras¹ were in the Treta² manifoldly extended. Works do ye perform religiously with one passion for the Truth; this is your road to the heaven of good deeds.

यदा लेलायते ह्यर्चिः समिद्दे हव्यवाहने ।
तदाज्यभागावन्तरेणाहुतीः प्रतिपादयेच्छद्यया हुतम् ॥ २ ॥

2. When the fire of the sacrifice is kindled and the flame sways and quivers, then between the double pourings of butter cast therein with faith thy offerings.

यस्याग्निहोत्रमदर्शमपौर्णमासमचातुर्मास्यमनाग्रयणमतिथिर्जितं च ।
अहुतमवैश्वदेवमविधिना हुतमासप्तमांस्तस्य लोकान् हिनस्ति ॥ ३ ॥

3. For he whose altar-fires are empty of the new-moon offering and the full-moon offering and the offering of the rains and the offering of the first fruits, or unfed, or fed without right ritual, or without guests or without the dues to the Vishwa-Devas, destroys his hope of all the seven worlds.

काली कराली च मनोजवा च सुलोहिता या च सुधूम्रवर्णा ।
स्फुलिङ्गिनी विश्वरुची च देवी लेलायमाना इति सप्त जिह्वाः ॥ ४ ॥

4. Kali, the black, Karali, the terrible, Manojava, thought-swift, Sulohita, blood-red, Sudhumravarna, smoke-hued, Sphulingini, scattering sparks, Vishwaruchi, the all-beautiful, these are the seven swaying tongues of the fire.

¹ The inspired verses of the Veda.

² The second of the four ages.

एतेषु यश्चरते भ्राजमानेषु यथाकालं चाहुतयो ह्याददायन् ।
तं नयन्त्येताः सूर्यस्य रश्मयो यत्र देवानां पतिरेकोऽधिवासः ॥ ५ ॥

5. He who in these when they are blazing bright performs the rites, in their due season, him his fires of sacrifice take and they lead him, these rays of the Sun, there where the Overlord of the gods is the Inhabitant on high.

एह्येहीति तमाहुतयः सुवर्चसः सूर्यस्य रश्मभिर्यजमानं वहन्ति ।
प्रियां वाचमभिवदन्त्योऽर्चयन्त्य एष वः पुण्यः सुकृतो ब्रह्मलोकः ॥ ६ ॥

6. “Come with us”, “Come with us”, they cry to him, these luminous fires of sacrifice, and they bear him by the rays of the Sun speaking to him pleasant words of sweetness, doing him homage, “This is your holy world of Brahman and the heaven of your righteousness.”

प्लवा ह्येते अदृढा यज्ञरूपा अष्टादशोक्तमवरं येषु कर्म ।
एतच्छ्रेयो येऽभिनन्दन्ति मृढा जरामृत्युं ते पुनरेवापि यन्ति ॥ ७ ॥

7. But frail are the ships of sacrifice, frail these forms of sacrifice, all the eighteen of them, in which are declared the lower works; fools are they who hail them as the highest good and they come yet again to this world of age and death.

अविद्यायामन्तरे वर्तमानाः स्वयं धीराः पण्डितमन्यमानाः ।
जड्ण्यमानाः परियन्ति मृढा अन्धेनैव नीयमाना यथान्धाः ॥ ८ ॥

8. They who dwell shut within the Ignorance and they hold themselves for learned men thinking “We, even we are the wise and the sages”—fools are they and they wander around beaten and stumbling like blind men led by the blind.

अविद्यायां बहुधा वर्तमाना वयं कृतार्था इत्यभिमन्यन्ति वालाः ।
यत्कर्मिणो न प्रवेदयन्ति रागात् तेनातुराः क्षीणलोकाश्चयवन्ते ॥ ९ ॥

9. They dwell in many bonds of the Ignorance, children thinking, “We have achieved our aim of Paradise”; for when the

men of works are held by their affections, and arrive not at the Knowledge, then they are overtaken by anguish, then their Paradise wastes by enjoying and they fall from their heavens.

इष्टापूर्तं मन्यमाना वरिष्ठं नान्यच्छेयो वेदयन्ते प्रमूढाः ।
नाकस्य पृष्ठे ते सुकृतेऽनुभूत्वेमं लोकं हीनतरं वा विशन्ति ॥ १० ॥

10. Minds bewildered who hold the oblation offered and the well dug for the greatest righteousness and know not any other highest good, on the back of heaven they enjoy the world won by their righteousness and enter again this or even a lower world.

तपःश्रद्धे ये ह्युपवसन्त्यरण्ये शान्ता विद्वांसो भैक्ष्यचर्या चरन्तः ।
सूर्यद्वारेण ते विरजाः प्रयान्ति यत्रामृतः स पुरुषो ह्यव्ययात्मा ॥ ११ ॥

11. But they who in the forest follow after faith and self-discipline, calm and full of knowledge, living upon alms, cast from them the dust of their passions, and through the gate of the Sun they pass on there where is the Immortal, the Spirit, the Self undecaying and imperishable.

परीक्ष्य लोकान्कर्मचितान् ब्राह्मणो निर्वेदमायान्नास्त्यकृतः कृतेन ।
तद्विज्ञानार्थं स गुरुमेवाभिगच्छेत् समित्पाणिः श्रोत्रियं ब्रह्मनिष्ठम् ॥ १२ ॥

12. The seeker of the Brahman, having put to the test the worlds piled up by works, arrives at world-distaste, for not by work done is reached He who is Uncreated.³ For the knowledge of That, let him approach, fuel in hand, a Guru, one who is learned in the Veda and is devoted to contemplation of the Brahman.

तस्मै स विद्वानुपसन्नाय सम्यक् प्रशान्तचित्ताय शमान्विताय ।
येनाक्षरं पुरुषं वेद सत्यं प्रोवाच तां तत्त्वतो ब्रह्मविद्याम् ॥ १३ ॥

³ Or, “He, the uncreated, lives not by that which is made.” Literally, “not by the made (or, by that which is done) the Unmade (He who is uncreated)”.

-
13. To him because he has taken entire refuge with him, with a heart tranquillised and a spirit at peace, that man of knowledge declares in its principles the science of the Brahman by which one comes to know the Immutable Spirit, the True and Real.

CHAPTER TWO: SECTION I

तदेतत्सत्यं यथा सुदीप्तात्पावकाद् विस्फुलिङ्गाः सहस्रशः प्रभवन्ते
सरूपाः ।
तथाक्षराद् विविधाः सोम्य भावाः प्रजायन्ते तत्र चैवापि यन्ति ॥ १ ॥

1. This is That, the Truth of things: as from one high-kindled fire thousands of different sparks are born and all have the same form of fire, so, O fair son, from the immutable manifold becomings are born and even into that they depart.

दिव्यो ह्यमूर्त्तः पुरुषः स बाह्याभ्यन्तरो ह्यजः ।
अप्राणो ह्यमनाः शुभ्रो ह्यक्षरात्परतः परः ॥ २ ॥

2. He, the divine, the formless Spirit, even he is the outward and the inward and he the Unborn; he is beyond life, beyond mind, luminous, Supreme beyond the immutable.

एतस्माज्जायते प्राणो मनः सर्वेन्द्रियाणि च ।
खं वायुज्योर्तिरापः पृथिवी विश्वस्य धारिणी ॥ ३ ॥

3. Life and mind and the senses are born from Him and the sky, and the wind, and light, and the waters and earth upholding all that is.

अग्निर्मध्या चक्षुषी चन्द्रसूर्यौ दिशः श्रोत्रे वाग् विवृताश्च वेदाः ।
वायुः प्राणो हृदयं विश्वमस्य पदम्यां पृथिवी ह्योष
सर्वभूतान्तरात्मा ॥ ४ ॥

4. Fire is the head of Him and his eyes are the Sun and Moon, the quarters his organs of hearing and the revealed Vedas are his voice, air is his breath, the universe is his heart, Earth lies at his feet. He is the inner Self in all beings.

तस्मादर्दिनः समिधो यस्य सूर्यः सोमात्पर्जन्य ओषधयः पृथिव्याम् ।
पुमान् रेतः सिञ्चति योषितायां बह्वीः प्रजाः पुरुषात्संप्रसूताः ॥ ५ ॥

5. From Him is fire, of which the Sun is the fuel, then rain

from the Soma, herbs upon the earth, and the male casts his seed into woman: thus are these many peoples born from the Spirit.

तस्मादृचः साम यज्ञंषि दीक्षा यज्ञाश्च सर्वे क्रतवो दक्षिणाश्च ।
संवत्सरश्च यजमानश्च लोकाः सोमो यत्र पवते यत्र सूर्यः ॥ ६ ॥

- From Him are the hymns of the Rig Veda, the Sama and the Yajur, initiation, and all sacrifices and works of sacrifice, and dues given, the year and the giver of the sacrifice and the worlds, on which the moon shines and the sun.

तस्माच्च देवा बहुधा संप्रसूताः साध्या मनुष्याः पश्वो वयांसि ।
प्राणापानौ त्रीहियौ तपश्च अद्वा सत्यं ब्रह्मचर्यं विधिश्च ॥ ७ ॥

- And from Him have issued many gods, and demi-gods and men and beasts and birds, the main breath and downward breath, and rice and barley, and askesis and faith and Truth, and chastity and rule of right practice.

सप्त प्राणाः प्रभवन्ति तस्मात्सप्तार्चिषः समिधः सप्त होमाः ।
सप्त इमे लोका येषु चरन्ति प्राणा गुहाशया निहिताः सप्त सप्त ॥ ८ ॥

- The seven breaths are born from Him and the seven lights and kinds of fuel and the seven oblations and these seven worlds in which move the life-breaths set within with the secret heart for their dwelling-place, seven and seven.

अतः समुद्रा गिरयश्च सर्वेऽस्मात्स्यन्दन्ते सिन्धवः सर्वरूपाः ।
अतश्च सर्वा ओषधयो रसश्च येनैष भूतैस्तिष्ठते ह्यन्तरात्मा ॥ ९ ॥

- From Him are the oceans and all these mountains and from Him flow rivers of all forms, and from Him are all plants, and sensible delight which makes the soul to abide with the material elements.

पुरुष एवेदं विश्वं कर्म तपो ब्रह्म परामृतम् ।
एतद्यो वेद निहितं गुहायां सोऽविद्याग्रन्थं विकिरतीह सोम्य ॥ १० ॥

10. The Spirit is all this universe; He is works and askesis and the Brahman, supreme and immortal. O fair son, he who knows this hidden in the secret heart, scatters even here in this world the knot of the Ignorance.

CHAPTER TWO: SECTION II

आविः संनिहितं गुहाचरं नाम महत्पदमत्रैतत् समर्पितम् ।
एजत्प्राणन्निमिषच्च यदेतज्जानथ सदसद्वरेण्यं परं विज्ञानाद् यद्विरिष्टं
प्रजानाम् ॥ १ ॥

1. Manifested, it is here set close within, moving in the secret heart, this is the mighty foundation and into it is consigned all that moves and breathes and sees. This that is that great foundation here, know, as the Is and Is-not, the supremely desirable, greatest and the Most High, beyond the knowledge of creatures.

यदर्चिमद् यदणुभ्योऽणु च यस्मिन्नोका निहिता लोकिनश्च ।
तदेतदक्षरं ब्रह्म स प्राणस्तदु वाङ्मनः । तदेतत्सत्यं तदमृतं तदेद्वयं
सोम्य विद्धि ॥ २ ॥

2. That which is the Luminous, that which is smaller than the atoms, that in which are set the worlds and their peoples, That is This,—it is Brahman immutable: life is That, it is speech and mind. That is This, the True and Real, it is That which is immortal: it is into That that thou must pierce, O fair son, into That penetrate.

धनुर्गृहीत्वौपनिषदं महास्त्रं शरं ह्युपासानिशितं संधयीत ।
आयम्य तद्भावगतेन चेतसा लक्ष्यं तदेवाक्षरं सोम्य विद्धि ॥ ३ ॥

3. Take up the bow of the Upanishad, that mighty weapon, set to it an arrow sharpened by adoration, draw the bow with a heart wholly devoted to the contemplation of That, and O fair son, penetrate into That as thy target, even into the Immutable.

प्रणवो धनुः शरो ह्यात्मा ब्रह्म तप्लक्ष्यमुच्यते ।
अप्रमत्तेन वेद्वयं शरवत् तन्मयो भवेत् ॥४॥

- OM is the bow and the soul is the arrow, and That, even the Brahman, is spoken of as the target. That must be pierced with an unfaltering aim; one must be absorbed into That as an arrow is lost in its target.

यस्मिन्द्यौः पृथिवी चान्तरिक्षमोत्तमः सह प्राणैश्च सर्वैः ।
तमेवैकं जानथ आत्मानमन्या वाचो विमुञ्चथामृतस्यैष सेतुः ॥५॥

- He in whom are inwoven heaven and earth and the mid-region, and mind with all the life-currents, Him know to be the one Self; other words put away from you: this is the bridge to immortality.

अरा इव रथनाभौ संहता यत्र नाड्यः स एषोऽन्तश्चरते बहुधा
जायमानः ।
ओमित्येवं ध्यायथ आत्मानं स्वस्ति वः पाराय तमसः परस्तात् ॥६॥

- Where the nerves are brought close together like the spokes in the nave of a chariot-wheel, this is He that moves within, — there is He manifoldly born. Meditate on the Self as OM and happy be your passage to the other shore beyond the darkness.

यः सर्वज्ञः सर्वविद् यस्यैष महिमा भुवि ।
दिव्ये ब्रह्मपुरे होष व्योम्न्यात्मा प्रतिष्ठितः ॥७॥

- The Omniscient, the All-wise, whose is this might and majesty upon the earth, is this self enthroned in the divine city of the Brahman, in his ethereal heaven.

मनोमयः प्राणशरीरनेता प्रतिष्ठितोऽन्ने हृदयं संनिधाय ।
तद्विज्ञानेन परिपश्यन्ति धीरा आनन्दरूपममृतं यद्विभाति ॥८॥

- A mental being, leader of the life and the body, has set a heart in matter, in matter he has taken his firm foundation.

By its knowing the wise see everywhere around them That which shines in its effulgence, a shape of Bliss and immortal.

भिद्यते हृदयग्रन्थिश्छ्रद्धान्ते सर्वसंशयाः ।
क्षीयन्ते चास्य कर्माणि तस्मिन्दृष्टे परावरे ॥ ९ ॥

9. The knot of the heart-strings is rent, cut away are all doubts, and a man's works are spent and perish, when is seen That which is at once the being below and the Supreme.

हिरण्मये परे कोशे विरजं ब्रह्म निष्कलम् ।
तच्छुद्रं ज्योतिषां ज्योतिस्तद्यदात्मविदो विदुः ॥ १० ॥

10. In a supreme golden sheath the Brahman lies, stainless, without parts. A Splendour is That, It is the Light of Lights, It is That which the self-knowers know.

न तत्र सूर्यो भाति न चन्द्रतारकं नेमा विद्युतो भान्ति कुतोऽयमग्निः ।
तमेव भान्तमनुभाति सर्वं तस्य भासा सर्वमिदं विभाति ॥ ११ ॥

11. There the sun shines not and the moon has no splendour and the stars are blind; there these lightnings flash not, how then shall burn this earthly fire? All that shines is but the shadow of his shining; all this universe is effulgent with his light.

ब्रह्मैवेदममृतं पुरस्ताद् ब्रह्म पश्चाद् ब्रह्म दक्षिणतश्चोत्तरेण ।
अधश्चोर्ध्वं च प्रसृतं ब्रह्मैवेदं विश्वमिदं वरिष्ठम् ॥ १२ ॥

12. All this is Brahman immortal, naught else; Brahman is in front of us, Brahman behind us, and to the south of us and to the north of us⁴ and below us and above us; it stretches everywhere. All this is Brahman alone, all this magnificent universe.

⁴ Or, "to the right and the left of us".

CHAPTER THREE: SECTION I

द्वा सुपर्णा सयुजा सखाया समानं वृक्षं परिषस्वजाते ।
तयोरन्यः पिप्पलं स्वाद्वृत्यनश्चन्नन्यो अभिचाकशीति ॥ १ ॥

1. Two birds, beautiful of wing, close companions, cling to one common tree: of the two one eats the sweet fruit of the tree, the other eats not but watches his fellow.

समाने वृक्षे पुरुषो निमग्नोऽनीशया शोचति मुह्यमानः ।
जुष्टं यदा पश्यत्यन्यमीशमस्य महिमानमिति वीतशोकः ॥ २ ॥

2. The soul is the bird that sits immersed on the one common tree; but because he is not lord he is bewildered and has sorrow. But when he sees that other who is the Lord and beloved, he knows that all is His greatness and his sorrow passes away from him.

यदा पश्यते रुक्मवर्णं कर्तारमीशं पुरुषं ब्रह्मयोनिम् ।
तदा विद्वान्पुण्यपापे विधूय निरञ्जनः परमं साम्यमुपैति ॥ ३ ॥

3. When, a seer, he sees the Golden-hued, the maker, the Lord, the Spirit who is the source of Brahman,⁵ then he becomes the knower and shakes from his wings sin and virtue; pure of all stain he reaches the supreme identity.⁶

प्राणो ह्येष यः सर्वभूतैर्विभाति विजानन् विद्वान्भवते नातिवादी ।
आत्मक्रीड आत्मरतिः क्रियावानेष ब्रह्मविदां वरिष्ठः ॥ ४ ॥

4. This is the life in things that shines manifested by all these beings; a man of knowledge coming wholly to know this, draws back from creeds and too much disputings. In the Self his delight, at play in the Self, doing works,— the best is he among the knowers of the Eternal.

⁵ Or, “whose source is Brahman”; Shankara admits the other meaning as an alternative, but explains it as “the source of the lower Brahman”.

⁶ Or, “pure of all staining tinge he reaches to a supreme equality.”

सत्येन लभ्यस्तपसा ह्येष आत्मा सम्यग्ज्ञानेन ब्रह्मचर्येण नित्यम् ।
अन्तःशरीरे ज्योतिर्मयो हि शुभ्रो यं पश्यन्ति यतयः क्षीणदोषाः ॥५॥

5. The Self can always be won by truth, by self-discipline, by integral knowledge, by a life of purity,—this Self that is in the inner body, radiant, made all of light whom by the perishing of their blemishes the doers of askesis behold.

सत्यमेव जयते नानृतं सत्येन पन्था विततो देवयानः ।
येनाक्रमन्त्यृष्ययो ह्यासकामा यत्र तत्सत्यस्य परमं निधानम् ॥६॥

6. It is Truth that conquers and not falsehood; by Truth was stretched out the path of the journey of the gods, by which the sages winning their desire ascend there where Truth has its supreme abode.

वृहच्च तद्विव्यमचिन्त्यरूपं सूक्ष्माच्च तत्सूक्ष्मतरं विभाति ।
द्वारात्सुद्धरे तदिहान्तिके च पश्यत्स्वहैव निहितं गुहायाम् ॥७॥

7. Vast is That, divine, its form unthinkable; it shines out subtler than the subtle:⁷ very far and farther than farness, it is here close to us, for those who have vision it is even here in this world; it is here, hidden in the secret heart.

न चक्षुषा गृह्यते नापि वाचा नान्यैदैवैस्तपसा कर्मणा वा ।
ज्ञानप्रसादेन विशुद्धसत्त्वस्तस्तु तं पश्यते निष्कलं ध्यायमानः ॥८॥

8. Eye cannot seize, speech cannot grasp Him, nor these other godheads; not by austerity can he be held nor by works: only when the inner being is purified by a glad serenity of knowledge, then indeed, meditating, one beholds the Spirit indivisible.

एषोऽणुरात्मा चेतसा वेदितव्यो यस्मिन्प्राणः पञ्चधा संविवेश ।
प्राणैश्चित्तं सर्वमोतं प्रजानां यस्मिन्विशुद्धे विभवत्येष आत्मा ॥९॥

9. This Self is subtle and has to be known by a thought-mind

⁷ Or, “minuter than the minute”.

into which the life-force has made its fivefold entry: all the conscious heart of creatures is shot through and inwoven with the currents of the life-force and only when it is purified can this Self manifest its power.⁸

यं यं लोकं मनसा संविभाति विशुद्धसत्त्वः कामयते यांश्च कामान् ।
तं तं लोकं जयते तांश्च कामांस्तस्मादात्मज्ञं ह्यर्चयेद् भूतिकामः ॥ १० ॥

10. Whatever world the man whose inner being is purified sheds the light of his mind upon, and whatsoever desires he cherishes, that world he takes by conquest, and those desires. Then, let whosoever seeks for success and well-being approach with homage a self-knower.

CHAPTER THREE: SECTION II

स वेदैतत्परमं ब्रह्म धाम यत्र विश्वं निहितं भाति शुभ्रम् ।
उपासते पुरुषं ये ह्यकामास्ते शुक्रमेतदतिवर्तन्ति धीराः ॥ १ ॥

1. He knows this supreme Brahman as the highest abiding place in which shines out, inset, the radiant world. The wise who are without desire and worship the Spirit pass beyond this sperm.⁹

कामान् यः कामयते मन्यमानः स कामभिर्जायते तत्र तत्र ।
पर्याप्तकामस्य कृतात्मनस्तु इहैव सर्वे प्रविलीयन्ति कामाः ॥ २ ॥

2. He who cherishes desires and his mind dwells with his longings, is by his desires born again wherever they lead him, but the man who has won all his desire¹⁰ and has found his soul, for him even here in this world vanish away all desires.

⁸ The verb *vibhavati* seems here to have a complex sense and to mean, “to manifest its full power and pervading presence”.

⁹ Shankara takes it so in the sense of semen virile, which is the cause of birth into the cosmos. But it is possible that it means rather “pass beyond this brilliant universe”, the radiant world which has just been spoken of, to the greater Light which is its abiding place and source, the supreme Brahman.

¹⁰ Or, “finished with desires”.

नायमात्मा प्रवचनेन लभ्यो न मेधया न बहुना श्रुतेन ।
यमेवैष वृणुते तेन लभ्यस्तस्यैष आत्मा विवृणुते तनुं स्वाम् ॥ ३ ॥

3. This Self is not won by exegesis, nor by brain-power, nor by much learning of Scripture. Only by him whom It chooses can It be won; to him this Self unveils its own body.

नायमात्मा बलहीनेन लभ्यो न च प्रमादात्तपसो वाप्यलिङ्गात् ।
एतैरुपार्यैर्यतते यस्तु विद्वास्तस्यैष आत्मा विशते ब्रह्मधाम ॥ ४ ॥

4. This Self cannot be won by any who is without strength, nor with error in the seeking, nor by an askesis without the true mark: but when a man of knowledge strives by these means his self enters into Brahman, his abiding place.

संप्राप्यैनमृषयो ज्ञानतृसाः कृतात्मानो वीतरागाः प्रशान्ताः ।
ते सर्वगं सर्वतः प्राप्य धीरा युक्तात्मानः सर्वमेवाविशन्ति ॥ ५ ॥

5. Attaining to him, seers glad with fullness of knowledge, perfected in the Self, all passions cast from them, tranquillised, — these, the wise, come to the all-pervading from every side, and, uniting themselves with him, enter utterly the All.

वेदान्तविज्ञानसुनिष्ठितार्थाः संन्यासयोगाद् यतयः शुद्धसत्त्वाः ।
ते ब्रह्मलोकेषु परान्तकाले परामृताः परिमुच्यन्ति सर्वे ॥ ६ ॥

6. Doers of askesis who have made sure of the aim¹¹ of the whole-knowledge of Vedanta, the inner being purified by the Yoga of renunciation, all in the hour of their last end passing beyond death are released into the worlds of the Brahman.

गताः कलाः पञ्चदश प्रतिष्ठा देवाश्च सर्वे प्रतिदेवतासु ।
कर्माणि विज्ञानमयश्च आत्मा परेऽव्यये सर्वे एकीभवन्ति ॥ ७ ॥

¹¹ Or, “meaning”.

7. The fifteen parts return into their foundations, and all the gods pass into their proper godheads, works and the Self of Knowledge,— all become one in the Supreme and Imperishable.

यथा नद्यः स्यन्दमानाः समुद्रेऽस्तं गच्छन्ति नामरूपे विहाय ।
तथा विद्वान् नामरूपाद्विमुक्तः परात्परं पुरुषमुपैति दिव्यम् ॥ ८ ॥

8. As rivers in their flowing reach their home¹² in the ocean and cast off their names and forms, even so one who knows is delivered from name and form and reaches the Supreme beyond the Most High, even the Divine Person.

स यो ह वै तत्परमं ब्रह्म वेद ब्रह्मैव भवति नास्याब्रह्मवित् कुले भवति ।
तरति शोकं तरति पाप्मानं गुहाग्रन्थिभ्यो विमुक्तोऽमृतो भवति ॥ ९ ॥

9. He, verily, who knows that Supreme Brahman becomes himself Brahman; in his lineage none is born who knows not the Brahman. He crosses beyond sorrow, he crosses beyond sin, he is delivered from the knotted cord of the secret heart and becomes immortal.

तदेतद्वचाभ्युक्तम्—
क्रियावन्तः श्रोत्रिया ब्रह्मनिष्ठाः स्वयं जुहूत एकर्षि अद्वयन्तः ।
तेषामेवैतां ब्रह्मविद्यां वदेत शिरोब्रतं विधिवद् यैस्तु चीर्णम् ॥ १० ॥

10. This is That declared by the Rig Veda. Doers of works, versed in the Veda, men absorbed in the Brahman, who putting their faith in the sole-seer offer themselves to him sacrifice,— to them one should speak this Brahman-knowledge, men by whom the Vow of the Head has been done according to the rite.

तदेतत्सत्यमृषिरङ्गिराः पुरोवाच नैतदचीर्णव्रतोऽधीते ।
नमः परमऋषिभ्यो नमः परमऋषिभ्यः ॥ ११ ॥

¹² Or, “come to their end”.

-
11. This is That, the Truth of things, which the seer Angiras spoke of old. This none learns who has not performed the Vow of the Head. Salutation to the seers supreme! Salutation to the seers supreme!

Readings in the Taittiriya Upanishad

The Knowledge of Brahman

The knower of Brahman reacheth that which is supreme.
This is that verse which was spoken; “Truth, Knowledge,
Infinity the Brahman,
He who knoweth that hidden in the secrecy in the supreme
ether,
Enjoyeth all desires along with the wise-thinking Brahman.”

This is the burden of the opening sentences of the Taittiriya Upanishad’s second section; they begin its elucidation of the highest truth. Or in the Sanskrit,

*brahmavid āpnoti param —
tad eśābhuyuktā — satyam jñānam anantam brahma —
yo veda nihitam guhāyām — parame vyoman —
so 'snute sarvān kāmān saha — brahmaṇā vipaściteti.*

But what is Brahman?

Whatever reality is in existence, by which all the rest subsists, that is Brahman. An Eternal behind all instabilities, a Truth of things which is implied, if it is hidden in all appearances, a Constant which supports all mutations, but is not increased, diminished, abrogated,— there is such an unknown *x* which makes existence a problem, our own self a mystery, the universe a riddle. If we were only what we seem to be to our normal self-awareness, there would be no mystery; if the world were only what it can be made out to be by the perceptions of the senses and their strict analysis in the reason, there would be no riddle; and if to take our life as it is now and the world as it has so far developed to our experience were the whole possibility of our knowing and doing, there would be no problem. Or at best

there would be but a shallow mystery, an easily solved riddle, the problem only of a child's puzzle. But there is more, and that more is the hidden head of the Infinite and the secret heart of the Eternal. It is the highest and this highest is the all; there is none beyond and there is none other than it. To know it is to know the highest and by knowing the highest to know all. For as it is the beginning and source of all things, so everything else is its consequence; as it is the support and constituent of all things, so the secret of everything else is explained by its secret; as it is the sum and end of all things, so everything else amounts to it and by throwing itself into it achieves the sense of its own existence.

This is the Brahman.

*
* * *

If this unknown be solely an indecipherable, only indefinable *x*, always unknown and unknowable, the hidden never revealed, the secret never opened to us, then our mystery would for ever remain a mystery, our riddle insoluble, our problem intangible. Its existence, even while it determines all we are, know and do, could yet make no practical difference to us; for our relation to it would then be a blind and helpless dependence, a relation binding us to ignorance and maintainable only by that ignorance. Or again, if it be in some way knowable, but the sole result of knowledge were an extinction or cessation of our being, then within our being it could have no consequences; the very act and fructuation of knowledge would bring the annihilation of all that we now are, not its completion or fulfilment. The mystery, riddle, problem would not be so much solved as abolished, for it would lose all its data. In effect we should have to suppose that there is an eternal and irreconcilable opposition between Brahman and what we now are, between the supreme cause and all its effects or between the supreme source and all its derivations. And it would then seem that all that the Eternal originates, all he supports, all he takes back to himself is a denial or contradiction of his being which, though in itself a negative of that which alone is, has yet

in some way become a positive. The two could not coexist in consciousness; if he allowed the world to know him, it would disappear from being.

But the Eternal is knowable, He defines himself so that we may seize him, and man can become, even while he exists as man and in this world and in this body, a knower of the Brahman.

The knowledge of the Brahman is not a thing luminous but otiose, informing to the intellectual view of things but without consequence to the soul of the individual or his living; it is a knowledge that is a power and a divine compulsion to change; by it his existence gains something that now he does not possess in consciousness. What is this gain? it is this that he is conscious now in a lower state only of his being, but by knowledge he gains his highest being.

The highest state of our being is not a denial, contradiction and annihilation of all that we now are; it is a supreme accomplishment of all things that our present existence means and aims at, but in their highest sense and in the eternal values.

*
* *

To live in our present state of self-consciousness is to live and to act in ignorance. We are ignorant of ourselves, because we know as yet only that in us which changes always, from moment to moment, from hour to hour, from period to period, from life to life, and not that in us which is eternal. We are ignorant of the world because we do not know God; we are aware of the law of appearances, but not of the law and truth of being.

Our highest wisdom, our minutest most accurate science, our most effective application of knowledge can be at most a thinning of the veil of ignorance, but not a going beyond it, so long as we do not get at the fundamental knowledge and the consciousness to which that is native. The rest are effective for their own temporal purposes, but prove ineffective in the end, because they do not bring to the highest good; they lead to no permanent solution of the problem of existence.

The ignorance in which we live is not a baseless and wholesale falsehood, but at its lowest the misrepresentation of a Truth, at its highest an imperfect representation and translation into inferior and to that extent misleading values. It is a knowledge of the superficial only and therefore a missing of the secret essential which is the key to all that the superficial is striving for; a knowledge of the finite and apparent, but a missing of all that the apparent symbolises and the finite suggests; a knowledge of inferior forms, but a missing of all that our inferior life and being has above it and to which it must aspire if it is to fulfil its greatest possibilities. The true knowledge is that of the highest, the inmost, the infinite. The knower of the Brahman sees all these lower things in the light of the Highest, the external and superficial as a translation of the internal and essential, the finite from the view of the Infinite. He begins to see and know existence no longer as the thinking animal, but as the Eternal sees and knows it. Therefore he is glad and rich in being, luminous in joy, satisfied of existence.

*
* * *

Knowledge does not end with knowing, nor is it pursued and found for the sake of knowing alone. It has its full value only when it leads to some greater gain than itself, some gain of being. Simply to know the eternal and to remain in the pain, struggle and inferiority of our present way of being, would be a poor and lame advantage.

A greater knowledge opens the possibility and, if really possessed, brings the actuality of a greater being. To be is the first verb which contains all the others; knowledge, action, creation, enjoyment are only a fulfilment of being. Since we are incomplete in being, to grow is our aim, and that knowledge, action, creation, enjoyment are the best which most help us to expand, grow, feel our existence.

Mere existence is not fullness of being. Being knows itself as power, consciousness, delight; a greater being means a greater

power, consciousness and delight.

If by greater being we incurred only a greater pain and suffering, this good would not be worth having. Those who say that it is, mean simply that we get by it a greater sense of fulfilment which brings of itself a greater joy of the power of existence, and an extension of suffering or a loss of other enjoyment is worth having as a price for this greater sense of wideness, height and power. But this could not be the perfection of being or the highest height of its fulfilment; suffering is the seal of a lower status. The highest consciousness is integrally fulfilled in wideness and power of its existence, but also it is integrally fulfilled in delight.

The knower of Brahman has not only the joy of light, but gains something immense as the result of his knowledge, *brahmavid āpnoti*.

What he gains is that highest, that which is supreme; he gains the highest being, the highest consciousness, the highest wideness and power of being, the highest delight; *brahmavid āpnoti param*.

*
* * *

The Supreme is not something aloof and shut up in itself. It is not a mere indefinable, prisoner of its own featureless absoluteness, impotent to define, create, know itself variously, eternally buried in a sleep or a swoon of self-absorption. The Highest is the Infinite and the Infinite contains the All. Whoever attains the highest consciousness, becomes infinite in being and embraces the All.

To make this clear the Upanishad has defined the Brahman as the Truth, Knowledge, Infinity and has defined the result of the knowledge of Him in the secrecy, in the cave of being, in the supreme ether as the enjoyment of all its desires by the soul of the individual in the attainment of its highest self-existence.

Our highest state of being is indeed a becoming one with Brahman in his eternity and infinity, but it is also an association

with him in delight of self-fulfilment, *aśnute saha brahmaṇā*. And that principle of the Eternal by which this association is possible, is the principle of his knowledge, his self-discernment and all-discernment, the wisdom by which he knows himself perfectly in all the world and all beings, *brahmaṇā vipaścītā*.

Delight of being is the continent of all the fulfilled values of existence which we now seek after in the forms of desire. To know its conditions and possess it purely and perfectly is the infinite privilege of the eternal Wisdom.

Truth, Knowledge, Infinity

Truth, Knowledge, Infinity, not as three separate things, but in their inseparable unity, are the supernal conscious being of the Eternal. It is an infinite being, an infinite truth of being, an infinite self-knowledge of self-being. Take one of these away and the idea of the Eternal fails us; we land ourselves in half-lights, in dark or shining paradoxes without issue or in a vain exaggeration and apotheosis of isolated intellectual conceptions.

Infinity is the timeless and spaceless and causeless infinity of the eternal containing all the infinities of space and time and the endless succession which humanly we call causality. But in fact causality is only an inferior aspect and translation into mental and vital terms of something which is not mechanical causality, but the harmonies of a free self-determination of the being of the Eternal.

Truth is truth of the infinite and eternal, truth of being, and truth of becoming only as a self-expression of the being. The circumstances of the self-expression appear to the mind as the finite, but nothing is really finite except the way the mind has of experiencing all that appears to its view. All things are, each thing is the Brahman.

Knowledge is the Eternal's inalienable self-knowledge of his infinite self-existence and of all its truth and reality and, in that truth, of all things as seen not by the mind, but by the self-view of the Spirit. This knowledge is not possible to the mind; it can only be reflected inadequately by it when it is touched by a ray from the secret luminous cavern of our superconscious being; yet of that ray we can make a shining ladder to climb into the source of this supreme self-viewing wisdom.

To know the eternal Truth, Knowledge, Infinity is to know the Brahman.

Part Two

Translations and Commentaries from Manuscripts

These texts written between c. 1900 and 1914 were found among Sri Aurobindo's manuscripts and typescripts. He did not revise them for publication.

Section One

Introduction

On Translating the Upanishads

OM TAT SAT

This translation of a few of the simpler & more exoteric Upanishads to be followed by other sacred and philosophical writings of the Hindus not included in the Revealed Scriptures, all under the one title of the Book of God, has been effected on one definite and unvarying principle, to present to England and through England to Europe the religious message of India only in those parts of her written thought which the West is fit to hear and to present these in such a form as should be attractive & suggestive to the Occidental intellect. The first branch of this principle necessitated a rigid selection on definite lines, the second dictated the choice of a style & method of rendering which should be literary rather than literal.

The series of translations called the Sacred Books of the East, edited by the late Professor Max Muller, was executed in a scholastic and peculiar spirit. Professor Max Muller, a scholar of wide attainments, great versatility and a refreshingly active, ingenious & irresponsible fancy, has won considerable respect in India by his attachment to Vedic studies, but it must fairly be recognized that he was more of a grammarian and philologist, than a sound Sanscrit scholar. He could construe Sanscrit well enough, but he could not feel the language or realise the spirit behind the letter. Accordingly he committed two serious errors of judgment; he imagined that by sitting in Oxford and evolving new meanings out of his own brilliant fancy he could understand the Upanishads better than Shankaracharya or any other Hindu of parts and learning; and he also imagined that what was important for Europe to know about the Upanishads was what he and other European scholars considered they ought to mean. This, however, is a matter of no importance to anybody but the

scholars themselves. What it is really important for Europe to know is in the first place what the Upanishads really do mean, so far as their exoteric teaching extends, and in a less degree what philosophic Hinduism took them to mean. The latter knowledge may be gathered from the commentaries of Shankaracharya and other philosophers which may be studied in the original or in the translations which the Dravidian Presidency, ignorantly called benighted by the materialists, has been issuing with a truly noble learning & high-minded enterprise. The former this book makes some attempt to convey.

But it may be asked, why these particular Upanishads alone, when there are so many others far larger in plan and of a not inferior importance? In answer I may quote a sentence from Professor Max Muller's Preface to the Sacred Books of the East. "I confess" he says "it has been for many years a problem to me, aye, and to a great extent is so still, how the Sacred Books of the East should, by the side of so much that is fresh, natural, simple, beautiful and true, contain so much that is not only unmeaning, artificial and silly, but even hideous and repellent." Now I am myself only a poor coarseminded Oriental and therefore not disposed to deny the gross physical facts of life & nature or able to see why we should scuttle them out of sight and put on a smug, respectable expression which suggests while it affects to hide their existence. This perhaps is the reason why I am somewhat at a loss to imagine what the Professor found in the Upanishads that is hideous and repellent. Still I was brought up almost from my infancy in England and received an English education, so that sometimes I have glimmerings. But as to what he intends by the unmeaning, artificial and silly elements, there can be no doubt. Everything is unmeaning in the Upanishads which the Europeans cannot understand, everything is artificial which does not come within the circle of their mental experience and everything is silly which is not explicable by European science and wisdom. Now this attitude is almost inevitable on the part of an European, for we all judge according to our lights and those who keep their minds really open, who can realise that there may be lights which are not theirs and yet as illuminating or more

illuminating than theirs, are in any nation a very small handful. For the most part men are the slaves of their associations.

Let us suppose that the ceremonies & services of the Roman Catholic were not mere ceremonies and formularies, borrowed for the most part from Eastern occultisms without understanding them,—that they had been arranged so as to be perfect symbols of certain deep metaphysical truths and to produce certain effects spiritual and material according to a scientific knowledge of the power of sound over both mind and matter; let us suppose that deep philosophical works had been written in the terminology of these symbols and often in a veiled allusive language; and let us suppose finally that these were translated into Bengali or Hindustani and presented to an educated Pundit who had studied both at Calcutta & at Nuddea or Benares. What would he make of them? It will be as well to take a concrete instance. Jesus Christ was a great thinker, a man who had caught, apparently by his unaided power, though this is not certain, something of the divine knowledge, but the writers who recorded his sayings were for the most part ordinary men of a very narrow culture and scope of thought and they seem grossly to have misunderstood his deepest sayings. For instance when he said “I and my Father are one” expressing the deep truth that the human self and the divine self are identical, they imagined that he was setting up an individual claim to be God; hence the extraordinary legend of the Virgin Mary & all that followed from it. Well, we all know the story of the Last Supper and Jesus’ marvellously pregnant utterance as he broke the bread and gave of the wine to his disciples “This is my body and this is my blood” and the remarkable rite of the Eucharist and the doctrine of Transubstantiation which the Roman Catholic Church has founded upon it. “Corruption! superstition! blasphemous nonsense!” cries the Protestant. “Only a vivid Oriental metaphor and nothing more.” If so, it was certainly an “unmeaning, artificial and silly” metaphor, nay, “even a hideous and repellent” one. But I prefer to believe that Jesus’ words had always a meaning & generally a true & beautiful one. On the other hand the Transubstantiation doctrine is one which the Catholics

themselves do not understand, it is to them a “mystery”. And yet how plain the meaning is to an Oriental intelligence! The plasm of matter, the foodsheath of the universe to which bread and wine belong, is indeed the blood and body of God and typifies the great primal sacrifice by which God crucified himself so that the world might exist. The Infinite had to become finite, the Unconditioned to condition himself, Spirit to evolve matter. In the bread and the wine which the communicant eats, God actually is but he is not present to our consciousness, and he only becomes so present by an act of faith; this is the whole doctrine of the Transubstantiation. For as the Upanishad says, we must believe in God before we can know him; we must realise him as the “He is” before we realise him in his essential. And indeed if the child had not believed in what his teacher or his book told him, how could the grown man know anything? But if a deep philosophical work were written on the Eucharist hinting at great truths but always using the symbol of the bread and wine and making its terminology from the symbol & from the doctrine of Transubstantiation based upon the symbol, what would our Hindu Pundit make of it? Being a scholar & philosopher, he would find there undoubtedly much that was fresh, natural, simple, beautiful & true but also a great deal that was unmeaning, artificial & silly & even to his vegetarian imagination hideous & repellent. As for the symbol itself, its probable effect on the poor vegetarian would be to make him vomit. “What hideous nonsense,” says the Protestant, “we are to believe that we are eating God!” But that is exactly what the Protestant himself does believe if he is sincere & not a parrot when he says “God is everywhere”, which is true enough, though it would be truer to say everything is in God. If God is everywhere, He must be in the food we eat. Not only is God the eaten, but He is the eater and eventually, says the Vedanta, when you come to the bottom fact of existence there is neither eaten or eater, but all is God. These are hard sayings for the rationalist who insists on limiting knowledge within the circle of the five senses. “God to whom the sages are as meat & princes as excellent eating & Death is the spice of his banquet, how shall such an one know of Him where He abideth?”

Many of the Upanishads are similarly written round symbols and in a phraseology and figures which have or had once a deep meaning and a sacred association to the Hindus but must be unintelligible and repellent to the European. What possible use can be served by presenting to Europe such works as the Chandogya or Aitareya Upanishads in which even the majority of Hindus find it difficult or impossible to penetrate every symbol to its underlying truth? Only the few Upanishads have been selected which contain the kernel of the matter in the least technical and most poetical form; the one exception is the Upanishad of the Questions which will be necessarily strange and not quite penetrable to the European mind. It was, however, necessary to include it for the sake of a due presentation of Upanishad philosophy in some of its details as well as in its main ideas, and its technical element has a more universal appeal than that of the Chandogya or Taittiriya.

An objection may be urged to the method of translation that has been adopted. Professor Max Muller in his translation did not make any attempt to render into English the precise shades of Aryan philosophical terms like Atman & Prana which do not correspond to any philosophical conception familiar to the West; he believed that the very unfamiliarity of the terms he used to translate them would be like a bracing splash of cold water to the mind forcing it to rouse itself and think. In this I think the Professor was in error; his proposition may be true of undaunted philosophical intellects such as Schopenhauer's or of those who are already somewhat familiar with the Sanscrit language, but to the ordinary reader the unfamiliar terminology forms a high & thick hedge of brambles shutting him off from the noble palace & beautiful gardens of the Upanishads. Moreover the result of a scholastic faithfulness to the letter has been to make the style of the translation intolerably uncouth and unworthy of the solemn rhythmic grandeur and ineffable poetical depth and beauty of these great religious poems. I do not say that this translation is worthy of them, for in no other human tongue than Sanscrit is such grandeur & beauty possible. But there are ways and their degrees. For instance *Etadwaitad*, the refrain of the

Katha Upanishad has a deep & solemn ring in Sanscrit because *éta* and *tad* so used have in Sanscrit a profound and grandiose philosophical signification which everybody at once feels; but in English “This truly is That” can be nothing but a juggling with demonstrative pronouns; it is far better and renders more nearly both rhythm & meaning to translate “This is the God of your seeking” however inadequate such a translation may be.

It may, however, fairly be said that a version managed on these lines cannot give a precise & accurate idea of the meaning. It is misleading to translate Prâna sometimes by life, sometimes by breath, sometimes by life breath or breath of life, because breath & life are merely subordinate aspects of the Prâna. Atman again rendered indifferently by soul, spirit & self, must mislead, because what the West calls the soul is really the Atman yoked with mind & intelligence, and spirit is a word of variable connotation often synonymous with soul; even “self” cannot be used precisely in that way in English. Again the Hindu idea of “immortality” is different from the European; it implies not life after death, but freedom from both life and death, for what we call life is after all impossible without death. Similarly Being does not render *Purusha*, nor “matter” *rayi*, nor askesis the whole idea of “tapas”. To a certain extent all this may be admitted, but at the same time I do not think that any reader who can think & feel will be seriously misled, and at any rate he will catch more of the meaning from imperfect English substitutes than from Sanscrit terms which will be a blank to his intelligence. The mind of man demands, and the demand is legitimate, that new ideas shall be presented to him in words which convey to him some association, with which he will not feel like a foreigner in a strange country where no one knows his language nor he theirs. The new must be presented to him in the terms of the old; new wine must be put to some extent in old bottles. What is the use of avoiding the word “God” and speaking always of the Supreme as “It” simply because the Sanscrit usually,—but not, be it observed, invariably—employs the neuter gender? The neuter in Sanscrit applies not only to what is inanimate but to what is beyond such terms as animate and inanimate,

not only to what is below gender but to what is above gender. In English this is not the case. The use of "It" may therefore lead to far more serious misconceptions than to use the term "God" & the pronoun "He". When Matthew Arnold said that God was a stream of tendency making towards righteousness, men naturally scoffed because it seemed to turn God into an inanimate force; yet surely such was not Arnold's meaning. On the other side if the new ideas are presented with force and power, a reader of intelligence will soon come to understand that something different is meant by "God" from the ideas he attaches to that word. And in the meanwhile we gain this distinct advantage that he has not been repelled at the outset by what would naturally seem to him bizarre, repulsive or irreverent.

It is true however that this translation will not convey a precise, full and categorical knowledge of the truths which underlie the Upanishads. To convey such knowledge is not the object of this translation, neither was it the object of the Upanishads themselves. It must always be remembered that these great treatises are simply the gate of the Higher Knowledge; there is much that lies behind the gate. Srikrishna has indeed said that the knowledge in the Vedas is sufficient for a holy mind that is capable of knowing God, just as the water in a well is sufficient for a man's purpose though there may be whole floods of water all around. But this does not apply to ordinary men. The ordinary man who wishes to reach God through knowledge, must undergo an elaborate training. He must begin by becoming absolutely pure, he must cleanse thoroughly his body, his heart and his intellect, he must get himself a new heart and be born again; for only the twiceborn can understand or teach the Vedas. When he has done this he needs yet four things before he can succeed, the Sruti or recorded revelation, the Sacred Teacher, the practice of Yoga and the Grace of God. The business of the Sruti and especially of the Upanishads is to seize the mind and draw it into a magic circle, to accustom it to the thought of God and aspirations after the Supreme, to bathe it in certain ideas, surround it with a certain spiritual atmosphere; for this purpose it plunges & rolls the mind over & over in an ocean of marvellous sound thro' which

a certain train of associations goes ever rolling. In other words it appeals through the intellect, the ear and the imagination to the soul. The purpose of the Upanishad cannot therefore be served by a translation; a translation at best prepares him for & attracts him to the original. But even when he has steeped himself in the original, he may have understood what the Upanishad suggests, but he has not understood all that it implies, the great mass of religious truth that lies behind, of which the Upanishad is but a hint or an echo. For this he must go to the Teacher. "Awake ye, arise & learn of God seeking out the Best who have the knowledge." Hard is it in these days to find the Best; for the Best do not come to us, we have to show our sincerity, patience and perseverance by seeking them. And when we have heard the whole of the Brahmanavida from the Teacher, we still know of God by theory only; we must farther learn from a preceptor the practical knowledge of God, the vision of Him and attainment of Him which is Yoga and the goal of Yoga. And even in that we cannot succeed unless we have the Grace of God, for Yoga is beset with temptations not the least of which are the powers it gives us, powers which the ignorant call supernatural. "Then must a man be very vigilant for Yoga, as it hath a beginning, so hath it an ending." Only the Grace of God, the blessing of triumphant self-mastery that comes from long and patient accumulation of soul-experience, can keep us firm and help us over these temptations. "The Spirit is not to be won by eloquent teaching, nor by brain power, nor by much learning: but he whom the Spirit chooseth, he getteth the Spirit, and to him God discovereth His body." Truly does the Upanishad say "for sharp as a razor's edge is the path, difficult & hard to traverse, say the seers." Fortunately it is not necessary & indeed it is not possible for all to measure the whole journey in a single life, nor can we, or should we abandon our daily duties like Buddha and flee into the mountain or the forest. It is enough for us to make a beginning.

Section Two
Complete Translations

Circa 1900–1902

The Upanishads
rendered into simple and rhythmic English.
(comprising six Upanishads namely the Isha, Kena, Katha,
Moondaca, Prusna, and Mandoukya).

Swulpumupyusya dhurmusya trayate mahato bhayat

Bhagavudgeta.

Even a little of this Law delivereth one out of great fear

X

Qual ch'ella par quand'un poco sorride
Non si può dicer ne tener' a mente,
Si è novo miracolo gentile.

Dante

What She appears when She smiles a little,
Cannot be spoken of, neither can the mind lay hold on it,
It is so sweet and strange and sublime a miracle.

----o:o:o:-----

The Prusna Upanishad

of the Athurvaveda

being the Upanishad of the Six Questions.

Before which one repeats the Mantra.

ॐ भद्रं कर्णेभिः शृणुयाम देवा भद्रं पश्येमाक्षभिर्यजत्राः ।
स्थिरैररङ्गैस्तुष्टवांसस्तनूभिर्व्यशेम देवहितं यदायुः ॥
स्वस्ति न इन्द्रो वृद्धश्रवाः स्वस्ति नः पूषा विश्ववेदाः ।
स्वस्ति नस्ताक्ष्यो अरिष्टनेमिः स्वस्ति नो बृहस्पतिर्दधातु ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

OM. May we hear what is auspicious with our ears, O ye Gods; may we see what is auspicious with our eyes, O ye of the sacrifice; giving praise with steady limbs, with motionless bodies, may we enter into that life which is founded in the Gods.

Ordain weal unto us Indra of high-heaped glories; ordain weal unto us Pushan, the all-knowing Sun; ordain weal unto us Tarkshya Arishtanemi; Brihaspati ordain weal unto us. OM. Peace! peace! peace!

Then the Chapter of the First Question.

ॐ नमः परमात्मने । हरिः ॐ ॥ सुकेशा च भारद्वाजः शैव्यश्च
सत्यकामः सौर्यायणी च गार्ग्यः कौसल्यशाश्वलायनो भार्गवो वैदर्भिः
कवन्धी कात्यायनस्ते हैते ब्रह्मपरा ब्रह्मनिष्ठाः परं ब्रह्मान्वेषमाणा
एष ह वै तत्सर्वं वक्ष्यतीति ते ह समित्पाणयो भगवन्तं पिप्पलादमुप -
सन्नाः ॥ १ ॥

1. OM! Salutation to the Supreme Spirit. The Supreme is OM.
Sukesha the Bharadwaja; the Shaiyya, Satyakama; Gargya,

son of the Solar race; the Coshalan, son of Uswal; the Bhargove of Vidurbha; and Cobundhy Catyaian;—these sought the Most High God, believing in the Supreme and to the Supreme devoted. Therefore they came to the Lord Pippalada, for they said “This is he that shall tell us of that Universal.”

तान् ह स ऋषिरुवाच भूय एव तपसा ब्रह्मचर्येण श्रद्धया संवत्सरं
संवत्स्यथ यथाकामं प्रश्नान्पृच्छत यदि विज्ञास्यामः सर्वं ह वो वक्ष्याम
इति ॥ २ ॥

2. The Rishi said to them, “Another year do ye dwell in holiness and faith and askesis; then ask what ye will, and if I know, surely I will conceal nothing.”

अथ कबन्धी कात्यायन उपेत्य पप्रच्छ । भगवन् कुतो ह वा इमाः
प्रजाः प्रजायन्त इति ॥ ३ ॥

3. Then came Cobundhy, son of Katya, to him and asked: “Lord, whence are all these creatures born?”

तस्मै स होवाच प्रजाकामो वै प्रजापतिः स तपोऽतप्यत स तपस्तस्वा
स मिथुनमुत्पादयते रयिं च प्राणं चेत्येतौ मे बहुधा प्रजाः करिष्यत
इति ॥ ४ ॥

4. To him answered the Rishi Pippalada: “The Eternal Father desired children, therefore he put forth his energy and by the heat of his energy produced twin creatures, Prana the Life, who is Male, and Rayi the Matter, who is Female. ‘These’ said he ‘shall make for me children of many natures.’

आदित्यो ह वै प्राणो रयिरेव चन्द्रमा रयिर्वा एतत्सर्वं यन्मूर्तं चामूर्तं
च तस्मान्मूर्तिरेव रयिः ॥ ५ ॥

5. “The Sun verily is Life and the Moon is no more than Matter; yet truly all this Universe formed and formless is Matter; therefore Form and Matter are One.

अथादित्य उदयन् यत्प्राचीं दिशं प्रविशति तेन प्राच्यान्प्राणान् रश्मिषु
संनिधत्ते । यद्वक्षिणां यत्प्रतीचीं यद्वदीचीं यदधो यद्वर्ध्वं यदन्तरा दिशो
यत्सर्वं प्रकाशयति तेन सर्वान्प्राणान् रश्मिषु संनिधत्ते ॥ ६ ॥

6. “Now when the Sun rising entereth the East, then absorbeth he the eastern breaths into his rays. But when he illumineth the south and west and north, and below and above and all the angles of space, yea, all that is, then he taketh all the breaths into his rays.

स एष वैश्वानरो विश्वरूपः प्राणोऽग्निरुदयते । तदेतद्वचाभ्युक्तम् ॥ ७ ॥

7. “Therefore is this fire that riseth, this Universal Male, of whom all things are the bodies, Prana the breath of existence. This is that which was said in the Rigveda.

विश्वरूपं हरिणं जातवेदसं परायणं ज्योतिरेकं तपन्तम् ।
सहस्ररश्मिः शतधा वर्तमानः प्राणः प्रजानामुदयत्येष सूर्यः ॥ ८ ॥

8. “Fire is this burning and radiant Sun, he is the One lustre and all-knowing Light, he is the highest heaven of spirits. With a thousand rays he burneth and existeth in a hundred existences; lo this Sun that riseth, he is the Life of all his creatures.’

संवत्सरो वै प्रजापतिस्तस्यायने दक्षिणं चोत्तरं च । तद्ये ह वै तदिष्टापूर्ते
कृतमित्युपासते ते चान्द्रमसमेव लोकमभिजयन्ते । त एव पुनरावर्तन्ते
तस्मादेत ऋषयः प्रजाकामा दक्षिणं प्रतिपद्यन्ते । एष ह वै रथ्यर्थः
पितृयाणः ॥ ९ ॥

9. “The year also is that Eternal Father and of the year there are two paths, the northern solstice and the southern. Now they who worship God with the well dug and the oblation offered, deeming these to be righteousness, conquer their heavens of the Moon; these return again to the world of birth. Therefore do the souls of sages who have not yet put from them the desire of offspring, take the way of the southern solstice which is the road of the Fathers. And this also is Matter, the Female.

अथोत्तरेण तपसा ब्रह्मचर्येण श्रद्धया विद्ययात्मानमन्विष्यादित्यमभि-
जयन्ते । एतद्वै प्राणानामायतनमेतदमृतमभयमेतत् परायणमेतस्मान्न
पुनरावर्तन्त इत्येष निरोधस्तदेष श्लोकः ॥ १० ॥

10. “But by the way of the northern solstice go the souls that have sought the Spirit through holiness and knowledge and faith and askesis; for they conquer their heavens of the Sun. There is the resting place of the breaths, there immortality casteth out fear, there is the highest heaven of spirits; thence no soul returneth; therefore is the wall and barrier. Whereof this is the Scripture.

पञ्चपादं पितरं द्वादशाकृतिं दिव आहुः परे अर्धे पुरीषिणम् ।
अथेमे अन्य उ परे विचक्षणं सप्तचक्रे षडर आहुरपितमिति ॥ ११ ॥

11. “‘Five-portioned, some say, is the Father and hath twelve figures and he floweth in the upper hemisphere beyond the heavens; but others speak of him as the Wisdom who standeth in a chariot of six spokes and seven wheels.’

मासो वै प्रजापतिस्तस्य कृष्णपक्ष एव रथिः शुक्रः प्राणस्तस्मादेत
ऋषयः शुक्र इष्टं कुर्वन्तीतर इतरस्मिन् ॥ १२ ॥

12. “The month also is that Eternal Father, whereof the dark fortnight is Matter the Female and the bright fortnight is Life the Male. Therefore do one manner of sages offer sacrifice in the bright fortnight and another in the dark.

अहोरात्रो वै प्रजापतिस्तस्याहरेव प्राणो रात्रिरेव रथिः प्राणं वा एते
प्रस्कन्दन्ति ये दिवा रत्या संयुज्यन्ते ब्रह्मचर्यमेव तद्यद् रात्रौ रत्या
संयुज्यन्ते ॥ १३ ॥

13. “Day and night also are the Eternal Father, whereof the day is Life and the night is Matter. Therefore do they offend against their own life who take joy with woman by day; by night who take joy, enact holiness.

अन्नं वै प्रजापतिस्ततो ह वै तद् रेतस्तस्मादिमाः प्रजाः प्रजायन्त
इति ॥ १४ ॥

14. “Food is the Eternal Father; for of this came the seed and of the seed is the world of creatures born.

तदे हैं वै तत्प्रजापतिव्रतं चरन्ति ते मिथुनमुत्पादयन्ते । तेषामेवैष
ब्रह्मलोको येषां तपो ब्रह्मचर्यं येषु सत्यं प्रतिष्ठितम् ॥ १५ ॥

15. “They therefore who perform the vow of the Eternal Father produce the twin creature. But theirs is the heaven of the spirit in whom are established askesis and holiness and in whom Truth has her dwelling.

तेषामसौ विरजो ब्रह्मलोको न येषु जिह्वमनृतं न माया चेति ॥ १६ ॥

16. “Theirs is the heaven of the Spirit, the world all spotless, in whom there is neither crookedness nor lying nor any illusion.”

And afterwards

The Chapter of the Second Question.

अथ हैनं भार्गवो वैदर्भिः पप्रच्छ । भगवन् कत्येव देवाः प्रजां वि-
धारयन्ते कतर एतत्प्रकाशयन्ते कः पुनरेषां वरिष्ठ इति ॥ १ ॥

1. Then the Bhargove, the Vidurbhan, asked him: “Lord, how many Gods maintain this creature, and how many illumine it, and which of these again is the mightiest?”

तस्मै स होवाचाकाशो ह वा एष देवो वायुरग्निरापः पृथिवी
वाङ्मनस्क्षुः ओत्रं च । ते प्रकाश्याभिवदन्ति वयमेतद् बाणमवष्टभ्य
विधारयामः ॥ २ ॥

2. To him answered the Rishi Pippalada: “These are the Gods, even Ether and Wind and Fire and Water and Earth and Speech and Mind and Sight and Hearing. These nine illumine the creature; therefore they vaunted themselves,—We, even we support this harp of God and we are the preservers.

तान् वरिष्ठः प्राण उवाच । मा मोहमापद्यथाहमेवैतत् पञ्चधात्मानं
प्रविभज्यैतद् बाणमवष्टभ्य विधारयामीति तेऽश्रद्धधाना बभूतुः ॥ ३ ॥

3. “Then answered Breath, their mightiest: ‘Yield not unto delusion; I dividing myself into this fivefold support this harp of God, I am its preserver.’ But they believed him not.

सोऽभिमानाद्वर्धमुत्क्रमत इव तस्मिन्नुत्क्रामत्यथेतरे सर्वं एवोत्क्रामन्ते
तस्मिंश्च प्रतिष्ठमाने सर्वं एवं प्रातिष्ठन्ते। तद्यथा मक्षिका मधुकर-
राजानमुत्क्रामन्तं सर्वां एवोत्क्रामन्ते तस्मिंश्च प्रतिष्ठमाने सर्वां एवं
प्रातिष्ठन्ते एवं वाङ्मनश्चक्षुः श्रोत्रं च ते प्रीताः प्राणं स्तुवन्ति ॥४॥

4. “Therefore offended he rose up, he was issuing out from the body. But when the Breath goeth out, then go all the others with him, and when the Breath abideth all the others abide; therefore as bees with the kingbee: when he goeth out all go out with him, and when he abideth all abide, even so was it with Speech and Mind and Sight and Hearing; then were they well-pleased and hymned the Breath to adore him.

एषोऽग्निस्तप्त्येष सूर्यं एष पर्जन्यो मघवानेष वायुः।
एष पृथिवी रयिदेवः सदसच्चामृतं च यत् ॥५॥

5. “Lo this is he that is Fire and the Sun that burneth, Rain and Indra and Earth and Air, Matter and Deity, Form and Formless, and Immortality.

अरा इव रथनामौ प्राणे सर्वं प्रतिष्ठितम्।
ऋचो यजूषि सामानि यज्ञः क्षत्रं ब्रह्म च ॥६॥

6. “As the spokes meet in the nave of a wheel, so are all things in the Breath established, the Rigveda and the Yajur and the Sama, and Sacrifice and Brahminhood and Kshatriyahood.

प्रजापतिश्चरसि गर्भे त्वमेव प्रतिजायसे।
तुभ्यं प्राणं प्रजास्त्वमा बलिं हरन्ति यः प्राणैः प्रतितिष्ठसि ॥७॥

7. “As the Eternal Father thou movest in the womb and art born in the likeness of the parents. To thee, O Life, the world of creatures offer the burnt offering, who by the breaths abidest.

देवानामसि वह्नितमः पितृणां प्रथमा स्वधा ।
ऋषीणां चरितं सत्यमर्थवाङ्गिरसामसि ॥ ८ ॥

8. “Of all the Gods thou art the strongest and fiercest and to the fathers thou art the first oblation; thou art the truth and virtue of the sages and thou art Athurvan among the sons of Ungirus.

इन्द्रस्त्वं प्राण तेजसा रुद्रोऽसि परिरक्षिता ।
त्वमन्तरिक्षे चरसि सूर्यस्त्वं ज्योतिषां पतिः ॥ ९ ॥

9. “Thou art Indra, O Breath, by thy splendour and energy and Rudra because thou preservest; thou walkest in the welkin as the Sun, that imperial lustre.

यदा त्वमभिवर्षस्यथेमाः प्राण ते प्रजाः ।
आनन्दरूपस्तिष्ठन्ति कामायान्नं भविष्यतीति ॥ १० ॥

10. “When thou, O Breath, rainest, thy creatures stand all joy because there shall be grain to the heart’s desire.

ब्रात्यस्त्वं प्राणैकऋषिरत्ता विश्वस्य सत्पतिः ।
वयमाद्यस्य दातारः पिता त्वं मातरिष्व नः ॥ ११ ॥

11. “Thou art, O Breath, the unpurified and thou art Fire, the only purity, the devourer of all and the lord of existences. We are the givers to thee of thy eating; for thou, O Matariswun, art our Father.

या ते तनुर्वाचि प्रतिष्ठिता या श्रोत्रे या च चक्षुषि ।
या च मनसि संतता शिवां तां कुरु मोत्कमीः ॥ १२ ॥

12. “That body of thine which is established in the speech, sight and hearing, and in the mind is extended, that make propitious; O Life, go not out from our midst!

प्राणस्येदं वशे सर्वं त्रिदिवे यत्प्रतिष्ठितम् ।
मातेव पुत्रान् रक्षस्व श्रीश्च प्रज्ञां च विधेहि न इति ॥ १३ ॥

13. “For all this Universe, yea, all that is established in the heavens to the Breath is subject; guard us as a mother watches over her little children; give us fortune and beauty, give us Wisdom.’”

And afterwards

The Chapter of the Third Question.

अथ हैनं कौसल्यश्वाश्वलायनः पप्रच्छ । भगवन् कुत एष प्राणो
जायते कथमायात्यस्मिन्द्वारा आत्मानं वा प्रविभज्य कथं प्रातिष्ठते
केनोत्क्रमते कथं वाह्यमधिभत्ते कथमध्यात्ममिति ॥ १ ॥

1. Then the Coshalan, the son of Uswal, asked him: “Lord, whence is this Life born? How comes it in this body or how stands by self-division? By what departeth, or how maintaineth the outward and how the inward spiritual?”

तस्मै स होवाचातिप्रश्नान् पृच्छसि ब्रह्मिष्ठोऽसीति तस्मात् तेऽहं
ब्रवीमि ॥ २ ॥

2. To him answered the Rishi Pippalada: “Many and difficult things thou askest; but because thou art very holy, therefore will I tell thee.

आत्मन एष प्राणो जायते । यथैषा पुरुषे छायैतस्मिन्नेतदाततं
मनोकृतेनायात्यस्मिन्द्वारे ॥ ३ ॥

3. “Of the Spirit is this breath of Life born; even as a shadow is cast by a man, so is this Life extended in the Spirit and by the action of the Mind it entereth into this body.

यथा सम्राडेवाधिकृतान् विनियुक्ते । एतान्नामानेतान्नामानधितिष्ठ-
स्वेत्येवमेवैष प्राण इतरान्प्राणान् पृथक्पृथगेव संनिधत्ते ॥ ४ ॥

4. “As an Emperor commandeth his officers, and he sayeth to one ‘Govern for me these villages’, and to another ‘Govern for me these others’, so this breath, the Life, appointeth the other breaths each in his province.

पायूपस्थेऽपानं चक्षुःश्रोत्रे मुखनासिकाभ्यां प्राणः स्वयं प्रातिष्ठते मध्ये
तु समानः । एष ह्येतद्वत्मन्नं समं नयति तस्मादेताः सप्तार्चिषो
भवन्ति ॥ ५ ॥

5. “In the anus and the organ of pleasure is the lower breath, and in the eyes and the ears, the mouth and the nose, the main breath itself is seated; but the medial breath is in the middle. This is he that equally distributeth the burnt offering of food; for from this are the seven fires born.

हृदि ह्येष आत्मा । अत्रैतदेकशतं नाडीनां तासां शतं शतमेकैक-
स्यां द्वासपतिद्वासपतिः प्रतिशाखानाडीसहस्राणि भवन्त्यासु व्यान-
श्चरति ॥ ६ ॥

6. “The Spirit in the heart abideth, and in the heart there are one hundred and one nerves, and each nerve hath a hundred branch-nerves and each branch-nerve hath seventy two thousand sub-branch-nerves; through these the breath pervasor moveth.

अथैकयोर्ध्वं उदानः पुण्येन पुण्यं लोकं नयति पापेन पापमुभाभ्यामेव
मनुष्यलोकम् ॥ ७ ॥

7. “Of these many there is one by which the upper breath departeth that by virtue taketh to the heaven of virtue, by sin to the hell of sin, and by mingled sin and righteousness back to the world of men restoreth.

आदित्यो ह वै बाह्यः प्राण उदयत्येष ह्येनं चाक्षुषं प्राणमनुगूणानः ।
पृथिव्यां या देवता सैषा पुरुषस्यापानमवष्टभ्यान्तरा यदाकाशः स
समानो वायुर्व्यानः ॥ ८ ॥

8. “The Sun is the main breath outside this body, for it cherisheth the eye in its rising. The divinity in the earth, she attracteth the lower breath of man, and the ether between is the medial breath; air is the breath pervasor.

तेजो ह वा उदानस्तस्मादुपशान्ततेजाः । पुनर्भवमिन्द्रियैर्मनसि सं-
पद्यमानैः ॥ ९ ॥

9. “Light, the primal energy, is the upper breath; therefore when the light and heat in a man hath dwindled, his senses retire into the mind and with these he departeth into another birth.

यच्चत्तस्तेनैष प्राणमायाति प्राणस्तेजसा युक्तः । सहात्मना यथा-
संकल्पितं लोकं नयति ॥ १० ॥

10. “Whatsoever be the mind of a man, with that mind he seeketh refuge with the breath when he dieth, and the breath and the upper breath lead him with the Spirit within him to the world of his imaginings.

य एवं विद्वान् प्राणं वेद । न हास्य प्रजा हीयतेऽमृतो भवति तदेष
श्लोकः ॥ ११ ॥

11. “The wise man that knoweth thus of the breath, his progeny wasteth not and he becometh immortal. Whereof this is the Scripture.

उत्पत्तिमायतिं स्थानं विभुत्वं चैव पञ्चधा ।
अध्यात्मं चैव प्राणस्य विज्ञायामृतमञ्जुत इति ॥ १२ ॥

12. “By knowing the origin of the Breath, his coming and his staying and his lordship in the five provinces, likewise his relation to the Spirit, one shall taste immortality.’ ”

And afterwards

The Chapter of the Fourth Question.

अथ हैनं सौर्यायणी गार्यः पप्रच्छ । भगवन्नेतस्मिन् पुरुषे कानि
स्वपन्ति कान्यस्मिन्जाग्रति कतर एष देवः स्वप्नान्पश्यति कस्यैतत्
सुखं भवति कस्मिन्नु सर्वे संप्रतिष्ठिता भवन्तीति ॥ १ ॥

1. Then Gargya of the Solar race asked him, “Lord, what are they that slumber in this Existing and what that keep vigil? Who is this god who seeth dreams or whose is this felicity? Into whom do all they vanish?”

तस्मै स होवाच । यथा गार्घ्यं मरीचयोऽर्कस्यास्तं गच्छतः सर्वा
एतस्मिंस्तेजोमण्डलं एकीभवन्ति । ताः पुनः पुनरुदयतः प्रचरन्त्येवं ह
वै तत्सर्वं परे देवे मनस्येकीभवति । तेन तह्येषु पुरुषो न शृणोति न
पश्यति न जिग्रति न रसयते न स्पृशते नाभिवदते नादत्ते नानन्दयते
न विसृजते नेयायते स्वपितीत्याचक्षते ॥ २ ॥

2. To him answered the Rishi Pippalada: “O Gargya, as are the rays of the sun in its setting, for they retire and all become one in yonder circle of splendour, but when he riseth again once more they walk abroad, so all the man becomes one in the highest god, even the mind. Then indeed this being seeth not, neither heareth, nor doth he smell, nor taste, nor touch, nor speaketh he aught, nor taketh in or giveth out, nor cometh nor goeth; he feeleth not any felicity. Then they say of him, ‘He sleepeth’.

प्राणाग्नय एवैतस्मिन् पुरे जाग्रति । गार्हपत्यो ह वा एषोऽपानो
व्यानोऽन्वाहार्यपचनो यद् गार्हपत्यात् प्रणीयते प्रणयनादाहवनीयः
प्राणः ॥ ३ ॥

3. “But the fires of the breath keep watch in that sleeping city. The lower breath is the householder’s fire and the breath pervasor the fire of the Lares that burneth to the southward. The main breath is the orient fire of the sacrifice; and even as the eastern fire taketh its fuel from the western, so in the slumber of a man the main breath taketh from the lower.

यदुच्छवासनिश्चासावेतावाहुती समं नयतीति स समानः । मनो ह वाव
यजमान इष्टफलमेवोदानः स एनं यजमानमहरहर्व्रह्मा गमयति ॥ ४ ॥

4. “But the medial breath is the priest, the sacrificant; for he equaliseth the offering of the inbreath and the offering of the outbreak. The Mind is the giver of the sacrifice and the upper breath is the fruit of the sacrifice, for it taketh the sacrificer day by day into the presence of the Eternal.

अत्रैष देवः स्वप्ने महिमानमनुभवति । यद् दृष्टं दृष्टमनुपश्यति श्रुतं
श्रुतमेवार्थमनुशृणोति देशदिग्न्तरैश्च प्रत्यनुभूतं पुनः पुनः प्रत्यनुभवति
दृष्टं चादृष्टं च श्रुतं चाश्रुतं चानुभूतं चानुभूतं च सच्चासच्च सर्वं
पश्यति सर्वः पश्यति ॥ ५ ॥

5. “Now the Mind in dream revelleth in the glory of his imaginings. All that it hath seen it seemeth to see over again, and of all that it hath heard it repeateth the hearing; yea, all that it hath felt and thought and known in many lands and in various regions, these it liveth over again in its dreaming. What it hath seen and what it hath not seen, what it hath heard and what it hath not heard, what it hath known and what it hath not known, what is and what is not, all, all it seeth; for the Mind is the Universe.

स यदा तेजसाभिभूतो भवति । अत्रैष देवः स्वप्नान् न पश्यत्यथ
तदैतस्मिन्नशरीर एतत्सुखं भवति ॥ ६ ॥

6. “But when he is overwhelmed with light, then Mind, the God, dreameth no longer; then in this body he hath felicity.

स यथा सोम्य वयांसि वासोवृक्षं संप्रतिष्ठन्ते । एवं ह वै तत्सर्वं पर
आत्मनि संप्रतिष्ठते ॥ ७ ॥

7. “O fair son, as birds wing towards their resting tree, so do all these depart into the Supreme Spirit:

पृथिवी च पृथिवीमात्रा चापश्चापोमात्रा च तेजश्च तेजोमात्रा च वायुश्च
वायुमात्रा चाकाशश्चाकाशमात्रा च चक्षुश्च द्रष्टव्यं च श्रोत्रं च श्रोतव्यं
च प्राणं च प्रातव्यं च रसश्च रसयितव्यं च त्वक् च स्पर्शयितव्यं च
वाक् च वक्तव्यं च हस्तौ चादातव्यं चोपस्थश्चानन्दयितव्यं च पायुश्च
विसर्जयितव्यं च पादौ च गन्तव्यं च मनश्च मन्तव्यं च बुद्धिश्च बोद्धव्यं
चाहंकारश्चाहंकर्तव्यं च चित्तं च चेतयितव्यं च तेजश्च विद्योतयितव्यं
च प्राणश्च विधारयितव्यं च ॥ ८ ॥

8. “Earth and the inner things of earth; water and the inner things of water; light and the inner things of light; air and

the inner things of air; ether and the inner things of ether; the eye and its seeings; the ear and its hearings; smell and the objects of smell; taste and the objects of taste; the skin and the objects of touch; speech and the things to be spoken; the two hands and their takings; the organ of pleasure and its enjoyings; the anus and its excretions; the feet and their goings; the mind and its feelings; the intelligence and what it understandeth; the sense of Ego and that which is felt to be Ego; the conscious heart and that of which it is conscious; light and what it lighteneth; Life and the things it maintaineth.

एष हि द्रष्टा स्प्रष्टा श्रोता ग्राता रसयिता मन्ता बोद्धा कर्ता विज्ञानात्मा
पुरुषः । स परेऽक्षर आत्मनि संप्रतिष्ठते ॥९॥

9. “For this that seeth and toucheth, heareth, smelleth, tasteth, feeleth, understandeth, acteth, is the reasoning self, the Male within. This too departeth into the Higher Self which is Imperishable.

परमेवाक्षरं प्रतिपद्यते स यो ह वै तदच्छायमशरीरमलोहितं शुभ्रमक्षरं
वेदयते यस्तु सोम्य । स सर्वज्ञः सर्वो भवति तदेष श्लोकः ॥१०॥

10. “He that knoweth the shadowless, colourless, bodiless, luminous and imperishable Spirit, attaineth to the Imperishable, even to the Most High. O fair son, he knoweth the All and becometh the All. Whereof this is the Scripture.

विज्ञानात्मा सह देवैश्च सर्वैः प्राणा भूतानि संप्रतिष्ठन्ति यत्र ।
तदक्षरं वेदयते यस्तु सोम्य स सर्वज्ञः सर्वमेवाविवेशेति ॥११॥

11. “‘He, O fair son, that knoweth the Imperishable into whom the understanding self departeth, and all the Gods, and the life-breaths and the elements, he knoweth the Universe!’ ”

And afterwards

The Chapter of the Fifth Question.

अथ हैनं शैव्यः सत्यकामः पप्रच्छ । स यो है तद् भगवन् मनुष्येषु
प्रायणान्तमोक्तारमभिध्यायीत । कतमं वाव स तेन लोकं जयतीति ॥१॥

- Then the Shaivya Satyakama asked him: “Lord, he among men that meditate unto death on OM the syllable, which of the worlds doth he conquer by its puissance?”

तस्मै स होवाच । एतद्वै सत्यकाम परं चापरं च ब्रह्म यदोंकारः ।
तस्माद् विद्वानेतेनैवायतनेनैकतरमन्वेति ॥२॥

- To him answered the Rishi Pippalada: “This imperishable Word that is OM, O Satyakama, is the Higher Brahman and also the Lower. Therefore the wise man by making his home in the Word, winneth to one of these.

स यदेकमात्रमभिध्यायीत स तेनैव संवेदितस्तूर्णमेव जगत्यामभि-
संपद्यते । तमृचो मनुष्यलोकमुपनयन्ते स तत्र तपसा ब्रह्मचर्येण श्रद्धया
संपन्नो महिमानमनुभवति ॥३॥

- “If he meditate on the one letter of OM the syllable, by that enlightened he attaineth swiftly in the material universe, and the hymns of the Rigveda escort him to the world of men; there endowed with askesis and faith and holiness he experienceth majesty.

अथ यदि द्विमात्रेण मनसि संपद्यते सोऽन्तरिक्षं यजुर्भिरुन्नीयते
सोमलोकम् । स सोमलोके विभूतिमनुभूय पुनरावर्तते ॥४॥

- “Now if by the two letters of the syllable he in the mind attaineth, to the skies he is exalted and the hymns of the Yajur escort him to the Lunar World. In the heavens of the Moon he feeleth his soul’s majesty; then once more he returneth.

यः पुनरेतं त्रिमात्रेणोमित्येतेनैवाक्षरेण परं पुरुषमभिध्यायीत स तेजसि
सूर्ये संपन्नः । यथा पादोदरस्त्वचा विनिर्मुच्यत एवं ह वै स पाप्मना
विनिर्मुक्तः स सामभिरुन्नीयते ब्रह्मलोकं स एतस्माज्जीवघनात्परात्परं
पुरिशयं पुरुषमीक्षते तदेतौ श्लोकौ भवतः ॥५॥

5. “But he who by all the three letters meditateth by this syllable, even by OM on the Most High Being, he in the Solar World of light and energy is secured in his attainings; as a snake casteth off its slough, so he casteth off sin, and the hymns of the Samaveda escort him to the heaven of the Spirit. He from that Lower who is the density of existence beholdeth the Higher than the Highest of whom every form is one city. Whereof these are the verses.

तिस्रो मात्रा मृत्युमत्यः प्रयुक्ता अन्योन्यसक्ता अनविप्रयुक्ताः ।
क्रियासु बाह्याभ्यन्तरमध्यमासु सम्यक्प्रयुक्तासु न कम्पते इः ॥६॥

6. “‘Children of death are the letters when they are used as three, the embracing and the inseparable letters; but the wise man is not shaken; for there are three kinds of works, outward deed and inward action and another which is blended of the two, and all these he doeth rightly without fear and without trembling.

ऋग्मिरेतं यजुर्भिरन्तरिक्षं सामभिर्यत्तक्वयो वेदयन्ते ।
तमोंकारेणैवायतनेनान्वेति विद्वान् यत्तच्छान्तमजरममृतमभयं
परं चेति ॥७॥

7. “‘To the earth the Rigveda leadeth, to the skies the Yajur, but the Sama to That of which the sages know. Thither the wise man by resting on OM the syllable attaineth, even to that Supreme Quietude where age is not and fear is cast out by immortality.’”

And afterwards

The Chapter of the Sixth Question.

अथ हैनं सुकेशा भारद्वाजः पप्रच्छ । भगवन् हिरण्यनाभः कौसल्यो
राजपुत्रो मामुपेत्यैतं प्रश्नमपृच्छत । षोडशकले भारद्वाज पुरुषं वेत्थ ।
तमहं कुमारमब्रुवं नाहमिमं वेद । यद्यहमिमवेदिषं कथं ते नावक्ष्य-
मिति । समूलो वा एष परिशुष्यति योऽनृतमभिवदति तस्मान्ना-
र्हाम्यनृतं वक्तुम । स तृष्णीं रथमारुद्ध्य प्रवत्राज । तं त्वा पृच्छामि
क्वासौ पुरुषं इति ॥ १ ॥

- Then Sukesha the Bharadwaja asked him, “Lord, Hiranyan-abha of Coshala, the king’s son, came to me and put me this question, ‘O Bharadwaja, knowest thou the Being and the sixteen parts of Him?’ and I answered the boy, ‘I know Him not; for if I knew Him, surely I should tell thee of Him: but I cannot tell thee a lie; for from the roots he shall wither who speaketh falsehood.’ But he mounted his chariot in silence and departed from me. Of Him I ask thee, who is the Being?”

तस्मै स होवाच । इहैवान्तःशरीरे सोम्य स पुरुषो यस्मिन्नेता: षोडश
कलाः प्रभवन्नीति ॥ २ ॥

- To him answered the Rishi Pippalada: “O fair son, even here is that Being, in the inner body of every creature for in Him are the sixteen members born.

स ईक्षांचक्रे । कस्मिन्नहमुत्कान्त उत्कान्तो भविष्यामि कस्मिन् वा
प्रतिष्ठिते प्रतिष्ठास्यामीति ॥ ३ ॥

- “He bethought Him. ‘What shall that be in whose issuing forth I shall issue forth from the body and in his abiding I shall abide?’

स प्राणमसृजत प्राणाच्छद्धां खं वायुज्योतिरापः पृथिवीन्द्रियं मनः ।
अन्नमन्नाद्वीर्यं तपो मन्त्राः कर्म लोका लोकेषु च नाम च ॥ ४ ॥

- “Then he put forth the Life, and from the Life faith, next ether and then air, and then light, and then water, and then earth, the senses and mind and food, and from food virility

and from virility askesis, and from askesis the mighty verses and from these action, and the worlds from action and name in the worlds; in this wise were all things born from the Spirit.

स यथेमा नद्यः स्यन्दमानाः समुद्रायणाः समुद्रं प्राप्यास्तं गच्छन्ति
भिद्यते तासां नामरूपे समुद्रं इत्येवं प्रोच्यते। एवमेवास्य परिद्रष्टुरिमाः
षोडश कलाः पुरुषायणाः पुरुषं प्राप्यास्तं गच्छन्ति भिद्यते चासां
नामरूपे पुरुषं इत्येवं प्रोच्यते स एषोडकलोडमृतो भवति तदेष
श्लोकः ॥ ५ ॥

5. “Therefore as all these flowing rivers move towards the sea, but when they reach the sea they are lost in it and name and form break away from them and all is called only the sea, so all the sixteen members of the silent witnessing Spirit move towards the Being, and when they have attained the Being they are lost in Him and name and form break away from them and all is called only the Being; then is He without members and immortal. Whereof this is the Scripture.

अरा इव रथनाभौ कला यस्मिन्प्रतिष्ठिताः ।
तं वेद्यं पुरुषं वेद यथा मा वो मृत्युः परिव्यथा इति ॥ ६ ॥

6. “He in whom the members are set as the spokes of a wheel are set in its nave, Him know for the Being who is the goal of knowledge, so shall death pass away from you and his anguish.”

तान् होवाचैतावदेवाहमेतत् परं ब्रह्म वेद । नातः परमस्तीति ॥ ७ ॥

7. And Pippalada said to them: “Thus far do I know the Most High God; than He there is none Higher.”

ते तमर्चयन्तस्त्वं हि नः पिता योऽस्माकमविद्यायाः परं पारं
तारयसीति । नमः परमऋषिभ्यो नमः परमऋषिभ्यः ॥ ८ ॥

8. And they worshipping him: “For thou art our father who hast carried us over to the other side of the Ignorance.”

Salutation to the mighty sages, salutation!

After which one repeats the Mantra.

ॐ भद्रं कर्णेभिः शृणुयाम देवा भद्रं पश्येमाक्षभिर्यजत्राः ।
 स्थिरैररङ्गैस्तुष्टवांसस्तनूभिर्व्यशेम देवहितं यदायुः ॥
 स्वस्ति न इन्द्रो वृद्धश्चवाः स्वस्ति नः पूषा विश्ववेदाः ।
 स्वस्ति नस्ताक्ष्यो अरिष्टनेमिः स्वस्ति नो बृहस्पतिर्दधातु ॥
 ॐ शान्तिः शान्तिः शान्तिः ॥

OM. May we hear what is auspicious with our ears, O ye Gods; may we see what is auspicious with our eyes, O ye of the sacrifice; giving praise with steady limbs, with motionless bodies, may we enter into that life which is founded in the Gods.

Ordain weal unto us Indra of high-heaped glories; ordain weal unto us Pushan, the all-knowing Sun; ordain weal unto us Tarkshya Arishtanemi; Brihaspati ordain weal unto us. OM. Peace! peace! peace!

The Mandoukya Upanishad

Before which one repeats the Mantra.

ॐ भद्रं कर्णेभिः शृणुयाम देवा भद्रं पश्येमाक्षभिर्यजत्राः ।
स्थिरैरङ्गैस्तुष्टुवांसस्तनूभिर्व्यशेम देवहितं यदायुः ॥
स्वस्ति न इन्द्रो वृद्धश्रवाः स्वस्ति नः पूषा विश्ववेदाः ।
स्वस्ति नस्ताक्षर्यो अरिष्टनेमिः स्वस्ति नो वृहस्पतिर्दधातु ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

OM. May we hear what is auspicious with our ears, O ye Gods; may we see what is auspicious with our eyes, O ye of the sacrifice; giving praise with steady limbs, with motionless bodies, may we enter into that life which is founded in the Gods.

Ordain weal unto us Indra of high-heaped glories; ordain weal unto us Pushan, the all-knowing Sun; ordain weal unto us Tarkshya Arishtanemi; Brihaspati ordain weal unto us. OM. Peace! peace! peace!

ओमित्येतदक्षरमिदं सर्वं तस्योपव्याख्यानं भूतं भवद् भविष्यदिति
सर्वमोक्षाकार एव । यच्चान्यत् त्रिकालातीतं तदप्योक्षाकार एव ॥१॥

1. OM is this imperishable Word, OM is the Universe, and this is the exposition of OM. The past, the present and the future, all that was, all that is, all that will be, is OM. Likewise all else that may exist beyond the bounds of Time, that too is OM.

सर्वं ह्येतद् ब्रह्मायमात्मा ब्रह्म सोऽयमात्मा चतुष्पात् ॥२॥

2. All this Universe is the Eternal Brahman, this Self is the Eternal, and the Self is fourfold.

जागरितस्थानो बहिष्प्रग्नः सप्ताङ्गं एकोनविंशतिमुखः स्थूलभुग् वैश्वा-
नरः प्रथमः पादः ॥३॥

3. He whose place is the wakefulness, who is wise of the outward, who has seven limbs, to whom there are nineteen doors, who feeleth and enjoyeth gross objects, Vaiswanor, the Universal Male, He is the first.

स्वप्नस्थानोऽन्तःप्रज्ञः सप्ताङ्गं एकोनविंशतिमुखः प्रविविक्तभुक् तैजसे
द्वितीयः पादः ॥ ४ ॥

4. He whose place is the dream, who is wise of the inward, who has seven limbs, to whom there are nineteen doors, who feeleth and enjoyeth subtle objects, Taijasa, the Inhabitant in Luminous Mind, He is the second.

यत्र सुप्तो न कंचन कामं कामयते न कंचन स्वप्नं पश्यति तत्सुषुप्तम् ।
सुषुप्तस्थानं एकीभूतः प्रज्ञानघनं एवानन्दमयो ह्यानन्दभुक् चेतोमुखः
प्राज्ञस्तृतीयः पादः ॥ ५ ॥

5. When one sleepeth and yearneth not with any desire, nor seeth any dream, that is the perfect slumber. He whose place is the perfect slumber, who is become Oneness, who is wisdom gathered into itself, who is made of mere delight, who enjoyeth delight unrelated, to whom conscious mind is the door, Prajna, the Lord of Wisdom, He is the third.

एष सर्वेष्वर एष सर्वज्ञ एषोऽन्तर्याम्येष योनिः सर्वस्य प्रभवाप्ययौ हि
भूतानाम् ॥ ६ ॥

6. This is the Almighty, this is the Omniscient, this is the Inner Soul, this is the Womb of the Universe, this is the Birth and Destruction of creatures.

नान्तःप्रज्ञं न बहिष्प्रज्ञं नोभयतःप्रज्ञं न प्रज्ञानघनं न प्रज्ञं नाप्रज्ञम् ।
अदृष्टमव्यवहार्यमग्राह्यमलक्षणमचिन्त्यमव्यपदेश्यमेकात्मप्रत्ययसारं
प्रपञ्चोपशमं शान्तं शिवमद्वैतं चतुर्थं मन्यन्ते स आत्मा स विज्ञेयः ॥ ७ ॥

7. He who is neither inward-wise, nor outward-wise, nor both inward and outward wise, nor wisdom self-gathered, nor possessed of wisdom, nor unpossessed of wisdom, He Who

is unseen and incomunicable, unseizable, featureless, unthinkable, and unnameable, Whose essentiality is awareness of the Self in its single existence, in Whom all phenomena dissolve, Who is Calm, Who is Good, Who is the One than Whom there is no other, Him they deem the fourth; He is the Self, He is the object of Knowledge.

सोऽयमात्माध्यक्षरमोक्तारोऽधिमात्रं पादा मात्रा मात्राश्च पादा अकार
उकारो मकार इति ॥ ८ ॥

8. Now this the Self, as to the imperishable Word, is OM; and as to the letters, His parts are the letters and the letters are His parts, namely, A U M.

जागरितस्थानो वैश्वानरोऽकारः प्रथमा मात्रासेरादिमत्त्वाद्वाप्नोति ह
वै सर्वान्कामानादिश्च भवति य एवं वेद ॥ ९ ॥

9. The Waker, Vaiswanor, the Universal Male, He is A, the first letter, because of Initiality and Pervasiveness; he that knoweth Him for such pervadeth and attaineth all his desires; he becometh the source and first.

स्वप्नस्थानस्तैजस उकारो द्वितीया मात्रोत्कर्षादुभयत्वाद्वोत्कर्षति ह
वै ज्ञानसंततिं समानश्च भवति नास्याब्रह्मवित् कुले भवति य एवं
वेद ॥ १० ॥

10. The Dreamer, Taijasa, the Inhabitant in Luminous Mind, He is U, the second letter, because of Advance and Centrality; he that knoweth Him for such, advanceth the bounds of his knowledge and riseth above difference; nor of his seed is any born that knoweth not the Eternal.

सुषुप्तस्थानः प्राज्ञो मकारस्तृतीया मात्रा मितेरपीतेवा मिनोति ह वा
इदं सर्वमपीतिश्च भवति य एवं वेद ॥ ११ ॥

11. The Sleeper, Prajna, the Lord of Wisdom, He is M, the third letter, because of Measure and Finality; he that knoweth Him for such measureth with himself the Universe and becometh the departure into the Eternal.

अमात्रश्वतुर्थोऽव्यवहार्यः प्रपञ्चोपशमः शिवोऽद्वैत एवमोक्षार आत्मैव
संविशत्यात्मनात्मानं य एवं वेद य एवं वेद ॥ १२ ॥

12. Letterless is the fourth, the Incommunicable, the end of phenomena, the Good, the One than Whom there is no other; thus is OM. He that knoweth is the Self and entereth by his self into the Self, he that knoweth, he that knoweth.

Here ends the Mandoukya Upanishad.

After which one repeats the Mantra.

ॐ भद्रं कर्णेभिः शृणुयाम देवा भद्रं पश्येमाक्षभिर्यजत्राः ।
स्थिरैरङ्गैस्तुष्टवांसस्तनूभिर्यशेम देवहितं यदायुः ॥
स्वस्ति न इन्द्रो वृद्धश्चवाः स्वस्ति नः पूषा विश्ववेदाः ।
स्वस्ति नस्ताक्षर्यो अरिष्टनेमिः स्वस्ति नो वृहस्पतिर्दधातु ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

OM. May we hear what is auspicious with our ears, O ye Gods; may we see what is auspicious with our eyes, O ye of the sacrifice; giving praise with steady limbs, with motionless bodies, may we enter into that life which is founded in the Gods.

Ordain weal unto us Indra of high-heaped glories; ordain weal unto us Pushan, the all-knowing Sun; ordain weal unto us Tarkshya Arishtanemi; Brihaspati ordain weal unto us. OM. Peace! peace! peace!

The Aitereya Upanishad

Chapter I

आत्मा वा इदमेक एवाग्र आसीत् । नान्यत्किंचन मिष्ट । स ईक्षत
लोकान्नु सृजा इति ॥ १ ॥

1. In the beginning the Spirit was One and all this (universe) was the Spirit; there was nought else that saw. The Spirit thought, “Lo, I will make me worlds from out my being.”

स इमाँलोकानसृजत । अम्भो मरीचीर्मरमापोऽदोऽम्भः परेण दिवं द्यौः
प्रतिष्ठान्तरिक्षं मरीचयः पृथिवी मरो या अधस्तात् ता आपः ॥ २ ॥

2. These were the worlds he made; Ambhah, of the ethereal waters, Marichih of light, Mara, of death and mortal things, Apah, of the lower waters. Beyond the shining firmament are the ethereal waters and the firmament is their base and resting-place; Space is the world of light; the earth is the world mortal; and below the earth are the lower waters.

स ईक्षतेमे नु लोका लोकपालान्नु सृजा इति । सोऽदम्य एव पुरुषं
समुद्भृत्यामूर्छयत् ॥ ३ ॥

3. The Spirit thought, “Lo, these are the worlds; and now will I make me guardians for my worlds.” Therefore he gathered the Purusha out of the waters and gave Him shape and substance.

तमभ्यतप्त तस्याभितस्य मुखं निरभिद्यत यथाण्डम् । मुखाद्वाग्
वाचोऽग्निर्नासिके निरभिद्येतां नासिकाभ्यां प्राणः प्राणाद्वायुरक्षिणी
निरभिद्येतामक्षिभ्यां चक्षुश्चक्षुष आदित्यः कर्णौ निरभिद्येतां कर्णाभ्यां
श्रोत्रं श्रोत्राहिष्टस्त्वङ् निरभिद्यत त्वचो लोमानि लोमभ्य ओषधिवन-
स्पतयो हृदयं निरभिद्यत हृदयान्मनो मनसश्चन्द्रमा नाभिर्निरभिद्यत
नाभ्या अपानोऽपानान्मृत्युः शिश्रं निरभिद्यत शिश्रादेतो रेतस
आपः ॥ ४ ॥

4. Yea, the Spirit brooded over Him and of Him thus brooded over the mouth broke forth, as when an egg is hatched and breaketh; from the mouth brake Speech and of Speech fire was born. The nostrils brake forth and from the nostrils Breath and of Breath air was born. The eyes brake forth and from the eyes Sight and of Sight the Sun was born. The ears brake forth and from the ears Hearing and of Hearing the regions were born. The skin brake forth and from the skin hairs and from the hairs herbs of healing and all trees and plants were born. The heart brake forth and from the heart Mind and of Mind the moon was born. The navel brake forth and from the navel Apana and of Apana Death was born. The organ of pleasure brake forth and from the organ seed and of seed the waters were born.

Chapter II

ता एता देवताः सृष्टा अस्मिन्महत्यर्णवे प्रापतन् । तमशनायापिपासा -
भ्यामन्ववार्जत् । ता एनमब्रुवन्नायतनं नः प्रजानीहि यस्मिन्न्रतिष्ठिता
अन्नमदामेति ॥ १ ॥

1. These were the Gods that He created; they fell into this great Ocean, and Hunger and Thirst leaped upon them. Then they said to Him, “Command unto us an habitation that we may dwell secure and eat of food.”

ताभ्यो गामानयत् ता अब्रुवन्न वै नोऽयमलमिति । ताभ्योऽश्वमानयत्
ता अब्रुवन्न वै नोऽयमलमिति ॥ २ ॥

2. He brought unto them the cow, but they said, “Verily, it is not sufficient for us.” He brought unto them the horse, but they said, “Verily, it is not enough for us.”

ताभ्यः पुरुषमानयत् ता अब्रुवन् सुकृतं बतेति पुरुषो वाव सुकृतम् ।
ता अब्रवीद्यथायतनं प्रविशतेति ॥ ३ ॥

3. He brought unto them Man, and they said, “O well fashioned truly! Man indeed is well and beautifully made.” Then

the Spirit said unto them, “Enter ye in each according to his habitation.”

अग्निर्वाग्भूत्वा मुखं प्राविशद् वायुः प्राणो भूत्वा नासिके प्राविश-
दादित्यश्चक्षुभूत्वाक्षिणी प्राविशद् दिशः श्रोत्रं भूत्वा कर्णौ प्राविश-
नोषधिवनस्पतयो लोमानि भूत्वा त्वचं प्राविशश्चन्द्रमा मनो भूत्वा
हृदयं प्राविशन्मृत्युरपानो भूत्वा नाभिं प्राविशदापो रेतो भूत्वा शिशं
प्राविशन् ॥ ४ ॥

4. Fire became Speech and entered into the mouth; Air became Breath and entered into the nostrils; the Sun became Sight and entered into the eyes; the Quarters became Hearing and entered into the ears; Herbs of healing and the plants and trees became Hairs and entered into the skin; the Moon became Mind and entered into the heart; Death became Apana, the lower breathing, and entered into the navel; the Waters became Seed and entered into the organ.

तमशनायापिपासे अबृतामावाभ्यामभिप्रजानीहीति ते अब्रवीदेता-
स्वेव वां देवतास्वाभजाम्येतासु भागिन्यौ करोमीति । तस्माद्यस्यै कस्यै
च देवतायै हविर्गृह्यते भागिन्यावेवास्यामशनायापिपासे भवतः ॥ ५ ॥

5. Then Hunger and Thirst said unto the Spirit, “Unto us too command an habitation.” But He said unto them, “Even among these gods do I apportion you; lo! I have made you sharers in their godhead.” Therefore to whatever god the oblation is offered, Hunger and Thirst surely have their share in the offering.

Chapter III

स ईक्षतेमे नु लोकाश्च लोकपालाश्चान्नमेभ्यः सृजा इति ॥ १ ॥

1. The Spirit thought, “These verily are my worlds and their guardians; and now will I make me food for these.”

सोऽपोऽभ्यतपत् ताभ्योऽभितपाभ्यो मूर्तिरजायत । या वै सा मूर्तिर-
जायतान्नं वै तत् ॥ २ ॥

2. The Spirit brooded in might upon the waters and from the waters brooded mightily over Form was born. Lo, all this that was born as form, is no other than Food.

तदेनत्सुष्टं पराडत्यजिघांसत् तद्वाचाजिघृक्षत् तन्नाशङ्कोद्वाचा ग्रहीतुं
स यद्दैनद् वाचाग्रहैष्यदभिव्याहृत्य हैवान्नमत्रप्स्यत् ॥ ३ ॥

3. Food being created fled back from his grasp. By speech He would have seized it, but He could not seize it by speech. Had He seized it by speech, then would a man be satisfied by merely speaking food.

तत्प्राणेनाजिघृक्षत् तन्नाशङ्कोत्प्राणेन ग्रहीतुं स यद्दैनत् प्राणेनाग्रहैष्य-
दभिप्राण्य हैवान्नमत्रप्स्यत् ॥ ४ ॥

4. By the breath He would have seized it, but He could not seize it by the breath. Had He seized it by the breath, then would a man be satisfied by merely breathing food.

तच्चक्षुषाजिघृक्षत् तन्नाशङ्कोच्चक्षुषा ग्रहीतुं स यद्दैनच्चक्षुषाग्रहैष्यद्
दृष्टा हैवान्नमत्रप्स्यत् ॥ ५ ॥

5. By the eye He would have seized it, but He could not seize it by the eye. Had He seized it by the eye, then would a man be satisfied by merely seeing food.

तच्छोत्रेणाजिघृक्षत् तन्नाशङ्कोच्छोत्रेण ग्रहीतुं स यद्दैनच्छोत्रेणाग्रहै-
ष्यच्छृत्वा हैवान्नमत्रप्स्यत् ॥ ६ ॥

6. By the ear He would have seized it, but He could not seize it by the ear. Had He seized it by the ear, then would a man be satisfied by merely hearing food.

तत्त्वचाजिघृक्षत् तन्नाशङ्कोत्त्वचा ग्रहीतुं स यद्दैनत्त्वचाग्रहैष्यत् स्पृष्टा
हैवान्नमत्रप्स्यत् ॥ ७ ॥

7. By the skin He would have seized it, but He could not seize it by the skin. Had He seized it by the skin, then would a man be satisfied by merely touching food.

तन्मनसाजिघृक्षत् तन्नाशङ्कोन्मनसा ग्रहीतुं स यद्वैनन्मनसाग्रहैष्यद्
ध्यात्वा हैवान्नमत्रप्स्यत् ॥८॥

8. By the mind He would have seized it, but He could not seize it by the mind. Had He seized it by the mind, then would a man be satisfied by merely thinking food.

तच्छ्वेनाजिघृक्षत् तन्नाशङ्कोच्छ्वेन ग्रहीतुं स यद्वैनच्छ्वेना-
ग्रहैष्यद् विसृज्य हैवान्नमत्रप्स्यत् ॥९॥

9. By the organ He would have seized it, but He could not seize it by the organ. Had He seized it by the organ, then would a man be satisfied by merely emitting food.

तदपानेनाजिघृक्षत् तदावयत् सैषोऽन्नस्य ग्रहो यद्वायुरन्नायुर्वा एष
यद्वायुः ॥१०॥

10. By the Apana He would have seized it, and it was seized. Lo this is the seizer of food which is also Breath of the Life, and therefore all that is Breath hath its life in food.

स ईक्षत कथं न्विदं मदृते स्यादिति स ईक्षत कतरेण प्रपद्या इति । स
ईक्षत यदि वाचाभिव्याहृतं यदि प्राणेनाभिप्रणितं यदि चक्षुषा दृष्टं यदि
श्रोत्रेण श्रुतं यदि त्वचा स्पृष्टं यदि मनसा ध्यातं यद्यपानेनाभ्यपानितं
यदि शिश्वेन विसृष्टमथ कोऽहमिति ॥११॥

11. The Spirit thought, "Without Me how should all this be?" and He thought, "By what way shall I enter in?" He thought also, "If utterance is by Speech, if breathing is by the Breath, if sight is by the Eye, if hearing is by the Ear, if thought is by the Mind, if the lower workings are by Apana, if emission is by the organ, who then am I?"

स एतमेव सीमानं विदार्थैतया द्वारा प्रापद्यत । सैषा विद्वतिनाम
द्वास्तदेतन्नान्दनम् । तस्य त्रय आवसथास्त्रयः स्वप्ना अयमावसथो
अयमावसथोऽयमावसथ इति ॥१२॥

12. It was this bound that He cleft, it was by this door that He entered in. 'Tis this that is called the gate of the cleaving; this is the door of His coming and here is the place of His delight.

He hath three mansions in His city, three dreams wherein He dwelleth, and of each in turn He saith, “Lo, this is my habitation” and “This is my habitation” and “This is my habitation.”

स जातो भूतान्यभिव्यैस्यत् किमिहान्यं वावदिषदिति । स एतमेव पुरुषं
ब्रह्म ततमपश्यत् । इदमदर्शमितीऽ ॥ १३ ॥

13. Now when He was born, He thought and spoke only of Nature and her creations; in this world of matter of what else should He speak or reason? Thereafter He beheld that Being who is the Brahman and the last Essence. He said, “Yea, this is He; verily, I have beheld Him.”

तस्मादिदन्दो नामेदन्दो ह वै नाम । तमिदन्दं सन्तमिन्दू इत्याचक्षते
परोक्षेण । परोक्षप्रिया इव हि देवाः परोक्षप्रिया इव हि देवाः ॥ १४ ॥

14. Therefore is He Idandra; for Idandra is the true name of Him. But though He is Idandra, they call Him Indra because of the veil of the Unrevelation; for the gods love the veil of the Unrevelation, yea, verily, the gods love the Unrevelation.

Chapter IV

पुरुषे ह वा अयमादितो गर्भो भवति यदेतद् रेतः । तदेतत् सर्वेभ्यो
इङ्गेभ्यस्तेजः संभूतमात्मन्येवात्मानं विभर्ति तद्यदा स्त्रियां सिञ्च-
त्यथैनज्जनयति तदस्य प्रथमं जन्म ॥ १ ॥

1. In the male first the unborn child becometh. This which is seed is the force and heat of him that from all parts of the creature draweth together for becoming; therefore he beareth himself in himself, and when he casteth it into the woman, 'tis himself he begetteth. And this is the first birth of the Spirit.

तत् स्त्रिया आत्मभूयं गच्छति यथा स्वमङ्गं तथा । तस्मादेनां न
हिनस्ति । सास्यैतमात्मानमत्र गतं भावयति ॥ २ ॥

2. It becometh one self with the woman, therefore it doeth her no hurt and she cherisheth this self of her husband that hath got into her womb.

सा भावयित्री भावयितव्या भवति । तं स्त्री गर्भं विभर्ति । सोऽग्रे एव कुमारं जन्मनोऽग्रेऽधिभावयति । स यत्कुमारं जन्मनोऽग्रेऽधिभावय-त्यात्मानमेव तद् भावयत्येषां लोकानां संतत्या एवं संतता हीमे लोकास्तदस्य द्वितीयं जन्म ॥ ३ ॥

3. She the cherisher must be cherished. So the woman beareth the unborn child and the man cherisheth the boy even from the beginning ere it is born. And whereas he cherisheth the boy ere it is born, 'tis verily himself that he cherisheth for the continuance of these worlds and their peoples; for 'tis even thus the thread of these worlds spinneth on unbroken. And this is the second birth of the Spirit.

सोऽस्यायमात्मा पुण्येभ्यः कर्मभ्यः प्रतिधीयते । अथास्यायमितर आत्मा कृतकृत्यो वयोगतः प्रैति । स इतः प्रयन्नेव पुनर्जायते तदस्य तृतीयं जन्म ॥ ४ ॥

4. Lo this is the spirit and self of him and he maketh it his vicegerent for the works of righteousness. Now this his other self when it hath done the works it came to do and hath reached its age, lo! it goeth hence, and even as it departeth, it is born again. And this is the third birth of the Spirit.

तदुक्तमृषिणा—
गर्भे नु सन्नन्वेषामवेदमहं देवानां जनिमानि विश्वा ।
शतं मा पुर आयसीररक्षन्नधः श्येनो जवसा निरदीयमिति ।
गर्भ एवैतच्छयानो वामदेव एवमुवाच ॥ ५ ॥

5. Therefore it was said by the sage Vamadeva: "I, Vamadeva, being yet in the womb, knew all the births of these gods and their causes. In a hundred cities of iron they held me down and kept me; I broke through them all with might & violence, like a hawk I soared up into my heavens." While yet he lay in the womb, thus said Vamadeva.

स एवं विद्वानस्माच्छ्रीरभेदाद्बृद्धं उत्कम्यामुष्मिन् स्वर्गे लोके सर्वान्
कामानास्वामृतः समभवत्समभवत् ॥ ६ ॥

6. And because he knew this, therefore when the strings of the body were snapped asunder, lo he soared forth into yonder world of Paradise & there having possessed all desires, put death behind him, yea, he put death behind him.

Chapter V

कोऽयमात्मेति वयमुपास्यहे कतरः स आत्मा । येन वा पश्यति येन
वा शृणोति येन वा गन्धानाजिप्रति येन वा वाचं व्याकरोति येन वा
स्वादु चास्वादु च विजानाति ॥ १ ॥

1. Who is this Spirit that we may adore Him? and which of all these is the Spirit? by whom one seeth or by whom one heareth or by whom one smelleth all kinds of perfume or by whom one uttereth clearness of speech or by whom one knoweth the sweet and bitter.

यदेतद्वदयं मनश्चैतत् । संज्ञानमाज्ञानं विज्ञानं प्रज्ञानं मेधा दृष्टिर्घृति-
र्मतिर्मनीषा जूतिः स्मृतिः संकल्पः क्रतुरसुः कामो वश इति । सर्वा-
प्येवैतानि प्रज्ञानस्य नामधेयानि भवन्ति ॥ २ ॥

2. This which is the heart, is mind also. Concept and will and analysis and wisdom and intellect and vision and continuity of purpose and feeling and understanding, pain and memory and volition and operation of thought and vitality and desire and passion, all these, yea all, are but names of the Eternal Wisdom.

एष ब्रह्मैष इन्द्र एष प्रजापतिरेते सर्वे देवा इमानि च पञ्च महाभूतानि
पृथिवी वायुराकाश आपो ज्योतींषीत्येतानीमानि च क्षुद्रमिश्रणीव ।
बीजानीतराणि चेतराणि चाण्डजानि च जारुजानि च स्वेदजानि
चोदिभज्जानि चाश्चा गावः पुरुषा हस्तिनो यत्किंचेदं प्राणि जडमं च
पतन्त्रि च यच्च स्थावरं सर्वं तत् प्रज्ञानेत्रं प्रज्ञाने प्रतिष्ठितं प्रज्ञानेत्रो
लोकः प्रज्ञा प्रतिष्ठा प्रज्ञानं ब्रह्म ॥ ३ ॥

3. This creating Brahma; this ruling Indra; this Prajapati Father of his peoples; all these Gods and these five elemental substances, even earth, air, ether, water and the shining principles; and these great creatures and those small; and seeds of either sort; and things egg-born and things sweat-born and things born of the womb and plants that sprout; and horses and cattle and men and elephants; yea, whatsoever thing here breatheth and all that moveth and everything that hath wings and whatso moveth not; by Wisdom all these are guided and have their firm abiding in Wisdom. For Wisdom is the eye of the world, Wisdom is the sure foundation, Wisdom is Brahman Eternal.

स एतेन प्रज्ञेनात्मनास्माल्लोकादुत्कम्यामुष्मिन् स्वर्गे लोके सर्वान्
कामानास्वामृतः समभवत्समभवत् ॥ ४ ॥

4. By the strength of the wise and seeing Self the sage having soared up from this world ascended into his other world of Paradise; and there having possessed desire, put death behind him, yea, he put death behind him.

Taittiriya Upanishad

Shiksha Valli

Chapter I

हरिः ॐ । शं नो मित्रः शं वरुणः । शं नो भवत्वर्यमा । शं न इन्द्रो
बृहस्पतिः । शं नो विष्णुरुक्मः । नमो ब्रह्मणे । नमस्ते वायो । त्वमेव

Together may we attain glory, together to the radiance of holiness. Hereupon we will expound next the secret meaning of Sanhita whereof there are five capitals; Concerning the Worlds; Concerning the Shining Fires; Concerning the Knowledge; Concerning Progeny; Concerning Self. These are called the great Sanhitas.

Now concerning the worlds. Earth is the first form; the heavens are the second form; ether is the linking; air is the joint of the linking. Thus far concerning the worlds.

Next concerning the shining fires. Fire is the first form; the Sun is the latter form; the waters are the linking; electricity is the joint of the linking. Thus far concerning the shining fires.

Next concerning the Knowledge. The Master is the first form; the disciple is the latter form; Knowledge is the linking; exposition is the joint of the linking. Thus far concerning the Knowledge.

Next concerning progeny. The mother is the first form; the father is the latter form; progeny is the linking; act of procreation is the joint of the linking. Thus far concerning progeny.

Next concerning Self. The upper jaw is the first form; the lower jaw is the latter form; speech is the linking; the tongue is the joint of the linking. Thus far concerning Self.

These are the great Sanhitas. He who knoweth thus the great Sanhitas as we have expounded them, to him are linked progeny

and wealth of cattle and the radiance of holiness and food and all that is of food and the world of his high estate in heaven.

The bull of the hymns of Veda whose visible form is all this Universe, he above the Vedas who sprang from that which is deathless, may Indra increase intellect unto me for my strengthening. O God, may I become a vessel of immortality. May my body be swift to all works, may my tongue drop pure honey. May I hear vast and manifold lore with my ears. O Indra, thou art the sheath of the Eternal and the veil that the workings of brain have drawn over Him; preserve whole unto me the sacred lore that I have studied.

She bringeth unto me wealth and extendeth it, yea, she

maketh speedily my own raiment and cattle and drink and food now and always; therefore carry to me Fortune of much fleecy wealth and cattle with her. Swaha!

May the Brahmacharins come unto me. Swaha!

From here and there may the Brahmacharins come unto me. Swaha!

May the Brahmacharins set forth unto me. Swaha!

May the Brahmacharins attain self-mastery. Swaha!

May the Brahmacharins attain to peace of soul. Swaha!

May I be a name among the folk! Swaha!

May I be the first of the wealthy! Swaha!

O Glorious Lord, into That which is Thou may I enter. Swaha!

Do thou also enter into me, O Shining One. Swaha!

Thou art a river with a hundred branching streams, O Lord of Grace, in thee may I wash me clean. Swaha!

As the waters of a river pour down the steep, as the months of the year hasten to the old age of days, O Lord that cherisheth, so may the Brahmacharins come to me from all the regions. Swaha!

O Lord, thou art my neighbour, thou dwellest very near me. Come to me, be my light and sun.

Chapter V

भूर्भुवः सुवरिति वा एतास्तिस्रो व्याहृतयः । तासामु ह स्मैतां चतुर्थम् ।
माहाचमस्यः प्रवेदयते । मह इति । तद् ब्रह्म । स आत्मा । अङ्गान्यन्या
देवताः ।

भूरिति वा ऋचः । भुव इति सामानि । सुवरिति यजूर्षि । मह
इति ब्रह्म । ब्रह्मणा वाव सर्वे वेदा महीयन्ते ।

भूरिति वै प्राणः । भुव इत्यपानः । सुवरिति व्यानः । मह इत्यन्नम् ।
अन्नेन वाव सर्वे प्राणा महीयन्ते ।

ता वा एताश्चतमस्तुधा । चतस्रश्चतस्रो व्याहृतयः । ता यो वेद ।
स वेद ब्रह्म । सर्वेऽस्मै देवा बलिमावहन्ति ॥

Bhûr, Bhuvan and Suvar, these are the three Words of His naming. Verily the Rishi Mahachamasya made known a fourth to these, which is Mahas. It is Brahman, it is the Self, and the other gods are his members.

Bhûr, it is this world; Bhuvan, it is the sky; Suvar, it is the other world: but Mahas is the Sun. By the Sun all these worlds increase and prosper.

Bhûr, it is Fire; Bhuvan, it is Air; Suvar, it is the Sun: but Mahas is the Moon. By the Moon all these shining fires increase and prosper.

Bhûr, it is the hymns of the Rigveda; Bhuvan, it is the hymns of the Sâma; Suvar, it is the hymns of the Yajur: but Mahas is the Eternal. By the Eternal all these Vedas increase and prosper.

Bhûr, it is the main breath; Bhuvan, it is the lower breath; Suvar, it is the breath pervasor: but Mahas is food. By food all these breaths increase and prosper.

These are the four & they are fourfold; — four Words of His naming and each is four again. He who knoweth these knoweth the Eternal, and to him all the Gods carry the offering.

Chapter VI

स य एषोऽन्तर्हृदय आकाशः । तस्मिन्नयं पुरुषो मनोमयः । अमृतो
हिरण्मयः । अन्तरेण तालुके । य एष स्तन इवावलम्बते । सेन्द्रयोनिः ।
यत्रासौ केशान्तो विवर्तते । व्यपोद्धृ शीर्षकपाले ।

भूरित्यग्नौ प्रतितिष्ठति । भुव इति वायौ । सुवरित्यादित्ये ।
मह इति ब्रह्मणि । आप्नोति स्वाराज्यम् । आप्नोति मनसस्पतिम् ।
वाक्पतिश्चक्षुष्टिः । श्रोत्रपतिर्विज्ञानपतिः । एतत्ततो भवति । आकाश -
शरीरं ब्रह्म । सत्यात्म प्राणारामं मनआनन्दम् । शान्तिसमृद्धमृतम् ।
इति प्राचीनयोग्योपास्त्व ॥

Lo this heaven of ether which is in the heart within, there dwelleth the Being who is all Mind, the radiant & golden Immortal. Between the two palates, this that hangeth down like

the breast of a woman, is the womb of Indra; yea where the hair at its end whirleth round like an eddy, there it divideth the skull and pusheth through it.

As Bhûr He is established in Agni, as Bhavar in Vaiou, as Suvar in the Sun, as Mahas in the Eternal. He attaineth to the kingdom of Himself; He attaineth to be the Lord of Mind; He becometh Lord of Speech, Lord of Sight, Lord of Hearing, Lord of the Knowledge. Thereafter this too He becometh,— the Eternal whose body is all ethereal space, whose soul is Truth, whose bliss is in Mind, who taketh His ease in Prana, the Rich in Peace, the Immortal. As such, O son of the ancient Yoga, do thou adore Him.

Chapter VII

पृथिव्यन्तरिक्षं द्यौर्दिशोऽवान्तरदिशः । अग्निर्वायुरादित्यश्चन्द्रमा नक्षत्राणि । आप ओषधयो वनस्पतय आकाश आत्मा । इत्यधिभूतम् ।

अथाध्यात्मम् । प्राणो व्यानोऽपान उदानः समानः । चक्षुः श्रोत्रं मनो वाक् त्वक् । चर्म मांसं स्नावास्थि मज्जा । एतदधिविधाय ऋषिरवोचत् । पाङ्गं वा इदं सर्वम् । पाङ्गेनैव पाङ्गं स्पृणोतीति ॥

Earth, sky, heaven, the quarters and the lesser quarters; Fire, Air, Sun, Moon and the Constellations; Waters, herbs of healing, trees of the forest, ether and the Self in all; these three concerning this outer creation.

Then concerning the Self. The main breath, the middle breath, the nether breath, the upper breath and the breath pervasor; eye, ear, mind, speech and the skin; hide, flesh, muscle, bone and marrow. Thus the Rishi divided them and said, “In sets of five is this universe; five and five with five and five He relateth.”

Chapter VIII

ओमिति ब्रह्म । ओमितीदं सर्वम् । ओमित्येतदनुकृतिर्ह स्म वा अप्यो श्रावयेत्याश्रावयन्ति । ओमिति सामानि गायन्ति । ओं श्रोमिति शस्त्राणि शंसन्ति । ओमित्यध्वर्युः प्रतिगरं प्रतिगृणाति । ओमिति ब्रह्मा

प्रसौति । ओमित्यग्निहोत्रमनुजानाति । ओमिति ब्राह्मणः प्रवक्ष्यन्नाह
ब्रह्मोपाद्वानीति । ब्रह्मैवोपाद्वाति ॥

OM is the Eternal, OM is all this universe. OM is the syllable of assent: saying OM! let us hear, they begin the citation. With OM they sing the hymns of the Sama; with OM SHOM they pronounce the Shastra. With OM the priest officiating at the sacrifice sayeth the response. With OM Brahma beginneth creation (or With OM the chief priest giveth sanction). With OM one sanctioneth the burnt offering. With OM the Brahmin ere he expound the Knowledge, crieth "May I attain the Eternal." The Eternal verily he attaineth.

Chapter IX

इति तपोनित्यः पौरुषिष्ठिः । स्वाध्यायप्रवचने एवेति नाको मौद्रित्यः ।
तद्विं तपस्तद्विं तपः ॥

Righteousness with the study & teaching of Veda; Truth with the study and teaching of Veda; askesis with the study and teaching of Veda; self-mastery with the study and teaching of Veda. Peace of soul with the study and teaching of Veda. The household fires with the study and teaching of Veda. The burnt offering with the study and teaching of Veda. Progeny with the study and teaching of Veda. Act of procreation with the study and teaching of Veda. Children of thy children with the study and teaching of Veda — *these duties*. "Truth is first" said the truth-speaker, the Rishi son of Rathitar. "Askesis is first" said the constant in austerity, the Rishi son of Purushishta. "Study and teaching of Veda is first" said Naka son of Mudgala. For this too is austerity and this too is askesis.

Chapter X

अहं वृक्षस्य रेरिवा । कीर्तिः पृष्ठं गिरेरिव । ऊर्ध्वपवित्रो वाजिनीव स्वमृतमस्मि । द्रविणं सर्वर्चसम् । सुमेधा अमृतोऽक्षितः । इति त्रिशङ्को-र्वदानुवचनम् ।

“I am He that moveth the Tree of the Universe & my glory is like the shoulders of a high mountain. I am lofty and pure like sweet nectar in the strong, I am the shining riches of the world, I am the deep thinker, the deathless One who decayeth not from the beginning.” This is Trishanku’s voicing of Veda and the hymn of his self-knowledge.

Chapter XI

वेदमनूच्याचार्योऽन्तेवासिनमनुशास्ति ।

सत्यं वद । धर्मं चर । स्वाध्यायान्मा प्रमदः । आचार्याय प्रियं धनमाहृत्य प्रजातन्तुं मा व्यवच्छेत्पीः । सत्यान्न प्रमदितव्यम् । धर्मान्न प्रमदितव्यम् । कुशलान्न प्रमदितव्यम् । भूत्यै न प्रमदितव्यम् । स्वाध्यायप्रवचनाभ्यां न प्रमदितव्यम् ।

एष आदेशः । एष उपदेशः । एषा वेदोपनिषत् । एतदनुशासनम् । एवमुपासितव्यम् । एवमु चैतद्वुपास्यम् ॥

When the Master hath declared Veda, then he giveth the commandments to his disciple.

Speak truth, walk in the way of thy duty, neglect not the

study of Veda. When thou hast brought to the Master the wealth that he desireth, thou shalt not cut short the long thread of thy race. Thou shalt not be negligent of truth; thou shalt not be negligent of thy duty; thou shalt not be negligent of welfare; thou shalt not be negligent towards thy increase and thy thriving; thou shalt not be negligent of the study & teaching of Veda.

Thou shalt not be negligent of thy works unto the Gods or thy works unto the Fathers. Let thy father be unto thee as thy God and thy mother as thy Goddess whom thou adorest. Serve the Master as a God and as a God the stranger within thy dwelling. The works that are without blame before the people, thou shalt do these with diligence and no others. The deeds we have done that are good and righteous, thou shalt practise these as a religion and no others.

Whosoever are better and nobler than we among the Brahmins, thou shalt refresh with a seat to honour them. Thou shalt give with faith and reverence; without faith thou shalt not give. Thou shalt give with shame, thou shalt give with fear; thou shalt give with fellow-feeling. Moreover if thou doubt of thy course or of thy action, then whatsoever Brahmins be there who are careful thinkers, devout, not moved by others, lovers of virtue, not severe or cruel, even as they do in that thing, so do thou. Then as to men accused & arraigned by their fellows, whatsoever Brahmins be there who are careful thinkers, devout, not moved by others, lovers of virtue, not severe or cruel, even as they are towards these, so be thou.

This is the law & the teaching. These are the Commandments. In such wise shalt thou practise religion, yea, verily in such wise do ever religiously.

मेव शिरः । अयं दक्षिणः पक्षः । अयमुत्तरः पक्षः । अयमात्मा । इदं
पुच्छं प्रतिष्ठा । तदप्येष श्लोको भवति ॥

OM. The knower of Brahman attaineth the Highest; for this is the verse that was declared of old, “Brahman is Truth, Brahman is Knowledge, Brahman is the Infinite, he that findeth Him hidden in the cavern heart of being; in the highest heaven of His creatures, lo he enjoyeth all desire and he abideth with the Eternal, even with that cognisant and understanding Spirit.”

This is the Self, the Spirit, and from the Spirit ether was born; and from the ether, air; and from the air, fire; and from the fire, the waters; and from the waters, earth; and from the earth, herbs and plants; and from the herbs and plants, food; and from food man was born. Verily, man, this human being, is made of the essential substance of food. And this that we see is the head of him, and this is his right side and this is his left; and

this is his spirit & the self of him; and this is his lower member whereon he resteth abidingly. Whereof this is the Scripture.

Chapter II

अन्नादौ प्रजाः प्रजायन्ते । याः काञ्च पृथिवीं श्रिताः । अथो अन्नेनैव जीवन्ति । अथैनदपि यन्त्यन्ततः । अन्नं हि भूतानां ज्येष्ठम् । तस्मात् सर्वौषधमुच्यते । सर्वं वै तेऽन्नमाप्नुवन्ति । येऽन्नं ब्रह्मोपासते । अन्नं हि भूतानां ज्येष्ठम् । तस्मात्सर्वौषधमुच्यते । अन्नाद् भूतानि जायन्ते । जातान्यन्नेन वर्धन्ते । अद्यतेऽति च भूतानि । तस्मादन्नं तदुच्यत इति । तस्माद्वा एतस्मादन्नरसमयात् । अन्योऽन्तर आत्मा प्राणमयः । तेनैष पूर्णः । स वा एष पुरुषविध एव । तस्य पुरुषविधताम् । अन्वयं पुरुषविधः । तस्य प्राण एव शिरः । व्यानो दक्षिणः पक्षः । अपान उत्तरः पक्षः । आकाश आत्मा । पृथिवी पुच्छं प्रतिष्ठा । तदप्येष श्लोको भवति ॥

Verily all sorts and races of creatures that have their refuge upon earth, are begotten from food; thereafter they live also by food and 'tis to food again that they return at the end and last. For food is the eldest of created things and therefore they name it the Green Stuff of the Universe. Verily they who worship the Eternal as food, attain the mastery of food to the uttermost; for food is the eldest of created things and therefore they name it the Green Stuff of the Universe. From food all creatures are born and being born they increase by food. Lo it is eaten and it eateth; yea it devoureth the creatures that feed upon it, therefore it is called food from the eating.

Now there is a second and inner Self which is other than this that is of the substance of food; and it is made of the vital stuff called Prana. And the Self of Prana filleth the Self of food. Now the Self of Prana is made in the image of a man; according as is the human image of the other, so is it in the image of the man. The main Breath is the head of him, the breath pervasor is his right side and the lower breath is his left side; ether is his spirit which is the self of him, earth is his lower member whereon he resteth abidingly. Whereof this is the Scripture.

Chapter III

प्राणं देवा अनु प्राणन्ति । मनुष्याः पशवश्च ये । प्राणो हि भूतानामायुः ।
तस्मात्सर्वायुषमुच्यते । सर्वमेव त आयुर्यन्ति । ये प्राणं ब्रह्मोपासते ।
प्राणो हि भूतानामायुः । तस्मात्सर्वायुषमुच्यत इति । तस्यैष एव शारीर
आत्मा । यः पूर्वस्य ।

तस्माद्वा एतस्मात्प्राणमयात् । अन्योऽन्तर आत्मा मनोमयः ।
तेनैष पूर्णः । स वा एष पुरुषविध एव । तस्य पुरुषविधताम् । अन्वयं
पुरुषविधः । तस्य यजुरेव शिरः । ऋगदक्षिणः पक्षः । सामोत्तरः पक्षः ।
आदेश आत्मा । अथर्वाङ्गिरसः पुच्छं प्रतिष्ठा । तदप्येष श्लोको भवति ॥

The Gods live and breathe under the dominion of Prana and men and all these that are beasts; for Prana is the life of created things & therefore they name it the Life-Stuff of the All. Verily they who worship the Eternal as Prana attain mastery of Life to the uttermost; for Prana is the life of created things and therefore they name it the Life-Stuff of the All. And this Self of Prana is the soul in the body of the former one which was of food.

Now there is yet a second and inner Self which is other than this that is of Prana, and it is made of Mind. And the Self of Mind filleth the Self of Prana. Now the Self of Mind is made in the image of a man; according as is the human image of the other, so is it in the image of the man. Yajur is the head of him and the Rigveda is his right side and the Samaveda is his left side: the Commandment is his spirit which is the self of him, Atharvan Ungirus is his lower member whereon he resteth abidingly. Whereof this is the Scripture.

Chapter IV

यतो वाचो निवर्तन्ते । अप्राप्य मनसा सह । आनन्दं ब्रह्मणो विद्वान् ।
न विभेति कदाचनेति । तस्यैष एव शारीर आत्मा । यः पूर्वस्य ।

तस्माद्वा एतस्मान्मनोमयात् । अन्योऽन्तर आत्मा विज्ञानमयः ।
तेनैष पूर्णः । स वा एष पुरुषविध एव । तस्य पुरुषविधताम् । अन्वयं
पुरुषविधः । तस्य श्रद्धैव शिरः । ऋतं दक्षिणः पक्षः । सत्यमुत्तरः पक्षः ।
योग आत्मा । महः पुच्छं प्रतिष्ठा । तदप्येष श्लोको भवति ॥

The delight of the Eternal from which words turn away without attaining and the mind also returneth baffled, who knoweth the delight of the Eternal? He shall fear nought now or hereafter. And this Self of Mind is the soul in the body to the former one which was of Prana.

Now there is yet a second and inner Self which is other than this which is of Mind and it is made of Knowledge. And the Self of Knowledge filleth the Self of Mind. Now the Knowledge-Self is made in the image of a man; according as is the human image of the other, so is it in the image of the man. Faith is the head of him, Law is his right side, Truth is his left side; Yoga is his spirit which is the self of him; Mahas (the material world) is his lower member whereon he resteth abidingly. Whereof this is the Scripture.

Chapter V

विज्ञानं यज्ञं तनुते । कर्माणि तनुतेऽपि च । विज्ञानं देवाः सर्वे । ब्रह्म ज्येष्ठमुपासते । विज्ञानं ब्रह्म चेद्वेद । तस्माच्चेन्न प्रमाद्यति । शरीरे पाप्मनो हित्वा । सर्वान्कामान् समश्वत इति । तस्यैष एव शारीर आत्मा । यः पूर्वस्य ।

तस्माद्वा एतस्माद्विज्ञानमयात् । अन्योऽन्तर आत्मानन्दमयः । तेनैष पूर्णः । स वा एष पुरुषविध एव । तस्य पुरुषविधताम् । अन्वयं पुरुषविधः । तस्य प्रियमेव शिरः । मोदो दक्षिणः पक्षः । प्रमोद उत्तरः पक्षः । आनन्द आत्मा । ब्रह्म पुच्छं प्रतिष्ठा । तदप्येष श्लोको भवति ॥

Knowledge spreadeth the feast of sacrifice and knowledge spreadeth also the feast of works; all the gods offer adoration to him as to Brahman and the Elder of the Universe. For if one worship Brahman as the knowledge and if one swerve not from it neither falter, then he casteth sin from him in this body and tasteth all desire. And this Self of Knowledge is the soul in the body to the former one which was of Mind.

Now there is yet a second and inner self which is other than this which is of Knowledge and it is fashioned out of Bliss. And the Self of Bliss filleth the Self of Knowledge. Now the Bliss

Self is made in the image of a man; according as is the human image of the other, so is it made in the image of the man. Love is the head of Him; Joy is His right side; pleasure is His left side; Bliss is His spirit which is the self of Him; the Eternal is His lower member wherein He resteth abidingly. Whereof this is the Scripture.

Chapter VI

असन्नेव स भवति । असद् ब्रह्मेति वेद चेत् । अस्ति ब्रह्मेति चेद्वेद् ।
सन्तमेनं ततो विदुरिति । तस्यैष एव शारीर आत्मा । यः पूर्वस्य ।
अथातोऽनुप्रश्नाः । उताविद्वानमुं लोकं प्रेत्य । कश्चन गच्छतीऽ । आहो
विद्वानमुं लोकं प्रेत्य । कश्चित्समश्वताऽ उ ।

सोऽकामयत । बहु स्यां प्रजायेयेति । स तपोऽतप्यत । स
तपस्तस्वा । इदं सर्वमसृजत । यदिदं किंच । तत्सृष्टा । तदेवानुप्राविशत् ।
तदनुप्रविश्य । सच्च त्यच्चाभवत । निरुक्तं चानिरुक्तं च । निलयं
चानिलयं च । विज्ञानं चाविज्ञानं च । सत्यं चानृतं च सत्यमभवत् ।
यदिदं किंच । तत्सत्यमित्याचक्षते । तदप्येष श्लोको भवति ॥

One becometh as the unexisting, if he know the Eternal as negation; but if one knoweth of the Eternal that He is, then men know him for the saint & the one reality. And this Self of Bliss is the soul in the body to the former one which was of Knowledge. And thereupon there arise these questions. "When one who hath not the Knowledge, passeth over to that other world, doth any such travel farther? Or when one who knoweth, hath passed over to the other world, doth any such enjoy possession?"

The Spirit desired of old "I would be manifold for the birth of peoples." Therefore He concentrated all Himself in thought, and by the force of His brooding He created all this universe, yea all whatsoever existeth. Now when He had brought it forth, He entered into that He had created, He entering in became the Is here and the May Be there; He became that which is defined and that which hath no feature; He became this housed thing and that houseless; He became Knowledge and He became Ignorance; He became Truth and He became falsehood. Yea He

became all truth, even whatsoever here existeth. Therefore they say of Him that He is Truth. Whereof this is the Scripture.

Chapter VII

असद्वा इदमग्र आसीत् । ततो वै सदजायत । तदात्मानं स्वयम-
कुरुत । तस्मात् तत्सुकृतमुच्यते इति । यद्वै तत्सुकृतम् । रसो वै
सः । रसं ह्येवायं लब्ध्यानन्दी भवति । को ह्येवान्यात्कः प्राण्यात् ।
यदेष आकाश आनन्दो न स्यात् । एष ह्येवानन्दयाति । यदा ह्यैवैष
एतस्मिन्नदृश्येऽनात्म्येऽनिरुक्तेऽनिलयनेऽभयं प्रतिष्ठां विन्दते । अथ
सोऽभयं गतो भवति । यदा ह्यैवैष एतस्मिन्नदरमन्तरं कुरुते । अथ
तस्य भयं भवति । तत् त्वेव भयं विदुषोऽमन्वानस्य । तदप्येष श्लोको
भवति ॥

In the beginning all this Universe was Non-Existent and Unmanifest, from which this manifest Existence was born. Itself created itself; none other created it. Therefore they say of it the well and beautifully made. Lo this that is well and beautifully made, verily it is no other than the delight behind existence. When he hath gotten him this delight, then it is that this creature becometh a thing of bliss; for who could labour to draw in the breath or who could have strength to breathe it out, if there were not that Bliss in the heaven of his heart, the ether within his being? It is He that is the fountain of bliss; for when the Spirit that is within us findeth his refuge and firm foundation in the Invisible Bodiless Undefinable and Unhoused Eternal, then he hath passed beyond the reach of Fear. But when the Spirit that is within us maketh for himself even a little difference in the Eternal, then he hath fear, yea the Eternal himself becometh a terror to such a knower who thinketh not. Whereof this is the Scripture.

Chapter VIII

भीषास्माद् वातः पवते । भीषोदेति सूर्यः । भीषास्मादग्निश्चेन्द्रश्च ।

स यश्चायं पुरुषे । यश्चासावादित्ये । स एकः । स य एवंवित् । अस्मात्प्रोकात् प्रेत्य । एतमन्नमयमात्मानमुपसंक्रामति । एतं प्राणमयमात्मानमुपसंक्रामति । एतं मनोमयमात्मानमुपसंक्रामति । एतं विज्ञानमयमात्मानमुपसंक्रामति । एतमानन्दमयमात्मानमुपसंक्रामति । तदप्येष श्लोको भवति ॥

Through the fear of Him the Wind bloweth; through the fear of Him the Sun riseth; through the fear of Him Indra and Agni and Death hasten in their courses. Behold this exposition of the Bliss to which ye shall hearken. Let there be a young man, excellent & lovely in his youth, a great student; let him have fair manners and a most firm heart and great strength of body, and let all this wide earth be full of wealth for his enjoying. That is the measure of bliss of one human being. Now a hundred and a hundredfold of the human measure of bliss, is one bliss of men that have become angels in heaven. And this is the bliss of the Vedawise whose soul the blight of desire not toucheth. A hundred and a hundredfold of this measure of angelic bliss is one bliss of Gods that are angels in heaven. And this is the bliss of the Vedawise whose soul the blight of desire not toucheth. A hundred and a hundredfold of this measure of divine angelic bliss is one bliss of the Fathers whose world of heaven is their world for ever. And

this is the bliss of the Vedawise whose soul the blight of desire not toucheth. A hundred and a hundredfold of this measure of bliss of the Fathers whose worlds are for ever, is one bliss of the Gods who are born as Gods in heaven. And this is the bliss of the Vedawise whose soul the blight of desire not toucheth. A hundred and a hundredfold of this measure of bliss of the firstborn in heaven, is one bliss of the Gods of work who are Gods, for by the strength of their deeds they depart and are Gods in heaven. And this is the bliss of the Vedawise whose soul the blight of desire not toucheth. A hundred and a hundredfold of this measure of bliss of the Gods of work, is one bliss of the great Gods who are Gods for ever. And this is the bliss of the Vedawise whose soul the blight of desire not toucheth. A hundred and a hundredfold of this measure of divine bliss, is one bliss of Indra, the King in Heaven. And this is the bliss of the Vedawise whose soul the blight of desire not toucheth. A hundred and a hundredfold of this measure of Indra's bliss is one bliss of Brihaspati, who taught the Gods in heaven. And this is the bliss of the Vedawise whose soul the blight of desire not toucheth. A hundred and a hundredfold of this measure of Brihaspati's bliss, is one bliss of Prajapati, the Almighty Father. And this is the bliss of the Vedawise whose soul the blight of desire not toucheth. A hundred and a hundredfold of this measure of Prajapati's bliss, is one bliss of the Eternal Spirit. And this is the bliss of the Vedawise whose soul the blight of desire not toucheth.

The Spirit who is here in a man and the Spirit who is there in the Sun, it is one Spirit and there is no other. He who knoweth this, when he hath gone away from this world, passeth to this Self which is of food; he passeth to this Self which is of Prana; he passeth to this Self which is of Mind; he passeth to this Self which is of Knowledge; he passeth to this Self which is of Bliss. Whereof this is the Scripture.

Chapter IX

यतो वाचो निर्वर्तन्ते । अप्राप्य मनसा सह । आनन्दं ब्रह्मणो विद्वान् ।
न विभेति कुतश्चनेति । एतं ह वाव न तपति । किमहं साधु नाकरवम् ।

ॐ ॥

The Bliss of the Eternal from which words turn back without attaining and mind also returneth baffled, who knoweth the Bliss of the Eternal? He feareth not for aught in this world or elsewhere. Verily to him cometh not remorse and her torment saying “Why have I left undone the good & why have I done that which was evil?” For he who knoweth the Eternal, knoweth these that they are alike his Spirit; yea, he knoweth both evil and good for what they are and delivereth Spirit, who knoweth the Eternal. And this is Upanishad, the secret of the Veda.

Together may He protect us, together may He possess us, together may we make unto us strength & virility. May our reading be full of light and power. May we never hate. OM Peace! Peace! Peace! Hari OM!

Chapter I

भृगुर्वै वारुणिः । वरुणं पितरमुपससार । अधीहि भगवो ब्रह्मेति । तस्मा
एतत् प्रोवाच । अन्नं प्राणं चक्षुः श्रोत्रं मनो वाचमिति । तं होवाच ।
यतो वा इमानि भूतानि जायन्ते । येन जातानि जीवन्ति । यत्
प्रयन्त्यभिसंविशन्ति । तद् विजिज्ञासस्व । तद् ब्रह्मेति । स तपोऽतप्यत ।
स तपस्तस्वा ॥

Bhrigu, Varouna's son, came unto his father Varouna and said "Lord, teach me the Eternal." And his father declared it unto him thus "Food and Prana and Eye and Ear and Mind—even these." Verily he said unto him "Seek thou to know that from which these creatures are born, whereby being born they live and to which they go hence and enter again; for that is the Eternal." And Bhrigu concentrated himself in thought and by the askesis of his brooding

Chapter II

अन्नं ब्रह्मेति व्यजानात् । अन्नाद्वेव खल्विमानि भूतानि जायन्ते । अन्नेन
जातानि जीवन्ति । अन्नं प्रयन्त्यभिसंविशन्तीति । तद्विज्ञाय । पुनरेव
वरुणं पितरमुपससार । अधीहि भगवो ब्रह्मेति । तं होवाच । तपसा ब्रह्म
विजिज्ञासस्व । तपो ब्रह्मेति । स तपोऽतप्यत । स तपस्तस्वा ॥

He knew food for the Eternal. For from food alone, it appeareth, are these creatures born and being born they live by food, and into food they depart and enter again. And when he had known this, he came again to Varouna his father and said "Lord, teach me the Eternal." And his father said to him "By askesis do thou seek to know the Eternal, for concentration in thought is the Eternal." He concentrated himself in thought and by the energy of his brooding

Chapter III

प्राणो ब्रह्मेति व्यजानात् । प्राणाद्वेव खल्विमानि भूतानि जायन्ते ।
 प्राणेन जातानि जीवन्ति । प्राणं प्रयन्त्यभिसंविशन्तीति । तद्विज्ञाय ।
 पुनरेव वरुणं पितरमुपससार । अधीहि भगवो ब्रह्मेति । तं होवाच ।
 तपसा ब्रह्म विजिज्ञासस्व । तपो ब्रह्मेति । स तपोऽतप्यत । स तप-
 स्तस्वा ॥

He knew Prana for the Eternal. For from Prana alone, it appeareth, are these creatures born and being born they live by Prana and to Prana they go hence and return. And when he had known this, he came again to Varouna his father and said "Lord, teach me the Eternal." But his father said to him "By askesis do thou seek to know the Eternal, for askesis in thought is the Eternal." He concentrated himself in thought and by the energy of his brooding

Chapter IV

मनो ब्रह्मेति व्यजानात् । मनसो ह्येव खल्विमानि भूतानि जायन्ते ।
 मनसा जातानि जीवन्ति । मनः प्रयन्त्यभिसंविशन्तीति । तद्विज्ञाय ।
 पुनरेव वरुणं पितरमुपससार । अधीहि भगवो ब्रह्मेति । तं होवाच ।
 तपसा ब्रह्म विजिज्ञासस्व । तपो ब्रह्मेति । स तपोऽतप्यत । स तप-
 स्तस्वा ॥

He knew mind for the Eternal. For from mind alone, it appeareth, are these creatures born and being born they live by

mind, and to mind they go hence and return. And when he had known this, he came again to Varouna his father and said “Lord, teach me the Eternal.” But his father said to him “By askesis do thou seek to know the Eternal, for concentration of force is the Eternal.” He concentrated himself in thought and by the energy of his brooding

Chapter V

विज्ञानं ब्रह्मेति व्यजानात् । विज्ञानाद्येव खल्विमानि भूतानि जायन्ते ।
विज्ञानेन जातानि जीवन्ति । विज्ञानं प्रयन्त्यभिसंविशन्तीति । तद्विद्वा-
ज्ञाय । पुनरेव वरुणं पितरमुपससार । अधीहि भगवो ब्रह्मेति । तं
होवाच । तपसा ब्रह्म विजिज्ञासस्व । तपो ब्रह्मेति । स तपोऽतप्यत । स
तपस्तस्वा ॥

He knew Knowledge for the Eternal. For from Knowledge alone, it appeareth, are these creatures born and being born they live by Knowledge and to Knowledge they go hence and return. And when he had known this, he came again to Varouna his father and said “Lord, teach me the Eternal.” But his father said to him “By askesis do thou seek to know the Eternal, for concentration of force is the Eternal.” He concentrated himself in thought and by the energy of his brooding

Chapter VI

आनन्दो ब्रह्मेति व्यजानात् । आनन्दाद्येव खल्विमानि भूतानि जायन्ते ।
आनन्देन जातानि जीवन्ति । आनन्दं प्रयन्त्यभिसंविशन्तीति । सैषा
भागवी वारुणी विद्या । परमे व्योमन्तरितिष्ठिता । स य एवं वेद प्रति-
तिष्ठिति । अन्नवानन्नादो भवति । महान्भवति प्रजया पशुभिर्ब्रह्मावर्चसेन ।
महान्कीर्त्या ॥

He knew Bliss for the Eternal. For from Bliss alone, it appeareth, are these creatures born and being born they live by Bliss and to Bliss they go hence and return. This is the lore of Bhrigu, the lore of Varouna, which hath its firm base in the highest heaven.

Who knoweth, getteth his firm base, he becometh the master of food and its eater, great in progeny, great in cattle, great in the splendour of holiness, great in glory.

Chapter VII

अन्नं न निन्द्यात् । तद् व्रतम् । प्राणो वा अन्नम् । शरीरमन्नादम् । प्राणे
शरीरं प्रतिष्ठितम् । शरीरे प्राणः प्रतिष्ठितः । तदेतदन्नमन्ने प्रतिष्ठितम् ।
स य एतदन्नमन्ने प्रतिष्ठितं वेद प्रतितिष्ठति । अन्नवानन्नादो भवति ।
महान्नवति प्रजया पशुभिर्ब्रह्मवर्चसेन । महान्कीर्त्या ॥

Thou shalt not blame food; for that is thy commandment unto labour. Verily Prana also is food, and the body is the eater. The body is established upon Prana and Prana is established upon the body. Therefore food here is established upon food. He who knoweth this food that is established upon food, getteth his firm base, he becometh the master of food and its eater, great in progeny, great in cattle, great in the radiance of holiness, great in glory.

Chapter VIII

अन्नं न परिचक्षीत । तद् व्रतम् । आपो वा अन्नम् । ज्योतिरन्नादम् ।
अप्सु ज्योतिः प्रतिष्ठितम् । ज्योतिष्यापः प्रतिष्ठिताः । तदेतदन्नमन्ने
प्रतिष्ठितम् । स य एतदन्नमन्ने प्रतिष्ठितं वेद प्रतितिष्ठति । अन्नवानन्नादो
भवति । महान्नवति प्रजया पशुभिर्ब्रह्मवर्चसेन । महान्कीर्त्या ॥

Thou shalt not reject food; for that too is the vow of thy labour. Verily the waters also are food, and the bright fire is the eater. The fire is established upon the waters and the waters are established upon the fires. Here too is food established upon food. He who knoweth this food that is established upon food, getteth his firm base, he becometh the master of food and its eater, great in progeny, great in cattle, great in the radiance of holiness, great in glory.

Chapter IX

अन्नं बहु कुर्वीत । तद् ब्रतम् । पृथिवी वा अन्नम् । आकाशोऽन्नादः ।
पृथिव्यामाकाशः प्रतिष्ठितः । आकाशे पृथिवी प्रतिष्ठिता । तदेतदन्नमन्ने
प्रतिष्ठितम् । स य एतदन्नमन्ने प्रतिष्ठितं वेद प्रतितिष्ठिति । अन्नवानन्नादो
भवति । महान्नवति प्रजया पशुभिर्ब्रह्मवर्चसेन । महान्कीर्त्या ॥

Thou shalt increase and amass food; for that too is thy commandment unto labour. Verily, earth also is food and ether is the eater. Ether is established upon earth and earth is established upon ether. Here too is food established upon food. He who knoweth this food that is established upon food, getteth his firm base. He becometh the master of food and its eater, great in progeny, great in cattle, great in the radiance of holiness, great in glory.

Thou shalt not reject any man in thy habitation, for that too is thy commandment unto labour. Therefore in whatsoever sort do thou get thee great store of food. They say unto the stranger in their dwelling “Arise, the food is ready.” Was the food made ready at the beginning? To him also is food made ready in the beginning. Was the food made ready in the middle? To him also is food made ready in the middle. Was the food made ready at the end & last? To him also is the food made ready at the end and last, who hath this knowledge. As prosperity in speech, as getting & having in the main breath and the nether, as work in the hands, as movement in the feet, as discharge in the anus, these are the cognitions in the human. Then in the divine; as satisfaction in the rain, as force in the lightning, as splendour in the beasts, as brightness in the constellations, as procreation and bliss and death conquered in the organ of pleasure, as the All in Ether. Pursue thou Him as the firm foundation of things & thou shalt get thee firm foundation. Pursue Him as Mahas, thou shalt become Mighty; pursue Him as Mind, thou shalt become full of mind; pursue Him as adoration, thy desires shall bow down before thee; pursue Him as the Eternal, thou shalt become full of the Spirit; pursue Him as the destruction of the Eternal that rangeth abroad, thou shalt see thy rivals and thy haters perish thick around thee and thy kin who loved thee not. The Spirit who is here in man & the Spirit who is there in the Sun, lo, it is One Spirit and there is no other. He who hath this knowledge, when he goeth from this world having passed to the Self which is of food; having passed to the Self which is of Prana; having passed to the Self which is of Mind; having passed to the Self which is of Knowledge; having passed to the Self which is of

Bliss, lo he rangeth about the worlds & eateth what he will and taketh what shape he will and ever he singeth the mighty Sama. “Ho! ho! ho! I am food! I am food! I am food! I am the eater of food! I am the eater! I am the eater! I am he who maketh Scripture! I am he who maketh! I am he who maketh! I am the firstborn of the Law; before the gods were, I am, yea at the very heart of immortality. He who giveth me, verily he preserveth me; for I being food, eat him that eateth. I have conquered the whole world and possessed it, my light is as the sun in its glory.” Thus he singeth, who hath the knowledge. This verily is Upanishad, the secret of the Veda.

Together may He protect us, together may He possess us, together may we make unto us strength and virility! May our study be full of light and power! May we never hate! OM Peace! Peace! Peace! Hari OM!

Svetasvatara Upanishad

Chapter IV

य एकोऽवर्णो बहुधा शक्तियोगाद् वर्णाननेकान्निहितार्थो दधाति ।
वि चैति चान्ते विश्वमादौ स देवः स नो बुद्धा शुभया संयुनक्तु ॥१॥

1. He who is one and without hue, but has ordained manifoldly many hues by the Yoga of his Force and holds within himself all objects, and in Him the universe dissolves in the end, that Godhead was in the beginning. May He yoke us with a good and bright understanding.

तदेवाग्निस्तदादित्यस्तद्वायुस्तदु चन्द्रमाः ।
तदेव शुक्रं तद् ब्रह्म तदापस्तत्प्रजापतिः ॥२॥

2. That alone is the fire and That the sun and That the wind and That too the moon; That is the Luminous, That the Brahman, That the waters, That the Father and Lord of creatures.

त्वं स्त्री त्वं पुमानसि त्वं कुमार उत वा कुमारी ।
त्वं जीर्णो दण्डेन वञ्चसि त्वं जातो भवसि विश्वतोमुखः ॥३॥

3. Thou art the woman and Thou the man; Thou art a boy and again a young virgin; Thou art yonder worn and aged man that walkest bent with thy staff. Lo, Thou becomest born and the world is full of thy faces.

नीलः पतञ्जो हरितो लोहिताक्षस्तडिङ्गर्भं ऋतवः समुद्राः ।
अनादिमत् त्वं विभुत्वेन वर्तसे यतो जातानि भुवनानि विश्वा ॥४॥

4. Thou art the blue bird and the green and the scarlet-eyed, the womb of lightning and the seasons and the oceans. Thou

art that which is without beginning and thou movest with thy pervasive extension whence all the worlds are born.

अजामेकां लोहितशुक्रकृष्णां बह्वीः प्रजाः सृजमानां सरूपाः ।
अजो ह्येको जुषमाणोऽनुशेते जहात्येनां भुक्तभोगामजोऽन्यः ॥ ५ ॥

5. There is One, unborn, white and black and red, who is ever bringing forth many creatures with forms and her one unborn loves and cleaves to and lies with her; another unborn abandons, when all her enjoyments have been enjoyed.

द्वा सुपर्णा सयुजा सखाया समानं वृक्षं परिषस्वजाते ।
तयोरन्यः पिप्पलं स्वाद्वत्यनश्चन्नन्यो अभिचाकशीति ॥ ६ ॥

6. Two winged birds cling about a common tree, comrades, yoke-fellows; and one eats the sweet fruit of the tree, the other eats not, but watches.

समाने वृक्षे पुरुषो निमग्नोऽनीशया शोचति मुद्यमानः ।
जुष्टं यदा पश्यत्यन्यमीशमस्य महिमानमिति वीतशोकः ॥ ७ ॥

7. The Soul upon a common tree is absorbed and because he is not lord, grieves and is bewildered; but when he sees and cleaves to that other who is the Lord, he knows that all is His greatness and his sorrow passes away from him.

ऋचो अक्षरे परमे व्योमन् यस्मिन्देवा अधि विश्वे निषेदुः ।
यस्तं न वेद किमृचा करिष्यति य इत् तद्विद्वस्त इमे समासते ॥ ८ ॥

8. In the highest immutable Heaven where all the gods have taken up their session, there are the verses of the Rigveda, and he who knows Him not, what shall he do with the Rik? They who know That, lo, it is they who thus are seated.

छन्दांसि यज्ञाः क्रतवो व्रतानि भूतं भव्यं यच्च वेदा वदन्ति ।
अस्मान्मायी सृजते विश्वमेतत् तस्मिंश्चान्यो मायया संनिरुद्धः ॥ ९ ॥

9. Rhythms and sacrifices and ritual and vows, what has been and what is to be and what the Vedas declare, — the Master

of Maya brings forth from that all this that is and there is another whom within it his Maya holds imprisoned.

मायां तु प्रकृतिं विद्यान्मायिनं तु महेश्वरम् ।
तस्यावयवभूतैस्तु व्यासं सर्वमिदं जगत् ॥ १० ॥

10. Thou shalt know Maya to be Force of Nature and the Master of Maya to be the great Lord; this whole universe is occupied by His becomings that are His members.

यो योनिं योनिमधितिष्ठत्येको यस्मिन्निदं सं च वि चैति सर्वम् ।
तमीशानं वरदं देवमीड्यं निचाय्येमां शान्तिमत्यन्तमेति ॥ ११ ॥

11. He who being One enters every womb and in whom all this comes together and goes apart, the adorable Godhead who rules as lord and gives us our desirable boons, one having seen comes exceedingly unto this peace.

यो देवानां प्रभवश्चोद्भवश्च विश्वाधिपो रुद्रो महर्षिः ।
हिरण्यगर्भं पश्यत जायमानं स नो बुद्धा शुभया संयुनक्तु ॥ १२ ॥

12. He who is the coming to birth of the gods and the arising of their being, the master of the universe, the Violent One, the Great Seer and beheld Hiranyagarbha born,—may he yoke us with a bright and good understanding.

यो देवानामधिपो यस्मिन्नोका अधिश्रिताः ।
य ईशो अस्य द्विपदश्चतुष्पदः कस्मै देवाय हविषा विधेम ॥ १३ ॥

13. He who is the master of the gods, in whom the worlds are lodged and who rules over this two-footed and four-footed, to what god should we offer the worship of our oblation?

सूक्ष्मातिसूक्ष्मं कलिलस्य मध्ये विश्वस्य स्रष्टारमनेकरूपम् ।
विश्वस्यैकं परिवेष्टितारं ज्ञात्वा शिवं शान्तिमत्यन्तमेति ॥ १४ ॥

14. Subtle beyond the subtle in the midst of the hurtling chaos, the creator of the universe who has many forms and being

one encompasses all, knowing as the Benign, one comes exceedingly to the peace.

स एव काले भुवनस्य गोप्ता विश्वाधिपः सर्वभूतेषु गूढः ।
यस्मिन् युक्ता ब्रह्मर्षयो देवताश्च तमेवं ज्ञात्वा मृत्युपाशां-
शिष्ठनन्ति ॥ १५ ॥

15. He in Time is the guardian of the world of existence and the master of the universe secret in all existences,— in whom have union of Yoga the holy sages and the gods; thus knowing him one cuts asunder the snares of Death.

घृतात्परं मण्डमिवातिसूक्ष्मं ज्ञात्वा शिवं सर्वभूतेषु गूढम् ।
विश्वस्यैकं परिवेष्टितारं ज्ञात्वा देवं मुच्यते सर्वपाशैः ॥ १६ ॥

16. Knowing him who is exceedingly subtle like the cream above the clarified butter, the Benign secret in all existences, knowing the God who being one encompasses all, one is released from every bondage.

एष देवो विश्वकर्मा महात्मा सदा जनानां हृदये संनिविष्टः ।
हृदा मनीषा मनसाभिकूतो य एतद् विद्वरमृतास्ते भवन्ति ॥ १७ ॥

17. This is the God, the mighty Soul, the Architect of all, seated for ever in the hearts of creatures and he is realised by the heart and the intellect and the mind; who know this, they become immortal.

यदाऽत्मस्तन्न दिवा न रात्रिं सन्न चासज्जिव एव केवलः ।
तदक्षरं तत्सवितुर्वरेण्यं प्रज्ञा च तस्मात्प्रसृता पुराणी ॥ १८ ॥

18. When there is no darkness, that is neither day nor night, nor being nor non-being, it is the absolute Benign alone; That is the immutable, that the supreme light of the Creating Sun and from it the Wisdom went forth that is of old.

नैनमूर्ध्वं न तिर्यञ्चं न मध्ये परिजग्रभत् ।
न तस्य प्रतिमा अस्ति यस्य नाम महद्यशः ॥ १९ ॥

19. Him one shall not seize as on high nor as one on a level plane nor in the middle; there is no image for him whose name is a mighty glory.

न संदूशे तिष्ठति रूपमस्य न चक्षुषा पश्यति कश्चनैनम् ।
हृदा हृदिस्थं मनसा य एनमेवं विद्वरमृतास्ते भवन्ति ॥ २० ॥

20. The form of Him stands not within the vision and none beholdeth Him by the eye; but by the heart and the mind, for in the heart is His station; who thus know Him, they become immortal.

अजात इत्येवं कश्चिद् भीरुः प्रपद्यते ।
रुद्र यत्ते दक्षिणं मुखं तेन मां पाहि नित्यम् ॥ २१ ॥

21. One here and there approaches him with awe thinking of him as the Unborn. O Violent One, that which is thy auspicious right-hand face, with that protect me ever.

मा नस्तोके तनये मा न आयुषि मा नो गोषु मा नो अश्वेषु रीरिषः ।
वीरान् मा नो रुद्र भामितो वधीर्हविष्मन्तः सदमित् त्वा हवामहे ॥ २२ ॥

22. Do no hurt to our son nor our grandson nor our life nor our cattle nor our horses. O Violent One, slay not in thy anger our heroes; ever to Thee with the oblation we call.

Chapter V

द्वे अक्षरे ब्रह्मपरे त्वनन्ते विद्याविद्ये निहिते यत्र गृहे ।
क्षरं त्वविद्या ह्यमृतं तु विद्या विद्याविद्ये ईशते यस्तु सोऽन्यः ॥ १ ॥

- Both of these in the Transcendent, the Knowledge & the Ignorance, yea both have their hidden being in the Eternal & Infinite Who dwelleth beyond Brahman of the Veda, & are set in it for ever. But of these Ignorance dieth and Knowledge liveth for ever; and He who is master of both is other than they.

यो योनिं योनिमधितिष्ठत्येको विश्वानि रूपाणि योनीश्च सर्वाः ।
ऋषिं प्रसूतं कपिलं यस्तमग्रे ज्ञानैर्बिर्भर्ति जायमानं च पश्येत् ॥ २ ॥

- He being One entereth upon womb & womb, yea upon all forms of being and upon all wombs of creatures. This was He that of old filled with many sorts of Knowledge Kapila, the seer, after his mother bore him; yea He saw Kapila shaping.

एकैकं जालं बहुधा विकुर्वन्नस्मिन्देवे संहरत्येष देवः ।
भूयः सृष्टा यतयस्तथेशः सर्वाधिपत्यं कुरुते महात्मा ॥ ३ ॥

- God weaveth Him one net or He weaveth Him another and He maketh it of manifold meshes & casteth it abroad in this field of the body; then He draweth it in again. Also He created Yatis, great Seekers, & thus the Mighty Mind wieldeth the sceptre of His universal Lordship.

सर्वा दिश ऊर्ध्वमधश्च तिर्यक् प्रकाशयन्नाजते यद्वन्निवान् ।
एवं स देवो भगवान्वरेण्यो योनिस्वभावानधितिष्ठत्येकः ॥ ४ ॥

- The Sun riseth & driveth the world's wain, then he blazeth illumining all the regions and above and below and the level grow one lustre, even so this glorious & shining God, being One, entereth upon & ruleth nature that clingeth to the womb, to each womb its nature.

यच्च स्वभावं पचति विश्वयोनिः पात्यांश्च सर्वान् परिणामयेद्यः ।
सर्वमेतद् विश्वमधितिष्ठत्येको गुणांश्च सर्वान् विनियोजयेद्यः ॥ ५ ॥

5. For He who is the Womb of the World bringeth each nature to its perfection and He matureth all those that are yet to be perfected. He indwelleth & presideth over all this His world and setteth all the modes of Nature to their workings.

तद् वेदगुह्योपनिषत्सु गृहं तद् ब्रह्मा वेदते ब्रह्मयोनिम् ।
ये पूर्वदेवा ऋषयश्च तद्विद्वस्ते तन्मया अमृता वै बभूवुः ॥ ६ ॥

6. This is that secret mystery which is hidden in Upanishads; for the Upanishad is the secret of the Veda. This is that which Brahma knoweth for the Womb of the Eternal and the older Gods and the sages who knew of This, became This & were immortal.

गुणान्वयो यः फलकर्मकर्ता कृतस्य तस्यैव स चोपभोक्ता ।
स विश्वरूपस्त्रिगुणस्त्रिवर्त्मा प्राणाधिपः संचरति स्वकर्मभिः ॥ ७ ॥

7. There is One who maketh works and their fruits to them, for the moods of Nature cleave to Him; this is He that enjoyeth the works He hath done; and the World is His body and He hath three modes of His natures & the roads of His travel are likewise three. Lo, the Master of Life, by the momentum of His own works He moveth in the centuries.

अङ्गुष्ठमात्रो रवितुल्यरूपः संकल्पाहंकारसमन्वितो यः ।
बुद्धेर्गुणेनात्मगुणेन चैव आराग्रमात्रो ह्यपरोऽपि दृष्टः ॥ ८ ॥

8. His size is as the size of a man's thumb but His aspect as the Sun in its glory; and He hath Volition and He hath Personality; but there is another whom we see by virtue of the Understanding & by virtue of the Spirit for the point of a cobbler's awl is not finer to vision.

वालाग्रशतभागस्य शतधा कल्पितस्य च ।
भागो जीवः स विज्ञेयः स चानन्त्याय कल्पते ॥ ९ ॥

9. Take thou the hundredth part of the point of a hair, divide it into a hundred parts again; then as is a part of this hundredth part of a hundredth, such shalt thou find this Spirit in man, if thou seek to separate Him; yet 'tis this in thee that availeth towards Infinity.

नैव स्त्री न पुमानेष न चैवायं नपुंसकः ।
यद्यच्छरीरमादत्ते तेन तेन स रक्ष्यते ॥ १० ॥

10. Not woman is He, nor man either, nor yet sexless; but whatsoever body He take, that confineth & preserveth Him.

संकल्पनस्पर्शनदृष्टिमोहैर्ग्रासाम्बुवृद्ध्या चात्मविवृद्धिजन्म ।
कर्मानुगान्यनुक्रमेण देही स्थानेषु रूपाण्यभिसंप्रपद्यते ॥ ११ ॥

11. As body is born and groweth by food and drink and plenty, so also the Spirit in body progressively attaineth to successive forms in their fit places — by the allurements of sight, by the witcheries of touch, by the magic of volition, for according to his works he progresseth and his forms shape themselves to his works.

स्थूलानि सूक्ष्माणि बहूनि चैव रूपाणि देही स्वगुणैर्वृणोति ।
क्रियागुणैरात्मगुणैश्च तेषां संयोगहेतुरपरोऽपि दृष्टः ॥ १२ ॥

12. Forms gross and forms subtle, forms many, — the Spirit in body evolveth them all by his own nature in its working; by the law of action of his works & the law of action of the Spirit in man, by these he evolveth them. But there is Another in Whom we behold Cause whereby all these meet together.

अनाद्यनन्तं कलिलस्य मध्ये विश्वस्य स्रष्टारमनेकरूपम् ।
विश्वस्यैकं परिवेष्टितारं ज्ञात्वा देवं मुच्यते सर्वपाशैः ॥ १३ ॥

13. Without beginning, without end in the welter and the chaos, who createth the world by taking many figures & as the One girdeth & encompasseth it. He is the Lord &

if thou know Him thou shalt break free from all kinds of bondage.

भावग्राह्यमनीडाख्यं भावाभावकरं शिवम् ।
कलासर्गकरं देवं ये विदुस्ते जहुस्तनुम् ॥ १४ ॥

14. Shiva the Master of all becomings and not-becomings and from Him this whole creation floweth and it is only one part of Shiva; but He is not named after any nest of the wingèd Spirit, and the heart alone can apprehend Him. They who know Shiva, the Blessed One, abandon body for ever.

Chapter VI

स्वभावमेके कवयो वदन्ति कालं तथान्ये परिमुह्यमानाः ।
देवस्यैष महिमा तु लोके येनेदं भ्रास्यते ब्रह्मचक्रम् ॥१॥

1. 'Tis Nature and Self-existence, say one school of the Seers. Nay, 'tis Time, say another; both are deceived and bewildered. 'Tis the Majesty of the Lord in the world of His creatures whereby the Wheel of the Eternal whirleth about continually.

येनावृतं नित्यमिदं हि सर्वं ज्ञः कालकारो गुणी सर्वविद्यः ।
तेनेशितं कर्म विवर्तते ह पृथ्व्याप्यतेजोऽनिलखानि चिन्त्यम् ॥२॥

2. He envelopeth this whole Universe with Himself for ever, He that knoweth, Maker of Time, & the Modes of Nature dwell in Him; yea, all things He discerneth and by His governance the Law of Works revolveth in its cycle. Earth, water, fire, air, ether, of these thou shalt consider (as the substance wherein it turneth).

तत्कर्म कृत्वा विनिवर्त्य भूयस्तत्त्वस्य तत्त्वेन समेत्य योगम् ।
एकेन द्वाभ्यां त्रिभिरष्टभिर्वा कालेन चैवात्मगुणैश्च सूक्ष्मैः ॥३॥

3. The Lord doeth works and resteth again from His works, one or two or three or eight He yoketh Himself with the Principle of things in their essence & with Time He yoketh Himself and with Self in its subtle workings.

आरभ्य कर्माणि गुणान्वितानि भावांश्च सर्वान् विनियोजयेद्यः ।
तेषामभावे कृतकर्मनाशः कर्मक्षये याति स तत्त्वतोऽन्यः ॥४॥

4. So He beginneth works, that are subject to the modes of Nature, and setteth all existences to their workings: & when these things are not, thereby cometh annihilation of work that hath been done; and with the perishing of work, He departeth out of them; for in His final truth He is other than they.

आदिः स संयोगनिमित्तहेतुः परस्त्रिकालादकलोऽपि दृष्टः।
तं विश्वरूपं भवभूतमीड्यं देवं स्वचित्तस्थमुपास्य पूर्वम् ॥५॥

5. Lo we have beheld Him & He is the Beginning and the Cause of all Causes whereby these elements meet together & form ariseth; the past, the present and the future are this side of Him and Time hath no part in Him. Let us worship the Ancient of Days in our own hearts who sitteth. Let us wait upon God who must be adored, for the world is His shape and the Universe is but His becoming.

स वृक्षकालाकृतिभिः परोऽन्यो यस्मात्प्रपञ्चः परिवर्ततेऽयम्।
धर्मावहं पापनुदं भगेशं ज्ञात्वात्मस्थममृतं विश्वधाम ॥६॥

6. Time & Form and the Tree of Things, none of these is He for He is more than they & it is from Him that this Cosmos beginneth. We will know this Master of grace & glory for He cometh to us carrying righteousness in His hand & He driveth Sin from its strong places. We will know Him for He is in our Self & immortal & the World's foundation.

तमीश्वराणां परमं महेश्वरं तं देवतानां परमं च दैवतम्।
पतिं पतीनां परमं परस्ताद् विदाम देवं भुवनेशमीड्यम् ॥७॥

7. We will know this Mightiest one who is far above all the mighty—this summit of the gods & their godhead, King of Kings and Lord of Lords, who towereth high above all summits & greatnesses. Let us learn of God for He is this World's Master & all shall adore Him.

न तस्य कार्यं करणं च विद्यते न तत्समश्वाभ्यधिकश्च दृश्यते।
परास्य शक्तिर्विविधैव श्रूयते स्वाभाविकी ज्ञानबलक्रिया च ॥८॥

8. God needeth not to do anything neither hath He any organ of doing; there is none greater than He nor do we see any that is His equal—for His power is far over all, only men hear of it under a thousand names & various fashions. Lo the strength of Him and the works of Him and

His Knowledge, they are self-efficient & their own cause & nature.

न तस्य कश्चित् पतिरस्ति लोके न चेशिता नैव च तस्य लिङ्गम् ।
स कारणं करणाधिपाधिपो न चास्य कश्चिज्जनिता न चाधिपः ॥ ९ ॥

9. He hath no master in all this world, there is none that shall rule over Him. Nor feature nor distinction hath He; for He is begetting cause and sovran over the lords of these natural organs, but Himself hath no begetter neither any sovran.

यस्तनुनाभ इव तनुभिः प्रधानजैः स्वभावतः ।
देव एकः स्वमावृणोत् स नो दधाद् ब्रह्माप्ययम् ॥ १० ॥

10. Even as is the spider that out of himself fashioneth his own web, so is God One & nought else existeth but by his own nature covereth Himself up in the threads He hath spun out of primal matter. May the One God ordain unto us departure into His Eternal.

एको देवः सर्वभूतेषु गृदः सर्वव्यापी सर्वभूतान्तरात्मा ।
कर्माध्यक्षः सर्वभूताधिवासः साक्षी चेता केवलो निर्गुणश्च ॥ ११ ॥

11. One God who alone is & He lurketh hidden in every creature for He pervadeth and is the inmost Self of all beings, He presideth over all work and is the home of all things living. He is the Mighty Witness who relateth thought with thought and again He is the Absolute in whom mood is not nor any attribute.

एको वशी निष्क्रियाणां बहूनामेकं बीजं बहुधा यः करोति ।
तमात्मस्थं येऽनुपश्यन्ति धीरास्तेषां सुखं शाश्वतं नेतरेषाम् ॥ १२ ॥

12. One God & alone He controlleth the many who have themselves no separate work nor purpose; and He developeth one seed into many kinds of creatures; the strong-hearted behold God in their own Self, therefore for them is everlasting bliss and not for others.

नित्योऽनित्यानां चेतनश्चेतनानामेको बहूनां यो विदधाति कामान् ।
तत्कारणं सांख्ययोगाधिगम्यं ज्ञात्वा देवं मुच्यते सर्वपाशैः ॥ १३ ॥

13. One Eternal of all these that pass & are not, One conscious in all consciousnesses; He being One ordereth the desires of many; He alone is the great Source to which Sankhya and Yoga bring us. If thou know God thou shalt break free from every sort of bondage.

न तत्र सूर्यो भाति न चन्द्रतारकं नेमा विद्युतो भान्ति कुतोऽयमग्निः ।
तमेव भान्तमनुभाति सर्वं तस्य भासा सर्वमिदं विभाति ॥ १४ ॥

14. There the sun cannot shine and the moon has no splendour; the stars are blind; there our lightnings flash not neither any earthly fire; all that is bright is but the shadow of His brightness and by His shining all this shineth.

एको हंसो भुवनस्यास्य मध्ये स एवाग्निः सलिले संनिविष्टः ।
तमेव विदित्वाति मृत्युमेति नान्यः पन्था विद्यतेऽयनाय ॥ १५ ॥

15. One Swan of Being in the heart of all this Universe & He is Fire that lieth deep in the heart of water. By Knowledge of Him, the soul passeth beyond the pursuit of Death and there is no other road for the great passage.

स विश्वकृद् विश्वविदात्मयोनिर्जः कालकारो गुणी सर्वविद्यः ।
प्रधानक्षेत्रज्ञपतिर्गुणेशः संसारमोक्षस्थितिबन्धहेतुः ॥ १६ ॥

16. He hath made all and knoweth all; for He is the womb out of which Self ariseth, & being possessed of the Nature Moods He becometh Time's Maker and discerneth all things. And Matter is subject to Him & the Spirit in Man that cogniseth His field of matter & the modes of Nature are His servants. He therefore is the cause of this coming into phenomena & of the release from phenomena — & because of Him is their endurance & because of Him is their bondage.

स तन्मयो ह्यमृत ईशसंस्थो ज्ञः सर्वगो भुवनस्यास्य गोप्ता ।
य ईशेऽस्य जगतो नित्यमेव नान्यो हेतुर्विद्यत ईशनाय ॥ १७ ॥

17. Lo He is Immortal because He is utter existence; but He houseth Himself in the Lord & is the Knower, the Omnipresent that standeth on guard over this His universe, yea He ruleth all this moving world for ever and for ever, and there is no other source of lordship and kingliness.

यो ब्रह्माणं विदधाति पूर्वं यो वै वेदांश्च प्रहिणोति तस्मै ।
तं ह देवमात्मबुद्धिप्रकाशं मुमुक्षुर्वै शरणमहं प्रपद्ये ॥ १८ ॥

18. He ordained Brahma the Creator from of old and sent forth unto him the Veda, I will hasten unto God who standeth self-revealed in the Spirit & in the Understanding. I will take refuge in the Lord for my salvation;

निष्कलं निष्क्रियं शान्तं निरवद्यं निरञ्जनम् ।
अमृतस्य परं सेतुं दग्धेन्द्रनमिवानलम् ॥ १९ ॥

19. Who hath neither parts nor works for He is utterly tranquil, faultless, stainless, therefore He is the one great bridge that carrieth us over to Immortality, even as when a fire hath burnt all its fuel.

यदा चर्मवदाकाशं वेष्टयिष्यन्ति मानवाः ।
तदा देवमविज्ञाय दुःखस्यान्तो भविष्यति ॥ २० ॥

20. When the sons of men shall fold up ether like a skin and wrap the heavens round them like a garment, then alone without knowledge of the Lord our God shall the misery of the World have an ending.

तपःप्रभावाद् देवप्रसादादच्च ब्रह्म ह श्वेताश्वतरोऽथ विद्वान् ।
अत्याश्रमिष्यः परमं पवित्रं प्रोवाच सम्यगृषिसङ्घजुष्टम् ॥ २१ ॥

21. By the might of his devotion & the grace of God in his being Svetasvatara hereafter knew the Eternal & he came to the

renouncers of the worldly life and truly declared unto them the Most High & Pure God, to whom the companies of seers resort for ever.

वेदान्ते परमं गुह्यं पुराकल्पे प्रचोदितम् ।
नाप्रशान्ताय दातव्यं नापुत्रायाशिष्याय वा पुनः ॥ २२ ॥

22. This is the great secret of the Vedanta which was declared in former times, not on hearts untroubled to be squandered nor men sonless nor on one who hath no disciples.

यस्य देवे परा भक्तिर्यथा देवे तथा गुरौ ।
तस्यैते कथिता ह्यर्थाः प्रकाशन्ते महात्मनः प्रकाशन्ते महात्मनः ॥ २३ ॥

23. But whosoever hath supreme love & adoration for the Lord and as for the Lord, so likewise for the Master, to that Mighty Soul these great matters when they are told become clear of themselves, yea to the Great Soul of him they are manifest.

Chhandogya Upanishad

Chapter I and the first section

ओमित्येतदक्षरमुद्गीथमुपासीत । ओमिति ह्युद्गायति तस्योपव्या-
ख्यानम् ॥१॥

1. Worship ye OM, the eternal syllable. OM is Udgitha, the chant of Samaveda; for with OM they begin the chant of Sama. And this is the exposition of OM.

एषां भूतानां पृथिवी रसः पृथिव्या आपो रसः । अपामोषधयो रस
ओषधीनां पुरुषो रसः पुरुषस्य वाग्रसो वाच ऋग्रस ऋचः साम रसः
साम्न उद्गीथो रसः ॥२॥

2. Earth is the substantial essence of all these creatures and the waters are the essence of earth; herbs of the field are the essence of the waters; man is the essence of the herbs. Speech is the essence of man, Rigveda the essence of Speech, Sama the essence of Rik. Of Sama OM is the essence.

स एष रसानां रसतमः परमः पराध्योऽष्टमो यदुद्गीथः ॥३॥

3. This is the eighth essence of the essences and the really essential, the highest and it belongeth to the upper hemisphere of things.

कतमा कतमर्क् कतमत् कतमत्साम कतमः कतम उद्गीथ इति विमृष्टं
भवति ॥४॥

4. Which among things & which again is Rik; which among things and which again is Sama; which among things and which again is OM of the Udgitha — this is now pondered.

वागेवर्कं प्राणः सामोमित्येतदक्षरमुद्दीथः । तद्वा एतन्मिथुनं यद्वाक् च
प्राणश्चर्कं च साम च ॥५॥

5. Speech is Rik, Breath is Sama; the Imperishable is OM of Udgitha. These are the divine lovers, Speech & Breath, Rik & Sama.

तदेतन्मिथुनमोमित्येतस्मिन्नक्षरे संसृज्यते यदा वै मिथुनौ समागच्छत
आपयतो वै तावन्योन्यस्य कामम् ॥६॥

6. As a pair of lovers are these and they cling together in OM the eternal syllable; now when the beloved and her lover meet, verily they gratify each the desire of the other.

आपयिता ह वै कामानां भवति य एतदेवं विद्वानक्षरमुद्दीथमुपास्ते ॥७॥

7. He becometh a gratifier of the desires of men who with this knowledge worshippeth OM the eternal syllable.

तद् वा एतदनुज्ञाक्षरं यद्वा किंचानुजानात्योमित्येव तदाहैषो एव
समृद्धिर्यदनुज्ञा समर्थयिता ह वै कामानां भवति य एतदेवं विद्वानक्षर-
मुद्दीथमुपास्ते ॥८॥

8. Now this OM is the syllable of Assent; for to whatsoever one assenteth, one sayeth OM; and assent is blessing of increase. Verily he becometh a blesser and increaser of the desires of men who with this knowledge worshippeth OM the eternal syllable.

तेनेयं त्रयी विद्या वर्तत ओमित्याश्रावयत्योमिति शंसत्योमित्युज्ञाय-
त्येतस्यैवाक्षरस्यापचित्यै महिम्ना रसेन ॥९॥

9. By OM the triple knowledge proceedeth; with OM the priest reciteth the Rik, with OM he pronounceth the Yajur, with OM he chanteth the Sama. And all this is for the heaping up of the Imperishable and by the greatness of It and the delightfulness.

तेनोभौ कुरुतो यश्चैतदेवं वेद यश्च न वेद। नाना तु विद्या चाविद्या
च यदेव विद्यया करोति श्रद्धयोपनिषदा तदेव वीर्यवत्तरं भवतीति
खल्वेतस्यैवाक्षरस्योपव्याख्यानं भवति ॥१०॥

10. He doeth works by OM who hath the knowledge, and he also who hath it not; but these are diverse, the Knowledge and the Ignorance. Whatso work one doeth with knowledge, with faith and with the secret of Veda, it becometh to him more virile and mighty. This is the exposition of the eternal letters.

And the second section

देवासुरा हृष्णे यत्र संयेतिर उभये प्राजापत्यास्तद्व देवा उक्तीथमा-
जहूरनेनैनानभिभविष्याम इति ॥१॥

1. The Gods and the Demons strove together and both were children of the Almighty Father. Then the Gods took up for weapon OM of Udgitha, for they said "With this we shall overcome these Titans."

ते ह नासिकं प्राणमुक्तीथमुपासांचक्रिरे तं हासुराः पाप्मना विविधु-
स्तस्मात्तेनोभयं जिग्नति सुरभि च दुर्गन्धि च पाप्मना ह्येष विद्धः ॥२॥

2. The Gods worshipped OM as Breath in the nostrils; but the Demons came and smote it with the arrow of Evil; therefore it smelleth both alike, the sweet scent and the evil odour. For it is smitten through and through with Evil.

अथ ह वाचमुक्तीथमुपासांचक्रिरे तां हासुराः पाप्मना विविधुस्तस्मात्
तयोभयं वदति सत्यं चानृतं च पाप्मना ह्येषा विद्धा ॥३॥

3. Then the Gods worshipped OM as Speech; but the Demons came and smote it with the arrow of Evil; therefore it speaketh both alike, Truth and Falsehood. For it is smitten through and through with Evil.

अथ ह चक्षुरुद्धीथमुपासांचक्रिरे तद्वासुराः पाप्मना विविधुस्तस्मात्
तेनोभयं पश्यति दर्शनीयं चादर्शनीयं च पाप्मना ह्येतद् विद्धम् ॥४॥

4. Then the Gods worshipped OM as the Eye; but the Demons came and smote it with the arrow of Evil; therefore it beholdeth both alike, the fair to see and the foul of favour. For it is smitten through and through with Evil.

अथ ह श्रोत्रमुद्धीथमुपासांचक्रिरे तद्वासुराः पाप्मना विविधुस्तस्मात्
तेनोभयं शृणोति श्रवणीयं चाश्रवणीयं च पाप्मना ह्येतद् विद्धम् ॥५॥

5. Then the Gods worshipped OM as the Ear; but the Demons came and smote it with the arrow of Evil; therefore it heareth both alike, that which is well to hear and that which is harsh and unseemly. For it is smitten through and through with Evil.

अथ ह मन उद्धीथमुपासांचक्रिरे तद्वासुराः पाप्मना विविधुस्तस्मात्
तेनोभयं संकल्पयते संकल्पनीयं चासंकल्पनीयं च पाप्मना ह्येतद्
विद्धम् ॥६॥

6. Then the Gods worshipped Udgitha as Mind; but the Demons came and smote it with the arrow of Evil; therefore it conceiveth both alike, right thoughts and unlawful imaginations. For it is smitten through and through with Evil.

अथ ह य एवायं मुख्यः प्राणस्तमुद्धीथमुपासांचक्रिरे तं हासुरा कृत्वा
विद्ध्वंसुर्यथाश्मानमाखणमृत्वा विध्वंसेत ॥७॥

7. Then the Gods worshipped OM as this which is Breath in the mouth and the Demons rushing against it dashed themselves to pieces; as when an object striketh against firm and solid rock, it dasheth to pieces upon the rock.

एवं यथाश्मानमाखणमृत्वा विध्वंसते एवं हैव स विध्वंसते य एवंविदि
पापं कामयते यश्चैनमभिदासति स एषोऽश्माखणः ॥८॥

8. And even as an object hurling against firm and solid rock

dasheth itself to pieces, so he hurleth himself upon destruction whoso desireth evil against the Knower or whoso doeth him hurt; for the Knower is as that firm and solid rock.

नैवैतेन सुरभि न दुर्गन्धि विजानात्यपहतपाप्मा ह्येष तेन यदश्चाति
यत्पिबति तेनेतरान् प्राणानवति । एतमु एवान्ततोऽविच्छोत्क्रामति
व्याददात्येवान्तत इति ॥ ९ ॥

9. With this Breath one cogniseth neither sweet scent nor ill odour, for it hath flung Evil from it. Whatsoever one eateth with this or drinketh, thereby it cherisheth the other breaths. At the end and last when he findeth not the breath, the Spirit goeth out from the body; verily he openeth wide the mouth as he goeth.

तं हाङ्गिरा उद्गीथमुपासांचक्र एतमु एवाङ्गिरसं मन्यन्तेऽङ्गानां यद्
रसः ॥ १० ॥

10. Angiras worshipped OM of Udgitha as Breath in the mouth and men think of Breath in the mouth as Angiras because it is essence of the members of the body.

तेन तं ह वृहस्पतिरुद्गीथमुपासांचक्र एतमु एव वृहस्पतिं मन्यन्ते वागिध
वृहती तस्या एष पतिः ॥ ११ ॥

11. By the strength of Angiras, Brihaspati worshipped OM as Breath in the mouth, and men think of the Breath as Brihaspati, because Speech is the great goddess and Breath is the lord of Speech.

तेन तं हायास्य उद्गीथमुपासांचक्र एतमु एवायास्यं मन्यन्त आस्याद्
यदयते ॥ १२ ॥

12. By the strength of Brihaspati, Ayasya worshipped OM as Breath in the mouth and men think of the Breath as Ayasya, because 'tis from the mouth it cometh.

तेन तं ह बको दात्म्यो विदांचकार । स ह नैमिषीयाणामुद्राता वभूव
स ह स्मैम्यः कामानागायति ॥ १३ ॥

13. By the strength of Ayasya, Baka the son of Dalbha knew the Breath. And he became the Chanter of the Sama among the Naimishiyas and he chanteth their desires for them unto fulfilment.

आगाता है कामानां भवति य एतदेवं विद्वानक्षरमुद्गीथमुपास्त
इत्यध्यात्मम् ॥ १४ ॥

14. Verily he becometh a chanter unto fulfilment of the desires of men who with this knowledge worshippeth OM of Udgitha, the eternal syllable. Thus far concerning Self is the exposition.

And the third section

अथाधिदैवतं य एवासौ तपति तमुद्गीथमुपासीतोद्यन्वा एष प्रजाभ्य
उद्गायति । उद्यस्तमो भयमपहन्त्यपहन्ता है वै भयस्य तमसो भवति
य एवं वेद ॥ १ ॥

1. Thereafter concerning the Gods. Lo yonder burning fire in the heavens, worship ye Him as the Udgitha; for the Sun riseth & singeth his bright hymn unto the peoples. Yea he riseth, & darkness is slain & its terror — therefore shall he be a slayer of the terror & the darkness, he who thus knoweth.

समान उ एवायं चासौ चोष्णोऽयमुष्णोऽसौ स्वर इतीममाचक्षते स्वर
इति प्रत्यास्वर इत्यमुं तस्माद्ग्रा एतमिमममुं चोद्गीथमुपासीत ॥ २ ॥

2. Breath & the Sun are one & alike — for the one is heat & the other is heat, and they call Breath the mover and the Sun too they call the mover & they call him also the mover that returneth upon his paths — therefore ye shall worship both the one & the other as Udgitha.

अथ खतु व्यानमेवोद्गीथमुपासीत यद्वै प्राणिति स प्राणो यदपानिति
सोऽपानः । अथ यः प्राणापानयोः संधिः स व्यानो यो व्यानः सा
वाक् । तस्मादप्राणन्ननपानन् वाचमभिव्याहरति ॥ ३ ॥

3. Thereafter verily ye shall worship Vyana the middle breath as Udgitha. For when one breathes forth it is Prana, the Main Breath, & when one breathes down it is Apana, the lower breath. Now this which is the joint & linking of the main breath & the lower breath, is Vyana — & Vyana, it is Speech. Therefore 'tis when one neither breatheth forth nor breatheth down that one giveth utterance to Speech.

या वाक् सर्क तस्मादप्राणन्ननपानन्नृचमभिव्याहरति यर्क तत्साम
तस्मादप्राणन्ननपानन् साम गायति यत्साम स उद्गीथस्तस्मादप्राणन्नन-
पानन्नृद्गायति ॥ ४ ॥

4. But Speech is the Rik — therefore 'tis when one neither breatheth out nor breatheth in that one uttereth the Rik. And Rik it is Sama — therefore 'tis when one neither breatheth out nor breatheth in that one chanteth the Sama. But Sama it is Udgitha — therefore 'tis when one neither breatheth out nor breatheth in that one singeth Udgitha.

अतो यान्यन्यानि वीर्यवन्ति कर्माणि यथाग्नेर्मन्यनमाजेः सरणं दृढस्य
धनुषं आयमनमप्राणन्ननपानंस्तानि करोत्येतस्य हेतोव्यानमेवोद्गीथ-
मुपासीत ॥ ५ ॥

5. Hence whatsoever actions there be that are of might & forcefulness as smiting out fire from the tinder or leaping a great barrier or bending a stark & mighty bow, it is when one neither breatheth out nor breatheth in that one doeth these. And for this cause ye shall worship the middle breath as Udgitha.

अथ खतुद्गीथाक्षराण्युपासीतोद्गीथ इति प्राण एवोत् प्राणेन ह्युत्तिष्ठति
वाग् गीर्वाचो ह गिर इत्याचक्षतेऽन्नं थमन्ने हीदं सर्वं स्थितम् ॥ ६ ॥

6. Thereafter verily ye shall worship the syllables of the Udgitha saying Udgitha & Prana is the first syllable, because one riseth up with the main breath & Speech is the second syllable, because they call Speech that which goeth forth &

food is the third syllable, because in food all this Universe is established.

द्यौरेवोदन्तरिक्षं गीः पृथिवी थमादित्य एवोद् वायुर्गर्भग्निस्यं
सामवेद एवोद् यजुर्वेदो गीऋग्वेदस्थं दुर्घेऽस्मै वाग् दोहं यो वाचो
दोहोऽन्नवानन्नादो भवति य एतान्येवं विद्वानुद्गीथाक्षराण्युपास्त उद्गीथ
इति ॥ ७ ॥

7. Heaven is the first syllable, the middle air is the second syllable, earth is the third syllable. The Sun is the first syllable, Air is the second syllable, Fire is the third syllable. The Samaveda is the first syllable, Yajurveda is the second syllable, Rigveda is the third syllable. To him Speech is a cow that yieldeth sweet milk — & what is this milking of Speech? — even that he becometh rich in food & the eater of food who knoweth these & worshippeth the syllables of Udgitha saying lo even this is Udgitha.

Notes on the Chhandogya Upanishad

First Adhyaya

ओमित्येतदक्षरमुद्दीथमुपासीत । ओमिति हृद्गायति तस्योपच्चा-
ख्यानम् ॥ १ ॥

OM is the syllable (the Imperishable One); one should follow after it as the upward Song (movement); for with OM one sings (goes) upwards; of which this is the analytical explanation.

So, literally translated in its double meaning, both its exoteric, physical and symbolic sense and its esoteric symbolised reality, runs the initial sentence of the Upanishad. These opening lines or passages of the Vedanta are always of great importance; they are always so designed as to suggest or even sum up, if not all that comes afterwards, yet the central and pervading idea of the Upanishad. The Isha Vasyam of the Vajasaneyi, the Keneshitam manas of the Talavakara, the Sacrificial Horse of the Brihad Aranyaka, the solitary Atman with its hint of the future world vibrations in the Aitareya are of this type. The Chhandogya, we see from its first and introductory sentence, is to be a work on the right & perfect way of devoting oneself to the Brahman; the spirit, the methods, the formulae are to be given to us. Its subject is the Brahman, but the Brahman as symbolised in the OM, the sacred syllable of the Veda; not, therefore, the pure state of the Universal Existence only, but that Existence in all its parts, the waking world & the dream self and the sleeping, the manifest, half-manifest and hidden, Bhurloka, Bhuvar & Swar,—the right means to win all of them, enjoy all of them, transcend all of them, is the subject of the Chhandogya. OM is the symbol and the thing symbolised. It is the symbol, aksharam, the syllable in which all sound of speech is brought back to its wide, pure indeterminate state; it is the symbolised, aksharam, the changeless, undiminishing, unincreasing, unappearing, undying Reality

which shows itself to experience in all the change, increase, diminution, appearance, departure which in a particular sum & harmony of them we call the world, just as OM the pure eternal sound-basis of speech shows itself to the ear in the variations and combinations of impure sound which in a particular sum and harmony of them we call the Veda. We are to follow after this OM with all our souls, upásita,—to apply ourselves to it and devote ourselves to its knowledge and possession, but always to OM as the Udgitha. Again in this word we have the symbolic sense and the truth symbolised expressed, as in aksharam and OM, in a single vocable with a double function and significance.

The Sanscrit has always been a language in which one word is naturally capable of several meanings and therefore carries with it a number of varied associations. It lends itself, therefore, with peculiar ease and naturalness to the figure called slesha or embrace, the marriage of different meanings in a single form of words. Paronomasia in English is mere punning, a tour-de-force, an incongruity, a grotesque and artificial play of humour. Paronomasia, slesha, in Sanscrit, though in form precisely the same thing, is not punning, not incongruous but easily appropriate, not grotesque or artificial, but natural and often inevitable, not used for intellectual horseplay, but with a serious, often a high and worthy purpose. It has been abused by rhetorical writers; yet great and noble poetical effects have been obtained by its aid, as, for instance, when the same form of words has been used to convey open blame & cover secret praise. Nevertheless in classical Sanscrit, the language has become a little too rigid for the perfect use of the figure; it is too literary, too minutely grammatised; it has lost the memory of its origins. A sense of cleverness and artifice suggests itself to us because meanings known to be distinct and widely separate are brought together in a single activity of the word which usually suggests them only in different contexts. But in the Vedic slesha we have no sense of cleverness or artifice, because the writers themselves had none. The language was still near to its origins and had, not perhaps an intellectual, but still an instinctive memory of them. With less grammatical and as little etymological knowledge as

Panini and the other classical grammarians, the Rishis had better possession of the soul of Sanskrit speech. The different meanings of a word, though distinct, were not yet entirely separate; many links yet survived between them which were afterwards lost; the gradations of sense remained, the hint of the word's history, the shading off from one sense to another. Ardha now means half and it means nothing else. To the Vedic man it carried other associations. Derived from the root ridh which meant originally to go and join, then to add, to increase, to prosper, it bore the sense of place of destination, the person to whom I direct myself, or simply place; increase, also addition, a part added and so simply a part or half. To have used it in any other sense than "place of destination" or as at once "half, part" and "a place of destination" would not be a violence to the Vedic mind, but a natural association of ideas. So when they spoke of the higher worlds of Sacchidananda as Parardha, they meant at once the higher half of man's inner existence & the param dháma or high seat of Vishnou in other worlds and, in addition, thought of that high seat as the destination of our upward movement. All this rose at once to their mind when the word was uttered, naturally, easily and, by long association, inevitably.

OM is a word in instance. When the word was spoken as a solemn affirmation, everyone thought of the Pranava in the Veda, but no one could listen to the word OM without thinking also of the Brahman in Its triple manifestation and in Its transcendent being. The word, aksharam, meaning both syllable & unshifting, when coupled with OM, is a word in instance; "OM the syllable" meant also, inevitably, to the Vedic mind "Brahman, who changes not nor perishes". The words udgítha and udgáyati are words in instance. In classical Sanscrit the prepositional prefix to the verb was dead and bore only a conventional significance or had no force at all; udgáyati or pragáyati is not very different from the simple gáyati; all mean merely sing or chant. But in Veda the preposition is still living & joins its verb or separates itself as it pleases; therefore it keeps its full meaning always. In Vedanta the power of separation is lost, but the separate force remains. Again the roots gí and gá

in classical Sanscrit mean to sing and have resigned the sense of going to their kinsman gam; but in Vedic times, the sense of going was still active and common. They meant also to express, to possess, to hold; but these meanings once common to the family are now entrusted to particular members of it, gir, for expression, grih, for holding. Gáthá, gíthá, gána, gáyati, gátá, gátu, meant to the Vedic mind both going and singing, udgítha meant ascension as well as casting upward the voice or the soul in song. When the Vedic singer said Ud gáyámi, the physical idea was that, perhaps, of the song rising upward, but he had also the psychical idea of the soul rising up in song to the gods and fulfilling in its meeting with them and entering into them its expressed aspiration. To show that this idea is not a modern etymological fancy of my own, it is sufficient to cite the evidence of the Chhandogya Upanishad itself in this very chapter where Baka Dalbhya is spoken of as the Udgata of the Naimishiyas who obtained their desires for them by the Vedic chant, ebhya ágáyati kámán; so, adds the Upanishad, shall everyone be a “singer to” & a “bringer to” of desires, ágátá kámánám, who with this knowledge follows after OM, the Brahman, as the Udgitha.

This then is the meaning of the Upanishad that OM, the syllable, technically called the Udgitha, is to be meditated on as a symbol of the fourfold Brahman with two objects, the “singing to” of one’s desires & aspirations in the triple manifestation and the spiritual ascension into the Brahman Itself so as to meet and enter into heaven after heaven & even into Its transcendent felicity. For, it says, with the syllable OM one begins the chant of the Samaveda, or, in the esoteric sense, by means of the meditation on OM one makes this soul-ascension and becomes master of all the soul desires. It is in this aspect & to this end that the Upanishad will expound OM. To explain Brahman in Its nature & workings, to teach the right worship and meditation on Brahman, to establish what are the different means of attainment of different results and the formulae of the meditation and worship, is its purpose. All this work of explanation has to be done in reference to Veda & Vedic sacrifice and ritual of which OM is the substance. In a certain sense, therefore,

the Upanishad is an explanation of the purpose & symbology of Vedic formulae & ritual; it sums up the results of the long travail of seeking by which the first founders & pioneers of Vedantism in an age when the secret & true sense of Veda had been largely submerged in the ceremonialism & formalism of the close of the Dwapara Yuga, attempted to recover their lost heritage partly by reference to the adepts who still remained in possession of it, partly by the traditions of the great seekers of the past Yuga, Janaka, Yajnavalkya, Krishna and others, partly by their own illuminations and spiritual experience. The Chhandogya Upanishad is thus the summary history of one of the greatest & most interesting ages of human thought.

Satyakama Jabala

The story of Satyakama Jabala occupies five sections, the third to the eighth, of the fourth chapter in the Chhandogya Upanishad. The Chhandogya seems to be the most ancient of the extant Upanishads. It speaks of Krishna, son of Devaki, and Dhritarashtra Vaichitravirya in a tone that would justify us in assuming that it regarded them not as ancient and far-off names but as men who had walked the earth in living memory. The movement of philosophic speculation of which the Upanishads are the extant record, was an attempt to pass from the old ritualistic *karma* to the freedom of the *jnanamarga*. According to the writer of the Gita, this was not a new movement, but a return to a past and lost discipline; for Sri Krishna says to Arjuna of the true or *sajnan karmamarga* he reveals to him, "This is the imperishable Yoga I declared unto Vivaswan, Vivaswan revealed it to Manu and Manu to Ixvacu told it. Thus was it known to the royal sages by hereditary transmission, till by the great lapse of time this yoga was lost, O scourge of thy foes. This is the same ancient Yoga that I have told unto [thee] today, because thou art my lover and my friend; for this is the highest of all the inner truths."

The Dwapara Yuga was the age of Kuru preeminence and the Kurus were a great practical, warlike, ritualistic, juristic race of the Roman type, with little of the speculative temper or moral enthusiasm of the eastern Coshalas, Videhas, Kashis, Chedis. The West of India has always been noted for its practical, soldierly, commercial bent of mind in comparison with the imaginative and idealistic Eastern races and the scholastic, logical and metaphysical South. According to the Hindu theory of the Yugas, it is in the Dwapara that everything is codified, ritualised, formalised. In the Satya Vishnu descends among men as Yajna. Yajna is the spirit of adoration and sacrifice, and in the Satya yajna reigns in the hearts of men, and there is no need

of external ritual, external sacrifices, elaborate law, government, castes, classes and creeds. Men follow the law by the necessity of their purified nature and their complete knowledge. The kingdom of God & the Veda are in the hearts of His people. In the Treta the old perfect order begins to break and Vishnu descends as the *chakravarti raja*, the warrior and ruler, Kartavirya, Parasurama, Rama, and the sword, the law and the written Veda are instituted to govern men. But there is still great elasticity and freedom and within certain limits men follow the healthy impulse of their nature, only slightly corrupted by the first descent from purity. It is in the Dwapara that form and rule have to take the place of the idea and the spirit as the true governors of religion, ethics and society. Vishnu then descends as Vyasa, the great codifier and systematiser of knowledge.

At the end of the Dwapara, when Sri Krishna came, this tendency had reached its extreme development, and the form tended to take the place of the idea and the rule to take the place of the spirit not only in the outward conduct but in the hearts of men. Nevertheless an opposite tendency had already begun. Dhritarashtra himself was an earnest inquirer into the inner meaning of things. Great Vedantists were living and teaching, such as the rishi Ghora to whom Sri Krishna himself went for the word of illumination. Sri Krishna was the intellectual force that took up all these scattered tendencies and, by breaking down the strong formalism of the Dwapara, prepared the work of the Kali. In the Gita he denounces those who will not go outside the four corners of the Veda and philosophises the whole theory of the sacrificial system; he contemptuously dismisses the guidance of the set ethical systems and establishes an inward and spiritual rule of conduct. To many of his time he seems to have appeared as a baneful and destructive portent; like all great revolutionary innovators, he is denounced by Bhurisravas as a well known misleader of men and corrupter of morals. It is the work of the Kali Yuga to destroy everything by questioning everything in order to establish after a struggle between the forces of purity and impurity a new harmony of life and knowledge in another Satyayuga.

After the destruction of the conservative Kurus and Panchalas at Kurukshetra, the development of the Vedanta commenced and went on progressing till in its turn it reached its extreme & excessive development in the teachings of Buddha and Shankaracharya. But at the period of the Chhandogya it is in its early stage of development. The first sections of the Upanishad are taken up with an esoteric development of the inner meaning of certain parts of the sacrificial formulae, which in itself is sufficient to show that the work belongs to the first stratum of Vedantic formation.

The story of Satyakama is one of the most typical in the Upanishad. It is full of sidelights on early Vedantic teaching, Yogic sadhan and that deep psychical knowledge which the writer took for granted in the hearers of his work. So much knowledge, indeed, is thus taken for granted that it is impossible for anyone not himself a practiser of Yoga, to understand anything but its broad conclusions. The modern commentators, Shankara included, have approached it in order to establish particular metaphysical doctrines, not to elucidate its entire significance. I shall take the side that has been neglected; for what to the European inquirer are merely "the babblings of children", bear to the Yogi an aspect of infinite truth, value and significance.

Chapter II

"Now Satyakama Jabala spoke unto his mother Jabala and said 'Mother, I shall go and lead the life of the Brahmacharin; tell me what is my *gotra*.' But she answered him, 'This I know not, my son, of what gotra thou art; resorting to many as a serving woman in my youth I got thee, therefore I know not of what gotra thou art. But Jabala is my name and Satyakama is thine, Satyakama Jabala therefore call thyself.' So he came to Haridrumata the Gautama and said, 'I would stay with my Lord as a Brahmacharin, let me therefore enter under thee.' And he said to him, 'My son, of what gotra art thou?' But the other answered, 'This, alas, I know not of what gotra I am; I asked my

mother and she answered me, Resorting to many in my youth as a serving woman I got thee, therefore I know not of what gotra thou art, but Jabala is my name and Satyakama is thine; Satyakama Jabala therefore am I.' And he said to him, 'None who is not a Brahmin can be strong enough to say this; gather the firewood, my son, I will take thee under me, for thou didst not depart from the truth.' He admitted him and put forth four hundred cows weak and lean and said, 'These, my son, do thou follow as a herd,' and he set the cows in motion and said, 'Return not until they are a thousand.' And he fared abroad with them during the years till they were a thousand."

So the story opens, and simple as it seems, it already contains several points of capital importance in understanding the ideas of the time and the principles of the old Vedantic *sadhana*. Satyakama, as we gather from other passages, was one of the great Vedantic teachers of the time immediately previous to the composition of the Chhandogya Upanishad. But his birth is the meanest possible. His mother is a serving girl, not a *dasi* attached to a permanent household whose son could have named his father and his gotra, but a *paricharika*, serving for hire at various houses, "resorting to many", and therefore unable to name her son's father. Satyakama has, therefore, neither caste, nor gotra, nor any position in life. It appears from this story as from others that, although the system of the four castes was firmly established, it counted as no obstacle in the pursuit of knowledge and spiritual advancement. The Kshatriya could teach the Brahmin, the illegitimate and fatherless son of the serving girl could be guru to the purest and highest blood in the land. This is nothing new or improbable, for it has been so throughout the history of Hinduism and the shutting out of anyone from spiritual truth and culture on the ground of caste is an invention of later times. In the nature of things the usual rule would be for the greater number of spiritual preceptors to be found in the higher castes, but this was the result of natural laws and not of a fixed prohibition. It is noticeable also from this and other instances that it was the father's position that fixed the son's, and the mother's seems to have been of very minor

importance. The question about the gotra was of importance, probably, with regard to the rites and other circumstances of initiation. Satyakama must have known perfectly well that he was the illegitimate son of a serving woman, but he wished to know his father's name and gotra because he would have to tell it to his guru. Even after knowing the worst, he persisted in his intention of taking up spiritual studies, so that he can have had no fear of being rejected on account of his base origin. His guru, impressed by his truthfulness, says, "None but a Brahmin would have the moral strength to make such an avowal." It can hardly be meant by this that Satyakama's father must have been a Brahmin, but that since he had the Brahmin qualities, he must be accepted as a Brahmin. Even the Kshatriya would have hesitated to speak so truthfully, because the Kshatriya is by nature a lover of honour and shuns dishonour, he has the sense of *mana* and *apamana*; but the true Brahmin is *samo manapamanayoh*, he accepts indifferently worldly honour and dishonour and cares only for the truth and the right. In short the Gautama concludes that, whatever may be Satyakama's physical birth, spiritually he is of the highest order and especially fitted for a sadhaka; *na satyad agat*, he did not depart from the truth.

The second point is the first action of the guru after the ceremony of initiation. Instead of beginning the instruction of this promising disciple he sends him out with four hundred miserable kine, more likely to die than prosper and increase, and forbids him to return till he has increased them to a thousand. Wherfore this singular arrangement? Was it a test? Was it a discipline? But Haridrumata had already seen that his new disciple had the high Brahmin qualities. What more did he require?

The perfect man is a fourfold being and one object of Vedantic discipline is to be the perfect man, *siddha*. When Christ said, "Be ye perfect as your Father in heaven is perfect," he was only repeating in popular language the Vedantic teaching of *sadharma*, likeness to God.

The Brihad Aranyak Upanishad

Chapter One: Section I

उषा वा अश्वस्य मेध्यस्य शिरः । सूर्यश्चक्षुर्वातः प्राणो व्यात्तमग्नि-
वैश्वानरः संवत्सर आत्माश्वस्य मेध्यस्य । द्यौः पृष्ठमन्तरिक्षमुदरं
पृथिवी पाजस्यं दिशः पार्श्वे अवान्तरदिशः पर्शीव ऋतवोऽङ्गानि
मासाश्वार्धमासाश्व पर्वाण्यहोरात्राणि प्रतिष्ठा नक्षत्राण्यस्थीनि नभो
मांसानि । ऊवध्यं सिकताः सिन्धवो गुदा यकृच्च क्रोमानश्च पर्वता
ओषधयश्च वनस्पतयश्च लोमान्युद्यन्पूर्वार्धो निस्तोचञ्जघनार्धो यद्
विजृम्भते तद्विद्योतते यद्विद्यनुते तत्सनयति यन्मेहति तद्वृष्टिं
वागेवास्य वाक् ॥ १ ॥

1. Dawn is the head¹ of the horse sacrificial.² The sun is his eye,³ his breath is the wind, his wide open mouth is Fire, the master might universal, Time is the self of the horse sacrificial.⁴ Heaven is his back & the midworld his belly, earth is his footing,— the regions are his flanks & the lesser regions their ribs, the seasons his members, the months & the half months are their joints, the days & nights are his standing place, the stars his bones & the sky is the flesh of his body. The strands are the food in his belly, the rivers are his veins, his liver & his lungs are the mountains, herbs & plants are his hairs, the rising is his front & the setting his hinder portion, when he stretches himself, then it lightens,

¹ Because it is the front and beginning.

² Aswa meant originally “being, existence, substance”. From the sense of speed & strength it came to mean “horse”. The word is therefore used to indicate material existence & the horse (the image usually conveyed by this name) is taken as the symbol of universal existence in annam.

The horse is symbolic & the sacrifice is symbolic. We have in it an image of the Virat Purusha, of Yajniya Purusha, God expressing himself in the material universe.

³ Because the sun is the master of sight.

⁴ Air is the basis of life, Fire of strength & expansion. Time is that which upholds existence in material space & is the soul of it.

when he shakes his frame, then it thunders, when he urines, then it rains. Speech, verily, is the sound of him.

अहर्वा अश्वं पुरस्तान्महिमान्वजायत तस्य पूर्वे समुद्रे योनी रात्रिरेनं
पश्चान्महिमान्वजायत तस्यापरे समुद्रे योनिरेतौ वा अश्वं महिमाना -
वभितः सबभूवतुः । हयो भूत्वा देवानवहृद् वाजी गन्धवानर्वासुरानश्चो
मनुष्यान् समुद्र एवास्य बन्धुः समुद्रो योनिः ॥ २ ॥

2. Day was the grandeur that was born before the horse as he galloped, the eastern ocean gave it birth; night was the grandeur that was born behind him & its birth was from the other waters. These are the grandeurs that came into being on either side of the horse. He became Haya & bore the gods, Vaja & bore the Gandharvas, Arvan & bore the Titans, Aswa & bore mankind. The sea was his brother & the sea was his birthplace.

Chapter One: Section II

नैवेह किंचनाग्र आसीन्मृत्युनैवेदमावृतमासीत् । अशनाययाशनाया
हि मृत्युस्तन्मनोऽकुरुतात्मन्वी स्यामिति । सोऽर्चन्नरत् तस्यार्चत
आपोऽजायन्तार्चते वै मे कमभूदिति तदेवार्कस्यार्कत्वं कं ह वा अस्मै
भवति य एवमेतदर्कस्यार्कत्वं वद ॥ १ ॥

1. Formerly there was nothing here; this was concealed by Death—by Hunger, for it is Hunger that is Death. That created Mind, & he said, Let me have substance. He moved about working & as he worked the waters were born & he said, Felicity was born to me as I worked. This verily is the activity in action. Therefore felicity cometh to him who thus knoweth this soul of activity in action.

आपो वा अर्कस्तद्यदपां शर आसीत् तत्समहन्यत । सा पृथिव्यभवत्
तस्यामश्राम्यत् तस्य श्रान्तस्य तस्य तेजोरसो निरवर्तताग्निः ॥ २ ॥

2. The waters verily (in their movement) are action; that which was a lake of waters was contracted & became compact. This became earth — upon earth he grew weary — in his

weariness he was heated & the Essence of energy went out from him, even Fire.

स त्रेधात्मानं व्यकुरुतादित्यं तृतीयं वायुं तृतीयं स एष प्राणस्त्रेधा विहितः । तस्य प्राची दिक् शिरोऽसौ चासौ चेमौ । अथास्य प्रतीची दिक् पुच्छमसौ चासौ च सकथ्यौ दक्षिणा चोदीची च पार्श्वे द्यौः पृष्ठमन्तरिक्षमुदरमियमुरः स एषोऽप्सु प्रतिष्ठितो यत्र क्व चैति तदेव प्रतितिष्ठत्येवं विद्वान् ॥ ३ ॥

3. Fire divided himself into three — the sun one of the three & Vayu one of the three; this is that force of life arranged triply. The east is his head and the northeast & the southeast are his arms. Now the west is his seat & the southwest & the northwest are his thighs; his sides are the south & the north; heaven is his back & the middle region is his belly; this earth is his bosom. This is he that is established in the waters wheresoever thou turn. And as that is he established who thus knoweth.

सोऽकामयत द्वितीयो म आत्मा जायेतेति स मनसा वाचं मिथुनं समभवदशनाया मृत्युस्तद्यद्रेत आसीत् स संवत्सरोऽभवत् । न ह पुरा ततः संवत्सर आस तमेतावन्तं कालमबिभः । यावान् संवत्सरस्तमेतावतः कालस्य परस्तादसृजत । तं जातमभिव्याददात् स भाणकरोत् सैव वागभवत् ॥ ४ ॥

4. He desired “Let a second self be born to me.” He by mind had intercourse with speech, even Hunger that is Death; the seed that was of that union became Time. For before this Time was not (period of Time) but so long He had borne him in Himself. So long as is Time’s period, after so long He gave it birth. He yawned upon him as soon as it was born; it cried out & that became speech.

स ऐक्षत यदि वा इममभिमंस्ये कनीयोऽन्नं करिष्य इति स तया वाचा तेनात्मनेदं सर्वमसृजत यदिदं किंचर्चो यजूंषि सामानि छन्दांसि यज्ञान्प्रजाः पशून् । स यद्यदेवासृजत तत्तदत्तुमन्त्रियत सर्वं वा अतीति तददितेरदितित्वं सर्वस्यैतस्यात्ता भवति सर्वमस्यान्नं भवति य एव-मेतददितेरदितित्वं वेद ॥ ५ ॥

5. He saw, If I devour this, I shall diminish food; therefore by that speech & by that self he created all this that we see, the Riks & the Yajus & the Samas & the rhythms & sacrifices & animals & these nations. Whatsoever he created, that he set about devouring, verily he devoureth all; this is the substantiality of being in substance (that it can be destroyed⁵). He becometh the eater of all the world & everything becometh his food who thus knoweth the substantiality of being in substance.

सोऽकामयत् भूयसा यज्ञेन भूयो यजेयेति । सोऽश्राम्यत् स तपोऽतप्यत् तस्य आन्तस्य तपस्य यशो वीर्यमुदक्रामत् । प्राणा वै यशो वीर्यं तत्प्राणेषूक्तान्तेषु शरीरं श्वयितुमन्त्रियत तस्य शरीर एव मन आसीत् ॥ ६ ॥

6. He desired “Let me sacrifice more richly with richer sacrifice.” He laboured & put forth heat of force, & of him thus laboured & heated splendour & strength came forth. The life-forces are that splendour & strength, therefore when the life-forces go forth, the body sets about to rot, yet in his body even so mind was.

सोऽकामयत् मेधं म इदं स्यादात्मन्यनेन स्यामिति । ततोऽश्वः समभवद् यदश्वत् तन्मेध्यमभूदिति तदेवाश्वमेधस्याश्वमेधत्वम् । एष ह वा अश्वमेधं वेद य एनमेवं वेद । तमनवरुच्यैवामन्यत । तं संवत्सरस्य परस्तादात्मन आलभत । . . . ॥ ७ ॥

7. He desired “Let this have sacrificial capacity for me, by this let me be provided with a body.” That which has expressed power & being, that is fit for the sacrifice. This verily is the secret of the Aswamedha & he knoweth indeed the Aswamedha who thus knoweth it. He gave him free course & thought, then after a year (a fixed period of time) he dedicated him to the self. [*The rest of this section was not translated.*]

⁵ Destroyed, ie enjoyed by absorption.

Chapter One: Section III

द्वया ह प्राजापत्या देवाश्चासुराश्च । ततः कानीयसा एव देवा ज्यायसा
असुरास्त एषु लोकेष्वस्पर्धन्ते ते ह देवा ऊर्हन्तासुरान् यज्ञ
उद्गीथेनात्ययामैति ॥ १ ॥

1. Two were the races of the Sons of God, the gods & the Titans. Thereafter the gods were weaker, mightier the Titans. They in these worlds strove together, & the gods said, Let us by the udgitha overpass the Titans in the yajna.

ते ह वाचमूचुस्त्वं न उद्गायेति तथेति तेभ्यो वागुदगायत् । यो वाचि
भोगस्तं देवेभ्य आगायद् यत्कल्याणं वदति तदात्मने । ते विद्वरनेन
वै न उद्गात्रात्येष्यन्तीति तमभिदृत्य पाप्मनाविद्यन् स यः स पाप्मा
यदेवेदमप्रतिरूपं वदति स एव स पाप्मा ॥ २ ॥

2. They said to Speech, Do thou go upward (by the udgitha) for us. “So be it” said Speech and he went upward for them; the enjoyment that is in speech, he reached for the gods, the good that it speaks, he reached for the self. They thought it was by this singer they would overpass them, but they ran at him and penetrated him with evil. The evil that one speaketh this that hath no correspondence (to the thing or fact to be expressed),—this is that evil.

The Great Aranyaka

A Commentary on the Brihad Aranyak Upanishad

Foreword

The Brihad Aranyak Upanishad, at once the most obscure and the profoundest of the Upanishads, offers peculiar difficulties to the modern mind. If its ideas are remote from us, its language is still more remote. Profound, subtle, extraordinarily rich in rare philosophical suggestions and delicate psychology, it has preferred to couch its ideas in a highly figurative and symbolical language, which to its contemporaries, accustomed to this suggestive dialect, must have seemed a noble frame for its riches, but meets us rather as an obscuring veil. To draw aside this curtain, to translate the old Vedic language and figures into the form contemporary thought prefers to give to its ideas is the sole object of this commentary. The task is necessarily a little hazardous. It would have been easy merely to reproduce the thoughts & interpretations of Shankara in the modern tongue — if there were an error, one could afford to err with so supreme an authority. But it seems to me that both the demands of truth and the spiritual need of mankind in this age call for a restoration of old Vedantic truth rather than for the prolonged dominion of that single side of it systematised by the mediaeval thinker. The great Shankaracharya needs no modern praise and can be hurt by no modern disagreement. Easily the first of metaphysical thinkers, the greatest genius in the history of philosophy, his commentary has also done an incalculable service to our race by bridging the intellectual gulf between the sages of the Upanishads and ourselves. It has protected them from the practical

oblivion in which our ignorance & inertia have allowed the Veda to rest for so many centuries — only to be dragged out by the rude hands of the daringly speculative Teuton. It has kept these ancient grandeurs of thought, these high repositories of spirituality under the safe-guard of that temple of metaphysics, the Adwaita philosophy — a little in the background, a little too much veiled & shrouded, but nevertheless safe from the iconoclasm and the restless ingenuities of modern scholarship. Nevertheless, it remains true that Shankara's commentary is interesting not so much for the light it sheds on the Upanishad as for its digressions into his own philosophy. I do not think that Shankara's rational intellect, subtle indeed to the extreme, but avid of logical clearness and consistency, could penetrate far into that mystic symbolism and that deep & elusive flexibility which is characteristic of all the Upanishads, but rises to an almost unattainable height in the Brihad Aranyaka. He has done much, has shown often a readiness and quickness astonishing in so different a type of intellectuality but more is possible and needed. The time is fast coming when the human intellect, aware of the mighty complexity of the universe, will be more ready to learn & less prone to dispute & dictate; we shall be willing then to read ancient documents of knowledge for what they contain instead of attempting to force into them our own truth or get them to serve our philosophic or scholastic purposes. To enter passively into the thoughts of the old Rishis, allow their words to sink into our souls, mould them & create their own reverberations in a sympathetic & responsive material — submissiveness, in short, to the Sruti — was the theory the ancients themselves had of the method of Vedic knowledge — giram upasrutim chara, stoman abhi swara, abhi grinihi, a ruva — to listen in soul to the old voices and allow the Sruti in the soul to respond, to vibrate first obscurely in answer to the Vedantic hymn of knowledge, to give the response, the echo & last to let that response gain in clarity, intensity & fullness. This is the principle of interpretation that I have followed — mystical perhaps but not necessarily more unsound than the insistence & equally personal standards of the logician & the scholar. And

for the rest, where no inner experience of truth sheds light on the text, to abide faithfully by the wording of the Upanishad and trust my intuitions. For I hold it right to follow the intuitions especially in interpreting this Upanishad, even at the risk of being accused of reading mysticism into the Vedanta, because the early Vedantists, it seems to me, were mystics — not in the sense of being vague & loose-thoughted visionaries, but in the sense of being intuitionist symbolists — who regarded the world as a movement of consciousness & all material forms & energies as external symbols & shadows of deeper & ever deeper internal realities. It is not my intention here nor is it in my limits possible to develop the philosophy of the Great Aranyaka Upanishad, but only to develop with just sufficient amplitude for entire clearness the ideas contained in its language & involved in its figures. The business of my commentary is to lay a foundation; it is for the thinker to build the superstructure.

The Horse of the Worlds

The Upanishad begins with a grandiose abruptness in an impetuous figure of the Horse of the Aswamedha. “OM” it begins “Dawn is the head of the horse sacrificial. The sun is his eye, his breath is the wind, his wide-open mouth is Fire, the universal energy; Time is the self of the horse sacrificial. Heaven is his back and the mid-region is his belly, earth is his footing, — the quarters are his flanks and their intermediate regions are his ribs; the seasons are his members, the months and the half months are their joints, the days and nights are that on which he stands, the stars are his bones and the sky is the flesh of his body. The strands are the food in his belly, the rivers are his veins, the mountains are his liver and lungs, herbs and plants are the hairs of his body; the rising day is his front portion and the setting day is his hinder portion. When he stretches himself, then it lightens; when he shakes himself, then it thunders; when he urines, then it rains. Speech verily is the voice of him. Day was the grandeur that was born before the horse as he galloped, the eastern ocean gave it

birth. Night was the grandeur that was born in his rear and its birth was in the western waters. These were the grandeurs that arose to being on either side of the horse. He became Haya and carried the gods,—Vajin and bore the Gandharvas,—Arvan and bore the Titans,—Aswa and carried mankind. The sea was his brother and the sea his birthplace.”

This passage, full of a gigantic imagery, sets the key to the Upanishad and only by entering into the meaning of its symbolism can we command the gates of this many-mansioned city of Vedantic thought. There is never anything merely poetic or ornamental in the language of the Upanishads. Even in this passage which would at first sight seem to be sheer imagery, there is a choice, a selecting eye, an intention in the images. They are all dependent not on the author’s unfettered fancy, but on the common ideas of the early Vedantic theosophy. It is fortunate, also, that the attitude of the Upanishads to the Vedic sacrifices is perfectly plain from this opening. We shall not stand in danger of being accused of reading modern subtleties into primitive minds or of replacing barbarous superstitions by civilised mysticism. The Aswamedha or Horse-Sacrifice is, as we shall see, taken as the symbol of a great spiritual advance, an evolutionary movement, almost, out of the dominion of apparently material forces into a higher spiritual freedom. The Horse of the Aswamedha is, to the author, a physical figure representing, like some algebraical symbol, an unknown quantity of force & speed. From the imagery it is evident that this force, this speed, is something worldwide, something universal; it fills the regions with its body, it occupies Time, it gallops through Space, it bears on in its speed men and gods and the Titans. It is the Horse of the Worlds,—and yet the Horse sacrificial.

Let us regard first the word Aswa and consider whether it throws any light on the secret of this image. For we know that the early Vedantins attached great importance to words in both their apparent and their hidden meaning and no one who does not follow them in this path, can hope to enter into the associations with which their minds were full. Yet the importance of associations in colouring and often in determining our thoughts,

determining even philosophic and scientific thought when it is most careful to be exact & free, should be obvious to the most superficial psychologist. Swami Dayananda's method with the Vedas, although it may have been too vigorously applied and more often out of the powerful mind of the modern Indian thinker than out of the recovered mentality of the old Aryan Rishis, would nevertheless, in its principle, have been approved by these Vedantins. Now the word Aswa must originally have implied strength or speed or both before it came to be applied to a horse. In its first or root significance it means to exist pervadingly and so to possess, have, obtain or enjoy. It is the Greek echo (OS. [Old Sanskrit] *ashâ*), the ordinary word in Greek for "I have". It means, also and even more commonly, to eat or enjoy. Beside this original sense inherent in the roots of its family it has its own peculiar significance of existence in force — strength, solidity, sharpness, speed, — in ashan and ashma, a stone, ashani, a thunderbolt, asri, a sharp edge or corner, (Latin acer, acris, sharp, acus, a point etc) and finally aswa, the strong, swift horse. Its fundamental meanings are, therefore, pervading existence, enjoyment, strength, solidity, speed. Shall we not say, therefore, that aswa to the Rishis meant the unknown power made up of force, strength, solidity, speed and enjoyment that pervades and constitutes the material world?

But there is a danger that etymological fancies may mislead us. It is necessary, therefore, to test our provisional conclusion from philology by a careful examination of the images of this parable. Yet before we proceed to this inquiry, it is as well to note that in the very opening of his second Brahmana, the Rishi passes on immediately from aswa the horse to Ashanaya mrityu, Hunger that is death and assigns this hunger that is death as the characteristic, indeed the very nature of the Force that has arranged and developed — evolved, as the moderns would say — the material worlds.

"Dawn" says the Rishi, "is the head of the horse sacrificial." Now the head is the front, the part of us that faces and looks out upon our world, — and Dawn is that part to the Horse of the worlds. This goddess must therefore be the opening out of

the world to the eye of being — for as day is the symbol of a time of activity, night of a time of inactivity, so dawn images the imperfect but pregnant beginnings of regular cosmic action; it is the Being's movement forward, it is its impulse to look out at the universe in which it finds itself and looking towards it, to yearn, to desire to enter upon possession of a world which looks so bright because of the brightness of the gaze that is turned upon it. The word Ushas means etymologically coming into manifested being; and it could mean also desire or yearning. Ushas or Dawn to the early thinkers was the impulse towards manifest existence, no longer a vague movement in the depths of the Unmanifest, but already emerging and on the brink of its satisfaction. For we must remember that we are dealing with a book full of mystical imagery, which starts with & looks on psychological and philosophical truths in the most material things and we shall miss its meaning altogether, if in our interpretation we are afraid of mysticism.

The sun is the eye of this great Force, the wind is its life-breath or vital energy, Fire is its open mouth. We are here in the company of very familiar symbols. We shall have to return to them hereafter but they are, in their surface application, obvious and lucid. By themselves they are almost sufficient to reveal the meaning of the symbol, — yet not altogether sufficient. For, taken by themselves, they might mislead us into supposing the Horse of the Worlds to be an image of the material universe only, a figure for those movements of matter & in matter with which modern Science is so exclusively preoccupied. But the next image delivers us from passing by this side-gate into materialism. "Time in its period is the self of the Horse Sacrificial." If we accept for the word *atma* a significance which is also common and is, indeed, used in the next chapter, if we understand by it, as I think we ought here to understand by it, "substance" or "body", the expression, in itself remarkable, will become even more luminous and striking. Not Matter then, but Time, a mental circumstance, is the body of this force of the material universe whose eye is the sun and his breath the wind. Are we then to infer that the Seer denies the essential materiality of

matter? does he assert it to be, as Huxley admitted it to be, "a state of consciousness"? We shall see. Meanwhile it is evident already that this Horse of the Worlds is not an image merely of matter or material force, but, as we had already supposed it to be, an image of the power which pervades and constitutes the material universe. We get also from this image about Time the idea of it as an unknown power—for Time which is its self or body, is itself an unknown quantity. The reality which expresses itself to us through Time—its body—but remains itself ungrasped, must be still what men have always felt it to be, the unknown God.

In the images that immediately follow we have the conception of Space added to the conception of Time and both are brought together side by side as constituents of the being of the horse. For the sky is the flesh of his body, the quarters his flanks & the intermediate regions his ribs—the sky, nabhas, the ether above us in which the stellar systems are placed,—and these stellar systems themselves, concentrations of ether, are the bones which support the flesh and of which life in this spatial infinity takes advantage in order more firmly to place & organise itself in matter. But side by side with this spatial image is that of the seasons reminding us immediately & intentionally of the connection of Time to Space. The seasons, determined for us by the movements of the sun & stars, are the flanks of the horse and he stands upon the months and the fortnights—the lunar divisions. Space, then, is the flesh constituting materially this body of Time which the Sage attributes to his Horse of the worlds,—by movement in Space its periods are shaped & determined. Therefore we return always to the full idea of the Horse—not as an image of matter, not as a symbol of the unknown supra-material Power in its supra-material reality, but of that Power expressing itself in matter—materially, we might almost say, pervading & constituting the universe. Time is its body,—yes, but sanvatsara not kala, Time in its periods determined by movement in Space, not Time in its essentiality.

Moreover, it is that Power imaging itself in Cosmos, it is the Horse of the Worlds. For, we read, "Heaven is its back, the

mid-region is its belly, earth is its footing" — pajasyam, the four feet upon which it stands. We must be careful not to confuse the ancient Seer's conception of the universe with our modern conception. To us nothing exists except the system of gross material worlds — annamayam jagat, — this earth, this moon, this sun & its planets, these myriad suns and their systems. But to the Vedantic thinkers the universe, the manifest Brahman, was a harmony of worlds within worlds; they beheld a space within our space but linked with it, they were aware of a Time connected with our Time but different from it. This earth was Bhur. Rising in soul into the air above the earth, the antariksham, they thought they came into contact with other sevenfold earths in which just as here matter is the predominant principle, so there nervous or vital energy is the main principle or else manas, still dependent on matter & vital energy; these earths they called Bhuvan. And rising beyond this atmosphere into the ethereal void they believed themselves to be aware of other worlds which they called Swar or heaven, where again in its turn mind, free, blithe, delivered from its struggle to impose itself in a world not its own upon matter & nerve-life, is the medium of existence & the governing Force. If we keep in mind these ideas, we shall easily understand why the images are thus distributed in the sentence I have last quoted. Heaven is the back of the Horse, because it is on mind that we rest, mind that bears up the Gods & Gandharvas, Titans & men; — the mid-region is the belly because vital energy is that which hungers & devours, moves restlessly everywhere seizing everything and turning it into food or else because mind is the womb of all our higher consciousness; — earth is the footing because matter here, outward form, is the fundamental condition for the manifestation of life, mind and all higher forces. On Matter we rest and have our firm stand; out of Matter we rise to our fulfilment in Spirit.

Then once again, after these higher & more remote suggestions, we are reminded that it is some Force manifesting in matter which the Horse symbolises; the material manifestation constitutes the essence of its symbolism. The images used are of an almost gross materiality. Some of them are at the same

time of a striking interest to the practical student of Yoga, for he recognises in them allusions to certain obscure but exceedingly common Yogic phenomena. The strands of the rivers are imaged as the undigested food in the horse's belly — earth not yet assimilated or of sufficient consistency for the habitual works of life; the rivers, distributing the water that is the life blood of earth's activities, are his veins; the mountains, breathing in health for us from the rarer altitudes and supporting by the streams born from them the works of life, are his lungs and liver; herbs and plants, springing up out of the sap of earth, are the hairs covering & clothing his body. All that is clear enough and designedly superficial. But then the Upanishad goes on to speak no longer of superficial circumstances but of the powers of the Horse. Some of these are material powers, the thunder, the lightning, the rain. When he stretches himself, then it lightens; when he shakes himself, then it thunders; when he urines, then it rains — vijrimbhate, extends himself by intensity, makes the most of his physical bulk & force; vidhunute, throws himself out by energy, converts his whole body into a motion & force; these two words are of a great impetuosity & vehemence, and taken in conjunction with what they image, extremely significant. The Yогin will at once recognise the reference to the electrical manifestations visible or felt which accompany so often the increase of concentration, thought & inner activity in the waking condition — electricity, *vidyutas*, the material symbol, medium & basis of all activities of knowledge, *sarvani vijnanavijrimbhitanī*. He will recognise also the meghadhwani, one of the characteristic sounds heard in the concentration of Yoga, symbolical of kshatratejas and physically indicative of force gathering itself for action. The first image is therefore an image of knowledge expressing itself in matter, the second is an image of power expressing itself in matter. The third, the image of the rain, suggests that it is from the mere waste matter of his body that this great Power is able to fertilise the world & produce sustenance for the myriad nations of his creatures. "Speech verily is the voice of him." Vagevasya *vak*. Speech with its burden of definite thought, is the neighing of this mighty horse of sacrifice; by that this great Power in matter

expresses materially the uprush of his thought & yearning & emotion, visible sparks of the secret universal fire that is in him — guhahitam.

But the real powers, the wonderful fundamental greatnesses of the Horse are, the Sage would have us remember, not the material. What are they then? The sunrise & sunset, day & night are their symbols, not the magnitudes of space, but the magnitudes of Time,— Time, that mysterious condition of universal mind which alone makes the ordering of the universe in Space possible, although its own particular relations to matter are necessarily determined by material events & movements— for itself subtle as well as infinite it offers no means by which it can be materially measured. Sunrise & sunset, that is to say birth & death, are the front & hind part of the body of the horse, Time expressed in matter. But on Day & Night the sage fixes a deeper significance. Day is the symbol of the continual manifestation of material things [in] the vyakta, the manifest or fundamentally in Sat, in infinite being; Night is the symbol of their continual disappearance in Avyakta, the unmanifest or finally into Asat, into infinite non-being. They appear according to the swift movement of this Horse of the Worlds, anu ajayata, or, as I have written, translating the idea & rhythm of the Upanishad rather than the exact words, as he gallops. Day is the greatness that appears in his front, Night is the greatness that appears in his rear,— whatever this Time-Spirit, this Zeitgeist, turns his face towards or arrives at as he gallops through Time, that appears or, as we say, comes into being, whatever he passes away from & leaves, that disappears out of being or, as we say, perishes. Not that things are really destroyed, for nothing that is can be destroyed — nabhvavo vidyate satah, but they no longer appear, they are swallowed up in this darkness of his refusal of consciousness; for the purposes of manifestation they cease to exist. All things exist already in Parabrahman, but all are not here manifest. They are already there in Being, not in Time. The universal Thought expressing itself as Time reaches them, they seem to be born; It passes away from them, they seem to perish; but there they still are, in Being, but not in Time. These

two greatnesses of the appearance of things in Time & Space & their disappearance in Time & Space act always & continuously so long as the Horse is galloping, are his essential greatnesses. Etau vai mahimanau. The birth of one is in the eastern ocean, of the other in the western, that is to say in Sat & Asat, in the ocean of Being & the ocean of denial of Being or else in Vyakrita Prakriti & Avyakrita Prakriti, occult sea of Chaos, manifest sea of Cosmos.

Then the sage throws out briefly a description, not exhaustive but typical, of the relations of the Horse to the different natural types of being that seem to possess this universe. For all of them He is the vahana, He bears them up on His infinite strength & speed & motion. He bears all of them without respect of differences, samabhavena, with the divine impartiality and equality of soul—samam hi Brahma. To the type of each individual being this Universal Might adapts himself & seems to take upon himself their image. He is Haya to the Gods, Arvan to the Asura, Vajin to the Gandharvas, Aswa to men. Ye yatha mam prapadyante tans tathaiva bhajamyaham, mama vartmanuvartante manushyah Partha sarvashah. In reality, they are made in his image, not He in theirs, & though he seems to obey them & follow their needs & impulses, though they handle the whip, ply the spur & tug the reins, it is he who bears them on in the courses of Time that are marked out for him by his hidden Self; He is free & exults in the swiftness of his galloping.

But what are these names, Haya, Vajin, Arvan, Aswa? Certainly, they must suggest qualities which fit the Horse in each case to the peculiar type of its rider; but the meaning depends on associations & an etymology which in modern Sanscrit have gone below the surface & are no longer easily seizable. Haya is especially difficult. For this reason Shankara, relying too much on scholarship & intellectual inference & too little on his intuitions, is openly at a loss in this passage. He sees that the word haya for horse must arise from the radical sense of motion borne by the root *hi*; but every horse has motion for his chief characteristic & utility, Arvan & Vajin no less than Haya. Why then should Haya alone be suitable for riding by the gods, why

Arvan for the Asuras? He has, I think, the right intuition when he suggests that it is some peculiar & excelling kind of motion (*visishtagati*) which is the characteristic of Haya. But then, unable to fix on that peculiarity, unable to read any characteristic meaning in the names that follow, he draws back from his intuition and adds that after all, these names may have merely indicated particular kinds of horses attributed mythologically to these various families of riders. But this suggestion would make the passage mere mythology; but the Upanishads, always intent on their deeper object, never waste time over mere mythology. We must therefore go deeper than Shankara and follow out the intuition he himself has abandoned.

I am dwelling on this passage at a length disproportionate to its immediate importance, not only because Shankara's failure in handling it shows the necessity & fruitfulness of trusting our intuitions when in contact with the Upanishads, but because the passage serves two other important uses. It illustrates the Vedantic use of the etymology of words and it throws light on the precise notions of the old thinkers about those super-terrestrial beings with whom the vision of the ancient Hindus peopled the universe. The Vedantic writers, we continually find, dwelt deeply & curiously on the innate & on the concealed meaning of words; *vyakarana*, always considered essential to the interpretation of the Vedas, they used not merely as scholars, but much more as intuitive thinkers. It was not only the actual etymological sense or the actual sense in use but the suggestions of the sound & syllables of the words which attracted them; for they found that by dwelling on them new & deep truths arose into their understandings. Let us see how they use this method in assigning the names assumed by the sacrificial Horse.

Here modern philology comes to our help, for, by the clue it has given, we can revive in its principle the *Nirukta* of our ancestors and discover by induction & inference the old meaning of the Vedic vocables. I will leave Haya alone for the present; because philology unaided does not help us very much in getting at the sense of its application,— in discovering the *visishtagati* which the word conveyed to the mind of the sage. But Vajin &

Arvan are very illuminative. Vaja & Vajin are common Vedic words; they recur perpetually in the Rigveda. The sense of Vaja is essentially substantiality of being attended with plenty, from which it came to signify full force, copiousness, strength, and by an easy transition substance & plenty in the sense of wealth and possessions. There can be no doubt about Vajin. But European scholarship has confused for us the approach to the sense of Arvan. *Ar* is a common Sanscrit root, the basis of *ari*, *Arya*, *Aryama* and a number of well known words. But the scholars tell us that it means to till or plough & the Aryans so called themselves because they were agriculturists and not nomads & hunters. Starting from this premise one may see in Arvan a horse for ploughing as opposed to a draught-animal or a warhorse, & support the derivation by instancing the Latin *arvum*, a tilled field! But even if the Aryans were ploughmen, the Titans surely were not — Hiranyakashipu & Prahlad did not pride themselves on the breaking of the glebe & the honest sweat of their brow! There is no trace of such an association in arvan here, — I know not whether there is any elsewhere in the Vedas. Indeed, this agriculturist theory of the Aryans seems one of the worst of the many irresponsible freaks which scholastic fancifulness has perpetrated in the field of Sanscrit learning. No ancient race would be likely so to designate itself. *Ar* signifies essentially any kind of preeminence in fact or force in act. It means therefore to be strong, high, swift or active, preeminent, noble, excellent or first; to raise, lead, begin or rule; it means also to struggle, fight, to drive, to labour, to plough. The sense of struggle & combat appears in *ari*, an enemy; the Greek *Ares*, the war-god, *arete*, virtue, meaning originally like the Latin *virtus*, valour; the Latin *arma*, weapons. *Arya* means strong, high, noble or warlike, as indeed its use in literature constantly indicates. We can now discover the true force of Arvan,— it is the strong one in command, it is the stallion, or the bull, ie master of the herd, the leader, master or fighter. The word *Asura* also means the strong or mighty one. The Gandharvas are cited here briefly, so as to suit the rapidity of the passage, as the type of a particular class of beings, Gandharvas, Yakshas, Kinnaras

whose unifying characteristic is material ease, prosperity and a beautiful, happy & undisturbed self-indulgence; they are angels of joy, ease, art, beauty & pleasure. For them the Horse becomes full of ease & plenty, the support of these qualities, the *vahana* of the Gandharvas. The Asuras are, similarly, angels of might & force & violent struggle,—self-will is their characteristic, just as an undisciplined fury of self-indulgence is the characteristic of their kindred Rakshasas. It is a self-will capable of discipline, but always huge & impetuous even in discipline, always based on a colossal egoism. They struggle gigantically to impose that egoism on their surroundings. It is for these mighty but imperfect beings that the Horse adapts himself to their needs, becomes full of force & might and bears up their gigantic struggle, their unceasing effort. And Haya? In the light of these examples we can hazard a suggestion. The root meaning is motion; but from certain kindred words, *hil*, to swing, *hind*, to swing, *hind*, to roam about freely & from another sense of *hi*, to exhilarate or gladden, we may, perhaps, infer that haya indicated to the sage a swift, free & joyous, bounding motion, fit movement for the bearer of the gods. For the Aryan gods were devas, angels of joy & brightness, fulfilled in being, in harmony with their functions & surroundings, not like the Titans imperfect, dispossessed, struggling. Firmly seated on the bounding joy of the Horse, they deliver themselves confidently to the exultation of his movements. The sense here is not so plain & certain as with Vajin & Arvan; but Haya must certainly have been one in character with the Deva in order to be his *vahana*; the sense I have given certainly belongs to the word Deva, is discoverable in Haya from its roots, & that this brightness & joyousness was the character of the Aryan gods, I think every reader of Veda & Purana must feel and admit. Last of all, the Horse becomes Aswa for men. But is he not Aswa for all? why particularly for men? The answer is that the Rishi is already moving forward in thought to the idea of Ashanaya Mrityu with which he opens the second Brahmana of the Upanishad. Man, first & supreme type of terrestrial creatures, is most of all subject to this mystery of wasting & death which the Titans bear with difficulty & the gods

& Gandharvas entirely overcome. For in man that characteristic of enjoyment which by enjoying devours & wastes both its object & itself is especially developed & he bears the consequent pressure of Ashanaya Mrityu which can only lighten & disappear if we rise upward in the scale of Being towards Brahman & become truly sons of immortality, Amritasya putrah. That form of force in matter that is self-wasting because it wastes or preys upon others, is man's vahana.

Of this Horse of the Worlds, who bears up all beings, the sea is the brother & the sea is the birthplace. There can be no doubt of the meaning of this symbol. It is the upper ocean of the Veda in which it imaged the superior & divine existence, these are the waters of supramaterial causality. From that this lower ocean of our manifestation derives its waters, its flowing energies, apah; from that when the Vritras are slain & the firmaments opened, it is perpetually replenished, prati samudram syandamanah and of that it is the shadow & the reproduction of its circumstances under the conditions of mental illusion, — Avidya, mother of limitation & death. This image not only consummates this passage but opens a door of escape from that which is to follow. Deliverance from the dominion of Ashanaya Mrityu is possible because of this circumstance that the sea of divine being is bandhu, kin & friend to the Horse. The aparardha proves to be of the same essential nature as the parardha, our mortal part is akin to our unlimited & immortal part, because the Horse of the Worlds comes to us from that divine source & in his essence partakes of its nature, & from what other except this Ocean can the Horse of the Worlds who is material yet supramaterial be said to have derived his being? We, appearing bound, mortal & limited, are manifestations of a free & infinite reality & from that from which we were born comes friendship & assistance for that which we are, towards making us that which we shall be. From our kindred heavens the Love descends always that works to raise up the lower to its brother, the higher.

The Kaivalya Upanishad

ॐ अथाश्वलायनो भगवन्तं परमेष्ठिनमुपसमेत्योवाच ।
अधीहि भगवन् ब्रह्मविद्यां वरिष्ठां सदा सदिभः सेव्यमानां निगृदाम् ।
यथाचिरात् सर्वपापं व्यपोह्य परात्परं पुरुषं याति विद्वान् ॥१॥

OM. Aswalayana to the Lord Parameshti came and said, Teach me, Lord, the highest knowledge of Brahman, the secret knowledge ever followed by the saints, how the wise man swiftly putting from him all evil goeth to the Purusha who is higher than the highest.

Commentary

The Lord Parameshti is Brahma — not the Creator Hiranyagarbha, but the soul who in this kalpa has climbed up to be the instrument of Creation, the first in time of the Gods, the Pitamaha or original & general Prajapati, the Pitamaha, because all the fathers or special Prajapatis, Daksha and others, are his mind born children. The confusion between the Grandsire and the Creator, who is also called Brahma, is common; but the distinction is clear. Thus in the Mundaka Upanishad ब्रह्मा देवानां प्रथमः संबूतः, it is the first of Gods, the earliest birth of Time, the father of Atharva, and not the unborn eternal Hiranyagarbha. In the Puranas Brahma is described as in fear of his life from Madhu and Kaitabha, and cannot be the fearless and immortal Hiranyagarbha. Nor would it be possible for Aswalayana to come to Hiranyagarbha and say “Teach me, Lord,” for Hiranyagarbha has no form nor is He approachable nor does He manifest Himself to men as Shiva and Vishnu do. He is millionfold, Protean, intangible, and for that reason He places in each cycle a Brahma or divine Man between Him and the search and worship of men. It is Brahma or divine Man who is called Parameshti or the one

full of Parameshtham, that which is superlative and highest,— Hiranyagarbha. The power of Hiranyagarbha is in Brahma and creates through him the nama and rupa of things in this cycle.

To Brahma Parameshthi Aswalayana comes as a disciple to a master and says to him, Lord, teach me the Brahmavidya. He specifies the kind of knowledge he requires. It is varishtha, the best or highest, because it goes beyond the triple Brahman to the Purushottam or Most High God; it is secret, because even in the ordinary teaching of Vedanta, Purana and Tantra it is not expressed, it is always followed by the saints, the initiates. The *santah* or saints are those who are pure of desire and full of knowledge, and it is to these that the secret knowledge has been given सदा, from the beginning. He makes his meaning yet clearer by stating the substance of the knowledge—यथा, how, by what means won by knowledge, विद्वान्, one can swiftly put sin from him and reach Purushottam.

There are three necessary elements of the path to Kaivalya,—first, the starting point, vidya, right knowledge, implying the escape from ignorance, non-knowledge and false knowledge; next, the process or means, escape from सर्वपापं, all evil, ie, sin, pain and grief; last, the goal, Purushottam, the Being who is beyond the highest, that is, beyond Turiya, being the Highest. By the escape from sin, pain and grief one attains absolute ananda, and by ananda, the last term of existence, we reach that in which ananda exists. What is that? It is not Turiya who is shivam, shantam, adwaitam, sacchidanandam, but that which is beyond shivam and ashivam, good and evil, shantam and kalilam, calm and chaos, dwaitam and adwaitam, duality and unity. Sat, Chit and Ananda are in this Highest, but He is neither Sat, Chit nor Ananda nor any combination of these. He is All and yet He is neti, neti, He is One and yet He is many. He is Parabrahman and He is Parameswara. He is Male and He is Female. He is Tat and He is Sa. This is the Higher than the Highest. He is the Purusha, the Being in whose image the world and all the Jivas are made, who pervades all and underlies all the workings of Prakriti as its reality and self. It is this Purusha that Aswalayana seeks.

Nila Rudra Upanishad

First Part

Translation

ॐ अपश्यं त्वावरोहन्तं दिवितः पृथिवीमवः ।
अपश्यमस्यन्तं रुद्रं नीलग्रीवं शिखण्डनम् ॥ १ ॥

1. OM. Thee I beheld in thy descending down from the heavens to the earth, I saw Rudra, the Terrible, the azure-throated, the peacock-feathered, as he hurled.

दिव उग्रो अवारुक्षत्प्रत्यष्ठाद् भूम्यामधि ।
जनासः पश्यते महं नीलग्रीवं विलोहितम् ॥ २ ॥

2. Fierce he came down from the sky, he stood facing me on the earth as its lord,— the people behold a mass of strength, azure-throated, scarlet-hued.

एष एत्यवीरहा रुद्रो जलासभेषजाः ।
यत्तेऽक्षेममनीनशाद् वातीकारोऽप्येतु ते ॥ ३ ॥

3. This that cometh is he that destroyeth evil, Rudra the Terrible, born of the tree that dwelleth in the waters; let the globe of the stormwinds come too, that destroyeth for thee all things of evil omen.

नमस्ते भवभावाय नमस्ते भासमन्यवे ।
नमस्ते अस्तु बाहुभ्यामुतो त इषवे नमः ॥ ४ ॥

4. Salutation to thee who bringeth the world into being, salutation to thee, the passionate with mighty wrath. Salutation be to thy arms of might, salutation be to thy angry shaft.

यामिषुं गिरिशन्त हस्ते विभर्यस्तवे ।
शिवां गिरित्र तां कृषु मा हिंसीत्पुरुषान् मम ॥५॥

5. The arrow thou bearest in thy hand for the hurling, O thou that liest on the mountains, make an arrow of blessing, O keeper of the hills, let it not slay my armed men.

शिवेन वचसा त्वा गिरिशाच्छ्रावदामसि ।
यथा नः सर्वमिज्जगदयक्षमं सुमना असत् ॥६॥

6. With fair speech, O mountain-dweller, we sue to thee in the assembly of the folk, that the whole world may be for us a friendly and sinless place.

या ते इषुः शिवतमा शिवं बभूव ते धनुः ।
शिवा शरव्या या तव तया नो मृड जीवसे ॥७॥

7. That thy arrow which is the kindest of all and thy bow which is well-omened and that thy quiver which beareth blessing, by that thou livest for us, O lord of slaughter.

या ते रुद्र शिवा तनूरघोरा पापकाशिनी ।
तया नस्तन्वा शन्तमया गिरिश त्वाभिचाकशत् ॥८॥

8. That thy body, O Terrible One, which is fair and full of kindness and destroyeth sin, not thy shape of terrors, in that thy body full of peace, O mountaineer, thou art wont to be seen among our folk.

असौ यस्ताम्रो अरुण उत बभूर्विलोहितः ।
ये चेमे अभितो रुद्रा दिक्षु श्रिताः सहस्रशो वैषां हेड ईमहे ॥९॥

9. This Aruna of the dawn that is tawny and copper-red and scarlet-hued, and these thy Violent Ones round about that dwell in the regions in their thousands, verily, it is these whom we desire.

Commentary

1. अपश्यं. I beheld. The speaker is the author of the Upanishad, a prince of the Aryan people, as we see from the fifth verse. He records a vision of Rudra descending from the heavens to the earth. अवः, down, is repeated for the sake of vividness. In the second half of the sloka the murti or image in which he beheld the Divine Manifestation is described, Rudra, the God of might and wrath, the neck and throat blue, a peacock's feather as a crest, in the act of hurling a shaft.

2. He proceeds to describe the descent. He descended fiercely, that is, with wrath in his face, gesture and motion and stood facing the seer, प्रत्यष्ठात्, on the earth, and over it, अधि, in a way expressive of command or control. This image of Divine Power, seen by the prince in Yoga, becomes visible to the people in general as a mass of strength, मह, scarlet in colour, deep blue in the neck and throat. मह is strength, bulk, greatness. The manifestation is that of wrath and might. The people see Rudra as a mass of brilliance, scarlet-ringed and crested with blue, the scarlet in Yoga denoting violent passion of anger or desire, the blue sraddha, bhakti, piety or religion.

3. Rudra, whom we know as the slayer of evil, comes. The Rājarshi describes him as born of the tree that is in the waters. भेष is by philology identical with the Latin ficus or figtree, aswattha. The aswattha is the Yogic emblem of the manifested world, as in the Gita, the tree of the two birds in the Swetasvatara Upanishad, the single tree in the blue expanse of the Song of Liberation. The jala is the apah or waters from which the world rises. The rishi then prays that the वातीकारः, mass of winds of which Rudra is lord and which in the tempest of their course blow away all calamity, such as pestilence etc, may come with him.

4. In the fourth verse he salutes the God. Rudra is the Supreme Ishwara, Creator of the World, He is the dreadful, wrathful and destroying Lord, swift to slay and punish. भास्म is passionate

anger, and the word मन्युः denotes a violent disturbed state of mind, passion, either of grief or of anger. भासमन्यवे therefore means, one who is full of the passion of violent anger. Rudra is being saluted as a God of might and wrath, it is therefore to the arms as the seat of strength and the arrow as the weapon of destruction that salutation is made.

5. Rudra is coming in a new form of wrath and destruction in which the Aryans are not accustomed to see him. Apprehensive of the meaning of this vision, the King summons the people and in assembly prayer is offered to Rudra to avert possible calamity. The shaft is lifted to be hurled from the bow; it is prayed that it may be turned into a shaft of blessing, not of wrath. In this verse the Prince prays the God not to slay his men, meaning evidently, the armed warriors of the clan.

Incomplete Commentaries
on the Kena Upanishad

Circa 1912–1914

Kena Upanishad

An Incomplete Commentary

Foreword

As the Isha Upanishad is concerned with the problem of God & the world and consequently with the harmonising of spirituality & ordinary human action, so the Kena is occupied with the problem of God & the Soul and the harmonising of our personal activity with the movement of infinite energy & the supremacy of the universal Will. We are not here in this universe as independent existences. It is evident that we are limited beings clashing with other limited beings, clashing with the forces of material Nature, clashing too with forces of immaterial Nature of which we are aware not with the senses but by the mind. The Upanishad takes for granted that we are souls, not merely life-inspired bodies — into that question it does not enter. But this soul in us is in relation with the outside world through the senses, through the vitality, through mind. It is entangled in the mesh of its instruments, thinks they alone exist or is absorbed in their action with which it identifies itself — it forgets itself in its activities. To recall it to itself, to lift it above this life of the senses, so that even while living in this world, it shall always refer itself & its actions to the high universal Self & Deity which we all are in the ultimate truth of our being — so that we may be free, may be pure & joyous, may be immortal, that is the object of the seer in the Kena Upanishad. Briefly to explain the steps by which he develops and arrives at his point and the principal philosophical positions underlying his great argument, is as always the purpose of this commentary. There is much that might & should be said for the full realisation of this ancient gospel of submission & self-surrender to the Infinite, but it is left to be said in a work of greater amplitude and capacity. Exegesis

in faithful subordination to the strict purport & connotation of the text will be here as always my principle.

The First Part

The Self & the Senses

“By whom controlled, by whom commissioned & sent forth falleth the mind on its object, by whom yoked to its activity goeth abroad this chief of the vital forces? By whom controlled is this word that men speak, and what god set ear & eye to their workings? That which is hearing within hearing, mind of the mind, speech behind the word, he too is the life of vitality & the sight within vision; the calm of soul are liberated from these instruments and passing beyond this world become Immortals... There the eye goes not & speech cannot follow nor the mind; we know it not nor can we decide by reason how to teach of it; for verily it is other than the known & it is beyond the unknown; so have we heard from the men that went before us by whom to us this Brahman was declared. That which is not uttered by speech, but by which speech is expressed, know thou that to be the Soul of things and not this which men here pursue. That which thinketh not by the mind, but by which mind itself is realised, know thou that to be the Soul of things, not this which men here pursue. That which seeth not by sight, but by which one seeth things visible, know thou that to be the Soul of things and not this which men here pursue. That which heareth not by hearing but by which hearing becomes subject to knowledge through the ear, know thou that to be the Soul of things & not this which men here pursue. That which liveth not by the breathing, but by which the breath becometh means of vitality, know thou that to be the Soul of things & not this which men here pursue.”

I

In order to understand the question with which the Upanishad opens its train of thought, it is necessary to remember the ideas of the Vedantic thinkers about the phenomena of sensation, life, mind and ideas which are the elements of all our activity in the body. It is noticeable that the body itself and matter, [the] principle of which the body is a manifestation, are not even mentioned in this Upanishad. The problem of matter the Seer supposes to have been so far solved for the inquirer that he no longer regards the physical state of consciousness as fundamental and no longer considers it as a reality separate from consciousness. All this world is only one conscious Being. Matter to the Vedantist is only one of several states—in reality, movements—of this conscious being,—a state in which this universal consciousness, having created forms within & out of itself as substance, absorbs & loses itself by concentration in the idea of being as substance of form. It is still conscious, but, as form, ceases to be self-conscious. The Purusha in matter, the Knower in the leaf, clod, stone, is involved in form, forgets himself in this movement of his Prakriti or Mode of Action and loses hold in outgoing knowledge of his self of conscious being & delight. He is not in possession of himself; He is not Atmavan. He has to get back what he has lost, to become Atmavan, and that simply means that He has to become gradually aware in matter of that which He has hidden from Himself in matter. He has to evolve what He has involved. This recovery in knowledge of our full and real self is the sole secret meaning & purpose of evolution. In reality it is no evolution, but a manifestation. We are already what we become. That which is still future in matter, is already present in Spirit. That which the mind in matter does not yet know, it is hiding from itself—that in us which is behind mind & informs it already knows—but it keeps its secret.

For that which we regard as matter, cannot be, if the Vedantic view is right, mere matter, mere inert existence, eternally bound by its own inertness. Even in a materialistic view of the world matter cannot be what it seems, but is only a form or

movement of Force which the Indians call Prakriti. This Force, according to the Upanishads, is composed in its action & capable in its potentiality of several principles, of which matter, mind & life are those already manifestly active in this world, and where one of these principles is active, the others must also be there, involved in it; or, to put it in another way, Force acting as one of its own principles, one of its movements, is inherently capable even in that movement of all the others. If in the leaf, clod, stone & metal life and mind are not active, it is not because they are not present, but because they are not yet brought forward (*prakrita*) and organised for action. They are kept concealed, in the background of the consciousness-being which is the leaf, stone or clod; they are not yet *vilu*, as the Rigveda would say, but *guha*, not *vyakta*, but *avyakta*. It is a great error to hold that that which is not just now or in this or that place manifest or active, does not there & then exist. Concealment is not annihilation; non-action is not non-being nor does the combination of secrecy & inaction constitute non-existence.

If it is asked how we know that there is the Purusha or Knower in the leaf, clod or stone,—the Vedantin answers that, apart from the perceptions of the Seer & the subjective & objective experiences by which the validity of the perceptions is firmly established in the reason, the very fact that the Knower emerges in matter shows that He must have been there all the time. And if He was there in some form of matter He must be there generally & in all; for Nature is one & knows no essential division, but only differences of form, circumstance and manifestation. There are not many substances in this world, but one substance variously concentrated in many forms; not many lives, but one liver variously active in many bodies; not many minds, but one mind variously intelligent in many embodied vitalities.

It is, at first sight, a plausible theory that life & mind are only particular movements of matter itself under certain conditions & need not therefore be regarded as independent immaterial movements of consciousness involved in matter but only as latent material activities of which matter is capable. But this view can only be held so long as it appears that mind and life can only

exist in this body & cease as soon as the body is broken up, can only know through the bodily instruments and can only operate in obedience to and as the result of certain material movements. The sages of the Upanishads had already proved by their own experience as Yogins that none of these limitations are inherent in the nature of life & mind. The mind & life which are in this body can depart from it, intact & still organised, and act more freely outside it; mind can know even material things without the help of the physical eye, touch or ear; life itself is not conditioned necessarily, and mind is not even conditioned usually, though it is usually affected, by the state of the body or its movements. It can always and does frequently in our experience transcend them. It can entirely master & determine the condition of the body. Therefore mind is capable of freedom from the matter in which it dwells here,—freedom in being, freedom in knowledge, freedom in power.

It is true that while working in matter, every movement of mind produces some effect & consequently some state or movement in the body, but this does not show that the mind is the material result of matter any more than steam is the mechanical result of the machine. This world in which mind is at present moving, in the system of phenomena to which we are now overtly related, is a world of matter, where, to start with, it is true to say Annam vai sarvam; All is matter. Mind and life awaken in it & seek to express themselves in it. Since & when they act in it, every movement they make, must have an effect upon it and produce a movement in it, just as the activity of steam must produce an effect in the machine in which its force is acting. Mind and life also use particular parts of the bodily machine for particular functions and, when these parts are injured, those workings of life & mind are correspondingly hampered, rendered difficult or for a time impossible — & even altogether impossible unless life & mind are given time, impulse & opportunity to readjust themselves to the new circumstances & either recreate or patch up the old means or adopt a new system of function. It is obvious that such a combination of time, impulse & opportunity cannot usually or even often occur,—

cannot occur at all unless men have the faith, the nistha — unless that is to say, they know beforehand that it can be done & have accustomed themselves to seek for the means. Bodies, drowned & “lifeless”, — nothing is really lifeless in the world, — can now be brought back to life because men believe & know that it can be done & have found a means to do it before the organised mind & life have had time to detach themselves entirely from the unorganised life which is present in all matter. So it is with all powers & operations. They are only impossible so long as we do not believe in their possibility & do not take the trouble or have not the clarity of mind to find their right process.

Life & mind are sometimes believed to descend,— or the hypothesis is advanced— into this world from another where they are more at home. If by world is meant not another star or system in this material universe, but some other systematisation of universal consciousness, the Vedantin who follows the Vedas & Upanishads, will not disagree. Life & mind in another star or system of this visible universe might, it is conceivable, be more free and, therefore, at home; but they would still be acting in a world whose basis & true substance was matter. There would therefore be no essential alteration in the circumstances of their action nor would the problem of their origin here be at all better solved. But it is reasonable to suppose that just as here Force organises itself in matter as its fundamental continent & movement, so there should be — the knowledge & experience of the ancient thinkers showed them that there are — other systems of consciousness where Force organises itself in life and in mind as its fundamental continent & movement. — It is not necessary to consider here what would be the relations in Time & Space of such worlds with ours. Life & mind might descend, ready organised, from such worlds and attach themselves to forms of matter here; but not in the sense of occupying physically these material forms & immediately using them, but in the sense of rousing by the shock of their contact & awakening to activity the latent life & mind in matter. That life & mind in matter would then proceed, under the superior help & impulse, to organise a nervous system for the use of life and a system of life-movements

in the nerves for the use of mind fit to express in matter the superior organisations who have descended here. It was indeed the belief of the ancients that — apart from the government of each living form by a single organised personality — such help from the worlds of life & mind was necessary to maintain & support all functionings of life & mind here below because of the difficulty otherwise of expressing & perfecting them in a world which did not properly belong to them but to quite other movements. This was the basis of the idea of Devas, Daityas, Asuras, Rakshasas, Pisachas, Gandharvas etc, with which the Veda, Upanishad & Itihasa have familiarised our minds. There is no reason to suppose that all worlds of this material system are the home of living things — on the contrary the very reverse is likely to be the truth. It is, probably, with difficulty & in select places that life & mind in matter are evolved.

If it were otherwise, if life & mind were to enter, organised or in full power, (such as they must be in worlds properly belonging to them) into material forms, those forms would immediately begin to function perfectly & without farther trouble. We should not see this long & laborious process of gradual manifestation, so laboured, so difficult, the result of so fierce a struggle, of such a gigantic toil of the secret Will in matter. Everywhere we see the necessity of a gradual organisation of forms. What is it that is being organised? A suitable system for the operations of life, a suitable system for the operations of mind. There are stirrings similar to those that constitute life in inanimate things, in metals — as Science has recently discovered, — vital response & failure to respond, but no system for the regular movement of vitality has been organised; therefore metals do not live. In the plant we have a vital system, one might almost say a nervous system, but although there is what might be called an unconscious mind in plants, although in some there are even vague movements of intelligence, the life system organised is suitable only for the flow of rasa, sap, sufficient for mere life, not for prana, nerve force, necessary for the operation in matter of mind. Apah is sufficient for life, vayu is necessary for life capable of mind. In the animal life is organised on a different plan and a nervous system capable

of carrying currents of pranic force is developed as one rises in the scale of animal creation, until it becomes perfect in man. It is, therefore, life & mind awakening in matter & manifesting with difficulty that is the truth of this material world, not the introduction of a ready made life entirely foreign to it in its own potentiality.

If it be said that the life & mind attaching themselves to matter only enter it by degrees as the system becomes more fit, putting more & more of itself into the body which is being made ready for it, that also is possible & conceivable. We are indeed led to see, as we progress in self-knowledge, that there is a great mental activity belonging to us only part of which is imperfectly expressed in our waking thoughts & perceptions—a sub-conscious or super-conscious Self which stores everything, remembers everything, foresees everything, in a way knows everything knowable, has possession of all that is false & all that is true, but only allows the waking mind into a few of its secrets. Similarly our life in the body is only a partial expression of the immortal life of which we are the assured possessors. But this only proves that we ourselves are not in our totality or essentiality the life & mind in the body, but are using that principle for our purpose or our play in matter. It does not prove that there is no principle of life & mind in matter. On the contrary, there is reason to believe that matter is similarly involved in mind & life & that wherever there is movement of life & mind, it tends to develop for itself some form of body in which securely to individualise itself. By analogy we must suppose life & mind to be similarly involved & latent in matter & therefore evolvable in it & capable of manifestation.

We know then the theory of the early Vedantins with regard to the relations of life, mind and matter & we may now turn to the actual statements of the Upanishad with regard to the activities of life & mind and their relation to the soul of things, the Brahman.

II

Mind

If the Upanishads were no more than philosophical speculations, it would be enough in commenting upon them to state the general thought of a passage and develop its implications in modern language and its bearing upon the ideas we now hold. Or if they only expressed in their ancient language general conclusions of psychological experience, which are still easily accessible & familiar, nothing would be gained by any minute emphasis on the wording of our Vedantic texts. But these great writings are not the record of ideas; they are a record of experiences; and those experiences, psychological and spiritual, are as remote from the superficial psychology of ordinary men as are the experiments and conclusions of Science from the ordinary observation of the peasant driving his plough through a soil only superficially known or the sailor of old guiding his bark by the few stars important to his rudimentary investigation. Every word in the Upanishads arises out of a depth of psychological experience and observation we no longer possess and is a key to spiritual truths which we can no longer attain except by discipline of a painful difficulty. Therefore each word, as we proceed, must be given its due importance. We must consider its place in the thought and discover the ideas of which it was the spoken symbol.

The opening phrase of the Kena Upanishad, *keneshitam patati preshitam manah*, is an example of this constant necessity. The Sage is describing not the mind in its entirety, but that action of it which he has found the most characteristic and important, that which, besides, leads up directly to the question of the secret source of all mental action, its president and impelling power. The central and common experience of this action is expressed by the word *patati*, falls. Motion forward and settling upon an object are the very nature of mind when it acts.

Our modern conception of mind is different; while acknowledging its action of movement and forward attention, we are apt to regard its essential & common action to be rather receptivity

of objects, than research of objects. The scientific explanation of mental activity helps to confirm this notion. Fixing its eye on the nervous system & the brain, the physical channels of thought, Physiology insists on the double action of the afferent and the efferent nerves as constituting the action of thought. An object falls on the sense-organ,— instead of mind falling on the object,— the afferent nerves carry the impact to the brain-cells, their matter undergoes modification, the brain-filaments respond to the shock, a message—the will of the cell-republic—returns through the efferent nerves and that action of perception,— whether of an object or the idea of an object or the idea of an idea, which is the essence of thinking—is accomplished. What else the mind does is merely the internal modification of the grey matter of the brain and the ceaseless activity of its filaments with the store of perceptions & ideas already amassed by these miraculous bits of organised matter. These movements of the bodily machine are all, according to Physiology. But it has been necessary to broach the theory of thought-waves or vibrations created by those animalcular amusements in order to account for the results of thought.

However widely & submissively this theory has been received by a hypnotised world, the Vedantist is bound to challenge it. His research has fixed not only on the physiological action, the movement of the bodily machine, but on the psychological action, the movement of the force that holds the machine,— not only on what the mind does, but on what it omits to do. His observation supported by that careful analysis & isolation in experiment of the separate mental constituents, has led him to a quite different conclusion. He upholds the wisdom of the sage in the phrase *patati manas*. An image falls on the eye,— admittedly, the mere falling of an image on the eye will not constitute mental perception—the mind has to give it attention; for it is not the eye that sees, it is the mind that sees through the eye as an instrument, just as it is not the telescope that sees an otherwise invisible sun, but the astronomer behind the telescope who sees. Therefore, physical reception of images is not sight; physical reception of sounds is not hearing. For how many sights & sounds besiege

us, fall on our retina, touch the tympanum of the ear, yet are to our waking thought non-existent! If the body were really a self-sufficient machine, this could not happen. The impact must be admitted, the message must rush through the afferent nerve, the cells must receive the shock, the modification, the response must occur. A self-sufficient machine has no choice of action or non-action; unless it is out of order, it must do its work. But here we see there is a choice, a selection, an ample power of refusal; the practical researches of the Yogins have shown besides that the power of refusal can be absolute, that something in us has a sovereign & conscious faculty of selection or total prohibition of perception & thought & can even determine how, if at all, it shall respond, can even see without the eye & hear without the ear. Even European hypnotism points to similar phenomena. The matter cannot be settled by the rough & ready conclusions of impatient Physiology eager to take a shortcut to Truth & interpret the world in the light of its first astonished discoveries.

Where the image is not seen, the sound is not heard, it is because the mind does not settle on its object—na patati. But we must first go farther & inquire what it is that works in the afferent & efferent nerves & insures the attention of the nerves. It is not, we have seen, mere physical shock, a simple vibration of the bodily matter in the nerve. For, if it were, attention to every impact would be automatically & inevitably assured. The Vedantins say that the nerve system is an immensely intricate organised apparatus for the action of life in the body; what moves in them is prana, the life principle, materialised, aerial (vayavya) in its nature and therefore invisible to the eye, but sufficiently capable of self-adaptation both to the life of matter & the life of mind to form the meeting place or bridge of the two principles. But this action of life-principle is not sufficient in itself to create thought, for if it were mind could be organised in vegetable as readily as in animal life. It is only when prana has developed a sufficient intensity of movement to form a medium for the rapid activities of mind and mind, at last possessed of a physical instrument, has poured itself into the life-movement and taken possession of it that thought becomes possible. That

which moves in the nerve system is the life-current penetrated & pervaded with the habitual movement of mind. When the movement of mind is involved in the life-movement, as it usually is in all forms, there is no response of mental knowledge to any contact or impression. For just as even in the metal there is life, so even in the metal there is mind; but it is latent, involved, its action secret,—unconscious, as we say, and confined to a passive reception into matter of the mind-forms created by these impacts. This will become clearer as we penetrate deeper into the mysteries of mind; we shall see that even though the clod, stone & tree do not think, they have in them the secret matrix of mind and in that matrix forms are stored which can be translated into mental symbols, into perception, idea and word. But it is only as the life-currents gain in intensity, rapidity & subtlety, making the body of things less durable but more capable of works, that mind-action becomes increasingly possible & once manifested more & more minutely & intricately effective. For body & life here are the *pratistha*, the basis of mind. A point, however, comes at which mind has got in life all that it needs for its higher development; and from that time it goes on enlarging itself & its activities out of all proportion to the farther organisation of its bodily & vital instruments or even without any such farther organisation in the lower man.

But even in the highest forms here in this material world, matter being the basis, life an intermediary and mind the third result, the normal rule is that matter & life (where life is expressed) shall always be active, mind only exceptionally active *in the body*. In other words, the ordinary action of mind is subconscious and receptive, as in the stone, clod & tree. The image that touches the eye, the sound that touches the ear is immediately taken in by the mind-informed life, the mind-informed & life-informed matter & becomes a part of the experience of Brahman in that system. Not only does it create a vibration in body, a stream of movement in life but also an impression in mind. This is inevitable, because mind, life & matter are one. Where one is, the others are, manifest or latent, involved or evolved, supraluminally active or subliminally active. The sword which

has struck in the battle, retains in itself the mental impression of the stroke, the striker & the stricken and that ancient event can be read centuries afterwards by the Yogi who has trained himself to translate its mind-forms into the active language of mind. Thus everything that occurs around us leaves on us its secret stamp & impression. That this is so, the recent discoveries of European psychology have begun to prove & from the ordinary point of view, it is one of the most amazing & stupendous facts of existence; but from the Vedantist's it is the most simple, natural & inevitable. This survival of all experience in a mighty & lasting record, is not confined to such impressions as are conveyed to the brain through the senses, but extends to all that can in any way come to the mind,— to distant events, to past states of existence & old occurrences in which our present selves had no part, to the experiences garnered in dream & in dreamless sleep, to the activities that take place during the apparent unconsciousness or disturbed consciousness of slumber, delirium, anaesthesia & trance. Unconsciousness is an error; cessation of awareness is a delusion.

It is for this reason that the phenomenon on which the sage lays stress as the one thing important & effective in mental action here & in the waking state, is not its receptiveness, but its outgoing force— patati. In sense-activity we can distinguish three kinds of action— first, when the impact is received subconsciously & there is no message by the mind in the life current to the brain,— even if the life current itself carry the message— secondly, when the mind is aware of an impact, that is to say, falls on its object, but merely with the sensory part of itself & not with the understanding part; thirdly, when it falls on the object with both the sensory & understanding parts of itself. In the first case, there is no act of mental knowledge, no attention of eye or mind; as when we pass, absorbed in thought, through a scene of Nature, yet have seen nothing, been aware of nothing. In the second, there is an act of sensory knowledge, the mind in the eye attends & observes, however slightly; the thing is perceived but not conceived or only partly conceived, as when the maid-servant going about her work, listens to the Hebrew of her

master, hearing all, but distinguishing & understanding nothing, not really attending except through the ear alone. In the third, there is true mental perception & conception or the attempt at perception & conception, and only the last movement comes within the description given by the Sage — ishitam preshitam patati manas. But we must observe that in all these cases somebody is attending, something is both aware & understands. The man, unconscious under an anaesthetic drug in an operation, can in hypnosis when his deeper faculties are released, remember & relate accurately everything that occurred to him in his state of supposed unconsciousness. The maid-servant thrown into an abnormal condition, can remember every word of her master's Hebrew discourse, & repeat in perfect order & without a single error long sentences in the language she did not understand. And, it may surely be predicted, one day we shall find that the thing our minds strove so hard to attend to and fathom, this passage in a new language, that new & unclassed phenomenon, was perfectly perceived, perfectly understood, automatically, infallibly, by something within us which either could not or did not convey its knowledge to the mind. We were only trying to make operative on the level of mind, a knowledge we already in some recess of our being perfectly possessed.

From this fact appears all the significance of the sage's sentence about the mind.

A Commentary on the Kena Upanishad

Foreword

The Upanishads are an orchestral movement of knowledge, each of them one strain in a great choral harmony. The knowledge of the Brahman, which is the Universality of our existence, and the knowledge of the world, which is the multiplicity of our existence, but the world interpreted not in the terms of its appearances as in Science, but in the terms of its reality, is the one grand and general subject of the Upanishads. Within this cadre, this general framework each Upanishad has its smaller province; each takes its own standpoint of the knower and its resulting aspect of the known; to each there belongs a particular motive and a distinguishing ground-idea. The Isha Upanishad, for example, is occupied with the problem of spirituality and life, God and the world; its motive is the harmonising of these apparent opposites and the setting forth of their perfect relations in the light of Vedantic knowledge. The Kena is similarly occupied with the problem of the relations between God and the soul and its motive is to harmonise our personal activities of mental energy and human will with the movement of the infinite divine Energy and the supremacy of the universal Will. The Isha, therefore, has its eye more upon the outward Brahman and our action in and with regard to the world we see outside us; the Kena fixes rather on our psychological action and the movements within us. For on this internal relation with the Brahman must evidently depend, from it must evidently arise that attitude towards the external world, the attitude of oneness with all these multitudinous beings which the Isha gives to us as the secret of a perfect & liberated existence. For we are not here in the phenomenal world as independent existences; we appear as limited beings clashing with other limited beings, clashing with the forces of material Nature, clashing too with

forces of immaterial Nature of which we are aware not with the physical senses but with the mind. We must become this multitudinous world, become it in our souls, obviously, not in our body & senses. The body & senses are intended to keep the multitudinousness,—they are there to prevent God's worldwide time-filling play from sinking back into the vague & inchoate. But in the soul there must be nothing but the sense & rapture of oneness in the various joy of multitude. How is that possible? It is possible because our relations with others are not in reality those of separate life-inspired bodies, but of the great universal movement of a single soul — ekah sanatanah,— broken up into separate waves by concentration in these many life-inspired bodies which we see appearing like temporary crests, ridges and bubbles in the divine ocean, apah. This soul in us is in relation to the outside world through the senses, through vitality, through mind. But it is entangled in the meshes of its instruments; it thinks they alone exist or is absorbed in their action with which it tends to identify itself preponderatingly or wholly;—it forgets itself in its activities. To recall the soul in man to self-knowledge, to lift it above the life of the senses [.....] always refer its activities to that highest Self and Deity which [we] ultimately are, so that we may be free and great, may be pure and joyous, be fulfilled and immortal,—this is the governing aim of the Kena Upanishad. I propose in my commentary to follow with some minuteness & care the steps by which the Upanishad develops its aim, to bring out carefully the psychological ideas on which the ancient system was founded and to suggest rather than work out the philosophical positions which are presupposed in the ancient sage's treatment of his subject. To work them out in a volume of the present size and purpose would not be possible, nor, if possible, would it be convenient, since it would need a freer and ampler method delivered from the necessity of faithful subordination to the text. The first principle of a commentary must be to maintain the order of ideas and adhere to the purpose and connotation of the text which it takes as its authority.

Three Fragments of Commentary

The first two words of the Kena, like the first two words of the Isha, concentrate into a single phrase the subject of the Upanishad and settle its bounds & its spirit. By whom is our separate mental existence governed? Who is its Lord & ruler? Who sends forth the mind — kena preshitam, who guides it so that it falls in its ranging on a particular object and not another (kena patati)? The mind is our centre; in the mind our personal existence is enthroned. Manomayah pranasariraneta pratisthito 'nne, a mental guide and leader of the life & body has been established in matter, and we suppose & feel ourselves to be that mental being. But what guides the mind itself? Is it the mental ego as the unreflecting thinker usually & naturally supposes? As a matter of fact, it is perfectly within our knowledge and experience that the mental [ego] guides our actions only partially and imperfectly; it is governed by other forces, it is driven often by impulses that it cannot understand, it receives indications from a superconscious source; it is associated in the body with an immense amount of subconscious action of which it is ignorant or over which it has only a partial control. Guide & leader, perhaps, but certainly not the master. Who then is the master? Mind is not all we are. There is a vital force in us independent of mind. For although the two work together & act upon each other, they are still different movements. Our life goes on or ceases, rests or is active caring nothing, after all, about the mind & its notions. It serves it as a master whose interests it cannot afford to neglect, but does not always obey it & insists on the rights of its own separate existence. Who sent out this life force, who yoked it or applied it to these bodies & these actions, kena praiti yuktah Pranah prathamah — the epithet is used to indicate the essential life force as distinct from the particular life-functions called in Vedantic psycho-physics the five pranas.

*

The Kena Upanishad is remarkable for its omissions. It omits to tell us what in relation to the transcendent & immanent Brahman this mind, life, sense activity really are. It omits even to mention one tattwa which one would think as important as mind, life & sense-activity — there is no least reference to matter. These omissions are remarkable; they are also significant. The Sage of the Kena Upanishad has a distinct object in view; he has selected a particular province of knowledge. He is careful not to admit anything which does not bear upon that object or to overstep the strict limits of that province. Matter is beyond his immediate field, therefore he makes no reference to matter. Careless of comprehensiveness, he keeps to the exact matter of his revelation — the working relations between man's mental life and his supreme Existence. With the same scrupulous reserve he abstains from the discussion of the nature of these organs & their essential relation to the supreme Existence. For this knowledge we have to resort to other Scriptures.

*

The subject of the Talavakara Upanishad is indicated and precisely determined by its opening word, Kena, very much as we have seen the subject of the Isha Upanishad to be indicated and precisely determined by its opening words Isha Vasyam. To reveal the true Master of our mental life, the real Force of the Vitality which supports it and of the sense-activities which minister to it and of the mentality which fulfils it in this material existence, is the intention of the Upanishad.

Kena Upanishad

A Partial Translation with Notes

I

1. By whom willed falleth the Mind when it is sent on its mission? By whom yoked goeth forth the primal Breath? By whom controlled is this Speech that men utter? What God yokes the vision¹ and the hearing?
2. That which is the Hearing behind hearing, the Mind of mind, utters the Speech behind speech,—He too is the Life of the life-breath and the Vision behind seeing. The wise put these away and pass beyond; departing from this world they become immortal.
3. There Sight goes not, nor there Speech, nor the Mind arrives. We know it not, nor can we discern how one should teach of this. Other verily is That from the known and then it is beyond the unknown,—so do we hear² from those of old by whom That was expounded unto us.
4. That which remaineth unexpressed by Speech, by which Speech is expressed, know thou That Brahman and not this which men follow³ after here.

¹ The words *chakshub śrotram* do not refer to the physical eye & ear but to the sense activity that uses the organ. This is evident from the expressions in verses 6 & 7, *chakshinshi pashyati* & *śrotram śrutam*—which cannot mean, “one sees the eyes” or “the ear is heard.”

² *Púrve* is used here in the Vedic sense, the ancient sages before us and *śuśrūma* means not the physical hearing but the reception by the Sruti, the inspired Word.

³ *Upásate* is by some understood in the sense of adoration; but the force of the word is here the same as in the Isha Upanishad, *ye avidyám upásate*, which does not mean “those who adore Ignorance”, but those who devote themselves to the state of Ignorance and make it the sole object of their consciousness.

5. That which thinketh⁴ not with the Mind, by which, they say,
 Mind was made subject to mental perception, know thou
 that Brahman⁵ and not this which men follow after here.

⁴ Here and in the verses that follow my rendering differs from the received interpretation which runs, "That which one cannot think with the mind", "That which one cannot see with the eye", etc and in verse 8, "That which one cannot smell by the breath", *yat prāṇena na prāṇīti*. *Prāṇa* is undoubtedly used sometimes of the breath as the medium of the sense of smell & *prāṇīti* to express the action of that sense. But in this Upanishad Prana has been used to indicate the nervous or vital force, the primal or principal Life-Energy, *prāṇah prathamah*, and not a subordinate sense function; the expressions employed almost reconstitute the image of the Horse by which the Life-Energy is symbolised in the language of the Veda and in the opening of the Brihadaranyaka Upanishad. It is difficult to believe that one & the same word means the Life-Breath in the question proposed, verse 1, and the sense of smell in an integral part of the answer given, verse 8. But if Prana means the Life-Energy typified by its obvious physical function, the life-breath, verse 8 can only mean, "He who liveth (breatheth) not by the life-breath", & the other verses must follow suit. For a kindred idea we may compare Katha Upanishad II.2.5. "No mortal lives by the superior or the inferior life-energy, but by another thing men live in which both these have their foundation."

⁵ The received interpretation runs "Know that to be the Brahman and not this which men follow after here," and by this text Shankara supports his metaphysical doctrine that the objective world is not Brahman and is therefore an illusion. The objections to the interpretation seem to me insuperable. The words are not Tadeva Brahmeti twam viddhi, but Tadeva Brahma twam viddhi, which we should naturally interpret "Seek to know that Brahman" ie, "seek to know Brahman in That Consciousness" and not in the form of this objective world to which most men are attached. Moreover, we ought to give their full value to the remarkable expressions "That by which the mind is thought, seeings seen, hearing heard." Such phrases can hardly refer to the pure Absolute remote from all relativity or to the pure Self of Shankara to whom the objective world is non-existent. They indicate another state of consciousness, intermediate, if you will, in which the universe exists not as an objective and external reality, but within the percipient consciousness and is no longer perceived only through the objective organs and their functions, but known directly to the power from which those organs & functions are derived. This idea is confirmed by the apologue in which Brahman appears as a Power governing the universe, the Ish or Lord of the Isha Upanishad, in whom and by whose existence the gods exist, but also by whose active might and its victories they conquer and reign. It is therefore a self-Existence which is active in its stability and conscious in the multiplicity of the universe as well as in its self-unity. The Upanishads, I think, nowhere deny but rather affirm that the objective world also is Brahman. The error of Ignorance is to accept it as represented by the mind & senses in their inadequate symbols and as if they were real in themselves, each in its own separate reality. The wise put from them the error of the mind and the senses and in the self-luminous & self-effective Consciousness beyond attain to that freedom, unity & immortality which we have seen set before humanity as its goal in the Isha Upanishad.

Section Five

Incomplete Translations
of Two Vedantic Texts

Circa 1900–1902

The Karikas of Gaudapada

The Karikas of Gaudapada are a body of authoritative verse maxims and reasonings setting forth in a brief and closely-argued manual the position of the extreme Monistic school of Vedanta philosophy. The monumental aphorisms of the Vedantasutra are meant rather for the master than the learner. Gaudapada's clear, brief and businesslike verses are of a wider utility; they presuppose only an elementary knowledge of philosophic terminology and the general trend of Monistic and Dualistic discussion. This preliminary knowledge granted they provide the student with an admirably lucid and pregnant nucleus of reasoning which enables him at once to follow the Monistic train of thought and to keep in memory its most notable positions. It has also had the advantage, due no doubt to its preeminent merit and the long possession of authority and general use, of a full and powerful commentary by the great Master himself and a farther exposition by the Master's disciple, the clearminded and often suggestive Anandagiri. To modern students there can be no better introduction to Vedanta philosophy — after some brooding over the sense of the Upanishads — than a study of Gaudapada's Karikas and Shankara's commentary with Deussen's System of the Vedanta in one hand and any brief & popular exposition of the Six Darshanas in the other. It is only after the Monistic School has been thoroughly understood that the Modified-Monistic and Dualistic-Monistic with their intermediary shades can be profitably studied. When the Vedantic theory has been mastered, the Sankhya, Yoga, Nyaya & Vaisheshika can in its light be easily mastered in succession with Vijnanabhikshu's work & the great synthesis of the Bhagavadgita to crown the whole structure. The philosophical basis will then be properly laid and the Upanishads can be studied with new interest, verifying or modifying as one goes one's original interpretation of the Sacred Books.

This will bring to a close the theoretical side of the Jnanakanda; its practical and more valuable side can only be mastered in the path of Yoga and under the guidance of a Sadguru.

Gaudapada begins his work by a short exposition in clear philosophic terms of the poetical and rhythmic phraseology of the Upanishad. He first defines precisely the essential character of the triune nature of the Self as manifested in the macrocosm & the microcosm, the Waker, the Dreamer & the Sleeper, who all meet and disappear in the Absolute.

बहिष्मदो विभुविश्वो ह्यन्तःप्रजास्तु तैजसः ।
घनप्रजास्तथा प्राज्ञ एक एव त्रिधा स्मृतः ॥ १ ॥

1. Visva being the Lord who pervades and is conscious of the external, Taijasa he who is conscious of the internal, Prajna he in whom consciousness is (densified and) drawn into itself, the Self presents himself to the memory as One under three conditions.

Shankara: The position taken is this, as *the entity which cognizes* enters into three conditions one after another *and not simultaneously*, and is moreover *in all three* connected by the memory *which persists in feeling* “This is I” “This is I” “This is I”, it is obvious that it is something beyond and above the three conditions, & therefore one, absolute and without attachment to its conditions. And this is supported by the illustrations like that of the large fish given in the Scripture.

दक्षिणाक्षिमुखे विश्वो मनस्यन्तस्तु तैजसः ।
आकाशे च हृदि प्राज्ञस्त्रिधा देहे व्यवस्थितः ॥ २ ॥

2. Visva in the gate of the right eye, Taijasa within in the mind, Prajna in the ether, the heart, this is its threefold station in the body.

Shankara: 1. The object of this verse is to show that these three, Visva, Taijasa & Prajna, are experienced even in the waking

state. The right eye is the door, *the means*, through which especially Visva, the seer of gross objects, becomes subject to experience. The Sruti saith "Verily and of a truth Indha is he, even this Being as he standeth here in the right eye." Vaisvanor is Indha, because his essential principle is light and is at once the macrocosmic Self within the Sun and the seer in the eye.

2. "But" it will be objected "Hiranyagarbha is one and the cognizer of the material field, the guide and seer in the right eye is quite another, the master of the body." Not so; for in itself —*if we look into the real nature of our perceptions*—we do not realise any difference between them. And the Scripture saith "One God hidden in all creatures" and the Smriti also:

Know me, O son of Bharat, for the knower of the body
in all bodies. I stand undivided in all creatures and only
seem to be divided.

3. *Be it noted that* though Visva works indeed in all the organs of sense without distinction, yet because the perceptions of [the] right eye are noticed to be superior in acuteness and clearness it is for that reason only specifically mentioned as his abiding-place. After this Visva then dwelling in the right eye has seen a shape or appearance, he remembers it when he has closed his eyes and still sees within in the mind, as if in a dream, the same shape or appearance as manifested in the form of the idea or impression it has left. And it is just the same in a dream, *the impression or idea preserved by memory reproduces in sleep the same shape or appearance that was seen in waking*. It follows that this Taijasa who is within in the mind is no other than Visva himself.

4. Then by cessation of the process called memory Prajna in the ether or heart becomes unified or as it is said densified consciousness drawn into itself. And this happens because the processes of the mind are absent; for sight and memory are vibrations of the mind and in their absence the Self in the form of Prana takes its abode in the ether or heart without possibility of separation or distinction. For the Scripture saith "It is Prana that swalloweth up all these into itself." Taijasa is the same

as Hiranyagarbha because it has its abode in the mind, and the mind is the subtle part of the body, as is clear from the verse, “This *purusha* is all mind”, and from other like sayings of Scripture.

5. It may be objected that Prana in the state of Sleep is really differenced and manifest & the senses become one with Prana, so how do you predicate of it absence of manifestation and differentia *by saying it becomes One?* But there is no real fault in the reasoning, since in the undifferenced the particularising conditions of space and time are absent *and the same is the case with Prana in the state of Sleep.* Although indeed the Prana is *in a sense* differenced because the idea of separate existence as Prana remains, yet the more special sense of separate existence as circumscribed by the body is brought to a stop in Prana and Prana is therefore undifferenced and unmanifest in the Sleep in relation *at least* to the possessors of this circumscribed egoism. And just as the Prana of those who have the circumscribed bodily egoism becomes undifferenced when it is absorbed *at the end of the world*, so it is with him who has the sense of existence as Prana only in the condition of *Sleep* which is *in reality* precisely the same *as that of the temporary disappearance of phenomena at the end of a world;* both states alike are void of differentia and manifestation and *both alike* are pregnant with the seeds of *future* birth. The *Self* governing either state is one & the same, it is *Self* in an undifferenced and unmanifest condition. It follows that the governing *Self* in each case and the experiencers of the circumscribed bodily egoism are one and the same; therefore the descriptions previously given of *Prajna* become One or become densified & self-concentrated consciousness etc are quite applicable; and the arguments already advanced support the same conclusion.

6. “But” you will say “why is the name, Prana, given to the Undifferenced?” On the ground of the Scripture “For, O fair son, the cord and fastening of the mind is Prana.” “O but” you answer “there the words ‘O fair son, Existence itself is *Prana*’ show that it is Brahman Existent which being the subject of the verses must be intended by the word Prana.” However, my

reasoning is not thereby vitiated, because we all understand the Existent to be pregnant with the seed of *future birth*. Although, then, it is Brahman Existent which is meant by Prana, all the same the name Prana is given to the Existent because the idea of pregnancy with the seed from which the Jiva or life-conditioned human spirit is to be born, has not been eliminated from it and *indeed* it is only when this idea is not eliminated from the idea of Brahman that he can be called Brahman Existent. For if it were the absolute seedless Brahman of which the Scripture had meant to speak, it would have used such expressions as "He is not this, nor that nor anything which we can call him"; "From whom words return baffled"; "He is other than the known and different from the Unknown." The Smriti also says "He (the Absolute) is called neither Existent nor non-Existent." Besides if the Existent be seedless, then there would be no ground for supposing that those who have coalesced with and become absorbed into the Existent in the state of Sleep or the destruction of a world can again awake *out of either of these conditions*. Or if they can, then we should immediately have the contingency of liberated souls again coming into phenomenal existence; for *on this hypothesis* the condition of *souls liberated into the Absolute and those absorbed into the Existent* would be alike, neither having seed or cause of future phenomenal existence. And if to remove this objection you say that it is the seed of ignorance which has to be burnt away in the fire of Knowledge that is absent in the case of liberated souls and some other seed of things in the other case, you are in danger of proving that Knowledge (of the Eternal) is without use or unnecessary as a means of salvation.

7. It is clear then that it is on the understanding that the Existent is pregnant with the seed of phenomenal life that in all the Scripture it is represented as Prana and the cause of things. Consequently it is by elimination of this idea of the seed that it is designated by such phrases as "He is the unborn in whom the objective & subjective are One", "From whom words return baffled", "He is not this nor that nor anything we can call him", and the rest. Our author will speak separately of this seedless condition of the Same Self which has been designated

by the term Prajna. This condition by its being the Fourth or Absolute is devoid of all relations such as body, *Prana* etc and is alone finally and transcendently true. Now the condition of undifferenced seedfulness also is *like the two others* experienced in this body in the form of the idea of the awakened man which tells him “*For so long I felt and knew nothing*”. Thus then the Self is said to have a threefold station in the body.

विश्वो हि स्थूलभुद् नित्यं तैजसः प्रविविक्तभुक् ।
आनन्दभुक् तथा प्राज्ञस्त्रिधा भोगं निबोधत ॥ ३ ॥

3. Visva is the enjoyer of gross objects, Taijasa of subtle, and Prajna of pure (unrelated) pleasure, thus shall ye understand the threefold enjoyment of *the Self in the body*.

स्थूलं तर्पयते विश्वं प्रविविक्तं तु तैजसम् ।
आनन्दश्च तथा प्राज्ञं त्रिधा तृतीं निबोधत ॥ ४ ॥

4. The gross utterly satisfieth Visva, but the subtle Taijasa and pure pleasure satisfieth Prajna, thus shall ye understand the threefold satisfaction of *the Self in the body*.

Shankara: The meaning of these two verses has been explained.

त्रिषु धामसु यद् भोज्यं भोक्ता यश्च प्रकीर्तिः ।
वेदैतद्वभयं यस्तु स भुज्जानो न लिप्यते ॥ ५ ॥

5. That which is enjoyed in the three conditions and that which is the enjoyer, he who knoweth both these as one enjoyeth & receiveth no stain.

Shankara: That which is enjoyed under the names of gross objects, subtle objects and pure pleasure in the three conditions, waking, dream and sleep is one and the same thing although it has taken a threefold aspect. And that which enjoys under the names of Visva, Taijasa & Prajna, has been declared to be one because they are connected by the sense of oneness expressed in the continual feeling “This is I, This is I” and because the nature of cognition is one and without difference throughout. Whoever

knows both these to be one though split up into multiplicity by the sense of being enjoyer or enjoyed, does not receive any stain from enjoyment, because the subject of enjoyment is the One universal and the enjoyer too is not different from the enjoyed. For note that whoever be the enjoyer or whatever his object of enjoyment, he does not increase with it or diminish with it, just as in the case of fire when it has burnt up its object in the shape of wood or other fuel; *it remains no less or greater than it was before.*

प्रभवः सर्वभावानां सतामिति विनिश्चयः ।
सर्वं जनयति प्राणश्चेतोऽशून् पुरुषः पृथक् ॥ ६ ॥

6. It is a certain conclusion that all existences which take birth are already in being; Prana brings the All into phenomenal being, it is this *Prana* or Purusha which *sends* its separate rays of consciousness abroad.

Shankara: All existences (divided as Visva, Taijasa & Prajna) are already in being, that is, they existed before and it is only by their own species & nature, an illusion of name and form created by Ignorance, that they take birth or in other words [are] put forth into phenomenal existence. As indeed the writer says later on “A son from a barren woman is not born either in reality or by illusion”. For if birth of the nonexistent — *that is something coming out of nothing* — were possible, then there would be no means of grasping this world of usage and experience and the Eternal itself would become an unreality. Moreover we have seen that the snake in the rope and other appearances born of the seed of illusion created by Ignorance do really exist as the self of the rope or *other substratum in the case*. For the snake in the rope, the mirage and other *hallucinations of the sort* are never experienced by anybody unless there is some substratum. Just as before the coming into phenomenal being of the snake it existed already in the rope as the rope’s self, so before the coming to birth of all phenomenal existences, they already existed as the self of the seed of things called Prana. And the Scripture also saith, “This universe is the Eternal”, “In the beginning all this

was the Spirit.” The Prana gives birth to the All as separate rays of consciousness;— just as the rays of the Sun, so are these consciousness-rays of the Purusha who is Chid or conscious existence and they are clearly distinguished in different bodies of gods, animals, etc under three different lights as Visva, Taijasa & Prajna, in the same way as reflections of the sun are clearly seen in different pieces of water; they are thrown from the Purusha and though they differ according to the separate existences which are their field of action & enjoyment, yet they are all alike like sparks from a fire being all Jiva or conditioned Self. Thus the Prana or causal Self gives phenomenal birth to all other existences as the spider to his web. Compare the Scripture “As a fire sendeth forth sparks.”

विभूतिं प्रसवं त्वन्ये मन्यन्ते सृष्टिचिन्तकाः ।
स्वप्नमायासरूपेति सृष्टिरन्यैर्विकल्पिता ॥ ७ ॥

7. Some who concern themselves with the *cause of creation* think that Almighty Power is the origin of things and by others creation is imagined as like to illusion or a dream.

Shankara: Those who concern themselves with creation think that creation is the pervading Power, the extension, so to speak, of God; but it is implied, those who concern themselves with final and transcendental truth do not care about speculations on creation. For when men see a conjurer throw a rope into the air and ascend it armed & accoutred and then after he has climbed out of sight fall hewn to pieces in battle and rise again *whole*, they do not care about inquiring into the illusion he has created with all its properties and origins. Just so this evolution of the Sleep, Dream and Waking conditions is just like the self-lengthening of the juggler’s rope and the Prajna, Taijasa and Visva self abiding in the three conditions is like the conjurer climbing up the rope, but the real conjurer is other than the rope or its climber. Just as he stands on the ground invisible and hidden in illusion, so is it with the real and transcendental fact called the Fourth. Therefore it is for Him that the Aryan-minded care, those who follow after salvation, and they do not

care for speculations about creation which are of no importance to them. Accordingly the writer implies that all these theories are only imaginations of those who concern themselves with the origin of creation and then goes on to say that by others creation is imagined as like to an illusion or again as like to a dream.

इच्छामात्रं प्रभोः सृष्टिरिति सृष्टौ विनिश्चिताः ।
कालात्प्रसृतिं भूतानां मन्यन्ते कालचिन्तकाः ॥ ८ ॥

8. Those who have made up their minds on the subject of creation say it is merely the Will of the Lord; those who concern themselves about Time think that from Time is the birth of creatures.

Shankara: Creation is the Will of the Lord because the divine ideas must be true facts—pots etc are ideas only and nothing more than ideas. Some say that creation is the result of Time.

भोगार्थं सृष्टिरित्यन्ये क्रीडार्थमिति चापरे ।
देवस्यैष स्वभावोऽयमासकामस्य का स्पृहा ॥ ९ ॥

9. Others say that creation is for the sake of enjoyment, yet others say it is for play. *Really*, this is the very nature of the Lord; *as for other theories, well*, He has all He can desire and why should He crave for anything?

Shankara: Others think creation *was made* for enjoyment or for play. These two theories are criticised by the line “This is the very nature of the Lord”. Or, it may be, that the theory of Divine Nature is resorted to in order to criticise all *other theories by the argument*, He has all He can desire and why should He crave for anything? For no cause can be alleged for the appearance of the snake etc in the rope and other substrata except the very nature of Ignorance.

निवृत्तेः सर्वदुःखानामीशानः प्रभुरव्ययः।
अद्वैतः सर्वभावानां देवस्तुर्यो विभुः स्मृतः॥१०॥

10. He who is called the Fourth is the Master of the cessation of all ills, the Strong Lord and undecaying, the One without second of all existences, the Shining One who pervadeth.

Shankara: The Fourth Self or *transcendental* is the master of the cessation of all ills, which belong to the conditions of Prajna, Taijasa & Visva. The expression Strong Lord is an explanation of the word Master; it is implied that His strength & lordship are in relation to the cessation of ills, because the cessation of ills results from the knowledge of Him. Undecaying, because He does not pass away, swerve or depart, ie, from His essential nature. How is this? Because He is the One without a second owing to the vanity of all phenomenal existences. He is also called God, the Shining One, because of effulgence, the Fourth and He who pervades, exists everywhere.

कार्यकारणबद्धौ ताविष्येते विश्वतैजसौ।
प्राज्ञः कारणबद्धस्तु द्वौ तौ तुर्ये न सिध्यतः॥११॥

11. Visva & Taijasa are acknowledged to be bound by cause & effect, Prajna is bound by cause only; both of these are held not to exist in the Fourth.

Shankara: The common and particular characteristics of Visva & the two others are now determined in order that the real self of the Fourth may become clear. Effect, that which is made or done, is existence as result. Cause, that which makes or does, is existence as seed. By inapprehension and misapprehension of the Truth the aforesaid Visva & Taijasa are, it is agreed, bound or imprisoned by existence as result and seed. But Prajna is bound by existence as seed only. For the seed state which lies in unawakening to the Truth alone and *not in misreading of Him* is the reason of the state of Prajna. Therefore both of these, existence as cause and existence as effect, inapprehension and misapprehension of the Truth are held not to apply to the Fourth, ie do not exist & cannot happen in Him.

नात्मानं न परांश्वैव न सत्यं नापि चानृतम् ।
प्राज्ञः किंचन संवेति तुर्यं तत्सर्वदृक् सदा ॥ १२ ॥

12. Prajna cogniseth nought, neither self nor others, neither truth nor falsehood; the Fourth seeth all things for ever.

Shankara: But how then is Prajna bound by Cause, while in the Fourth the two kinds of bondage conditioned by inapprehension & misapprehension of the Truth are said to be impossible? Because Prajna does not cognize at all this duality of an outside universe born from Ignorance and conditioned as distinct from Self, so that like Visva & Taijasa he also is bound by inapprehension of the Truth, by that blind darkness which becomes the seed of misapprehension; and because the Fourth seeth all things for ever. That is to say, since nothing *really* exists except the Fourth, He is necessarily a seer of all that is, Omniscient & All-cognizant at all times & for ever; in Him therefore the seed state of which the conditioning feature is inapprehension of the Truth, cannot possibly exist. Absence of the misapprehension which arises out of inapprehension naturally follows. The Sun is for ever illuminative by its nature and non-illumination or misillumination as contrary to its nature cannot happen to it; *and the same train of reasoning applies to the Omnicience of the Turiya.* The Scripture also says “For of the Sight of the Seer there is no annihilation.” Or indeed, since it is the Fourth that in the Waking and Dream State dwelling in all creatures is the light or reflection in them to which all objects *present themselves as visible ie cognizable objects*, it is *in this way too* the seer of all things for ever. The Scripture says “There is nought else than This that seeth.”

Sadananda's Essence of Vedanta

INVOCATION

To the Absolute

अखण्डं सच्चिदानन्दमवाङ्मनसगोचरम् ।
आत्मानमस्तिलाधारमाश्रयेऽभीष्टसिद्धये ॥ १ ॥

1. I take refuge with Him who is *sheer Existence, Intelligence and Bliss, impartible, beyond the purview of speech and mind, the Self in whom the whole Universe exists*—may my desire & purpose attain fulfilment.

To the Masters

अर्थतोऽप्यद्यानन्दानतीतद्वैत्तभानतः ।
गुरुनाराध्य वेदान्तसारं वक्ष्ये यथामति ॥ २ ॥

2. After homage to the Masters who in deed as well as word delight in the One without second and from whom the seeming of duality have passed away, I will declare the Essence of Vedanta according to my intellectual capacity.

PRELIMINARY STATEMENT

The Training of the Vedantin

वेदान्तो नामोपनिषत्प्रमाणं तदुपकारीणि शारीरकसूत्रादीनि च ॥ ३ ॥

3. By Vedanta is meant the Upanishads as authoritative basis of the philosophy and as useful supplementary inquiries the Aphoristic Books that treat of the Embodied Soul.

अस्य वेदान्तप्रकरणत्वात् तदीयैरेवानुबन्धैस्तद्वत्सिद्धेर्न ते पृथगा-
लोचनीयाः ॥ ४ ॥

4. Now since Vedanta is the subject of this work, its circumstantiae—the conclusions sought to be established being similar in both,—are the same as those of the Vedanta and need not be separately discussed.

तत्रानुबन्धो नामाधिकारिविषयसंबन्धप्रयोजनानि ॥ ५ ॥

5. In circumstantia we include four things, the fit hearer, the subject, the logical relation, the object of the work.

अधिकारी तु विधिवदधीतवेदवेदाङ्गत्वेनापाततोऽधिगताख्यिलवेदार्थो
ऽस्मिन् जन्मनि जन्मान्तरे वा काम्यनिषिद्धवर्जनपुरःसरं नित्य-
नैमित्तिकप्रायश्चित्तोपासनानुष्ठानेन निर्गतनिख्यिलकल्पषतया नितान्त-
निर्मलस्वान्तः साधनचतुष्टयसंपन्नः प्रमाता ॥ ६ ॥

6. Now the fit hearer of Vedanta must be one who is competent to form a right judgment of it. He must therefore have mastered [] by proper study of Veda and its accessory sciences the entire meaning of Veda; he must in this life or another have begun by abandoning forbidden actions and actions prompted by desire and then by the performance of daily observances, occasional observances, penance and adoration freed himself from all sin and stain and attained to perfect purity of the mind and heart; and he must be in possession of the four Ways & Means.

काम्यानि स्वर्गादीष्टसाधनानि ज्योतिष्ठोमादीनि ॥ ७ ॥

7. By actions of desire is understood all ways and means by which we pursue various kinds of happiness from Paradise downward—the Jyotisthom sacrifice for example.

निषिद्धानि नरकाद्यनिष्टसाधनानि ब्रह्महननादीनि ॥ ८ ॥

8. By forbidden actions is meant all ways & means by which we compass all our ills from the torments of Hell downward,—Brahminicide for example & other sins & disobediences.

नित्यान्यकरणे प्रत्यवायसाधनानि संध्यावन्दनादीनि ॥९॥

9. By regular observances is meant ceremonies like the evening prayer etc, the non-performance of which turns them into means of offence & stumbling blocks.

नैमित्तिकानि पुत्रजन्माद्यनुबन्धीनि जातेष्यादीनि ॥१०॥

10. By occasional observances is understood ceremonies circumstantial to particular occasions, such as the Blessing of the New-born attendant on the birth of a son.

प्रायश्चित्तानि पापक्षयमात्रसाधनानि चान्द्रायणादीनि ॥११॥

11. By penances is understood vows & forms of self-discipline such as the Chandrayan vow which are means *only* towards the purging away of sin.

उपासनानि सगुणब्रह्मविषयकमानसव्यापाररूपाणि शाण्डिल्यविद्या -
दीनि ॥१२॥

12. By adoration is understood the various forms of mental working which have for their whole subject and purpose the Eternal in His aspect as a Personal Deity — Sandilya's Art of Divine Love, for example.

एतेषां नित्यादीनां बुद्धिशुद्धिः परं प्रयोजनमुपासनानां तु चित्तैका -
ग्र्यम् । तमेतमात्मानं वेदानुवचनेन ब्राह्मणा विविदिषन्ति यज्ञेनेत्यादि -
श्रुतेः तपसा कल्पषं हन्तीत्यादिस्मृतेश्च ॥१३॥

13. The main object of the first three, observances regular and occasional and penance, is the purification of the Understanding; but the main object of adoration is singleness of heart & mind towards one object. This is proved by such passages as these from Revealed Scripture — “This is that Self of whom the Brahmins shall seek to know by exposition of Veda and by Sacrifice shall they seek to know Him” — and by other passages from the Unrevealed Scripture such as “By Tapasya (energism of will) one slayeth sin.”

नित्यनैमित्तिकयोरुपासनानां चावान्तरफलं पितृलोकसत्यलोकप्राप्तिः ।
कर्मणा पितृलोको विद्यते देवतोक इत्यादिश्रुतेः ॥ १४ ॥

14. A secondary result of observances regular and occasional and of adoration & worship is attainment to the world of the fathers and to the world of the Living Truth. For so the Scripture says “By action the World of the Fathers is found and the World of the Gods also.”

साधनानि नित्यानित्यवस्तुविवेकेहामुत्रफलभोगविरागशमदमादिसं -
पत्तिमुमुक्षुत्वानि ॥ १५ ॥

15. By Ways & Means we understand, Discrimination of eternal objects from the transient; Disattachment from enjoyment in this world or another; Calm, Self-Conquest & the other moral excellences; and Desire of Salvation.

नित्यानित्यवस्तुविवेकस्तावद् ब्रह्मैव नित्यं वस्तु ततोऽन्यदस्ति -
मनित्यमिति विवेचनम् ॥ १६ ॥

16. By Discrimination of eternal objects from the transient we understand the discernment of Brahman as the one thing eternal and of everything other than Brahman as transient and perishable.

Part Three

Writings on Vedanta

These incomplete writings (c. 1902–1916) were not revised by Sri Aurobindo for publication. They have been transcribed from his manuscripts and arranged in chronological order.

Four Fragments

1

The answer to all philosophical problems hinges on the one question, What is myself? It is only by knowing man's real self that we can know God; for whatever we may think or know, the value of the thought and the knowledge must hinge upon the knower, the means of knowledge and

Vedanta's final & single answer to all the questions of philosophy is contained in a single mighty & ever-memorable phrase, So 'ham. I am He or more explicitly or to the question of the inquirer अहं ब्रह्मास्मि, I am Brahman. Cutting through all tremors & hesitations, scorning all doubt or reserve it announces with a hardy & daring incisiveness the complete identity of man & God. This is its gospel that the individual Self who seems so limited, thwarted, befouled, shamed & obscured with the bonds & shackles, the mud & stains of earthly life and the pure, perfect and illimitable Being who possesses & supports all existence, to Whom this vast and majestic Universe is but an inconsiderable corner of His mind and infinite Time cannot end and infinite Space cannot confine and the infinite net of cause and effect is powerless to trammel are equal, are of one nature, power, splendour, bliss, are One. It seems the very madness of megalomania, the very delirium of egoism. And yet if it be true?

And it is true. Reason can come to no other conclusion, Yoga ends in no less an experience, the voices of a hundred holy witnesses who have seen God face to face, bring to us no less wonderful a message. And since it is true, what eagerness should not fill us to

Ego or Self is an Ens which is not knowable by sight or any of the senses; it can only be grasped in the innate conception, "I am". This intuitive and inherent self-perception is called, subjective illumination; for there are two kinds of direct knowledge, one called subjective, the other objective illumination and the difference is that while objective illumination or as it is called the Supra-intelligence has for its object both the known & unknown, the object of subjective illumination is that which is perpetually & inevitably known, since even the supra-intelligence is illumined or revealed by the light of the Ego. For as it is said "The subtle self has consciousness for its

It has been said with a singularly subtle ineptitude that the existence of the One Formless Nameless Indivisible without Qualities & without desires may be admitted; and the existence of a multifold world of phenomena may be admitted; but that the one excludes the other. Since it is not possible that the Absolute should limit itself even illusorily; for any such limitation is an act and an act implies an object; but an Existence without desires can have no object to serve and cannot therefore act. Moreover the Infinite excludes the possibility of the Finite. This is a juggling with words. The Infinite instead of excluding the Finite supposes the Finite. When we think of the Infinite, it is not at first as a blind & limitless expanse but as the Finite Existence we know spreading on & on without beginning or limit. Having once formed the idea of the Infinite, we may then by an effort of the Mind blot out that vision of finite things informing it and imagine infinity as a blind & limitless expanse; but even so Infinity only exists to us on condition of the possibility of the Finite; it is there possible, latent, manifested in the past, to be yet manifested in the future. Destroy the possibility of the Finite and the Infinite becomes unimaginable. This is expressed in the Puranic philosophy of the Parabrahma absorbing all things into

himself for a while only to put them forth again. Nor is the objection that an Act implies an object, in itself tenable; an act may be pure & objectless, ceasing indeed to be an action in the ordinary human sense of the word but not in the philosophic or scientific sense. The sun acts when it shines though it has no object in doing so (जडवत् समाचरेत्).

The Visishtadwait recognizing that the Infinite implies the Finite within it, bases its ontology on the fact; the Adwait points out however that the existence of the Finite is only a possibility and when it occurs implies no real change in the Infinite, nothing essential and permanent, but the objectless action of the Absolute, the working of a force which as it creates nothing real and lasting may well be called Maya or illusion. All turns on whether the Finite is a real ie an essential & permanent existence or a mere condition of thought. If the former, the Visishtadwaita view is correct, but if the latter the Adwaita must claim our adherence.

4

[.....] the next few centuries. This issue I prefer to call the issue between Science and Hinduism, not because there are not in the world other great embodiments of the old religious & moral spirit, but because Hinduism alone has shown an eternal & indestructible vitality and still more because Hinduism alone does not on the side of reason stand naked to the assaults of Science. And when I speak of Hinduism, I do not refer to the ignorant & customary Hinduism of today, which is largely a Buddhicised and vulgarised edition of the old faith, but the purer form which under the pressure of Science is now reasserting its empire over the Hindu mind.

The Spirit of Hinduism

God

OM *ityetad akṣaram idam sarvam*; OM is the syllable, OM is the Universe; all that was, all that is, all that will be is OM. With this pregnant confession of faith Hinduism begins its interpretation of the Universe.

Metaphysical systems arise and metaphysical systems fall; Hegel disappears and Kant arrives; Pantheism, Theism, Atheism pursue their interminable round, and there is no finality. Then Science comes and declares the whole vanity, for all is physical and there is nothing metaphysical save in the brain of the dreamer; and yet tho' Science has spoken still there is no finality. For the soul of man refuses to be dissolved into a force or a procession of sensations or a composite effect created by the action of outward things on the neurons of the brain. It persists in saying "I am"; it persists in demanding an explanation of its existence, and will not be satisfied without an answer. But where is that answer to come from or how is it possible to arrive at any conclusion? The rock on which all metaphysics come to shipwreck is the same unsurpassable barrier before which Science itself becomes a baffled and impotent thing; it is that behind everything, beyond everything, when all knowledge has been acquired, when matter has been pursued into its subtlest unanalysable element, there is always an Inexplicable Something which remains. Metaphysics seeks to tell us What the Universe is and Why it is; in other words to explain the Inexplicable; but the end of this process is inevitably a juggling with words which must repel all clear-minded thinkers. At the end of all metaphysical systems we find an enthroned word which appalled in the purple of finality professes to explain the Universe, and yet when we look into it, we find that it stands itself in need of explanation, that it is merely a Word which stands for the

Inexplicable. Science avoids the difficulty by professing that the ultimate results of its analysis are a sufficient description of the Universe, a sufficient answer to the What, and as to the Why it rests in the great fact of Evolution. Again we find that we have landed ourselves in unexplained words beyond which lies the same region of darkness involved in yet deeper darkness; the *tamas tamasā gūḍham* of the Scriptures; Evolution, Force, Kinesis, these are words in which we gather up our observation of certain phenomena; they are the sum of the workings of a nameless, unintelligible Thing, but what that Thing is and why It is, remains an unsolved mystery. Whether it is that the human mind is intrinsically unable to pierce beyond the veil or whether it has the power latent or potential but as yet unevolved, we may at least safely assert that so far man has not been able to understand Finality; he is constitutionally incapable of imagining a Final Cause which his reason when faithfully interrogated will not refuse to accept as Final, will not be forced by its own nature to subject to the query How & Why. There are only two ways of meeting the difficulty; one is to assert that the reason of man as at present constituted is imperfect and by reason of its imperfection unable to grasp Finality which for all that exists; the other is to assert that the reason of man is right and that Finality is inconceivable because it does not exist. The latter is the answer which Hinduism has selected; the human mind cannot arrive at anything final because there is nothing final, for all the universe is OM and OM is Infinite, without beginning and without end either in Time or in Space. It has indeed been advanced that the human mind can realise only the Finite and not the Infinite,—a sorry paradox, for it is truer to say that the only fact which the human mind can realise is Infinity; the Finite it grasps only as a phenomenon, the very conception of which depends on the wider conception of the Infinite. A finite thing, such as a house, we conceive as a limited phenomenon in relation to that which is not the house; limit is only imaginable in relation to something beyond the limit; a final limit to everything is unimaginable whether in Time or Space. Outside the house is the province and outside the limits of the province is the country

and outside the limits of the country is the earth and outside the limits of the earth is the Universe and to the Universe we can only imagine limits if we imagine it as surrounded by other Universes, and so the mind of man goes travelling forward & ever forward without reaching an end. Having realised that there is no end the Mind refuses to proceed farther and returns on its traces into the world of phenomena. It is this refusal, this return which is meant when it is stated that the human mind cannot conceive Infinity. And yet what does the statement amount to? Simply to this that there is no end to the Infinite, in other words that the Infinite *is* infinite, that the boundless *has* no bound. The human mind works within limits, that is to say, within the Absolute apparently conditioned by phenomena because it is itself the Absolute apparently conditioned by phenomena. This fundamental idea of the Vedanta I shall have occasion to return upon in its proper place; here I follow out the argument so far in order to establish that the working of the human mind within limits does not militate against the undoubted experience that if rigidly interrogated it realises phenomena only as phenomena and the only fact to which it can give assent is the fact of infinity. If therefore we take reason or mental Experience as the final authority, the Hindu proposition demonstrates itself. The alternative proposition like the Roman Curia calls upon us to put reason out of Court and makes discussion of the question impossible. Although one cannot dogmatically declare it to be untrue, it is certainly contrary to all scientific probability; Hinduism does not deny, but rather asserts that the powers of the human mind can & will enlarge indefinitely, but it believes that this will be by the process of development, not by a radical alteration of its essential nature. To assert that man must believe in finality although he is constitutionally unable to grasp any finality, is to leave the terra firma on which all thought moves & reposes, the collective mental experience of the race affecting & affected by the mental experience of each individual and to launch into the void of dogmatic & irrational belief. *Credo quia incredibile est*, I believe because it is incomprehensible.

We come back therefore to the Hindu confession of faith, OM is the syllable, OM is the Universe; the past, the present and the future, — all that was, all that is, all that will be is OM. Likewise all that may exist beyond the bounds of Time, that too is OM.

Mark the determination to drive the idea of Infinity to its logical conclusion. *All that may exist beyond the bounds of Time, that too is OM.* Man can conceive nothing that is neither in the past, present nor future, but if there be such inconceivable thing, it does not by becoming beyond Time place itself beyond OM. That too is OM. In a similar spirit another verse of the Upanishad declares of God “He moves & He moveth not, He is near & He is far, He is within the Universe and He is outside the Universe.” The Universe is all that exists, all that Man can know or conceive & there can be nothing outside it because it has no limits; but if there does exist such inconceivable thing as is beyond illimitable Space it does not by becoming beyond Space, put itself beyond OM. *He is within the Universe and He is outside the Universe.* All Hindu Scripture is precise upon this point, our God is not a gigantic polypus, not a term for infinite & Eternal Matter, not a stream of Tendency that makes for righteousness, or for the survival of the fittest, or for the goal of Evolution, whatever that may be. He is the Infinite and the Absolute, and what seems to be finite and conditioned, seems & is not; is phenomenon & not fact. God is the only fact, God is the only reality; God is the One than whom there is no other. He alone exists, all else appears. But of these things later. At present the conclusion which I wish to present is this that there is an Infinite who is the one fact; there is no Final Cause, because Final Cause implies an Effect different from itself & must therefore be finite, but the human mind cannot conceive of anything ultimate & finite; for there is no such thing; it cannot conceive of a beginning to all things because there was no beginning, or an end to all things because there is no end. There is only One Infinite who is without beginning and without End.

But if He is Infinite, He must be Unknowable, for knowledge implies limit & division. The human mind as has been said, works within limits; in order to know, we must define and

analyse; but definition and analysis imply limits, imply conditions. The Infinite is conceivable to us, but not being measurable, it is also not knowable. This is the second great philosophical truth on which Hinduism insists. OM *tat sat* is its formula, OM, That is what Is. “That”, the most non-committing expression discoverable in the language, is the one selected to express the idea of the Infinite One. “That is the one thing that is”, but *what* That is and *why* That is, lies beyond the scope of our knowledge. Again and again the Scriptures asseverate our ultimate ignorance.¹

¹ *The notes that follow were written by Sri Aurobindo at the top of the last page of this manuscript:*

Infinite, therefore Unknowable, Unknowable therefore Absolute. Prove the Existence of God. Known by Becoming.

The Philosophy of the Upanishads

Chapter I

Prefatory

The philosophy of the Upanishads is the basis of all Indian religion and morals and to a considerable extent of Hindu politics, legislation and society. Its practical importance to [our] race is therefore immense. But it has also profoundly [affected] the thought of the West in many of the most critical stages of [its] development; at first through Pythagoras and other Greek philosophers, then through Buddhism working into Essene, Gnostic and Roman Christianity and once again in our own times through German metaphysics, Theosophy, and a hundred strange and irregular channels. One can open few books now at all in the latest stream of thought without seeing the old Vedantism busy at its work of moulding and broadening the European mind, sometimes by direct and conscious impact as a force, more often by an unacknowledged and impalpable pressure as an atmosphere. This potent influence [in] modern times of a way of thinking many thousands of years old, is due to [a] singular parallelism between the fundamental positions arrived [at by] ancient Vedantism and modern Science. Science in its [researches] amid matter has stumbled on the basal fact of the [Unity] of all things; the Unity of all things is the rock on which the Upanishads have been built. Evolution has been discovered and [analyzed] by Science; Evolution of a kind is implied at every turn by the Vedanta. Vedantism like Science, [but] after its own fashion, [is] severely conscientious in its logical processes and rigorously experimental; [Vedantism] has mastered physical and psychical laws which Science [is] now beginning to handle.

But the parallelism is no more than a parallelism, [there is] no real point of contact; for the Hindu or Southern Asiatic mind

differs fundamentally in its processes from either [the] Teutonic or the Mediterranean. The former is diffuse and comprehensive; the latter compact and precise. The Asiatic acquires a [deeper] and truer view of things in their totality, the European a more accurate and practically serviceable conception of their parts. [The] European seizes on an aspect and takes it for the whole; he is [a] fanatic of single ideas and the preacher of the finite: the Asiatic passes at once to the whole and slurs rapidly over the aspects; he [is] eclectic, inveterately flexible and large-minded, the priest of [the Infinite]. The European is an analytical reasoner proceeding from observations, the Asiatic a synthetic diviner, leaping to intuitions. Even [when] both analyze, the European prefers to dissect his observations, [the] Asiatic to distinguish his experiences: or when both [synthetize, the] European generalises and classifies what he has [observed,] the Asiatic masses into broad single truths what he [has seen] within. The one deals as a master with facts, but halts over [ideas and] having mastered an idea works round it in a circle; the other [masters ideas] unerringly [.....] but stumbles among facts and applications. The mind of the European is an Iliad or an Odyssey, fighting rudely but heroically forward, or, full of a rich curiosity, wandering as an accurate and vigorous observer in landlocked seas of thought; the mind of the Asiatic is a Ramayan or a Mahabharat, a gleaming infinity of splendid and inspiring imaginations and idealisms or else an universe of wide moral aspiration and ever varying and newly-grouped masses of thought. The mind of the Westerner is a Mediterranean full of small and fertile islands, studded with ports to which the owner, a private merchant, eagerly flees with his merchandise after a little dashing among the billows, and eagerly he disembarks and kisses his dear mother earth; the mind of the Eastern man is an Ocean, and its voyager an adventurer and discoverer, a Columbus sailing for months over an illimitable Ocean out of reach of land, and his ports of visit are few and far between, nor does he carry in his bottoms much merchandise you can traffick in; yet he opens for the trader new horizons, new worlds with new markets. By his intuitions and divinations he helps to widen the circles the European is always

obstinately tracing. The European is essentially scientific, artistic and commercial; the Asiatic is essentially a moralist, pietist and philosopher. Of course the distinction is not rigid or absolute; there is much that is Asiatic in numbers of Europeans, and in particular races, notably the South Germans, the Celt and the Slav; there is much that is European in numbers of Asiatics, and in particular nations, notably the Arabs and the Japanese. But the fundamental divergence in speculative habits is very noticeable, for in the things of the mind the South imposes its law on the whole Continent.

We shall therefore expect to find, as we do find, that Vedantic Evolution and Monism are very different things from Evolution and Monism as European Science understands them. European thought seizes on Evolution as manifested in the outward facts of our little earth and follows it into its details with marvellous minuteness, accuracy and care. The Vedanta slurs over this part of the scheme with a brief acknowledgement, but divines the whole course of Evolution in the Universe and lays down with confident insight its larger aspects in the inward facts of the soul. In its Monism also Vedanta is far more profound and searching than the European scientific observer, for while the latter is aware only of this gross material world and resolves everything into the monism of gross Matter, the Vedanta, which is perfectly aware that gross matter can all be resolved into a single principle, does not pause at this discovery; it has pursued its investigations into two other worlds which surround & interpenetrate ours like two concentric but larger circles, the psychic or dream world of subtle Matter and the spiritual or sleep world of causal Matter, each with its own monistic unity; these three parallel monisms it resolves into a Supreme, Absolute and Transcendent Unity which is alone real and eternal. To the Indian consciousness at least these are no mere speculations; they are conclusions based on the actual experiences and observations of investigators who had themselves entered into these inner and yet wider worlds. The good faith of their observations cannot seriously be doubted and their accuracy can only be impugned when Science itself consents to explore the same fields of being

whether by the methods hitherto practised in the East or by any other adequate means of its own invention.

We need not expect in the Upanishads a full statement of the facts on which its more grandiose statements of religious and philosophic truth are built, nor should we hope to find in them complete or reasoned treatises marshalling in a comprehensive and orderly manner the whole scheme of Vedantic philosophy. That is seldom the way in which the true Asiatic goes to work. He is a poet and a *divine* in the real sense of the word. His peculiar faculty is apparent in the very form of his philosophic books. The Aphorisms, that peculiarly Indian instrument of thought, by which our philosophers later on packed tons of speculation into an inch of space, give only the fundamental illuminations on which their philosophy depends. The Exegeses (*Karikas*) of Gaudapada and others are often a connected and logical array of concise and pregnant thoughts each carrying its burden of endless suggestion, each starting its own reverberating echo of wider and wider thought; but they are not comprehensive treatises. Nor can such a term be applied to the Commentaries (*Bhashyas*) of Shankara, Ramanuja and other powerful and original minds; they are, rather, forceful excursions into terse and strenuous logic, basing, strengthening, building up, adding a wing here and a story there to the cunning and multiform, yet harmonic structure of Indian thought. Nowhere will you find an exhaustive and systematic statement of a whole philosophy interpreting every part of the universe in the terms of a single line of thought. This habit of suggestiveness & reserve in thought leaves the old philosophies still as inspiring and full of intention and potential development as when the glowing divinations and massive spiritual experiences stored in the Upanishads were first annealed & hammered into philosophic form. It is the reason of the Vedanta's surprising vitality, of the extent to which it enters and the potency with which it governs Indian life, in a way that no European philosophy except recently the Evolutionary has entered into or governed the life of the West. The European metaphysician has something in him of the pedagogue, something indeed of the mechanic, at least of the geometrician;

his philosophies are masterpieces of consistent logic, admirable constructions of a rigid symmetry. But their very perfection militates against the vitality of the truth they set forth; for Life is not built on the lines of consistent logic, Nature does not proceed on the principle of a rigid symmetry: even where she seems most formal she loves to assert herself in even the slightest, just perceptible, perhaps hardly perceptible deflection from a strict correspondence. Nothing indeed can live permanently which has not in itself the potentiality of an unending Evolution; nothing—nothing finite at least—is completely true which is not incomplete. The moment a poem or work of art becomes incapable of fresh interpretation, or a philosophy of fruitful expansion or a species of change & variety, it ceases from that moment to be essential to existence and is therefore doomed, sooner or later, to extinction. The logical intellect may rebel against this law and insist passionately on finality in truth,¹ but it rebels vainly; for this *is* the law of all life and all truth.

This is the secret of the Upanishads and their undying fruitfulness. They are, to begin with, inspired poems,—not less so when they are couched in prose form than when they are poured into solemn and far-sounding verse,—grand and rhythmic intuitions where the speakers seem to be conveyors only of informing ideas cast out from a full and complete vision in the eternal guardian Mind of the race. The style in which they are couched is wonderfully grave, penetrating and mighty, suffused with strange light as if from another world, its rhythms unequalled for fathomless depth of sound and the rolling sea of solemn echoes they leave behind them. Here only in literature have philosophy and poetry at their highest met together and mingled their beings in the unison of a perfect love and understanding. For the Upanishads stand, as poetry, with the

¹ Observe for instance the phenomenon of Theosophy. The Western intellect seizes upon the profound researches of the East into the things behind the veil, the things of the soul & spirit—researches admirably firm in the outline of their results but incomplete in detail—and lo and behold! everything is arranged, classified, manualized, vulgarized, all gaps filled in, finality insisted on and the infinite future with its infinite possibilities and uncertainties audaciously barred out of its heritage.

greatest productions of creative force and harmonic beauty. As philosophy, they have borne the weight of three millenniums of thought and may well suffice for an equal period of future speculation. But exhaustive and balanced exposition is not to be expected; you must piece together their glowing jewels of thought if you would arrive at the forced symmetry of a system; and perhaps to the end of the world different minds will construct from them a different mosaic. To the systematic intellect this inevitably detracts from their philosophic value, but to the Indian mind, flexible, illimitable, unwilling to recognize any finality in philosophy or religion, it enhances their claim to reverence as Scriptures for the whole world and for all time to come.

Chapter II Discovery of the Absolute Brahman

The idea of transcendental Unity, Oneness & Stability behind all the flux and variety of phenomenal life is the basal idea of the Upanishads: this is the pivot of all Indian metaphysics, the sum and goal of our spiritual experience. To the phenomenal world around us stability and singleness seem at first to be utterly alien; nothing but passes and changes, nothing but has its counterparts, contrasts, harmonised and dissident parts; and all are perpetually shifting and rearranging their relative positions and affections. Yet if one thing is certain, it is that the sum of all this change and motion is absolutely stable, fixed and unvarying; that all this heterogeneous multitude of animate & inanimate things are fundamentally homogeneous and one. Otherwise nothing could endure, nor could there be any certainty in existence. And this unity, stability, unvarying fixity which reason demands & ordinary experience points to, is being ascertained slowly but surely by the investigations of Science. We can no longer escape from the growing conviction that however the parts may change and shift and appear to perish, yet the sum and whole remains unchanged, undiminished and imperishable; however

multitudinous, mutable and mutually irreconcilable forms and compounds may be, yet the grand substratum is one, simple and enduring; death itself is not a reality but a seeming, for what appears to be destruction, is merely transformation and a preparation for rebirth. Science may not have appreciated the full import of her own discoveries; she may shrink from an unflinching acceptance of the logical results to which they lead; and certainly she is as yet far from advancing towards the great converse truths which they for the present conceal,—for instance the wonderful fact that not only is death a seeming, but life itself is a seeming, and beyond life and death there lies a condition which is truer and therefore more permanent than either. But though Science dreams not as yet of her goal, her feet are on the road from which there is no turning back,—the road which Vedanta on a different plane has already trod before it.

Here then is a great fundamental fact which demands from philosophy an adequate explanation of itself;—that all variations resolve themselves into an unity; that within the flux of things and concealed by it is an indefinable, immutable Something, at once the substratum and sum of all, which Time cannot touch, motion perturb, nor variation increase or diminish; and that this substratum and sum has been from all eternity and will be for all eternity. A fundamental fact to which all Thought moves, and yet is it not, when narrowly considered, an acute paradox? For how can the sum of infinite variations be a semipiternally fixed amount which has never augmented or decreased and can never augment or decrease? How can that whole be fixed and eternal of which every smallest part is eternally varying and perishing? Given a bewildering whirl of motion, how does the result come to be not merely now or as a result, but from beginning to end a perfect fixity? Impossible, unless either there be a guiding Power, for which at first sight there seems to be no room in the semipiternal chain of causation; or unless that sum and substratum be the one reality, imperishable because not conditioned by Time, indivisible because not conditioned by Space, immutable because not conditioned by Causality,—in a word absolute & transcendent and *therefore* eternal, unalterable and

undecaying. Motion and change and death and division would then be merely transitory phenomena, masks and seemings of the One and Absolute, the as yet undefined and perhaps indefinable It which alone *is*.

To such a conclusion Indian speculation had turned at a very early period of its conscious strivings — uncertainly at first and with many gropings and blunders. The existence of some Oneness which gives order and stability to the multitudinous stir of the visible world, the Aryan thinkers were from the first disposed to envisage and they sought painfully to arrive at the knowledge of that Oneness in its nature or its essentiality. The living Forces of the Cosmos which they had long worshipped, yet always with a floating but persistent perception of an Unity in their multitude, melted on closer analysis into a single concept, a single Force or Presence, one and universal. The question then arose, Was that Force or Presence intelligent or non-intelligent? God or Nature? "He alone" hazarded the Rigveda "knoweth, or perhaps He knoweth not." Or might it not be that the Oneness which ties together and governs phenomena and rolls out the evolution of the worlds, is really the thing we call *Time*, since of the three original conditions of phenomenal existence, Time, Space and Causality, Time is a necessary part of the conception of Causality and can hardly be abstracted from the conception of Space, but neither Space nor Causality seems necessary to the conception of Time? Or if it be not Time, might it not be *Swabhava*, the essential Nature of Things taking various conditions and forms? Or perhaps *Chance*, some blind principle working out an unity and law in things by infinite experiment, — this too might be possible. Or since from eternal uncertainty eternal certainty cannot come, might it not be *Fate*, a fixed and unalterable law in things in subjection to which this world evolves itself in a preordained procession of phenomena from which it cannot deviate? Or perhaps in the original atomic fountain of things certain *Elements* might be discovered which by perpetual and infinite combinations and permutations keep the universe to its workings? But if so, these elements must themselves proceed from something

which imposes on them the law of their being, and what could that be but the *Womb*, the matrix of original and indestructible Matter, the plasm which moulds the universe and out of which it is moulded? And yet in whatever scheme of things the mind might ultimately rest, some room surely must be made for these conscious, thinking and knowing *Egos* of living beings, of whom knowledge and thought seem to be the essential selves and without whom this world of perceptible and knowable things could not be perceived and known; — and if not perceived and known, might it not be that without them it could not even exist?

Such were the gorges of endless speculation in which the old Aryan thinkers, tossed and perplexed, sought for some firm standing-ground, some definite clue which might save them from being beaten about like stumbling blind men led by a guide as blind. They sought at first to liberate themselves from the tyranny of appearances by the method which Kapila, the ancient prehistoric Master of Thought, had laid down for mankind, the method called Sankhya or the law of Enumeration. The method of Kapila consisted in guidance by pure discriminative reason and it took its name from one of its principal rules, the law of enumeration and generalisation. They enumerated first the immediate Truths-in-Things which they could distinguish or deduce from things obviously phenomenal, and from these by generalisation they arrived at a much smaller number of ulterior Truths-in-Things of which the immediate were merely aspects. And then having enumerated these ulterior Truths-in-Things, they were able by generalisation to reduce them to a very small number of ultimate Truths-in-Things, the Tattwas (literally The-nesses) of the developed Sankhya philosophy. And these Tattwas once enumerated with some approach to certainty, was it not possible to generalise yet one step farther? The Sankhya did so generalise and by this supreme and final generalisation arrived at the very last step on which, in its own unaided strength, it could take safe footing. This was the great principle of Prakriti, the single eternal indestructible principle and origin of Matter which by perpetual evolution rolls out through aeons and aeons the

unending panorama of things.² And for whose benefit? Surely for those conscious knowing and perceiving Egos, the army of witnesses, who, each in his private space of reasoning and perceiving Mind partitioned off by an enveloping medium of gross matter, sit for ever as spectators in the theatre of the Universe! For ever, thought the Sankhyas, since the Egos, though their partitions are being continually broken down and built anew and the spaces occupied never remain permanently identical, yet seem themselves to be no less eternal and indestructible than Prakriti.

This then was the wide fixed lake of ascertained philosophical knowledge into which the method of Sankhya, pure intellectual reasoning on definite principles, led in the mind of ancient India. Branchings off, artificial canals from the reservoir were not, indeed, wanting. Some by resolving that army of witnesses into a single Witness, arrived at the dual conception of God and Nature, Purusha & Prakriti, Spirit and Matter, Ego and Non-ego. Others, more radical, perceived Prakriti as the creation, shadow or aspect of Purusha, so that God alone remained, the spiritual or ideal factor eliminating by inclusion the material or real. Solutions were also attempted on the opposite side; for some eliminated the conscious Egos themselves as mere seemings; not a few seem to have thought that each ego is only a series of successive shocks of consciousness and the persistent sense of identity no more than an illusion due to the unbroken continuity of the shocks. If these shocks of consciousness are borne in on the brain from the changes of Prakriti in the multitudinous stir of evolution, then is consciousness one out of the many terms of Prakriti itself, so that Prakriti alone remains as the one reality, the material or real factor eliminating by inclusion the spiritual or ideal. But if we deny, as many did, that Prakriti is an ultimate reality apart from the perceptions of Purushas and yet apply the theory of a false notion of identity created by successive waves of

² Note that Matter here not only includes gross matter with which Western Science is mainly concerned, but subtle matter, the material in which thought & feeling work, and causal matter in which the fundamental operations of the Will-to-live are conducted.

sensation, we arrive at the impossible & sophistic position of the old Indian Nihilists whose reason by a singular suicide landed itself in Nothingness as the cradle & bourne, nay, the very stuff and reality of all existence. And there was a third direction in which thought tended and which led it to the very threshold of Vedanta; for this also was a possible speculation that Prakriti & Purusha might both be quite real & yet not ultimately different aspects or sides of each other and so, after all, of a Oneness higher than either. But these speculations, plausible or imperfect, logical or sophistic, were yet mere speculations; they had no basis either in observed fact or in reliable experience. Two certainties seemed to have been arrived at, Prakriti was testified to by a close analysis of phenomenal existence; it was the basis of the phenomenal world which without a substratum of original matter could not be accounted for and without a fundamental oneness and indestructibility in that substratum could not be, what observation showed it to be, subject, namely, to fixed laws & evidently invariable in its sum and substance. On the other hand Purushas were testified to by the eternal persistence of the sense of individuality and identity whether during life or after death³ and by the necessity of a perceiving cause for the activity of Prakriti; they were the receptive and contemplative Egos within the sphere of whose consciousness Prakriti, stirred to creative activity by their presence, performed her long drama of phenomenal Evolution.

But meanwhile the seers of ancient India had, in their experiments and efforts at spiritual training and the conquest of the body, perfected a discovery which in its importance to the future of human knowledge dwarfs the divinations of Newton and Galileo; even the discovery of the inductive and experimental method in Science was not more momentous; for they discovered down to its ultimate processes the method of Yoga and by the method of Yoga they rose to three crowning realisations. They

³ Survival of the human personality after death has always been held in India to be a proved fact beyond all dispute; the Charvaka denial of it was contemned as mere irrational & wilful folly. Note however that survival after death does not necessarily to the Indian mind imply immortality, but only raises a presumption in its favour.

realised first as a fact the existence under the flux and multitudinousness of things of that supreme Unity and immutable Stability which had hitherto been posited only as a necessary theory, an inevitable generalisation. They came to know that It is the one reality and all phenomena merely its seemings and appearances, that It is the true Self of all things and phenomena are merely its clothes and trappings. They learned that It is absolute and transcendent and, because absolute and transcendent, therefore eternal, immutable, imminuable and indivisible. And looking back on the past progress of speculation they perceived that this also was the goal to which pure intellectual reasoning would have led them. For that which is in Time must be born and perish; but the Unity and Stability of things is eternal and must therefore transcend Time. That which is in Space must increase & diminish, have parts & relations, but the Unity and Stability of things is imminuable, not augmentable, independent of the changefulness of its parts and untouched by the shifting of their relations, and must therefore transcend Space; — and if it transcends Space, cannot really have parts, since Space is the condition of material divisibility; divisibility therefore must be, like death, a seeming and not a reality. Finally that which is subject to Causality, is necessarily subject to Change; but the Unity and Stability of things is immutable, the same now as it was aeons ago and will be aeons hereafter, and must therefore transcend Causality.

This then was the first realisation through Yoga, NITYO 'NITYÂNÂM, the One Eternal in many transient.

At the same time they realised one truth more,—a surprising truth; they found that the transcendent absolute Self of things was also the Self of living beings, the Self too of man, that highest of the beings living in the material plane on earth. The Purusha or conscious Ego in man which had perplexed and baffled the Sankhyas, turned out to be precisely the same in his ultimate being as Prakriti the apparently non-conscious source of things; the non-consciousness of Prakriti, like so much else, was proved a seeming and no reality, since behind the inanimate form a conscious Intelligence at work is to the eyes of the Yогin luminously self-evident.

This then was the second realisation through Yoga, CHÉTANAŚ CHÉTANĀNĀM, the One Consciousness in many Consciousnesses.

Finally at the base of these two realisations was a third, the most important of all to our race,—that the Transcendent Self in individual man is as complete *because identically the same* as the Transcendent Self in the Universe; for the Transcendent is indivisible and the sense of separate individuality is only one of the fundamental seemings on which the manifestation of phenomenal existence perpetually depends. In this way the Absolute which would otherwise be beyond knowledge, becomes knowable; and the man who knows his whole Self knows the whole Universe. This stupendous truth is enshrined to us in the two famous formulae of Vedanta, SO 'HAM, He am I, and AHAM BRAHM' ÂSMI, I am Brahman the Eternal.

Based on these four grand truths, NITYO 'NITYĀNĀM, CHÉTANAŚ CHÉTANĀNĀM, SO 'HAM, AHAM BRAHM' ÂSMI, as upon four mighty pillars the lofty philosophy of the Upanishads raises its front among the distant stars.

Chapter III Nature of the Absolute Brahman

Viewed in the light of these four great illuminations the utterances of the Upanishads arrange themselves and fall into a perfect harmony. European scholars like Max Muller have seen in these Scriptures a mass of heterogeneous ideas where the sublime jostles the childish, the grandiose walks arm-in-arm with the grotesque, the most petty trivialities feel at home with the rarest and most solemn philosophical intuitions, and they have accordingly declared them to be the babblings of a child humanity; inspired children, idiots endowed with genius, such to the Western view are the great Rishis of the Aranyaka. But the view is suspect from its very nature. It is not likely that men who handle the ultimate and most difficult intellectual problems with such mastery, precision and insight, would babble mere folly in

matters which require the use of much lower faculties. Their utterances in this less exalted sphere may be true or they may be erroneous, but, it may fairly be assumed, they gave them forth with a perfectly clear idea of their bearing and signification. To an understanding totally unacquainted with the methods by which they are arrived at, many of the established conclusions of modern Science would seem unutterably grotesque and childish, —the babblings if not of a child humanity, at least of humanity in its dotage; yet only a little accurate knowledge is needed to show that these grotesque trivialities are well-ascertained and irrefragable truths.

In real truth the Upanishads are in all their parts, allowing for imaginative language and an occasional element of symbolism, quite rational, consistent and homogeneous. They are not concerned indeed to create an artificial impression of consistency by ignoring the various aspects of this manifold Universe and reducing all things to a single denomination; for they are not metaphysical treatises aiming at mathematical abstractness or geometrical precision and consistency. They are a great store of observations and spiritual experiences with conclusions and generalisations from those observations and experiences, set down without any thought of controversial caution or any anxiety to avoid logical contradictions. Yet they have the consistency of all truthful observation and honest experience; they arrange themselves naturally and without set purpose under one grand universal truth developed into a certain number of wide general laws within whose general agreement there is room for infinite particular variations and even anomalies. They have in other words a scientific rather than a logical consistency.

To the rigorous logician bound in his narrow prison of verbal reasoning, the Upanishads seem indeed to base themselves on an initial and fundamental inconsistency. There are a number of passages in these Scriptures which dwell with striking emphasis on the unknowability of the Absolute Brahman. It is distinctly stated that neither mind nor senses can reach the Brahman and that words return baffled from the attempt to describe It; more, —that we do not discern the Absolute and Transcendent in Its

reality, nor can we discriminate the right way or perhaps any way of teaching the reality of It to others; and it is even held, that It can only be properly characterised in negative language and that to every challenge for definition the only true answer is NÉTI NÉTI, *It is not this, It is not that.* Brahman is not definable, not describable, not intellectually knowable. And yet in spite of these passages the Upanishads constantly declare that Brahman is the one true object of knowledge and the whole Scripture is in fact an attempt not perhaps to define, but at least in some sort to characterise and present an idea, and even a detailed idea, of the Brahman.

The inconsistency is more apparent than real. The Brahman in Its ultimate reality is transcendent, absolute, infinite; but the senses and the intellect, which the senses supply with its material, are finite; speech also is limited by the deficiencies of the intellect; Brahman must therefore in Its very nature be unknowable to the intellect and beyond the power of speech to describe,—yet only in Its ultimate reality, not in Its aspects or manifestations. The Agnostic Scientist also believes that there must be some great ultimate Reality unknown and probably unknowable to man (*ignoramus et ignorabimus*) from which this Universe proceeds and on which all phenomena depend, but his admission of Unknowability is confined to the ultimate Nature of this supreme Ens and not to its expression or manifestation in the Universe. The Upanishad, proceeding by a profounder method than material analysis, casts the net of knowledge wider than the modern Agnostic, yet in the end its attitude is much the same; it differs only in this important respect that it asserts even the ultimate Brahman to be although inexpressible in the terms of finite knowledge, yet realisable and attainable.

The first great step to the realisation of the Brahman is by the knowledge of Him as manifested in the phenomenal Universe; for if there is no reality but Brahman, the phenomenal Universe which is obviously a manifestation of *something* permanent and eternal, must be a manifestation of Brahman and of nothing else, and if we know it completely, we do to a certain extent and in a certain way, know Him, not as an Absolute Existence, but under

the conditions of phenomenal manifestation. While, however, European Science seeks only to know the phenomena of gross matter, the Yогin goes farther. He asserts that he has discovered an universe of subtle matter penetrating and surrounding the gross; this universe to which the spirit withdraws partially and for a brief time in sleep but more entirely and for a longer time through the gates of death, is the source whence all psychic processes draw their origin; and the link which connects this universe with the gross material world is to be found in the phenomena of life and mind. His assertion is perfectly positive and the Upanishad proceeds on it as on an ascertained and indisputable fact quite beyond the limits of mere guesswork, inference or speculation. But he goes yet farther and declares that there is yet a third universe of causal matter penetrating and surrounding both the subtle and the gross, and that this universe to which the spirit withdraws in the deepest and most abysmal states of sleep and trance and also in a remote condition beyond the state of man after death, is the source whence all phenomena take their rise. If we are to understand the Upanishads we must accept these to us astounding statements, temporarily at least; for on them the whole scheme of Vedanta is built. Now Brahman manifests Himself in each of these Universes, in the Universe of Causal Matter as the Cause, Self and Inspirer, poetically styled Prajna the Wise One; in the universe of subtle matter as the Creator, Self and Container, styled Hiranyagarbha the Golden Embryo of life and form, and in the universe of gross matter as the Ruler, Guide, Self and Helper, styled Virat the Shining and Mighty One. And in each of these manifestations He can be known and realised by the spirit of Man.

Granted the truth of these remarkable assertions, what then is the relation between the Supreme Self and man? The position has already been quite definitely taken that the transcendent Self in man is identically the same as the transcendent Self in the Universe and that this identity is the one great key to the knowledge of the Absolute Brahman. Does not this position rule out of court any such differences between the Absolute and the human Self as is implied in the character of the triple

manifestation of Brahman? On the one hand completest identity of the Supreme Self and the human is asserted as an ascertained & experienced fact, on the other hand widest difference is asserted as an equally well-ascertained and experienced fact; there can be no reconciliation between these incompatible statements. Yet are they both facts, answers Vedanta; identity *is* a fact in the reality of things; difference *is* a fact in the appearance of things, the world of phenomena; for phenomena are in their essence nothing but seemings and the difference between the individual Self and the Universal Self is the fundamental seeming which makes all the rest possible. This difference grows as the manifestation of Brahman proceeds. In the world of gross matter, it is complete; the difference is so acute, that it is impossible for the material sensual being to conceive of the Supreme Soul as having any point of contact with his own soul and it is only by a long process of evolution that he arrives at the illumination in which some kind of identity becomes to him conceivable. The basal conception for Mind as conditioned by gross matter is Dualistic; the knower here must be different from the Known and his whole intellectual development consists in the discovery, development and perfected use of ever new media and methods of knowledge. Undoubtedly the ultimate knowledge he arrives at brings him to the fundamental truth of identity between himself and the Supreme Self, but in the sphere of gross phenomena this identity can never be more than an intellectual conception, it can never be verified by personal realisation. On the other hand it can be *felt* by the supreme sympathy of love and faith, either through love of humanity and of all other fellow-beings or directly through love of God. This feeling of identity is very strong in religions based largely on the sentiment of Love and Faith. I and my Father are One, cried the Founder of Christianity; I and my brother man & my brother beast are One, says Buddhism; St Francis spoke of Air as his brother and Water as his sister; and the Hindu devotee when he sees a bullock lashed falls down in pain with the mark of the whip on his own body. But the feeling of Oneness remaining only a feeling does not extend into knowledge and therefore these religions while emotionally

pervaded with the sense of identity, tend in the sphere of intellect to a militant Dualism or to any other but always unMonistic standpoint. Dualism is therefore no mere delusion; it is a truth, but a phenomenal truth and not the ultimate reality of things.

As it proceeds in the work of discovering and perfecting methods of knowledge, the individual self finds an entry into the universe of subtle phenomena. Here the difference that divides it from the Supreme Self is less acute; for the bonds of matter are lightened and the great agents of division and disparity, Time and Space, diminish in the consistency of their pressure. The individual here comes to realise a certain unity with the great Whole; he is enlarged and aggrandized into a part of the Universal Self, but the sense of identity is not complete and cannot be complete. The basal conception for Mind in this subtle Universe is Dualo-Monistic; the knower is not quite different from the known; he is like and of the same substance but inferior, smaller and dependent; his sense of oneness may amount to similarity and consubstantiality but not to coincidence and perfect identity.

From the subtle Universe the individual self rises in its evolution until it is able to enter the universe of Causal matter, where it stands near to the fountain-head. In this universe media and methods of knowledge begin to disappear, Mind comes into almost direct relations with its source and the difference between the individual and the Supreme Self is greatly attenuated. Nevertheless there is here too a wall of difference, even though it wears eventually thin as the thinnest paper. The knower is aware that he is coeval and coexistent with the Supreme Self, he is aware in a sense of omnipresence, for wherever the Supreme Self is, there also he is; he is, moreover, on the other side of phenomena and can see the Universe at will without him or within him; but he has still not necessarily realised the Supreme as utterly himself, although the perfect realisation is now for the first time in his grasp. The basal perception for Mind in this Universe is Monism with a difference, but the crowning perception of Monism becomes here possible.

And when it is no longer only possible but grasped? Then the individual Self entering into full realisation, ceases in any

sense to be the individual Self, but merges into & becomes again the eternal and absolute Brahman, without parts, unbeginning, undecaying, unchanging. He has passed beyond causality and phenomena and is no longer under the bondage of that which is only by seeming. This is the *laya* or utter absorption of Hinduism, the highest *nirvana* or extinction from phenomena of the Upanishads and of Buddhist metaphysics. It is obviously a state which words fail to describe, since words which are created to express relations and have no meaning except when they express relations, cannot deal successfully with a state which is perfectly pure, absolute and unrelated; nor is it a condition which the bounded & finite intellect of man on this plane can for a moment envisage. This unintelligibility of the supreme state is naturally a great stumblingblock to the undisciplined imagination of our present-day humanity which, being sensuous, emotional and intellectual, inevitably recoils from a bliss in which neither the senses, emotions nor intellect have any place. Surely, we cry, the extinction or quietude of all these sources & means of sensation and pleasure implies not supreme bliss but absolute nothingness, blank annihilation. "An error", answers the Vedanta, "a pitiful, grovelling error! Why is it that the senses cease in that supreme condition? Because the senses were evolved in order to sense external being and where externality ceases, they having no action cease to exist. The emotions too are directed outwards and need another for their joy, they can only survive so long as we are incomplete. The intellect similarly is and works only so long as there is something external to it and ungrasped. But to the Most High there is nothing ungrasped, the Most High depends on none for His joy. He has therefore neither emotions nor intellect, nor can he either who merges in and becomes the Most High, possess them for a moment after that high consummation. The deprivation of the limited senses in His boundlessness is not a loss or an extinction, but must be a fulfilment, a development into Being which rejoices in its own infinity. The disappearance of our broken & transient emotions in His completeness must bring us not into a cold void but rather into illimitable bliss. The culmination of knowledge by the supersession of our divided

& fallible intellect must lead not to utter darkness and blank vacuity but to the luminous ecstasy of an infinite Consciousness. Not the annihilation of Being, but utter fullness of Being is our Nirvana." And when this ecstatic language is brought to the touchstone of reason, it must surely be declared just and even unanswerable. For the final absolution of the intellect can only be at a point where the Knower, Knowledge and the Known become one, Knowledge being there infinite, direct and without media. And where there is this infinite and flawless knowledge, there must be, one thinks, infinite and flawless existence and bliss. But by the very conditions of this state, we can only say of it that it is, we cannot define it in words, precisely because we cannot realize it with the intellect. The Self can be realized only with the Self; there is no other instrument of realization.

Granted, it may be said, that such a state is conceivably possible,—as certainly it is, starting from your premises, the only and inevitable conclusion,—but what proof have we that it exists as a reality? what proof can even your Yoga bring to us that it exists? For when the individual Self becomes identified with the Supreme, its evolution is over and it does not return into phenomena to tell its experiences. The question is a difficult one to handle, partly because language, if it attempts to deal with it at all precisely, must become so abstract and delicate as to be unintelligible, partly because the experiences it involves are so far off from our present general evolution and attained so rarely that dogmatism or even definite statement appears almost unpardonable. Nevertheless with the use of metaphorical language, or, in St Paul's words, speaking as a fool, one may venture to outline what there is at all to be said on the subject. The truth then seems to be that there are even in this last or fourth state of the Self, stages and degrees, as to the number of which experience varies; but for practical purposes we may speak of three, the first when we stand at the entrance of the porch and look within; the second when we stand at the inner extremity of the porch and are really face to face with the Eternal; the third when we enter into the Holy of Holies. Be it remembered that the language I am using is the language of metaphor and must not be pressed

with a savage literalness. Well then, the first stage is well within the possible experience of man and from it man returns to be a Jivanmukta, one who lives & is yet released in his inner self from the bondage of phenomenal existence; the second stage once reached, man does not ordinarily return, unless he is a supreme Buddha,— or perhaps as a world Avatar; from the third stage none returns nor is it attainable in the body. Brahman as realised by the Jivanmukta, seen from the entrance of the porch, is that which we usually term Parabrahman, the Supreme Eternal and the subject of the most exalted descriptions of the Vedanta. There are therefore five conditions of Brahman. Brahman Virat, Master of the Waking Universe; Brahman Hiranyagarbha, of the Dream Universe; Brahman Prajna or Avyakta of the Trance Universe of Unmanifestation; Parabrahman, the Highest; and that which is higher than the highest, the Unknowable. Now of the Unknowable it is not profitable to speak, but something of Parabrahman can be made intelligible to the human understanding because — always if the liberal use of loose metaphors is not denied,— it can be partially brought within the domain of speech.

Chapter IV Parabrahman

So far the great Transcendent Reality has been viewed from the standpoint of the human spirit as it travels on the upward curve of evolution to culminate in the Supreme. It will now be more convenient to view the Absolute from the other end of the cycle of manifestation where, in a sense, evolution begins and the great Cause of phenomena stands with His face towards the Universe He will soon create. At first of course there is the Absolute, unconditioned, unmanifested, unimaginable, of Whom nothing can be predicated except negatives. But as the first step towards manifestation the Absolute — produces, shall we say? let the word serve for want of a better! — produces in Itself a luminous Shadow of Its infinite inconceivable Being, — the image is

trivial and absurd, but one can find none adequate,—which is Parabrahman or if we like so to call Him, God, the Eternal, the Supreme Spirit, the Seer, Witness, Wisdom, Source, Creator, Ancient of Days. Of Him Vedanta itself can only speak in two great trilogies, subjective and objective, Sacchidanandam, Existence, Consciousness, Bliss; Satyam Jnanam Anantam, Truth, Knowledge, Infinity.

SACCHIDANANDAM. The Supreme is Pure Being, Absolute Existence, SAT. He is Existence because He alone *Is*, there being nothing else which has any ultimate reality or any being independent of His self-manifestation. And He is *Absolute* Existence because since He alone is and nothing else exists in reality, He must necessarily exist by Himself, in Himself and to Himself. There can be no cause for His existence, nor object to His existence; nor can there be any increase or diminution in Him, since increase can only come by addition from something external and diminution by loss to something external, and there is nothing external to Brahman. He cannot change in any way, for then He would be subject to Time and Causality; nor have parts, for then He would be subject to the law of Space. He is beyond the conceptions of Space, Time and Causality which He creates phenomenally as the conditions of manifestation but which cannot condition their Source. Parabrahman, then, is Absolute Existence.

The Supreme is also Pure Awareness, Absolute Consciousness, CHIT. We must be on our guard against confusing the ultimate consciousness of Brahman with our own modes of thought and knowledge, or calling Him in any but avowedly metaphorical language the Universal Omniscient Mind and by such other terminology; Mind, Thought, Knowledge, Omnipotence, Partial Science, Nescience are merely modes in which Consciousness figures under various conditions and in various receptacles. But the Pure Consciousness of the Brahman is a conception which transcends our modes of thinking. Philosophy has done well to point out that consciousness is in its essence purely subjective. We are not conscious of external objects; we are only conscious of certain perceptions and impressions in our

brains which by the separate or concurrent operation of our senses we are able to externalise into name and form; and in the very nature of things and to the end of Time we cannot be conscious of anything except these impressions & perceptions. The fact is indubitable, though Materialism and Idealism explain it in diametrically opposite directions. We shall eventually know that this condition is imperative precisely because consciousness is the fundamental thing from which all phenomenal existence proceeds, so much so that all phenomena have been called by a bold metaphor distortions or corruptions (*vikaras*) of the absolute consciousness. Monistic philosophers tell us however that the true explanation is not corruption but illusion (*adhyaropa*), first of the idea of not-self into the Self, and of externality into the internal, and then of fresh and ever more complex forms by the method of Evolution. These metaphysical explanations it is necessary indeed to grasp, but even when we have mastered their delicate distinctions, refined upon refinement and brought ourselves to the verge of infinite ideas, there at least we must pause; we are moored to our brains and cannot in this body cut the rope in order to spread our sails over the illimitable ocean. It is enough if we satisfy ourselves with some dim realisation of the fact that all sentience is ultimately self-sentience.

The Upanishads tell us that Brahman is not a blind universal Force working by its very nature mechanically, nor even an unconscious Cause of Force; He is conscious or rather is Himself Consciousness, CHIT, as well as SAT. It necessarily follows that SAT and CHIT are really the same; Existence is Consciousness and cannot be separated from Consciousness. Phenomenally we may choose to regard existence as proceeding from sentience or culminating in it or being in and by it; but culmination is only a return to a concealed source, an efflorescence already concealed in the seed, so that from all these three standpoints sentience is eventually the condition of existence; they are only three different aspects of the mental necessity which forbids us to imagine the great Is as essentially unaware that He Is. We may of course choose to believe that things are the other way about, that existence proceeds from insentience through

sentience back again to insentience. Sentience is then merely a form of insentience, a delusion or temporary corruption (*vikara*) of the eternal and insentient. In this case Sentience, Intelligence, Mind, Thought and Knowledge, all are Maya and either insentient Matter or Nothingness the only eternal reality. But the Nihilist's negation of existence is a mere *reductio ad absurdum* of all thought and reason, a metaphysical *harakiri* by which Philosophy rips up her own bowels with her own weapons. The Materialist's conclusion of eternal insentient Matter seems to stand on firmer ground; for we have certainly the observed fact that evolution seems to start from inanimate Matter, and consciousness presents itself in Matter as a thing that appears for a short time only to disappear, a phenomenon or temporary seeming. To this argument also Vedanta can marshal a battalion of replies. The assertion of eternally insentient Matter (*Prakriti*) without any permanently sentient reality (*Purusha*) is, to begin with, a paradox far more startling than the Monistic paradox of Maya and lands us in a conclusion mentally inconceivable. Nor is the materialistic conclusion indisputably proved by observed facts; rather facts seem to lead us to a quite different conclusion, since the existence of anything really insentient behind which there is no concealed Sentience is an assumption (for we cannot even positively say that inanimate things are absolutely inanimate,) and the one fact we surely and indisputably know is our own sentience and animation. In the workings of inanimate Matter we everywhere see the operations of Intelligence operating by means and adapting means to an end and the intelligent use of means by an unconscious entity is a thing paradoxical in itself and unsupported by an atom of proof; indeed the wider knowledge of the Universe attainable to Yoga actually does reveal such a Universal Intelligence everywhere at work.

Brahman, then, is Consciousness, and this once conceded, it follows that He must be in His transcendental reality Absolute Consciousness. His Consciousness is from itself and of itself like His existence, because there is nothing separate and other than Him; not only so but it does not consist in the knowledge of one part of Himself by another, or of His parts by His whole, since

His transcendental existence is one and simple, without parts. His consciousness therefore does not proceed by the same laws as our consciousness, does not proceed by differentiating subject from object, knower from known, but simply *is*, by its own right of pure and unqualified existence, eternally and illimitably, in a way impure and qualified existences cannot conceive.

The Supreme is, finally, Pure Ecstasy, Absolute Bliss, ÂNANDA. Now just as SAT and CHIT are the same, so are SAT and CHIT not different from ÂNANDA; just as Existence is Consciousness and cannot be separated from Consciousness, so Conscious Existence is Bliss and cannot be separated from Bliss. I think we feel this even in the very finite existence and cramped consciousness of life on the material plane. Conscious existence at least cannot endure without pleasure; even in the most miserable sentient being there must be pleasure in existence though it appear small as a grain of mustard seed; blank absolute misery entails suicide and annihilation as its necessary and immediate consequence. The will to live, — the desire of conscious existence and the instinct of self-preservation,— is no mere teleological arrangement of Nature with a particular end before it, but is fundamental and independent of end or object; it is merely a body and form to that pleasure of existence which is essential and eternal; and it cannot be forced to give way to anything but that will to live *more* fully and widely which is the source on one side of all personal ambition and aspiration, on the other of all love, self-sacrifice and self-conquest. Even suicide is merely a frenzied revolt against limitation, a revolt not the less significant because it is without knowledge. The pleasure of existence can consent to merge only in the greater pleasure of a widened existence, and religion, the aspiration towards God, is simply the fulfilment of this eternal elemental force, its desire to merge its separate & limited joy in the sheer bliss of infinite existence. The Will to live individually embodies the pleasure of individual existence which is the outer phenomenal self of all creatures; but the will to live infinitely can only proceed straight from the transcendent, ultimate Spirit in us which is our real Self; and it is this that availeth towards immortality. Brahman, then,

being infinity of conscious existence, is also infinite bliss. And the bliss of Brahman is necessarily absolute both in its nature and as to its object. Any mixture or coexistence with pain would imply a cause of pain either the same or other than the cause of bliss, with the immediate admission of division, struggle, opposition, of something inharmonious and self-annulling in Brahman; but division and opposition which depend upon relation cannot exist in the unrelated Absolute. Pain is, properly considered, the result of limitation. When the desires and impulses are limited in their satisfaction or the matter, physical or mental, on which they act is checked, pressed inward, divided or pulled apart by something alien to itself, then only can pain arise. Where there is no limitation, there can be no pain. The Bliss of Brahman is therefore absolute in its nature.

It is no less absolute with regard to its object; for the subject and object are the same. It is inherent in His own existence and consciousness and cannot possibly have any cause within or without Him who alone Is and Is without parts or division. Some would have us believe that a self-existent bliss is impossible; bliss, like pain, needs an object or cause different from the subject and therefore depends on limitation. Yet even in this material or waking world any considerable and deep experience will show us that there is a pleasure which is independent of surroundings and does not rely for its sustenance on temporary or external objects. The pleasure that depends on others is turbid, precarious and marred by the certainty of diminution and loss; it is only as one withdraws deeper and deeper into oneself that one comes nearer and nearer to the peace that passeth understanding. An equally significant fact is to be found in the phenomena of satiety; of which this is the governing law that the less limited and the more subjective the field of pleasure, the farther is it removed from the reach of satiety and disgust. The body is rapidly sated with pleasure; the emotions, less limited and more subjective, can take in a much deeper draught of joy; the mind, still wider and more capable of internality, has a yet profounder gulp and untiring faculty of assimilation; the pleasures of the intellect and higher understanding, where we

move in a very rare and wide atmosphere, seldom pall and, even then, soon repair themselves; while the infinite spirit, the acme of our subjectiveness, knows not any disgust of spiritual ecstasy and will be content with nothing short of infinity in its bliss. The logical culmination of this ascending series is the transcendent and absolute Parabrahman whose bliss is endless, self-existent and pure.

This then is the Trinity of the Upanishads, Absolute Existence; which is *therefore* Absolute Consciousness; which is therefore Absolute Bliss.

And then the second Trinity SATYAM JNANAM ANANTAM. This Trinity is not different from the first but merely its objective expression. Brahman is *Satyam*, Truth or Reality because Truth or Reality is merely the subjective idea of existence viewed objectively. Only that which fundamentally exists is real and true, and Brahman being absolute existence is also absolute truth and reality. All other things are only relatively real, not indeed false in every sense since they are appearances of a Reality, but impermanent and therefore not in themselves ultimately true.

Brahman is also JNÂNAM, Knowledge; for Knowledge is merely the subjective idea of consciousness viewed objectively. The word *Jnâna* as a philosophic term has an especial connotation. It is distinguished from *samjnâna* which is awareness by contact; from *âjnâna* which is perception by receptive and central Will and implies a command from the brain; from *prajnâna* which is Wisdom, teleological will or knowledge with a purpose; and from *vijnâna* or knowledge by discrimination. *Jnâna* is knowledge direct and without the use of a medium. Brahman is absolute *Jnâna*, direct & self-existent, without beginning, middle or end, in which the Knower is also the Knowledge and the Known.

Finally, Brahman is ANANTAM, Endlessness, including all kinds of Infinity. His Infinity is of course involved in His absolute existence and consciousness, but it arises directly from His absolute bliss, since bliss, as we have seen, consists objectively in the absence of limitation. Infinity therefore is merely the subjective idea of bliss viewed objectively. It may be otherwise expressed by

the word Freedom or by the word Immortality. All phenomenal things are bound by laws and limitations imposed by the triple idea of Time, Space and Causality; in Brahman alone there is absolute Freedom; for He has no beginning, middle or end in Time or Space nor, being immutable, in Causality. Regarded from the point of view of Time, Brahman is Eternity or Immortality, regarded from the point of view of Space He is Infinity or Universality, regarded from the point of view of Causality He is absolute Freedom. In one word He is ANANTAM, Endlessness, Absence of Limitation.

Chapter V

Maya: the Principle of Phenomenal Existence

Brahman then, let us suppose, has projected in Itself this luminous Shadow of Itself and has in the act (speaking always in the language of finite beings with its perpetual taint of Time, Space & Causality) begun to envisage Itself and consider Its essentialities in the light of attributes. He who is Existence, Consciousness, Bliss envisages Himself as existent, conscious, blissful. From that moment phenomenal manifestation becomes inevitable; the Unqualified chooses to regard Himself as qualified. Once this fundamental condition is granted, everything else follows by the rigorous logic of evolution; it is the one postulate which Vedanta demands. For this postulate once granted, we can see how the Absolute when it projects in itself this luminous Shadow called the Parabrahman, prepares the way for and as it were necessitates the evolution of this manifest world,— by bringing into play the great fundamental principle of Maya or Illusion. Under the play of that one principle translating itself into motion, the great transformation spoken of by the Upanishad becomes possible,— the One becomes the Many.

(But this one fundamental postulate is not easily conceded. The question which will at once spring up armed and gigantic in

the European mind is the teleological objection, Why? All action implies a purpose; with what purpose did Brahman regard Himself as qualified? All Evolution is prompted by a desire, implies development, moves to an intelligible goal. What did Brahman who, being Absolute, is self-sufficing, desire, of what development did He stand in need or to what goal does He move? This is, from the teleological standpoint, the great crux of any theory of the Universe which tries to start from an essential and original Unity; a gulf is left which the intellect finds it impossible to bridge. Certain philosophies do indeed attempt to bridge it by a teleological explanation. The Absolute One, it is argued, passes through the cycle of manifestation, because He then returns to His original unity *enriched* with a new store of experiences and impressions, richer in love, richer in knowledge, richer in deed. It is truly amazing that any minds should be found which can seriously flatter themselves with the serene illusion that this is philosophy. Anything more unphilosophical, more vicious in reasoning cannot be imagined. When the Veda, speaking not of the Absolute but of Brahman Hiranyagarbha, says that He was alone and grew afraid of His loneliness, it passes, as a daring poetical fancy; and this too might pass as a poetical fancy, but not as serious reasoning. It is no more than an unreasoning recoil from the European idea of absolute, impersonal Unity as a blank and empty Negation. To avoid this appalling conclusion, an Unity is imagined which can be at the same time, not phenomenally but in its ultimate reality, manifold, teeming with myriad memories. It is difficult to understand the precise argumentation of the idea, whether the One when He has reentered His unity, preserves His experiences in detail or in the mass, say, as a pulp or essence. But at any rate several radical incoherences are in its conception. The Absolute is imaged as a thing incomplete and awaking to a sense of Its incompleteness which It proceeds in a business-like way to remedy; subject therefore to Desire and subject also to Time in which It is now contained! As to the source whence these new impressions are derived which complete the incompleteness of Brahman, that is a still greater mystery. If it was out of Himself, then it was latent in Him, already existing unknown to Himself.

One therefore presumes He produced in Himself, since there was no other place to produce them from, things which had no existence previously but now are; that which was not, became; out of nothing, something arose. This is not philosophy but theology; not reasoning, but faith. As faith it might pass; that God is omnipotent and can therefore literally create something out of nothing, is a dogma which one is at liberty to believe or reject, but it is outside the sphere of reasoning.)

There seems at first to be a fatal objection to the concession of this postulate; it seems really to evade the fundamental question of the problem of Existence or merely carry the beginning of the problem two steps farther back. For the great crux of the Universe is precisely the difficulty of understanding How and Why the One became Many, and we do not get rid of the difficulty by saying that it proceeds from the Unqualified willing to regard Himself as qualified. Even if the question How were satisfactorily met by the theory of Maya, the Why of the whole process remains. The goal of Evolution may have been determined,—it is, let us concede, the return of the Infinite upon Itself through the cycle of manifestation; but the beginning of Evolution is not accounted for, its utility is not made manifest. Why did the Absolute turn His face towards Evolution? There seems to be no possible answer to this inquiry; it is impossible to suggest any teleological reason why the Unqualified should will to look on Himself as qualified and so set the wheel of Evolution rolling,—at any rate any reason which would not be hopelessly at variance with the essential meaning of Absoluteness; and it is only an unphilosophic or imperfectly philosophic mind which can imagine that it has succeeded in the attempt. But the impossibility does not vitiate the theory of Maya; for the Vedantist parries this question of the Why with an unanswerable retort. The question itself, he says, as directed to the Brahman, is inadmissible and an impertinence. He, being Absolute, is in His very nature beyond Causality on which all ideas of need, utility, purpose depend, and to suppose purpose in Him is to question His transcendent and absolute nature: That which is beyond causality, has no need to act on a purpose. To catechise

the Mighty Infinite as to why It chose to veil Its infinity in Maya, or to insist that the Universe shall choose between being utilitarian or not being at all, is absurd; it betrays a want of perfect intellectual lucidity. The question Why simply cannot arise.

But even when the question of utility is set aside, the intelligibility of the process is not established. The Unqualified willing to regard Himself as qualified is, you say, His Maya. But what is the nature of the process, intellectual or volitional, and how can an intellectual or volitional process be consistently attributed to the Absolute? — on this head at least one expects intellectual satisfaction. But the Vedantist strenuously denies the legitimacy of the expectation. If the “Will to regard” were put forward as a literal statement of a definable fact and its terms as philosophically precise, then the expectation would be justifiable. But the terms are avowedly poetical and therefore logically inadequate; they were merely intended to present the fact of Maya to the intellect in the imperfect and totally inadequate manner which is alone possible to finite speech and thought in dealing with the infinite. No intellectual or volitional process as we conceive will and intellect has really taken place. What then has happened? What is Maya? How came it into existence?

The Vedanta answers this question with its usual uncompromising candour and imperturbable clearness of thought; — we cannot tell, it says, for we do not and cannot know; at least we cannot intelligibly define; and this for the simple reason that the birth of Maya, if it had any birth, took place on the other side of phenomena, before the origin of Time, Space and Causality; and is therefore not cognizable by the intellect which can only think in terms of Time, Space and Causality. A little reflection will show that the existence of Maya is necessarily involved even in the casting of the luminous shadow called Parabrahman. A thing so far removed in the dark backward and abysm before Time, a state, force or process (call it what we will) operating directly in the Absolute Who is but cannot be thought of, may be perceived as a fact, but cannot be explained or defined. We say therefore that Maya is a thing *anirdeshyam*, impossible to define, of which we cannot say that it is, — for it is Illusion, —

and we cannot say that it is not,—for it is the Mother of the Universe; we can only infer that it is a something inherent in the being of Brahman and must therefore be not born but eternal, not in Time, but out of Time. So much arises from our premises; more it would be dishonest to pretend to know.

Still Maya is no mere assumption or its existence unprovable! Vedanta is prepared to prove that Maya is; prepared to show *what* it is, not ultimately but as involved in Parabrahman and manifested in the Universe; prepared to describe *how* it set about the work of Evolution, prepared to present Maya in terms of the intellect as a perfectly possible explanation of the entire order of the Universe; prepared even to contend that it is the only explanation perfectly consistent with the nature of being and the recognized bases of scientific and philosophical truth. It is only not prepared to represent the ultimate infinite nature and origin of Maya in precise terms comprehensible to finite mind; for to attempt philosophical impossibilities constitutes an intellectual pastime in which the Vedantist is too much attached to clear thinking to indulge.

What then is Maya? It is, intellectually envisaged, a subjective necessity involved in the very nature of Parabrahman. We have seen that Parabrahman is visible to us in the form of three subjective conceptions with three corresponding objective conceptions, which are the essentialities of His being. But Parabrahman is the Brahman as envisaged by the individual self in the act of returning to its source; Brahman externalized by His own will in the form of Maya is looking at Himself with the curtains of Maya half-lifted but not yet quite thrown back. The forms of Maya have disappeared, but the essentiality stands behind the returning Self at the entrance of the porch, and it is only when he reaches the inner end of the porch that he passes utterly out of the control of Maya. And the essentiality of Maya is to resolve Existence, Consciousness and Bliss which are really one, into three, the Unity appearing as a Trinity and the single Essentiality immediately breaking up into manifold properties or attributes. The Absolute Brahman at the inner entrance is the bright triune Parabrahman, absolute also, but cognizable; at the

threshold of the porch He is Parabrahman envisaging Maya, and the next step carries Him into Maya, where Duality begins, Purusha differentiates from Prakriti, Spirit from Matter, Force from Energy, Ego from Non-Ego; and as the descent into phenomena deepens, single Purusha differentiates itself into multitudinous receptacles, single Prakriti into innumerable forms. This is the law of Maya.

But the first step, speaking in the terms of pure intellect, is the envisaging of the Essentiality as possessing Its three subjective and three objective properties,—Existence; Consciousness; Bliss; Truth; Knowledge; Infinity. The moment this happens, by inevitable necessity, the opposite attributes, Nothingness, Non-Sentience, Pain, present themselves as inseparable shadows of the three substances, and with them come the objective triad, Falsehood, Ignorance, Limitation; Limitation necessitates Divisibility, Divisibility necessitates Time and Space; Time and Space necessitate Causality; Causality, the source from which definite phenomena arise, necessitates Change. All the fundamental laws of Duality have sprung into being, necessitated in a moment by the appearance of Saguna Brahman, the Unqualified Infinite become Qualified. They do not really or ultimately exist, because they are inconsistent with the absolute nature of Parabrahman, for even in the sphere of phenomena we can rise to the truth that annihilation is an illusion and only form is destroyed; nothingness is an impossibility, and the Eternal cannot perish; nor can He become non-sentient in whose being sentience and non-sentience are one; nor can He feel pain who is infinite and without limitation. Yet these things, which we know cannot exist, must be conceived and therefore have phenomenally an existence and a reality in impermanence. For this is the paradox of Maya and her works that we cannot say they exist, because they are in reality impossible, and we cannot say they do not exist, because we must conceive them subjectively and, knowledge being now turned outward, envisage them objectively.

Surely this is to land ourselves in a metaphysical morass! But the key of the tangle is always in our hands;—it is to remember that Parabrahman is Himself only the aspect of the

indefinable Absolute who is beyond Science and Nescience, Existence and Non-existence, Limitation and Infinity, and His sixfold attributes are not really six but one, not really attributes of Brahman, but in their unity Brahman Himself. It is only when we conceive of them as attributes that we are driven to regard Annihilation, Non-sentience and Limitation and their correspondings subjective or objective, as realities. But we are driven so to conceive them by something datelessly inherent in the infinite Will to live, in Brahman Himself. To leave for a moment the difficult language of metaphysics which on this dizzy verge of infinity, eludes and bewilders our giddy understanding and to use the trenchant symbolic style of the Upanishads, Parabrahman is the luminous shadow of the Absolute projected in Itself by Itself, and Maya is similarly the dark shadow projected by the Absolute in Parabrahman; both are real because eternal, but sheer reality is neither the light nor the darkness but the Thing-in-itself which they not merely like phenomena represent, but which in an inexplicable way they are. This, then, is Maya in its subjective relation to Parabrahman.

In phenomena Maya becomes objectivised in a hundred elusive forms, amid whose complex variety we long strive vainly to find the one supreme clue. The old thinkers long followed various of the main threads, but none led them to the mysterious starting point of her motions. "Then" says the Svetasvatara "they followed after concentration of Yoga and saw the Might of the Spirit of the Lord hidden deep in the modes of working of its own nature;" *Devatmashakti*, the Energy of the Divine Self, Parabrahman, is Maya; and it is in another passage stated to have two sides, obverse & reverse, Vidya and Avidya, Science and Nescience. Nescience eternally tends to envelop Science, Science eternally tends to displace Nescience. Avidya or Nescience is Parabrahman's power of creating illusions or images, things which seem but are not in themselves; Vidya or Science is His power of shaking off His own imaginations and returning upon His real and eternal Self. The action and reaction of these two great Energies doing work upon each other is the secret of Universal activity. The power of Nescience is evident on every

plane of existence; for the whole Universe is a series of images. The sun rises up in the morning, mounts into the cusp of the blue Heavens and descends at evening trailing behind it clouds of glory as it disappears. Who could doubt this irrefragable, overwhelmingly evidenced fact? Every day, through myriads of years, the eyes of millions of men all over the world have borne concurrent and unvarying testimony to the truth of these splendid voyagings. Than such universal ocular testimony, what evidence can be more conclusive? Yet it all turns out to be an image created by Nescience in the field of vision. Science comes & undeterred by prison & the stake tells us that the sun never voyages through our heavens, is indeed millions of miles from our heavens, and it is we who move round the Sun, not the Sun round us. Nay those Heavens themselves, the blue firmament into which poetry and religion have read so much beauty and wonder, is itself only an *image*, in which Nescience represents our atmosphere to us in the field of vision. The light too which streams upon us from our Sun and seems to us to fill Space turns out to be no more than an image. Science now freely permitted to multiply her amazing paradoxes, forces us at last to believe that it is only motion of matter affecting us at a certain pitch of vibration with that particular impression on the brain. And so she goes on resolving all things into mere images of the great cosmic ether which alone is. Of such unsubstantialities is this marvellous fabric of visible things created! Nay, it would even appear that the more unsubstantial a thing seems, the nearer it is to ultimate reality. This, which Science proves, says the Vedantist, is precisely what is meant by Maya.

Never dream, however, that Science will end here and that we have come to the last of her unveilings. She will yet go on and tell us that the cosmic ether itself is only an image, that this universe of sensible things and things inferable from sense is only a selection of translations from a far vaster universe of forms built out of subtler matter than our senses can either show or imply to us. And when she has entered into that subtler world with fit instruments of observation and analysis, that too she will relentlessly resolve into mere images of the subtler ether out of

which it is born. Behind that subtler universe also there looms a profounder and vaster, but simpler state of existence where there is only the undetermined universality of things as yet involved in their causes. Here Science must come to her latest dealings with matter and show us that this indeterminate universality of things is after all only an image of something in our own self. Meanwhile with that very self she is busy, continually and potently trying to persuade us that all which we believe to be ourselves, all in which our Nescience would have us contentedly dwell, is mere imagery and form. The animal in us insists that this body is the real Self and the satisfaction of its needs our primal duty; but Science (of whom Prof. Haeckel's Riddle of the Universe is not the concluding utterance) bids us beware of identifying our Self with a mere mass of primitive animal forms associated together by an aggregating nucleus of vital impulses; this surely is not the reality of Shakespeare & Newton, Buddha & St Francis! Then in those vital impulses we seek the bedrock of our being. But these too Science resolves into a delusion or image created by Nescience; for in reality these vital impulses have no existence by themselves but are merely the link established between that material aggregation of animal forms and something within us which we call Mind. Mind too she will not permit us long to mistake for anything more than an image created by the interaction of sensations and response to sensations between the material aggregation of the body and something that governs and informs the material system. This governing power in its action upon mind reveals itself in the discriminating, selecting, ordering and purposeful entity called by Vedanta the Buddhi, of which reason is only one aspect, intellect only one image. Buddhi also turns out eventually to be no entity, only an image, and Science must end by showing us that body, vitality, mind, buddhi are all images of what Philosophy calls Ananda, the pleasure of existence or Will to live; and she reveals to us at last that although this Will divides itself into innumerable forms which represent themselves as individual selves, yet all these are images of one great Cosmic Will to live, just as all material forms are merely images of one great undifferentiated Universality of

cosmic matter, causal ether, if we so choose to describe it. That Will is Purusha, that Universality is Prakriti; and both are but images of Parabrahman.

So, very briefly and inadequately stated in some of its main principles, runs the Vedantic theory of Maya, for which analytic Science is, without quite knowing it, multiplying a stupendous mass of evidence. Every fresh certainty which this Science adds, swells the mass, and it is only where she is incomplete and therefore should be agnostic, that Vedanta finds no assistance from her analysis. The completion of Science means the final conquest over Nescience and the unveiling of Maya.

Chapter VI Maya; the Energy of the Absolute

Maya then is the fundamental fact in the Universe, her dualistic system of balanced pairs of opposites is a necessity of intellectual conception; but the possibility of her existence as an inherent energy in the Absolute, outside phenomena, has yet to be established. So long as Science is incomplete and Yoga a secret discipline for the few, the insistent questions of the metaphysician can never be ignored, nor his method grow obsolete. The confident and even arrogant attempt of experimental Science to monopolise the kingdom of Mind, to the exclusion of the metaphysical and all other methods, was a rash and premature aggression,—rash because premature; successful at first its victorious usurping onrush is beginning to stagger and fail, even to lose hold on positions once thought to be permanently secured. The slow resurgence of metaphysics has already begun. Certainly, no metaphysic can be admissible which does not take count of the standards and undoubted results of Science; but until experimental analysis has solved the whole mystery of the Universe, not by speculation through logic (a method stolen from metaphysics with which Science has no business) but by experimental proof and hypotheses checked & confirmed by experimental proof, leaving no phenomenon unaccounted

for and no fact ignored,—until then metaphysics must reign where analytic experiment leaves a void. Vedanta, though it bases itself chiefly on the subjective experimental methods of Yoga and admits no metaphysical hypothesis as valid which is not in agreement with its results, is yet willing to submit its own conclusions to the tests of metaphysical logic. The Vedantic Yogi shrinks at present, because of certain moral scruples, from divulging his arcana to the crowd, but he recognises that so long as he refuses, he has no right to evade the inquisition of the metaphysical logician. Atharvan & Svetasvatara having spoken, Shankara and Ramanuja must be allowed their arena of verbal discussion.

The metaphysical question involved turns upon the nature of Avidya, Nescience, and its possibility in Parabrahman who is, after all, absolute,—Absolute Consciousness and therefore Absolute Knowledge. It is not sound to say that Parabrahman envisaging Maya, *becomes* capable of Avidya; for envisagement of Maya is simply a metaphorical expression for Avidya itself. Neither can the Vedantist take refuge in the theologian's evasion of reason by an appeal to lawless Omnipotence, to the Credo quia Impossibile. The Eternal is undoubtedly in His own nature free and unlimited, but, as undoubtedly, He has deliberately bound Himself in His relation to phenomena by certain fundamental principles; He has willed that certain things shall not and cannot be, and to use a human parallel He is like a King who having promulgated a certain code is as much bound by his own laws as the meanest subject, or like a poet whose imaginations in themselves free, are limited by laws the moment they begin to take shape. We may say, theoretically, that God being Omnipotent can create something out of nothing, but so long as no single clear instance can be given of a something created out of nothing, the rule of *ex nihilo nihil fit* remains an universal and fundamental law and to suppose that God has based the Universe on a violation of a fundamental law of the Universe, is to kick Reason out of the house and slam the door against her return. Similarly, if the coexistence of Avidya with Vidya in the same field and as it were interpenetrating each other, is

against the Law, it does by that very fact become impossible and the theory of Maya will then be proved an error; no appeal to Omnipotence will save it.

The objection to Avidya may be stated thus that Absolute Knowledge cannot at the same time not know, cannot imagine a thing to be real which is not real; for such imagination involves an element of self-deception, and self-deception is not possible in the Absolute. But is it really a law of consciousness—for there lies the point—that things can in no sense be at the same time real and unreal, that you cannot by any possibility imagine things to be real which *at the same time* you know perfectly well to be unreal? The dualist objector may contend that this impossibility is a law of consciousness. The Vedantin replies at once, Negatur, your statement is refuted by a host of examples; it is inconsistent with universal experience. The most utter and avowed unrealities can be and are firmly imagined as realities, seen as realities, sensed as realities, conceived as realities without the mind for a moment admitting that they are indeed real. The mirage of the desert we know after a time to be unreal, but even then we see & firmly image it as a reality, admire the green beauty of those trees and pant for the cool shining delight of those waters. We see dreams and dreams are unrealities, and yet some of them at least are at the same time not positive unrealities, for they image, and sometimes very exactly, events which have happened, are happening or will happen in the future. We see the juggler throw a rope in the air, climb up it, kill the boy who has preceded him and throw down his bleeding limbs piecemeal on the earth; every detail and circumstance of the unreal event corresponding to the event as it would have been, were it real; we do not imagine it to be unreal while it lasts, and we cannot so imagine it; for the visualisation is too clear & consistent, the feelings it awakes in us are too vivid, and yet all the time we perfectly well know that no such thing is happening. Instances of this sort are not easily numbered.

But these are distant, unimmediate things, and for some of them the evidence may not be considered ample. Let us come nearer to our daily life. We see a stone and we note its properties

of solidity and immobility, nor can we by any persuasion be induced to imagine it as anything else but solid and immobile; and we are right, for it is both: and yet we know that its immobility and solidity are not real, that it is, and to a vision sensible of the infinitesimal would appear, a world of the most active motion, of myriads of atoms *with spaces between them*. Again, if there is one thing that is real to me, it is this, that I am vertical and upright, whatever the people at the Antipodes may be and that I walk in all directions horizontally along the earth; and yet alas! I know that I am in reality not vertical but nearer the horizontal, walking often vertically up and down the earth, like a fly on the wall. I know it perfectly, yet if I were constantly to translate my knowledge into imagination, a padded room in Bedlam would soon be the only place for me. This is indeed the singular and amazing law of our consciousness that it is perfectly capable of holding two contradictory conceptions at the same time and with equal strength. We accept the knowledge which Science places at our disposal, but we perpetually act upon the images which Nescience creates. I know that the sun does not rise or set, does not move round the earth, does not sail through the heavens marking the time of day as it proceeds, but in my daily life I act precisely on the supposition that this unreality really happens; I hourly and momently conceive it and firmly image it as real and sometimes regulate on it my every movement. The eternal belligerents, Science and Nescience, have come in this matter of the sun's motion, as in so many others, to a working compromise. To me as an untrammelled Will to live who by the subtle intellectual part of me, can wander through Eternity and place myself as a spectator in the centre of the sun or even outside the material Universe the better to observe its motions, the phenomenon of the earth's movement round the sun is the reality, and even Nescience consents that I shall work on it as an acknowledged fact in the operations of pure intellect; but to me as a trammelled body unable to leave the earth and bound down in my daily life to the ministry of my senses, the phenomenon of the sun's movement round the earth is the reality and to translate my intellectual knowledge into the stuff of my daily

imaginings would be intolerably inconvenient; it would take my secure resting-place, the earth, from under my feet and make havoc of my life in sensation; even Science therefore consents that I shall work on the evidence of my senses as an acknowledged fact in my material life of earth-bounded existence. In this duplicity of standpoint we see as in a glass darkly some image of the manner in which the Absolute wills to be phenomenally conditioned; at once knows perfectly what is, yet chooses to image what is not, having infinite Science, yet makes room for self-limiting Nescience. It is not necessary to labour the point, or to range through all scientific knowledge for instances; in the light of modern knowledge the objection to the coexistence of *Vidya* & *Avidya* cannot stand; it is a perpetual fact in the daily economy of Consciousness.

Yes, it may be argued, but this does not establish it as anything more than a possibility in regard to the Absolute. A state of things true throughout the range of phenomenal existence, may cease to operate at the point where phenomena themselves cease. The possibility, however, once granted, Vedanta is entitled to put forward *Maya* as the one successful explanation yet advanced of this manifold existence; first, because *Maya* does explain the whole of existence metaphysically and is at the same time an universal, scientifically observable fact ranging through the whole Universe and fundamentally present in every operation of Consciousness; secondly, because it does transcend phenomena as well as inform them, it has its absolute as well as its conditioned state and is therefore not only possible in the Absolute but must be the Absolute Himself in manifestation; and thirdly, because no other possible explanation can logically contain *both* the truth of sheer transcendent Absoluteness of the Brahman and the palpable, imperative existence of the phenomenal Universe.⁴ Illogical theories, theories which part company with reason, theories which, instead of basing themselves in observed laws,

⁴ Of course I am not prepared, in these limits, to develop the final argument; that would imply a detailed examination of all metaphysical systems, which would be in itself the labour of a lifetime.

take their stand in the void, may be had in plenty. Maya is no theory but a fact; no mere result of logic or speculation, but of careful observation, and yet unassailable by logic and unsurpassable by speculation.

One of the most remarkable manifestations of Avidya in human consciousness, presenting in its nature and laws of working a close analogy to its parent is the power of imagination,—the power of bodying forth images which may either be reabsorbed into the individual consciousness which gave them forth or outlast it. Of the latter kind poetical creation is a salient example. At a certain time in a certain country one named Shakespeare created a new world by the force of his Avidya, his faculty of imagining what is not. That world is as real and unreal today as it was when Shakespeare created it or in more accurate Vedantic language *asrijata*, loosed it forth from the causal world within him. Within the limits of that world Iago is real to Othello, Othello to Desdemona, and all are real to any and every consciousness which can for a time abstract itself from this world [of] its self-created surroundings and enter the world of Shakespeare. We are aware of them, observe them, grow in knowledge about them, see them act, hear them speak, feel for their griefs and sorrows; and even when we return to our own world, they do not always leave us, but sometimes come with us and influence our actions. The astonishing power of poetical creation towards moulding life and history, has not yet been sufficiently observed; yet it was after all Achilles, the swift-footed son of Peleus, who thundered through Asia at the head of his legions, dragged Batis at his chariot-wheels and hurled the Iranian to his fall,—Achilles, the son of Peleus, who never lived except as an image,—nay, does not omniscient learning tell us, that even his creator never lived, or was only a haphazard assortment of poets who somehow got themselves collectively nicknamed Homer! Yet these images, which we envisage as real and confess by our words, thoughts, feelings, and sometimes even by our actions to be real, are, all the time and we know them perfectly well to be as mythical as the dream, the mirage and the juggler on his rope. There is no Othello, no Iago, no Desdemona but all these are merely varieties

of name & form, not of Shakespeare, but in which Shakespeare is immanent and which still exist merely because Shakespeare is immanent in them. Nevertheless he who best succeeds in imaging forth these children of illusion, this strange harmonic Maya, is ever adjudged by us to be the best poet, Creator or Maker, even though others may link words more sweetly together or dovetail incidents more deftly. The parallel between this work of imagination and the creation of phenomena and no less between the relation of the author to his creatures and the relation of the Conditioned Brahman to His creatures is astonishingly close in most of their details no less than in their general nature. Observe for instance that in all that multitude of figures vicious & virtuous, wise and foolish, he their creator who gave them forth, their Self and reality without whom they cannot exist, is unaffected by their crimes and virtues, irresponsible and free. The Lord [*sentence left incomplete*]

What then? Is this analogy anything more than poetic fancy, or is not after all, the whole idea of Brahman and Maya itself a mere poetic fancy? Perhaps, but not more fanciful or unreal, in that case, than the Universe itself and its motions; for the principle & working of the two are identical.

Let us ask ourselves, what it is that has happened when a great work of creation takes place and how it is that Shakespeare's creatures are still living to us, now that Shakespeare himself is dead and turned to clay. Singular indeed that Shakespeare's creations should be immortal and Shakespeare himself a mere shortlived conglomeration of protoplasmic cells! We notice first that Shakespeare's dramatic creatures are only a selection or anthology from among the teeming images which peopled that wonderful mind; there were thousands of pictures in that gallery which were never produced for the admiration of the ages. This is a truth to which every creator whether he use stone or colour or words for his thought-symbols will bear emphatic testimony. There was therefore a subtler and vaster world in Shakespeare than the world we know him to have bodied forth into tangible material of literature. Secondly we note that all these imaginations already existed in Shakespeare unmanifested

and unformed before they took shape and body; for certainly they did not come from outside. Shakespeare took his materials from this legend or that play, this chronicle or that history? His framework possibly, but not his creations; Hamlet did not come from the legend or the play, nor Cassius or King Henry from the history or the chronicle. No, Shakespeare contained in himself all his creatures, and therefore transcended & exceeded them; he was and is more than they or even than their sum and total; for they are merely limited manifestations of him under the conditions of time & space, and he would have been the same Shakespeare, even if we had not a scene or a line of him to know him by; only the world of imagination would have remained latent in him instead of manifest, *avyakta* instead of *vyakta*. Once manifest, his creatures are preserved immortally, not by print or manuscript, for the Veda has survived thousands of years without print or manuscript,— but, by words, shall we say? no, for words or sounds are only the physical substance, the atoms out of which their shapes are built, and can be entirely rearranged,— by translation, for example— without our losing Othello and Desdemona, just as the indwelling soul can take a new body without being necessarily changed by the transmigration. Othello and Desdemona are embodied in sounds or words, but thought is their finer and immortal substance. It is the subtler world of thought in Shakespeare from which they have been selected and bodied forth in sounds, and into the world of thought they originally proceeded from a reservoir of life deeper than thought itself, from an ocean of being which our analysis has not yet fathomed.

Now, let us translate these facts into the conceptions of Vedanta. Parabrahman self-limited in the name and form of Shakespeare, dwells deepest in him invisible to consciousness, as the unmanifest world of that something more elemental than thought (may it not be causal, elemental Will?), in which Shakespeare's imaginations lie as yet unformed and undifferentiated; then he comes to a surface of consciousness visible to Shakespeare as the inwardly manifest world of subtle matter or thought in which those imaginations take subtle thought-shapes

& throng; finally, he rises to a surface of consciousness visible to others besides Shakespeare as the outwardly manifest world, manifest in sound, in which a select number of these imaginations are revealed to universal view. These mighty images live immortally in our minds because Parabrahman in Shakespeare is the same as Parabrahman in ourselves; and because Shakespeare's thought is, therefore, water of the same etheric ocean as that which flows through our brains. Thought, in fact, is one, although to be revealed to us, it has to be bodied forth and take separate shapes in sound forms which we are accustomed to perceive and understand. Brahman-Brahma as Thought Creative in Shakespeare brings them forth, Brahman-Vishnu as Thought Preservative in us maintains them, Brahman-Rudra as Thought Destructive or Oblivion will one day destroy them; but in all these operations Brahman is one, Thought is one, even as all the Oceans are one. Shakespeare's world is in every way a parable of ours. There is, however, a distinction — Shakespeare could not body forth his images into forms palpable in gross matter either because, as other religions believe, that power is denied to man, [or] because, as Vedantism suggests, mankind has not risen as yet to that pitch of creative force.

There is one class of phenomena however in which this defect of identity between individual Imagination and universal Avidya seems to be filled up. The mind can create under certain circumstances images surviving its own dissolution or departure, which do take some kind of form in gross matter or at least matter palpable to the gross senses. For the phenomena of apparition there is an accumulating mass of evidence. Orthodox Science prefers to ignore the evidence, declines to believe that a *prima facie* case has been made out for investigation and shuts the gate on farther knowledge with a triple polysyllabic key, mysticism, coincidence, hallucination. Nevertheless, investigated or not, the phenomena persist in occurring! Hauntings, for example, for which there are only scattered indications in Europe, are in India, owing to the more strenuous psychical force and more subtle psychical sensitiveness of our physical organisation, fairly common. In these hauntings we have a signal

instance of the triumph of imagination. In the majority of cases they are images created by dying or doomed men in their agony which survive the creator, some of them visible, some audible, some both visible and audible, and in rare cases in an unearthly, insufficient, but by no means inefficient manner, palpable. The process of their creation is in essence the same as attends the creation of poetry or the creation of the world; it is *tapas* or *tapasya*,—not penance as English scholars will strangely insist on translating it, but HEAT, a tremendous concentration of will, which sets the whole being in a flame, masses all the faculties in closed ranks and hurls them furiously on a single objective. By *tapas* the world was created; by *tapas*, says the Moondaca, creative Brahman is piled up, *chiyate*, gathered & intensified; by *tapas* the rush of inspiration is effected. This *tapas* may be on the material plane associated with purpose or entirely dissociated from purpose. In the case of intense horror or grief, fierce agony or terrible excitement on the verge of death it is totally dissociated from any material purpose, it is what would be ordinarily called involuntary, but it receives from its origin an intensity so unparalleled as to create living images of itself which remain & act long after the source has been dissolved or stilled by death. Such is the ultimate power of imagination, though at present it cannot be fully used on the material plane except in a random, fortuitous and totally unpurposed manner.

In the manner of its working, then, Imagination is a carefully executed replica of Avidya; and if other marks of her essential identity with Avidya are needed, they can be found. Both are, for instance, preponderatingly purposeless. The workings of imagination are often totally dissociated, on the material plane at least, from any intelligible purpose and though it is quite possible that the latent part of our consciousness which works below the surface, may have sometimes a purpose of which the superficial part is not aware, yet in the most ordinary workings of Imagination, an absolute purposelessness is surely evident. Certainly, if not purposelessness there is colossal waste. A few hundreds of images were selected from Shakespeare's mind for a definite artistic purpose, but the thousands that never found verbal

expression, many of them with as splendid potentialities as those which did materialize in Hamlet and Macbeth seem to have risen & perished without any useful purpose. The same wastefulness is shown by Nature in her works; how many millions of lives does she not shower forth that a few may be selected for the purposes of evolution! Yet when she chooses to work economically and with set purpose, she like Imagination can become a scrupulous miser of effort and show herself possessed of a magical swiftness and sureness in shaping the means to the end. Neither Nature nor Imagination, therefore, can be supposed to be blind, random energies proceeding from an ungoverned force and teleological only by accident. Their operations are obviously guided by an Intelligence as perfectly capable, when it so wills, of purposing, planning, fitting its means to its ends, economising its materials and labour as any intelligent and careful workman in these days of science and method. We need therefore some explanation why this great universal Intelligence should not be, as a careful workman, always, not occasionally, economical of its materials and labour. Is not the truth this that Nature is not universally and in all her works teleological, that purpose is only one minor part of existence more concentrated than most and therefore more intense and triumphant, while for the greater part of her universal operation we must find another explanation than the teleological? or rather [one that] will at once contain and exceed the teleological? If it had only been Shakespeare, Michelangelo, Edison, Beethoven, Napoleon, Schopenhauer, the creators in poetry, art, science, music, life or thought, who possessed imagination, we might then have found an use for their unused imaginations in the greater preparatory richness they gave to the soil from which a few exquisite flowers were to spring. The explanation might not be a good one, little more indeed than a poetical fancy, but it could have passed for want of a better. But every human being possesses the divine faculty, more or less developed; every mind is a teeming world of imaginations; and indeed, imagination for imagination the opium-smoker's is more vivid, fertile and gorgeous than Shakespeare's. Yet hardly in one case out of a thousand are these imaginations of use to the world

or anything but a practical hindrance or at best a purposeless pastime to the dreamer. Imagination is a fundamental energy of consciousness, and this marvellous, indomitable energy works on without caring whether she is put to use or misuse or no use at all; she exists merely for the sake of delight in her own existence. Here I think we touch bottom. Imagination is outside purpose, sometimes above, sometimes below it, sometimes united with it, because she is an inherent energy not of some great teleological Master-Workman, but of Ananda, the Bliss of existence or Will to live, and beyond this delight in existence she has no reason for being. In the same way Maya, the infinite creative energy which peoples the phenomenal Universe, is really some force inherent in the infinite Will to be; and it is for this reason that her operations seem so wasteful from the standpoint of utilitarian economy; for she cares nothing about utilitarianism or economy and is only obeying her fundamental impulse towards phenomenal existence, consciousness, and the pleasure of conscious existence. So far as she has a purpose, it is this, and all the teleologic element in Nature has simply this end, to find more perfect surroundings or more exquisite means or wider opportunities or a grander gust and scope for the pleasure of conscious phenomenal existence. Yet the deepest bliss is after all that which she left and to which she will return, not the broken and pain-bounded bliss of finite life, but the perfect and infinite Bliss of transcendent undivided and illimitable consciousness. She seeks for a while to find perfect bliss by finite means and in finite things, the heaven of the socialist or anarchist, the heaven of the artist, the heaven of knowledge, the heaven of thought, or a heaven in some other world; but one day she realises that great truth, "The Kingdom of Heaven is within you," and to that after all she returns. *This is Maya.*

One metaphysical test remains to be satisfied before we can be sure that Avidya and Vidya, the outcurve and incurve of Maya, go back to something eternally existent in the Absolute and are not created by phenomenal causes. If inherent in the Absolute, Maya must culminate in conceptions that are themselves absolute, infinite and unconditioned. Vidya tapers off into

infinity in the conceptions, SAT or Pure Existence, CHIT or Pure Consciousness, ANANDA or Pure Bliss; Avidya rises at her apex into ASAT, Nothingness, ACHETANAM, Non-sentience, NIRANANDAM, Blisslessness or Misery. Nothingness & Non-sentience are certainly absolute conceptions, infinite and unconditioned; but the third term of the negative Trinity gives us pause. Absolute pain, blank infinite unconditioned and unrelieved Misery is a conception which Reason shies at and Consciousness refuses, violently refuses to admit as a possibility. A cypher if you like to make metaphysical calculations with, but by itself sheer nought, nowhere discoverable as existing or capable of existence. Yet if infinite misery could be, it would in the very act of being merge into Nothingness, it would lose its name in the very moment of becoming absolute. As a metaphysical conception we may then admit Absolute Blisslessness as a valid third term of the negative Trinity, not as a real or possible state, for no one of the three is a real or possible state. The unreality comes home to us most in the third term, just as reality comes home to us most in the third term of the positive Trinity, because Bliss and its negative blisslessness appeal to us on the material plane vividly and sensibly; the others touch us more indirectly, on the psychic & causal planes. Yet the Nothingness of nothingness is taught us by Science, and the unreality of non-sentience will become clear when the nature of sentience is better understood.

It will be said that the escape from pleasure as well as pain is after all the common goal of Buddhism & Vedanta. True, escape from limited pleasure which involves pain, escape from pain which is nothing but the limitation of pleasure. Both really seek absolute absence of limitation which is not a negative condition, but a positive, infinity and its unspeakable, unmixed bliss; their escape from individuality does not lead them into nothingness, but into infinite existence, their escape from sensation does not purpose the annihilation of sentience but pure absolute consciousness as its goal. Not ASAD ACHETANAM NIRANANDAM, but SACCHIDANANDAM is the great Reality to which Jivatman rises to envisage, the TAT or sole Thing-in-itself to whom by the force of Vidya he tends ever to return.

Chapter VII

The Triple Brahman

Parabrahman is now on the way to phenomenal manifestation; the Absolute Shakespeare of Existence, the infinite *Kavi*, Thinker & Poet, is, by the mere existence of the eternal creative force Maya, about to shadow forth a world of living realities out of Himself which have yet no independent existence. He becomes phenomenally a Creator & Container of the Universe, though really He is what He ever was, absolute and unchanged. To understand why and how the Universe appears what it is, we have deliberately to abandon our scientific standpoint of transcendental knowledge and speaking the language of Nescience, represent the Absolute as limiting Itself, the One becoming the Many, the pure ultra-Spiritual unrefining Itself into the mental and material. We are like the modern astrologer who, knowing perfectly well that the earth moves round the sun, must yet persist in speaking of the Sun as moving and standing in this part of the heavens or that other, because he has to do with the relative *positions* of the Sun and planets with regard to men living in the earth and not with the ultimate astronomical realities.

From this point of view we have to begin with a dualism of the thing and its shadow, Purusha & Prakriti, commonly called spirit and matter. Properly speaking, the distinction is illusory, since there is nothing which is exclusively spirit or exclusively matter, nor can the Universe be strictly parcelled out between these; from the point of view of Reality spirit and matter are not different but the same. We may say, if we like, that the entire Universe is matter and spirit does not exist; we may say, if we like, that the entire Universe is spirit and matter does not exist. In either case we are merely multiplying words without counsel, ignoring the patent fact visible throughout the Universe that both spirit and matter exist and are indissolubly welded, precisely because they are simply one thing viewed from two sides. The distinction between them is one of the primary dualisms and a

first result of the great Ignorance. Maya works out in name and form as material; Maya works out in the conceiver of name and form as spiritual. Purusha is the great principle or force whose presence is necessary to awake creative energy and send it out working into and on shapes of matter. For this reason Purusha is the name usually applied to the Conditioned Brahman in His manifestations; but it is always well to remember that the Primal Existence turned towards manifestation has a double aspect, Male and Female, positive and negative; He is the origin of the birth of things and He is the receptacle of the birth and it is to the Male aspect of Himself that the word Purusha predominatingly applies. The image often applied to these relations is that of the man casting his seed into the woman; his duty is merely to originate the seed and deposit it, but it is the woman's duty to cherish the seed, develop it, bring it forth and start it on its career of manifested life. The seed, says the Upanishad, is the self of the Male, it is spirit, and being cast into the Female, Prakriti, it becomes one with her and therefore does her no hurt; spirit takes the shaping appearance of matter and does not break up the appearances of matter, but develops under their law. The Man and the Woman, universal Adam and Eve, are really one and each is incomplete without the other, barren without the other, inactive without the other. Purusha the Male, God, is that side of the One which gives the impulse towards phenomenal existence; Prakriti the Female, Nature, is that side which is and evolves the material of phenomenal existence; both of them are therefore unborn & eternal. The Male is Purusha, he who lurks in the Wide; the Female is Prakriti, the working of the Male, and sometimes called Rayi, the universal movement emanating from the quiescent Male. Purusha is therefore imaged as the Enjoyer, Prakriti as the enjoyed; Purusha as the Witness, Prakriti as the phenomena he witnesses; Purusha as the *getter* or father of things, Prakriti as their *bearer* or mother. And there are many other images the Upanishad employs, Purusha, for instance, symbolising Himself in the Sun, the father of life, and Prakriti in the Earth, the bearer of life. It is necessary thus clearly to define Purusha from the first in order to avoid confusion in endeavouring to grasp the

development of Maya as the Upanishads describe it.

Parabrahman in the course of evolving phenomena enters into three states or conditions which are called in one passage his three habitations and, by a still more suggestive figure, his three states of dream. The first condition is called *avyakta*, the state previous to manifestation, in which all things are involved, but in which nothing is expressed or imaged, the state of ideality, undifferentiated but pregnant of differentiation, just as the seed is pregnant of the bark, sap, pith, fibre, leaf, fruit and flower and all else that unites to make the conception of a tree; just as the protoplasm is pregnant of all the extraordinary variations of animal life. It is, in its objective aspect, the seed-state of things. The objective possibility, and indeed necessity of such a condition of the whole Universe, cannot be denied; for this is the invariable method of development which the operations of Nature show to us. Evolution does not mean that out of protoplasm as a material so many organisms have been created or added by an outside power, but that they have been developed out of the protoplasm; and if developed, they were already there existent, and have been manifested by some power dwelling and working in the protoplasm itself. But open up the protoplasm, as you will, you will not find in it the rudiments of the organs and organisms it will hereafter develop. So also though the protoplasm and everything else is evolved out of ether, yet no symptom of them would yield themselves up to an analytical research into ether. The organs and organisms are in the protoplasm, the leaf, flower, fruit in the seed and all forms in the ether from which they evolve, in an undifferentiated condition and therefore defy the method of analysis which is confined to the discovery of differences. This is the state called involution. So also ether itself, gross or subtle, and all that evolves from ether is involved in *Avyakta*; they are present but they can never be discovered there because there [they] are undifferentiated. Plato's world of ideas is a confused attempt to arrive at this condition of things, confused because it unites two incompatible things, the conditions of *Avyakta* and those of the next state presided over by *Hiranyagarbha*.

The question then arises, what is the subjective aspect of

Parabrahman in the state of Avyakta? The organs and organisms are evolved out of protoplasm and forms out of ether by a power which resides and works in them, and that power must be intelligent consciousness unmanifested; *must*, because it is obviously a power that can plan, arrange and suit means to ends; *must* because otherwise the law of subtler involving grosser cannot obtain. If matter is all, then from the point of view of matter, the gross is more real because more palpable than the subtle and unreality cannot develop reality; it is intelligent consciousness and nothing else we know of that not only has the power of containing at one and the same time the gross & the subtle, but does consistently proceed in its method of creation or evolution from vagueness to precision, from no-form to form and from simple form to complex form. If the discoveries of Science mean anything and are not a chaos, an illusion or a chimaera, they can only mean the existence of an intelligent consciousness present and working in all things. Parabrahman therefore is present subjectively even in the condition of Avyakta no less than in the other conditions as intelligent consciousness and therefore as bliss.

For the rest, we are driven to the use of metaphors, and since metaphors must be used, one will do as well as another, for none can be entirely applicable. Let us then image Avyakta as an egg, the golden egg of the Puranas, full of the waters of undifferentiated existence and divided into two halves, the upper or luminous half filled with the upper waters of subjective ideation, the lower or tenebrous half with the lower waters of objective ideation. In the upper half Purusha is concealed as the final cause of things; it is there that is formed the idea of undifferentiated, eternal, infinite, universal Spirit. In the lower half he is concealed as Prakriti, the material cause of things; it is there that is formed the idea of undifferentiated, eternal, infinite, universal matter, with the implications Time, Space and Causality involved in its infinity. It is represented mythologically by Vishnu on the causal Ocean sitting on the hood of Ananta, the infinite snake whose endless folds are Time, and are also Space and are also Causality, these three being fundamentally

one,—a Trinity. In the upper half Parabrahman is still utterly Himself, but with a Janus face, one side contemplating the Absolute Reality which He *is*, the other envisaging Maya, looking on the endless procession of her works not yet as a reality, but as a phantasmagoria. In the lower half, if we may use a daring metaphor, Parabrahman forgets Himself. He is subjectively in the state corresponding to utter sleep or trance from which when a man awakes he can only realise that he was and that he was in a state of bliss resulting from the complete absence of limitation; that he was conscious in that state, follows from his realisation of blissful existence, but the consciousness is not a part of his realisation. This concealment of Consciousness is a characteristic of the seed-state of things and it is what is meant by saying that when Parabrahman enters into matter as Prakriti, He forgets Himself.

Of such a condition, the realisations of consciousness do not return to us, we can have no particular information. The Yогin passes through it on his way to the Eternal, but he hastens to this goal and does not linger in it; not only so, but absorption in this stage is greatly dreaded except as a temporary necessity; for if the soul finally leaves the body in that condition, it must recommence the cycle of evolution all over again; for it has identified itself with the seed state of things and must follow the nature of Avyakta which is to start on the motions of Evolution by the regular order of universal manifestation. This absorption is called the Prakriti laya or absorption in Prakriti. The Yогin can enter into this state of complete Nescience or Avidya and remain there for centuries, but if by any chance his body is preserved and he returns to it, he brings nothing back to the store of our knowledge on this side of Avyakta.

Parabrahman in the state of Avyakta Purusha is known as Prâjna, the Master of Prajnâ, Eternal Wisdom or Providence, for it is here that He orders and marshals before Himself like a great poet planning a wonderful masterpiece in his mind, the eternal laws of existence and the unending procession of the worlds. Vidyâ and Avidya are here perfectly balanced, the former still and quiescent though comprehensive, the latter not yet at active

work, waiting for the command, Let there be darkness. And then the veil of darkness, Vidya seems to be in abeyance, and from the disturbance of the balance results inequality; then out of the darkness Eternal Wisdom streams forth to its task of creation and Hiranyagarbha, the Golden Child, is born.

An Incomplete Work of Vedantic Exegesis

Book II The Nature of God

Chapter I

The view of cosmic evolution which has been set forth in the first book of this exegesis,¹ may seem deficient to the ordinary religious consciousness which is limited & enslaved by its creeds and to which its particular way of worship is a master and not a servant, because it leaves no room for a “Personal” God. The idea of a Personal God is, however, a contradiction in terms. God is Universal, he is Omnipresent, Infinite, not subject to limits. This all religions confess, but the next moment they nullify their confession by assuming in Him a Personality. The Universal cannot be personal, the Omnipresent cannot be excluded from any thing or creature in the world He universally pervades and possesses. The moment we attribute certain qualities to God, we limit Him and create a double principle in the world. Yet no religion²

Brahman, we have seen, is the Universal Consciousness which Is and delights in Being; impersonal, infinite, eternal, omnipresent, sole-existing, the One than whom there is no other, and all things and creatures have only a phenomenal existence [in] Brahman and by Brahman.

In the Vedantic theory of this Universe and its view of the nature of the Brahman and Its relations to the phenomena that make up this Universe, there is one initial paradox from which the

¹ *This first book was not written or has not survived. — Ed.*

² *After this incomplete sentence, the rest of the notebook page was left blank. — Ed.*

whole Vedantic philosophy, religion and ethics take their start. We have seen that in existence as we see it there is Something that is eternal, immutable and one, to which we give the name of Brahman, amidst an infinite deal that is transient, mutable and multifold. Brahman as the eternal, immutable and one, is not manifest but latent; It supports, contains and pervades the changing & unstable Universe and gives it eternity as a whole in spite [of the] transience of its parts, unity as a whole in spite of the multiplicity of its parts, immutability as a whole in spite of the mutability of its parts. Without It the persistence of the Universe would be inexplicable, but itself is not visible, nameable or definable except as Sacchidanandam, absolute and therefore unnameable and indefinable self-existence, self-awareness, self-bliss. But when we ask what is it then which is mutable, transient, multiple, and whether this is something other than and different from Brahman, we get the reply that this also is Brahman and that there can be nothing other than Brahman, because Brahman is the One without a second, ekamevadwitiyam. This one, eternal, immutable became the many who are transient and mutable, but this becoming is not real, only phenomenal. Just as all objects & substances are phenomena of and in the single, eternal & unchanging ether, so are all existences animate or inanimate, corporeal, psychical or spiritual phenomena of and in Brahman. This phenomenal change of the One into the Many, the Eternal into the perishable, the Immutable into the everchanging, is a supreme paradox but a paradox which all scientific investigation shows to be the one fundamental fact of the Universe. Science considers the One eternal & permanent reality to be eternal Matter, Vedanta for reasons already stated holds it to be eternal Consciousness of which Spirit-Matter are in phenomena the positive-negative aspects. This Brahman, this Sacchidanandam, this eternal Consciousness unknowable, unnameable and indefinable, which reason cannot analyse, nor imagination put into any shape, nor the mind and senses draw within their jurisdiction, is the Transcendent Reality which alone truly exists. The sole existence of this Turiya Brahman or Transcendent Eternal Consciousness is the basis of the Adwaita philosophy.

But where in all this is there any room for religion, for the spirit of man, for any idea of God? Who is the Lord, Isha, Maheshwar, Vishnu, Rudra, Indra, the Lord of the Illusion, the Ruler, the Mighty One of which all the Upanishads speak? Who is this triple Prajna-Hiranyagarbha-Virat? Who is this twofold Purusha-Prakriti, God & Nature, without which the existence of the phenomenal world and consciousness in matter would not be intelligible or conceivable? To whom does the Bhakti of the Bhakta, to whom do the works of the Karmayogin direct themselves? Why and Whom do men worship? What is it to which the human self rises in Yoga? The answer is that this also is Brahman,—Brahman not in His absolute Self but in relation to the infinite play of multiplicity, mobility, mortality which He has phenomenally created for His own delight on the surface of His really eternal immutable & single existence. Above is the eternal surge, the innumerable laughters of the million-crested, multitudinous, ever-marching, ever-shifting wilderness of waves; below is the silent, motionless, unchanging rest of the Ocean's immeasurable and unvisited depths. The rest and immobility is the Sea, and the mutable stir and motion of the waves is also the Sea, and as the Sea is to its waves, so is Brahman to His creation. What is the relation of the Sea of Brahman to its waves? Brahman is the One Self and all the rest, innumerable souls of creatures and innumerable forms of things are His Maya, illusions which cannot be eternal and therefore cannot be true, because there is only One Eternal; the One Self is real, all else is unreal and ends. This is Adwaita. But even though Brahman be the One Self, He has become Many by His own Iccha or Will and the exercise of His Will is not for a moment or limited by time & space or subject to fatigue, but for ever. He is eternal and therefore His Iccha is eternal and the Many Selves which live in Him by His Iccha are eternal and do not perish, for they also being really Brahman the Self are indistinguishable from Him in nature and though their bodies, mind-forms and all else may perish, cannot themselves perish. He may draw them into Himself in utter communion, but He can also release them again into separate communion, and this is actually what happens. All

else is transient and changes & passes, but the Self that is One and the Self that is Many are both of them real and eternal; and still they are One Self. This is Visishtadwaita. This eternity of the One Self and eternity of the Many-Selves shows that both are real without beginning and without end and the difference between them is therefore without beginning and end. The One is true and the Many are true, and the One is not and cannot be the Many, though the Many live in and for the One. This is Dwaita.

The only tests to which we can subject these three interpretations of the relation between the One and the Many, all of which are equally logical and therefore equally valid to the reason, are the statements of the Upanishads and the Gita and the experiences of Yoga when the Jivatman or individual Self is in direct communion with the Paramatman or Supreme Universal Self and aware therefore of its real relations to Him. The supreme experience of Yoga is undoubtedly the state of complete identification in Sacchidananda in which the Jivatman becomes purely self-existent, self-aware and self-joyous and phenomenal existence no longer is. Adwaita, therefore, is true according to the experience of Yoga. On the other hand the Jivatman can come out of this state and return into phenomenal existence, and there is also another Yogic state in which it is doubly conscious of its reality apart from the world and its reality in the world or can see the Universe at will in itself or outside itself possessing and enjoying it as an omniscient, omnipotent, all-seeing, all-hearing, all-conscious Being; Visishtadwaita therefore is also true. Finally, there is the state in which the Jivatman is entirely aware only of itself and the Paramatman and lives in a state of exalted love and adoration of the Eternal Being; and without this state³

To put the individual Self in intimate relation with the Eternal is the aim of Hindu life, its religion, its polity, its ethics. Morality is not for its own sake, nor for the pleasures of virtue, nor for any reward here or in another life, nor for the sake of society; these

³ *This sentence was not completed; the rest of this notebook page and the next were left blank. — Ed.*

are false aims and false sanctions. Its true aim is a preparation and purification of the soul to fit it for the presence of God. The sense-obscured, limited and desire-driven individual self must raise itself out of the dark pit of sense-obsession into the clear air of the spirit, must disembarass itself of servile bondage to bodily, emotional & intellectual selfishness and assume the freedom & royalty of universal love and beneficence, must expand itself from the narrow, petty, inefficient ego till it becomes commensurate with the infinite, all-powerful, omnipresent Self of All; then is its aim of existence attained, then is its pilgrimage ended. This may be done by realising the Eternal in oneself by knowledge, by realising oneself in Him by Love as God the Beloved, or by realising Him as the Lord of all in His universe and all its creatures by works. This realisation is the true crown of any ethical system. For whether we hold the aim of morality to be the placing of oneself in harmony with eternal laws, or the fulfilment of man's nature, or the natural evolution of man in the direction of his highest faculties, Hinduism will not object but it insists that the Law with which man must put himself into relation is the Eternal in the universe, that in this permanent and stable Truth man's nature fulfils itself out of the transient seemings of his daily existence and that to this goal his evolution moves. This consummation may be reached by ethical means through a certain manner of action and a certain spirit in action which is the essence of Karmamarga, the Way of Works, one of the three ways by which the spirit of man may see, embrace & become God. The first law of Karmamarga is to give up the natural desire for the fruits of our works and surrender all we do, think, feel and are into the keeping of the Eternal, and the second is to identify oneself with all creatures in the Universe both individually and collectively, realising our larger Self in others. These two laws of action together make what is called Karmayoga or the putting of ourselves into relation with that which is Eternal by means of and in our works. Before, then, we can understand what Karmayoga is, we must understand entirely and utterly what is this Eternal Being with whom we must put ourselves in relation and what are His relations with our self,

with the phenomena of the Universe and with the creatures that people it. The Vedantic knowledge of Brahman, the Vedantic Cosmogony, the Vedantic explanation of the coexistence of Brahman with the Universe, the Eternal with the Transient, the Transcendent with the Phenomenal, the One with the Many, are what we have first to study.

Chapter II The Brahman in His Universe

Three verses of the Isha Upanishad describe directly the Brahman & His relations with the Universe, the [fourth] and [fifth:]

*Anejad ekāṁ manaso javīyo nainad devā āpnuvan pūrvam
arṣat
Tad dhāvato 'nyān atyeti tiṣṭhat tasminn apo mātariśvā
dadhāti.
Tad ejati tannaijati tad dūre tadvantike
Tad antar asya sarvasya tad u sarvasyāsyā bāhyataḥ.*

and the [eighth:]

*Sa paryagācchukram akāyam avraṇam asnaṁviram
śuddham apāpaviddham
Kavir manīṣī paribhūḥ svayambhūr yāthātathyato 'rthān
vyadadhācchāsvatibhyah samābhyaḥ.*

We may for the present postpone the minuter consideration of the last verse and proceed on the basis of the earlier two alone.

The first conclusion of Vedanta is that the Brahman in this shifting, multifold, mutable Universe is One, stable & unmoving, therefore permanent and unchanging.

* * *

The second conclusion of Vedanta is that Brahman pervades this Universe & possesses it.

* * *

The third conclusion of Vedanta is that Brahman which pervades, possesses, causes and governs the world is the same as the Absolute Transcendental Existence of which metaphysics speaks. Of this Transcendental Existence Vedanta always speaks in the neuter as Tat, that or it; of the Eternal Will which pervades & governs the Universe it speaks in the masculine as स, He. But in the [fourth] verse we find that to Tat are attributed that universal action and pervasiveness which is properly only attributable to स, the Eternal & Universal Will; the identification of the two could not be more complete. It is yet more strikingly brought out in the [eighth] verse where the description of the cosmical action of Brahman begins with स but the negative attributes of this masculine subject immediately following are in the neuter as appropriate only to the Conditionless Brahman and those that follow later on & apply to the Universal Will revert to the masculine,— all without any break in the sentence.

* * *

The fourth conclusion of the Vedanta is that Brahman [is] not only the Absolute Transcendental Self, not only the One, Stable Immutable Reality in the phenomenal Universe, not only pervades, possesses, causes and governs it as an Eternal Universal Will, but contains and in a figurative sense is it as its condition, continent, material cause and informing force. *Tasmīnnaपो mātariśvā dadhāti*. It is in this infinitely motionless etc.

Book III
Brahman in the individual Self

Chapter I

We have now ascertained in some detail the nature of the Vedantic Cosmogony and have some idea of the relations of Brahman to His universe; but to us human beings, the crown and last glorious evolution of conscious phenomenal existence in psycho-physical matter, the real question of interest is not a knowledge of the nature of the Universe for its own sake, but a knowledge of our selves. γνῶθι σεαυτόν, Know thyself, is still and always the supreme command for humanity, and if we seek to know the universe, it is because that knowledge is necessary to the more important knowledge of ourselves. Science has adopted a different view; looking only at man as a separate bodily organism it fairly enough regards the Universe as more important than man and seeks to study its laws for their own sake. But still it remains true that humanity persists in its claim and that only those discoveries of the physicist, the zoologist and the chemist have been really fruitful which have helped man practically to master physical nature or to understand the laws of his own life and progress. Whatever moralist or philosopher may say, Yajnavalkya's great dictum remains true that whatever man thinks or feels or does he thinks, feels & does not for any other purpose or creature but for the sake of his Self. The supreme question therefore yet remains imperfectly answered, "So much then for Brahman and the Universe; but what of the things we have cherished so long, what of religion, what of God, what of the human soul?" To some extent the answer to this question has been foreshadowed, but before we get our foundations right for the structure of a higher ethical conception of life and conduct, we must probe to the core in comparison with the current and longstanding ideas on the subject the nature of the Supreme Being as set forth by the Vedanta and His relations to the individual self in man which are the chief preoccupation of religion. We may postpone till later

the question whether ethics can or cannot be satisfactorily based on a materialistic interpretation of the world and nonreligious sanctions and aims.

A question of the first importance arises at once, how far does the Vedanta sanction the ordinary ideas of God as a Personal Active Being with definite qualities which is all the average religionist understands by the Divine Idea? Whether we regard him with the Jews as a God of Power and Might & Wrath and Justice, or with the Moslems as God the Judge and Governor and Manager of the world or with the early Christians as a God of Love, yet all agree in regarding Him as a Person, definable, imaginable, limited in His Nature by certain qualities though not limited in His Powers, omniscient, omnipotent, omnipresent & yet by a mysterious paradox quite separate from His creatures and His world. He creates, judges, punishes, rewards, favours, condemns, loves, hates, is pleased, is angry, for all the world like a man of unlimited powers, and is indeed a Superior Man, a shadow of man's soul thrown out on the huge background of the Universe. The intellectual and moral difficulties of this conception are well-known. An Omnipotent God of Love, in spite of all glosses, remains inconsistent with the anguish and misery, the red slaughter and colossal sum of torture and multitudinous suffering which pervades this world and is the condition of its continuance; an Omnipotent God of Justice who created & caused sin, yet punishes man for falling into the traps He has Himself set, is an infinite & huge inconsistency, an insane contradiction in terms; a God of wrath, a jealous God, who favours & punishes according to His caprice, fumes over insults and preens Himself at the sound of praise is much lower than the better sort of men and, as an inferior, unworthy of the adoration of the saints. An omnipresent God cannot be separate from His world, an infinite God cannot be limited in Time or Space or qualities. Intellectually the whole concept becomes incredible. Science, Philosophy, the great creeds which have set Knowledge as the means of salvation, have always been charged with atheism because they deny these conceptions of the Divine Nature. Science and Philosophy & Knowledge take

their revenge by undermining the faith of the believers in the ordinary religions through an exposure of the crude and semi-savage nature of the ideas which religion has woven together into a bizarre texture of clumsy paradoxes and dignified with the name of God. They show triumphantly that the ordinary conceptions of God when analysed are incredible to the intellect, unsatisfactory and sometimes revolting to the moral sense and, if they succeed in one or two cases in satisfying the heart, succeed only by magnificently ignoring the claims of the reason. They find it an easy task to show that the attempts of theologians to reconcile the difficulties they have created are childish to the trained reason and can find no acceptance with any honest and candid intellect. Theology in vain denies the right of reason to speak in matters of spiritual truth, and demands that the incredible should be believed. Reason is too high a faculty to be with impunity denied its rights. In thus destroying the unsatisfactory intellectual conceptions with which it has been sought to bring the Eternal Being into the province of the reasoning powers, the core & essence of popular religion which is true and necessary to humanity is discredited along with its imperfect coverings; materialism establishes itself for a while as the human creed and the intellect of man holds despotic empire for a while at the expense of his heart and his ethical instincts, until Nature revenges itself and saves the perishing soul of mankind by flooding the world with a religious belief which seeks to satisfy the heart and the ethical instincts only and mocks at and tramples upon the claims of the intellect. In this unnatural duel between faculties which should work harmoniously for our development, the internal peace and progress of the human self is marred & stunted. Much that has been gained is repeatedly being lost and has to be recovered with great difficulty and not always in its entirety.

If reason unaided could solve the enigma of the world, it would be a different matter. But the reason is able only to form at the best an intellectually possible or logically consistent conception of the Eternal in the Universe; it is not able to bring Him home to the human consciousness and relate the

human soul to Him as it should be related if He exists. For nothing is more certain than this that if a universal & eternal Consciousness exists, the life and development of the human soul must be towards It and governed by the law of Its nature; and a philosophy which cannot determine these relations so as to bring light and help to humanity in its long road is merely an intellectual plaything and might just as well have been kept as a private amusement when minds of a ratiocinative turn meet in the lecture-room or the study. Philosophy can see clearly that the Universe can be explicable only in the terms of the Eternal Consciousness by which it exists. Either God is the material universe in which case the name is a mere convenient abstraction like the materialist's "Nature", or He is the Self within the Universe. If the Self, then He is either transcendent and beyond phenomena and the phenomenal Universe can only be Maya, an imagination in the Universal Mind, or else He is involved in phenomena, Consciousness His soul, the Universe His form, Consciousness the witnessing and inspiring Force, the Universe the work or Energy of the Consciousness. But whichever of these possibilities be the truth, Knowledge is not complete if it stops with this single conception and does not proceed to the practical consequences of the conception. If the universe is Maya, what of the human soul? Is that also Maya, a phenomenon like the rest which disappears with the dissolution of the body or is it permanent and identical with the Eternal Consciousness? If permanent, why then has it confused itself with phenomena and how does it escape from the bondage of this confusion? On the other hand if He is involved in phenomena, what is the relation of the human consciousness to the Eternal? Are our souls parts of Him or manifestations or emanations? And if so do they return into Him at the dissolution of the body or do they persist? And if they persist, what is their ultimate goal? Do they remain by individuality separated from Him for ever even after the end of phenomena or are both the Universe and the individual soul eternal? Or is the individual soul only phenomenally different from the eternal, and the phenomenal difference terminable at the pleasure of the Eternal or by the will of the individual Ego?

What are the present relations of the self to the Eternal? What are sin & virtue? pleasure & pain? What are we to do with our emotions, desires, imaginations? Has the Eternal Consciousness any direct action on the phenomenal Universe and, if so, how is He different from the popular conception of God?

These are the questions which Philosophy has to answer, and in answering them the great difficulty it has to meet is its inability to find any better sanction for its conclusions than the play of speculative logic or to evolve anything better than a speculative system of metaphysics which may satisfy the argumentative faculty of the mind but cannot satisfy the reason of the heart or find its way to a mastery of that inner self in man which controls his life. Religion, however imperfect, has the secret of that mastery; religion can conquer the natural instincts and desires of man, metaphysics can only convince him logically that they ought to be conquered — an immense difference. For this reason philosophy has never been able to satisfy any except the intellectual few and was even for a time relegated to oblivion by the imperious contempt of Science which thought that it had discovered a complete solution of the Universe, a truth and a law of life independent of religion and yet able to supersede religion in its peculiar province of reaching & regulating the sources of conduct and leading mankind in its evolution. But it has now become increasingly clear that Science has failed to substantiate its claims, and that a belief in evolution or the supremacy of physical laws or the subjection of the ephemeral individual to the interests of the slightly less ephemeral race is no substitute for a belief in Christ or Buddha, for the law of Divine Love or the trust in Divine Power & Providence. If Philosophy failed to be an ethical control or a spiritual force, Science has failed still more completely, and for a very simple reason — the intellect does not control the conduct. There is quite another mental force which controls it and which turns into motives of action only those intellectual conceptions of which it can be got to approve. We arrive therefore at this dilemma that Philosophy & Science can satisfy the reason but cannot satisfy the heart or get mastery of the source of conduct; while Religion which satisfies

the heart and controls conduct, cannot in its average conceptions permanently satisfy the reason and thus exposes itself to gradual loss of empire over the mind.

A religion therefore which claims to be eternal, must not be content with satisfying the heart and imagination, it must answer to the satisfaction of the intellect the questions with which philosophy is preoccupied. A philosophy which professes to explain the world-problem once for all, must not be satisfied with logical consistency and comprehensiveness; it must like Science base its conclusions not merely on speculative logic, but on actual observation and its truths must always be capable of verification by experiment so that they may be not merely conceivable truth but ascertained truth; it must like religion seize on the heart & imagination and without sacrificing intellectual convincingness, comprehensiveness & accuracy impregnate with itself the springs of human activity; and it must have the power of bringing the human self into direct touch with the Eternal. The Vedantic religion claims to be the eternal religion because it satisfies all these demands. It is intellectually comprehensive in its explanation of all the problems that perplex the human mind; it brings the contradictions of the world into harmony by a single luminous law of being; it has developed in Yoga a process of spiritual experience by which its assertions can be tested and confirmed; the law of being it has discovered seizes not only on the intellect but on the deepest emotions of man and calls into activity his highest ethical instincts; and its whole aim and end is to bring the individual self into a perfect and intimate union with the Eternal.

Chapter II

[*This chapter was not written.*]

The Religion of Vedanta

If it were asked by anyone what is this multitudinous, shifting, expanding, apparently amorphous or at all events multimorphous sea of religious thought, feeling, philosophy, spiritual experience we call Hinduism, what it is characteristically and essentially, we might answer in one word, the religion of Vedanta. And if it were asked what are the Hindus with their unique and persistent difference from all other races, we might again answer, the children of Vedanta. For at the root of all that we Hindus have done, thought and said through these thousands of years of our race-history, behind all we are and seek to be, there lies concealed, the fount of our philosophies, the bedrock of our religions, the kernel of our thought, the explanation of our ethics and society, the summary of our civilisation, the rivet of our nationality, this one marvellous inheritance of ours, the Vedanta. Nor is it only to Hindu streams that this great source has given of its life-giving waters. Buddhism, the teacher of one third of humanity, drank from its inspiration. Christianity, the offspring of Buddhism, derived its ethics and esoteric teaching at second-hand from the same source. Through Persia Vedanta put its stamp on Judaism, through Judaism, Christianity and Sufism on Islam, through Buddha on Confucianism, through Christ and mediaeval mysticism and Catholic ceremonial, through Greek and German philosophy, through Sanscrit learning and [*sentence left incomplete*]

Evolution in the Vedantic View

We must not however pass from this idea,¹ as it is easy to pass, into another which is only a popular error,—that evolution is the object of existence. Evolution is not an universal law, it is a particular process, nor as a process has it any very wide applicability. Some would affirm that every particle of matter in the universe is bound to evolve life, mind, an individualised soul, a finally triumphant spirit. The idea is exhilarating, but impossible. There is no such rigid law, no such self-driven & unintelligent destiny in things. In the conceptions of the Upanishads Brahman in the world is not only Prajna, but Ishwara. He is not subject to law, but uses process. It is only the individual soul in a state of ignorance on which process seems to impose itself as law. Brahman on the other hand has an omnipotent power of selection and limitation. He is not bound to develop self-conscious individuality in every particle of matter, nor has He any object in such a colossal and monotonous application of one particular movement of things. He has nothing to gain by evolving, nothing to lose by not evolving. For to Him all being is only a play of His universal self-consciousness, the will so to exist the only reason of this existence and its own pleasurable its only object in existence. In that play He takes an equal delight in all, He is sama in ananda — an equal delight in the evolved state, the unevolved & the evolving. He is equal also in Being; when He has evolved Himself in the perfect man, He is no more than He already was in the leaf & clod. To suppose that all existence has one compelling purpose of growth, of progress, of consummation is to be guilty of the Western error and misunderstand the nature of being. Existence is already consummate, all change

¹ It is not known what “idea” Sri Aurobindo is referring to here, or whether the writing in which he discussed it has survived. — Ed.

& variety in it is for delight, not for a gain or a development. The Vedantist cannot admit that anything is really developed in the sense of something new emerging into existence by whatever combination or accident which had no previous being. Nasato vidyate bhavah. That which was not cannot come into existence. The play of Brahman is not in its real nature an evolution, but a manifestation, it is not an adding of something that was wanting or a developing of something that was non-existent, but merely a manifesting of something that was hidden. We are already what we shall become. That which is still future in matter, is present in spirit.

We say, then, in the Vedanta that if the human form appears on earth or the tree grows out of the seed, it is because the human form already exists in the seed that is cast into the womb and the form and nature of the tree already exists in the seed that is cast into the earth. If there were not this preexistence as idea or implied form in the seed, there would be no reason why any seed should bring forth according to its kind. The form does not indeed exist sensibly in the form of consciousness which we see as matter, but in the consciousness itself it is there, and therefore there is a predisposition in the matter to produce that form & no other, which is much more than tendency, which amounts to a necessity. But how came this preconception into unintelligent matter? The question itself is erroneous in form; for matter is not unintelligent, but itself a movement of conceiving Spirit. This conceiving Spirit which in man conceives the idea of human form, being one in the mind of the man, in his life principle, in every particle of his body, stamps that conception on the life principle so that it becomes very grain of it, stamps it on the material part so that it becomes very grain of it, so that when the seed is cast into the woman, it enters full of the conception, impregnated with it in the whole totality of its being. We can see how this works in man; we know how the mental conceptions of the father & mother work powerfully to shape body, life & temperament of the son. But we do not perceive how this works in the tree, because we are accustomed to dissociate from the tree all idea of mind & even of life. We therefore talk vaguely of the

law of Nature that the tree shall produce according to its kind without understanding why such a law should exist. Vedanta tells us that the process in the tree is the same as in man, except that mind not being active & self-conscious cannot produce those variations of delicate possibility which are possible in the human being. The supramental conceiving Spirit stamps, through unconscious mind, on the life principle in the tree and on all matter in the tree the conception of its nature & kind so that the seed falls into earth with every atom of its being full of that secret conception and every moment of the tree's growth is presided over by the same fixed idea. Not only in thinking man & living tree but in substances in which life & mind are inactive, this conceiving Spirit presides & determines its law & form. So 'rthan vyadadhach chhaswatibhyah samabhyah.

We must not for a moment imagine that Brahman of the Upanishads is either an extracosmic God entering into a cosmos external to Him or that last refuge of the dualising intellect, an immanent God. When Brahman the conceiving Spirit is said to be in life & mind and matter, it is only as the poet is said to be in his own thought and creations; as a man muses in his mind, as the river pours forward in swirls & currents. It would be easy, by quoting isolated texts from the Upanishads, to establish on them any system whatever; for the sages of the Upanishads have made it their business to see Brahman in many aspects, from many standpoints, to record all the most important fundamental experiences which the soul has when it comes into contact with the All, the Eternal. This they did with the greater freedom because they knew that in the fundamental truth of this All & Eternal, the most varied & even contradictory experiences found their harmony & their relative truth and necessity to each other. The Upanishads are Pantheistic, because they consider the whole universe to be Brahman, yet not Pantheistic because they regard Brahman as transcendental, exceeding the universe & in his final truth other than phenomena. They are Theistic because they consider Brahman as God & Lord of His universe, immanent in it, containing it, governing & arranging it; yet not Theistic because they regard the world also as God, containing

Himself & dwelling in Himself. They are polytheistic because they acknowledge the existence, power & adorability of Surya-Agni, Indra and a host of other deities; yet not polytheistic, because they regard them as only powers and names & personalities of the one Brahman. Thus it is possible for the Isha Upanishad to open with the idea of the indwelling God, Isha vasyam jagat, to continue with the idea of the containing Brahman, Tasminn apo Matariswa dadhati, and at the same time to assert the world, the jagat, also as Brahman, Tad ejati, sa paryagat. That this catholicity was not born of incoherence of thinking is evident from the deliberate & precise nicety [of] statement both in the Gita & the Upanishad. The Gita continually dwells on God in all things, yet it says Naham teshu te mayi, "I am not in them, they are in me"; and again it says God is Bhutabhrīt not bhutastha, and yet na cha matsthāni bhutāni pashya me yogam aishwaram. "I bear up creatures in myself, I do not dwell in them; they exist in me, & yet they do not exist in me; behold my divine Yoga." The Upanishads similarly dwell on the coexistence of contradictory attributes in Brahman, nirguna guni, anejad ekam manaso javiyo, tadejati tannaijati. All this is perfectly intelligible & reconcilable, provided we never lose sight of the key word, the master thought of the Upanishads, that Brahman is not a Being with fixed attributes, but absolute Being beyond attributes yet, being absolute, capable of all, and the world a phenomenal arrangement of attributes in Intelligent Being, arranged not logically & on a principle of mutual exclusion, but harmoniously on a principle of mutual balancing & reconciliation. God's immanence & God's extramanence, God's identity with things & God's transcendence of things, God's personality & God's impersonality, God's mercy & God's cruelty & so on through all possible pairs of opposites, all possible multiplicity of aspects, are but the two sides of the same coin, are but different views of the same scene & incompatible or inharmonious to our ideas only so long as we do not see the entire entity, whole vision.

In Himself therefore God has arranged all objects according to their nature from years sempiternal. He has fixed from the

beginning the relations of his movements in matter, mind and life. The principle of diversity in unity governs all of them. The world is not comprised of many substances combining variously into many forms,—like the elements of the chemist, which now turn out not to be elements,—nor yet of many substances composing by fusion one substance,—as hydrogen & oxygen seem to compose water,—but is always & eternally one substance variously concentrated into many elements, innumerable atoms, multitudinous forms. There are not many lives composing by their union & fusion or by any other sort of combination one composite life, as pluralistic theories tend to suppose, but always & eternally one Life variously active in multitudinous substantial bodies. There are not many minds acting upon each other, mutually penetrative and tending to or consciously seeking unity, as romantic theories of being suppose, but always & eternally one mind variously intelligent in innumerable embodied vitalities. It is because of this unity that there is the possibility of contact, interchange, interpenetration and recovery of unity by & between substance & substance, life & life, mind and mind. The contact & union is the result of oneness; the oneness is not the result of contact & union. This world is not in its reality a sum of things but one unalterable transcendental integer showing itself to us phenomenally as many apparent fractions of itself,—fractional appearances simultaneous in manifestation, related in experience. The mind & sense deal with the fractions, proceed from the experience of fractions to the whole; necessarily, therefore, they arrive at the idea of an eternal sum of things; but this totality of sum is merely a mental symbol, necessary to the mind's computations of existence. When we rise higher, we find ourselves confronted with a unity which is transcendental, an indivisible and incomputable totality. That is Parabrahman, the Absolute. All our thoughts, perceptions, experiences are merely symbols by which the Absolute is phenomenally represented to the movements of its own Awareness conditioned as matter, life, mind or supermind.

Just as each of these tattwas, principles of being, movements of Chit, conditions of Ananda which we call life, matter, mind,

are eternally one in themselves embracing a diversity of mere transient forms & individual activities which emerge from, abide in & one day return into their totality, material form into the substance of the pancha bhutas, individual life into the oceanic surge of the world-pervading life principle, individual mind, whenever that is dissolved, into the secret sukshmatattva or sea of subtle mind-existence, so also these three tattwas & all others that may exist are a diversity embraced in an eternal unity — the unity of Brahman. It is Brahman who moves densely as the stability of matter, forcefully as the energy of life, elastically in the subtlety of mind. Just as different vibrations in ether produce the appearances to sense which we call light & sound, so different vibrations in Chit produce the various appearances to Chit which we call matter, life & mind. It is all merely the extension of the same principle through stair & higher stair of apparent existence until, overcoming all appearances, we come to the still & unvibrating Brahman who, as we say in our gross material language, contains it all. The Sankhya called this essential vibration the kshobha, disturbance in Prakriti, cosmic ripple in Nature. The Vedanta continually speaks of the world as a movement. The Isha speaks of things as jagatyam jagat, particular movement in the general movement of conscious Being steadily *viewed* by that Being in His own self-knowledge, atmani atmanam atmana, self by self in self. This is the motion & nature of the Universe.

This then is Matter, a particular movement of the Brahman, one stream, one ocean of His consciousness fixed in itself as the substance of form. This is life, mind; other movements, other such streams or oceans active as material of thought & vitality. But if they are separate, though one, how is it that they do not flow separately — for obviously in some way they meet, they intermingle, they have relations. Life here evolves in body; mind here evolves in vitalised substance. It is not enough to say, as we have said, that the conception of Brahman is stamped in grain of mind, through mind in grain of life, through life in grain of matter & so produces particular form. For what we actually start with seems to be not life moulding matter, but life evolving out

of matter or at least in matter. Afterwards, no doubt, its needs & circumstances react on matter & help to mould it. Even if we suppose the first moulding to be only latent life and mind, the primacy of matter has to be explained.

The Means of Realisation

Vedanta is merely an intellectual assent, without Yoga. The verbal revelation of the true relations between the One and the Many, the intellectual acceptance of the revelation and the dogmatic acknowledgement of the relations do not lead us beyond metaphysics, and there is no human pursuit more barren and frivolous than metaphysics practised merely as an intellectual pastime, a play with words & thoughts, when there is no intention of fulfilling thought in life or of moulding our inner state and outer activity by the knowledge which we have intellectually accepted. It is only by Yoga that the fulfilment and moulding of our life and being in the type of the true relations between God and the soul can become possible. Therefore every Upanishad has in it an element of Yoga as well as an element of Sankhya, the scientific psychology on which Yoga is founded. Vedanta, the perception of the relations between God in Himself and God in the world, Sankhya, the scientific, philosophical and psychological analysis of those relations and Yoga, called also by the Rishis Yajna, their practical application in social life, religious worship and individual discipline & self-perfection, is and has always been the whole substance of the Hindu religion. Whatever we know of God, that we ought in every way to be and live, is almost the only common dogma of all Hindu sects and schools of every description.

If then we know this of God and ourselves that we and He are one, So 'ham asmi, but divided by a movement of self-awareness which differentiates our forward active movement of waking life from the great life behind that knows and embraces all, then to recover that oneness in our waking state becomes the supreme aim and meaning of every individual existence. Nothing connected only with the movement of division can be of any moment to us, neither our bodily life and health, nor our

family welfare, nor our communal wellbeing compared with this immense self-fulfilment; they can only be of importance as means or movements in the self-fulfilment. If, farther, we know that by recovering our secret oneness with God we shall also be at one with the world and that hatred, grief, fear, limitation, sickness, mortality, the creations of the divided movement, will no longer be able to exercise their yoke upon us, then the abandonment of all else, if necessary, for the one thing needful, becomes not only the supreme aim and meaning of human life, but our only true interest. Even if, as is quite probable, we cannot in one birth attain to the fullness of this grand result yet it is clear that even a little progress towards it must mean an immense change in our life & inner experience and be well worth the sacrifice and the labour. As the Gita says with force, “A little of this rule of life saves man out of his great fear.” If farther a man knows that all mankind is intended to attain this consummation, he being one life with that divine movement called humanity, it must also be part of his self-fulfilment to pour whatever fullness of being, knowledge, power or bliss he may attain, out on his fellow beings. It is his interest also, for humanity being one piece, it is difficult for the individual to attain fullness of life here when the race creates for him an atmosphere of darkness, unrest and base preoccupation with the cares of a half-intellectualised animal existence. So strong has this atmosphere become in the Iron Age, that it is the rule for the individual who seeks his own salvation to sever himself from life and society and content himself with only the inner realisation. Modern Hinduism has become, therefore, in all but its strongest spirits, absorbed in the idea of an individual salvation. But our Vedic forefathers were of a different stuff. They had always their eye on the individual in the race. Nothing is more remarkable in the Veda than the absolute indifference & even confusion with which the singular and plural are used by the Singer, as if “I” & “we” were identical in meaning, and the persistence with which the Rishi regards himself as a representative soul, as it were, of the *visháṁ devayatínám*, the peoples in their seeking after the Godhead. We find the same transition in the Isha from the singular “*pashyami*” of the successful representative soul

realising his oneness with God to the plural asman when he turns to pray for the equal purification and felicity of his fellows. Our ideal, therefore, is fixed,—to become one with God and lead individually the divine life, but also to help others to the divine realisation and prepare, by any means, humanity for the kingdom of God on earth,—satyadharma, satyayuga.

Our means is Yoga. Yoga is not, as the popular mind too often conceives, shutting oneself in a room or isolating oneself in a monastery or cave and going through certain fixed mental and bodily practices. These are merely particular and specialised types of Yogic practice. The mental and bodily practices of Rajayoga and Hathayoga are exercises of great force and utility, but they are not indispensable. Even solitude is not indispensable, and absolute solitude limits our means and scope of self-fulfilment. Yoga is the application, by whatever means, of Vedanta to life so as to put oneself in some kind of touch with the high, one, universal and transcendent Existence in us & without us in our progress towards a final unity. All religious worship, sincerely done, all emotional, intellectual and spiritual realisation of that which is higher than ourselves, all steadily practised increase of essential power, purity, love or knowledge, all sacrifice and self-transcending amounts to some form of Yoga. But Yoga can be done with knowledge or without knowledge, with a higher immediate object or with a lower immediate object, for a partial higher result or for the fullest divine perfection and bliss. Yoga without knowledge can never have the force of Yoga with knowledge, Yoga with the lower object the force of Yoga with the higher object, Yoga for a partial result the force of Yoga for the full & perfect result. But even in its lowest, most ignorant or narrowest forms, it is still a step towards God.

A Fragmentary Chapter for a Work on Vedanta

[.....] Each of the great authoritative Upanishads has its own peculiar character and determined province as well as the common starting point of thought and supreme truth in the light of which all their knowledge has to be understood. The unity of universal existence in the transcendental Being who alone is manifested here or elsewhere forms their common possession & standpoint.

All thought & experience here rest upon this great enigma of a multiplicity that when questioned resolves itself to a unity of sum, of nature & of being, of a unity that when observed seems to be a mere sum or convention for a collection of multiples. The mind when it starts its business of experience in sensation and thought, finds itself stumbling about in a forest of details of each of which it becomes aware individually by knocking up against it, like a wayfarer in a thick and midnight forest stumbling & dashing himself against the trees,— by the shock & the touch only he knows of them. Mind cannot discriminate & put these details into their place except, imperfectly, by the aid of memory — the habit of the [mind] of sensations. Like the women imprisoned in the magic forests of the old Tantra the mind is a prisoner in the circle of its own sensations wandering round & round in that narrow area and always returning to the original source of its bondage,— its inability to go beyond its data, the compulsion under which it lies of returning to the object it meets merely the image of that object as mirrored through the senses & in the mind. It is reason, the faculty that can discriminate as objects, that first attempts to deliver mind from its bondage by standing apart from the object and its mental reflection and judging them in its own terms & by its own measurements and not in the terms & measurements of the senses. The knowledge which the mind gives is sanjna, awareness not passing beyond contact with and response to the thing known, the knowledge which reason gives

is prajna, awareness placing the object in front of it and studying it as a thing affecting but yet apart from and unconnected with the feelings & needs of that which experiences. Therefore it is, according to our philosophy, in buddhi & not in manas that ahankara, the discriminative ego-sense is born. Mind like matter has an inert unity of all things in experience born of non-discrimination; the perception of an object outside & a sensation within it stand on the same footing to sanjna. We must discriminate and reflect, in order to be aware of separate multiplicity as distinguished from a multitude [of] sensations in the unity of our consciousness. Afterwards when we rise through reason but above it, to Veda, we recover, however rudimentarily, the original unity, but discriminating, knowing the tattwa of things, perceiving them to be circumstances not of an individual & sense bound [but] of universal & sense delivered consciousness. This consummation of knowledge & the ordering of life on that knowledge is man's summit of evolution, the business for which he is here upon the earth. To climb to it from the animal mentality [*sentence left incomplete*]

The first thing that this discriminating reason effects is to put each detail in its place & then to arrange the details in groups. It travels from the individual to the group, from the group to the class, from the class to the kind, from the kind to the mass. And there until help arrives it has to pause. It has done much. It has distinguished each individual tree in the magical forest from its neighbour; it has arranged them in groves and thickets; it has distinguished & numbered the various species of trees and fixed their genus. It has mapped them out collectively & known the whole mass as the forest. But it is not yet free. It has not escaped from the ensorcelled gyre of the Almighty Magician. It knows every detail of its prison, nothing more. It has discovered the vyashti & the samashti; it has arrived only at a collective & not at a real unity. It has discovered the relations of unit to unit, the units to the smaller group and the smaller group to the larger group & the whole to the mass. It has its laws of life fixed upon that knowledge, its duties of individual to individual, of man to the family, of the man & family to the class, of [all] three

to the nation, of the nation & its constituents to humanity. It has ordered excellently our life in the prison house. But it still travels in the magic circle, it is still a prisoner & a [.....] It has even discovered one pregnant truth that the farther we travel from the many, the nearer we draw to the one, the less is the transience, the greater the permanence. The family outlasts the individual, the class endures when the single family has perished, the kind survives the disappearance of the class, the collective whole endures & outlives all the revolutions of its component parts. Therefore a final law and morality is found, the sacrifice & consummation of the less in the greater, of the few for the many,—an evolutionary utility, a consummate altruism. And when all is said and done, we are still in the prison house. For even the most permanent is here transient, the world perishes as inevitably as the midge & the ant & to our ranging vision seems hardly mightier in its ultimate reality or the importance of its fate. For who has made individual follow individual & nation follow nation & world follow world through the brilliant mirage of life into the incomprehensible mystery of death; and when all is ended, what profit has a man had of all his labour that he has done under the sun?

Reason cannot deliver us. The day of our freedom dawns when we transcend reason, not by imagination, which is itself only an intellectual faculty, not [by] the intuition even, but by illumination. The intuitive reason can do much for us, can indicate to us the higher truth. The intellectual reason can only arrive, as we have seen, at a collective unity; it is still bound by its data. The intuitive reason first suggests to us a unity which is not collective but essential, the Brahman of the Veda [.....] It is intuitive reason that [.....] infinity. We [.....] its non-existence to the observing intellect. [None] has ever [travelled] beyond the uttermost limit of the stars and assured [himself that] there is always a beyond, or lived from all time before the stars shone out in the heavens so that he can say, Time never began. The imagination can indeed add tract to tract of Space and millennium to millennium of Time and, returning tired &

appalled, say "I at least find no end and infinity is possible." But still we have no proof — there are no data on which we can stand. Infinity remains to the intellect a surmise, a hypothesis, a powerful inference. Reason is essentially a measuring & arranging faculty & can only deal with the finite. It is ensorcelled within the limits of the forest. Yet we have an intuitive perception of the truth of infinity, not collectively, not as a never ending sum of miles or moments but as a thing in itself not dependent on that which it contains. We have, if we examine ourselves, other such intuitive perceptions, of immortality although we cannot look beyond the black wall of death, of freedom although the facts of the world seem to load us with chains.

Are we yet free by the force of this intuitive reason? We cannot say so, — for this reason that it gives us suggestions, but not realisations. It is in its nature what the old psychologists would have called smriti, a memory of truth, rather than a perception. There is a suggestion to us in ourselves of infinity, of immortality, of freedom and knowledge in us replies, Yes, I know that to be true, though I do not see it, there is something in me that has always known it, it is in me like some divine memory. The reason of this movement is that the intuitive reason works in the intellect. It is the memory of freedom coming to the woman in the forest which tells her that there is something outside this green & leafy, but yet to her dark, fatal & dismal forest of imprisonment, some world of wide & boundless skies where a man can move freely doing what he wills, *kamachari*. And because it works in the intellect, its movement can be imitated by the other inhabitants of the intellect, by the brilliancy of imagination, by the fond thought that is only the image of our wish. The rationalist is right in distrusting intuition although it gave him Newton's theory of gravitation and most of the brilliant beginnings of Science & Free Thought, — right, yet not right; right from the standpoint of a scepticism that asks for intellectual certainty, wrong from the standpoint of ultimate truth & the imperative needs of humanity. Faith rests upon the validity of this faculty of intuitive reason, and faith has been the great helper and consoler of humanity in its progress, the indispensable staff on which he

supports his thought & his action. But because the divine smriti is aped by the voices of desire & fancy, faith has also been the parent & perpetuator of many errors.

It is knowledge that loosens our bonds, that snaps asunder the toils of sense & dispels the force of the world-enchantment. In order to be free, we must pass from intuition to illumination. We must get the direct perception of the knowledge of which intuitive reason is the memory. For within us there are unawakened folds in folds of conscious experience which we have yet to set in action in order to fulfil our nature's possibilities. In these inner realms we are sushupta, asleep; but the whole movement of humanity is towards the awakening of these centres. Science is in error when it imagines that man is from all time & to all time a rational animal & the reason the end & summit of his evolution. Man did not begin with reason, neither will he end with it. There are faculties within us which transcend reason and are asleep to our waking consciousness, just as life is asleep in the metal, consciousness in the tree, reason in the animal. Our evolution is not over, we have not completed even half of the great journey. And if now we are striving to purify the intellect & to carry reason to its utmost capacities, it is in order that we may discourage the lower movements of passion and desire, self-interest and prejudice and dogmatic intolerance which stand in the way of the illumination. When the intellectual buddhi is pure by vichara & abhyasa of these things, then it becomes ready to rise up out of the mind into the higher levels of consciousness and there lose itself in a much mightier movement which because of its greatness & perfection is called in the Rigveda mahas and in the Vedanta vijnana. This is what [is] meant in the Veda by Saraswati awakening the great ocean. Pavaka nah saraswati maho arnash chetayati. This is the justification of the demand in our own Yoga that desire shall be expelled, the mind stilled, the very play of reason & imagination silenced before a man shall attain to knowledge,—as the Gita puts it, na kinchid api chintayet.

The illumination of the vijnana, when it is complete, shows us not a collective material unity, a sum of physical units, but a

real unity. It reveals to us Space, Time and the chain of apparent circumstance to be merely conventions & symbols seen in His own being by One Seer and dependent purely on a greater transcendental existence of which they are not separate realities & divisions but the manifold expressions of its single Truth. It is this knowledge that gives us freedom. We escape from the enchanted forest, we know once more the world outside this petty world, see the boundless heavens above & breast the wide & circumambient air of our infinite existence. The first necessity is to know the One, to be in possession of the divine Existence; afterwards we can have all the knowledge, joy & power for action that is intended for our souls,—for He being known all is known, tasmin vijnate sarvam vijnatam, not at once by any miraculous revelation, but by a progressive illumination or rather an application of the single necessary illumination to God's multiplicity in manifestation, by the movement of the mahat & the bhuma, not working from petty details to the whole, but from the knowledge of the one to the knowledge of relation & circumstance, by a process of knowledge that is sovereign & free, not painful, struggling & bound. This is the central truth of Veda & Upanishad & the process by which they have been revealed to men.

This free & great movement of illumination descending from above to us below and not like our thought here which climbs painfully up the mountain peaks of thought only to find at the summit that it is yet far removed from the skies to which it aspires, this winged & mighty descent of Truth is what we call Sruti or revelation. There are three words which are used of illumined thought, drishti, sruti & smriti, sight, hearing and remembrance. The direct vision or experience of a truth or the thought-substance of a truth is called drishti, and because they had that direct vision or experience, that pratyaksha not of the senses, but of the liberated soul, the Rishis are called drashtas. But besides the truth and its artha or thought-substance in which it is represented to the mind, there is the vak or sound symbol, the inevitable word in which the truth is naturally enshrined & revealed & not as in ordinary speech half concealed or only

suggested. The revelation of the vak is sruti. The revealed word is also revelatory and whoever has taken it into his soul, though the mind may not understand it, has the Truth ready prepared in the higher or sushupta reaches of his being from whence it must inevitably descend at a future date or in another life to his lower & darkened consciousness in order to liberate & illumine. It is this psychological truth which is the foundation of the Hindu's trust in the Name of God, the vibrations of the mantra and the sound of the Veda. For the vak carries, in the right state of the soul, an illumination with it of the truth which it holds, an inspiration of its force of satyam which is less than drishti but must in the end lead to drishti. A still more indirect action of the vijnana is smriti; when the truth is presented to the soul and its truth immediately & directly recognised by a movement resembling memory—a perception that this was always true and already known to the higher consciousness. It is smriti that is nearest to intellect action and forms the link between vijnanam & prajnanam, ideal thought & intellectual thought, by leading to the higher forms of intellectual activity, such as intuitive reason, inspiration, insight & prophetic revelation, the equipment of the man of genius.

But what proof have we that this illumination exists? how can we say that this illuminated sight, this revelatory hearing, this confirming remembrance of eternal knowledge is not a self-delusion or a peculiarly brilliant working of imagination and of rapid intellectuality? To those who have the illumination, the question does not arise. The prisoner released from his fetters does not doubt the reality of the file that undid their rivets; the woman escaped from the forest does not ask herself whether this amazing sunlight & wide-vaulted blue sky is not a dream and a delusion. The scientist himself would not be patient with one who began the study of science by questioning the reality of the revealing power of microscope and telescope and suggesting that the objects as seen underneath were so presented merely by an optical illusion. Those who have experienced & seen, know [.....] sceptic. "Learn how to use the instruments [.....] yourself, study all these wonders invisible to

the ordinary eye, examine their constancy, coherency, fidelity to fixed wide & general laws, and then judge; do not vitiate inquiry from the beginning by denying on a priori grounds its utility or the right to inquire." It is only by faith in the instruments of our knowledge that we can acquire knowledge,—by faith in the evidence of the senses that we can think at all, by faith in the validity of reason that we can deduce, infer and argue. So also it is only by faith in illumination that we can see truth from above & come face to [face with God.] It is true that all faith must have its limits. The faith in the senses must be transcended & checked by the faith in our reason. The faith in the reason itself is checked by agnosticism [and] will one day be transcended & checked by the faith in the vijnana. The faith in the vijnana must be checked & harmonised by a faith in a still higher form of knowledge,—knowledge by identity. But within its own province each instrument is supreme and must be trusted. In relying, therefore, upon the vijnana, in asserting and demanding a preliminary faith in it, the Yigin is making no mystic, irrational or obscurantist claim. He is not departing from the universal process of knowledge. He claims to exceed reason, just as the scientist claims to exceed the evidence of the senses. When he asserts that things are not what they seem, that there are invisible forces and agencies at work about us and that the whole of our apparent existence and environment is only phenomenal, he is no more departing from rationality or advancing anything wild or absurd than the scientist when he asserts that the earth moves round the sun and the sun is relatively still, affirms the existence of invisible gases or invisible bacilli, or finds in matter only a form of energy. Nor are faith in the Guru & faith in the Sruti irrational demands, any more than the scientist is irrational in saying to his pupil "Trust my expert knowledge, trust my method of experiment & the books that are authoritative and when you have made the experiments, you can use your intellect to confirm, refute, amend or enlarge whatever scientific knowledge is presented to you in book or lecture or personal instruction,"—or than the man of the Indian village who has been to London is irrational in expecting his fellow villagers to accept his statement

of the existence, sights, scenes and characteristics of London or in supporting [it] by any book that may have been written with authority on the subject. If the Indian Teacher similarly demands faith in himself as an expert, faith in the Sruti as the evidence of ancient experts, drishti as revealed truth coming direct to them by vijnanam from the divine Knowledge, he is following the common, the necessary rule. He has the right to say, Trust these, follow these, afterwards you will yourself look on the unveiled face of Truth & see God. In each case there is a means of confirmation,—the evidence of the observation & deduction has to be confirmed by observation & deduction; the evidence of the senses by the senses, the evidence of the vijnanam by the vijnanam. One cannot exceed one's instrument.

There is also the evidence of common experience — there is this eternal witness to the truth of the vijnana, that men who have used it, in whatever clime & whatever age, however they may differ in their intellectual statement or the conclusions of the reason about what they have seen, are at one in the substance of their experience & vision. Whoever follows in these days the paths indicated, makes the experiments prescribed, goes through the training needed, cannot go beyond, in the substance of his knowledge, or depart from what the ancients observed. He may not go beyond [*sentence left incomplete*]

God and Immortality

Chapter I The Upanishad

The Upanishads stand out from the dim background of Vedic antiquity like stupendous rock cathedrals of thought hewn out of the ancient hills by a race of giant builders the secret of whose inspiration and strength has passed away with them into the Supreme. They are at once Scripture, philosophy and seer-poetry; for even those of them that dispense with the metrical form, are prose poems of a rhythmically mystic thought. But whether as Scripture, philosophical theosophy or literature, there is nothing like them in ancient, mediaeval or modern, in Occidental or Oriental, in Egyptian, Chaldean, Semitic or Mongolian creation; they are unique in style, structure and motive, entirely *sui generis*. After them there were philosophic poems, aphorisms, verse and prose treatises in great number, Sutras, Karikas, Gitas, their intellectual children; but these are a human progeny very different in type from their immortal ancestors. Pseudo-Upanishads there have been in plenty, a hundred or more of them; some have arrived at a passable aping of the more external features of the type, but always betray themselves by the pseudo-style, the artificial falsetto, the rasping creak of the machine; others are pastiches; others are fakes. The great Upanishads stand out always serene, grand, inimitable with their puissant and living breath, with that phrase which goes rolling out a thousand echoes, with that faultless spontaneous sureness of the inevitable expression, with that packed yet easy compression of wide and rich wisdom into a few revelatory syllables by which they justify their claim to be the divine word. Neither this inspiration nor this technique has been renewed or repeated in later human achievement.

And if we look for their secret, we shall find it best expressed in the old expression of them as the impersonal *shabda-brahman*. They are that is to say, the accents of the divine Gnosis,—a revelatory word direct and impersonal from the very heart of a divine and almost superconscious self-vision. All supreme utterance which is the inspired word and not merely speech of the mind, does thus come from a source beyond the human person through whom it is uttered; still it comes except in rare moments through the personal thought, coloured by it, a little altered in the transit, to some extent coloured by the intellect or the temperament. But these seers seem to have possessed the secret of the rapt passivity in which is heard faultlessly the supreme word; they speak the language of the sons of Immortality. Its truth is entirely revelatory, entirely intuitive; its speech altogether a living breath of inspiration; its art sovereignly a spontaneous and unwilled discerning of perfection.

The plan and structure of their thought corresponds; it has a perfection of supra-intellectual cohesion in its effortless welling of sound and thought, a system of natural and unsystematic correspondences. There is no such logical development, explicitly or implicitly satisfying the demands of the intellect, such as we find in other philosophical thought or the best architectonic poetry; but there is at the same time a supreme logic, only it is the logic of existence expressing itself self-luminously rather than of thought carefully finding out its own truth. It is the logic of the Himalayas or of a causeway of giants, not the painful and meticulous construction effected with labour by our later intellectual humanity. There is in the whole a unity of vision; the Upanishad itself rather than a human mind sees with a single glance, hears the word that is the natural body of the truth it has seen, perceives and listens again, and still again, till all has been seen and heard: this is not the unity of the intellect carefully weaving together its connections of thought, choosing, rejecting, pruning to get terseness, developing to get fullness. And yet there is a perfect coherence; for every successive movement takes up the echoes of the old and throws out new echoes which are taken up in their turn. A wave of seeing rises and ends to rise into

another wave and so on till the final fall and natural ceasing of the whole sea of thought on its shore. Perhaps the development of a great and profound strain of music is the nearest thing we have to this ancient poetry of pure intuitive thought. This at least is the method of the metrical Upanishads; and even the others approximate to it, though more pliant in their make.

Note on the Texts

Note on the Texts

KENA AND OTHER UPANISHADS comprises Sri Aurobindo's translations of and commentaries on Upanishads other than the Isha Upanishad, as well as translations of later Vedantic texts, and writings on the Upanishads and Vedanta philosophy in general. Translations of and commentaries on the Isha Upanishad are published in *Isha Upanishad*, volume 17 of THE COMPLETE WORKS OF SRI AUROBINDO.

Sri Aurobindo's work on the Upanishads occupied more than twenty years, from around 1900 until the early 1920s. (One translation was revised some twenty-five years after that.) Between 1914 and 1920, he published translations of the Isha, the Kena and the Mundaka Upanishads, along with commentaries on the Isha and the Kena, in the monthly review *Arya*. These, along with the translation of the Katha Upanishad, which was published in 1909 and subsequently revised, may be said to represent his Upanishadic interpretation in its most definitive form. His other translations and commentaries were not published during his lifetime. Most of them belong to an earlier period and only a few are complete. Some were used in producing the final translations and commentaries published in Part One. They are of interest as steps in the development of his thought, as well as for their own inherent value.

In the present volume, the editors have placed material published during Sri Aurobindo's lifetime in Part One, and material found among his manuscripts in Parts Two and Three. The Sanskrit texts have been included for the convenience of Sanskrit-knowing readers.

PART ONE: TRANSLATIONS AND COMMENTARIES
PUBLISHED BY SRI AUROBINDO

This part contains the final versions of Sri Aurobindo's translations of three Upanishads, the Kena, Katha and Mundaka, and commentaries on the Kena and parts of the Taittiriya.

The Kena Upanishad. Sri Aurobindo first translated the Kena Upanishad in Baroda around 1900. (This translation forms part of a type-written manuscript, hereafter referred to as TMS, which Sri Aurobindo entitled “The Upanishads rendered into simple and rhythmic English”.) The TMS translation of the Kena was lightly revised and published in the weekly review *Karmayogin* in June 1909. In 1920 the *Karmayogin* translation was reproduced in *The Seven Upanishads*, published by Ashtekar & Co., Poona. (Only three of the seven translations in this book were by Sri Aurobindo: Isha, Kena and Mundaka.)

Between 1912 and 1914, Sri Aurobindo began three commentaries on and one annotated translation of the Kena. All of these pieces were left incomplete. They are published in Part Two, Section Four.

Between June 1915 and July 1916, Sri Aurobindo published a new translation of the Kena Upanishad and a fifteen-chapter commentary on it in the *Arya*. He wrote each of the instalments immediately before its publication. Sometime between 1916 and 1920, he lightly revised the *Arya* translation and commentary. Their publication in book-form was planned, and production was actually begun in the summer of 1920; but the proposed book was never issued. Questioned about the possibility of publishing *Kena Upanishad* in December 1927, Sri Aurobindo wrote: “My present intention is not to publish it as it stands. This must be postponed for the present.” He never found time to return to this work.

When the publication of Sri Aurobindo’s Upanishadic translations and commentaries was undertaken after his passing, the existence of the revised versions of his translation of and commentary on the Kena Upanishad was not known. The unrevised *Arya* versions were published by the Sri Aurobindo Ashram as *Kena Upanishad* in 1952, and included in the same publisher’s *Eight Upanishads* in 1953. The revised translation (but unrevised commentary) first appeared in the second edition of *Kena Upanishad* in 1970. The same texts were reproduced in *The Upanishads: Texts, Translations and Commentaries*, volume 12 of the Sri Aurobindo Birth Centenary Library, in 1971. The revised commentary first appeared in *The Upanishads: Part One*, published by the Sri Aurobindo Ashram in 1981.

The *Arya* text of the commentary had no chapter-titles. While revising the work, Sri Aurobindo gave titles to all the chapters except

8, 9 and 12. In the present edition, the editors have provided titles for these three chapters.

The Katha Upanishad of the Black Yajurveda. Sri Aurobindo first translated this Upanishad in Baroda around 1900; it forms part of TMS. He later said that he had tried “to convey the literary merit of the original”. The translation, slightly revised, was published in the *Karmayogin* in July and August 1909. The *Karmayogin* translation was published as *The Katha Upanishad* by Ashtekar & Co., Poona, in 1919. Sometime during the early part of his stay in Pondicherry (1910–20), Sri Aurobindo began a more extensive revision of TMS, but reached only the end of the First Cycle. When it was proposed to bring out the translation in a book during the late 1920s, he replied that he did not have the time to make the necessary revisions. A new edition of *Katha Upanishad* was published by the Sri Aurobindo Ashram in 1952. In that edition, in *Eight Upanishads* (1953), and in *The Upanishads* (1971), the partially revised TMS version was used as text, with some editorial modernisation of the language. The *Karmayogin* version, containing the last revision of the Second Cycle, was disregarded. In the present volume, the revised TMS is followed for the First Cycle, and the *Karmayogin* text for the Second.

Mundaka Upanishad. Sri Aurobindo first translated this Upanishad in Baroda around 1900; it forms part of TMS. A revised version of the translation was published in the *Karmayogin* in February 1910. (This revised translation was included in *The Seven Upanishads*.) A further revised translation was published in the *Arya* in the issue of November/December 1920. Sri Aurobindo thoroughly revised the *Arya* translation during the late 1940s. This version was used when the translation was published in *Eight Upanishads* in 1953 and in *The Upanishads* in 1971.

Readings in the Taittiriya Upanishad. Sri Aurobindo translated the Taittiriya Upanishad in Baroda around 1902 (see below), but never revised it for publication. He wrote “The Knowledge of Brahman: Readings in the Taittiriya Upanishad” in 1918 for publication in the *Arya*. It appeared in the November 1918 issue of the review. “Truth, Knowledge, Infinity” was apparently intended for a later issue, but it was never completed and not published during Sri Aurobindo’s lifetime. Its first appearance in a book was in the 1981 edition of *The Upanishads*.

PART TWO: TRANSLATIONS AND COMMENTARIES
FROM MANUSCRIPTS

The texts in this part were not published during Sri Aurobindo's lifetime. Several of the translations and all the commentaries are incomplete. They have been arranged in five sections, the first comprising an introductory essay.

Section One. Introduction

On Translating the Upanishads. Editorial title. Sri Aurobindo wrote this text in Baroda around 1900–1902 under the heading “OM TAT SAT”. He evidently intended it to be the introduction to a collection of his translations, probably “The Upanishads rendered into simple and rhythmic English”. It was first published in a book as the introduction to *Eight Upanishads* in 1953, and was included in *The Upanishads* in 1971 and subsequently.

Section Two. Complete Translations (circa 1900–1902)

“The Upanishads rendered into simple and rhythmic English”. This is the title page of the typewritten manuscript (TMS), which dates from around the turn of the century. Two of the six translations in the manuscript—those of the Prashna (“Prusna”) and Mandukya (“Mandoukya”) Upanishads—were never revised or published by Sri Aurobindo. These two are published here in their original form.

The Prusna Upanishad of the Athurvaveda. Circa 1900. From TMS. The translation was published in *Eight Upanishads* in 1953 and was included in *The Upanishads* in 1971.

The Mandoukya Upanishad. Circa 1900. From TMS. The translation was first published in *Eight Upanishads* in 1953 and was included in *The Upanishads* in 1971.

The Aitereya Upanishad. Sri Aurobindo translated this Upanishad in Baroda around 1902. (It does not form part of TMS.) The translation was never revised and is published here in its original form. It was first published in *Eight Upanishads* in 1953 and was included in *The Upanishads* in 1971.

Taittiriya Upanishad. Sri Aurobindo translated this Upanishad in Baroda around 1902. (It does not form part of TMS.) It was never revised and is published here in its original form. It was first published in *Eight Upanishads* in 1953 and was included in *The Upanishads* in 1971.

Section Three. Incomplete Translations and Commentaries
(circa 1902–1912)

Svetasvatara Upanishad. Sri Aurobindo translated the fourth to sixth chapters of this Upanishad sometime during the first decade of the century. (It is not known whether he ever translated the first three chapters.) Judging by the notebook and handwriting, it would appear that he did the translation during the period of his stay in Baroda; yet he is recorded as saying, “I translated the Shwetashwatara Upanishad while I was in Bengal.” It is possible that he did the translation in Bengal during one of his vacations from Baroda College between 1902 and 1906. He retranslated the fourth chapter in Pondicherry several years later. The early translation of chapters 4 to 6 was first published in the 1971 edition of *The Upanishads*. The revised version of the fourth chapter first appeared in the 1981 edition.

Chhandogya Upanishad. Around 1902 Sri Aurobindo translated the first two sections and part of the third section of the first chapter of this Upanishad in the margins of his copy of *The Chhāndogya Upanishad* (Madras, 1899). He later recopied and revised the first two sections in the notebook he used for his translations of the Aitareya and Taittiriya. The editors have reproduced the recopied translation for sections 1–2, and fallen back on the marginal translation for section 3, verses 1–7. The translation of the first two sections was first published in *The Upanishads* in 1971; the translation of the opening of section 3 first appeared in 1986 in the second impression of the second edition of that book.

Notes on the Chhandogya Upanishad. Circa 1912. Sri Aurobindo wrote these two passages of commentary separately in Pondicherry. The first is entitled in the manuscript “Notes on the Chhandogya Upanishad/ First Adhyaya” (but only the first sentence is treated). Part of the first page was included in *The Upanishads* in 1971; the full text was published in the 1981 edition. The second commentary,

also incomplete, is entitled in the manuscript “Vedic Interpretations/Satyakama Jabala”. In most editions of the Chhandogya Upanishad, the story of Satyakama Jabala occupies sections 4–9 of the fourth chapter, not sections 3–8 as in the edition Sri Aurobindo used. The commentary was first published in the 1981 edition of *The Upanishads*.

The Brihad Aranyak Upanishad. Around 1912 Sri Aurobindo translated the first two sections and part of the third section of the first chapter of this Upanishad in the margins of his copy of the text (Poona: Ananda Ashram, 1902). This marginal translation was first reproduced in the 1981 edition of *The Upanishads*.

The Great Aranyaka. Circa 1912. Shortly after writing the above translation, Sri Aurobindo began a commentary on the Brihadaranyaka Upanishad that he entitled “The Great Aranyaka/A Commentary on the Brihad Aranyak Upanishad”. This was not completed even to the extent of what had been translated. The commentary was included in *The Upanishads* in 1971.

The Kaivalya Upanishad. Sri Aurobindo wrote this translation and commentary, which cover only the first verse of the Upanishad, in Pondicherry around 1912. It was first published in *The Upanishads* in 1971. The commentary in English is followed by a commentary in Sanskrit, which is published in *Writings in Bengali and Sanskrit*, volume 9 of THE COMPLETE WORKS OF SRI AUROBINDO.

Nila Rudra Upanishad. Sri Aurobindo translated the first of the three parts of this Upanishad, with a commentary on the first five verses, in Pondicherry around 1912. It was first published in *The Upanishads* in 1971.

Section Four. Incomplete Commentaries on the Kena Upanishad (circa 1912–1914)

Kena Upanishad: An Incomplete Commentary. Circa 1912. Editorial subtitle. Sri Aurobindo wrote only the “foreword” and portions of one “part” of this planned commentary before abandoning it. It was first published in *The Upanishads* in 1971.

A Commentary on the Kena Upanishad: Foreword. Circa 1912. This fragmentary work appears to be a rewriting of the foreword of the

preceding incomplete commentary. The manuscript has been damaged and one entire line is missing. This piece is being published here for the first time in a book.

Three Fragments of Commentary. Circa 1912–13. Sri Aurobindo wrote these three untitled fragments on sheets used otherwise for linguistic notes, undated entries for the *Record of Yoga* and the essay “The Origin of Genius”. They are being published here for the first time in a book.

Kena Upanishad: A Partial Translation with Notes. Editorial subtitle. Sri Aurobindo wrote this on 23 May 1914. The *Record of Yoga* for that day states: “Kena Upanishad I Kh [Khanda] translated with notes”. It is being published here for the first time.

Section Five. Incomplete Translations of Two Vedantic Texts (circa 1900–1902)

The Karikas of Gaudapada. Editorial title. Circa 1900. This classic Vedantic text was written by Gaudapada in or around the eighth century. Sri Aurobindo translated only the first twelve verses, along with Shankaracharya’s commentary on them. The words italicised in his translation were supplied by him to make the meaning of the Sanskrit more clear. It was first published in *The Upanishads* in 1971.

Sadananda’s Essence of Vedanta. Circa 1902. The *Vedāntasāra* or “Essence of Vedanta” was written by Sadananda in the fifteenth century. Sri Aurobindo translated only the first sixteen of the work’s 227 aphorisms. The incomplete translation was first published in *The Upanishads* in 1971.

PART THREE: WRITINGS ON VEDANTA

These pieces found among Sri Aurobindo’s manuscripts were not completed or published by him. Written at various times from around 1902 to 1916, they have been arranged chronologically from earlier to later.

With the exception of *The Philosophy of the Upanishads*, the writings in this part are being published here for the first time in a book. Most of them previously appeared in the journal *Sri Aurobindo: Archives and Research* between 1978 and 1984.

Four Fragments. Circa 1902–4. These jottings are among Sri Aurobindo's earliest independent philosophical writings. Before revision, the last sentence of the final fragment ended: “. . . the purer form in which Vedanta, Sankhya & Yoga are harmonised”. This final fragment is being published here for the first time, the other three for the first time in a book.

The Spirit of Hinduism: God. Circa 1903–4. This piece opens with the first words of the Mandukya Upanishad.

The Philosophy of the Upanishads. Circa 1904–6. Sri Aurobindo wrote this piece during the latter part of his stay in Baroda. (He seems to have left the manuscript in western India when he came to Bengal in February 1906.) After completing six chapters and part of a seventh, he broke off work and never took it up again. The second to the seventh chapters of this work were included in *The Upanishads* in 1971, where they were numbered from one to six. The full text was published as a book in 1994.

The present text has been checked carefully against the manuscript, which unfortunately lacks its first two pages. For those pages the editors have relied on a typewritten transcript that was made before the pages were lost. The transcript contains several blanks, which occur in such a way as to suggest that the outer edge of the missing leaf of the manuscript was broken off. Making use of the indications found in the transcript, the editors have filled in the blanks with conjectural reconstructions; these have been printed within square brackets if they admitted of any doubt.

An Incomplete Work of Vedantic Exegesis. Circa 1906–8. Editorial title. This piece seems to have been written during the same period as “The Karmayogin: A Commentary on the Isha Upanishad”, an extensive work published in *Isha Upanishad*, volume 17 of THE COMPLETE WORKS. It is quite incomplete. Not all the projected chapters were finished, and some of the completed chapters contain unfinished passages. Sri Aurobindo wrote the following outline at the end of the notebook:

II. God

Turiya Brahman. Swayambhu.

Prajna. Kavih.

- Sacchidananda.
 The Sakshi.
 Isha in contemplation. Maheshwara.
 Ananda. The Seed State. Sleep.
 Hiranyagarbha. Manishi
 The Will in Buddhi
 God Manifold. The Saguna Brahman.
 The Qualities of God. The Dream State.
 Virat. Paribhu
 The Almighty. Mahat.
 The Self in creatures. God in Man (Avatars.)
 The Self in Nature.
 Images
 God as Fate
 God as Providence
 Worship (Prayer & Praise)
 Purusha & Prakritih.
 III. Vidya & Avidya
 Salvation. Escape from Avidya.
 Knowledge, Love & Works. Nirguna & Saguna
 Brahman.
 Self-realisation in Virat.
 States of moksha (Hiranyagarbha). Laya (Prajna).
 Yoga.
 IV. I The Law of Karma. Sin & Virtue. Heaven & Hell.
 Salvation by Works
 V. Ethics of Vedanta.

The Religion of Vedanta. 1906–8. An earlier draft of this fragment is published in the Reference Volume, volume 35 of THE COMPLETE WORKS. That draft continues slightly beyond the point where this version stops. After work on the present draft was broken off, Sri Aurobindo wrote the following, apparently a chapter-outline for a planned work:

1. Vedantic Cosmos	4.5
2. God in the Vedanta	1.8
3. Salvation by Works	1.2.3

4. The Ethics of Vedanta	6.7
5. The Twofold Will	9.10.11.12.13.14.15.16
6. Works and Immortality	17.18
7. The Great Release.	

It would appear that the proposed work was to be based on the Isha Upanishad, which has eighteen verses.

Evolution in the Vedantic View. Circa 1912. Editorial title. It is evident from the first sentence that the piece was written as part of a larger work, which either was not completed or has not survived.

The Means of Realisation. Circa 1912. The actual heading in the manuscript is “Chapter XI/ The Means of Realisation”. The ten chapters that presumably preceded this one have not been found or identified.

A Fragmentary Chapter for a Work on Vedanta. Circa 1912–13. Editorial title. The manuscript of this piece is badly damaged in places. The opening lines are lost, as are a number of words and parts of sentences written near the edges and especially at the tops and bottoms of the pages.

God and Immortality. Circa 1916. This incomplete chapter is all that was written of a proposed book.

PUBLISHING HISTORY

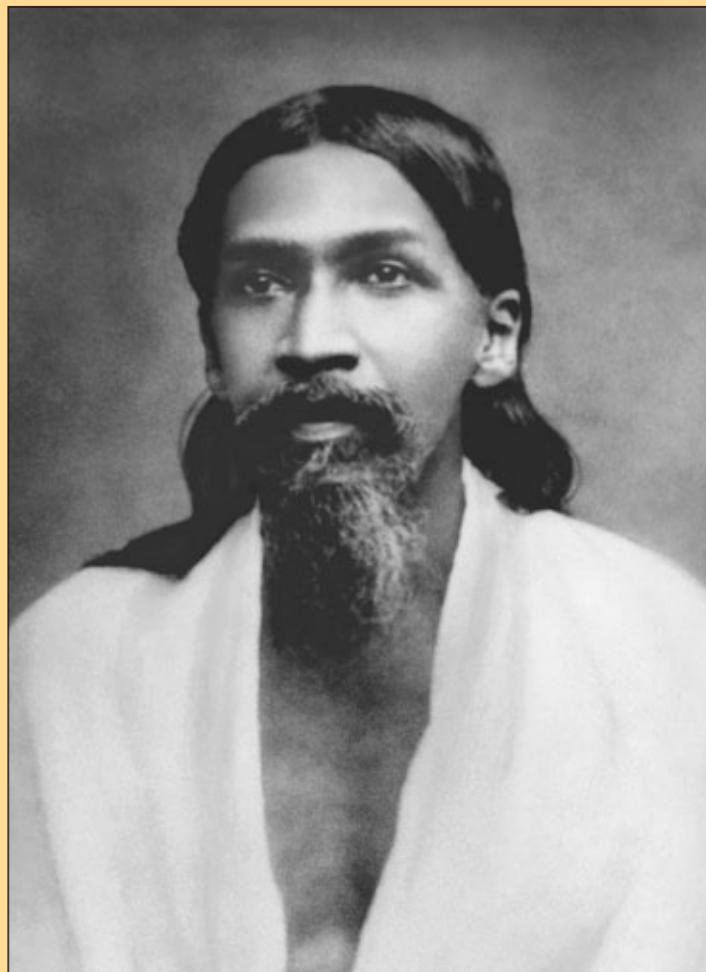

Sri Aurobindo published translations of the Kena, Katha and Mundaka Upanishads in the *Karmayogin*, a weekly journal of political opinion, during the years 1909 and 1910. Between 1914 and 1920 he published revised or new translations of the Kena and Mundaka, and commentaries on all of the Kena and parts of the Taittiriya in the *Arya*, a monthly review of philosophy. He revised most of these works with a view to publishing them in books, but never did so. The unrevised *Karmayogin* translation of the Katha Upanishad was reprinted by Ashtekar & Co., Poona, in 1919; the unrevised *Karmayogin* translations of the Isha, Kena and Mundaka were included in the same publisher’s *Seven Upanishads* in 1920. It is uncertain whether or not Sri Aurobindo authorised these publications.

The pieces published in Parts Two and Three of the present volume

were found among Sri Aurobindo's manuscripts after his passing in 1950. Many of them were first published in journals connected with the Sri Aurobindo Ashram. In 1953 Sri Aurobindo's published translations of the Isha, Kena, Katha and Mundaka Upanishads and his unpublished translations of the Prashna, Mandukya, Aitareya and Taittiriya were brought out by the Sri Aurobindo Ashram as *Eight Upanishads*. In 1971 all these translations, the Arya commentaries on the Isha and Kena, the first of the "Readings in the Taittiriya Upanishad", and a number of pieces from the author's notebooks, were published in *The Upanishads*, volume 12 of the Sri Aurobindo Birth Centenary Library. This book was reprinted several times. In 1981 most of the contents of the volume were rearranged and republished under the title *The Upanishads: Part One*. Several pieces that had appeared in the 1971 edition were removed from the 1981 edition with the intention of including them, along with other, recently discovered pieces, in a proposed second volume; but this was never brought out. The 1981 edition was reprinted in 1986 (when the translation of Chapter One, Section 3 of the Chhandogya Upanishad was included) and subsequently.

The present edition is the first to appear under the title *Kena and Other Upanishads*. In it, two pieces are published for the first time: "Kena Upanishad: A Partial Translation with Notes" and the last of the "Four Fragments" in Part Three. Several other pieces in Parts Two and Three have previously appeared only in the journal *Sri Aurobindo: Archives and Research* and are included here for the first time in a book.

Essays on the Gita

Publisher's Note

The first series of *Essays on the Gita* appeared in the monthly review *Arya* between August 1916 and July 1918. It was revised by Sri Aurobindo and published as a book in 1922.

The second series appeared in the *Arya* between August 1918 and July 1920. In 1928 Sri Aurobindo brought out an extensively revised edition in book form.

For the present edition, the text has been thoroughly checked against all previous editions and against the manuscripts of the revised *Arya*.

CONTENTS

FIRST SERIES

Sri Aurobindo in Pondicherry, c. 1915

the Purushottama who is the cosmic spirit in Time and who gives the command to the divine action of the liberated human being. He is both Akshara and Kshara, and yet he is other than either of these opposites. *Uttamah purushas teanyah paramātmetyuldhritah, yo lokatra-yam avishya vibhartiyaryaya īswarah*, "But other than these two is that highest spirit called the supreme Self, which enters the three worlds and upbears them, the imperishable Lord." This verse is the keyword of the Gita's reconciliation of these two apparently opposite aspects of our existence.

The idea of the Purushottama has been prepared, alluded to, adumbrated, assumed even from the beginning, but it is only now in the fifteenth chapter that it is expressly stated and the distinction given a name. And it is instructive to see how it is now immediately approached and developed. To rise into the divine nature, we have been told, one must first fix oneself in a perfect spiritual equality and so rise above the lower nature of the three gunas. *Thus beginning the lower planes* by that we fix ourselves in the impersonality, the imperceptible superiority to all action, the purity from all definition and limitation by quality which is the nature of the Purushottama manifested as the eternity and unity of the self, the Akshara. But there is also an eternal multiplicity of the Purushottama in soul manifestation. The Infinite has an eternal power and unending action of his divine Nature, and personality too finds in the infinite its highest spiritual meaning; but it is no longer the egoistic, separative, oblivious personality of the lower Prakriti; it is something exalted, immortal and divine. That mystery is the secret of love and devotion. The eternal soul offering itself to the eternal Divine, of whom it is a portion, *is a portion of the Divine and therefore* finds itself in this love and adoration and the sacrifice of works receives by it its consummation and perfect sanction. It is then through these things that the soul of man fulfils it-

*in that action
the morale
of soul person
ality changes
from a thing
of apparently
immortal
power, freedom
to transitory
This is possible
because
self offering,*

*to the ineffableuster of our personality and its
arise*

Essays on the Gita

First Series

I

Our Demand and Need from the Gita

THE WORLD abounds with scriptures sacred and profane, with revelations and half-revelations, with religions and philosophies, sects and schools and systems. To these the many minds of a half-ripe knowledge or no knowledge at all attach themselves with exclusiveness and passion and will have it that this or the other book is alone the eternal Word of God and all others are either impostures or at best imperfectly inspired, that this or that philosophy is the last word of the reasoning intellect and other systems are either errors or saved only by such partial truth in them as links them to the one true philosophical cult. Even the discoveries of physical Science have been elevated into a creed and in its name religion and spirituality banned as ignorance and superstition, philosophy as frippery and moonshine. And to these bigoted exclusions and vain wranglings even the wise have often lent themselves, misled by some spirit of darkness that has mingled with their light and overshadowed it with some cloud of intellectual egoism or spiritual pride. Mankind seems now indeed inclined to grow a little modester and wiser; we no longer slay our fellows in the name of God's truth or because they have minds differently trained or differently constituted from ours; we are less ready to curse and revile our neighbour because he is wicked or presumptuous enough to differ from us in opinion; we are ready even to admit that Truth is everywhere and cannot be our sole monopoly; we are beginning to look at other religions and philosophies for the truth and help they contain and no longer merely in order to damn them as false or criticise what we conceive to be their errors. But we are still apt to declare that our truth gives us *the* supreme knowledge which other religions or philosophies

have missed or only imperfectly grasped so that they deal either with subsidiary and inferior aspects of the truth of things or can merely prepare less evolved minds for the heights to which we have arrived. And we are still prone to force upon ourselves or others the whole sacred mass of the book or gospel we admire, insisting that all shall be accepted as eternally valid truth and no iota or underline or diaeresis denied its part of the plenary inspiration.

It may therefore be useful in approaching an ancient Scripture, such as the Veda, Upanishads or Gita, to indicate precisely the spirit in which we approach it and what exactly we think we may derive from it that is of value to humanity and its future. First of all, there is undoubtedly a Truth one and eternal which we are seeking, from which all other truth derives, by the light of which all other truth finds its right place, explanation and relation to the scheme of knowledge. But precisely for that reason it cannot be shut up in a single trenchant formula, it is not likely to be found in its entirety or in all its bearings in any single philosophy or scripture or uttered altogether and for ever by any one teacher, thinker, prophet or Avatar. Nor has it been wholly found by us if our view of it necessitates the intolerant exclusion of the truth underlying other systems; for when we reject passionately, we mean simply that we cannot appreciate and explain. Secondly, this Truth, though it is one and eternal, expresses itself in Time and through the mind of man; therefore every Scripture must necessarily contain two elements, one temporary, perishable, belonging to the ideas of the period and country in which it was produced, the other eternal and imperishable and applicable in all ages and countries. Moreover, in the statement of the Truth the actual form given to it, the system and arrangement, the metaphysical and intellectual mould, the precise expression used must be largely subject to the mutations of Time and cease to have the same force; for the human intellect modifies itself always; continually dividing and putting together it is obliged to shift its divisions continually and to rearrange its syntheses; it is always leaving old expression and symbol for new or, if it uses the old, it so changes its connotation or at least

its exact content and association that we can never be quite sure of understanding an ancient book of this kind precisely in the sense and spirit it bore to its contemporaries. What is of entirely permanent value is that which besides being universal has been experienced, lived and seen with a higher than the intellectual vision.

I hold it therefore of small importance to extract from the Gita its exact metaphysical connotation as it was understood by the men of the time,—even if that were accurately possible. That it is not possible, is shown by the divergence of the original commentaries which have been and are still being written upon it; for they all agree in each disagreeing with all the others, each finds in the Gita its own system of metaphysics and trend of religious thought. Nor will even the most painstaking and disinterested scholarship and the most luminous theories of the historical development of Indian philosophy save us from inevitable error. But what we can do with profit is to seek in the Gita for the actual living truths it contains, apart from their metaphysical form, to extract from it what can help us or the world at large and to put it in the most natural and vital form and expression we can find that will be suitable to the mentality and helpful to the spiritual needs of our present-day humanity. No doubt in this attempt we may mix a good deal of error born of our own individuality and of the ideas in which we live, as did greater men before us, but if we steep ourselves in the spirit of this great Scripture and, above all, if we have tried to live in that spirit, we may be sure of finding in it as much real truth as we are capable of receiving as well as the spiritual influence and actual help that, personally, we were intended to derive from it. And that is after all what Scriptures were written to give; the rest is academical disputation or theological dogma. Only those Scriptures, religions, philosophies which can be thus constantly renewed, relived, their stuff of permanent truth constantly reshaped and developed in the inner thought and spiritual experience of a developing humanity, continue to be of living importance to mankind. The rest remain as monuments of the past, but have no actual force or vital impulse for the future.

In the Gita there is very little that is merely local or temporal and its spirit is so large, profound and universal that even this little can easily be universalised without the sense of the teaching suffering any diminution or violation; rather by giving an ampler scope to it than belonged to the country and epoch, the teaching gains in depth, truth and power. Often indeed the Gita itself suggests the wider scope that can in this way be given to an idea in itself local or limited. Thus it dwells on the ancient Indian system and idea of sacrifice as an interchange between gods and men,— a system and idea which have long been practically obsolete in India itself and are no longer real to the general human mind; but we find here a sense so entirely subtle, figurative and symbolic given to the word “sacrifice” and the conception of the gods is so little local or mythological, so entirely cosmic and philosophical that we can easily accept both as expressive of a practical fact of psychology and general law of Nature and so apply them to the modern conceptions of interchange between life and life and of ethical sacrifice and self-giving as to widen and deepen these and cast over them a more spiritual aspect and the light of a profounder and more far-reaching Truth. Equally the idea of action according to the Shastra, the fourfold order of society, the allusion to the relative position of the four orders or the comparative spiritual disabilities of Shudras and women seem at first sight local and temporal, and, if they are too much pressed in their literal sense, narrow so much at least of the teaching, deprive it of its universality and spiritual depth and limit its validity for mankind at large. But if we look behind to the spirit and sense and not at the local name and temporal institution, we see that here too the sense is deep and true and the spirit philosophical, spiritual and universal. By Shastra we perceive that the Gita means the law imposed on itself by humanity as a substitute for the purely egoistic action of the natural unregenerate man and a control on his tendency to seek in the satisfaction of his desire the standard and aim of his life. We see too that the fourfold order of society is merely the concrete form of a spiritual truth which is itself independent of the form; it rests on the conception of right works as a rightly ordered

expression of the nature of the individual being through whom the work is done, that nature assigning him his line and scope in life according to his inborn quality and his self-expressive function. Since this is the spirit in which the Gita advances its most local and particular instances, we are justified in pursuing always the same principle and looking always for the deeper general truth which is sure to underlie whatever seems at first sight merely local and of the time. For we shall find always that the deeper truth and principle is implied in the grain of the thought even when it is not expressly stated in its language.

Nor shall we deal in any other spirit with the element of philosophical dogma or religious creed which either enters into the Gita or hangs about it owing to its use of the philosophical terms and religious symbols current at the time. When the Gita speaks of Sankhya and Yoga, we shall not discuss beyond the limits of what is just essential for our statement, the relations of the Sankhya of the Gita with its one Purusha and strong Vedantic colouring to the non-theistic or "atheistic" Sankhya that has come down to us bringing with it its scheme of many Purushas and one Prakriti, nor of the Yoga of the Gita, many-sided, subtle, rich and flexible to the theistic doctrine and the fixed, scientific, rigorously defined and graded system of the Yoga of Patanjali. In the Gita the Sankhya and Yoga are evidently only two convergent parts of the same Vedantic truth or rather two concurrent ways of approaching its realisation, the one philosophical, intellectual, analytic, the other intuition, devotional, practical, ethical, synthetic, reaching knowledge through experience. The Gita recognises no real difference in their teachings. Still less need we discuss the theories which regard the Gita as the fruit of some particular religious system or tradition. Its teaching is universal whatever may have been its origins.

The philosophical system of the Gita, its arrangement of truth, is not that part of its teaching which is the most vital, profound, eternally durable; but most of the material of which the system is composed, the principal ideas suggestive and penetrating which are woven into its complex harmony, are eternally valuable and valid; for they are not merely the luminous ideas or

striking speculations of a philosophic intellect, but rather enduring truths of spiritual experience, verifiable facts of our highest psychological possibilities which no attempt to read deeply the mystery of existence can afford to neglect. Whatever the system may be, it is not, as the commentators strive to make it, framed or intended to support any exclusive school of philosophical thought or to put forward predominantly the claims of any one form of Yoga. The language of the Gita, the structure of thought, the combination and balancing of ideas belong neither to the temper of a sectarian teacher nor to the spirit of a rigorous analytical dialectics cutting off one angle of the truth to exclude all the others; but rather there is a wide, undulating, encircling movement of ideas which is the manifestation of a vast synthetic mind and a rich synthetic experience. This is one of those great syntheses in which Indian spirituality has been as rich as in its creation of the more intensive, exclusive movements of knowledge and religious realisation that follow out with an absolute concentration one clue, one path to its extreme issues. It does not cleave asunder, but reconciles and unifies.

The thought of the Gita is not pure Monism although it sees in one unchanging, pure, eternal Self the foundation of all cosmic existence, nor Mayavada although it speaks of the Maya of the three modes of Prakriti omnipresent in the created world; nor is it qualified Monism although it places in the One his eternal supreme Prakriti manifested in the form of the Jiva and lays most stress on dwelling in God rather than dissolution as the supreme state of spiritual consciousness; nor is it Sankhya although it explains the created world by the double principle of Purusha and Prakriti; nor is it Vaishnava Theism although it presents to us Krishna, who is the Avatar of Vishnu according to the Puranas, as the supreme Deity and allows no essential difference nor any actual superiority of the status of the indefinable relationless Brahman over that of this Lord of beings who is the Master of the universe and the Friend of all creatures. Like the earlier spiritual synthesis of the Upanishads this later synthesis at once spiritual and intellectual avoids naturally every such rigid determination as would injure its universal

comprehensiveness. Its aim is precisely the opposite to that of the polemist commentators who found this Scripture established as one of the three highest Vedantic authorities and attempted to turn it into a weapon of offence and defence against other schools and systems. The Gita is not a weapon for dialectical warfare; it is a gate opening on the whole world of spiritual truth and experience and the view it gives us embraces all the provinces of that supreme region. It maps out, but it does not cut up or build walls or hedges to confine our vision.

There have been other syntheses in the long history of Indian thought. We start with the Vedic synthesis of the psychological being of man in its highest flights and widest rangings of divine knowledge, power, joy, life and glory with the cosmic existence of the gods, pursued behind the symbols of the material universe into those superior planes which are hidden from the physical sense and the material mentality. The crown of this synthesis was in the experience of the Vedic Rishis something divine, transcendent and blissful in whose unity the increasing soul of man and the eternal divine fullness of the cosmic godheads meet perfectly and fulfil themselves. The Upanishads take up this crowning experience of the earlier seers and make it their starting-point for a high and profound synthesis of spiritual knowledge; they draw together into a great harmony all that had been seen and experienced by the inspired and liberated knowers of the Eternal throughout a great and fruitful period of spiritual seeking. The Gita starts from this Vedantic synthesis and upon the basis of its essential ideas builds another harmony of the three great means and powers, Love, Knowledge and Works, through which the soul of man can directly approach and cast itself into the Eternal. There is yet another, the Tantric,¹ which though less subtle and spiritually profound, is even more bold and forceful than the synthesis of the Gita,—for it seizes even upon the obstacles to the spiritual life and compels them to become the means for a richer spiritual conquest and enables us to embrace the whole

¹ All the Puranic tradition, it must be remembered, draws the richness of its contents from the Tantra.

of Life in our divine scope as the Lila² of the Divine; and in some directions it is more immediately rich and fruitful, for it brings forward into the foreground along with divine knowledge, divine works and an enriched devotion of divine Love, the secrets also of the Hatha and Raja Yogas, the use of the body and of mental askesis for the opening up of the divine life on all its planes, to which the Gita gives only a passing and perfunctory attention. Moreover it grasps at that idea of the divine perfectibility of man, possessed by the Vedic Rishis but thrown into the background by the intermediate ages, which is destined to fill so large a place in any future synthesis of human thought, experience and aspiration.

We of the coming day stand at the head of a new age of development which must lead to such a new and larger synthesis. We are not called upon to be orthodox Vedantins of any of the three schools or Tantrics or to adhere to one of the theistic religions of the past or to entrench ourselves within the four corners of the teaching of the Gita. That would be to limit ourselves and to attempt to create our spiritual life out of the being, knowledge and nature of others, of the men of the past, instead of building it out of our own being and potentialities. We do not belong to the past dawns, but to the noons of the future. A mass of new material is flowing into us; we have not only to assimilate the influences of the great theistic religions of India and of the world and a recovered sense of the meaning of Buddhism, but to take full account of the potent though limited revelations of modern knowledge and seeking; and, beyond that, the remote and dateless past which seemed to be dead is returning upon us with an effulgence of many luminous secrets long lost to the consciousness of mankind but now breaking out again from behind the veil. All this points to a new, a very rich, a very vast synthesis; a fresh and widely embracing harmonisation of our gains is both an intellectual and a spiritual necessity of the future. But just as the past syntheses have taken those which preceded them for their starting-point, so also must that of the future,

² The cosmic Play.

to be on firm ground, proceed from what the great bodies of realised spiritual thought and experience in the past have given. Among them the Gita takes a most important place.

Our object, then, in studying the Gita will not be a scholastic or academical scrutiny of its thought, nor to place its philosophy in the history of metaphysical speculation, nor shall we deal with it in the manner of the analytical dialectician. We approach it for help and light and our aim must be to distinguish its essential and living message, that in it on which humanity has to seize for its perfection and its highest spiritual welfare.

II

The Divine Teacher

THE PECULIARITY of the Gita among the great religious books of the world is that it does not stand apart as a work by itself, the fruit of the spiritual life of a creative personality like Christ, Mahomed or Buddha or of an epoch of pure spiritual searching like the Veda and Upanishads, but is given as an episode in an epic history of nations and their wars and men and their deeds and arises out of a critical moment in the soul of one of its leading personages face to face with the crowning action of his life, a work terrible, violent and sanguinary, at the point when he must either recoil from it altogether or carry it through to its inexorable completion. It matters little whether or no, as modern criticism supposes, the Gita is a later composition inserted into the mass of the Mahabharata by its author in order to invest its teaching with the authority and popularity of the great national epic. There seem to me to be strong grounds against this supposition for which, besides, the evidence, extrinsic or internal, is in the last degree scanty and insufficient. But even if it be sound, there remains the fact that the author has not only taken pains to interweave his work inextricably into the vast web of the larger poem, but is careful again and again to remind us of the situation from which the teaching has arisen; he returns to it prominently, not only at the end, but in the middle of his profoundest philosophical disquisitions. We must accept the insistence of the author and give its full importance to this recurrent preoccupation of the Teacher and the disciple. The teaching of the Gita must therefore be regarded not merely in the light of a general spiritual philosophy or ethical doctrine, but as bearing upon a practical crisis in the application of ethics and spirituality to human life. For what that crisis stands, what is the significance of the battle of Kurukshetra and its effect on Arjuna's inner being, we have first to determine if we would

grasp the central drift of the ideas of the Gita.

Very obviously a great body of the profoundest teaching cannot be built round an ordinary occurrence which has no gulfs of deep suggestion and hazardous difficulty behind its superficial and outward aspects and can be governed well enough by the ordinary everyday standards of thought and action. There are indeed three things in the Gita which are spiritually significant, almost symbolic, typical of the profoundest relations and problems of the spiritual life and of human existence at its roots; they are the divine personality of the Teacher, his characteristic relations with his disciple and the occasion of his teaching. The teacher is God himself descended into humanity; the disciple is the first, as we might say in modern language, the representative man of his age, closest friend and chosen instrument of the Avatar, his protagonist in an immense work and struggle the secret purpose of which is unknown to the actors in it, known only to the incarnate Godhead who guides it all from behind the veil of his unfathomable mind of knowledge; the occasion is the violent crisis of that work and struggle at the moment when the anguish and moral difficulty and blind violence of its apparent movements forces itself with the shock of a visible revelation on the mind of its representative man and raises the whole question of the meaning of God in the world and the goal and drift and sense of human life and conduct.

India has from ancient times held strongly a belief in the reality of the Avatara, the descent into form, the revelation of the Godhead in humanity. In the West this belief has never really stamped itself upon the mind because it has been presented through exoteric Christianity as a theological dogma without any roots in the reason and general consciousness and attitude towards life. But in India it has grown up and persisted as a logical outcome of the Vedantic view of life and taken firm root in the consciousness of the race. All existence is a manifestation of God because He is the only existence and nothing can be except as either a real figuring or else a figment of that one reality. Therefore every conscious being is in part or in some way a descent of the Infinite into the apparent finiteness of

name and form. But it is a veiled manifestation and there is a gradation between the supreme being¹ of the Divine and the consciousness shrouded partly or wholly by ignorance of self in the finite. The conscious embodied soul² is the spark of the divine Fire and that soul in man opens out to self-knowledge as it develops out of ignorance of self into self-being. The Divine also, pouring itself into the forms of the cosmic existence, is revealed ordinarily in an efflorescence of its powers, in energies and magnitudes of its knowledge, love, joy, developed force of being,³ in degrees and faces of its divinity. But when the divine Consciousness and Power, taking upon itself the human form and the human mode of action, possesses it not only by powers and magnitudes, by degrees and outward faces of itself but out of its eternal self-knowledge, when the Unborn knows itself and acts in the frame of the mental being and the appearance of birth, that is the height of the conditioned manifestation; it is the full and conscious descent of the Godhead, it is the Avatara.

The Vaishnava form of Vedantism which has laid most stress upon this conception expresses the relation of God in man to man in God by the double figure of Nara-Narayana, associated historically with the origin of a religious school very similar in its doctrines to the teaching of the Gita. Nara is the human soul which, eternal companion of the Divine, finds itself only when it awakens to that companionship and begins, as the Gita would say, to live in God. Narayana is the divine Soul always present in our humanity, the secret guide, friend and helper of the human being, the "Lord who abides within the heart of creatures" of the Gita; when within us the veil of that secret sanctuary is withdrawn and man speaks face to face with God, hears the divine voice, receives the divine light, acts in the divine power, then becomes possible the supreme uplifting of the embodied human conscious-being into the unborn and eternal. He becomes capable of that dwelling in God and giving up of his whole consciousness into the Divine which the Gita upholds as the best or highest secret of things, *uttamam rahasyam*. When

¹ *para bhāva*. ² *dehī*. ³ *vibhūti*.

this eternal divine Consciousness always present in every human being, this God in man, takes possession partly⁴ or wholly of the human consciousness and becomes in visible human shape the guide, teacher, leader of the world, not as those who living in their humanity yet feel something of the power or light or love of the divine Gnosis informing and conducting them, but out of that divine Gnosis itself, direct from its central force and plenitude, then we have the manifest Avatar. The inner Divinity is the eternal Avatar in man; the human manifestation is its sign and development in the external world.

When we thus understand the conception of Avatarhood, we see that whether for the fundamental teaching of the Gita, our present subject, or for spiritual life generally the external aspect has only a secondary importance. Such controversies as the one that has raged in Europe over the historicity of Christ, would seem to a spiritually-minded Indian largely a waste of time; he would concede to it a considerable historical, but hardly any religious importance; for what does it matter in the end whether a Jesus son of the carpenter Joseph was actually born in Nazareth or Bethlehem, lived and taught and was done to death on a real or trumped-up charge of sedition, so long as we can know by spiritual experience the inner Christ, live uplifted in the light of his teaching and escape from the yoke of the natural Law by that atonement of man with God of which the crucifixion is the symbol? If the Christ, God made man, lives within our spiritual being, it would seem to matter little whether or not a son of Mary physically lived and suffered and died in Judea. So too the Krishna who matters to us is the eternal incarnation of the Divine and not the historical teacher and leader of men.

In seeking the kernel of the thought of the Gita we need, therefore, only concern ourselves with the spiritual significance of the human-divine Krishna of the Mahabharata who is presented to us as the teacher of Arjuna on the battle-field of Kurukshetra. The historical Krishna, no doubt, existed. We meet

⁴ Chaitanya, the Avatar of Nadiya, is said to have been thus partly or occasionally occupied by the divine Consciousness and Power.

the name first in the Chhandogya Upanishad where all we can gather about him is that he was well known in spiritual tradition as a knower of the Brahman, so well known indeed in his personality and the circumstances of his life that it was sufficient to refer to him by the name of his mother as Krishna son of Devaki for all to understand who was meant. In the same Upanishad we find mention of King Dhritarashtra son of Vichitravirya, and since tradition associated the two together so closely that they are both of them leading personages in the action of the Mahabharata, we may fairly conclude that they were actually contemporaries and that the epic is to a great extent dealing with historical characters and in the war of Kurukshetra with a historical occurrence imprinted firmly on the memory of the race. We know too that Krishna and Arjuna were the object of religious worship in the pre-Christian centuries; and there is some reason to suppose that they were so in connection with a religious and philosophical tradition from which the Gita may have gathered many of its elements and even the foundation of its synthesis of knowledge, devotion and works, and perhaps also that the human Krishna was the founder, restorer or at the least one of the early teachers of this school. The Gita may well in spite of its later form represent the outcome in Indian thought of the teaching of Krishna and the connection of that teaching with the historical Krishna, with Arjuna and with the war of Kurukshetra may be something more than a dramatic fiction. In the Mahabharata Krishna is represented both as the historical character and the Avatar; his worship and Avatarhood must therefore have been well established by the time — apparently from the fifth to the first centuries B.C. — when the old story and poem or epic tradition of the Bharatas took its present form. There is a hint also in the poem of the story or legend of the Avatar's early life in Vrindavan which, as developed by the Puranas into an intense and powerful spiritual symbol, has exercised so profound an influence on the religious mind of India. We have also in the Harivansha an account of the life of Krishna, very evidently full of legends, which perhaps formed the basis of the Puranic accounts.

But all this, though of considerable historical importance, has none whatever for our present purpose. We are concerned only with the figure of the divine Teacher as it is presented to us in the Gita and with the Power for which it there stands in the spiritual illumination of the human being. The Gita accepts the human Avatarhood; for the Lord speaks of the repeated, the constant⁵ manifestation of the Divine in humanity, when He the eternal Unborn assumes by his Maya, by the power of the infinite Consciousness to clothe itself apparently in finite forms, the conditions of becoming which we call birth. But it is not this upon which stress is laid, but on the transcendent, the cosmic and the internal Divine; it is on the Source of all things and the Master of all and on the Godhead secret in man. It is this internal divinity who is meant when the Gita speaks of the doer of violent Asuric austerities troubling the God within or of the sin of those who despise the Divine lodged in the human body or of the same Godhead destroying our ignorance by the blazing lamp of knowledge. It is then the eternal Avatar, this God in man, the divine Consciousness always present in the human being who manifested in a visible form speaks to the human soul in the Gita, illumines the meaning of life and the secret of divine action and gives it the light of the divine knowledge and guidance and the assuring and fortifying word of the Master of existence in the hour when it comes face to face with the painful mystery of the world. This is what the Indian religious consciousness seeks to make near to itself in whatever form, whether in the symbolic human image it enshrines in its temples or in the worship of its Avatars or in the devotion to the human Guru through whom the voice of the one world-Teacher makes itself heard. Through these it strives to awaken to that inner voice, unveil that form of the Formless and stand face to face with that manifest divine Power, Love and Knowledge.

Secondly, there is the typical, almost the symbolic significance of the human Krishna who stands behind the great action of the Mahabharata, not as its hero, but as its secret centre

⁵ *bahūni me vyatitāni janmāni . . . sambhavāmi yuge yuge.*

and hidden guide. That action is the action of a whole world of men and nations, some of whom have come as helpers of an effort and result by which they do not personally profit, and to these he is a leader, some as its opponents and to them he also is an opponent, the baffle of their designs and their slayer and he seems even to some of them an instigator of all evil and destroyer of their old order and familiar world and secure conventions of virtue and good; some are representatives of that which has to be fulfilled and to them he is counsellor, helper, friend. Where the action pursues its natural course or the doers of the work have to suffer at the hands of its enemies and undergo the ordeals which prepare them for mastery, the Avatar is unseen or appears only for occasional comfort and aid, but at every crisis his hand is felt, yet in such a way that all imagine themselves to be the protagonists and even Arjuna, his nearest friend and chief instrument, does not perceive that he is an instrument and has to confess at last that all the while he did not really know his divine Friend. He has received counsel from his wisdom, help from his power, has loved and been loved, has even adored without understanding his divine nature; but he has been guided like all others through his own egoism and the counsel, help and direction have been given in the language and received by the thoughts of the Ignorance. Until the moment when all has been pushed to the terrible issue of the struggle on the field of Kurukshetra and the Avatar stands at last, still not as fighter, but as the charioteer in the battle-car which carries the destiny of the fight, he has not revealed Himself even to those whom he has chosen.

Thus the figure of Krishna becomes, as it were, the symbol of the divine dealings with humanity. Through our egoism and ignorance we are moved, thinking that we are the doers of the work, vaunting of ourselves as the real causes of the result, and that which moves us we see only occasionally as some vague or even some human and earthly fountain of knowledge, aspiration, force, some Principle or Light or Power which we acknowledge and adore without knowing what it is until the occasion arises that forces us to stand arrested before the Veil.

And the action in which this divine figure moves is the whole wide action of man in life, not merely the inner life, but all this obscure course of the world which we can judge only by the twilight of the human reason as it opens up dimly before our uncertain advance the little span in front. This is the distinguishing feature of the Gita that it is the culmination of such an action which gives rise to its teaching and assigns that prominence and bold relief to the gospel of works which it enunciates with an emphasis and force we do not find in other Indian Scriptures. Not only in the Gita, but in other passages of the Mahabharata we meet with Krishna declaring emphatically the necessity of action, but it is here that he reveals its secret and the divinity behind our works.

The symbolic companionship of Arjuna and Krishna, the human and the divine soul, is expressed elsewhere in Indian thought, in the heavenward journey of Indra and Kutsa seated in one chariot, in the figure of the two birds upon one tree in the Upanishad, in the twin figures of Nara and Narayana, the seers who do *tapasyā* together for the knowledge. But in all three it is the idea of the divine knowledge in which, as the Gita says, all action culminates that is in view; here it is instead the action which leads to that knowledge and in which the divine Knower figures himself. Arjuna and Krishna, this human and this divine, stand together not as seers in the peaceful hermitage of meditation, but as fighter and holder of the reins in the clamorous field, in the midst of the hurtling shafts, in the chariot of battle. The Teacher of the Gita is therefore not only the God in man who unveils himself in the word of knowledge, but the God in man who moves our whole world of action, by and for whom all our humanity exists and struggles and labours, towards whom all human life travels and progresses. He is the secret Master of works and sacrifice and the Friend of the human peoples.

III

The Human Disciple

SUCH then is the divine Teacher of the Gita, the eternal Avatar, the Divine who has descended into the human consciousness, the Lord seated within the heart of all beings, He who guides from behind the veil all our thought and action and heart's seeking even as He directs from behind the veil of visible and sensible forms and forces and tendencies the great universal action of the world which He has manifested in His own being. All the strife of our upward endeavour and seeking finds its culmination and ceases in a satisfied fulfilment when we can rend the veil and get behind our apparent self to this real Self, can realise our whole being in this true Lord of our being, can give up our personality to and into this one real Person, merge our ever-dispersed and ever-converging mental activities into His plenary light, offer up our errant and struggling will and energies into His vast, luminous and undivided Will, at once renounce and satisfy all our dissipated outward-moving desires and emotions in the plenitude of His self-existent Bliss. This is the world-Teacher of whose eternal knowledge all other highest teaching is but the various reflection and partial word, this the Voice to which the hearing of our soul has to awaken.

Arjuna, the disciple who receives his initiation on the battlefield, is a counterpart of this conception; he is the type of the struggling human soul who has not yet received the knowledge, but has grown fit to receive it by action in the world in a close companionship and an increasing nearness to the higher and divine Self in humanity. There is a method of explaining the Gita in which not only this episode but the whole Mahabharata is turned into an allegory of the inner life and has nothing to do with our outward human life and action, but only with the battles of the soul and the powers that strive within us for possession. That is a view which the general character and the

actual language of the epic does not justify and, if pressed, would turn the straightforward philosophical language of the Gita into a constant, laborious and somewhat puerile mystification. The language of the Veda and part at least of the Puranas is plainly symbolic, full of figures and concrete representations of things that lie behind the veil, but the Gita is written in plain terms and professes to solve the great ethical and spiritual difficulties which the life of man raises, and it will not do to go behind this plain language and thought and wrest them to the service of our fancy. But there is this much of truth in the view, that the setting of the doctrine though not symbolical, is certainly typical, as indeed the setting of such a discourse as the Gita must necessarily be if it is to have any relation at all with that which it frames. Arjuna, as we have seen, is the representative man of a great world-struggle and divinely-guided movement of men and nations; in the Gita he typifies the human soul of action brought face to face through that action in its highest and most violent crisis with the problem of human life and its apparent incompatibility with the spiritual state or even with a purely ethical ideal of perfection.

Arjuna is the fighter in the chariot with the divine Krishna as his charioteer. In the Veda also we have this image of the human soul and the divine riding in one chariot through a great battle to the goal of a high-aspiring effort. But there it is a pure figure and symbol. The Divine is there Indra, the Master of the World of Light and Immortality, the power of divine knowledge which descends to the aid of the human seeker battling with the sons of falsehood, darkness, limitation, mortality; the battle is with spiritual enemies who bar the way to the higher world of our being; and the goal is that plane of vast being resplendent with the light of the supreme Truth and uplifted to the conscious immortality of the perfected soul, of which Indra is the master. The human soul is Kutsa, he who constantly seeks the seer-knowledge, as his name implies, and he is the son of Arjuna or Arjuni, the White One, child of Switra the White Mother; he is, that is to say, the sattvic or purified and light-filled soul which is open to the unbroken glories of the divine knowledge. And

when the chariot reaches the end of its journey, the own home of Indra, the human Kutsa has grown into such an exact likeness of his divine companion that he can only be distinguished by Sachi, the wife of Indra, because she is "truth-conscious". The parable is evidently of the inner life of man; it is a figure of the human growing into the likeness of the eternal divine by the increasing illumination of Knowledge. But the Gita starts from action and Arjuna is the man of action and not of knowledge, the fighter, never the seer or the thinker.

From the beginning of the Gita this characteristic temperament of the disciple is clearly indicated and it is maintained throughout. It becomes first evident in the manner in which he is awakened to the sense of what he is doing, the great slaughter of which he is to be the chief instrument, in the thoughts which immediately rise in him, in the standpoint and the psychological motives which make him recoil from the whole terrible catastrophe. They are not the thoughts, the standpoint, the motives of a philosophical or even of a deeply reflective mind or a spiritual temperament confronted with the same or a similar problem. They are those, as we might say, of the practical or the pragmatic man, the emotional, sensational, moral and intelligent human being not habituated to profound and original reflection or any sounding of the depths, accustomed rather to high but fixed standards of thought and action and a confident treading through all vicissitudes and difficulties, who now finds all his standards failing him and all the basis of his confidence in himself and his life shorn away from under him at a single stroke. That is the nature of the crisis which he undergoes.

Arjuna is, in the language of the Gita, a man subject to the action of the three gunas or modes of the Nature-Force and habituated to move unquestioningly in that field, like the generality of men. He justifies his name only in being so far pure and sattwic as to be governed by high and clear principles and impulses and habitually control his lower nature by the noblest Law which he knows. He is not of a violent Asuric disposition, not the slave of his passions, but has been trained to a high calm and self-control, to an unswerving performance of his duties

and firm obedience to the best principles of the time and society in which he has lived and the religion and ethics to which he has been brought up. He is egoistic like other men, but with the purer or sattvic egoism which regards the moral law and society and the claims of others and not only or predominantly his own interests, desires and passions. He has lived and guided himself by the Shastra, the moral and social code. The thought which preoccupies him, the standard which he obeys is the *dharma*, that collective Indian conception of the religious, social and moral rule of conduct, and especially the rule of the station and function to which he belongs, he the Kshatriya, the high-minded, self-governed, chivalrous prince and warrior and leader of Aryan men. Following always this rule, conscious of virtue and right dealing he has travelled so far and finds suddenly that it has led him to become the protagonist of a terrific and unparalleled slaughter, a monstrous civil war involving all the cultured Aryan nations which must lead to the complete destruction of the flower of their manhood and threatens their ordered civilisation with chaos and collapse.

It is typical again of the pragmatic man that it is through his sensations that he awakens to the meaning of his action. He has asked his friend and charioteer to place him between the two armies, not with any profounder idea, but with the proud intention of viewing and looking in the face these myriads of the champions of unrighteousness whom he has to meet and conquer and slay "in this holiday of fight" so that the right may prevail. It is as he gazes that the revelation of the meaning of a civil and domestic war comes home to him, a war in which not only men of the same race, the same nation, the same clan, but those of the same family and household stand upon opposite sides. All whom the social man holds most dear and sacred, he must meet as enemies and slay,—the worshipped teacher and preceptor, the old friend, comrade and companion in arms, grandsires, uncles, those who stood in the relation to him of father, of son, of grandson, connections by blood and connections by marriage,—all these social ties have to be cut asunder by the sword. It is not that he did not know these things before, but he has

never realised it all; obsessed by his claims and wrongs and by the principles of his life, the struggle for the right, the duty of the Kshatriya to protect justice and the law and fight and beat down injustice and lawless violence, he has neither thought it out deeply nor felt it in his heart and at the core of his life. And now it is shown to his vision by the divine charioteer, placed sensationaly before his eyes, and comes home to him like a blow delivered at the very centre of his sensational, vital and emotional being.

The first result is a violent sensational and physical crisis which produces a disgust of the action and its material objects and of life itself. He rejects the vital aim pursued by egoistic humanity in its action,—happiness and enjoyment; he rejects the vital aim of the Kshatriya, victory and rule and power and the government of men. What after all is this fight for justice when reduced to its practical terms, but just this, a fight for the interests of himself, his brothers and his party, for possession and enjoyment and rule? But at such a cost these things are not worth having. For they are of no value in themselves, but only as a means to the right maintenance of social and national life and it is these very aims that in the person of his kin and his race he is about to destroy. And then comes the cry of the emotions. These are they for whose sake life and happiness are desired, our "own people". Who would consent to slay these for the sake of all the earth, or even for the kingdom of the three worlds? What pleasure can there be in life, what happiness, what satisfaction in oneself after such a deed? The whole thing is a dreadful sin,—for now the moral sense awakens to justify the revolt of the sensations and the emotions. It is a sin, there is no right nor justice in mutual slaughter; especially are those who are to be slain the natural objects of reverence and of love, those without whom one would not care to live, and to violate these sacred feelings can be no virtue, can be nothing but a heinous crime. Granted that the offence, the aggression, the first sin, the crimes of greed and selfish passion which have brought things to such a pass came from the other side; yet armed resistance to wrong under such circumstances would be itself a sin and

crime worse than theirs because they are blinded by passion and unconscious of guilt, while on this side it would be with a clear sense of guilt that the sin would be committed. And for what? For the maintenance of family morality, of the social law and the law of the nation? These are the very standards that will be destroyed by this civil war; the family itself will be brought to the point of annihilation, corruption of morals and loss of the purity of race will be engendered, the eternal laws of the race and moral law of the family will be destroyed. Ruin of the race, the collapse of its high traditions, ethical degradation and hell for the authors of such a crime, these are the only practical results possible of this monstrous civil strife. "Therefore," cries Arjuna, casting down the divine bow and inexhaustible quiver given to him by the gods for that tremendous hour, "it is more for my welfare that the sons of Dhritarashtra armed should slay me unarmed and unresisting. I will not fight."

The character of this inner crisis is therefore not the questioning of the thinker; it is not a recoil from the appearances of life and a turning of the eye inward in search of the truth of things, the real meaning of existence and a solution or an escape from the dark riddle of the world. It is the sensational, emotional and moral revolt of the man hitherto satisfied with action and its current standards who finds himself cast by them into a hideous chaos where they are in violent conflict with each other and with themselves and there is no moral standing-ground left, nothing to lay hold of and walk by, no *dharma*.¹ That for the soul of action in the mental being is the worst possible crisis, failure and overthrow. The revolt itself is the most elemental and simple possible; sensationnally, the elemental feeling of horror, pity and disgust; vitally, the loss of attraction and faith in the recognised and familiar objects of action and aims of life; emotionally, the recoil of the ordinary feelings of social man, affection, reverence, desire of a common happiness and satisfaction, from a stern duty outraging them all; morally, the elementary sense of sin and

¹ *Dharma* means literally that which one lays hold of and which holds things together, the law, the norm, the rule of nature, action and life.

hell and rejection of “blood-stained enjoyments”; practically, the sense that the standards of action have led to a result which destroys the practical aims of action. But the whole upshot is that all-embracing inner bankruptcy which Arjuna expresses when he says that his whole conscious being, not the thought alone but heart and vital desires and all, are utterly bewildered and can find nowhere the *dharma*, nowhere any valid law of action. For this alone he takes refuge as a disciple with Krishna; give me, he practically asks, that which I have lost, a true law, a clear rule of action, a path by which I can again confidently walk. He does not ask for the secret of life or of the world, the meaning and purpose of it all, but for a *dharma*.

Yet it is precisely this secret for which he does not ask, or at least so much of the knowledge as is necessary to lead him into a higher life, to which the divine Teacher intends to lead this disciple; for he means him to give up all *dharma*s except the one broad and vast rule of living consciously in the Divine and acting from that consciousness. Therefore after testing the completeness of his revolt from the ordinary standards of conduct, he proceeds to tell him much that has to do with the state of the soul, but nothing of any outward rule of action. He must be equal in soul, abandon the desire of the fruits of work, rise above his intellectual notions of sin and virtue, live and act in Yoga with a mind in Samadhi, firmly fixed, that is to say, in the Divine alone. Arjuna is not satisfied: he wishes to know how the change to this state will affect the outward action of the man, what result it will have on his speech, his movements, his state, what difference it will make in this acting, living human being. Krishna persists merely in enlarging upon the ideas he has already brought forward, on the soul-state behind the action, not on the action itself. It is the fixed anchoring of the intelligence in a state of desireless equality that is the one thing needed. Arjuna breaks out impatiently,—for here is no rule of conduct such as he sought, but rather, as it seems to him, the negation of all action,—“If thou holdest the intelligence to be greater than action, why then dost thou appoint me to an action terrible in its nature? Thou bewilderest my understanding with a mingled

word: speak one thing decisively by which I can attain to what is the best." It is always the pragmatic man who has no value for metaphysical thought or for the inner life except when they help him to his one demand, a *dharma*, a law of life in the world or, if need be, of leaving the world; for that too is a decisive action which he can understand. But to live and act in the world, yet be above it, this is a "mingled" and confusing word the sense of which he has no patience to grasp.

The rest of Arjuna's questions and utterances proceed from the same temperament and character. When he is told that once the soul-state is assured there need be no apparent change in the action, he must act always by the law of his nature, even if the act itself seem faulty and deficient compared with that of another law than his own, he is troubled. The nature! but what of this sense of sin in the action with which he is preoccupied? is it not this very nature which drives men as if by force and even against their better will into sin and guilt? His practical intelligence is baffled by Krishna's assertion that it was he who in ancient times revealed to Vivasvan this Yoga, since lost, which he is now again revealing to Arjuna, and by his demand for an explanation he provokes the famous and oft-quoted statement of Avatarhood and its mundane purpose. He is again perplexed by the words in which Krishna continues to reconcile action and renunciation of action and asks once again for a decisive statement of that which is the best and highest, not this "mingled" word. When he realises fully the nature of the Yoga which he is bidden to embrace, his pragmatic nature accustomed to act from mental will and preference and desire is appalled by its difficulty and he asks what is the end of the soul which attempts and fails, whether it does not lose both this life of human activity and thought and emotion which it has left behind and the Brahmic consciousness to which it aspires and falling from both perish like a dissolving cloud?

When his doubts and perplexities are resolved and he knows that it is the Divine which must be his law, he aims again and always at such clear and decisive knowledge as will guide him practically to this source and this rule of his future action. How

is the Divine to be distinguished among the various states of being which constitute our ordinary experience? What are the great manifestations of its self-energy in the world in which he can recognise and realise it by meditation? May he not see even now the divine cosmic Form of That which is actually speaking to him through the veil of the human mind and body? And his last questions demand a clear distinction between renunciation of works and this subtler renunciation he is asked to prefer; the actual difference between Purusha and Prakriti, the Field and the Knower of the Field, so important for the practice of desireless action under the drive of the divine Will; and finally a clear statement of the practical operations and results of the three modes of Prakriti which he is bidden to surmount.

To such a disciple the Teacher of the Gita gives his divine teaching. He seizes him at a moment of his psychological development by egoistic action when all the mental, moral, emotional values of the ordinary egoistic and social life of man have collapsed in a sudden bankruptcy, and he has to lift him up out of this lower life into a higher consciousness, out of ignorant attachment to action into that which transcends, yet originates and orders action, out of ego into Self, out of life in mind, vitality and body into that higher nature beyond mind which is the status of the Divine. He has at the same time to give him that for which he asks and for which he is inspired to seek by the guidance within him, a new Law of life and action high above the insufficient rule of the ordinary human existence with its endless conflicts and oppositions, perplexities and illusory certainties, a higher Law by which the soul shall be free from this bondage of works and yet powerful to act and conquer in the vast liberty of its divine being. For the action must be performed, the world must fulfil its cycles and the soul of the human being must not turn back in ignorance from the work it is here to do. The whole course of the teaching of the Gita is determined and directed, even in its widest wheelings, towards the fulfilment of these three objects.

IV

The Core of the Teaching

WE KNOW the divine Teacher, we see the human disciple; it remains to form a clear conception of the doctrine. A clear conception fastening upon the essential idea, the central heart of the teaching is especially necessary here because the Gita with its rich and many-sided thought, its synthetical grasp of different aspects of the spiritual life and the fluent winding motion of its argument lends itself, even more than other scriptures, to one-sided misrepresentations born of a partisan intellectuality. The unconscious or half-conscious wresting of fact and word and idea to suit a preconceived notion or the doctrine or principle of one's preference is recognised by Indian logicians as one of the most fruitful sources of fallacy; and it is perhaps the one which it is most difficult for even the most conscientious thinker to avoid. For the human reason is incapable of always playing the detective upon itself in this respect; it is its very nature to seize upon some partial conclusion, idea, principle, become its partisan and make it the key to all truth, and it has an infinite faculty of doubling upon itself so as to avoid detecting in its operations this necessary and cherished weakness. The Gita lends itself easily to this kind of error, because it is easy, by throwing particular emphasis on one of its aspects or even on some salient and emphatic text and putting all the rest of the eighteen chapters into the background or making them a subordinate and auxiliary teaching, to turn it into a partisan of our own doctrine or dogma.

Thus, there are those who make the Gita teach, not works at all, but a discipline of preparation for renouncing life and works: the indifferent performance of prescribed actions or of whatever task may lie ready to the hands, becomes the means, the discipline; the final renunciation of life and works is the sole real object. It is quite easy to justify this view by citations from

the book and by a certain arrangement of stress in following out its argument, especially if we shut our eyes to the peculiar way in which it uses such a word as *sannyāsa*, renunciation; but it is quite impossible to persist in this view on an impartial reading in face of the continual assertion to the very end that action should be preferred to inaction and that superiority lies with the true, the inner renunciation of desire by equality and the giving up of works to the supreme Purusha.

Others again speak of the Gita as if the doctrine of devotion were its whole teaching and put in the background its monistic elements and the high place it gives to quietistic immvergence in the one self of all. And undoubtedly its emphasis on devotion, its insistence on the aspect of the Divine as Lord and Purusha and its doctrine of the Purushottama, the Supreme Being who is superior both to the mutable Being and to the Immutable and who is what in His relation to the world we know as God, are the most striking and among the most vital elements of the Gita. Still, this Lord is the Self in whom all knowledge culminates and the Master of sacrifice to whom all works lead as well as the Lord of Love into whose being the heart of devotion enters, and the Gita preserves a perfectly equal balance, emphasising now knowledge, now works, now devotion, but for the purposes of the immediate trend of the thought, not with any absolute separate preference of one over the others. He in whom all three meet and become one, He is the Supreme Being, the Purushottama.

But at the present day, since in fact the modern mind began to recognise and deal at all with the Gita, the tendency is to subordinate its elements of knowledge and devotion, to take advantage of its continual insistence on action and to find in it a scripture of the Karmayoga, a Light leading us on the path of action, a Gospel of Works. Undoubtedly, the Gita is a Gospel of Works, but of works which culminate in knowledge, that is, in spiritual realisation and quietude, and of works motived by devotion, that is, a conscious surrender of one's whole self first into the hands and then into the being of the Supreme, and not at all of works as they are understood by the modern mind, not at all an action dictated by egoistic and altruistic, by personal,

social, humanitarian motives, principles, ideals. Yet this is what present-day interpretations seek to make of the Gita. We are told continually by many authoritative voices that the Gita, opposing in this the ordinary ascetic and quietistic tendency of Indian thought and spirituality, proclaims with no uncertain sound the gospel of human action, the ideal of disinterested performance of social duties, nay, even, it would seem, the quite modern ideal of social service. To all this I can only reply that very patently and even on the very surface of it the Gita does nothing of the kind and that this is a modern misreading, a reading of the modern mind into an ancient book, of the present-day European or Europeanised intellect into a thoroughly antique, a thoroughly Oriental and Indian teaching. That which the Gita teaches is not a human, but a divine action; not the performance of social duties, but the abandonment of all other standards of duty or conduct for a selfless performance of the divine will working through our nature; not social service, but the action of the Best, the God-possessed, the Master-men done impersonally for the sake of the world and as a sacrifice to Him who stands behind man and Nature.

In other words, the Gita is not a book of practical ethics, but of the spiritual life. The modern mind is just now the European mind, such as it has become after having abandoned not only the philosophic idealism of the highest Graeco-Roman culture from which it started, but the Christian devotionalism of the Middle Ages; these it has replaced by or transmuted into a practical idealism and social, patriotic and philanthropic devotion. It has got rid of God or kept Him only for Sunday use and erected in His place man as its deity and society as its visible idol. At its best it is practical, ethical, social, pragmatic, altruistic, humanitarian. Now all these things are good, are especially needed at the present day, are part of the divine Will or they would not have become so dominant in humanity. Nor is there any reason why the divine man, the man who lives in the Brahmic consciousness, in the God-being should not be all of these things in his action; he will be, if they are the best ideal of the age, the Yugadharma, and there is no yet higher ideal to be established,

no great radical change to be effected. For he is, as the Teacher points out to his disciple, the best who has to set the standard for others; and in fact Arjuna is called upon to live according to the highest ideals of his age and the prevailing culture, but with knowledge, with understanding of that which lay behind, and not as ordinary men, with a following of the merely outward law and rule.

But the point here is that the modern mind has exiled from its practical motive-power the two essential things, God or the Eternal and spirituality or the God-state, which are the master conceptions of the Gita. It lives in humanity only, and the Gita would have us live in God, though for the world in God; in its life, heart and intellect only, and the Gita would have us live in the spirit; in the mutable Being who is "all creatures", and the Gita would have us live also in the Immutable and the Supreme; in the changing march of Time, and the Gita would have us live in the Eternal. Or if these higher things are now beginning to be vaguely envisaged, it is only to make them subservient to man and society; but God and spirituality exist in their own right and not as adjuncts. And in practice the lower in us must learn to exist for the higher, in order that the higher also may in us consciously exist for the lower, to draw it nearer to its own altitudes.

Therefore it is a mistake to interpret the Gita from the standpoint of the mentality of today and force it to teach us the disinterested performance of duty as the highest and all-sufficient law. A little consideration of the situation with which the Gita deals will show us that this could not be its meaning. For the whole point of the teaching, that from which it arises, that which compels the disciple to seek the Teacher, is an inextricable clash of the various related conceptions of duty ending in the collapse of the whole useful intellectual and moral edifice erected by the human mind. In human life some sort of a clash arises fairly often, as for instance between domestic duties and the call of the country or the cause, or between the claim of the country and the good of humanity or some larger religious or moral principle. An inner situation may even arise, as with the Buddha, in which

all duties have to be abandoned, trampled on, flung aside in order to follow the call of the Divine within. I cannot think that the Gita would solve such an inner situation by sending Buddha back to his wife and father and the government of the Sakya State, or would direct a Ramakrishna to become a Pundit in a vernacular school and disinterestedly teach little boys their lessons, or bind down a Vivekananda to support his family and for that to follow dispassionately the law or medicine or journalism. The Gita does not teach the disinterested performance of duties but the following of the divine life, the abandonment of all dharmas, *sarvadharmān*, to take refuge in the Supreme alone, and the divine activity of a Buddha, a Ramakrishna, a Vivekananda is perfectly in consonance with this teaching. Nay, although the Gita prefers action to inaction, it does not rule out the renunciation of works, but accepts it as one of the ways to the Divine. If that can only be attained by renouncing works and life and all duties and the call is strong within us, then into the bonfire they must go, and there is no help for it. The call of God is imperative and cannot be weighed against any other considerations.

But here there is this farther difficulty that the action which Arjuna must do is one from which his moral sense recoils. It is his duty to fight, you say? But that duty has now become to his mind a terrible sin. How does it help him or solve his difficulty, to tell him that he must do his duty disinterestedly, dispassionately? He will want to know which is his duty or how it can be his duty to destroy in a sanguinary massacre his kin, his race and his country. He is told that he has right on his side, but that does not and cannot satisfy him, because his very point is that the justice of his legal claim does not justify him in supporting it by a pitiless massacre destructive to the future of his nation. Is he then to act dispassionately in the sense of not caring whether it is a sin or what its consequences may be so long as he does his duty as a soldier? That may be the teaching of a State, of politicians, of lawyers, of ethical casuists; it can never be the teaching of a great religious and philosophical Scripture which sets out to solve the problem of life and action from the

very roots. And if that is what the Gita has to say on a most poignant moral and spiritual problem, we must put it out of the list of the world's Scriptures and thrust it, if anywhere, then into our library of political science and ethical casuistry.

Undoubtedly, the Gita does, like the Upanishads, teach the equality which rises above sin and virtue, beyond good and evil, but only as a part of the Brahmic consciousness and for the man who is on the path and advanced enough to fulfil the supreme rule. It does not preach indifference to good and evil for the ordinary life of man, where such a doctrine would have the most pernicious consequences. On the contrary it affirms that the doers of evil shall not attain to God. Therefore if Arjuna simply seeks to fulfil in the best way the ordinary law of man's life, disinterested performance of what he feels to be a sin, a thing of Hell, will not help him, even though that sin be his duty as a soldier. He must refrain from what his conscience abhors though a thousand duties were shattered to pieces.

We must remember that duty is an idea which in practice rests upon social conceptions. We may extend the term beyond its proper connotation and talk of our duty to ourselves or we may, if we like, say in a transcendent sense that it was Buddha's duty to abandon all, or even that it is the ascetic's duty to sit motionless in a cave! But this is obviously to play with words. Duty is a relative term and depends upon our relation to others. It is a father's duty, as a father, to nurture and educate his children; a lawyer's to do his best for his client even if he knows him to be guilty and his defence to be a lie; a soldier's to fight and shoot to order even if he kill his own kin and countrymen; a judge's to send the guilty to prison and hang the murderer. And so long as these positions are accepted, the duty remains clear, a practical matter of course even when it is not a point of honour or affection, and overrides the absolute religious or moral law. But what if the inner view is changed, if the lawyer is awakened to the absolute sinfulness of falsehood, the judge becomes convinced that capital punishment is a crime against humanity, the man called upon to the battlefield feels, like the conscientious objector of today or as a Tolstoy would feel, that

in no circumstances is it permissible to take human life any more than to eat human flesh? It is obvious that here the moral law which is above all relative duties must prevail; and that law depends on no social relation or conception of duty but on the awakened inner perception of man, the moral being.

There are in the world, in fact, two different laws of conduct each valid on its own plane, the rule principally dependent on external status and the rule independent of status and entirely dependent on the thought and conscience. The Gita does not teach us to subordinate the higher plane to the lower, it does not ask the awakened moral consciousness to slay itself on the altar of duty as a sacrifice and victim to the law of the social status. It calls us higher and not lower; from the conflict of the two planes it bids us ascend to a supreme poise above the mainly practical, above the purely ethical, to the Brahmic consciousness. It replaces the conception of social duty by a divine obligation. The subjection to external law gives place to a certain principle of inner self-determination of action proceeding by the soul's freedom from the tangled law of works. And this, as we shall see,—the Brahmic consciousness, the soul's freedom from works and the determination of works in the nature by the Lord within and above us,—is the kernel of the Gita's teaching with regard to action.

The Gita can only be understood, like any other great work of the kind, by studying it in its entirety and as a developing argument. But the modern interpreters, starting from the great writer Bankim Chandra Chatterji who first gave to the Gita this new sense of a Gospel of Duty, have laid an almost exclusive stress on the first three or four chapters and in those on the idea of equality, on the expression *kartavyam karma*, the work that is to be done, which they render by duty, and on the phrase "Thou hast a right to action, but none to the fruits of action" which is now popularly quoted as the great word, *mahāvākya*, of the Gita. The rest of the eighteen chapters with their high philosophy are given a secondary importance, except indeed the great vision in the eleventh. This is natural enough for the modern mind which is, or has been till yesterday, inclined to be impatient of

metaphysical subtleties and far-off spiritual seekings, eager to get to work and, like Arjuna himself, mainly concerned for a workable law of works, a *dharma*. But it is the wrong way to handle this Scripture.

The equality which the Gita preaches is not disinterestedness,—the great command to Arjuna given *after* the foundation and main structure of the teaching have been laid and built, “Arise, slay thy enemies, enjoy a prosperous kingdom,” has not the ring of an uncompromising altruism or of a white, dispassionate abnegation; it is a state of inner poise and wideness which is the foundation of spiritual freedom. With that poise, in that freedom we have to do the “work that is to be done,” a phrase which the Gita uses with the greatest wideness including in it all works, *sarvakarmāṇi*, and which far exceeds, though it may include, social duties or ethical obligations. What is the work to be done is not to be determined by the individual choice; nor is the right to the action and the rejection of claim to the fruit the great word of the Gita, but only a preliminary word governing the first state of the disciple when he begins ascending the hill of Yoga. It is practically superseded at a subsequent stage. For the Gita goes on to affirm emphatically that the man is not the doer of the action; it is Prakriti, it is Nature, it is the great Force with its three modes of action that works through him, and he must learn to see that it is *not* he who does the work. Therefore the “right to action” is an idea which is only valid so long as we are still under the illusion of being the doer; it must necessarily disappear from the mind like the claim to the fruit, as soon as we cease to be to our own consciousness the doer of our works. All pragmatic egoism, whether of the claim to fruits or of the right to action, is then at an end.

But the determinism of Prakriti is not the last word of the Gita. The equality of the will and the rejection of fruits are only means for entering with the mind and the heart and the understanding into the divine consciousness and living in it; and the Gita expressly says that they are to be employed as a means as long as the disciple is unable so to live or even to seek by practice the gradual development of this higher state. And

what is this Divine, whom Krishna declares himself to be? It is the Purushottama beyond the Self that acts not, beyond the Prakriti that acts, foundation of the one, master of the other, the Lord of whom all is the manifestation, who even in our present subjection to Maya sits in the heart of His creatures governing the works of Prakriti, He by whom the armies on the field of Kurukshetra have already been slain while yet they live and who uses Arjuna only as an instrument or immediate occasion of this great slaughter. Prakriti is only His executive force. The disciple has to rise beyond this Force and its three modes or *gunas*; he has to become *trigunātīta*. Not to her has he to surrender his actions, over which he has no longer any claim or “right”, but into the being of the Supreme. Reposing his mind and understanding, heart and will in Him, with self-knowledge, with God-knowledge, with world-knowledge, with a perfect equality, a perfect devotion, an absolute self-giving, he has to do works as an offering to the Master of all self-energisings and all sacrifice. Identified in will, conscious with that consciousness, That shall decide and initiate the action. This is the solution which the Divine Teacher offers to the disciple.

What the great, the supreme word of the Gita is, its *mahāvākya*, we have not to seek; for the Gita itself declares it in its last utterance, the crowning note of the great diapason. “With the Lord in thy heart take refuge with all thy being; by His grace thou shalt attain to the supreme peace and the eternal status. So have I expounded to thee a knowledge more secret than that which is hidden. Further hear the most secret, the supreme word that I shall speak to thee. Become my-minded, devoted to Me, to Me do sacrifice and adoration; infallibly, thou shalt come to Me, for dear to me art thou. Abandoning all laws of conduct seek refuge in Me alone. I will release thee from all sin; do not grieve.”

The argument of the Gita resolves itself into three great steps by which action rises out of the human into the divine plane leaving the bondage of the lower for the liberty of a higher law. First, by the renunciation of desire and a perfect equality works have to be done as a sacrifice by man as the doer, a sacrifice to

a deity who is the supreme and only Self though by him not yet realised in his own being. This is the initial step. Secondly, not only the desire of the fruit, but the claim to be the doer of works has to be renounced in the realisation of the Self as the equal, the inactive, the immutable principle and of all works as simply the operation of universal Force, of the Nature-Soul, Prakriti, the unequal, active, mutable power. Lastly, the supreme Self has to be seen as the supreme Purusha governing this Prakriti, of whom the soul in Nature is a partial manifestation, by whom all works are directed, in a perfect transcendence, through Nature. To him love and adoration and the sacrifice of works have to be offered; the whole being has to be surrendered to Him and the whole consciousness raised up to dwell in this divine consciousness so that the human soul may share in His divine transcendence of Nature and of His works and act in a perfect spiritual liberty.

The first step is Karmayoga, the selfless sacrifice of works, and here the Gita's insistence is on action. The second is Jnanayoga, the self-realisation and knowledge of the true nature of the self and the world; and here the insistence is on knowledge; but the sacrifice of works continues and the path of Works becomes one with but does not disappear into the path of Knowledge. The last step is Bhaktiyoga, adoration and seeking of the supreme Self as the Divine Being, and here the insistence is on devotion; but the knowledge is not subordinated, only raised, vitalised and fulfilled, and still the sacrifice of works continues; the double path becomes the triune way of knowledge, works and devotion. And the fruit of the sacrifice, the one fruit still placed before the seeker, is attained, union with the divine Being and oneness with the supreme divine nature.

V

Kurukshetra

BEFORE we can proceed, following in the large steps of the Teacher of the Gita, to watch his tracing of the triune path of man,—the path which is that of his will, heart, thought raising themselves to the Highest and into the being of that which is the supreme object of all action, love and knowledge, we must consider once more the situation from which the Gita arises, but now in its largest bearings as a type of human life and even of all world-existence. For although Arjuna is himself concerned only with his own situation, his inner struggle and the law of action he must follow, yet, as we have seen, the particular question he raises, in the manner in which he raises it, does really bring up the whole question of human life and action, what the world is and why it is and how possibly, it being what it is, life here in the world can be reconciled with life in the Spirit. And all this deep and difficult matter the Teacher insists on resolving as the very foundation of his command to an action which must proceed from a new poise of being and by the light of a liberating knowledge.

But what, then, is it that makes the difficulty for the man who has to take the world as it is and act in it and yet would live, within, the spiritual life? What is this aspect of existence which appals his awakened mind and brings about what the title of the first chapter of the Gita calls significantly the Yoga of the dejection of Arjuna, the dejection and discouragement felt by the human being when he is forced to face the spectacle of the universe as it really is with the veil of the ethical illusion, the illusion of self-righteousness torn from his eyes, before a higher reconciliation with himself is effected? It is that aspect which is figured outwardly in the carnage and massacre of Kurukshetra and spiritually by the vision of the Lord of all things as Time arising to devour and destroy the creatures whom it has made.

This is the vision of the Lord of all existence as the universal Creator but also the universal Destroyer, of whom the ancient Scripture can say in a ruthless image, "The sages and the heroes are his food and death is the spice of his banquet." It is one and the same truth seen first indirectly and obscurely in the facts of life and then directly and clearly in the soul's vision of that which manifests itself in life. The outward aspect is that of world-existence and human existence proceeding by struggle and slaughter; the inward aspect is that of the universal Being fulfilling himself in a vast creation and a vast destruction. Life a battle and a field of death, this is Kurukshetra; God the Terrible, this is the vision that Arjuna sees on that field of massacre.

War, said Heraclitus, is the father of all things, War is the king of all; and the saying, like most of the apophthegms of the Greek thinker, suggests a profound truth. From a clash of material or other forces everything in this world, if not the world itself, seems to be born; by a struggle of forces, tendencies, principles, beings it seems to proceed, ever creating new things, ever destroying the old, marching one knows not very well whither, —to a final self-destruction, say some; in an unending series of vain cycles, say others; in progressive cycles, is the most optimistic conclusion, leading through whatever trouble and apparent confusion towards a higher and higher approximation to some divine apocalypse. However that may be, this is certain that there is not only no construction here without destruction, no harmony except by a poise of contending forces won out of many actual and potential discords, but also no continued existence of life except by a constant self-feeding and devouring of other life. Our very bodily life is a constant dying and being reborn, the body itself a beleaguered city attacked by assailing, protected by defending forces whose business is to devour each other: and this is only a type of all our existence. The command seems to have gone out from the beginning, "Thou shalt not conquer except by battle with thy fellows and thy surroundings; thou shalt not even live except by battle and struggle and by absorbing into thyself other life. The first law of this world that I have made is creation and preservation by destruction."

Ancient thought accepted this starting-point so far as it could see it by scrutiny of the universe. The old Upanishads saw it very clearly and phrased it with an uncompromising thoroughness which will have nothing to do with any honeyed glosses or optimistic scuttlings of the truth. Hunger that is Death, they said, is the creator and master of this world, and they figured vital existence in the image of the Horse of the sacrifice. Matter they described by a name which means ordinarily food and they said, we call it food because it is devoured and devours creatures. The eater eating is eaten, this is the formula of the material world, as the Darwinians rediscovered when they laid it down that the struggle for life is the law of evolutionary existence. Modern science has only rephrased the old truths that had already been expressed in much more forcible, wide and accurate formulas by the apophthegm of Heraclitus and the figures employed by the Upanishads.

Nietzsche's insistence upon war as an aspect of life and the ideal man as a warrior,—the camel-man he may be to begin with and the child-man hereafter, but the lion-man he must become in the middle, if he is to attain his perfection,—these now much-decried theories of Nietzsche have, however much we may differ from many of the moral and practical conclusions he drew from them, their undeniable justification and recall us to a truth we like to hide out of sight. It is good that we should be reminded of it; first, because to see it has for every strong soul a tonic effect which saves us from the flabbiness and relaxation encouraged by a too mellifluous philosophic, religious or ethical sentimentalism, that which loves to look upon Nature as love and life and beauty and good, but turns away from her grim mask of death, adoring God as Shiva but refusing to adore him as Rudra; secondly, because unless we have the honesty and courage to look existence straight in the face, we shall never arrive at any effective solution of its discords and oppositions. We must see first what life and the world are; afterwards, we can all the better set about finding the right way to transform them into what they should be. If this repellent aspect of existence holds in itself some secret of the final harmony, we shall by

ignoring or belittling it miss that secret and all our efforts at a solution will fail by fault of our self-indulgent ignoring of the true elements of the problem. If, on the other hand, it is an enemy to be beaten down, trampled on, excised, eliminated, still we gain nothing by underrating its power and hold upon life or refusing to see how firmly it is rooted in the effective past and the actually operative principles of existence.

War and destruction are not only a universal principle of our life here in its purely material aspects, but also of our mental and moral existence. It is self-evident that in the actual life of man intellectual, social, political, moral we can make no real step forward without a struggle, a battle between what exists and lives and what seeks to exist and live and between all that stands behind either. It is impossible, at least as men and things are, to advance, to grow, to fulfil and still to observe really and utterly that principle of harmlessness which is yet placed before us as the highest and best law of conduct. We will use only soul-force and never destroy by war or any even defensive employment of physical violence? Good, though until soul-force is effective, the Asuric force in men and nations tramples down, breaks, slaughters, burns, pollutes, as we see it doing today, but then at its ease and unhindered, and you have perhaps caused as much destruction of life by your abstinence as others by resort to violence; still you have set up an ideal which may some day and at any rate ought to lead up to better things. But even soul-force, when it is effective, destroys. Only those who have used it with eyes open, know how much more terrible and destructive it is than the sword and the cannon; and only those who do not limit their view to the act and its immediate results, can see how tremendous are its after-effects, how much is eventually destroyed and with that much all the life that depended on it and fed upon it. Evil cannot perish without the destruction of much that lives by the evil, and it is no less destruction even if we personally are saved the pain of a sensational act of violence.

Moreover, every time we use soul-force we raise a great force of Karma against our adversary, the after-movements of which we have no power to control. Vasishtha uses soul-force

against the military violence of Vishwamitra and armies of Huns and Shakas and Pallavas hurl themselves on the aggressor. The very quiescence and passivity of the spiritual man under violence and aggression awakens the tremendous forces of the world to a retributive action; and it may even be more merciful to stay in their path, though by force, those who represent evil than to allow them to trample on until they call down on themselves a worse destruction than we would ever think of inflicting. It is not enough that our own hands should remain clean and our souls unstained for the law of strife and destruction to die out of the world; that which is its root must first disappear out of humanity. Much less will mere immobility and inertia unwilling to use or incapable of using any kind of resistance to evil, abrogate the law; inertia, tamas, indeed, injures much more than can the rajasic principle of strife which at least creates more than it destroys. Therefore, so far as the problem of the individual's action goes, his abstention from strife and its inevitable concomitant destruction in their more gross and physical form may help his own moral being, but it leaves the Slayer of creatures unabashed.

For the rest the whole of human history bears witness to the inexorable vitality and persistent prevalence of this principle in the world. It is natural that we should attempt to palliate, to lay stress on other aspects. Strife and destruction are not all; there is the saving principle of association and mutual help as well as the force of dissociation and mutual strife; a power of love no less than a power of egoistic self-assertion; an impulse to sacrifice ourselves for others as well as the impulse to sacrifice others to ourselves. But when we see how these have actually worked, we shall not be tempted to gloss over or ignore the power of their opposites. Association has been worked not only for mutual help, but at the same time for defence and aggression, to strengthen us against all that attacks or resists in the struggle for life. Association itself has been a servant of war, egoism and the self-assertion of life against life. Love itself has been constantly a power of death. Especially the love of good and the love of God, as embraced by the human ego, have been responsible for

much strife, slaughter and destruction. Self-sacrifice is great and noble, but at its highest it is an acknowledgment of the law of Life by death and becomes an offering on the altar of some Power that demands a victim in order that the work desired may be done. The mother bird facing the animal of prey in defence of its young, the patriot dying for his country's freedom, the religious martyr or the martyr of an idea, these in the lower and the superior scale of animal life are highest examples of self-sacrifice, and it is evident to what they bear witness.

But if we look at after results, an easy optimism becomes even less possible. See the patriot dying in order that his country may be free, and mark that country a few decades after the Lord of Karma has paid the price of the blood and the suffering that was given; you shall see it in its turn an oppressor, an exploiter and conqueror of colonies and dependencies devouring others that it may live and succeed aggressively in life. The Christian martyrs perish in their thousands, setting soul-force against empire-force that Christ may conquer, Christianity prevail. Soul-force does triumph, Christianity does prevail, — but not Christ; the victorious religion becomes a militant and dominant Church and a more fanatically persecuting power than the creed and the empire which it replaced. The very religions organise themselves into powers of mutual strife and battle together fiercely to live, to grow, to possess the world.

All which seems to show that here is an element in existence, perhaps the initial element, which we do not know how to conquer either because it cannot be conquered or because we have not looked at it with a strong and impartial gaze so as to recognise it calmly and fairly and know what it is. We must look existence in the face if our aim is to arrive at a right solution, whatever that solution may be. And to look existence in the face is to look God in the face; for the two cannot be separated, nor the responsibility for the laws of world-existence be shifted away from Him who created them or from That which constituted it. Yet here too we love to palliate and equivocate. We erect a God of Love and Mercy, a God of good, a God just, righteous and virtuous according to our own moral conceptions

of justice, virtue and righteousness, and all the rest, we say, is not He or is not His, but was made by some diabolical Power which He suffered for some reason to work out its wicked will or by some dark Ahriman counterbalancing our gracious Ormuzd, or was even the fault of selfish and sinful man who has spoiled what was made originally perfect by God. As if man had created the law of death and devouring in the animal world or that tremendous process by which Nature creates indeed and preserves but in the same step and by the same inextricable action slays and destroys. It is only a few religions which have had the courage to say without any reserve, like the Indian, that this enigmatic World-Power is one Deity, one Trinity, to lift up the image of the Force that acts in the world in the figure not only of the beneficent Durga, but of the terrible Kali in her blood-stained dance of destruction and to say, "This too is the Mother; this also know to be God; this too, if thou hast the strength, adore." And it is significant that the religion which has had this unflinching honesty and tremendous courage, has succeeded in creating a profound and wide-spread spirituality such as no other can parallel. For truth is the foundation of real spirituality and courage is its soul. *Tasyai satyam āyatanaṁ*.

All this is not to say that strife and destruction are the alpha and omega of existence, that harmony is not greater than war, love more the manifest divine than death or that we must not move towards the replacement of physical force by soul-force, of war by peace, of strife by union, of devouring by love, of egoism by universality, of death by immortal life. God is not only the Destroyer, but the Friend of creatures; not only the cosmic Trinity, but the Transcendent; the terrible Kali is also the loving and beneficent Mother; the lord of Kurukshtera is the divine comrade and charioteer, the attracter of beings, incarnate Krishna. And whithersoever he is driving through all the strife and clash and confusion, to whatever goal or godhead he may be attracting us, it is — no doubt of that — to some transcendence of all these aspects upon which we have been so firmly insisting. But where, how, with what kind of transcendence, under what conditions, this we have to discover; and to discover it, the first

necessity is to see the world as it is, to observe and value rightly his action as it reveals itself at the start and now; afterwards the way and the goal will better reveal themselves. We must acknowledge Kurukshetra; we must submit to the law of Life by Death before we can find our way to the life immortal; we must open our eyes, with a less appalled gaze than Arjuna's, to the vision of our Lord of Time and Death and cease to deny, hate or recoil from the universal Destroyer.

Man and the Battle of Life

THUS, if we are to appreciate in its catholicity the teaching of the Gita, we must accept intellectually its standpoint and courageous envisaging of the manifest nature and process of the world. The divine charioteer of Kurukshetra reveals himself on one side as the Lord of all the worlds and the Friend and omniscient Guide of all creatures, on the other as Time the Destroyer "arisen for the destruction of these peoples." The Gita, following in this the spirit of the catholic Hindu religion, affirms this also as God; it does not attempt to evade the enigma of the world by escaping from it through a side-door. If, in fact, we do not regard existence merely as the mechanic action of a brute and indifferent material Force or, on the other hand, as an equally mechanical play of ideas and energies arising out of an original Non-Existence or else reflected in the passive Soul or the evolution of a dream or nightmare in the surface consciousness of an indifferent, immutable Transcendence which is unaffected by the dream and has no real part in it,—if we accept at all, as the Gita accepts, the existence of God, that is to say of the omnipresent, omniscient, omnipotent, yet always transcendent Being who manifests the world and Himself in the world, who is not the slave but the lord of His creative Consciousness, Nature or Force (Maya, Prakriti or Shakti), who is not baffled or thwarted in His world-conception or design by His creatures, man or devil, who does not need to justify Himself by shifting the responsibility for any part of His creation or manifestation on that which is created or manifested, then the human being has to start from a great, a difficult act of faith. Finding himself in a world which is apparently a chaos of battling powers, a clash of vast and obscure forces, a life which subsists only by constant change and death, menaced from every side by pain, suffering, evil and destruction, he has to see the omnipresent

Deity in it all and conscious that of this enigma there must be a solution and beyond this Ignorance in which he dwells a Knowledge that reconciles, he has to take his stand upon this faith, "Though Thou slay me, yet will I trust in Thee." All human thought or faith that is active and affirmative, whether it be theistic, pantheistic or atheistic, does in fact involve more or less explicitly and completely such an attitude. It admits and it believes: admits the discords of the world, believes in some highest principle of God, universal Being or Nature which shall enable us to transcend, overcome or harmonise these discords, perhaps even to do all three at once, to harmonise by overcoming and transcending.

Then, as to human life in its actualities, we have to accept its aspect of a struggle and a battle mounting into supreme crises such as that of Kurukshetra. The Gita, as we have seen, takes for its frame such a period of transition and crisis as humanity periodically experiences in its history, in which great forces clash together for a huge destruction and reconstruction, intellectual, social, moral, religious, political, and these in the actual psychological and social stage of human evolution culminate usually through a violent physical convulsion of strife, war or revolution. The Gita proceeds from the acceptance of the necessity in Nature for such vehement crises and it accepts not only the moral aspect, the struggle between righteousness and unrighteousness, between the self-affirming law of Good and the forces that oppose its progression, but also the physical aspect, the actual armed war or other vehement physical strife between the human beings who represent the antagonistic powers. We must remember that the Gita was composed at a time when war was even more than it is now a necessary part of human activity and the idea of its elimination from the scheme of life would have been an absolute chimera. The gospel of universal peace and goodwill among men—for without a universal and entire mutual goodwill there can be no real and abiding peace—has never succeeded for a moment in possessing itself of human life during the historic cycle of our progress, because morally, socially, spiritually the race was not prepared and the poise of

Nature in its evolution would not admit of its being immediately prepared for any such transcendence. Even now we have not actually progressed beyond the feasibility of a system of accommodation between conflicting interests which may minimise the recurrence of the worst forms of strife. And towards this consummation the method, the approach which humanity has been forced by its own nature to adopt, is a monstrous mutual massacre unparalleled in history; a universal war, full of bitterness and irreconcilable hatred, is the straight way and the triumphant means modern man has found for the establishment of universal peace! That consummation, too, founded not upon any fundamental change in human nature, but upon intellectual notions, economic convenience, vital and sentimental shrinkings from the loss of life, discomfort and horror of war, effected by nothing better than political adjustments, gives no very certain promise of firm foundation and long duration. A day may come, must surely come, we will say, when humanity will be ready spiritually, morally, socially for the reign of universal peace; meanwhile the aspect of battle and the nature and function of man as a fighter have to be accepted and accounted for by any practical philosophy and religion. The Gita, taking life as it is and not only as it may be in some distant future, puts the question how this aspect and function of life, which is really an aspect and function of human activity in general, can be harmonised with the spiritual existence.

The Gita is therefore addressed to a fighter, a man of action, one whose duty in life is that of war and protection, war as a part of government for the protection of those who are excused from that duty, debarred from protecting themselves and therefore at the mercy of the strong and the violent, war, secondly and by a moral extension of this idea, for the protection of the weak and the oppressed and for the maintenance of right and justice in the world. For all these ideas, the social and practical, the moral and the chivalrous enter into the Indian conception of the Kshatriya, the man who is a warrior and ruler by function and a knight and king in his nature. Although the more general and universal ideas of the Gita are those which are the most

important to us, we ought not to leave out of consideration altogether the colouring and trend they take from the peculiar Indian culture and social system in the midst of which they arose. That system differed from the modern in its conception. To the modern mind man is a thinker, worker or producer and a fighter all in one, and the tendency of the social system is to lump all these activities and to demand from each individual his contribution to the intellectual, economical and military life and needs of the community without paying any heed to the demands of his individual nature and temperament. The ancient Indian civilisation laid peculiar stress on the individual nature, tendency, temperament and sought to determine by it the ethical type, function and place in the society. Nor did it consider man primarily as a social being or the fullness of his social existence as the highest ideal, but rather as a spiritual being in process of formation and development and his social life, ethical law, play of temperament and exercise of function as means and stages of spiritual formation. Thought and knowledge, war and government, production and distribution, labour and service were carefully differentiated functions of society, each assigned to those who were naturally called to it and providing the right means by which they could individually proceed towards their spiritual development and self-perfection.

The modern idea of a common obligation in all the main departments of human activity has its advantages; it helps to greater solidarity, unity and fullness in the life of the community and a more all-round development of the complete human being as opposed to the endless divisions and over-specialisation and the narrowing and artificial shackling of the life of the individual to which the Indian system eventually led. But it has also its disadvantages and in certain of its developments the too logical application of it has led to grotesque and disastrous absurdities. This is evident enough in the character of modern war. From the idea of a common military obligation binding on every individual to defend and fight for the community by which he lives and profits, has arisen the system by which the whole manhood of the nation is hurled into the bloody trench to slay

and be slain, thinkers, artists, philosophers, priests, merchants, artisans all torn from their natural functions, the whole life of the community disorganised, reason and conscience overridden, even the minister of religion who is salaried by the State or called by his function to preach the gospel of peace and love forced to deny his creed and become a butcher of his fellow-men! Not only are conscience and nature violated by the arbitrary fiat of the military State, but national defence carried to an insane extreme makes its best attempt to become a national suicide.

Indian civilisation on the contrary made it its chief aim to minimise the incidence and disaster of war. For this purpose it limited the military obligation to the small class who by their birth, nature and traditions were marked out for this function and found in it their natural means of self-development through the flowering of the soul in the qualities of courage, disciplined force, strong helpfulness and chivalrous nobility for which the warrior's life pursued under the stress of a high ideal gives a field and opportunities. The rest of the community was in every way guarded from slaughter and outrage; their life and occupations were as little interfered with as possible and the combative and destructive tendencies of human nature were given a restricted field, confined in a sort of lists so as to do the minimum amount of harm to the general life of the race, while at the same time by being subjected to high ethical ideals and every possible rule of humanity and chivalry the function of war was obliged to help in ennobling and elevating instead of brutalising those who performed it. It must be remembered that it is war of this kind and under these conditions that the Gita had in view, war considered as an inevitable part of human life, but so restricted and regulated as to serve like other activities the ethical and spiritual development which was then regarded as the whole real object of life, war destructive within certain carefully fixed limits of the bodily life of individual men but constructive of their inner life and of the ethical elevation of the race. That war in the past has, when subjected to an ideal, helped in this elevation, as in the development of knighthood and chivalry, the

Indian ideal of the Kshatriya, the Japanese ideal of the Samurai, can only be denied by the fanatics of pacifism. When it has fulfilled its function, it may well disappear; for if it tries to survive its utility, it will appear as an unrelieved brutality of violence stripped of its ideal and constructive aspects and will be rejected by the progressive mind of humanity; but its past service to the race must be admitted in any reasonable view of our evolution.

The physical fact of war, however, is only a special and outward manifestation of a general principle in life and the Kshatriya is only the outward manifestation and type of a general characteristic necessary to the completeness of human perfection. War typifies and embodies physically the aspect of battle and struggle which belongs to all life, both to our inner and our outer living, in a world whose method is a meeting and wrestling of forces which progress by mutual destruction towards a continually changing adjustment expressive of a progressive harmonising and hopeful of a perfect harmony based upon some yet ungrasped potentiality of oneness. The Kshatriya is the type and embodiment of the fighter in man who accepts this principle in life and faces it as a warrior striving towards mastery, not shrinking from the destruction of bodies and forms, but through it all aiming at the realisation of some principle of right, justice, law which shall be the basis of the harmony towards which the struggle tends. The Gita accepts this aspect of the world-energy and the physical fact of war which embodies it, and it addresses itself to the man of action, the striver and fighter, the Kshatriya,—war which is the extreme contradiction of the soul's high aspiration to peace within and harmlessness¹ without, the striver and fighter whose necessary turmoil of struggle and action seems to be the very contradiction of the soul's high ideal of calm mastery and self-possession,—and it seeks for an issue from the contradiction, a point at which its terms meet and a poise which shall be the first essential basis of harmony and transcendence.

¹ *abīmśā*.

Man meets the battle of life in the manner most consonant with the essential quality most dominant in his nature. There are, according to the Sankhya philosophy accepted in this respect by the Gita, three essential qualities or modes of the world-energy and therefore also of human nature, *sattva*, the mode of poise, knowledge and satisfaction, *rajas*, the mode of passion, action and struggling emotion, *tamas*, the mode of ignorance and inertia. Dominated by *tamas*, man does not so much meet the rush and shock of the world-energies whirling about him and converging upon him as he succumbs to them, is overborne by them, afflicted, subjected; or at the most, helped by the other qualities, the tamasic man seeks only somehow to survive, to subsist so long as he may, to shelter himself in the fortress of an established routine of thought and action in which he feels himself to a certain extent protected from the battle, able to reject the demand which his higher nature makes upon him, excused from accepting the necessity of farther struggle and the ideal of an increasing effort and mastery. Dominated by *rajas*, man flings himself into the battle and attempts to use the struggle of forces for his own egoistic benefit, to slay, conquer, dominate, enjoy; or, helped by a certain measure of the sattwic quality, the rajasic man makes the struggle itself a means of increasing inner mastery, joy, power, possession. The battle of life becomes his delight and passion partly for its own sake, for the pleasure of activity and the sense of power, partly as a means of his increase and natural self-development. Dominated by *sattva*, man seeks in the midst of the strife for a principle of law, right, poise, harmony, peace, satisfaction. The purely sattwic man tends to seek this within, whether for himself alone or with an impulse to communicate it, when won, to other human minds, but usually by a sort of inner detachment from or else an outer rejection of the strife and turmoil of the active world-energy; but if the sattwic mind accepts partly the rajasic impulse, it seeks rather to impose this poise and harmony upon the struggle and apparent chaos, to vindicate a victory for peace, love and harmony over the principle of war, discord and struggle. All the attitudes adopted by the human mind towards the problem of life either

derive from the domination of one or other of these qualities or else from an attempt at balance and harmony between them.

But there comes also a stage in which the mind recoils from the whole problem and, dissatisfied with the solutions given by the threefold mode of Nature, *traigunya*, seeks for some higher solution outside of it or else above it. It looks for an escape either into something which is outside and void of all qualities and therefore of all activity or in something which is superior to the three qualities and master of them and therefore at once capable of action and unaffected, undominated by its own action, in the *nirguna* or the *trigunātīta*. It aspires to an absolute peace and unconditioned existence or to a dominant calm and superior existence. The natural movement of the former attitude is towards the renunciation of the world, *sannyāsa*; of the latter towards superiority to the claims of the lower nature and its whirl of actions and reactions, and its principle is equality and the inner renunciation of passion and desire. The former is the first impulse of Arjuna recoiling from the calamitous culmination of all his heroic activity in the great cataclysm of battle and massacre, Kurukshetra; losing his whole past principle of action, inaction and the rejection of life and its claims seem to him the only issue. But it is to an inner superiority and not to the physical renunciation of life and action that he is called by the voice of the divine Teacher.

Arjuna is the Kshatriya, the rajasic man who governs his rajasic action by a high sattvic ideal. He advances to this gigantic struggle, to this Kurukshetra with the full acceptance of the joy of battle, as to "a holiday of fight", but with a proud confidence in the righteousness of his cause; he advances in his rapid chariot tearing the hearts of his enemies with the victorious clamour of his war-conch; for he wishes to look upon all these Kings of men who have come here to champion against him the cause of unrighteousness and establish as a rule of life the disregard of law, justice and truth which they would replace by the rule of a selfish and arrogant egoism. When this confidence is shattered within him, when he is smitten down from his customary attitude and mental basis of life, it is by the uprush of the tamasic quality into

the rajasic man, inducing a recoil of astonishment, grief, horror, dismay, dejection, bewilderment of the mind and the war of reason against itself, a collapse towards the principle of ignorance and inertia. As a result he turns towards renunciation. Better the life of the mendicant living upon alms than this *dharma* of the Kshatriya, this battle and action culminating in undiscriminating massacre, this principle of mastery and glory and power which can only be won by destruction and bloodshed, this conquest of blood-stained enjoyments, this vindication of justice and right by a means which contradicts all righteousness and this affirmation of the social law by a war which destroys in its process and result all that constitutes society.

Sannyāsa is the renunciation of life and action and of the threefold modes of Nature, but it has to be approached through one or other of the three qualities. The impulse may be tamasic, a feeling of impotence, fear, aversion, disgust, horror of the world and life; or it may be the rajasic quality tending towards tamas, an impulse of weariness of the struggle, grief, disappointment, refusal to accept any longer this vain turmoil of activity with its pains and its eternal discontent. Or the impulse may be that of rajas tending towards sattwa, the impulse to arrive at something superior to anything life can give, to conquer a higher state, to trample down life itself under the feet of an inner strength which seeks to break all bonds and transcend all limits. Or it may be sattvic, an intellectual perception of the vanity of life and the absence of any real goal or justification for this ever-cycling world-existence or else a spiritual perception of the Timeless, the Infinite, the Silent, the nameless and formless Peace beyond. The recoil of Arjuna is the tamasic recoil from action of the sattwa-rajasic man. The Teacher may confirm it in its direction, using it as a dark entry to the purity and peace of the ascetic life; or he may purify it at once and raise it towards the rare altitudes of the sattvic tendency of renunciation. In fact, he does neither. He discourages the tamasic recoil and the tendency to renunciation and enjoins the continuance of action and even of the same fierce and terrible action, but he points the disciple towards another and inner renunciation which is the real issue

from his crisis and the way towards the soul's superiority to the world-Nature and yet its calm and self-possessed action in the world. Not a physical asceticism, but an inner askesis is the teaching of the Gita.

VII

The Creed of the Aryan Fighter¹

THE ANSWER of the divine Teacher to the first flood of Arjuna's passionate self-questioning, his shrinking from slaughter, his sense of sorrow and sin, his grieving for an empty and desolate life, his forecast of evil results of an evil deed, is a strongly-worded rebuke. All this, it is replied, is confusion of mind and delusion, a weakness of the heart, an unmanliness, a fall from the virility of the fighter and the hero. Not this was fitting in the son of Pritha, not thus should the champion and chief hope of a righteous cause abandon it in the hour of crisis and peril or suffer the sudden amazement of his heart and senses, the clouding of his reason and the downfall of his will to betray him into the casting away of his divine weapons and the refusal of his God-given work. This is not the way cherished and followed by the Aryan man; this mood came not from heaven nor can it lead to heaven, and on earth it is the forfeiting of the glory that waits upon strength and heroism and noble works. Let him put from him this weak and self-indulgent pity, let him rise and smite his enemies!

The answer of a hero to a hero, shall we say, but not that which we should expect from a divine Teacher from whom we demand rather that he shall encourage always gentleness and saintliness and self-abnegation and the recoil from worldly aims and cessation from the ways of the world? The Gita expressly says that Arjuna has thus lapsed into unheroic weakness, "his eyes full and distressed with tears, his heart overcome by depression and discouragement," because he is invaded by pity, *kṛpayāviṣṭam*. Is this not then a divine weakness? Is not pity a divine emotion which should not thus be discouraged with harsh rebuke? Or are we in face of a mere gospel of war and heroic

¹ Gita, II. 1-38.

action, a Nietzschean creed of power and high-browed strength, of Hebraic or old Teutonic hardness which holds pity to be a weakness and thinks like the Norwegian hero who thanked God because He had given him a hard heart? But the teaching of the Gita springs from an Indian creed and to the Indian mind compassion has always figured as one of the largest elements of the divine nature. The Teacher himself enumerating in a later chapter the qualities of the godlike nature in man places among them compassion to creatures, gentleness, freedom from wrath and from the desire to slay and do hurt, no less than fearlessness and high spirit and energy. Harshness and hardness and fierceness and a satisfaction in slaying enemies and amassing wealth and unjust enjoyments are Asuric qualities; they come from the violent Titanic nature which denies the Divine in the world and the Divine in man and worships Desire only as its deity. It is not then from any such standpoint that the weakness of Arjuna merits rebuke.

"Whence has come to thee this dejection, this stain and darkness of the soul in the hour of difficulty and peril?" asks Krishna of Arjuna. The question points to the real nature of Arjuna's deviation from his heroic qualities. There is a divine compassion which descends to us from on high and for the man whose nature does not possess it, is not cast in its mould, to pretend to be the superior man, the master-man or the superman is a folly and an insolence, for he alone is the superman who most manifests the highest nature of the Godhead in humanity. This compassion observes with an eye of love and wisdom and calm strength the battle and the struggle, the strength and weakness of man, his virtues and sins, his joy and suffering, his knowledge and his ignorance, his wisdom and his folly, his aspiration and his failure and it enters into it all to help and to heal. In the saint and philanthropist it may cast itself into the mould of a plenitude of love or charity; in the thinker and hero it assumes the largeness and the force of a helpful wisdom and strength. It is this compassion in the Aryan fighter, the soul of his chivalry, which will not break the bruised reed, but helps and protects the weak and the oppressed and the wounded and the fallen. But it

is also the divine compassion that smites down the strong tyrant and the confident oppressor, not in wrath and with hatred,—for these are not the high divine qualities, the wrath of God against the sinner, God's hatred of the wicked are the fables of half-enlightened creeds, as much a fable as the eternal torture of the Hells they have invented,—but, as the old Indian spirituality clearly saw, with as much love and compassion for the strong Titan erring by his strength and slain for his sins as for the sufferer and the oppressed who have to be saved from his violence and injustice.

But such is not the compassion which actuates Arjuna in the rejection of his work and mission. That is not compassion but an impotence full of a weak self-pity, a recoil from the mental suffering which his act must entail on himself,—“I see not what shall thrust from me the sorrow that dries up the senses,”—and of all things self-pity is among the most ignoble and un-Aryan of moods. Its pity for others is also a form of self-indulgence; it is the physical shrinking of the nerves from the act of slaughter, the egoistic emotional shrinking of the heart from the destruction of the Dhritarashtrians because they are “one’s own people” and without them life will be empty. This pity is a weakness of the mind and senses,—a weakness which may well be beneficial to men of a lower grade of development, who have to be weak because otherwise they will be hard and cruel; for they have to cure the harsher by the gentler forms of sensational egoism, they have to call in tamas, the debile principle, to help sattwa, the principle of light, in quelling the strength and excess of their rajasic passions. But this way is not for the developed Aryan man who has to grow not by weakness, but by an ascension from strength to strength. Arjuna is the divine man, the master-man in the making and as such he has been chosen by the gods. He has a work given to him, he has God beside him in his chariot, he has the heavenly bow Gandiva in his hand, he has the champions of unrighteousness, the opponents of the divine leading of the world in his front. Not his is the right to determine what he shall do or not do according to his emotions and his passions, or to shrink from

a necessary destruction by the claim of his egoistic heart and reason, or to decline his work because it will bring sorrow and emptiness to his life or because its earthly result has no value to him in the absence of the thousands who must perish. All that is a weak falling from his higher nature. He has to see only the work that must be done, *kartavyam karma*, to hear only the divine command breathed through his warrior nature, to feel only for the world and the destiny of mankind calling to him as its god-sent man to assist its march and clear its path of the dark armies that beset it.

Arjuna in his reply to Krishna admits the rebuke even while he strives against and refuses the command. He is aware of his weakness and yet accepts subjection to it. It is poorness of spirit, he owns, that has smitten away from him his true heroic nature; his whole consciousness is bewildered in its view of right and wrong and he accepts the divine Friend as his teacher; but the emotional and intellectual props on which he had supported his sense of righteousness have been entirely cast down and he cannot accept a command which seems to appeal only to his old standpoint and gives him no new basis for action. He attempts still to justify his refusal of the work and puts forward in its support the claim of his nervous and sensational being which shrinks from the slaughter with its sequel of blood-stained enjoyments, the claim of his heart which recoils from the sorrow and emptiness of life that will follow his act, the claim of his customary moral notions which are appalled by the necessity of slaying his gurus, Bhishma and Drona, the claim of his reason which sees no good but only evil results of the terrible and violent work assigned to him. He is resolved that on the old basis of thought and motive he will not fight and he awaits in silence the answer to objections that seem to him unanswerable. It is these claims of Arjuna's egoistic being that Krishna sets out first to destroy in order to make place for the higher law which shall transcend all egoistic motives of action.

The answer of the Teacher proceeds upon two different lines, first, a brief reply founded upon the highest ideas of the general Aryan culture in which Arjuna has been educated,

secondly, another and larger founded on a more intimate knowledge, opening into deeper truths of our being, which is the real starting-point of the teaching of the Gita. This first answer relies on the philosophic and moral conceptions of the Vedantic philosophy and the social idea of duty and honour which formed the ethical basis of Aryan society. Arjuna has sought to justify his refusal on ethical and rational grounds, but he has merely cloaked by words of apparent rationality the revolt of his ignorant and unchastened emotions. He has spoken of the physical life and the death of the body as if these were the primary realities; but they have no such essential value to the sage and the thinker. The sorrow for the bodily death of his friends and kindred is a grief to which wisdom and the true knowledge of life lend no sanction. The enlightened man does not mourn either for the living or the dead, for he knows that suffering and death are merely incidents in the history of the soul. The soul, not the body, is the reality. All these kings of men for whose approaching death he mourns, have lived before, they will live again in the human body; for as the soul passes physically through childhood and youth and age, so it passes on to the changing of the body. The calm and wise mind, the *dhīra*, the thinker who looks upon life steadily and does not allow himself to be disturbed and blinded by his sensations and emotions, is not deceived by material appearances; he does not allow the clamour of his blood and his nerves and his heart to cloud his judgment or to contradict his knowledge. He looks beyond the apparent facts of the life of the body and senses to the real fact of his being and rises beyond the emotional and physical desires of the ignorant nature to the true and only aim of the human existence.

What is that real fact? that highest aim? This, that human life and death repeated through the aeons in the great cycles of the world are only a long progress by which the human being prepares and makes himself fit for immortality. And how shall he prepare himself? who is the man that is fit? The man who rises above the conception of himself as a life and a body, who does not accept the material and sensational touches of the world at their own value or at the value which the physical man attaches

to them, who knows himself and all as souls, learns himself to live in his soul and not in his body and deals with others too as souls and not as mere physical beings. For by immortality is meant not the survival of death,—that is already given to every creature born with a mind,—but the transcendence of life and death. It means that ascension by which man ceases to live as a mind-informed body and lives at last as a spirit and in the Spirit. Whoever is subject to grief and sorrow, a slave to the sensations and emotions, occupied by the touches of things transient cannot become fit for immortality. These things must be borne until they are conquered, till they can give no pain to the liberated man, till he is able to receive all the material happenings of the world whether joyful or sorrowful with a wise and calm equality, even as the tranquil eternal Spirit secret within us receives them. To be disturbed by sorrow and horror as Arjuna has been disturbed, to be deflected by them from the path that has to be travelled, to be overcome by self-pity and intolerance of sorrow and recoil from the unavoidable and trivial circumstance of the death of the body, this is un-Aryan ignorance. It is not the way of the Aryan climbing in calm strength towards the immortal life.

There is no such thing as death, for it is the body that dies and the body is not the man. That which really is, cannot go out of existence, though it may change the forms through which it appears, just as that which is non-existent cannot come into being. The soul is and cannot cease to be. This opposition of is and is not, this balance of being and becoming which is the mind's view of existence, finds its end in the realisation of the soul as the one imperishable self by whom all this universe has been extended. Finite bodies have an end, but that which possesses and uses the body, is infinite, illimitable, eternal, indestructible. It casts away old and takes up new bodies as a man changes worn-out raiment for new; and what is there in this to grieve at and recoil and shrink? This is not born, nor does it die, nor is it a thing that comes into being once and passing away will never come into being again. It is unborn, ancient, sempiternal; it is not slain with the slaying of the body. Who can slay the immortal spirit? Weapons cannot cleave it, nor the fire burn, nor do the

waters drench it, nor the wind dry. Eternally stable, immobile, all-pervading, it is for ever and for ever. Not manifested like the body, but greater than all manifestation, not to be analysed by the thought, but greater than all mind, not capable of change and modification like the life and its organs and their objects, but beyond the changes of mind and life and body, it is yet the Reality which all these strive to figure.

Even if the truth of our being were a thing less sublime, vast, intangible by death and life, if the self were constantly subject to birth and death, still the death of beings ought not to be a cause of sorrow. For that is an inevitable circumstance of the soul's self-manifestation. Its birth is an appearing out of some state in which it is not non-existent but unmanifest to our mortal senses, its death is a return to that unmanifest world or condition and out of it it will again appear in the physical manifestation. The to-do made by the physical mind and senses about death and the horror of death whether on the sick-bed or the battlefield, is the most ignorant of nervous clamours. Our sorrow for the death of men is an ignorant grieving for those for whom there is no cause to grieve, since they have neither gone out of existence nor suffered any painful or terrible change of condition, but are beyond death no less in being and no more unhappy in circumstance than in life. But in reality the higher truth is the real truth. All are that Self, that One, that Divine whom we look on and speak and hear of as the wonderful beyond our comprehension, for after all our seeking and declaring of knowledge and learning from those who have knowledge no human mind has ever known this Absolute. It is this which is here veiled by the world, the master of the body; all life is only its shadow; the coming of the soul into physical manifestation and our passing out of it by death is only one of its minor movements. When we have known ourselves as this, then to speak of ourselves as slayer or slain is an absurdity. One thing only is the truth in which we have to live, the Eternal manifesting itself as the soul of man in the great cycle of its pilgrimage with birth and death for milestones, with worlds beyond as resting-places, with all the circumstances of life happy or unhappy as the means of

our progress and battle and victory and with immortality as the home to which the soul travels.

Therefore, says the Teacher, put away this vain sorrow and shrinking, fight, O son of Bharata. But wherefore such a conclusion? This high and great knowledge, this strenuous self-discipline of the mind and soul by which it is to rise beyond the clamour of the emotions and the cheat of the senses to true self-knowledge, may well free us from grief and delusion; it may well cure us of the fear of death and the sorrow for the dead; it may well show us that those whom we speak of as dead are not dead at all nor to be sorrowed for, since they have only gone beyond; it may well teach us to look undisturbed upon the most terrible assaults of life and upon the death of the body as a trifle; it may exalt us to the conception of all life's circumstances as a manifestation of the One and as a means for our souls to raise themselves above appearances by an upward evolution until we know ourselves as the immortal Spirit. But how does it justify the action demanded of Arjuna and the slaughter of Kurukshetra? The answer is that this is the action required of Arjuna in the path he has to travel; it has come inevitably in the performance of the function demanded of him by his *svadharma*, his social duty, the law of his life and the law of his being. This world, this manifestation of the Self in the material universe is not only a cycle of inner development, but a field in which the external circumstances of life have to be accepted as an environment and an occasion for that development. It is a world of mutual help and struggle; not a serene and peaceful gliding through easy joys is the progress it allows us, but every step has to be gained by heroic effort and through a clash of opposing forces. Those who take up the inner and the outer struggle even to the most physical clash of all, that of war, are the Kshatriyas, the mighty men; war, force, nobility, courage are their nature; protection of the right and an unflinching acceptance of the gage of battle is their virtue and their duty. For there is continually a struggle between right and wrong, justice and injustice, the force that protects and the force that violates and oppresses, and when this has once been brought to the issue of physical strife, the champion and

standard-bearer of the Right must not shake and tremble at the violent and terrible nature of the work he has to do; he must not abandon his followers or fellow-fighters, betray his cause and leave the standard of Right and Justice to trail in the dust and be trampled into mire by the blood-stained feet of the oppressor, because of a weak pity for the violent and cruel and a physical horror of the vastness of the destruction decreed. His virtue and his duty lie in battle and not in abstention from battle; it is not slaughter, but non-slaying which would here be the sin.

The Teacher then turns aside for a moment to give another answer to the cry of Arjuna over the sorrow of the death of kindred which will empty his life of the causes and objects of living. What is the true object of the Kshatriya's life and his true happiness? Not self-pleasing and domestic happiness and a life of comfort and peaceful joy with friends and relatives, but to battle for the right is his true object of life and to find a cause for which he can lay down his life or by victory win the crown and glory of the hero's existence is his greatest happiness. "There is no greater good for the Kshatriya than righteous battle, and when such a battle comes to them of itself like the open gate of heaven, happy are the Kshatriyas then. If thou doest not this battle for the right, then hast thou abandoned thy duty and virtue and thy glory, and sin shall be thy portion." He will by such a refusal incur disgrace and the reproach of fear and weakness and the loss of his Kshatriya honour. For what is worst grief for a Kshatriya? It is the loss of his honour, his fame, his noble station among the mighty men, the men of courage and power; that to him is much worse than death. Battle, courage, power, rule, the honour of the brave, the heaven of those who fall nobly, this is the warrior's ideal. To lower that ideal, to allow a smirch to fall on that honour, to give the example of a hero among heroes whose action lays itself open to the reproach of cowardice and weakness and thus to lower the moral standard of mankind, is to be false to himself and to the demand of the world on its leaders and kings. "Slain thou shalt win Heaven, victorious thou shalt enjoy the earth; therefore arise, O son of Kunti, resolved upon battle."

This heroic appeal may seem to be on a lower level than the stoical spirituality which precedes and the deeper spirituality which follows; for in the next verse the Teacher bids him to make grief and happiness, loss and gain, victory and defeat equal to his soul and then turn to the battle,—the real teaching of the Gita. But Indian ethics has always seen the practical necessity of graded ideals for the developing moral and spiritual life of man. The Kshatriya ideal, the ideal of the four orders is here placed in its social aspect, not as afterwards in its spiritual meaning. This, says Krishna in effect, is my answer to you if you insist on joy and sorrow and the result of your actions as your motive of action. I have shown you in what direction the higher knowledge of self and the world points you; I have now shown you in what direction your social duty and the ethical standard of your order point you, *svadharmaṁ api cāvekṣya*. Whichever you consider, the result is the same. But if you are not satisfied with your social duty and the virtue of your order, if you think that leads you to sorrow and sin, then I bid you rise to a higher and not sink to a lower ideal. Put away all egoism from you, disregard joy and sorrow, disregard gain and loss and all worldly results; look only at the cause you must serve and the work that you must achieve by divine command; “so thou shalt not incur sin.” Thus Arjuna’s plea of sorrow, his plea of the recoil from slaughter, his plea of the sense of sin, his plea of the unhappy results of his action, are answered according to the highest knowledge and ethical ideals to which his race and age had attained.

It is the creed of the Aryan fighter. “Know God,” it says, “know thyself, help man; protect the Right, do without fear or weakness or faltering thy work of battle in the world. Thou art the eternal and imperishable Spirit, thy soul is here on its upward path to immortality; life and death are nothing, sorrow and wounds and suffering are nothing, for these things have to be conquered and overcome. Look not at thy own pleasure and gain and profit, but above and around, above at the shining summits to which thou climbest, around at this world of battle and trial in which good and evil, progress and retrogression are locked in stern conflict. Men call to thee, their strong man, their

hero for help; help then, fight. Destroy when by destruction the world must advance, but hate not that which thou destroyest, neither grieve for all those who perish. Know everywhere the one self, know all to be immortal souls and the body to be but dust. Do thy work with a calm, strong and equal spirit; fight and fall nobly or conquer mightily. For this is the work that God and thy nature have given to thee to accomplish."

VIII

Sankhya and Yoga

IN THE moment of his turning from this first and summary answer to Arjuna's difficulties and in the very first words which strike the keynote of a spiritual solution, the Teacher makes at once a distinction which is of the utmost importance for the understanding of the Gita,—the distinction of Sankhya and Yoga. "Such is the intelligence (the intelligent knowledge of things and will) declared to thee in the Sankhya, hear now this in the Yoga, for if thou art in Yoga by this intelligence, O son of Pritha, thou shalt cast away the bondage of works." That is the literal translation of the words in which the Gita announces the distinction it intends to make.

The Gita is in its foundation a Vedantic work; it is one of the three recognised authorities for the Vedantic teaching and, although not described as a revealed Scripture, although, that is to say, it is largely intellectual, ratiocinative, philosophical in its method, founded indeed on the Truth, but not the directly inspired Word which is the revelation of the Truth through the higher faculties of the seer, it is yet so highly esteemed as to be ranked almost as a thirteenth Upanishad. But still its Vedantic ideas are throughout and thoroughly coloured by the ideas of the Sankhya and the Yoga way of thinking and it derives from this colouring the peculiar synthetic character of its philosophy. It is in fact primarily a practical system of Yoga that it teaches and it brings in metaphysical ideas only as explanatory of its practical system; nor does it merely declare Vedantic knowledge, but it founds knowledge and devotion upon works, even as it uplifts works to knowledge, their culmination, and informs them with devotion as their very heart and kernel of their spirit. Again its Yoga is founded upon the analytical philosophy of the Sankhyas, takes that as a starting-point and always keeps it as a large element of its method and doctrine; but still it proceeds far

beyond it, negatives even some of its characteristic tendencies and finds a means of reconciling the lower analytical knowledge of Sankhya with the higher synthetic and Vedantic truth.

What, then, are the Sankhya and Yoga of which the Gita speaks? They are certainly not the systems which have come down to us under these names as enunciated respectively in the Sankhya Karika of Ishwara Krishna and the Yoga aphorisms of Patanjali. This Sankhya is not the system of the Karikas,—at least as that is generally understood; for the Gita nowhere for a moment admits the multiplicity of Purushas as a primal truth of being and it affirms emphatically what the traditional Sankhya strenuously denies, the One as Self and Purusha, that One again as the Lord, Ishwara or Purushottama, and Ishwara as the cause of the universe. The traditional Sankhya is, to use our modern distinctions, atheistic; the Sankhya of the Gita admits and subtly reconciles the theistic, pantheistic and monistic views of the universe.

Nor is this Yoga the Yoga system of Patanjali; for that is a purely subjective method of Rajayoga, an internal discipline, limited, rigidly cut out, severely and scientifically graded, by which the mind is progressively stilled and taken up into Samadhi so that we may gain the temporal and eternal results of this self-exceeding, the temporal in a great expansion of the soul's knowledge and powers, the eternal in the divine union. But the Yoga of the Gita is a large, flexible and many-sided system with various elements, which are all successfully harmonised by a sort of natural and living assimilation, and of these elements Rajayoga is only one and not the most important and vital. This Yoga does not adopt any strict and scientific gradation but is a process of natural soul-development; it seeks by the adoption of a few principles of subjective poise and action to bring about a renovation of the soul and a sort of change, ascension or new birth out of the lower nature into the divine. Accordingly, its idea of Samadhi is quite different from the ordinary notion of the Yogic trance; and while Patanjali gives to works only an initial importance for moral purification and religious concentration, the Gita goes so far as to make works the distinctive

characteristic of Yoga. Action to Patanjali is only a preliminary, in the Gita it is a permanent foundation; in the Rajayoga it has practically to be put aside when its result has been attained or at any rate ceases very soon to be a means for the Yoga, for the Gita it is a means of the highest ascent and continues even after the complete liberation of the soul.

This much has to be said in order to avoid any confusion of thought that might be created by the use of familiar words in a connotation wider than the technical sense now familiar to us. Still, all that is essential in the Sankhya and Yoga systems, all in them that is large, catholic and universally true, is admitted by the Gita, even though it does not limit itself by them like the opposing schools. Its Sankhya is the catholic and Vedantic Sankhya such as we find it in its first principles and elements in the great Vedantic synthesis of the Upanishads and in the later developments of the Puranas. Its idea of Yoga is that large idea of a principally subjective practice and inner change, necessary for the finding of the Self or the union with God, of which the Rajayoga is only one special application. The Gita insists that Sankhya and Yoga are not two different, incompatible and discordant systems, but one in their principle and aim; they differ only in their method and starting-point. The Sankhya also is a Yoga, but it proceeds by knowledge; it starts, that is to say, by intellectual discrimination and analysis of the principles of our being and attains its aim through the vision and possession of the Truth. Yoga, on the other hand, proceeds by works; it is in its first principle Karmayoga; but it is evident from the whole teaching of the Gita and its later definitions that the word *karma* is used in a very wide sense and that by Yoga is meant the selfless devotion of all the inner as well as the outer activities as a sacrifice to the Lord of all works, offered to the Eternal as Master of all the soul's energies and austerities. Yoga is the practice of the Truth of which knowledge gives the vision, and its practice has for its motor-power a spirit of illumined devotion, of calm or fervent consecration to that which knowledge sees to be the Highest.

But what are the truths of Sankhya? The philosophy drew

its name from its analytical process. Sankhya is the analysis, the enumeration, the separative and discriminative setting forth of the principles of our being of which the ordinary mind sees only the combinations and results of combination. It did not seek at all to synthetise. Its original standpoint is in fact dualistic, not with the very relative dualism of the Vedantic schools which call themselves by that name, Dwaita, but in a very absolute and trenchant fashion. For it explains existence not by one, but by two original principles whose inter-relation is the cause of the universe,—Purusha, the inactive, Prakriti, the active. Purusha is the Soul, not in the ordinary or popular sense of the word, but of pure conscious Being immobile, immutable and self-luminous. Prakriti is Energy and its process. Purusha does nothing, but it reflects the action of Energy and its processes; Prakriti is mechanical, but by being reflected in Purusha it assumes the appearance of consciousness in its activities, and thus there are created those phenomena of creation, conservation, dissolution, birth and life and death, consciousness and unconsciousness, sense-knowledge and intellectual knowledge and ignorance, action and inaction, happiness and suffering which the Purusha under the influence of Prakriti attributes to itself although they belong not at all to itself but to the action or movement of Prakriti alone.

For Prakriti is constituted of three *gunas* or essential modes of energy; sattwa, the seed of intelligence, conserves the workings of energy; rajas, the seed of force and action, creates the workings of energy; tamas, the seed of inertia and non-intelligence, the denial of sattwa and rajas, dissolves what they create and conserve. When these three powers of the energy of Prakriti are in a state of equilibrium, all is in rest, there is no movement, action or creation and there is therefore nothing to be reflected in the immutable luminous being of the conscious Soul. But when the equilibrium is disturbed, then the three gunas fall into a state of inequality in which they strive with and act upon each other and the whole inextricable business of ceaseless creation, conservation and dissolution begins, unrolling the phenomena of the cosmos. This continues so long as

the Purusha consents to reflect the disturbance which obscures his eternal nature and attributes to it the nature of Prakriti; but when he withdraws his consent, the gunas fall into equilibrium and the soul returns to its eternal, unchanging immobility; it is delivered from phenomena. This reflection and this giving or withdrawal of consent seem to be the only powers of Purusha; he is the witness of Nature by virtue of reflection and the giver of the sanction, *sāksī* and *anumantā* of the Gita, but not actively the Ishwara. Even his giving of consent is passive and his withdrawing of consent is only another passivity. All action subjective or objective is foreign to the Soul; it has neither an active will nor an active intelligence. It cannot therefore be the sole cause of the cosmos and the affirmation of a second cause becomes necessary. Not Soul alone by its nature of conscious knowledge, will and delight is the cause of the universe, but Soul and Nature are the dual cause, a passive Consciousness and an active Energy. So the Sankhya explains the existence of the cosmos.

But whence then come this conscious intelligence and conscious will which we perceive to be so large a part of our being and which we commonly and instinctively refer not to the Prakriti, but to the Purusha? According to the Sankhya this intelligence and will are entirely a part of the mechanical energy of Nature and are not properties of the soul; they are the principle of Buddhi, one of the twenty-four *tattvas*, the twenty-four cosmic principles. Prakriti in the evolution of the world bases herself with her three gunas in her as the original substance of things, unmanifest, inconscient, out of which are evolved successively five elemental conditions of energy or matter,—for Matter and Force are the same in the Sankhya philosophy. These are called by the names of the five concrete elements of ancient thought, ether, air, fire, water and earth; but it must be remembered that they are not elements in the modern scientific sense but subtle conditions of material energy and nowhere to be found in their purity in the gross material world. All objects are created by the combination of these five subtle conditions or elements. Again, each of these five is the base of one of five subtle properties of

energy or matter, sound, touch, form, taste and smell, which constitute the way in which the mind-sense perceives objects. Thus by these five elements of Matter put forth from primary energy and these five sense relations through which Matter is known is evolved what we would call in modern language the objective aspect of cosmic existence.

Thirteen other principles constitute the subjective aspect of the cosmic Energy,— Buddhi or Mahat, Ahankara, Manas and its ten sense-functions, five of knowledge, five of action. Manas, mind, is the original sense which perceives all objects and reacts upon them; for it has at once an inferent and an efferent activity, receives by perception what the Gita calls the outward touches of things, *bāhya sparśa*, and so forms its idea of the world and exercises its reactions of active vitality. But it specialises its most ordinary functions of reception by aid of the five perceptive senses of hearing, touch, sight, taste and smell, which make the five properties of things their respective objects, and specialises certain necessary vital functions of reaction by aid of the five active senses which operate for speech, locomotion, the seizing of things, ejection and generation. Buddhi, the discriminating principle, is at once intelligence and will; it is that power in Nature which discriminates and coordinates. Ahankara, the ego-sense, is the subjective principle in Buddhi by which the Purusha is induced to identify himself with Prakriti and her activities. But these subjective principles are themselves as mechanical, as much a part of the inconscient energy as those which constitute her objective operations. If we find it difficult to realise how intelligence and will can be properties of the mechanical Inconscient and themselves mechanical (*jada*), we have only to remember that modern Science itself has been driven to the same conclusion. Even in the mechanical action of the atom there is a power which can only be called an inconscient will and in all the works of Nature that pervading will does inconsciously the works of intelligence. What we call mental intelligence is precisely the same thing in its essence as that which discriminates and coordinates subconsciously in all the activities of the material universe, and conscious Mind itself, Science has tried

to demonstrate, is only a result and transcript of the mechanical action of the inconscient. But Sankhya explains what modern Science leaves in obscurity, the process by which the mechanical and inconscient takes on the appearance of consciousness. It is because of the reflection of Prakriti in Purusha; the light of consciousness of the Soul is attributed to the workings of the mechanical energy and it is thus that the Purusha, observing Nature as the witness and forgetting himself, is deluded with the idea generated in her that it is he who thinks, feels, wills, acts, while all the time the operation of thinking, feeling, willing, acting is conducted really by her and her three modes and not by himself at all. To get rid of this delusion is the first step towards the liberation of the soul from Nature and her works.

There are certainly plenty of things in our existence which the Sankhya does not explain at all or does not explain satisfactorily, but if all we need is a rational explanation of the cosmic processes in their principles as a basis for the great object common to the ancient philosophies, the liberation of the soul from the obsession of cosmic Nature, then the Sankhya explanation of the world and the Sankhya way of liberation seem as good and as effective as any other. What we do not seize at first is why it should bring in an element of pluralism into its dualism by affirming one Prakriti, but many Purushas. It would seem that the existence of one Purusha and one Prakriti should be sufficient to account for the creation and procession of the universe. But the Sankhya was bound to evolve pluralism by its rigidly analytical observation of the principles of things. First, actually, we find that there are many conscious beings in the world and each regards the same world in his own way and has his independent experience of its subjective and objective things, his separate dealings with the same perceptive and reactive processes. If there were only one Purusha, there would not be this central independence and separateness, but all would see the world in an identical fashion and with a common subjectivity and objectivity. Because Prakriti is one, all witness the same world; because her principles are everywhere the same, the general principles which constitute internal and external experience are the

same for all; but the infinite difference of view and outlook and attitude, action and experience and escape from experience,—a difference not of the natural operations which are the same but of the witnessing consciousness,—are utterly inexplicable except on the supposition that there is a multiplicity of witnesses, many Purushas. The separative ego-sense, we may say, is a sufficient explanation? But the ego-sense is a common principle of Nature and need not vary; for by itself it simply induces the Purusha to identify himself with Prakriti, and if there is only one Purusha, all beings would be one, joined and alike in their egoistic consciousness; however different in detail might be the mere forms and combinations of their natural parts, there would be no difference of soul-outlook and soul-experience. The variations of Nature ought not to make all this central difference, this multiplicity of outlook and from beginning to end this separateness of experience in one Witness, one Purusha. Therefore the pluralism of souls is a logical necessity to a pure Sankhya system divorced from the Vedantic elements of the ancient knowledge which first gave it birth. The cosmos and its process can be explained by the commerce of one Prakriti with one Purusha, but not the multiplicity of conscious beings in the cosmos.

There is another difficulty quite as formidable. Liberation is the object set before itself by this philosophy as by others. This liberation is effected, we have said, by the Purusha's withdrawal of his consent from the activities of Prakriti which she conducts only for his pleasure; but, in sum, this is only a way of speaking. The Purusha is passive and the act of giving or withdrawing consent cannot really belong to it, but must be a movement in Prakriti itself. If we consider, we shall see that it is, so far as it is an operation, a movement of reversal or recoil in the principle of Buddhi, the discriminative will. Buddhi has been lending itself to the perceptions of the mind-sense; it has been busy discriminating and coordinating the operations of the cosmic energy and by the aid of the ego-sense identifying the Witness with her works of thought, sense and action. It arrives by the process of discriminating things at the acid and dissolvent realisation that this identity is a delusion; it discriminates finally the Purusha

from Prakriti and perceives that all is mere disturbance of the equilibrium of the gunas; the Buddhi, at once intelligence and will, recoils from the falsehood which it has been supporting and the Purusha, ceasing to be bound, no longer associates himself with the interest of the mind in the cosmic play. The ultimate result will be that Prakriti will lose her power to reflect herself in the Purusha; for the effect of the ego-sense is destroyed and the intelligent will becoming indifferent ceases to be the means of her sanction: necessarily then her gunas must fall into a state of equilibrium, the cosmic play must cease, the Purusha return to his immobile repose. But if there were only the one Purusha and this recoil of the discriminating principle from its delusions took place, all cosmos would cease. As it is, we see that nothing of the kind happens. A few beings among innumerable millions attain to liberation or move towards it; the rest are in no way affected, nor is cosmic Nature in her play with them one whit inconvenienced by this summary rejection which should be the end of all her processes. Only by the theory of many independent Purushas can this fact be explained. The only at all logical explanation from the point of view of Vedantic monism is that of the Mayavada; but there the whole thing becomes a dream, both bondage and liberation are circumstances of the unreality, the empirical blunderings of Maya; in reality there is none freed, none bound. The more realistic Sankhya view of things does not admit this phantasmagoric idea of existence and therefore cannot adopt this solution. Here too we see that the multiplicity of souls is an inevitable conclusion from the data of the Sankhya analysis of existence.

The Gita starts from this analysis and seems at first, even in its setting forth of Yoga, to accept it almost wholly. It accepts Prakriti and her three gunas and twenty-four principles; accepts the attribution of all action to the Prakriti and the passivity of the Purusha; accepts the multiplicity of conscious beings in the cosmos; accepts the dissolution of the identifying ego-sense, the discriminating action of the intelligent will and the transcendence of the action of the three modes of energy as the means of liberation. The Yoga which Arjuna is asked to practise from

the outset is Yoga by the Buddhi, the intelligent will. But there is one deviation of capital importance,— the Purusha is regarded as one, not many; for the free, immaterial, immobile, eternal, immutable Self of the Gita, but for one detail, is a Vedantic description of the eternal, passive, immobile, immutable Purusha of the Sankhyas. But the capital difference is that there is One and not many. This brings in the whole difficulty which the Sankhya multiplicity avoids and necessitates a quite different solution. This the Gita provides by bringing into its Vedantic Sankhya the ideas and principles of Vedantic Yoga.

The first important new element we find is in the conception of Purusha itself. Prakriti conducts her activities for the pleasure of Purusha; but how is that pleasure determined? In the strict Sankhya analysis it can only be by a passive consent of the silent Witness. Passively the Witness consents to the action of the intelligent will and the ego-sense, passively he consents to the recoil of that will from the ego-sense. He is Witness, source of the consent, by reflection upholder of the work of Nature, *sākṣī anumantā bhartā*, but nothing more. But the Purusha of the Gita is also the Lord of Nature; he is Ishwara. If the operation of the intelligent will belongs to Nature, the origination and power of the will proceed from the conscious Soul; he is the Lord of Nature. If the act of intelligence of the Will is the act of Prakriti, the source and light of the intelligence are actively contributed by the Purusha; he is not only the Witness, but the Lord and Knower, master of knowledge and will, *jñātā īśvarah*. He is the supreme cause of the action of Prakriti, the supreme cause of its withdrawal from action. In the Sankhya analysis Purusha and Prakriti in their dualism are the cause of the cosmos; in this synthetic Sankhya Purusha by his Prakriti is the cause of the cosmos. We see at once how far we have travelled from the rigid purism of the traditional analysis.

But what of the one self immutable, immobile, eternally free, with which the Gita began? That is free from all change or involution in change, *avikārya*, unborn, unmanifested, the Brahman, yet it is that “by which all this is extended.” Therefore it would seem that the principle of the Ishwara is in its being;

if it is immobile, it is yet the cause and lord of all action and mobility. But how? And what of the multiplicity of conscious beings in the cosmos? They do not seem to be the Lord, but rather very much not the Lord, *anīśa*, for they are subject to the action of the three gunas and the delusion of the ego-sense, and if, as the Gita seems to say, they are all the one self, how did this involution, subjection and delusion come about or how is it explicable except by the pure passivity of the Purusha? And whence the multiplicity? or how is it that the one self in one body and mind attains to liberation while in others it remains under the delusion of bondage? These are difficulties which cannot be passed by without a solution.

The Gita answers them in its later chapters by an analysis of Purusha and Prakriti which brings in new elements very proper to a Vedantic Yoga, but alien to the traditional Sankhya. It speaks of three Purushas or rather a triple status of the Purusha. The Upanishads in dealing with the truths of Sankhya seem sometimes to speak only of two Purushas. There is one unborn of three colours, says a text, the eternal feminine principle of Prakriti with its three gunas, ever creating; there are two unborn, two Purushas, of whom one cleaves to and enjoys her, the other abandons her because he has enjoyed all her enjoyments. In another verse they are described as two birds on one tree, eternally yoked companions, one of whom eats the fruits of the tree,—the Purusha in Nature enjoying her cosmos,—the other eats not, but watches his fellow,—the silent Witness, withdrawn from the enjoyment; when the first sees the second and knows that all is his greatness, then he is delivered from sorrow. The point of view in the two verses is different, but they have a common implication. One of the birds is the eternally silent, unbound Self or Purusha by whom all this is extended and he regards the cosmos he has extended, but is aloof from it; the other is the Purusha involved in Prakriti. The first verse indicates that the two are the same, represent different states, bound and liberated, of the same conscious being,—for the second Unborn has descended into the enjoyment of Nature and withdrawn from her; the other verse brings out what we would

not gather from the former, that in its higher status of unity the self is for ever free, inactive, unattached, though it descends in its lower being into the multiplicity of the creatures of Prakriti and withdraws from it by reversion in any individual creature to the higher status. This theory of the double status of the one conscious soul opens a door; but the process of the multiplicity of the One is still obscure.

To these two the Gita, developing the thought of other passages in the Upanishads,¹ adds yet another, the supreme, the Purushottama, the highest Purusha, whose greatness all this creation is. Thus there are three, the Kshara, the Akshara, the Uttama. Kshara, the mobile, the mutable is Nature, *svabhāva*, it is the various becoming of the soul; the Purusha here is the multiplicity of the divine Being; it is the Purusha multiple not apart from, but in Prakriti. Akshara, the immobile, the immutable, is the silent and inactive self, it is the unity of the divine Being, Witness of Nature, but not involved in its movement; it is the inactive Purusha free from Prakriti and her works. The Uttama is the Lord, the supreme Brahman, the supreme Self, who possesses both the immutable unity and the mobile multiplicity. It is by a large mobility and action of His nature, His energy, His will and power, that He manifests Himself in the world and by a greater stillness and immobility of His being that He is aloof from it; yet is He as Purushottama above both the aloofness from Nature and the attachment to Nature. This idea of the Purushottama, though continually implied in the Upanishads, is disengaged and definitely brought out by the Gita and has exercised a powerful influence on the later developments of the Indian religious consciousness. It is the foundation of the highest Bhaktiyoga which claims to exceed the rigid definitions of monistic philosophy; it is at the back of the philosophy of the devotional Puranas.

The Gita is not content, either, to abide within the Sankhya analysis of Prakriti; for that makes room only for the ego-sense and not for the multiple Purusha, which is there not a part of

¹ *Puruṣah . . . akṣarāt parataḥ parah*, — although the Akshara is supreme, there is a supreme Purusha higher than it, says the Upanishad.

Prakriti, but separate from her. The Gita affirms on the contrary that the Lord by His nature becomes the Jiva. How is that possible, since there are only the twenty-four principles of the cosmic Energy and no others? Yes, says the divine Teacher in effect, that is a perfectly valid account for the apparent operations of the cosmic Prakriti with its three gunas, and the relation attributed to Purusha and Prakriti there is also quite valid and of great use for the practical purposes of the involution and the withdrawal. But this is only the lower Prakriti of the three modes, the inconscient, the apparent; there is a higher, a supreme, a conscient and divine Nature, and it is that which has become the individual soul, the Jiva. In the lower nature each being appears as the ego, in the higher he is the individual Purusha. In other words multiplicity is part of the spiritual nature of the One. This individual soul is myself, in the creation it is a partial manifestation of me, *mamaiva amśah*, and it possesses all my powers; it is witness, giver of the sanction, upholder, knower, lord. It descends into the lower nature and thinks itself bound by action, so to enjoy the lower being: it can draw back and know itself as the passive Purusha free from all action. It can rise above the three gunas and, liberated from the bondage of action, yet possess action, even as I do myself, and by adoration of the Purushottama and union with him it can enjoy wholly its divine Nature.

Such is the analysis, not confining itself to the apparent cosmic process but penetrating into the occult secrets of super-conscious Nature, *uttamam rāhasyam*, by which the Gita finds its synthesis of Vedanta, Sankhya and Yoga, its synthesis of knowledge, works and devotion. By the pure Sankhya alone the combining of works and liberation is contradictory and impossible. By pure Monism alone the permanent continuation of works as a part of Yoga and the indulgence of devotion after perfect knowledge and liberation and union are attained, become impossible or at least irrational and otiose. The Sankhya knowledge of the Gita dissipates and the Yoga system of the Gita triumphs over all these obstacles.

IX

Sankhya, Yoga and Vedanta

THE WHOLE object of the first six chapters of the Gita is to synthetise in a large frame of Vedantic truth the two methods, ordinarily supposed to be diverse and even opposite, of the Sankhyas and the Yogins. The Sankhya is taken as the starting-point and the basis; but it is from the beginning and with a progressively increasing emphasis permeated with the ideas and methods of Yoga and remoulded in its spirit. The practical difference, as it seems to have presented itself to the religious minds of that day, lay first in this that Sankhya proceeded by knowledge and through the Yoga of the intelligence, while Yoga proceeded by works and the transformation of the active consciousness and, secondly,—a corollary of this first distinction,—that Sankhya led to entire passivity and the renunciation of works, *sannyāsa*, while Yoga held to be quite sufficient the inner renunciation of desire, the purification of the subjective principle which leads to action and the turning of works Godwards, towards the divine existence and towards liberation. Yet both had the same aim, the transcendence of birth and of this terrestrial existence and the union of the human soul with the Highest. This at least is the difference as it is presented to us by the Gita.

The difficulty which Arjuna feels in understanding any possible synthesis of these oppositions is an indication of the hard line that was driven in between these two systems in the normal ideas of the time. The Teacher sets out by reconciling works and the Yoga of the intelligence: the latter, he says, is far superior to mere works; it is by the Yoga of the Buddhi, by knowledge raising man out of the ordinary human mind and its desires into the purity and equality of the Brahmic condition free from all desire that works can be made acceptable. Yet are works a means of salvation, but works thus purified by knowledge.

Filled with the notions of the then prevailing culture, misled by the emphasis which the Teacher lays upon the ideas proper to Vedantic Sankhya, conquest of the senses, withdrawal from mind into the Self, ascent into the Brahmic condition, extinction of our lower personality in the Nirvana of impersonality,—for the ideas proper to Yoga are as yet subordinated and largely held back,—Arjuna is perplexed and asks, “If thou holdest the intelligence to be greater than works, why then dost thou appoint me to a terrible work? Thou seemest to bewilder my intelligence with a confused and mingled speech; tell me then decisively that one thing by which I may attain to my soul’s weal.”

In answer Krishna affirms that the Sankhya goes by knowledge and renunciation, the Yoga by works; but the real renunciation is impossible without Yoga, without works done as a sacrifice, done with equality and without desire of the fruit, with the perception that it is Nature which does the actions and not the soul; but immediately afterwards he declares that the sacrifice of knowledge is the highest, all work finds its consummation in knowledge, by the fire of knowledge all works are burnt up; therefore by Yoga works are renounced and their bondage overcome for the man who is in possession of his Self. Again Arjuna is perplexed; here are desireless works, the principle of Yoga, and renunciation of works, the principle of Sankhya, put together side by side as if part of one method, yet there is no evident reconciliation between them. For the kind of reconciliation which the Teacher has already given,—in outward inaction to see action still persisting and in apparent action to see a real inaction since the soul has renounced its illusion of the worker and given up works into the hands of the Master of sacrifice,—is for the practical mind of Arjuna too slight, too subtle and expressed almost in riddling words; he has not caught their sense or at least not penetrated into their spirit and reality. Therefore he asks again, “Thou declarest to me the renunciation of works, O Krishna, and again thou declarest to me Yoga; which one of these is the better way, that tell me with a clear decisiveness.”

The answer is important, for it puts the whole distinction

very clearly and indicates though it does not develop entirely the line of reconciliation. “Renunciation and Yoga of works both bring about the soul’s salvation, but of the two the Yoga of works is distinguished above the renunciation of works. He should be known as always a Sannyasin (even when he is doing action) who neither dislikes nor desires; for free from the dualities he is released easily and happily from the bondage. Children speak of Sankhya and Yoga apart from each other, not the wise; if a man applies himself integrally to one, he gets the fruit of both,” because in their integrality each contains the other. “The status which is attained by the Sankhya, to that the men of the Yoga also arrive; who sees Sankhya and Yoga as one, he sees. But renunciation is difficult to attain without Yoga; the sage who has Yoga attains soon to the Brahman; his self becomes the self of all existences (of all things that have become), and even though he does works, he is not involved in them.” He knows that the actions are not his, but Nature’s and by that very knowledge he is free; he has renounced works, does no actions, though actions are done through him; he becomes the Self, the Brahman, *brahmabhūta*, he sees all existences as becoming (*bhūtāni*) of that self-existent Being, his own only one of them, all their actions as only the development of cosmic Nature working through their individual nature and his own actions also as a part of the same cosmic activity. This is not the whole teaching of the Gita; for as yet there is only the idea of the immutable self or Purusha, the Akshara Brahman, and of Nature, Prakriti, as that which is responsible for the cosmos and not yet the idea, clearly expressed, of the Ishwara, the Purushottama; as yet only the synthesis of works and knowledge and not yet, in spite of certain hints, the introduction of the supreme element of devotion which becomes so important afterwards; as yet only the one inactive Purusha and the lower Prakriti and not yet the distinction of the triple Purusha and the double Prakriti. It is true the Ishwara is spoken of, but his relation to the self and nature is not yet made definite. The first six chapters only carry the synthesis so far as it can be carried without the clear expression and decisive entrance of these all-important truths

which, when they come in, must necessarily enlarge and modify, though without abolishing, these first reconciliations.

Twofold, says Krishna, is the self-application of the soul by which it enters into the Brahmic condition: "that of the Sankhyas by the Yoga of knowledge, that of the Yogins by the Yoga of works." This identification of Sankhya with Jnanayoga and of Yoga with the way of works is interesting; for it shows that quite a different order of ideas prevailed at that time from those we now possess as the result of the great Vedantic development of Indian thought, subsequent evidently to the composition of the Gita, by which the other Vedic philosophies fell into desuetude as practical methods of liberation. To justify the language of the Gita we must suppose that at that time it was the Sankhya method which was very commonly¹ adopted by those who followed the path of knowledge. Subsequently, with the spread of Buddhism, the Sankhya method of knowledge must have been much overshadowed by the Buddhistic. Buddhism, like the Sankhya non-Theistic and anti-Monistic, laid stress on the impermanence of the results of the cosmic energy, which it presented not as Prakriti but as Karma because the Buddhists admitted neither the Vedantic Brahman nor the inactive Soul of the Sankhyas, and it made the recognition of this impermanence by the discriminating mind its means of liberation. When the reaction against Buddhism arrived, it took up not the old Sankhya notion, but the Vedantic form popularised by Shankara who replaced the Buddhistic impermanence by the cognate Vedantic idea of illusion, Maya, and the Buddhistic idea of Non-Being, indefinable Nirvana, a negative Absolute, by the opposite and yet cognate Vedantic idea of the indefinable Being, Brahman, an ineffably positive Absolute in which all feature and action and energy cease because in That they never really existed and are mere illusions of the mind. It is the method of Shankara based upon these concepts of his philosophy, it is the renunciation of life as an illusion of which we ordinarily think when we speak

¹ The systems of the Puranas and Tantras are full of the ideas of the Sankhya, though subordinated to the Vedantic idea and mingled with many others.

now of the Yoga of knowledge. But in the time of the Gita Maya was evidently not yet quite the master word of the Vedantic philosophy, nor had it, at least with any decisive clearness, the connotation which Shankara brought out of it with such a luminous force and distinctness; for in the Gita there is little talk of Maya and much of Prakriti and, even, the former word is used as little more than an equivalent of the latter but only in its inferior status; it is the lower Prakriti of the three gunas, *traigunyamayī māyā*. Prakriti, not illusive Maya, is in the teaching of the Gita the effective cause of cosmic existence.

Still, whatever the precise distinctions of their metaphysical ideas, the practical difference between the Sankhya and Yoga as developed by the Gita is the same as that which now exists between the Vedantic Yogas of knowledge and of works, and the practical results of the difference are also the same. The Sankhya proceeded like the Vedantic Yoga of knowledge by the Buddhi, by the discriminating intelligence; it arrived by reflective thought, *vicāra*, at right discrimination, *viveka*, of the true nature of the soul and of the imposition on it of the works of Prakriti through attachment and identification, just as the Vedantic method arrives by the same means at the right discrimination of the true nature of the Self and of the imposition on it of cosmic appearances by mental illusion which leads to egoistic identification and attachment. In the Vedantic method Maya ceases for the soul by its return to its true and eternal status as the one Self, the Brahman, and the cosmic action disappears; in the Sankhya method the working of the *gunas* falls to rest by the return of the soul to its true and eternal status as the inactive Purusha and the cosmic action ends. The Brahman of the Mayavadins is silent, immutable and inactive; so too is the Purusha of the Sankhya; therefore for both ascetic renunciation of life and works is a necessary means of liberation. But for the Yoga of the Gita, as for the Vedantic Yoga of works, action is not only a preparation but itself the means of liberation; and it is the justice of this view which the Gita seeks to bring out with such an unceasing force and insistence,—an insistence, unfortunately, which could not prevail in India against the tremendous

tide of Buddhism,² was lost afterwards in the intensity of ascetic illusionism and the fervour of world-shunning saints and devotees and is only now beginning to exercise its real and salutary influence on the Indian mind. Renunciation is indispensable, but the true renunciation is the inner rejection of desire and egoism; without that the outer physical abandoning of works is a thing unreal and ineffective, with it it ceases even to be necessary, although it is not forbidden. Knowledge is essential, there is no higher force for liberation, but works with knowledge are also needed; by the union of knowledge and works the soul dwells entirely in the Brahmic status not only in repose and inactive calm, but in the very midst and stress and violence of action. Devotion is all-important, but works with devotion are also important; by the union of knowledge, devotion and works the soul is taken up into the highest status of the Ishwara to dwell there in the Purushottama who is master at once of the eternal spiritual calm and the eternal cosmic activity. This is the synthesis of the Gita.

But, apart from the distinction between the Sankhya way of knowledge and the Yoga way of works, there was another and similar opposition in the Vedanta itself, and this also the Gita has to deal with, to correct and to fuse into its large restatement of the Aryan spiritual culture. This was the distinction between Karmakanda and Jnanakanda, between the original thought that led to the philosophy of the Purva Mimansa, the Vedavada, and that which led to the philosophy of the Uttara Mimansa,³ the Brahmavada, between those who dwelt in the tradition of the Vedic hymns and the Vedic sacrifice and those who put these aside as a lower knowledge and laid stress on the lofty metaphysical knowledge which emerges from the Upanishads.

² At the same time the Gita seems to have largely influenced Mahayanist Buddhism and texts are taken bodily from it into the Buddhist Scriptures. It may therefore have helped largely to turn Buddhism, originally a school of quietistic and illuminated ascetics, into that religion of meditative devotion and compassionate action which has so powerfully influenced Asiatic culture.

³ Jaimini's idea of liberation is the eternal Brahmaloka in which the soul that has come to know Brahman still possesses a divine body and divine enjoyments. For the Gita the Brahmaloka is not liberation; the soul must pass beyond to the supracosmic status.

For the pragmatic mind of the Vedavadins the Aryan religion of the Rishis meant the strict performance of the Vedic sacrifices and the use of the sacred Vedic mantras in order to possess all human desires in this world, wealth, progeny, victory, every kind of good fortune, and the joys of immortality in Paradise beyond. For the idealism of the Brahnavadins this was only a preliminary preparation and the real object of man, true *puruṣārtha*, began with his turning to the knowledge of the Brahman which would give him the true immortality of an ineffable spiritual bliss far beyond the lower joys of this world or of any inferior heaven. Whatever may have been the true and original sense of the Veda, this was the distinction which had long established itself and with which therefore the Gita has to deal.

Almost the first word of the synthesis of works and knowledge is a strong, almost a violent censure and repudiation of the Vedavada, “this flowery word which they declare who have not clear discernment, devoted to the creed of the Veda, whose creed is that there is nothing else, souls of desire, seekers of Paradise, — it gives the fruits of the works of birth, it is multifarious with specialities of rites, it is directed to enjoyment and lordship as its goal.” The Gita even seems to go on to attack the Veda itself which, though it has been practically cast aside, is still to Indian sentiment intangible, inviolable, the sacred origin and authority for all its philosophy and religion. “The action of the three gunas is the subject matter of the Veda; but do thou become free from the triple guna, O Arjuna.” The Vedas in the widest terms, “all the Vedas”, — which might well include the Upanishads also and seems to include them, for the general term *Śruti* is used later on,— are declared to be unnecessary for the man who knows. “As much use as there is in a well with water in flood on every side, so much is there in all the Vedas for the Brahmin who has the knowledge.” Nay, the Scriptures are even a stumbling-block; for the letter of the Word — perhaps because of its conflict of texts and its various and mutually dissentient interpretations — bewilders the understanding, which can only find certainty and concentration by the light within. “When thy intelligence shall cross beyond the whorl of delusion, then shalt thou become

indifferent to Scripture heard or that which thou hast yet to hear, *gantāsi nirvedam̄ śrotavyasya śrutasya ca*. When thy intelligence which is bewildered by the Sruti, *śrutivipratipannā*, shall stand unmoving and stable in Samadhi, then shalt thou attain to Yoga.” So offensive is all this to conventional religious sentiment that attempts are naturally made by the convenient and indispensable human faculty of text-twisting to put a different sense on some of these verses, but the meaning is plain and hangs together from beginning to end. It is confirmed and emphasised by a subsequent passage in which the knowledge of the knower is described as passing beyond the range of Veda and Upanishad, *śabdabrahmātivartate*.

Let us see, however, what all this means; for we may be sure that a synthetic and catholic system like the Gita’s will not treat such important parts of the Aryan culture in a spirit of mere negation and repudiation. The Gita has to synthetise the Yoga doctrine of liberation by works and the Sankhya doctrine of liberation by knowledge; it has to fuse *karma* with *jñāna*. It has at the same time to synthetise the Purusha and Prakriti idea common to Sankhya and Yoga with the Brahmanava of the current Vedanta in which the Purusha, Deva, Ishwara,—supreme Soul, God, Lord,—of the Upanishads all became merged in the one all-swallowing concept of the immutable Brahman; and it has to bring out again from its overshadowing by that concept but not with any denial of it the Yoga idea of the Lord or Ishwara. It has too its own luminous thought to add, the crown of its synthetic system, the doctrine of the Purushottama and of the triple Purusha for which, though the idea is there, no precise and indisputable authority can be easily found in the Upanishads and which seems indeed at first sight to be in contradiction with that text of the Sruti where only two Purushas are recognised. Moreover, in synthetising works and knowledge it has to take account not only of the opposition of Yoga and Sankhya, but of the opposition of works to knowledge in Vedanta itself, where the connotation of the two words and therefore their point of conflict is not quite the same as the point of the Sankhya-Yoga opposition. It is not surprising at all, one may observe in passing,

that with the conflict of so many philosophical schools all founding themselves on the texts of the Veda and Upanishads, the Gita should describe the understanding as being perplexed and confused, led in different directions by the Sruti, *śrutivipratipannā*. What battles are even now delivered by Indian pundits and metaphysicians over the meaning of the ancient texts and to what different conclusions they lead! The understanding may well get disgusted and indifferent, *gantāsi nirvedam*, refuse to hear any more texts new or old, *śrotavyasya śrutasya ca*, and go into itself to discover the truth in the light of a deeper and inner and direct experience.

In the first six chapters the Gita lays a large foundation for its synthesis of works and knowledge, its synthesis of Sankhya, Yoga and Vedanta. But first it finds that *karma*, works, has a particular sense in the language of the Vedantins; it means the Vedic sacrifices and ceremonies or at most that and the ordering of life according to the Grihyasutras in which these rites are the most important part, the religious kernel of the life. By works the Vedantins understood these religious works, the sacrificial system, the *yajña*, full of a careful order, *vidhi*, of exact and complicated rites, *kriyā-viṣeṣa-bahulām*. But in Yoga works had a much wider significance. The Gita insists on this wider significance; in our conception of spiritual activity all works have to be included, *sarva-karmāṇi*. At the same time it does not, like Buddhism, reject the idea of the sacrifice, it prefers to uplift and enlarge it. Yes, it says in effect, not only is sacrifice, *yajña*, the most important part of life, but all life, all works should be regarded as sacrifice, are *yajña*, though by the ignorant they are performed without the higher knowledge and by the most ignorant not in the true order, *avidhi-pūrvakam*. Sacrifice is the very condition of life; with sacrifice as their eternal companion the Father of creatures created the peoples. But the sacrifices of the Vedavadins are offerings of desire directed towards material rewards, desire eager for the result of works, desire looking to a larger enjoyment in Paradise as immortality and highest salvation. This the system of the Gita cannot admit; for that in its very inception starts with the renunciation of desire, with its

rejection and destruction as the enemy of the soul. The Gita does not deny the validity even of the Vedic sacrificial works; it admits them, it admits that by these means one may get enjoyment here and Paradise beyond; it is I myself, says the divine Teacher, who accept these sacrifices and to whom they are offered, I who give these fruits in the form of the gods since so men choose to approach me. But this is not the true road, nor is the enjoyment of Paradise the liberation and fulfilment which man has to seek. It is the ignorant who worship the gods, not knowing whom they are worshipping ignorantly in these divine forms; for they are worshipping, though in ignorance, the One, the Lord, the only Deva, and it is he who accepts their offering. To that Lord must the sacrifice be offered, the true sacrifice of all the life's energies and activities, with devotion, without desire, for His sake and for the welfare of the peoples. It is because the Vedavada obscures this truth and with its tangle of ritual ties man down to the action of the three gunas that it has to be so severely censured and put roughly aside; but its central idea is not destroyed; transfigured and uplifted, it is turned into a most important part of the true spiritual experience and of the method of liberation.

The Vedantic idea of knowledge does not present the same difficulties. The Gita takes it over at once and completely and throughout the six chapters quietly substitutes the still immutable Brahman of the Vedantins, the One without a second immanent in all cosmos, for the still immutable but multiple Purusha of the Sankhyas. It accepts throughout these chapters knowledge and realisation of the Brahman as the most important, the indispensable means of liberation, even while it insists on desireless works as an essential part of knowledge. It accepts equally Nirvana of the ego in the infinite equality of the immutable, impersonal Brahman as essential to liberation; it practically identifies this extinction with the Sankhya return of the inactive immutable Purusha upon itself when it emerges out of identification with the actions of Prakriti; it combines and fuses the language of the Vedanta with the language of the Sankhya, as had already indeed been done by certain of the

Upanishads.⁴ But still there is a defect in the Vedantic position which has to be overcome. We may, perhaps, conjecture that at this time the Vedanta had not yet redeveloped the later theistic tendencies which in the Upanishads are already present as an element, but not so prominent as in the Vaishnava philosophies of the later Vedantins where they become indeed not only prominent but paramount. We may take it that the orthodox Vedanta was, at any rate in its main tendencies, pantheistic at the basis, monistic at the summit.⁵ It knew of the Brahman, one without a second; it knew of the Gods, Vishnu, Shiva, Brahma and the rest, who all resolve themselves into the Brahman; but the one supreme Brahman as the one Ishwara, Purusha, Deva — words often applied to it in the Upanishads and justifying to that extent, yet passing beyond the Sankhya and the theistic conceptions — was an idea that had fallen from its pride of place;⁶ the names could only be applied in a strictly logical Brahmanava to subordinate or inferior phases of the Brahman-idea. The Gita proposes not only to restore the original equality of these names and therefore of the conceptions they indicate, but to go a step farther. The Brahman in its supreme and not in any lower aspect has to be presented as the Purusha with the lower Prakriti for its Maya, so to synthetise thoroughly Vedanta and Sankhya, and as Ishwara, so to synthetise thoroughly both with Yoga; but the Gita is going to represent the Ishwara, the Purushottama, as higher even than the still and immutable Brahman, and the loss of ego in the impersonal comes in at the beginning as only a great initial and necessary step towards union with the Purushottama. For the Purushottama is the supreme Brahman. It therefore passes boldly beyond the Veda and the Upanishads as they were taught by their best authorised exponents and affirms a teaching of its own which it has developed from them,

⁴ Especially the Swetasvatara.

⁵ The pantheistic formula is that God and the All are one, the monistic adds that God or Brahman alone exists and the cosmos is only an illusory appearance or else a real but partial manifestation.

⁶ This is a little doubtful, but we may say at least that there was a strong tendency in that direction of which Shankara's philosophy was the last culmination.

but which may not be capable of being fitted in within the four corners of their meaning as ordinarily interpreted by the Vedantins.⁷ In fact without this free and synthetic dealing with the letter of the Scripture a work of large synthesis in the then state of conflict between numerous schools and with the current methods of Vedic exegesis would have been impossible.

The Gita in later chapters speaks highly of the Veda and the Upanishads. They are divine Scriptures, they are the Word. The Lord himself is the knower of Veda and the author of Vedanta, *vedavid vedāntakṛt*; the Lord is the one object of knowledge in all the Vedas, *sarvair vedair aham eva vedyah*, a language which implies that the word Veda means the book of knowledge and that these Scriptures deserve their appellation. The Purushottama from his high supremacy above the Immutable and the mutable has extended himself in the world and in the Veda. Still the letter of the Scripture binds and confuses, as the apostle of Christianity warned his disciples when he said that the letter killeth and it is the spirit that saves; and there is a point beyond which the utility of the Scripture itself ceases. The real source of knowledge is the Lord in the heart; "I am seated in the heart of every man and from me is knowledge," says the Gita; the Scripture is only a verbal form of that inner Veda, of that self-luminous Reality, it is *śabdabrahma*: the mantra, says the Veda, has risen from the heart, from the secret place where is the seat of the truth, *sadanād rtasya, guhāyām*. That origin is its sanction; but still the infinite Truth is greater than its word. Nor shall you say of any Scripture that it alone is all-sufficient and no other truth can be admitted, as the Vedavadins said of the Veda, *nānyad astīti vādinaḥ*. This is a saving and liberating word which must be applied to all the Scriptures of the world. Take all the Scriptures that are or have been, Bible and Koran

⁷ In reality the idea of the Purushottama is already announced in the Upanishads, though in a more scattered fashion than in the Gita and, as in the Gita, the Supreme Brahman or Supreme Purusha is constantly described as containing in himself the opposition of the Brahman with qualities and without qualities, *nirguna gunī*. He is not one of these things to the exclusion of the other which seems to our intellect to be its contrary.

and the books of the Chinese, Veda and Upanishads and Purana and Tantra and Shastra and the Gita itself and the sayings of thinkers and sages, prophets and Avatars, still you shall not say that there is nothing else or that the truth your intellect cannot find there is not true because you cannot find it there. That is the limited thought of the sectarian or the composite thought of the eclectic religionist, not the untrammelled truth-seeking of the free and illumined mind and God-experienced soul. Heard or unheard before, that always is the truth which is seen by the heart of man in its illumined depths or heard within from the Master of all knowledge, the knower of the eternal Veda.

X

The Yoga of the Intelligent Will

I HAVE had to deviate in the last two essays and to drag the reader with me into the arid tracts of metaphysical dogma,— however cursorily and with a very insufficient and superficial treatment,— so that we might understand why the Gita follows the peculiar line of development it has taken, working out first a partial truth with only subdued hints of its deeper meaning, then returning upon its hints and bringing out their significance until it rises to its last great suggestion, its supreme mystery which it does not work out at all, but leaves to be lived out, as the later ages of Indian spirituality tried to live it out in great waves of love, of surrender, of ecstasy. Its eye is always on its synthesis and all its strains are the gradual preparation of the mind for its high closing note.

I have declared to you the poise of a self-liberating intelligence in Sankhya, says the divine Teacher to Arjuna. I will now declare to you another poise in Yoga. You are shrinking from the results of your works, you desire other results and turn from your right path in life because it does not lead you to them. But this idea of works and their result, desire of result as the motive, the work as a means for the satisfaction of desire, is the bondage of the ignorant who know not what works are, nor their true source, nor their real operation, nor their high utility. My Yoga will free you from all bondage of the soul to its works, *karma-bandham prahāsyasi*. You are afraid of many things, afraid of sin, afraid of suffering, afraid of hell and punishment, afraid of God, afraid of this world, afraid of the hereafter, afraid of yourself. What is it that you are not afraid of at this moment, you the Aryan fighter, the world's chief hero? But this is the great fear which besieges humanity, its fear of sin and suffering now and hereafter, its fear in a world of whose true nature it is ignorant, of a God whose true being also it has not seen and

whose cosmic purpose it does not understand. My Yoga will deliver you from the great fear and even a little of it will bring deliverance. When you have once set out on this path, you will find that no step is lost; every least movement will be a gain; you will find there no obstacle that can baulk you of your advance. A bold and absolute promise and one to which the fearful and hesitating mind beset and stumbling in all its paths cannot easily lend an assured trust; nor is the large and full truth of it apparent unless with these first words of the message of the Gita we read also the last, "Abandon all laws of conduct and take refuge in Me alone; I will deliver you from all sin and evil; do not grieve."

But it is not with this deep and moving word of God to man, but rather with the first necessary rays of light on the path, directed not like that to the soul, but to the intellect, that the exposition begins. Not the Friend and Lover of man speaks first, but the guide and teacher who has to remove from him his ignorance of his true self and of the nature of the world and of the springs of his own action. For it is because he acts ignorantly, with a wrong intelligence and therefore a wrong will in these matters, that man is or seems to be bound by his works; otherwise works are no bondage to the free soul. It is because of this wrong intelligence that he has hope and fear, wrath and grief and transient joy; otherwise works are possible with a perfect serenity and freedom. Therefore it is the Yoga of the buddhi, the intelligence, that is first enjoined on Arjuna. To act with right intelligence and, therefore, a right will, fixed in the One, aware of the one self in all and acting out of its equal serenity, not running about in different directions under the thousand impulses of our superficial mental self, is the Yoga of the intelligent will.

There are, says the Gita, two types of intelligence in the human being. The first is concentrated, poised, one, homogeneous, directed singly towards the Truth; unity is its characteristic, concentrated fixity is its very being. In the other there is no single will, no unified intelligence, but only an endless number of ideas many-branching, coursing about, that is to say, in this or that direction in pursuit of the desires which are offered to it by life and by the environment. Buddhi, the word used, means, properly

speaking, the mental power of understanding but it is evidently used by the Gita in a large philosophic sense for the whole action of the discriminating and deciding mind which determines both the direction and use of our thoughts and the direction and use of our acts; thought, intelligence, judgment, perceptive choice and aim are all included in its functioning: for the characteristic of the unified intelligence is not only concentration of the mind that knows, but especially concentration of the mind that decides and persists in the decision, *vyavasāya*, while the sign of the dissipated intelligence is not so much even discursiveness of the ideas and perceptions as discursiveness of the aims and desires, therefore of the will. Will, then, and knowledge are the two functions of the Buddhi. The unified intelligent will is fixed in the enlightened soul, it is concentrated in inner self-knowledge; the many-branching and multifarious, busied with many things, careless of the one thing needful is on the contrary subject to the restless and discursive action of the mind, dispersed in outward life and works and their fruits. "Works are far inferior," says the Teacher, "to Yoga of the intelligence; desire rather refuge in the intelligence; poor and wretched souls are they who make the fruit of their works the object of their thoughts and activities."

We must remember the psychological order of the Sankhya which the Gita accepts. On one side there is the Purusha, the soul calm, inactive, immutable, one, not evolutive; on the other side there is Prakriti or Nature-force inert without the conscious Soul, active but only by juxtaposition to that consciousness, by contact with it, as we would say, not so much one at first as indeterminate, triple in its qualities, capable of evolution and involution. The contact of soul and nature generates the play of subjectivity and objectivity which is our experience of being; what is to us the subjective first evolves, because the soul-consciousness is the first cause, inconscient Nature-force only the second and dependent cause; but still it is Nature and not Soul which supplies the instruments of our subjectivity. First in order come Buddhi, discriminative or determinative power evolving out of Nature-force, and its subordinate power of self-discriminating ego. Then as a secondary evolution there arises

out of these the power which seizes the discriminations of objects, sense-mind or Manas,— we must record the Indian names because the corresponding English words are not real equivalents. As a tertiary evolution out of sense-mind we have the specialising organic senses, ten in number, five of perception, five of action; next the powers of each sense of perception, sound, form, scent, etc., which give their value to objects for the mind and make things what they are to our subjectivity,— and, as the substantial basis of these, the primary conditions of the objects of sense, the five elements of ancient philosophy or rather elementary conditions of Nature, *pañca bhūta*, which constitute objects by their various combination.

Reflected in the pure consciousness of Purusha these degrees and powers of Nature-force become the material of our impure subjectivity, impure because its action is dependent on the perceptions of the objective world and on their subjective reactions. Buddhi, which is simply the determinative power that determines all inertly out of indeterminate inconscient Force, takes for us the form of intelligence and will. Manas, the inconscient force which seizes Nature's discriminations by objective action and reaction and grasps at them by attraction, becomes sense-perception and desire, the two crude terms or degradations of intelligence and will,— becomes the sense-mind sensational, emotive, volitional in the lower sense of wish, hope, longing, passion, vital impulsion, all the deformations (*vikāra*) of will. The senses become the instruments of sense-mind, the perceptive five of our sense-knowledge, the active five of our impulsions and vital habits, mediators between the subjective and objective; the rest are the objects of our consciousness, *viśayas* of the senses.

This order of evolution seems contrary to that which we perceive as the order of the material evolution; but if we remember that even Buddhi is in itself an inert action of inconscient Nature and that there is certainly in this sense an inconscient will and intelligence, a discriminative and determinative force even in the atom, if we observe the crude inconscient stuff of sensation, emotion, memory, impulsion in the plant and in the subconscious forms of existence, if we look at these powers

of Nature-force assuming the forms of our subjectivity in the evolving consciousness of animal and man, we shall see that the Sankhya system squares well enough with all that modern enquiry has elicited by its observation of material Nature. In the evolution of the soul back from Prakriti towards Purusha, the reverse order has to be taken to the original Nature-evolution, and that is how the Upanishads and the Gita following and almost quoting the Upanishads state the ascending order of our subjective powers. "Supreme, they say," beyond their objects "are the senses, supreme over the senses the mind, supreme over the mind the intelligent will: that which is supreme over the intelligent will, is he," — is the conscious self, the Purusha. Therefore, says the Gita, it is this Purusha, this supreme cause of our subjective life which we have to understand and become aware of by the intelligence; in that we have to fix our will. So holding our lower subjective self in Nature firmly poised and stilled by means of the greater really conscient self, we can destroy the restless ever-active enemy of our peace and self-mastery, the mind's desire.

For evidently there are two possibilities of the action of the intelligent will. It may take its downward and outward orientation towards a discursive action of the perceptions and the will in the triple play of Prakriti, or it may take its upward and inward orientation towards a settled peace and equality in the calm and immutable purity of the conscious silent soul no longer subject to the distractions of Nature. In the former alternative the subjective being is at the mercy of the objects of sense, it lives in the outward contact of things. That life is the life of desire. For the senses excited by their objects create a restless or often violent disturbance, a strong or even headlong outward movement towards the seizure of these objects and their enjoyment, and they carry away the sense-mind, "as the winds carry away a ship upon the sea"; the mind subjected to the emotions, passions, longings, impulsions awakened by this outward movement of the senses carries away similarly the intelligent will, which loses therefore its power of calm discrimination and mastery. Subjection of the soul to the confused play

of the three gunas of Prakriti in their eternal entangled twining and wrestling, ignorance, a false, sensuous, objective life of the soul, enslavement to grief and wrath and attachment and passion, are the results of the downward trend of the buddhi,—the troubled life of the ordinary, unenlightened, undisciplined man. Those who like the Vedavadins make sense-enjoyment the object of action and its fulfilment the highest aim of the soul, are misleading guides. The inner subjective self-delight independent of objects is our true aim and the high and wide poise of our peace and liberation.

Therefore, it is the upward and inward orientation of the intelligent will that we must resolutely choose with a settled concentration and perseverance, *vyavasāya*; we must fix it firmly in the calm self-knowledge of the Purusha. The first movement must be obviously to get rid of desire which is the whole root of the evil and suffering; and in order to get rid of desire, we must put an end to the cause of desire, the rushing out of the senses to seize and enjoy their objects. We must draw them back when they are inclined thus to rush out, draw them away from their objects,—as the tortoise draws in his limbs into the shell, so these into their source, quiescent in the mind, the mind quiescent in intelligence, the intelligence quiescent in the soul and its self-knowledge, observing the action of Nature, but not subject to it, not desiring anything that the objective life can give.

It is not an external asceticism, the physical renunciation of the objects of sense that I am teaching, suggests Krishna immediately to avoid a misunderstanding which is likely at once to arise. Not the renunciation of the Sankhyas or the austerities of the rigid ascetic with his fasts, his maceration of the body, his attempt to abstain even from food; that is not the self-discipline or the abstinence which I mean, for I speak of an inner withdrawal, a renunciation of desire. The embodied soul, having a body, has to support it normally by food for its normal physical action; by abstention from food it simply removes from itself the physical contact with the object of sense, but does not get rid of the inner relation which makes that contact hurtful. It retains the pleasure of the sense in the object, the *rasa*, the

liking and disliking,—for *rasa* has two sides; the soul must, on the contrary, be capable of enduring the physical contact without suffering inwardly this sensuous reaction. Otherwise there is *nivṛtti*, cessation of the object, *viṣayā vinivartante*, but no subjective cessation, no *nivṛtti* of the mind; but the senses are of the mind, subjective, and subjective cessation of the *rasa* is the only real sign of mastery. But how is this desireless contact with objects, this unsensuous use of the senses possible? It is possible, *param dr̥ṣṭvā*, by the vision of the supreme,—*param*, the Soul, the Purusha,—and by living in the Yoga, in union or oneness of the whole subjective being with that, through the Yoga of the intelligence; for the one Soul is calm, satisfied in its own delight, and that delight free from duality can take, once we see this supreme thing in us and fix the mind and will on that, the place of the sensuous object-ridden pleasures and repulsions of the mind. This is the true way of liberation.

Certainly self-discipline, self-control is never easy. All intelligent human beings know that they must exercise some control over themselves and nothing is more common than this advice to control the senses; but ordinarily it is only advised imperfectly and practised imperfectly in the most limited and insufficient fashion. Even, however, the sage, the man of clear, wise and discerning soul who really labours to acquire complete self-mastery finds himself hurried and carried away by the senses. That is because the mind naturally lends itself to the senses; it observes the objects of sense with an inner interest, settles upon them and makes them the object of absorbing thought for the intelligence and of strong interest for the will. By that attachment comes, by attachment desire, by desire distress, passion and anger when the desire is not satisfied or is thwarted or opposed, and by passion the soul is obscured, the intelligence and will forget to see and be seated in the calm observing soul; there is a fall from the memory of one's true self, and by that lapse the intelligent will is also obscured, destroyed even. For, for the time being, it no longer exists to our memory of ourselves, it disappears in a cloud of passion; we become passion, wrath, grief and cease to be self and intelligence and will. This then must be prevented

and all the senses brought utterly under control; for only by an absolute control of the senses can the wise and calm intelligence be firmly established in its proper seat.

This cannot be done perfectly by the act of the intelligence itself, by a merely mental self-discipline; it can only be done by Yoga with something which is higher than itself and in which calm and self-mastery are inherent. And this Yoga can only arrive at its success by devoting, by consecrating, by giving up the whole self to the Divine, "to Me", says Krishna; for the Liberator is within us, but it is not our mind, nor our intelligence, nor our personal will,—they are only instruments. It is the Lord in whom, as we are told in the end, we have utterly to take refuge. And for that we must at first make him the object of our whole being and keep in soul-contact with him. This is the sense of the phrase "he must sit firm in Yoga, wholly given up to Me"; but as yet it is the merest passing hint after the manner of the Gita, three words only which contain in seed the whole gist of the highest secret yet to be developed. *Yukta āsīta matparah*.

If this is done, then it becomes possible to move among the objects of sense, in contact with them, acting on them, but with the senses entirely under the control of the subjective self,—not at the mercy of the objects and their contacts and reactions,—and that self again obedient to the highest self, the Purusha. Then, free from reactions, the senses will be delivered from the affections of liking and disliking, escape the duality of positive and negative desire, and calm, peace, clearness, happy tranquillity, *ātmaprasāda*, will settle upon the man. That clear tranquillity is the source of the soul's felicity; all grief begins to lose its power of touching the tranquil soul; the intelligence is rapidly established in the peace of the self; suffering is destroyed. It is this calm, desireless, griefless fixity of the buddhi in self-poise and self-knowledge to which the Gita gives the name of Samadhi.

The sign of the man in Samadhi is not that he loses consciousness of objects and surroundings and of his mental and physical self and cannot be recalled to it even by burning or torture of the body,—the ordinary idea of the matter; trance

is a particular intensity, not the essential sign. The test is the expulsion of all desires, their inability to get at the mind, and it is the inner state from which this freedom arises, the delight of the soul gathered within itself with the mind equal and still and high-poised above the attractions and repulsions, the alternations of sunshine and storm and stress of the external life. It is drawn inward even when acting outwardly; it is concentrated in self even when gazing out upon things; it is directed wholly to the Divine even when to the outward vision of others busy and preoccupied with the affairs of the world. Arjuna, voicing the average human mind, asks for some outward, physical, practically discernible sign of this great Samadhi; how does such a man speak, how sit, how walk? No such signs can be given, nor does the Teacher attempt to supply them; for the only possible test of its possession is inward and that there are plenty of hostile psychological forces to apply. Equality is the great stamp of the liberated soul and of that equality even the most discernible signs are still subjective. "A man with mind untroubled by sorrows, who has done with desire for pleasures, from whom liking and wrath and fear have passed away, such is the sage whose understanding has become founded in stability." He is "without the triple action of the qualities of Prakriti, without the dualities, ever based in his true being, without getting or having, possessed of his self." For what gettings and havings has the free soul? Once we are possessed of the Self, we are in possession of all things.

And yet he does not cease from work and action. There is the originality and power of the Gita, that having affirmed this static condition, this superiority to nature, this emptiness even of all that constitutes ordinarily the action of Nature for the liberated soul, it is still able to vindicate for it, to enjoin on it even the continuance of works and thus avoid the great defect of the merely quietistic and ascetic philosophies,—the defect from which we find them today attempting to escape. "Thou hast a right to action, but only to action, never to its fruits; let not the fruits of thy works be thy motive, neither let there be in thee any attachment to inactivity." Therefore it is not the works practised with desire by the Vedavadins, it is not the

claim for the satisfaction of the restless and energetic mind by a constant activity, the claim made by the practical or the kinetic man, which is here enjoined. "Fixed in Yoga do thy actions, having abandoned attachment, having become equal in failure and success; for it is equality that is meant by Yoga." Action is distressed by the choice between a relative good and evil, the fear of sin and the difficult endeavour towards virtue? But the liberated who has united his reason and will with the Divine, casts away from him even here in this world of dualities both good doing and evil doing; for he rises to a higher law beyond good and evil, founded in the liberty of self-knowledge. Such desireless action can have no decisiveness, no effectiveness, no efficient motive, no large or vigorous creative power? Not so; action done in Yoga is not only the highest but the wisest, the most potent and efficient even for the affairs of the world; for it is informed by the knowledge and will of the Master of works: "Yoga is skill in works." But all action directed towards life leads away from the universal aim of the Yогin which is by common consent to escape from bondage to this distressed and sorrowful human birth? Not so, either; the sages who do works without desire for fruits and in Yoga with the Divine are liberated from the bondage of birth and reach that other perfect status in which there are none of the maladies which afflict the mind and life of a suffering humanity.

The status he reaches is the Brahmic condition; he gets to firm standing in the Brahman, *brāhma sthiti*. It is a reversal of the whole view, experience, knowledge, values, seeings of earth-bound creatures. This life of the dualities which is to them their day, their waking, their consciousness, their bright condition of activity and knowledge, is to him a night, a troubled sleep and darkness of the soul; that higher being which is to them a night, a sleep in which all knowledge and will cease, is to the self-mastering sage his waking, his luminous day of true being, knowledge and power. They are troubled and muddy waters disturbed by every little inrush of desire; he is an ocean of wide being and consciousness which is ever being filled, yet ever motionless in its large poise of his soul; all the desires of the

world enter into him as waters into the sea, yet he has no desire nor is troubled. For while they are filled with the troubling sense of ego and mine and thine, he is one with the one Self in all and has no "I" or "mine". He acts as others, but he has abandoned all desires and their longings. He attains to the great peace and is not bewildered by the shows of things; he has extinguished his individual ego in the One, lives in that unity and, fixed in that status at his end, can attain to extinction in the Brahman, Nirvana,— not the negative self-annihilation of the Buddhists, but the great immergence of the separate personal self into the vast reality of the one infinite impersonal Existence.

Such, subtly unifying Sankhya, Yoga and Vedanta, is the first foundation of the teaching of the Gita. It is far from being all, but it is the first indispensable practical unity of knowledge and works with a hint already of the third crowning intensest element in the soul's completeness, divine love and devotion.

Works and Sacrifice

THE YOGA of the intelligent will and its culmination in the Brahmic status, which occupies all the close of the second chapter, contains the seed of much of the teaching of the Gita,—its doctrine of desireless works, of equality, of the rejection of outward renunciation, of devotion to the Divine; but as yet all this is slight and obscure. What is most strongly emphasised as yet is the withdrawal of the will from the ordinary motive of human activities, desire, from man's normal temperament of the sense-seeking thought and will with its passions and ignorance, and from its customary habit of troubled many-branching ideas and wishes to the desireless calm unity and passionless serenity of the Brahmic poise. So much Arjuna has understood. He is not unfamiliar with all this; it is the substance of the current teaching which points man to the path of knowledge and to the renunciation of life and works as his way of perfection. The intelligence withdrawing from sense and desire and human action and turning to the Highest, to the One, to the actionless Purusha, to the immobile, to the featureless Brahman, that surely is the eternal seed of knowledge. There is no room here for works, since works belong to the Ignorance; action is the very opposite of knowledge; its seed is desire and its fruit is bondage. That is the orthodox philosophical doctrine, and Krishna seems quite to admit it when he says that works are far inferior to the Yoga of the intelligence. And yet works are insisted upon as part of the Yoga; so that there seems to be in this teaching a radical inconsistency. Not only so; for some kind of work no doubt may persist for a while, the minimum, the most inoffensive; but here is a work wholly inconsistent with knowledge, with serenity and with the motionless peace of the self-delighted soul,—a work terrible, even monstrous, a bloody strife, a ruthless battle, a giant massacre. Yet it is this that is

enjoined, this that it is sought to justify by the teaching of inner peace and desireless equality and status in the Brahman! Here then is an unreconciled contradiction. Arjuna complains that he has been given a contradictory and confusing doctrine, not the clear, strenuously single road by which the human intelligence can move straight and trenchantly to the supreme good. It is in answer to this objection that the Gita begins at once to develop more clearly its positive and imperative doctrine of Works.

The Teacher first makes a distinction between the two means of salvation on which in this world men can concentrate separately, the Yoga of knowledge, the Yoga of works, the one implying, it is usually supposed, renunciation of works as an obstacle to salvation, the other accepting works as a means of salvation. He does not yet insist strongly on any fusion of them, on any reconciliation of the thought that divides them, but begins by showing that the renunciation of the Sankhyas, the physical renunciation, Sannyasa, is neither the only way, nor at all the better way. *Naiṣkarmya*, a calm voidness from works, is no doubt that to which the soul, the Purusha has to attain; for it is Prakriti which does the work and the soul has to rise above involution in the activities of the being and attain to a free serenity and poise watching over the operations of Prakriti, but not affected by them. That, and not cessation of the works of Prakriti, is what is really meant by the soul's *naiṣkarmya*. Therefore it is an error to think that by not engaging in any kind of action this actionless state of the soul can be attained and enjoyed. Mere renunciation of works is not a sufficient, not even quite a proper means for salvation. "Not by abstention from works does a man enjoy actionlessness, nor by mere renunciation (of works) does he attain to his perfection," — to *siddhi*, the accomplishment of the aims of his self-discipline by Yoga.

But at least it must be one necessary means, indispensable, imperative? For how, if the works of Prakriti continue, can the soul help being involved in them? How can I fight and yet in my soul not think or feel that I the individual am fighting, not desire victory nor be inwardly touched by defeat? This is the teaching of

the Sankhyas that the intelligence of the man who engages in the activities of Nature, is entangled in egoism, ignorance and desire and therefore drawn to action; on the contrary, if the intelligence draws back, then the action must cease with the cessation of the desire and the ignorance. Therefore the giving up of life and works is a necessary part, an inevitable circumstance and an indispensable last means of the movement to liberation. This objection of a current logic,—it is not expressed by Arjuna, but it is in his mind as the turn of his subsequent utterances shows,—the Teacher immediately anticipates. No, he says, such renunciation, far from being indispensable, is not even possible. “For none stands even for a moment not doing work; everyone is made to do action helplessly by the modes born of Prakriti.” The strong perception of the great cosmic action and the eternal activity and power of the cosmic energy which was so much emphasised afterwards by the teaching of the Tantric Shaktas who even made Prakriti or Shakti superior to Purusha, is a very remarkable feature of the Gita. Although here an undertone, it is still strong enough, coupled with what we might call the theistic and devotional elements of its thought, to bring in that activism which so strongly modifies in its scheme of Yoga the quietistic tendencies of the old metaphysical Vedanta. Man embodied in the natural world cannot cease from action, not for a moment, not for a second; his very existence here is an action; the whole universe is an act of God, mere living even is His movement.

Our physical life, its maintenance, its continuance is a journey, a pilgrimage of the body, *śarīra-yātrā*, and that cannot be effected without action. But even if a man could leave his body unmaintained, otiose, if he could stand still always like a tree or sit inert like a stone, *tishthati*, that vegetable or material immobility would not save him from the hands of Nature; he would not be liberated from her workings. For it is not our physical movements and activities alone which are meant by works, by *karma*; our mental existence also is a great complex action, it is even the greater and more important part of the works of the unresting energy,—subjective cause and determinant of the physical. We have gained nothing if we repress the effect but

retain the activity of the subjective cause. The objects of sense are only an occasion for our bondage, the mind's insistence on them is the means, the instrumental cause. A man may control his organs of action and refuse to give them their natural play, but he has gained nothing if his mind continues to remember and dwell upon the objects of sense. Such a man has bewildered himself with false notions of self-discipline; he has not understood its object or its truth, nor the first principles of his subjective existence; therefore all his methods of self-discipline are false and null.¹ The body's actions, even the mind's actions are nothing in themselves, neither a bondage, nor the first cause of bondage. What is vital is the mighty energy of Nature which will have her way and her play in her great field of mind and life and body; what is dangerous in her, is the power of her three *gunas*, modes or qualities to confuse and bewilder the intelligence and so obscure the soul. That, as we shall see later, is the whole crux of action and liberation for the Gita. Be free from obscuration and bewilderment by the three *gunas* and action can continue, as it must continue, and even the largest, richest or most enormous and violent action; it does not matter, for nothing then touches the Purusha, the soul has *naiṣkarmya*.

But at present the Gita does not proceed to that larger point. Since the mind is the instrumental cause, since inaction is impossible, what is rational, necessary, the right way is a controlled action of the subjective and objective organism. The mind must bring the senses under its control as an instrument of the intelligent will and then the organs of action must be used for their proper office, for action, but for action done as Yoga. But what is the essence of this self-control, what is meant by action done as Yoga, *Karmayoga*? It is non-attachment, it is to do works without clinging with the mind to the objects of sense and the fruit of the works. Not complete inaction, which is an error, a confusion, a self-delusion, an impossibility, but action full and

¹ I cannot think that *mithyācāra* means a hypocrite. How is a man a hypocrite who inflicts on himself so severe and complete a privation? He is mistaken and deluded, *vimūḍhātmā*, and his *ācāra*, his formally regulated method of self-discipline, is a false and vain method,—this surely is all that the Gita means.

free done without subjection to sense and passion, desireless and unattached works, are the first secret of perfection. Do action thus self-controlled, says Krishna, *niyatam kuru karma tvam*: I have said that knowledge, the intelligence, is greater than works, *jyāyasi karmano buddhiḥ*, but I did not mean that inaction is greater than action; the contrary is the truth, *karma jyāyo akarmanāḥ*. For knowledge does not mean renunciation of works, it means equality and non-attachment to desire and the objects of sense; and it means the poise of the intelligent will in the Soul free and high-uplifted above the lower instrumentation of Prakriti and controlling the works of the mind and the senses and body in the power of self-knowledge and the pure objectless self-delight of spiritual realisation, *niyatam karma*.² *Buddhiyoga* is fulfilled by *karmayoga*; the Yoga of the self-liberating intelligent will finds its full meaning by the Yoga of desireless works. Thus the Gita founds its teaching of the necessity of desireless works, *niṣkāma karma*, and unites the subjective practice of the Sankhyas — rejecting their merely physical rule — with the practice of Yoga.

But still there is an essential difficulty unsolved. Desire is the ordinary motive of all human actions, and if the soul is free from desire, then there is no farther rationale for action. We may be compelled to do certain works for the maintenance of the body, but even that is a subjection to the desire of the body which we ought to get rid of if we are to attain perfection. But granting that this cannot be done, the only way is to fix a rule for action outside ourselves, not dictated by anything in our subjectivity, the *nityakarma* of the Vedic rule, the routine

² Again, I cannot accept the current interpretation of *niyatam karma* as if it meant fixed and formal works and were equivalent to the Vedic *nityakarma*, the regular works of sacrifice, ceremonial and the daily rule of Vedic living. Surely, *niyata* simply takes up the *niyamya* of the last verse. Krishna makes a statement, “he who controlling the senses by the mind engages with the organs of action in Yoga of action, he excels,” *manasā niyamya ārabhate karmayogam*, and he immediately goes on to draw from the statement an injunction, to sum it up and convert it into a rule. “Do thou do controlled action,” *niyatam kuru karma tvam*: *niyatam* takes up the *niyamya*, *kuru karma* takes up the *ārabhate karmayogam*. Not formal works fixed by an external rule, but desireless works controlled by the liberated *buddhi*, is the Gita’s teaching.

of ceremonial sacrifice, daily conduct and social duty, which the man who seeks liberation may do simply because it is enjoined upon him, without any personal purpose or subjective interest in them, with an absolute indifference to the doing, not because he is compelled by his nature but because it is enjoined by the Shastra. But if the principle of the action is not to be external to the nature but subjective, if the actions even of the liberated and the sage are to be controlled and determined by his nature, *svabhāva-niyatam*, then the only subjective principle of action is desire of whatever kind, lust of the flesh or emotion of the heart or base or noble aim of the mind, but all subject to the *gunas* of Prakriti. Let us then interpret the *niyata karma* of the Gita as the *nityakarma* of the Vedic rule, its *kartavya karma* or work that has to be done as the Aryan rule of social duty and let us take too its work done as a sacrifice to mean simply these Vedic sacrifices and this fixed social duty performed disinterestedly and without any personal object. This is how the Gita's doctrine of desireless work is often interpreted. But it seems to me that the Gita's teaching is not so crude and simple, not so local and temporal and narrow as all that. It is large, free, subtle and profound; it is for all time and for all men, not for a particular age and country. Especially, it is always breaking free from external forms, details, dogmatic notions and going back to principles and the great facts of our nature and our being. It is a work of large philosophic truth and spiritual practicality, not of constrained religious and philosophical formulas and stereotyped dogmas.

The difficulty is this, how, our nature being what it is and desire the common principle of its action, is it possible to institute a really desireless action? For what we call ordinarily disinterested action is not really desireless; it is simply a replacement of certain smaller personal interests by other larger desires which have only the appearance of being impersonal, virtue, country, mankind. All action, moreover, as Krishna insists, is done by the *gunas* of Prakriti, by our nature; in acting according to the Shastra we are still acting according to our nature,—even if this Shastric action is not, as it usually is, a mere cover for our desires, prejudices, passions, egoisms, our personal, national, sectarian

vanities, sentiments and preferences; but even otherwise, even at the purest, still we obey a choice of our nature, and if our nature were different and the *gunas* acted on our intelligence and will in some other combination, we would not accept the Shastra, but live according to our pleasure or our intellectual notions or else break free from the social law to live the life of the solitary or the ascetic. We cannot become impersonal by obeying something outside ourselves, for we cannot so get outside ourselves; we can only do it by rising to the highest in ourselves, into our free Soul and Self which is the same and one in all and has therefore no personal interests, to the Divine in our being who possesses Himself transcendent of cosmos and is therefore not bound by His cosmic works or His individual action. That is what the Gita teaches and desirelessness is only a means to this end, not an aim in itself. Yes, but how is it to be brought about? By doing all works with sacrifice as the only object, is the reply of the divine Teacher. "By doing works otherwise than for sacrifice, this world of men is in bondage to works; for sacrifice practise works, O son of Kunti, becoming free from all attachment." It is evident that all works and not merely sacrifice and social duties can be done in this spirit; any action may be done either from the ego-sense narrow or enlarged or for the sake of the Divine. All being and all action of Prakriti exist only for the sake of the Divine; from that it proceeds, by that it endures, to that it is directed. But so long as we are dominated by the ego-sense we cannot perceive or act in the spirit of this truth, but act for the satisfaction of the ego and in the spirit of the ego, otherwise than for sacrifice. Egoism is the knot of the bondage. By acting Godwards, without any thought of ego, we loosen this knot and finally arrive at freedom.

At first, however, the Gita takes up the Vedic statement of the idea of sacrifice and phrases the law of sacrifice in its current terms. This it does with a definite object. We have seen that the quarrel between renunciation and works has two forms, the opposition of Sankhya and Yoga which is already in principle reconciled and the opposition of Vedism and Vedantism which the Teacher has yet to reconcile. The first is a larger statement of

the opposition in which the idea of works is general and wide. The Sankhya starts from the notion of the divine status as that of the immutable and inactive Purusha which each soul is in reality and makes an opposition between inactivity of Purusha and activity of Prakriti; so its logical culmination is cessation of all works. Yoga starts from the notion of the Divine as Ishwara, lord of the operations of Prakriti and therefore superior to them, and its logical culmination is not cessation of works but the soul's superiority to them and freedom even though doing all works. In the opposition of Vedism and Vedantism works, *karma*, are restricted to Vedic works and sometimes even to Vedic sacrifice and ritualised works, all else being excluded as not useful to salvation. Vedism of the Mimansakas insisted on them as the means, Vedantism taking its stand on the Upanishads looked on them as only a preliminary belonging to the state of ignorance and in the end to be overpassed and rejected, an obstacle to the seeker of liberation. Vedism worshipped the Devas, the gods, with sacrifice and held them to be the powers who assist our salvation. Vedantism was inclined to regard them as powers of the mental and material world opposed to our salvation (men, says the Upanishad, are the cattle of the gods, who do not desire man to know and be free); it saw the Divine as the immutable Brahman who has to be attained not by works of sacrifice and worship but by knowledge. Works only lead to material results and to an inferior Paradise; therefore they have to be renounced.

The Gita resolves this opposition by insisting that the Devas are only forms of the one Deva, the Ishwara, the Lord of all Yoga and worship and sacrifice and austerity, and if it is true that sacrifice offered to the Devas leads only to material results and to Paradise, it is also true that sacrifice offered to the Ishwara leads beyond them to the great liberation. For the Lord and the immutable Brahman are not two different beings, but one and the same Being, and whoever strives towards either, is striving towards that one divine Existence. All works in their totality find their culmination and completeness in the knowledge of the Divine, *sarvam karmākhilam pārtha jñāne parisamāpyate*. They are not an obstacle, but the way to the supreme knowledge.

Thus this opposition too is reconciled with the help of a large elucidation of the meaning of sacrifice. In fact its conflict is only a restricted form of the larger opposition between Yoga and Sankhya. Vedism is a specialised and narrow form of Yoga; the principle of the Vedantists is identical with that of the Sankhyas, for to both the movement of salvation is the recoil of the intelligence, the *buddhi*, from the differentiating powers of Nature, from ego, mind, senses, from the subjective and the objective, and its return to the undifferentiated and the immutable. It is with this object of reconciliation in his mind that the Teacher first approaches his statement of the doctrine of sacrifice; but throughout, even from the very beginning, he keeps his eye not on the restricted Vedic sense of sacrifice and works, but on their larger and universal application,—that widening of narrow and formal notions to admit the great general truths they unduly restrict which is always the method of the Gita.

The Significance of Sacrifice

THE GITA'S theory of sacrifice is stated in two separate passages; one we find in the third chapter, another in the fourth; the first gives it in language which might, taken by itself, seem to be speaking only of the ceremonial sacrifice; the second interpreting that into the sense of a large philosophical symbolism, transforms at once its whole significance and raises it to a plane of high psychological and spiritual truth. "With sacrifice the Lord of creatures of old created creatures and said, By this shall you bring forth (fruits or offspring), let this be your milker of desires. Foster by this the gods and let the gods foster you; fostering each other, you shall attain to the supreme good. Fostered by sacrifice the gods shall give you desired enjoyments; who enjoys their given enjoyments and has not given to them, he is a thief. The good who eat what is left from the sacrifice, are released from all sin; but evil are they and enjoy sin who cook (the food) for their own sake. From food creatures come into being, from rain is the birth of food, from sacrifice comes into being the rain, sacrifice is born of work; work know to be born of Brahman, Brahman is born of the Immutable; therefore is the all-pervading Brahman established in the sacrifice. He who follows not here the wheel thus set in movement, evil is his being, sensual is his delight, in vain, O Partha, that man lives." Having thus stated the necessity of sacrifice,—we shall see hereafter in what sense we may understand a passage which seems at first sight to convey only a traditional theory of ritualism and the necessity of the ceremonial offering,—Krishna proceeds to state the superiority of the spiritual man to works. "But the man whose delight is in the Self and who is satisfied with the enjoyment of the Self and in the Self he is content, for him there exists no work that needs to be done. He has no object here to be gained by action done and none to be gained by action undone;

he has no dependence on all these existences for any object to be gained."

Here then are the two ideals, Vedist and Vedantist, standing as if in all their sharp original separation and opposition, on one side the active ideal of acquiring enjoyments here and the highest good beyond by sacrifice and the mutual dependence of the human being and the divine powers and on the other, facing it, the austerer ideal of the liberated man who, independent in the Spirit, has nothing to do with enjoyment or works or the human or the divine worlds, but exists only in the peace of the supreme Self, joys only in the calm joy of the Brahman. The next verses create a ground for the reconciliation between the two extremes; the secret is not inaction as soon as one turns towards the higher truth, but desireless action both before and after it is reached. The liberated man has nothing to gain by action, but nothing also to gain by inaction, and it is not at all for any personal object that he has to make his choice. "Therefore without attachment perform ever the work that is to be done (done for the sake of the world, *lokasaṅgraha*, as is made clear immediately afterward); for by doing work without attachment man attains to the highest. For it was even by works that Janaka and the rest attained to perfection." It is true that works and sacrifice are a means of arriving at the highest good, *śreyah param avāpsyatha*; but there are three kinds of works, that done without sacrifice for personal enjoyment which is entirely selfish and egoistic and misses the true law and aim and utility of life, *moghaṁ pārtha sa jīvati*, that done with desire, but with sacrifice and the enjoyment only as a result of sacrifice and therefore to that extent consecrated and sanctified, and that done without desire or attachment of any kind. It is the last which brings the soul of man to the highest, *param āpnoti pūruṣah*.

The whole sense and drift of this teaching turns upon the interpretation we are to give to the important words, *yajña*, *karma*, *brahma*, sacrifice, work, Brahman. If the sacrifice is simply the Vedic sacrifice, if the work from which it is born is the Vedic rule of works and if the *brahman* from which the work itself is born is the *śabdabrahman* in the sense only of the

letter of the Veda, then all the positions of the Vedist dogma are conceded and there is nothing more. Ceremonial sacrifice is the right means of gaining children, wealth, enjoyment; by ceremonial sacrifice rain is brought down from heaven and the prosperity and continuity of the race assured; life is a continual transaction between the gods and men in which man offers ceremonial gifts to the gods from the gifts they have bestowed on him and in return is enriched, protected, fostered. Therefore all human works have to be accompanied and turned into a sacrament by ceremonial sacrifice and ritualistic worship; work not so dedicated is accursed, enjoyment without previous ceremonial sacrifice and ritual consecration is a sin. Even salvation, even the highest good is to be gained by ceremonial sacrifice. It must never be abandoned. Even the seeker of liberation has to continue to do ceremonial sacrifice, although without attachment; it is by ceremonial sacrifice and ritualistic works done without attachment that men of the type of Janaka attained to spiritual perfection and liberation.

Obviously, this cannot be the meaning of the Gita, for it would be in contradiction with all the rest of the book. Even in the passage itself, without the illuminating interpretation afterwards given to it in the fourth chapter, we have already an indication of a wider sense where it is said that sacrifice is born from work, work from *brahman*, *brahman* from the Akshara, and therefore the all-pervading Brahman, *sarvagatam brahma*, is established in the sacrifice. The connecting logic of the "therefore" and the repetition of the word *brahma* are significant; for it shows clearly that the *brahman* from which all work is born has to be understood with an eye not so much to the current Vedic teaching in which it means the Veda as to a symbolical sense in which the creative Word is identical with the all-pervading Brahman, the Eternal, the one Self present in all existences, *sarvabhūtesu*, and present in all the workings of existence. The Veda is the knowledge of the Divine, the Eternal, — "I am He who is to be known in all the books of the Knowledge," *vedaiś ca vedyāḥ*, Krishna will say in a subsequent chapter; but it is the knowledge of him in the workings of Prakriti, in the workings of the three

guṇas, first qualities or modes of Nature, *traigunyavisaṭā vedāḥ*. This Brahman or Divine in the workings of Nature is born, as we may say, out of the Akshara, the immutable Purusha, the Self who stands above all the modes or qualities or workings of Nature, *nistraiguṇya*. The Brahman is one but self-displayed in two aspects, the immutable Being and the creator and originator of works in the mutable becoming, *ātman, sarvabhūtāni*; it is the immobile omnipresent Soul of things and it is the spiritual principle of the mobile working of things, Purusha poised in himself and Purusha active in Prakriti; it is *akṣara* and *kṣara*. In both of these aspects the Divine Being, Purushottama, manifests himself in the universe; the immutable above all qualities is His poise of peace, self-possession, equality, *samarī brahma*; from that proceeds His manifestation in the qualities of Prakriti and their universal workings; from the Purusha in Prakriti, from this Brahman with qualities, proceed all the works¹ of the universal energy, Karma, in man and in all existences; from that work proceeds the principle of sacrifice. Even the material interchange between gods and men proceeds upon this principle, as typified in the dependence of rain and its product food on this working and on them the physical birth of creatures. For all the working of Prakriti is in its true nature a sacrifice, *yajña*, with the Divine Being as the enjoyer of all energisms and works and sacrifice and the great Lord of all existences, *bhoktāram yajñatapasām sarvaloka-maheśvaram*, and to know this Divine all-pervading and established in sacrifice, *sarvagataṁ yajñe pratiṣṭhitam*, is the true, the Vedic knowledge.

¹ That this is the right interpretation results also from the opening of the eighth chapter where the universal principles are enumerated, *akṣara (brahma), svabhāva, karma, kṣara bhāva, puruṣa, adhyajña*. Akshara is the immutable Brahman, spirit or self, Atman; swabhava is the principle of the self, *adhyātma*, operative as the original nature of the being, “own way of becoming”, and this proceeds out of the self, the Akshara; Karma proceeds from that and is the creative movement, *visarga*, which brings all natural beings and all changing subjective and objective shapes of being into existence; the result of Karma therefore is all this mutable becoming, the changes of nature developed out of the original self-nature, *kṣara bhāva* out of *svabhāva*; Purusha is the soul, the divine element in the becoming, *adhibdaivata*, by whose presence the workings of Karma become a sacrifice, *yajña*, to the Divine within; *adhyajña* is this secret Divine who receives the sacrifice.

But he may be known in an inferior action through the *devas*, the gods, the powers of the divine Soul in Nature and in the eternal interaction of these powers and the soul of man, mutually giving and receiving, mutually helping, increasing, raising each other's workings and satisfaction, a commerce in which man rises towards a growing fitness for the supreme good. He recognises that his life is a part of this divine action in Nature and not a thing separate and to be held and pursued for its own sake. He regards his enjoyments and the satisfaction of his desires as the fruit of sacrifice and the gift of the gods in their divine universal workings and he ceases to pursue them in the false and evil spirit of sinful egoistic selfishness as if they were a good to be seized from life by his own unaided strength without return and without thankfulness. As this spirit increases in him, he subordinates his desires, becomes satisfied with sacrifice as the law of life and works and is content with whatever remains over from the sacrifice, giving up all the rest freely as an offering in the great and beneficent interchange between his life and the world-life. Whoever goes contrary to this law of action and pursues works and enjoyment for his own isolated personal self-interest, lives in vain; he misses the true meaning and aim and utility of living and the upward growth of the soul; he is not on the path which leads to the highest good. But the highest only comes when the sacrifice is no longer to the gods, but to the one all-pervading Divine established in the sacrifice, of whom the gods are inferior forms and powers, and when he puts away the lower self that desires and enjoys and gives up his personal sense of being the worker to the true executrix of all works, Prakriti, and his personal sense of being the enjoyer to the Divine Purusha, the higher and universal Self who is the real enjoyer of the works of Prakriti. In that Self and not in any personal enjoyment he finds now his sole satisfaction, complete content, pure delight; he has nothing to gain by action or inaction, depends neither on gods nor men for anything, seeks no profit from any, for the self-delight is all-sufficient to him, but does works for the sake of the Divine only, as a pure sacrifice, without attachment or desire. Thus he gains equality and becomes free from the

modes of Nature, *nistraigunya*; his soul takes its poise not in the insecurity of Prakriti, but in the peace of the immutable Brahman, even while his actions continue in the movement of Prakriti. Thus is sacrifice his way of attaining to the Highest.

That this is the sense of the passage is made clear in what follows, by the affirmation of *lokasaṅgraha* as the object of works, of Prakriti as the sole doer of works and the divine Purusha as their equal upholder, to whom works have to be given up even in their doing,—this inner giving up of works and yet physical doing of them is the culmination of sacrifice,—and by the affirmation that the result of such active sacrifice with an equal and desireless mind is liberation from the bondage of works. “He who is satisfied with whatever gain comes to him and equal in failure and success, is not bound even when he acts. When a man liberated, free from attachment, acts for sacrifice, all his action is dissolved,” leaves, that is to say, no result of bondage or after-impression on his free, pure, perfect and equal soul. To these passages we shall have to return. They are followed by a perfectly explicit and detailed interpretation of the meaning of *yajña* in the language of the Gita which leaves no doubt at all about the symbolic use of the words and the psychological character of the sacrifice enjoined by this teaching. In the ancient Vedic system there was always a double sense physical and psychological, outward and symbolic, the exterior form of the sacrifice and the inner meaning of all its circumstances. But the secret symbolism of the ancient Vedic mystics, exact, curious, poetic, psychological, had been long forgotten by this time and it is now replaced by another, large, general and philosophical in the spirit of Vedanta and a later Yoga. The fire of sacrifice, *agni*, is no material flame, but *brahmāgni*, the fire of the Brahman, or it is the Brahman-ward energy, inner Agni, priest of the sacrifice, into which the offering is poured; the fire is self-control or it is a purified sense-action or it is the vital energy in that discipline of the control of the vital being through the control of the breath which is common to Rajayoga and Hathayoga, or it is the fire of self-knowledge, the flame of the supreme sacrifice. The food eaten as the leavings of the sacrifice is, it is explained, the nectar

of immortality, *amṛta*, left over from the offering; and here we have still something of the old Vedic symbolism in which the Soma-wine was the physical symbol of the *amṛta*, the immortalising delight of the divine ecstasy won by the sacrifice, offered to the gods and drunk by men. The offering itself is whatever working of his energy, physical or psychological, is consecrated by him in action of body or action of mind to the gods or God, to the Self or to the universal powers, to one's own higher Self or to the Self in mankind and in all existences.

This elaborate explanation of the Yajna sets out with a vast and comprehensive definition in which it is declared that the act and energy and materials of the sacrifice, the giver and receiver of the sacrifice, the goal and object of the sacrifice are all the one Brahman. "Brahman is the giving, Brahman is the food-offering, by Brahman it is offered into the Brahman-fire, Brahman is that which is to be attained by samadhi in Brahman-action." This then is the knowledge in which the liberated man has to do works of sacrifice. It is the knowledge declared of old in the great Vedantic utterances, "I am He", "All this verily is the Brahman, Brahman is this Self." It is the knowledge of the entire unity; it is the One manifest as the doer and the deed and the object of works, knower and knowledge and the object of knowledge. The universal energy into which the action is poured is the Divine; the consecrated energy of the giving is the Divine; whatever is offered is only some form of the Divine; the giver of the offering is the Divine himself in man; the action, the work, the sacrifice is itself the Divine in movement, in activity; the goal to be reached by sacrifice is the Divine. For the man who has this knowledge and lives and acts in it, there can be no binding works, no personal and egoistically appropriated action; there is only the divine Purusha acting by the divine Prakriti in His own being, offering everything into the fire of His self-conscious cosmic energy, while the knowledge and the possession of His divine existence and consciousness by the soul unified with Him is the goal of all this God-directed movement and activity. To know that and to live and act in this unifying consciousness is to be free.

But all even of the Yogins have not attained to this knowledge. "Some Yogins follow after the sacrifice which is of the gods; others offer the sacrifice by the sacrifice itself into the Brahman-fire." The former conceive of the Divine in various forms and powers and seek him by various means, ordinances, *dharma*s, laws or, as we might say, settled rites of action, self-discipline, consecrated works; for the latter, those who already know, the simple fact of sacrifice, of offering whatever work to the Divine itself, of casting all their activities into the unified divine consciousness and energy, is their one means, their one *dharma*. The means of sacrifice are various; the offerings are of many kinds. There is the psychological sacrifice of self-control and self-discipline which leads to the higher self-possession and self-knowledge. "Some offer their senses into the fires of control, others offer the objects of sense into the fires of sense, and others offer all the actions of the sense and all the actions of the vital force into the fire of the Yoga of self-control kindled by knowledge." There is, that is to say, the discipline which receives the objects of sense-perception without allowing the mind to be disturbed or affected by its sense-activities, the senses themselves becoming pure fires of sacrifice; there is the discipline which stills the senses so that the soul in its purity may appear from behind the veil of mind-action, calm and still; there is the discipline by which, when the self is known, all the actions of the sense-perceptions and all the action of the vital being are received into that one still and tranquil soul. The offering of the striver after perfection may be material and physical, *dravya-yajña*, like that consecrated in worship by the devotee to his deity, or it may be the austerity of his self-discipline and energy of his soul directed to some high aim, *tapo-yajña*, or it may be some form of Yoga like the Pranayama of the Rajayogins and Hathayogins, or any other *yoga-yajña*. All these tend to the purification of the being; all sacrifice is a way towards the attainment of the highest.

The one thing needful, the saving principle constant in all these variations, is to subordinate the lower activities, to diminish the control of desire and replace it by a superior energy, to abandon the purely egoistic enjoyment for that diviner delight

which comes by sacrifice, by self-dedication, by self-mastery, by the giving up of one's lower impulses to a greater and higher aim. "They who enjoy the nectar of immortality left over from the sacrifice attain to the eternal Brahman." Sacrifice is the law of the world and nothing can be gained without it, neither mastery here, nor the possession of heavens beyond, nor the supreme possession of all; "this world is not for him who doeth not sacrifice, how then any other world?" Therefore all these and many other forms of sacrifice have been "extended in the mouth of the Brahman," the mouth of that Fire which receives all offerings; they are all means and forms of the one great Existence in activity, means by which the action of the human being can be offered up to That of which his outward existence is a part and with which his inmost self is one. They are "all born of work"; all proceed from and are ordained by the one vast energy of the Divine which manifests itself in the universal *karma* and makes all the cosmic activity a progressive offering to the one Self and Lord and of which the last stage for the human being is self-knowledge and the possession of the divine or Brahmic consciousness. "So knowing thou shalt become free."

But there are gradations in the range of these various forms of sacrifice, the physical offering the lowest, the sacrifice of knowledge the highest. Knowledge is that in which all this action culminates, not any lower knowledge, but the highest, self-knowledge and God-knowledge, that which we can learn from those who know the true principles of existence, that by possessing which we shall not fall again into the bewilderment of the mind's ignorance and into its bondage to mere sense-knowledge and to the inferior activity of the desires and passions. The knowledge in which all culminates is that by which "thou shalt see all existences (becomings, *bhūtāni*) without exception in the Self, then in Me." For the Self is that one, immutable, all-pervading, all-containing, self-existent reality or Brahman hidden behind our mental being into which our consciousness widens out when it is liberated from the ego; we come to see all beings as becomings, *bhūtāni*, within that one self-existence.

But this Self or immutable Brahman we see too to be the

self-presentation to our essential psychological consciousness of a supreme Being who is the source of our existence and of whom all that is mutable or immutable is the manifestation. He is God, the Divine, the Purushottama. To Him we offer everything as a sacrifice; into His hands we give up our actions; in His existence we live and move; unified with Him in our nature and with all existence in Him, we become one soul and one power of being with Him and with all beings; with His supreme reality we identify and unite our self-being. By works done for sacrifice, eliminating desire, we arrive at knowledge and at the soul's possession of itself; by works done in self-knowledge and God-knowledge we are liberated into the unity, peace and joy of the divine existence.

XIII

The Lord of the Sacrifice

WE HAVE, before we can proceed further, to gather up all that has been said in its main principles. The whole of the Gita's gospel of works rests upon its idea of sacrifice and contains in fact the eternal connecting truth of God and the world and works. The human mind seizes ordinarily only fragmentary notions and standpoints of a many-sided eternal truth of existence and builds upon them its various theories of life and ethics and religion, stressing this or that sign or appearance, but to some entirety of it it must always tend to reawaken whenever it returns in an age of large enlightenment to any entire and synthetic relation of its world-knowledge with its God-knowledge and self-knowledge. The gospel of the Gita reposes upon this fundamental Vedantic truth that all being is the one Brahman and all existence the wheel of Brahman, a divine movement opening out from God and returning to God. All is the expressive activity of Nature and Nature a power of the Divine which works out the consciousness and will of the divine Soul master of her works and inhabitant of her forms. It is for his satisfaction that she descends into the absorption of the forms of things and the works of life and mind and returns again through mind and self-knowledge to the conscious possession of the Soul that dwells within her. There is first an involving of self and all it is or means in an evolution of phenomena; there is afterwards an evolution of self, a revelation of all it is and means, all that is hidden and yet suggested by the phenomenal creation. This cycle of Nature could not be what it is but for the Purusha assuming and maintaining simultaneously three eternal poises each of which is necessary to the totality of this action. It must manifest itself in the mutable, and there we see it as the finite, the many, all existences, *sarvabhūtāni*. It appears to us as the finite personality of these million creatures with their

infinite diversities and various relations and it appears to us behind these as the soul and force of the action of the gods,—that is to say, the cosmic powers and qualities of the Divine which preside over the workings of the life of the universe and constitute to our perception different universal forms of the one Existence, or, it may be, various self-statements of personality of the one supreme Person. Then, secret behind and within all forms and existences, we perceive too an immutable, an infinite, a timeless, an impersonal, a one unchanging spirit of existence, an indivisible Self of all that is, in which all these many find themselves to be really one. And therefore by returning to that the active, finite personality of the individual being discovers that it can release itself into a silent largeness of universality and the peace and poise of an immutable and unattached unity with all that proceeds from and is supported by this indivisible Infinite. Or even he may escape into it from individual existence. But the highest secret of all, *uttamam rahasyam*, is the Purushottama. This is the supreme Divine, God, who possesses both the infinite and the finite and in whom the personal and the impersonal, the one Self and the many existences, being and becoming, the world-action and the supracosmic peace, *pravrtti* and *nivrtti*, meet, are united, are possessed together and in each other. In God all things find their secret truth and their absolute reconciliation.

All truth of works must depend upon the truth of being. All active existence must be in its inmost reality a sacrifice of works offered by Prakriti to Purusha, Nature offering to the supreme and infinite Soul the desire of the multiple finite Soul within her. Life is an altar to which she brings her workings and the fruits of her workings and lays them before whatever aspect of the Divinity the consciousness in her has reached for whatever result of the sacrifice the desire of the living soul can seize on as its immediate or its highest good. According to the grade of consciousness and being which the soul has reached in Nature, will be the Divinity it worships, the delight which it seeks and the hope for which it sacrifices. And in the movement of the mutable Purusha in Nature all is and must be interchange; for

existence is one and its divisions must found themselves on some law of mutual dependence, each growing by each and living by all. Where sacrifice is not willingly given, Nature exacts it by force, she satisfies the law of her living. A mutual giving and receiving is the law of Life without which it cannot for one moment endure, and this fact is the stamp of the divine creative Will on the world it has manifested in its being, the proof that with sacrifice as their eternal companion the Lord of creatures has created all these existences. The universal law of sacrifice is the sign that the world is of God and belongs to God and that life is his dominion and house of worship and not a field for the self-satisfaction of the independent ego; not the fulfilment of the ego,—that is only our crude and obscure beginning,—but the discovery of God, the worship and seeking of the Divine and the Infinite through a constantly enlarging sacrifice culminating in a perfect self-giving founded on a perfect self-knowledge, is that to which the experience of life is at last intended to lead.

But the individual being begins with ignorance and persists long in ignorance. Acutely conscious of himself he sees the ego as the cause and whole meaning of life and not the Divine. He sees himself as the doer of works and does not see that all the workings of existence including his own internal and external activities are the workings of one universal Nature and nothing else. He sees himself as the enjoyer of works and imagines that for him all exists and him Nature ought to satisfy and obey his personal will; he does not see that she is not at all concerned with satisfying him or at all careful of his will, but obeys a higher universal will and seeks to satisfy a Godhead who transcends her and her works and creations; his finite being, his will and his satisfactions are hers and not his, and she offers them at every moment as a sacrifice to the Divine of whose purpose in her she makes all this the covert instrumentation. Because of this ignorance whose seal is egoism, the creature ignores the law of sacrifice and seeks to take all he can for himself and gives only what Nature by her internal and external compulsion forces him to give. He can really take nothing except what she allows him to receive as his portion, what the divine Powers within her yield

to his desire. The egoistic soul in a world of sacrifice is as if a thief or robber who takes what these Powers bring to him and has no mind to give in return. He misses the true meaning of life and, since he does not use life and works for the enlargement and elevation of his being through sacrifice, he lives in vain.

Only when the individual being begins to perceive and acknowledge in his acts the value of the self in others as well as the power and needs of his own ego, begins to perceive universal Nature behind his own workings and through the cosmic godheads gets some glimpse of the One and the Infinite, is he on his way to the transcendence of his limitation by the ego and the discovery of his soul. He begins to discover a law other than that of his desires, to which his desires must be more and more subordinated and subjected; he develops the purely egoistic into the understanding and ethical being. He begins to give more value to the claims of the self in others and less to the claims of his ego; he admits the strife between egoism and altruism and by the increase of his altruistic tendencies he prepares the enlargement of his own consciousness and being. He begins to perceive Nature and divine Powers in Nature to whom he owes sacrifice, adoration, obedience, because it is by them and by their law that the workings both of the mental and the material world are controlled, and he learns that only by increasing their presence and their greatness in his thought and will and life can he himself increase his powers, knowledge, right action and the satisfactions which these things bring to him. Thus he adds the religious and supraphysical to the material and egoistic sense of life and prepares himself to rise through the finite to the Infinite.

But this is only a long intermediate stage. It is still subject to the law of desire, to the centrality of all things in the conceptions and needs of his ego and to the control of his being as well as his works by Nature, though it is a regulated and governed desire, a clarified ego and a Nature more and more subtilised and enlightened by the sattvic, the highest natural principle. All this is still within the domain, though the very much enlarged domain, of the mutable, finite and personal. The real self-knowledge and consequently the right way of works

lies beyond; for the sacrifice done with knowledge is the highest sacrifice and that alone brings a perfect working. That can only come when he perceives that the self in him and the self in others are one being and this self is something higher than the ego, an infinite, an impersonal, a universal existence in whom all move and have their being,—when he perceives that all the cosmic gods to whom he offers his sacrifice are forms of one infinite Godhead and when again, leaving all his limited and limiting conceptions of that one Godhead, he perceives him to be the supreme and ineffable Deity who is at once the finite and the infinite, the one self and the many, beyond Nature though manifesting himself through Nature, beyond limitation by qualities though formulating the power of his being through infinite quality. This is the Purushottama to whom the sacrifice has to be offered, not for any transient personal fruit of works, but for the soul's possession of God and in order to live in harmony and union with the Divine.

In other words, man's way to liberation and perfection lies through an increasing impersonality. It is his ancient and constant experience that the more he opens himself to the impersonal and infinite, to that which is pure and high and one and common in all things and beings, the impersonal and infinite in Nature, the impersonal and infinite in life, the impersonal and infinite in his own subjectivity, the less he is bound by his ego and by the circle of the finite, the more he feels a sense of largeness, peace, pure happiness. The pleasure, joy, satisfaction which the finite by itself can give or the ego in its own right attain, is transitory, petty and insecure. To dwell entirely in the ego-sense and its finite conceptions, powers, satisfactions is to find this world for ever full of transience and suffering, *anityam asukham*; the finite life is always troubled by a certain sense of vanity for this fundamental reason that the finite is not the whole or the highest truth of life; life is not entirely real until it opens into the sense of the infinite. It is for this reason that the Gita opens its gospel of works by insisting on the Brahmic consciousness, the impersonal life, that great object of the discipline of the ancient sages. For the impersonal, the infinite, the One in which all

the impermanent, mutable, multiple activity of the world finds above itself its base of permanence, security and peace, is the immobile Self, the Akshara, the Brahman. If we see this, we shall see that to raise one's consciousness and the poise of one's being out of limited personality into this infinite and impersonal Brahman is the first spiritual necessity. To see all beings in this one Self is the knowledge which raises the soul out of egoistic ignorance and its works and results; to live in it is to acquire peace and firm spiritual foundation.

The way to bring about this great transformation follows a double path; for there is the way of knowledge and there is the way of works, and the Gita combines them in a firm synthesis. The way of knowledge is to turn the understanding, the intelligent will away from its downward absorption in the workings of the mind and the senses and upward to the self, the Purusha or Brahman; it is to make it dwell always on the one idea of the one Self and not in the many-branching conceptions of the mind and many-streaming impulses of desire. Taken by itself this path would seem to lead to the complete renunciation of works, to an immobile passivity and to the severance of the soul from Nature. But in reality such an absolute renunciation, passivity and severance are impossible. Purusha and Prakriti are twin principles of being which cannot be severed, and so long as we remain in Nature, our workings in Nature must continue, even though they may take a different form or rather a different sense from those of the unenlightened soul. The real renunciation—for renunciation, *sannyāsa*, there must be—is not the fleeing from works, but the slaying of ego and desire. The way is to abandon attachment to the fruit of works even while doing them, and the way is to recognise Nature as the agent and leave her to do her works and to live in the soul as the witness and sustainer, watching and sustaining her, but not attached either to her actions or their fruits. The ego, the limited and troubled personality is then quieted and merged in the consciousness of the one impersonal Self, while the works of Nature continue to our vision to operate through all these “becomings” or existences who are now seen by us as living

and acting and moving, under her impulsion entirely, in this one infinite Being; our own finite existence is seen and felt to be only one of these and its workings are seen and felt to be those of Nature, not of our real self which is the silent, impersonal unity. The ego claimed them as its own doings and therefore we thought them ours; but the ego is now dead and henceforth they are no longer ours, but Nature's. We have achieved by the slaying of ego impersonality in our being and consciousness; we have achieved by the renunciation of desire impersonality in the works of our nature. We are free not only in inaction, but in action; our liberty does not depend on a physical and temperamental immobility and vacancy, nor do we fall from freedom directly we act. Even in a full current of natural action the impersonal soul in us remains calm, still and free.

The liberation given by this perfect impersonality is real, is complete, is indispensable; but is it the last word, the end of the whole matter? All life, all world-existence, we have said, is the sacrifice offered by Nature to the Purusha, the one and secret soul in Nature, in whom all her workings take place; but its real sense is obscured in us by ego, by desire, by our limited, active, multiple personality. We have risen out of ego and desire and limited personality and by impersonality, its great corrective, we have found the impersonal Godhead; we have identified our being with the one self and soul in whom all exist. The sacrifice of works continues, conducted not by ourselves any longer, but by Nature,—Nature operating through the finite part of our being, mind, senses, body,—but in our infinite being. But to whom then is this sacrifice offered and with what object? For the impersonal has no activity and no desires, no object to be gained, no dependence for anything on all this world of creatures; it exists for itself, in its own self-delight, in its own immutable eternal being. We may have to do works without desire as a means in order to reach this impersonal self-existence and self-delight, but, that movement once executed, the object of works is finished; the sacrifice is no longer needed. Works may even then continue because Nature continues and her activities; but there is no longer any further object in these works. The sole reason

for our continuing to act after liberation is purely negative; it is the compulsion of Nature on our finite parts of mind and body. But if that be all, then, first, works may well be whittled down and reduced to a minimum, may be confined to what Nature's compulsion absolutely will have from our bodies; and secondly, even if there is no reduction to a minimum,—since action does not matter and inaction also is no object,—then the nature of the works also does not matter. Arjuna, once having attained knowledge, may continue to fight out the battle of Kurukshetra, following his old Kshatriya nature, or he may leave it and live the life of the Sannyasin, following his new quietistic impulse. Which of these things he does, becomes quite indifferent; or rather the second is the better way, since it will discourage more quickly the impulses of Nature which still have a hold on his mind owing to past created tendency and, when his body has fallen from him, he will securely depart into the Infinite and Impersonal with no necessity of returning again to the trouble and madness of life in this transient and sorrowful world, *anityam asukham imam lokam.*

If this were so, the Gita would lose all its meaning; for its first and central object would be defeated. But the Gita insists that the nature of the action does matter and that there is a positive sanction for continuance in works, not only that one quite negative and mechanical reason, the objectless compulsion of Nature. There is still, after the ego has been conquered, a divine Lord and enjoyer of the sacrifice, *bhoktāram yajñatapasām*, and there is still an object in the sacrifice. The impersonal Brahman is not the very last word, not the utterly highest secret of our being; for impersonal and personal, finite and infinite turn out to be only two opposite, yet concomitant aspects of a divine Being unlimited by these distinctions who is both these things at once. God is an ever unmanifest Infinite ever self-impelled to manifest himself in the finite; he is the great impersonal Person of whom all personalities are partial appearances; he is the Divine who reveals himself in the human being, the Lord seated in the heart of man. Knowledge teaches us to see all beings in the one impersonal self, for so we are liberated from the separative

ego-sense, and then through this delivering impersonality to see them in this God, *ātmani atho mayi*, “in the Self and then in Me.” Our ego, our limiting personalities stand in the way of our recognising the Divine who is in all and in whom all have their being; for, subject to personality, we see only such fragmentary aspects of Him as the finite appearances of things suffer us to seize. We have to arrive at him not through our lower personality, but through the high, infinite and impersonal part of our being, and that we find by becoming this self one in all in whose existence the whole world is comprised. This infinite containing, not excluding all finite appearances, this impersonal admitting, not rejecting all individualities and personalities, this immobile sustaining, pervading, containing, not standing apart from all the movement of Nature, is the clear mirror in which the Divine will reveal His being. Therefore it is to the Impersonal that we have first to attain; through the cosmic deities, through the aspects of the finite alone the perfect knowledge of God cannot be totally obtained. But neither is the silent immobility of the impersonal Self, conceived as shut into itself and divorced from all that it sustains, contains and pervades, the whole all-revealing all-satisfying truth of the Divine. To see that we have to look through its silence to the Purushottama, and he in his divine greatness possesses both the Akshara and the Kshara; he is seated in the immobility, but he manifests himself in the movement and in all the action of cosmic Nature; to him even after liberation the sacrifice of works in Nature continues to be offered.

The real goal of the Yoga is then a living and self-completing union with the divine Purushottama and is not merely a self-extinguishing immergence in the impersonal Being. To raise our whole existence to the Divine Being, to dwell in him (*mayyeva nivasiṣyasi*), to be at one with him, unify our consciousness with his, to make our fragmentary nature a reflection of his perfect nature, to be inspired in our thought and sense wholly by the divine knowledge, to be moved in will and action utterly and faultlessly by the divine will, to lose desire in his love and delight, is man’s perfection; it is that which the Gita describes as

the highest secret. It is the true goal and the last sense of human living and the highest step in our progressive sacrifice of works. For he remains to the end the master of works and the soul of sacrifice.

The Principle of Divine Works

THIS THEN is the sense of the Gita's doctrine of sacrifice. Its full significance depends on the idea of the Purushottama which as yet is not developed,—we find it set forth clearly only much later in the eighteen chapters,—and therefore we have had to anticipate, at whatever cost of infidelity to the progressive method of the Gita's exposition, that central teaching. At present the Teacher simply gives a hint, merely adumbrates this supreme presence of the Purushottama and his relation to the immobile Self in whom it is our first business, our pressing spiritual need to find our poise of perfect peace and equality by attainment to the Brahmic condition. He speaks as yet not at all in set terms of the Purushottama, but of himself,—“I”, Krishna, Narayana, the Avatar, the God in man who is also the Lord in the universe incarnated in the figure of the divine charioteer of Kurukshetra. “In the Self, then in Me,” is the formula he gives, implying that the transcendence of the individual personality by seeing it as a “becoming” in the impersonal self-existent Being is simply a means of arriving at that great secret impersonal Personality, which is thus silent, calm and uplifted above Nature in the impersonal Being, but also present and active in Nature in all these million becomings. Losing our lower individual personality in the Impersonal, we arrive finally at union with that supreme Personality which is not separate and individual, but yet assumes all individualities. Transcending the lower nature of the three gunas and seating the soul in the immobile Purusha beyond the three gunas, we can ascend finally into the higher nature of the infinite Godhead which is not bound by the three gunas even when it acts through Nature. Reaching the inner actionlessness of the silent Purusha, *naiṣkarmya*, and leaving Prakriti to do her works, we can attain supremely beyond to the status of the divine Mastery which is

able to do all works and yet be bound by none. The idea of the Purushottama, seen here as the incarnate Narayana, Krishna, is therefore the key. Without it the withdrawal from the lower nature to the Brahmic condition leads necessarily to inaction of the liberated man, his indifference to the works of the world; with it the same withdrawal becomes a step by which the works of the world are taken up in the spirit, with the nature and in the freedom of the Divine. See the silent Brahman as the goal and the world with all its activities has to be forsaken; see God, the Divine, the Purushottama as the goal, superior to action yet its inner spiritual cause and object and original will, and the world with all its activities is conquered and possessed in a divine transcendence of the world. It can become instead of a prison-house an opulent kingdom, *rājyam samṛddham*, which we have conquered for the spiritual life by slaying the limitation of the tyrant ego and overcoming the bondage of our gaoler desires and breaking the prison of our individualistic possession and enjoyment. The liberated universalised soul becomes *svarāt samrāt*, self-ruler and emperor.

The works of sacrifice are thus vindicated as a means of liberation and absolute spiritual perfection, *samsiddhi*. So Janaka and other great Karmayogins of the mighty ancient Yoga attained to perfection, by equal and desireless works done as a sacrifice, without the least egoistic aim or attachment—*karmanaiva hi samsiddhim āsthitā janakādayah*. So too and with the same desirelessness, after liberation and perfection, works can and have to be continued by us in a large divine spirit, with the calm high nature of a spiritual royalty. “Thou shouldst do works regarding also the holding together of the peoples, *lokasaṅgraham evāpi sampaśyan kartum arhasi*. Whatsoever the Best doeth, that the lower kind of man puts into practice; the standard he creates, the people follows. O son of Pritha, I have no work that I need to do in all the three worlds, I have nothing that I have not gained and have yet to gain, and I abide verily in the paths of action,” *varta eva ca karmani*, —*eva* implying, I abide in it and do not leave it as the Sannyasin thinks himself bound to abandon works. “For if I did not abide sleeplessly in

the paths of action, men follow in every way my path, these peoples would sink to destruction if I did not works and I should be the creator of confusion and slay these creatures. As those who know not act with attachment to the action, he who knows should act without attachment, having for his motive to hold together the peoples. He should not create a division of their understanding in the ignorant who are attached to their works; he should set them to all actions, doing them himself with knowledge and in Yoga." There are few more important passages in the Gita than these seven striking couplets.

But let us clearly understand that they must not be interpreted, as the modern pragmatic tendency concerned much more with the present affairs of the world than with any high and far-off spiritual possibility seeks to interpret them, as no more than a philosophical and religious justification of social service, patriotic, cosmopolitan and humanitarian effort and attachment to the hundred eager social schemes and dreams which attract the modern intellect. It is not the rule of a large moral and intellectual altruism which is here announced, but that of a spiritual unity with God and with this world of beings who dwell in him and in whom he dwells. It is not an injunction to subordinate the individual to society and humanity or immolate egoism on the altar of the human collectivity, but to fulfil the individual in God and to sacrifice the ego on the one true altar of the all-embracing Divinity. The Gita moves on a plane of ideas and experiences higher than those of the modern mind which is at the stage indeed of a struggle to shake off the coils of egoism, but is still mundane in its outlook and intellectual and moral rather than spiritual in its temperament. Patriotism, cosmopolitanism, service of society, collectivism, humanitarianism, the ideal or religion of humanity are admirable aids towards our escape from our primary condition of individual, family, social, national egoism into a secondary stage in which the individual realises, as far as it can be done on the intellectual, moral and emotional level,—on that level he cannot do it entirely in the right and perfect way, the way of the integral truth of his being,—the oneness of his existence with the existence of other beings. But

the thought of the Gita reaches beyond to a tertiary condition of our developing self-consciousness towards which the secondary is only a partial stage of advance.

The Indian social tendency has been to subordinate the individual to the claims of society, but Indian religious thought and spiritual seeking have been always loftily individualistic in their aims. An Indian system of thought like the Gita's cannot possibly fail to put first the development of the individual, the highest need of the individual, his claim to discover and exercise his largest spiritual freedom, greatness, splendour, royalty,—his aim to develop into the illumined seer and king in the spiritual sense of seerdom and kingship, which was the first great charter of the ideal humanity promulgated by the ancient Vedic sages. To exceed himself was their goal for the individual, not by losing all his personal aims in the aims of an organised human society, but by enlarging, heightening, aggrandising himself into the consciousness of the Godhead. The rule given here by the Gita is the rule for the master man, the superman, the divinised human being, the Best, not in the sense of any Nietzschean, any one-sided and lopsided, any Olympian, Apollonian or Dionysian, any angelic or demoniac supermanhood, but in that of the man whose whole personality has been offered up into the being, nature and consciousness of the one transcendent and universal Divinity and by loss of the smaller self has found its greater self, has been divinised.

To exalt oneself out of the lower imperfect Prakriti, *trai-gunyamayī māyā*, into unity with the divine being, consciousness and nature,¹ *madbhāvam āgatāḥ*, is the object of the Yoga. But when this object is fulfilled, when the man is in the Brahmic status and sees no longer with the false egoistic vision himself and the world, but sees all beings in the Self, in God, and the Self in all beings, God in all beings, what shall be the action,—since action there still is,—which results from that seeing, and what shall be the cosmic or individual motive of all his

¹ *Sāyujya*, *sālokya* and *sādr̥ṣya* or *sādharmya*. *Sādharmya* is becoming of one law of being and action with the Divine.

works? It is the question of Arjuna,² but answered from a stand-point other than that from which Arjuna had put it. The motive cannot be personal desire on the intellectual, moral, emotional level, for that has been abandoned,— even the moral motive has been abandoned, since the liberated man has passed beyond the lower distinction of sin and virtue, lives in a glorified purity beyond good and evil. It cannot be the spiritual call to his perfect self-development by means of disinterested works, for the call has been answered, the development is perfect and fulfilled. His motive of action can only be the holding together of the peoples, *cikīrṣur lokasaṅgraham*. This great march of the peoples towards a far-off divine ideal has to be held together, prevented from falling into the bewilderment, confusion and utter discord of the understanding which would lead to dissolution and destruction and to which the world moving forward in the night or dark twilight of ignorance would be too easily prone if it were not held together, conducted, kept to the great lines of its discipline by the illumination, by the strength, by the rule and example, by the visible standard and the invisible influence of its Best. The best, the individuals who are in advance of the general line and above the general level of the collectivity, are the natural leaders of mankind, for it is they who can point to the race both the way they must follow and the standard or ideal they have to keep to or to attain. But the divinised man is the Best in no ordinary sense of the word and his influence, his example must have a power which that of no ordinarily superior man can exercise. What example then shall he give? What rule or standard shall he uphold?

In order to indicate more perfectly his meaning, the divine Teacher, the Avatar gives his own example, his own standard to Arjuna. "I abide in the path of action," he seems to say, "the path that all men follow; thou too must abide in action. In the way I act, in that way thou too must act. I am above the necessity of works, for I have nothing to gain by them; I am the Divine who possess all things and all beings in the world and I am myself

² *kim prabhāseta kim āśīta vrajeta kim.*

beyond the world as well as in it and I do not depend upon anything or anyone in all the three worlds for any object; yet I act. This too must be thy manner and spirit of working. I, the Divine, am the rule and the standard; it is I who make the path in which men tread; I am the way and the goal. But I do all this largely, universally, visibly in part, but far more invisibly; and men do not really know the way of my workings. Thou, when thou knowest and seest, when thou hast become the divinised man, must be the individual power of God, the human yet divine example, even as I am in my avatars. Most men dwell in the ignorance, the God-seer dwells in the knowledge; but let him not confuse the minds of men by a dangerous example, rejecting in his superiority the works of the world; let him not cut short the thread of action before it is spun out, let him not perplex and falsify the stages and gradations of the ways I have hewn. The whole range of human action has been decreed by me with a view to the progress of man from the lower to the higher nature, from the apparent undivine to the conscious Divine. The whole range of human works must be that in which the God-knower shall move. All individual, all social action, all the works of the intellect, the heart and the body are still his, not any longer for his own separate sake, but for the sake of God in the world, of God in all beings and that all those beings may move forward, as he has moved, by the path of works towards the discovery of the Divine in themselves. Outwardly his actions may not seem to differ essentially from theirs; battle and rule as well as teaching and thought, all the various commerce of man with man may fall in his range; but the spirit in which he does them must be very different, and it is that spirit which by its influence shall be the great attraction drawing men upwards to his own level, the great lever lifting the mass of men higher in their ascent."

The giving of the example of God himself to the liberated man is profoundly significant; for it reveals the whole basis of the Gita's philosophy of divine works. The liberated man is he who has exalted himself into the divine nature and according to that divine nature must be his actions. But what is the divine nature? It is not entirely and solely that of the Akshara, the immobile,

inactive, impersonal self; for that by itself would lead the liberated man to actionless immobility. It is not characteristically that of the Kshara, the multitudinous, the personal, the Purusha self-subjected to Prakriti; for that by itself would lead him back into subjection to his personality and to the lower nature and its qualities. It is the nature of the Purushottama who holds both these together and by his supreme divinity reconciles them in a divine reconciliation which is the highest secret of his being, *rahasyam hyetad uttamam*. He is not the doer of works in the personal sense of our action involved in Prakriti; for God works through his power, conscious nature, effective force,—Shakti, Maya, Prakriti,—but yet above it, not involved in it, not subject to it, not unable to lift himself beyond the laws, workings, habits of action it creates, not affected or bound by them, not unable to distinguish himself, as we are unable, from the workings of life, mind and body. He is the doer of works who acts not, *kartāram akartāram*. “Know me,” says Krishna, “for the doer of this (the fourfold law of human workings) who am yet the imperishable non-doer. Works fix not themselves on me (*na limpanti*), nor have I desire for the fruits of action.” But neither is he the inactive, impassive, unpuissant Witness and nothing else; for it is he who works in the steps and measures of his power; every movement of it, every particle of the world of beings it forms is instinct with his presence, full of his consciousness, impelled by his will, shaped by his knowledge.

He is, besides, the Supreme without qualities who is possessed of all qualities, *nirguna guṇī*.³ He is not bound by any mode of nature or action, nor consists, as our personality consists, of a sum of qualities, modes of nature, characteristic operations of the mental, moral, emotional, vital, physical being, but is the source of all modes and qualities, capable of developing any he wills in whatever way and to whatever degree he wills; he is the infinite being of which they are ways of becoming, the immeasurable quantity and unbound ineffable of which they are measures, numbers and figures, which they seem to rhythmise

³ *Swetasvatara Upanishad.*

and arithmise in the standards of the universe. Yet neither is he merely an impersonal indeterminate, nor a mere stuff of conscious existence for all determinations and personalisings to draw upon for their material, but a supreme Being, the one original conscious Existent, the perfect Personality capable of all relations even to the most human, concrete and intimate; for he is friend, comrade, lover, playmate, guide, teacher, master, ministrant of knowledge or ministrant of joy, yet in all relations unbound, free and absolute. This too the divinised man becomes in the measure of his attainment, impersonal in his personality, unbound by quality or action even when maintaining the most personal and intimate relations with men, unbound by any *dharma* even when following in appearance this or that *dharma*. Neither the dynamism of the kinetic man nor the actionless light of the ascetic or quietist, neither the vehement personality of the man of action nor the indifferent impersonality of the philosophic sage is the complete divine ideal. These are the two conflicting standards of the man of this world and the ascetic or the quietist philosopher, one immersed in the action of the Kshara, the other striving to dwell entirely in the peace of the Akshara; but the complete divine ideal proceeds from the nature of the Purushottama which transcends this conflict and reconciles all divine possibilities.

The kinetic man is not satisfied with any ideal which does not depend upon the fulfilment of this cosmic nature, this play of the three qualities of that nature, this human activity of mind and heart and body. The highest fulfilment of that activity, he might say, is my idea of human perfection, of the divine possibility in man; some ideal that satisfies the intellect, the heart, the moral being, some ideal of our human nature in its action can alone satisfy the human being; he must have something that he can seek in the workings of his mind and life and body. For that is his nature, his *dharma*, and how can he be fulfilled in something outside his nature? For to his nature each being is bound and within it he must seek for his perfection. According to our human nature must be our human perfection; and each man must strive for it according to the line of his personality, his *svadharma*, but

in life, in action, not outside life and action. Yes, there is a truth in that, replies the Gita; the fulfilment of God in man, the play of the Divine in life is part of the ideal perfection. But if you seek it only in the external, in life, in the principle of action, you will never find it; for you will then not only act according to your nature, which is in itself a rule of perfection, but you will be — and this is a rule of the imperfection — eternally subject to its modes, its dualities of liking and dislike, pain and pleasure and especially to the rajasic mode with its principle of desire and its snare of wrath and grief and longing, — the restless, all-devouring principle of desire, the insatiable fire which besieges your worldly action, the eternal enemy of knowledge by which it is covered over here in your nature as is a fire by smoke or a mirror by dust and which you must slay in order to live in the calm, clear, luminous truth of the spirit. The senses, mind and intellect are the seat of this eternal cause of imperfection and yet it is within this sense, mind and intellect, this play of the lower nature that you would limit your search for perfection! The effort is vain. The kinetic side of your nature must first seek to add to itself the quietistic; you must uplift yourself beyond this lower nature to that which is above the three gunas, that which is founded in the highest principle, in the soul. Only when you have attained to peace of soul, can you become capable of a free and divine action.

The quietist, the ascetic, on the other hand cannot see any possibility of perfection into which life and action enter. Are they not the very seat of bondage and imperfection? Is not all action imperfect in its nature, like a fire that must produce smoke, is not the principle of action itself rajasic, the father of desire, a cause that must have its effect of obscuration of knowledge, its round of longing and success and failure, its oscillations of joy and grief, its duality of virtue and sin? God may be in the world, but he is not of the world; he is a God of renunciation and not the Master or cause of our works; the master of our works is desire and the cause of works is ignorance. If the world, the Kshara is in a sense a manifestation or a *lilā* of the Divine, it is an imperfect play with the ignorance of Nature, an obscuration

rather than a manifestation. That is surely evident from our very first glance at the nature of the world and does not the fullest experience of the world teach us always the same truth? is it not a wheel of the ignorance binding the soul to continual birth by the impulse of desire and action until at last that is exhausted or cast away? Not only desire, but action also must be flung away; seated in the silent self the soul will then pass away into the motionless, actionless, imperturbable, absolute Brahman. To this objection of the impersonalising quietist the Gita is at more pains to answer than to that of the man of the world, the kinetic individual. For this quietism having hold of a higher and more powerful truth which is yet not the whole or the highest truth, its promulgation as the universal, complete, highest ideal of human life is likely to be more confusing and disastrous to the advance of the human race towards its goal than the error of an exclusive kinetism. A strong one-sided truth, when set forth as the whole truth, creates a strong light but also a strong confusion; for the very strength of its element of truth increases the strength of its element of error. The error of the kinetic ideal can only prolong the ignorance and retard the human advance by setting it in search of perfection where perfection cannot be found; but the error of the quietistic ideal contains in itself the very principle of world-destruction. Were I to act upon it, says Krishna, I should destroy the peoples and be the author of confusion; and though the error of an individual human being, even though a nearly divine man, cannot destroy the whole race, it may produce a widespread confusion which may be in its nature destructive of the principle of human life and disturbing to the settled line of its advance.

Therefore the quietistic tendency in man must be got to recognise its own incompleteness and admit on an equality with itself the truth which lies behind the kinetic tendency,—the fulfilment of God in man and the presence of the Divine in all the action of the human race. God is there not only in the silence, but in the action; the quietism of the impassive soul unaffected by Nature and the kinetism of the soul giving itself to Nature so that the great world-sacrifice, the Purusha-Yajna, may be

effected, are not a reality and a falsehood in perpetual struggle nor yet two hostile realities, one superior, the other inferior, each fatal to the other; they are the double term of the divine manifestation. The Akshara alone is not the whole key of their fulfilment, not the very highest secret. The double fulfilment, the reconciliation is to be sought in the Purushottama represented here by Krishna, at once supreme Being, Lord of the worlds and Avatar. The divinised man entering into his divine nature will act even as he acts; he will not give himself up to inaction. The Divine is at work in man in the ignorance and at work in man in the knowledge. To know Him is our soul's highest welfare and the condition of its perfection, but to know and realise Him as a transcendent peace and silence is not all; the secret that has to be learned is at once the secret of the eternal and unborn Divine and the secret of the divine birth and works, *janna karma ca me divyam*. The action which proceeds from that knowledge, will be free from all bondage; "he who so knoweth me," says the Teacher, "is not bound by works." If the escape from the obligation of works and desire and from the wheel of rebirth is to be the aim and the ideal, then this knowledge is to be taken as the true, the broad way of escape; for, says the Gita, "he who knows in their right principles my divine birth and works, comes when he leaves his body, not to rebirth, but to Me, O Arjuna." Through the knowledge and possession of the divine birth he comes to the unborn and imperishable Divine who is the self of all beings, *ajo avyaya ātmā*; through the knowledge and execution of divine works to the Master of works, the lord of all beings, *bhūtānām iśvara*. He lives in that unborn being; his works are those of that universal Mastery.

The Possibility and Purpose of Avatarhood

IN SPEAKING of this Yoga in which action and knowledge become one, the Yoga of the sacrifice of works with knowledge, in which works are fulfilled in knowledge, knowledge supports, changes and enlightens works, and both are offered to the Purushottama, the supreme Divinity who becomes manifest within us as Narayana, Lord of all our being and action seated secret in our hearts for ever, who becomes manifest even in the human form as the Avatar, the divine birth taking possession of our humanity, Krishna has declared in passing that this was the ancient and original Yoga which he gave to Vivasvan, the Sun-God, Vivasvan gave it to Manu, the father of men, Manu gave it to Ikshvaku, head of the Solar line, and so it came down from royal sage to royal sage till it was lost in the great lapse of Time and is now renewed for Arjuna, because he is the lover and devotee, friend and comrade of the Avatar. For this, he says, is the highest secret,—thus claiming for it a superiority to all other forms of Yoga, because those others lead to the impersonal Brahman or to a personal Deity, to a liberation in actionless knowledge or a liberation in absorbed beatitude, but this gives the highest secret and the whole secret; it brings us to divine peace and divine works, to divine knowledge, action and ecstasy unified in a perfect freedom; it unites into itself all the Yogic paths as the highest being of the Divine reconciles and makes one in itself all the different and even contrary powers and principles of its manifested being. Therefore this Yoga of the Gita is not, as some contend, only the Karmayoga, one and the lowest, according to them, of the three paths, but a highest Yoga synthetic and integral directing Godward all the powers of our being.

Arjuna takes the declaration about the transmission of the Yoga in its most physical sense,—there is another significance in which it can be taken,—and asks how the Sun-God, one of the first-born of beings, ancestor of the Solar dynasty, can have received the Yoga from the man Krishna who is only now born into the world. Krishna does not reply, as we might have expected him to have done, that it was as the Divine who is the source of all knowledge that he gave the Word to the Deva who is his form of knowledge, giver of all inner and outer light,—*bhargah savitur devasya yo no dhiyah pracodayāt*; he accepts instead the opportunity which Arjuna gives him of declaring his concealed Godhead, a declaration for which he had prepared when he gave himself as the divine example for the worker who is not bound by his works, but which he has not yet quite explicitly made. He now openly announces himself as the incarnate Godhead, the Avatar.

We have had occasion already, when speaking of the divine Teacher, to state briefly the doctrine of Avatarhood as it appears to us in the light of Vedanta, the light in which the Gita presents it to us. We must now look a little more closely at this Avatarhood and at the significance of the divine Birth of which it is the outward expression; for that is a link of considerable importance in the integral teaching of the Gita. And we may first translate the words of the Teacher himself in which the nature and purpose of Avatarhood are given summarily and remind ourselves also of other passages or references which bear upon it. “Many are my lives that are past, and thine also, O Arjuna; all of them I know, but thou knowest not, O scourge of the foe. Though I am the unborn, though I am imperishable in my self-existence, though I am the Lord of all existences, yet I stand upon my own Nature and I come into birth by my self-Maya. For whosoever there is the fading of the Dharma and the uprising of unrighteousness, then I loose myself forth into birth. For the deliverance of the good, for the destruction of the evil-doers, for the enthroning of the Right I am born from age to age. He who knoweth thus in its right principles my divine birth and my divine work, when he abandons his body, comes not to rebirth, he comes to Me,

O Arjuna. Delivered from liking and fear and wrath, full of me, taking refuge in me, many purified by austerity of knowledge have arrived at my nature of being (*madbhāvam*, the divine nature of the Purushottama). As men approach me, so I accept them to my love (*bhajāmi*); men follow in every way my path, O son of Pritha."

But most men, the Gita goes on to say, desiring the fulfilment of their works, sacrifice to the gods, to various forms and personalities of the one Godhead, because the fulfilment (*siddhi*) that is born of works,—of works without knowledge,—is very swift and easy in the human world; it belongs indeed to that world alone. The other, the divine self-fulfilment in man by the sacrifice with knowledge to the supreme Godhead, is much more difficult; its results belong to a higher plane of existence and they are less easily grasped. Men therefore have to follow the fourfold law of their nature and works and on this plane of mundane action they seek the Godhead through his various qualities. But, says Krishna, though I am the doer of the fourfold works and creator of its fourfold law, yet I must be known also as the non-doer, the imperishable, the immutable Self. "Works affect me not, nor have I desire for the fruit of works;" for God is the impersonal beyond this egoistic personality and this strife of the modes of Nature, and as the Purushottama also, the impersonal Personality, he possesses this supreme freedom even in works. Therefore the doer of divine works even while following the fourfold law has to know and live in that which is beyond, in the impersonal Self and so in the supreme Godhead. "He who thus knows me is not bound by his works. So knowing was work done by the men of old who sought liberation; do therefore, thou also, work of that more ancient kind done by ancient men."

The second portion of these passages which has here been given in substance, explains the nature of divine works, *divyam karma*, with the principle of which we have had to deal in the last essay; the first, which has been fully translated, explains the way of the divine birth, *divyam janma*, the Avatarhood. But we have to remark carefully that the upholding of Dharma in

the world is not the only object of the descent of the Avatar, that great mystery of the Divine manifest in humanity; for the upholding of the Dharma is not an all-sufficient object in itself, not the supreme possible aim for the manifestation of a Christ, a Krishna, a Buddha, but is only the general condition of a higher aim and a more supreme and divine utility. For there are two aspects of the divine birth; one is a descent, the birth of God in humanity, the Godhead manifesting itself in the human form and nature, the eternal Avatar; the other is an ascent, the birth of man into the Godhead, man rising into the divine nature and consciousness, *madbhāvam āgataḥ*; it is the being born anew in a second birth of the soul. It is that new birth which Avatarhood and the upholding of the Dharma are intended to serve. This double aspect in the Gita's doctrine of Avatarhood is apt to be missed by the cursory reader satisfied, as most are, with catching a superficial view of its profound teachings, and it is missed too by the formal commentator petrified in the rigidity of the schools. Yet it is necessary, surely, to the whole meaning of the doctrine. Otherwise the Avatar idea would be only a dogma, a popular superstition, or an imaginative or mystic deification of historical or legendary supermen, not what the Gita makes all its teaching, a deep philosophical and religious truth and an essential part of or step to the supreme mystery of all, *rahasyam uttamam*.

If there were not this rising of man into the Godhead to be helped by the descent of God into humanity, Avatarhood for the sake of the Dharma would be an otiose phenomenon, since mere Right, mere justice or standards of virtue can always be upheld by the divine omnipotence through its ordinary means, by great men or great movements, by the life and work of sages and kings and religious teachers, without any actual incarnation. The Avatar comes as the manifestation of the divine nature in the human nature, the apocalypse of its Christhood, Krishnahood, Buddhahood, in order that the human nature may by moulding its principle, thought, feeling, action, being on the lines of that Christhood, Krishnahood, Buddhahood transfigure itself into the divine. The law, the Dharma which the Avatar establishes

is given for that purpose chiefly; the Christ, Krishna, Buddha stands in its centre as the gate, he makes through himself the way men shall follow. That is why each Incarnation holds before men his own example and declares of himself that he is the way and the gate; he declares too the oneness of his humanity with the divine being, declares that the Son of Man and the Father above from whom he has descended are one, that Krishna in the human body, *mānuṣīm tanum āśritam*, and the supreme Lord and Friend of all creatures are but two revelations of the same divine Purushottama, revealed there in his own being, revealed here in the type of humanity.

That the Gita contains as its kernel this second and real object of the Avatarhood, is evident even from this passage by itself rightly considered; but it becomes much clearer if we take it, not by itself, — always the wrong way to deal with the texts of the Gita, — but in its right close connection with other passages and with the whole teaching. We have to remember and take together its doctrine of the one Self in all, of the Godhead seated in the heart of every creature, its teaching about the relations between the Creator and his creation, its strongly emphasised idea of the *vibhūti*, — noting too the language in which the Teacher gives his own divine example of selfless works which applies equally to the human Krishna and the divine Lord of the worlds, and giving their due weight to such passages as that in the ninth chapter, “Deluded minds despise me lodged in the human body because they know not my supreme nature of being, Lord of all existences”; and we have to read in the light of these ideas this passage we find before us and its declaration that by the knowledge of his divine birth and divine works men come to the Divine and by becoming full of him and even as he and taking refuge in him they arrive at his nature and status of being, *madbhāvam*. For then we shall understand the divine birth and its object, not as an isolated and miraculous phenomenon, but in its proper place in the whole scheme of the world-manifestation; without that we cannot arrive at its divine mystery, but shall either scout it altogether or accept it ignorantly and, it may be, superstitiously or fall into the petty and superficial ideas of the

modern mind about it by which it loses all its inner and helpful significance.

For to the modern mind Avatarhood is one of the most difficult to accept or to understand of all the ideas that are streaming in from the East upon the rationalised human consciousness. It is apt to take it at the best for a mere figure for some high manifestation of human power, character, genius, great work done for the world or in the world, and at the worst to regard it as a superstition,—to the heathen a foolishness and to the Greeks a stumbling-block. The materialist, necessarily, cannot even look at it, since he does not believe in God; to the rationalist or the Deist it is a folly and a thing of derision; to the thoroughgoing dualist who sees an unbridgeable gulf between the human and the divine nature, it sounds like a blasphemy. The rationalist objects that if God exists, he is extracosmic or supracosmic and does not intervene in the affairs of the world, but allows them to be governed by a fixed machinery of law,—he is, in fact, a sort of far-off constitutional monarch or spiritual King Log, at the best an indifferent inactive Spirit behind the activity of Nature, like some generalised or abstract witness Purusha of the Sankhyas; he is pure Spirit and cannot put on a body, infinite and cannot be finite as the human being is finite, the ever unborn creator and cannot be the creature born into the world,—these things are impossible even to his absolute omnipotence. To these objections the thoroughgoing dualist would add that God is in his person, his role and his nature different and separate from man; the perfect cannot put on human imperfection; the unborn personal God cannot be born as a human personality; the Ruler of the worlds cannot be limited in a nature-bound human action and in a perishable human body. These objections, so formidable at first sight to the reason, seem to have been present to the mind of the Teacher in the Gita when he says that although the Divine is unborn, imperishable in his self-existence, the Lord of all beings, yet he assumes birth by a supreme resort to the action of his Nature and by force of his self-Maya; that he whom the deluded despise because lodged in a human body, is verily in his supreme being the Lord of all; that he is in the action of

the divine consciousness the creator of the fourfold Law and the doer of the works of the world and at the same time in the silence of the divine consciousness the impartial witness of the works of his own Nature,—for he is always, beyond both the silence and the action, the supreme Purushottama. And the Gita is able to meet all these oppositions and to reconcile all these contraries because it starts from the Vedantic view of existence, of God and the universe.

For in the Vedantic view of things all these apparently formidable objections are null and void from the beginning. The idea of the Avatar is not indeed indispensable to its scheme, but it comes in naturally into it as a perfectly rational and logical conception. For all here is God, is the Spirit or Self-existence, is Brahman, *ekamevādvitīyam*,—there is nothing else, nothing other and different from it and there can be nothing else, can be nothing other and different from it; Nature is and can be nothing else than a power of the divine consciousness; all beings are and can be nothing else than inner and outer, subjective and objective soul-forms and bodily forms of the divine being which exist in or result from the power of its consciousness. Far from the Infinite being unable to take on finiteness, the whole universe is nothing else but that; we can see, look as we may, nothing else at all in the whole wide world we inhabit. Far from the Spirit being incapable of form or disdaining to connect itself with form of matter or mind and to assume a limited nature or a body, all here is nothing but that, the world exists only by that connection, that assumption. Far from the world being a mechanism of law with no soul or spirit intervening in the movement of its forces or the action of its minds and bodies,—only some original indifferent Spirit passively existing somewhere outside or above it,—the whole world and every particle of it is on the contrary nothing but the divine force in action and that divine force determines and governs its every movement, inhabits its every form, possesses here every soul and mind; all is in God and in him moves and has its being, in all he is, acts and displays his being; every creature is the disguised Narayana.

Far from the unborn being unable to assume birth, all beings

are even in their individuality unborn spirits, eternal without beginning or end, and in their essential existence and their universality all are the one unborn Spirit of whom birth and death are only a phenomenon of the assumption and change of forms. The assumption of imperfection by the perfect is the whole mystic phenomenon of the universe; but the imperfection appears in the form and action of the mind or body assumed, subsists in the phenomenon,—in that which assumes it there is no imperfection, even as in the Sun which illuminates all there is no defect of light or of vision, but only in the capacities of the individual organ of vision. Nor does God rule the world from some remote heaven, but by his intimate omnipresence; each finite working of force is an act of infinite Force and not of a limited separate self-existent energy labouring in its own underived strength; in every finite working of will and knowledge we can discover, supporting it, an act of the infinite all-will and all-knowledge. God's rule is not an absentee, foreign and external government; he governs all because he exceeds all, but also because he dwells within all movements and is their absolute soul and spirit. Therefore none of the objections opposed by our reason to the possibility of Avatarhood can stand in their principle; for the principle is a vain division made by the intellectual reason which the whole phenomenon and the whole reality of the world are busy every moment contradicting and disproving.

But still, apart from the possibility, there is the question of the actual divine working,—whether actually the divine consciousness does appear coming forward from beyond the veil to act at all directly in the phenomenal, the finite, the mental and material, the limited, the imperfect. The finite is indeed nothing but a definition, a face-value of the Infinite's self-representations to its own variations of consciousness; the real value of each finite phenomenon is an infinite value, is indeed the very Infinite. Each being is infinite in its self-existence, whatever it may be in the action of its phenomenal nature, its temporal self-representation. The man is not, when we look closely, himself alone, a rigidly separate self-existent individual, but humanity in a mind and body of itself; and humanity too is no rigidly

separate self-existent species or genus, it is the All-existence, the universal Godhead figuring itself in the type of humanity; there it works out certain possibilities, develops, evolves, as we now say, certain powers of its manifestations. What it evolves, is itself, is the Spirit.

For what we mean by Spirit is self-existent being with an infinite power of consciousness and unconditioned delight in its being; it is either that or nothing, or at least nothing which has anything to do with man and the world or with which, therefore, man or the world has anything to do. Matter, body is only a massed motion of force of conscious being employed as a starting-point for the variable relations of consciousness working through its power of sense; nor is Matter anywhere really void of consciousness, for even in the atom, the cell there is, as is now made abundantly clear in spite of itself by modern Science, a power of will, an intelligence at work; but that power is the power of will and intelligence of the Self, Spirit or Godhead within it, it is not the separate, self-derived will or idea of the mechanical cell or atom. This universal will and intelligence, involved, develops its powers from form to form, and on earth at least it is in man that it draws nearest to the full divine and there first becomes, even in the outward intelligence in the form, obscurely conscious of its divinity. But still there too there is a limitation, there is that imperfection of the manifestation which prevents the lower forms from having the self-knowledge of their identity with the Divine. For in each limited being the limitation of the phenomenal action is accompanied by a limitation also of the phenomenal consciousness which defines the nature of the being and makes the inner difference between creature and creature. The Divine works behind indeed and governs its special manifestation through this outer and imperfect consciousness and will, but is itself secret in the cavern, *guhāyām*, as the Veda puts it, or as the Gita expresses it, "In the heart of all existences the Lord abides turning all existences as if mounted on a machine by Maya." This secret working of the Lord hidden in the heart from the egoistic nature-consciousness through which he works, is God's universal method with creatures. Why then should we

suppose that in any form he comes forward into the frontal, the phenomenal consciousness for a more direct and consciously divine action? Obviously, if at all, then to break the veil between himself and humanity which man limited in his own nature could never lift.

The Gita explains the ordinary imperfect action of the creature by its subjection to the mechanism of Prakriti and its limitation by the self-representations of Maya. These two terms are only complementary aspects of one and the same effective force of divine consciousness. Maya is not essentially illusion,—the element or appearance of illusion only enters in by the ignorance of the lower Prakriti, Maya of the three modes of Nature,—it is the divine consciousness in its power of various self-representation of its being, while Prakriti is the effective force of that consciousness which operates to work out each such self-representation according to its own law and fundamental idea, *svabhāva* and *svadharma*, in its own proper quality and particular force of working, *guna-karma*. “Leaning—pressing down upon my own Nature (Prakriti) I create (loose forth into various being) all this multitude of existences, all helplessly subject to the control of Nature.” Those who know not the Divine lodged in the human body, are ignorant of it because they are grossly subject to this mechanism of Prakriti, helplessly subject to its mental limitations and acquiescent in them, and dwell in an Asuric nature that deludes with desire and bewilders with egoism the will and the intelligence, *mohinīm prakṛtim śritāḥ*. For the Purushottama within is not readily manifest to any and every being; he conceals himself in a thick cloud of darkness or a bright cloud of light, utterly he envelops and wraps himself in his Yogamaya.¹ “All this world,” says the Gita, “because it is bewildered by the three states of being determined by the modes of Nature, fails to recognise me, for this my divine Maya of the modes of Nature is hard to get beyond; those cross beyond it who approach Me; but those who dwell in the Asuric nature of being, have their knowledge reft from them by Maya.” In

¹ *nāhaṁ prakāśāḥ sarvasya yogamāyā-samāvṛtaḥ*.

other words, there is the inherent consciousness of the divine in all, for in all the Divine dwells; but he dwells there covered by his Maya and the essential self-knowledge of beings is reft from them, turned into the error of egoism by the action of Maya, the action of the mechanism of Prakriti. Still by drawing back from the mechanism of Nature to her inner and secret Master man can become conscious of the indwelling Divinity.

Now it is notable that with a slight but important variation of language the Gita describes in the same way both the action of the Divine in bringing about the ordinary birth of creatures and his action in his birth as the Avatar. "Leaning upon my own Nature, *prakṛtim svām avaṣṭabhyā*," it will say later, "I loose forth variously, *visṛjāmi*, this multitude of creatures helplessly subject owing to the control of Prakriti, *avaśāṁ prakṛter vaśāt*." "Standing upon my own Nature," it says here, "I am born by my self-Maya, *prakṛtim svām adhiṣṭhāya . . . ātmamāyayā*, I loose forth myself, *ātmānam srjāmi*." The action implied in the word *avaṣṭabhyā* is a forceful downward pressure by which the object controlled is overcome, oppressed, blocked or limited in its movement or working and becomes helplessly subject to the controlling power, *avaśāṁ vaśāt*; Nature in this action becomes mechanical and its multitude of creatures are held helpless in the mechanism, not lords of their own action. On the contrary the action implied in the word *adhiṣṭhāya* is a dwelling in, but also a standing upon and over the Nature, a conscious control and government by the indwelling Godhead, *adhiṣṭhātrī devatā*, in which the Purusha is not helplessly driven by the Prakriti through ignorance, but rather the Prakriti is full of the light and the will of the Purusha. Therefore in the normal birth that which is loosed forth,—created, as we say,—is the multitude of creatures or becomings, *bhūtagrāmam*; in the divine birth that which is loosed forth, self-created, is the self-conscious self-existent being, *ātmānam*; for the Vedantic distinction between *ātmā* and *bhūtāni* is that which is made in European philosophy between the Being and its becomings. In both cases Maya is the means of the creation or manifestation, but in the divine birth it is by self-Maya, *ātmamāyayā*, not the involution in the lower Maya

of the ignorance, but the conscious action of the self-existent Godhead in its phenomenal self-representation, well aware of its operation and its purpose,—that which the Gita calls elsewhere Yogamaya. In the ordinary birth Yogamaya is used by the Divine to envelop and conceal itself from the lower consciousness, so it becomes for us the means of the ignorance, *avidyā-māyā*; but it is by this same Yogamaya that self-knowledge also is made manifest in the return of our consciousness to the Divine, it is the means of the knowledge, *vidyā-māyā*; and in the divine birth it so operates—as the knowledge controlling and enlightening the works which are ordinarily done in the Ignorance.

The language of the Gita shows therefore that the divine birth is that of the conscious Godhead in our humanity and essentially the opposite of the ordinary birth even though the same means are used, because it is not the birth into the Ignorance, but the birth of the knowledge, not a physical phenomenon, but a soul-birth. It is the Soul's coming into birth as the self-existent Being controlling consciously its becoming and not lost to self-knowledge in the cloud of the ignorance. It is the Soul born into the body as Lord of Nature, standing above and operating in her freely by its will, not entangled and helplessly driven round and round in the mechanism; for it works in the knowledge and not, as most do, in the ignorance. It is the secret Soul in all coming forward from its governing secrecy behind the veil to possess wholly in a human type, but as the Divine, the birth which ordinarily it possesses only from behind the veil as the Ishwara while the outward consciousness in front of the veil is rather possessed than in possession because there it is a partially conscious being, the Jiva lost to self-knowledge and bound in its works through a phenomenal subjection to Nature. The Avatar² therefore is a direct manifestation in humanity by Krishna the divine Soul of that divine condition of being to which Arjuna, the human soul, the type of a highest human being, a Vibhuti, is called upon by the Teacher to arise, and to which he can

² The word Avatara means a descent; it is a coming down of the Divine below the line which divides the divine from the human world or status.

only arise by climbing out of the ignorance and limitation of his ordinary humanity. It is the manifestation from above of that which we have to develop from below; it is the descent of God into that divine birth of the human being into which we mortal creatures must climb; it is the attracting divine example given by God to man in the very type and form and perfected model of our human existence.

The Process of Avatarhood

WE SEE that the mystery of the divine Incarnation in man, the assumption by the Godhead of the human type and the human nature, is in the view of the Gita only the other side of the eternal mystery of human birth itself which is always in its essence, though not in its phenomenal appearance, even such a miraculous assumption. The eternal and universal self of every human being is God; even his personal self is a part of the Godhead, *mamaivāṁśah*,—not a fraction or fragment, surely, since we cannot think of God as broken up into little pieces, but a partial consciousness of the one Consciousness, a partial power of the one Power, a partial enjoyment of world-being by the one and universal Delight of being, and therefore in manifestation or, as we say, in Nature a limited and finite being of the one infinite and illimitable Being. The stamp of that limitation is an ignorance by which he forgets, not only the Godhead from which he came forth, but the Godhead which is always within him, there living in the secret heart of his own nature, there burning like a veiled Fire on the inner altar in his own temple-house of human consciousness.

He is ignorant because there is upon the eyes of his soul and all its organs the seal of that Nature, Prakriti, Maya, by which he has been put forth into manifestation out of God's eternal being; she has minted him like a coin out of the precious metal of the divine substance, but overlaid with a strong coating of the alloy of her phenomenal qualities, stamped with her own stamp and mark of animal humanity, and although the secret sign of the Godhead is there, it is at first indistinguishable and always with difficulty decipherable, not to be really discovered except by that initiation into the mystery of our own being which distinguishes a Godward from an earthward humanity. In the Avatar, the divinely-born Man, the real substance shines

through the coating; the mark of the seal is there only for form, the vision is that of the secret Godhead, the power of the life is that of the secret Godhead, and it breaks through the seals of the assumed human nature; the sign of the Godhead, an inner soul-sign, not outward, not physical, stands out legible for all to read who care to see or who can see; for the Asuric nature is always blind to these things, it sees the body and not the soul, the external being and not the internal, the mask and not the Person. In the ordinary human birth the Nature-aspect of the universal Divine assuming humanity prevails; in the incarnation the God-aspect of the same phenomenon takes its place. In the one he allows the human nature to take possession of his partial being and to dominate it; in the other he takes possession of his partial type of being and its nature and divinely dominates it. Not by evolution or ascent like the ordinary man, the Gita seems to tell us, not by a growing into the divine birth, but by a direct descent into the stuff of humanity and a taking up of its moulds.

But it is to assist that ascent or evolution the descent is made or accepted; that the Gita makes very clear. It is, we might say, to exemplify the possibility of the Divine manifest in the human being, so that man may see what that is and take courage to grow into it. It is also to leave the influence of that manifestation vibrating in the earth-nature and the soul of that manifestation presiding over its upward endeavour. It is to give a spiritual mould of divine manhood into which the seeking soul of the human being can cast itself. It is to give a dharma, a religion,—not a mere creed, but a method of inner and outer living,—a way, a rule and law of self-moulding by which he can grow towards divinity. It is too, since this growth, this ascent is no mere isolated and individual phenomenon, but like all in the divine world-activities a collective business, a work and the work for the race, to assist the human march, to hold it together in its great crises, to break the forces of the downward gravitation when they grow too insistent, to uphold or restore the great dharma of the Godward law in man's nature, to prepare even, however far off, the kingdom of God, the victory of the seekers of light and perfection, *sādhūnām*, and the overthrow of those

who fight for the continuance of the evil and the darkness. All these are recognised objects of the descent of the Avatar, and it is usually by his work that the mass of men seek to distinguish him and for that they are ready to worship him. It is only the spiritual who see that this external Avatarhood is a sign, in the symbol of a human life, of the eternal inner Godhead making himself manifest in the field of their own human mentality and corporeality so that they can grow into unity with that and be possessed by it. The divine manifestation of a Christ, Krishna, Buddha in external humanity has for its inner truth the same manifestation of the eternal Avatar within in our own inner humanity. That which has been done in the outer human life of earth, may be repeated in the inner life of all human beings.

This is the object of the incarnation, but what is the method? First, we have the rational or minimising view of Avatarhood which sees in it only an extraordinary manifestation of the diviner qualities moral, intellectual and dynamic by which average humanity is exceeded. In this idea there is a certain truth. The Avatar is at the same time the Vibhuti. This Krishna who in his divine inner being is the Godhead in a human form, is in his outer human being the leader of his age, the great man of the Vrishnis. This is from the point of view of the Nature, not of the soul. The Divine manifests himself through infinite qualities of his nature and the intensity of the manifestation is measured by their power and their achievement. The *vibhūti* of the Divine is therefore, impersonally, the manifest power of his quality, it is his outflowing, in whatever form, of Knowledge, Energy, Love, Strength and the rest; personally, it is the mental form and the animate being in whom this power is achieved and does its great works. A pre-eminence in this inner and outer achievement, a greater power of divine quality, an effective energy is always the sign. The human *vibhūti* is the hero of the race's struggle towards divine achievement, the hero in the Carlylean sense of heroism, a power of God in man. "I am Vasudeva (Krishna) among the Vrishnis," says the Lord in the Gita, "Dhananjaya (Arjuna) among the Pandavas, Vyasa among the sages, the seer-poet Ushanas among the seer-poets," the first in each category,

the greatest of each group, the most powerfully representative of the qualities and works in which its characteristic soul-power manifests itself. This heightening of the powers of the being is a very necessary step in the progress of the divine manifestation. Every great man who rises above our average level, raises by that very fact our common humanity; he is a living assurance of our divine possibilities, a promise of the Godhead, a glow of the divine Light and a breath of the divine Power.

It is this truth which lies behind the natural human tendency to the deification of great minds and heroic characters; it comes out clearly enough in the Indian habit of mind which easily sees a partial (*amīsa*) Avatar in great saints, teachers, founders, or most significantly in the belief of southern Vaishnavas that some of their saints were incarnations of the symbolic living weapons of Vishnu,—for that is what all great spirits are, living powers and weapons of the Divine in the upward march and battle. This idea is innate and inevitable in any mystic or spiritual view of life which does not draw an inexorable line between the being and nature of the Divine and our human being and nature; it is the sense of the divine in humanity. But still the Vibhuti is not the Avatar; otherwise Arjuna, Vyasa, Ushanas would be Avatars as well as Krishna, even if in a less degree of the power of Avatarhood. The divine quality is not enough; there must be the inner consciousness of the Lord and Self governing the human nature by his divine presence. The heightening of the power of the qualities is part of the becoming, *bhūtagrāma*, an ascent in the ordinary manifestation; in the Avatar there is the special manifestation, the divine birth from above, the eternal and universal Godhead descended into a form of individual humanity, *ātmānam sṛjāmi*, and conscious not only behind the veil but in the outward nature.

There is an intermediary idea, a more mystical view of Avatarhood which supposes that a human soul calls down this descent into himself and is either possessed by the divine consciousness or becomes an effective reflection or channel of it. This view rests upon certain truths of spiritual experience. The divine birth in man, his ascent, is itself a growing of the human

into the divine consciousness, and in its intensest culmination is a losing of the separate self in that. The soul merges its individuality in an infinite and universal being or loses it in the heights of a transcendent being; it becomes one with the Self, the Brahman, the Divine or, as it is sometimes more absolutely put, becomes the one Self, the Brahman, the Divine. The Gita itself speaks of the soul becoming the Brahman, *brahmabhūta*, and of its thereby dwelling in the Lord, in Krishna, but it does not, it must be marked, speak of it as becoming the Lord or the Purushottama, though it does declare that the Jiva himself is always Ishwara, the partial being of the Lord, *mamaivāṁśah*. For this greatest union, this highest becoming is still part of the ascent; while it is the divine birth to which every Jiva arrives, it is not the descent of the Godhead, not Avatarhood, but at most Buddhahood according to the doctrine of the Buddhists, it is the soul awakened from its present mundane individuality into an infinite superconsciousness. That need not carry with it either the inner consciousness or the characteristic action of the Avatar.

On the other hand, this entering into the divine consciousness may be attended by a reflex action of the Divine entering or coming forward into the human parts of our being, pouring himself into the nature, the activity, the mentality, the corporeality even of the man; and that may well be at least a partial Avatarhood. The Lord stands in the heart, says the Gita,—by which it means of course the heart of the subtle being, the nodus of the emotions, sensations, mental consciousness, where the individual Purusha also is seated,—but he stands there veiled, enveloped by his Maya. But above, on a plane within us but now superconscient to us, called heaven by the ancient mystics, the Lord and the Jiva stand together revealed as of one essence of being, the Father and the Son of certain symbolisms, the Divine Being and the divine Man who comes forth from Him born of the higher divine Nature,¹ the virgin Mother, *parā prakṛti*, *parā*

¹ In the Buddhist legend the name of the mother of Buddha makes the symbolism clear; in the Christian the symbol seems to have been attached by a familiar mythopoetic process to the actual human mother of Jesus of Nazareth.

māyā, into the lower or human nature. This seems to be the inner doctrine of the Christian incarnation; in its Trinity the Father is above in this inner Heaven; the Son or supreme Prakriti become Jiva of the Gita descends as the divine Man upon earth, in the mortal body; the Holy Spirit, pure Self, Brahmic consciousness is that which makes them one and that also in which they communicate; for we hear of the Holy Spirit descending upon Jesus and it is the same descent which brings down the powers of the higher consciousness into the simple humanity of the Apostles.

But also the higher divine consciousness of the Purushottama may itself descend into the humanity and that of the Jiva disappear into it. This is said by his contemporaries to have happened in the occasional transfigurations of Chaitanya when he who in his normal consciousness was only the lover and devotee of the Lord and rejected all deification, became in these abnormal moments the Lord himself and so spoke and acted, with all the outflooding light and love and power of the divine Presence. Supposing this to be the normal condition, the human receptacle to be constantly no more than a vessel of this divine Presence and divine Consciousness, we should have the Avatar according to this intermediary idea of the incarnation. That easily recommends itself as possible to our human notions; for if the human being can elevate his nature so as to feel a unity with the being of the Divine and himself a mere channel of its consciousness, light, power, love, his own will and personality lost in that will and that being,—and this is a recognised spiritual status,—then there is no inherent impossibility of the reflex action of that Will, Being, Power, Love, Light, Consciousness occupying the whole personality of the human Jiva. And this would not be merely an ascent of our humanity into the divine birth and the divine nature, but a descent of the divine Purusha into humanity, an Avatar.

The Gita, however, goes much farther. It speaks clearly of the Lord himself being born; Krishna speaks of his many births that are past and makes it clear by his language that it is not merely the receptive human being but the Divine of whom he makes this affirmation, because he uses the very language of

the Creator, the same language which he will employ when he has to describe his creation of the world. "Although I am the unborn Lord of creatures, I create (loose forth) my *self* by my Maya," presiding over the actions of my Prakriti. Here there is no question of the Lord and the human Jiva or of the Father and the Son, the divine Man, but only of the Lord and his Prakriti. The Divine descends by his own Prakriti into birth in its human form and type and brings into it the divine Consciousness and the divine Power, though consenting, though willing to act in the form, type, mould of humanity, and he governs its actions in the body as the indwelling and over-dwelling Soul, *adhiṣṭhāya*. From above he governs always, indeed, for so he governs all nature, the human included; from within also he governs all nature, always, but hidden; the difference here is that he is manifest, that the nature is conscious of the divine Presence as the Lord, the Inhabitant, and it is not by his secret will from above, "the will of the Father which is in heaven," but by his quite direct and apparent will that he moves the nature. And here there seems to be no room for the human intermediary; for it is by resort to his own nature, *prakṛtim svām*, and not the special nature of the Jiva that the Lord of all existence thus takes upon himself the human birth.

This doctrine is a hard saying, a difficult thing for the human reason to accept; and for an obvious reason, because of the evident humanity of the Avatar. The Avatar is always a dual phenomenon of divinity and humanity; the Divine takes upon himself the human nature with all its outward limitations and makes them the circumstances, means, instruments of the divine consciousness and the divine power, a vessel of the divine birth and the divine works. But so surely it must be, since otherwise the object of the Avatar's descent is not fulfilled; for that object is precisely to show that the human birth with all its limitations can be made such a means and instrument of the divine birth and divine works, precisely to show that the human type of consciousness can be compatible with the divine essence of consciousness made manifest, can be converted into its vessel, drawn into nearerer conformity with it by a change of its mould

and a heightening of its powers of light and love and strength and purity; and to show also how it can be done. If the Avatar were to act in an entirely supernormal fashion, this object would not be fulfilled. A merely supernormal or miraculous Avatar would be a meaningless absurdity; not that there need be an entire absence of the use of supernormal powers such as Christ's so-called miracles of healing, for the use of supernormal powers is quite a possibility of human nature; but there need not be that at all, nor in any case is it the root of the matter, nor would it at all do if the life were nothing else but a display of supernormal fireworks. The Avatar does not come as a thaumaturgic magician, but as the divine leader of humanity and the exemplar of a divine humanity. Even human sorrow and physical suffering he must assume and use so as to show, first, how that suffering may be a means of redemption,—as did Christ,—secondly, to show how, having been assumed by the divine soul in the human nature, it can also be overcome in the same nature,—as did Buddha. The rationalist who would have cried to Christ, "If thou art the Son of God, come down from the cross," or points out sagely that the Avatar was not divine because he died and died too by disease,—as a dog dieth,—knows not what he is saying: for he has missed the root of the whole matter. Even, the Avatar of sorrow and suffering must come before there can be the Avatar of divine joy; the human limitation must be assumed in order to show how it can be overcome; and the way and the extent of the overcoming, whether internal only or external also, depends upon the stage of the human advance; it must not be done by a non-human miracle.

The question then arises, and it is the sole real difficulty, for here the intellect falters and stumbles over its own limits, how is this human mind and body assumed? For they were not created suddenly and all of a piece, but by some kind of evolution, physical or spiritual or both. No doubt, the descent of the Avatar, like the divine birth from the other side, is essentially a spiritual phenomenon, as is shown by the Gita's *ātmānam sṛjāmi*, it is a soul-birth; but still there is here an attendant physical birth. How then were this human mind and body of

the Avatar created? If we suppose that the body is always created by the hereditary evolution, by inconscient Nature and its immanent Life-spirit without the intervention of the individual soul, the matter becomes simple. A physical and mental body is prepared fit for the divine incarnation by a pure or great heredity and the descending Godhead takes possession of it. But the Gita in this very passage applies the doctrine of reincarnation, boldly enough, to the Avatar himself, and in the usual theory of reincarnation the reincarnating soul by its past spiritual and psychological evolution itself determines and in a way prepares its own mental and physical body. The soul prepares its own body, the body is not prepared for it without any reference to the soul. Are we then to suppose an eternal or continual Avatar himself evolving, we might say, his own fit mental and physical body according to the needs and pace of the human evolution and so appearing from age to age, *yuge yuge*? In some such spirit some would interpret the ten incarnations of Vishnu, first in animal forms, then in the animal man, then in the dwarf man-soul, Vamana, the violent Asuric man, Rama of the axe, the divinely-natured man, a greater Rama, the awakened spiritual man, Buddha, and, preceding him in time, but final in place, the complete divine manhood, Krishna,—for the last Avatar, Kalki, only accomplishes the work Krishna began,—he fulfils in power the great struggle which the previous Avatars prepared in all its potentialities. It is a difficult assumption to our modern mentality, but the language of the Gita seems to demand it. Or, since the Gita does not expressly solve the problem, we may solve it in some other way of our own, as that the body is prepared by the Jiva but assumed from birth by the Godhead or that it is prepared by one of the four Manus, *catvāro manavah*, of the Gita, the spiritual Fathers of every human mind and body. This is going far into the mystic field from which the modern reason is still averse; but once we admit Avatarhood, we have already entered into it and, once entered, may as well tread in it with firm footsteps.

There the Gita's doctrine of Avatarhood stands. We have had to advert to it at length in this aspect of its method, as we

did to the question of its possibility, because it is necessary to look at it and face the difficulties which the reasoning mind of man is likely to offer to it. It is true that the physical Avatarhood does not fill a large space in the Gita, but still it does occupy a definite place in the chain of its teachings and is implied in the whole scheme, the very framework being the Avatar leading the *vibhūti*, the man who has risen to the greatest heights of mere manhood, to the divine birth and divine works. No doubt, too, the inner descent of the Godhead to raise the human soul into himself is the main thing,—it is the inner Christ, Krishna or Buddha that matters. But just as the outer life is of immense importance for the inner development, so the external Avatarhood is of no mean importance for this great spiritual manifestation. The consummation in the mental and physical symbol assists the growth of the inner reality; afterwards the inner reality expresses itself with greater power in a more perfect symbolisation of itself through the outer life. Between these two, spiritual reality and mental and physical expression, acting and returning upon each other constantly the manifestation of the Divine in humanity has elected to move always in the cycles of its concealment and its revelation.

The Divine Birth and Divine Works

THE WORK for which the Avatar descends has like his birth a double sense and a double form. It has an outward side of the divine force acting upon the external world in order to maintain there and to reshape the divine law by which the Godward effort of humanity is kept from decisive retrogression and instead decisively carried forward in spite of the rule of action and reaction, the rhythm of advance and relapse by which Nature proceeds. It has an inward side of the divine force of the Godward consciousness acting upon the soul of the individual and the soul of the race, so that it may receive new forms of revelation of the Divine in man and may be sustained, renewed and enriched in its power of upward self-unfolding. The Avatar does not descend merely for a great outward action, as the pragmatic sense in humanity is too often tempted to suppose. Action and event have no value in themselves, but only take their value from the force which they represent and the idea which they symbolise and which the force is there to serve.

The crisis in which the Avatar appears, though apparent to the outward eye only as a crisis of events and great material changes, is always in its source and real meaning a crisis in the consciousness of humanity when it has to undergo some grand modification and effect some new development. For this action of change a divine force is needed; but the force varies always according to the power of consciousness which it embodies; hence the necessity of a divine consciousness manifesting in the mind and soul of humanity. Where, indeed, the change is mainly intellectual and practical, the intervention of the Avatar is not needed; there is a great uplifting of consciousness, a great manifestation of power in which men are for the time being exalted above their normal selves, and this surge of consciousness and power finds its wave-crests in certain exceptional individuals,

vibhūtis, whose action leading the general action is sufficient for the change intended. The Reformation in Europe and the French Revolution were crises of this character; they were not great spiritual events, but intellectual and practical changes, one in religious, the other in social and political ideas, forms and motives, and the modification of the general consciousness brought about was a mental and dynamic, but not a spiritual modification. But when the crisis has a spiritual seed or intention, then a complete or a partial manifestation of the God-consciousness in a human mind and soul comes as its originator or leader. That is the Avatar.

The outward action of the Avatar is described in the Gita as the restoration of the Dharma; when from age to age the Dharma fades, languishes, loses force and its opposite arises, strong and oppressive, then the Avatar comes and raises it again to power; and as these things in idea are always represented by things in action and by human beings who obey their impulsion, his mission is, in its most human and outward terms, to relieve the seekers of the Dharma who are oppressed by the reign of the reactionary darkness and to destroy the wrong-doers who seek to maintain the denial of the Dharma. But the language used can easily be given a poor and insufficient connotation which would deprive Avatarhood of all its spiritual depth of meaning. Dharma is a word which has an ethical and practical, a natural and philosophical and a religious and spiritual significance, and it may be used in any of these senses exclusive of the others, in a purely ethical, a purely philosophical or a purely religious sense. Ethically it means the law of righteousness, the moral rule of conduct, or in a still more outward and practical significance social and political justice, or even simply the observation of the social law. If used in this sense we shall have to understand that when unrighteousness, injustice and oppression prevail, the Avatar descends to deliver the good and destroy the wicked, to break down injustice and oppression and restore the ethical balance of mankind.

Thus the popular and mythical account of the Krishna avatar is that the unrighteousness of the Kurus as incarnated

in Duryodhana and his brothers became so great a burden to the earth that she had to call upon God to descend and lighten her load; accordingly Vishnu incarnated as Krishna, delivered the oppressed Pandavas and destroyed the unjust Kauravas. A similar account is given of the descent of the previous Vishnu avatars, of Rama to destroy the unrighteous oppression of Ravana, of Parashurama to destroy the unrighteous license of the military and princely caste, the Kshatriyas, of the dwarf Vamana to destroy the rule of the Titan Bali. But obviously the purely practical, ethical or social and political mission of the Avatar which is thus thrown into popular and mythical form, does not give a right account of the phenomenon of Avatarhood. It does not cover its spiritual sense, and if this outward utility were all, we should have to exclude Buddha and Christ whose mission was not at all to destroy evil-doers and deliver the good, but to bring to all men a new spiritual message and a new law of divine growth and spiritual realisation. On the other hand, if we give to the word dharma only its religious sense, in which it means a law of religious and spiritual life, we shall indeed get to the kernel of the matter, but we shall be in danger of excluding a most important part of the work done by the Avatar. Always we see in the history of the divine incarnations the double work, and inevitably, because the Avatar takes up the workings of God in human life, the way of the divine Will and Wisdom in the world, and that always fulfils itself externally as well as internally, by inner progress in the soul and by an outer change in the life.

The Avatar may descend as a great spiritual teacher and saviour, the Christ, the Buddha, but always his work leads, after he has finished his earthly manifestation, to a profound and powerful change not only in the ethical, but in the social and outward life and ideals of the race. He may, on the other hand, descend as an incarnation of the divine life, the divine personality and power in its characteristic action, for a mission ostensibly social, ethical and political, as is represented in the story of Rama or Krishna; but always then this descent becomes in the soul of the race a permanent power for the inner living and the spiritual rebirth. It is indeed curious to note that the

permanent, vital, universal effect of Buddhism and Christianity has been the force of their ethical, social and practical ideals and their influence even on the men and the ages which have rejected their religious and spiritual beliefs, forms and disciplines; later Hinduism which rejected Buddha, his *sangha* and his *dharma*, bears the ineffaceable imprint of the social and ethical influence of Buddhism and its effect on the ideas and the life of the race, while in modern Europe, Christian only in name, humanitarianism is the translation into the ethical and social sphere and the aspiration to liberty, equality and fraternity the translation into the social and political sphere of the spiritual truths of Christianity, the latter especially being effected by men who aggressively rejected the Christian religion and spiritual discipline and by an age which in its intellectual effort of emancipation tried to get rid of Christianity as a creed. On the other hand the life of Rama and Krishna belongs to the prehistoric past which has come down only in poetry and legend and may even be regarded as myths; but it is quite immaterial whether we regard them as myths or historical facts, because their permanent truth and value lie in their persistence as a spiritual form, presence, influence in the inner consciousness of the race and the life of the human soul. Avatarhood is a fact of divine life and consciousness which may realise itself in an outward action, but must persist, when that action is over and has done its work, in a spiritual influence; or may realise itself in a spiritual influence and teaching, but must then have its permanent effect, even when the new religion or discipline is exhausted, in the thought, temperament and outward life of mankind.

We must then, in order to understand the Gita's description of the work of the Avatar, take the idea of the Dharma in its fullest, deepest and largest conception, as the inner and the outer law by which the divine Will and Wisdom work out the spiritual evolution of mankind and its circumstances and results in the life of the race. Dharma in the Indian conception is not merely the good, the right, morality and justice, ethics; it is the whole government of all the relations of man with other beings, with Nature, with God, considered from the point of view of a divine

principle working itself out in forms and laws of action, forms of the inner and the outer life, orderings of relations of every kind in the world. Dharma¹ is both that which we hold to and that which holds together our inner and outer activities. In its primary sense it means a fundamental law of our nature which secretly conditions all our activities, and in this sense each being, type, species, individual, group has its own dharma. Secondly, there is the divine nature which has to develop and manifest in us, and in this sense dharma is the law of the inner workings by which that grows in our being. Thirdly, there is the law by which we govern our outgoing thought and action and our relations with each other so as to help best both our own growth and that of the human race towards the divine ideal.

Dharma is generally spoken of as something eternal and unchanging, and so it is in the fundamental principle, in the ideal, but in its forms it is continually changing and evolving, because man does not already possess the ideal or live in it, but aspires more or less perfectly towards it, is growing towards its knowledge and practice. And in this growth dharma is all that helps us to grow into the divine purity, largeness, light, freedom, power, strength, joy, love, good, unity, beauty, and against it stands its shadow and denial, all that resists its growth and has not undergone its law, all that has not yielded up and does not will to yield up its secret of divine values, but presents a front of perversion and contradiction, of impurity, narrowness, bondage, darkness, weakness, vileness, discord and suffering and division, and the hideous and the crude, all that man has to leave behind in his progress. This is the *adharma*, not-dharma, which strives with and seeks to overcome the dharma, to draw backward and downward, the reactionary force which makes for evil, ignorance and darkness. Between the two there is perpetual battle and struggle, oscillation of victory and defeat in which sometimes the upward and sometimes the downward forces prevail. This has been typified in the Vedic image of the struggle between the divine and the Titanic powers, the sons

¹ The word means "holding" from the root *dhr*, to hold.

of the Light and the undivided Infinity and the children of the Darkness and Division, in Zoroastrianism by Ahuramazda and Ahriman, and in later religions in the contest between God and his angels and Satan or Iblis and his demons for the possession of human life and the human soul.

It is these things that condition and determine the work of the Avatar. In the Buddhistic formula the disciple takes refuge from all that opposes his liberation in three powers, the *dharma*, the *saṅgha*, the Buddha. So in Christianity we have the law of Christian living, the Church and the Christ. These three are always the necessary elements of the work of the Avatar. He gives a *dharma*, a law of self-discipline by which to grow out of the lower into the higher life and which necessarily includes a rule of action and of relations with our fellowmen and other beings, endeavour in the eightfold path or the law of faith, love and purity or any other such revelation of the nature of the divine in life. Then because every tendency in man has its collective as well as its individual aspect, because those who follow one way are naturally drawn together into spiritual companionship and unity, he establishes the *saṅgha*, the fellowship and union of those whom his personality and his teaching unite. In Vaishnavism there is the same trio, *bhāgavata*, *bhakta*, *bhagavān*, — the *bhāgavata*, which is the law of the Vaishnava dispensation of adoration and love, the *bhakta* representing the fellowship of those in whom that law is manifest, *bhagavān*, the divine Lover and Beloved in whose being and nature the divine law of love is founded and fulfils itself. The Avatar represents this third element, the divine personality, nature and being who is the soul of the *dharma* and the *saṅgha*, informs them with himself, keeps them living and draws men towards the felicity and the liberation.

In the teaching of the Gita, which is more catholic and complex than other specialised teachings and disciplines, these things assume a larger meaning. For the unity here is the all-embracing Vedantic unity by which the soul sees all in itself and itself in all and makes itself one with all beings. The *dharma*

is therefore the taking up of all human relations into a higher divine meaning; starting from the established ethical, social and religious rule which binds together the whole community in which the God-seeker lives, it lifts it up by informing it with the Brahmic consciousness; the law it gives is the law of oneness, of equality, of liberated, desireless, God-governed action, of God-knowledge and self-knowledge enlightening and drawing to itself all the nature and all the action, drawing it towards divine being and divine consciousness, and of God-love as the supreme power and crown of the knowledge and the action. The idea of companionship and mutual aid in God-love and God-seeking which is at the basis of the idea of the *sangha* or divine fellowship, is brought in when the Gita speaks of the seeking of God through love and adoration, but the real *sangha* of this teaching is all humanity. The whole world is moving towards this dharma, each man according to his capacity,—“it is my path that men follow in every way,”—and the God-seeker, making himself one with all, making their joy and sorrow and all their life his own, the liberated made already one self with all beings, lives in the life of humanity, lives for the one Self in humanity, for God in all beings, acts for *lokasangraha*, for the maintaining of all in their dharma and the Dharma, for the maintenance of their growth in all its stages and in all its paths towards the Divine. For the Avatar here, though he is manifest in the name and form of Krishna, lays no exclusive stress on this one form of his human birth, but on that which it represents, the Divine, the Purushottama, of whom all Avatars are the human births, of whom all forms and names of the Godhead worshipped by men are the figures. The way declared by Krishna here is indeed announced as the way by which man can reach the real knowledge and the real liberation, but it is one that is inclusive of all paths and not exclusive. For the Divine takes up into his universality all Avatars and all teachings and all dharmas.

The Gita lays stress upon the struggle of which the world is the theatre, in its two aspects, the inner struggle and the outer battle. In the inner struggle the enemies are within, in

the individual, and the slaying of desire, ignorance, egoism is the victory. But there is an outer struggle between the powers of the Dharma and the Adharma in the human collectivity. The former is supported by the divine, the godlike nature in man, and by those who represent it or strive to realise it in human life, the latter by the Titanic or demoniac, the Asuric and Rakshasic nature whose head is a violent egoism, and by those who represent and strive to satisfy it. This is the war of the Gods and Titans, the symbol of which the old Indian literature is full, the struggle of the Mahabharata of which Krishna is the central figure being often represented in that image; the Pandavas who fight for the establishment of the kingdom of the Dharma, are the sons of the Gods, their powers in human form, their adversaries are incarnations of the Titanic powers, they are Asuras. This outer struggle too the Avatar comes to aid, directly or indirectly, to destroy the reign of the Asuras, the evil-doers, and in them depress the power they represent and to restore the oppressed ideals of the Dharma. He comes to bring nearer the kingdom of heaven on earth in the collectivity as well as to build the kingdom of heaven within in the individual human soul.

The inner fruit of the Avatar's coming is gained by those who learn from it the true nature of the divine birth and the divine works and who, growing full of him in their consciousness and taking refuge in him with their whole being, *mām mayā mām upāśritāḥ*, purified by the realising force of their knowledge and delivered from the lower nature, attain to the divine being and divine nature, *madbhāvam*. The Avatar comes to reveal the divine nature in man above this lower nature and to show what are the divine works, free, unegoistic, disinterested, impersonal, universal, full of the divine light, the divine power and the divine love. He comes as the divine personality which shall fill the consciousness of the human being and replace the limited egoistic personality, so that it shall be liberated out of ego into infinity and universality, out of birth into immortality. He comes as the divine power and love which calls men to itself, so that they may take refuge in that and no longer in the insufficiency

of their human wills and the strife of their human fear, wrath and passion, and liberated from all this unquiet and suffering may live in the calm and bliss of the Divine.² Nor does it matter essentially in what form and name or putting forward what aspect of the Divine he comes; for in all ways, varying with their nature, men are following the path set to them by the Divine which will in the end lead them to him and the aspect of him which suits their nature is that which they can best follow when he comes to lead them; in whatever way men accept, love and take joy in God, in that way God accepts, loves and takes joy in man. *Ye yathā mām prapadyante tāṁs tathaiva bhajāmyaham.*

² *janma karma ca me divyam evaṁ yo vetti tattvataḥ,
tyaktvā dehaṁ punarjanma naiti mām eti so'rjuna.
vitarāgabhayakrodhā manmayā mām upāśritāḥ,
bahavo jñānatapasā pūtā madbhāvam āgatāḥ.*

XVIII

The Divine Worker

TO ATTAIN to the divine birth,— a divinising new birth of the soul into a higher consciousness,— and to do divine works both as a means towards that before it is attained and as an expression of it after it is attained, is then all the Karmayoga of the Gita. The Gita does not try to define works by any outward signs through which it can be recognisable to an external gaze, measurable by the criticism of the world; it deliberately renounces even the ordinary ethical distinctions by which men seek to guide themselves in the light of the human reason. The signs by which it distinguishes divine works are all profoundly intimate and subjective; the stamp by which they are known is invisible, spiritual, supra-ethical.

They are recognisable only by the light of the soul from which they come. For, it says, “what is action and what is inaction, as to this even the sages are perplexed and deluded,” because, judging by practical, social, ethical, intellectual standards, they discriminate by accidentals and do not go to the root of the matter; “I will declare to thee that action by the knowledge of which thou shalt be released from all ills. One has to understand about action as well as to understand about wrong action and about inaction one has to understand; thick and tangled is the way of works.” Action in the world is like a deep forest, *gahana*, through which man goes stumbling as best he can, by the light of the ideas of his time, the standards of his personality, his environment, or rather of many times, many personalities, layers of thought and ethics from many social stages all inextricably confused together, temporal and conventional amidst all their claim to absoluteness and immutable truth, empirical and irrational in spite of their aping of right reason. And finally the sage seeking in the midst of it all a highest foundation of fixed law and an original truth finds himself obliged to raise the

last supreme question, whether all action and life itself are not a delusion and a snare and whether cessation from action, *akarma*, is not the last resort of the tired and disillusioned human soul. But, says Krishna, in this matter even the sages are perplexed and deluded. For by action, by works, not by inaction comes the knowledge and the release.

What then is the solution? what is that type of works by which we shall be released from the ills of life, from this doubt, this error, this grief, from this mixed, impure and baffling result even of our purest and best-intentioned acts, from these million forms of evil and suffering? No outward distinctions need be made, is the reply; no work the world needs, be shunned; no limit or hedge set round our human activities; on the contrary, all actions should be done, but from a soul in Yoga with the Divine, *yuktah krtsna-karma-kṛt*. *Akarma*, cessation from action is not the way; the man who has attained to the insight of the highest reason, perceives that such inaction is itself a constant action, a state subject to the workings of Nature and her qualities. The mind that takes refuge in physical inactivity, is still under the delusion that it and not Nature is the doer of works; it has mistaken inertia for liberation; it does not see that even in what seems absolute inertia greater than that of the stone or clod, Nature is at work, keeps unimpaired her hold. On the contrary in the full flood of action the soul is free from its works, is not the doer, not bound by what is done, and he who lives in the freedom of the soul, not in the bondage of the modes of Nature, alone has release from works. This is what the Gita clearly means when it says that he who in action can see inaction and can see action still continuing in cessation from works, is the man of true reason and discernment among men. This saying hinges upon the Sankhya distinction between Purusha and Prakriti, between the free inactive soul, eternally calm, pure and unmoved in the midst of works, and ever active Nature operative as much in inertia and cessation as in the overt turmoil of her visible hurry of labour. This is the knowledge which the highest effort of the discriminating reason, the *buddhi*, gives to us, and therefore whoever possesses it is the truly rational and discerning man, *sa*

buddhimān manusyesu, — not the perplexed thinker who judges life and works by the external, uncertain and impermanent distinctions of the lower reason. Therefore the liberated man is not afraid of action, he is a large and universal doer of all works, *kṛtsna-karma-kṛt*; not as others do them in subjection to Nature, but poised in the silent calm of the soul, tranquilly in Yoga with the Divine. The Divine is the lord of his works, he is only their channel through the instrumentality of his nature conscious of and subject to her Lord. By the flaming intensity and purity of this knowledge all his works are burned up as in a fire and his mind remains without any stain or disfiguring mark from them, calm, silent, unperturbed, white and clean and pure. To do all in this liberating knowledge, without the personal egoism of the doer, is the first sign of the divine worker.

The second sign is freedom from desire; for where there is not the personal egoism of the doer, desire becomes impossible; it is starved out, sinks for want of a support, dies of inanition. Outwardly the liberated man seems to undertake works of all kinds like other men, on a larger scale perhaps with a more powerful will and driving-force, for the might of the divine will works in his active nature; but from all his inceptions and undertakings the inferior concept and nether will of desire is entirely banished, *sarve samārambhāḥ kāmasaṅkalpavarjitaḥ*. He has abandoned all attachment to the fruits of his works, and where one does not work for the fruit, but solely as an impersonal instrument of the Master of works, desire can find no place, — not even the desire to serve successfully, for the fruit is the Lord's and determined by him and not by the personal will and effort, or to serve with credit and to the Master's satisfaction, for the real doer is the Lord himself and all glory belongs to a form of his Shakti missioned in the nature and not to the limited human personality. The human mind and soul of the liberated man does nothing, *na kiñcit karoti*; even though through his nature he engages in action, it is the Nature, the executive Shakti, it is the conscious Goddess governed by the divine Inhabitant who does the work.

It does not follow that the work is not to be done perfectly,

with success, with a right adaptation of means to ends: on the contrary a perfect working is easier to action done tranquilly in Yoga than to action done in the blindness of hopes and fears, lamed by the judgments of the stumbling reason, running about amidst the eager trepidations of the hasty human will: Yoga, says the Gita elsewhere, is the true skill in works, *yogah karmasu kauśalam*. But all this is done impersonally by the action of a great universal light and power operating through the individual nature. The Karmayogin knows that the power given to him will be adapted to the fruit decreed, the divine thought behind the work equated with the work he has to do, the will in him,—which will not be wish or desire, but an impersonal drive of conscious power directed towards an aim not his own,—subtly regulated in its energy and direction by the divine wisdom. The result may be success, as the ordinary mind understands it, or it may seem to that mind to be defeat and failure; but to him it is always the success intended, not by him, but by the all-wise manipulator of action and result, because he does not seek for victory, but only for the fulfilment of the divine will and wisdom which works out its ends through apparent failure as well as and often with greater force than through apparent triumph. Arjuna, bidden to fight, is assured of victory; but even if certain defeat were before him, he must still fight because that is the present work assigned to him as his immediate share in the great sum of energies by which the divine will is surely accomplished.

The liberated man has no personal hopes; he does not seize on things as his personal possessions; he receives what the divine Will brings him, covets nothing, is jealous of none: what comes to him he takes without repulsion and without attachment; what goes from him he allows to depart into the whirl of things without repining or grief or sense of loss. His heart and self are under perfect control; they are free from reaction and passion, they make no turbulent response to the touches of outward things. His action is indeed a purely physical action, *sārīram kevalam karma*; for all else comes from above, is not generated on the human plane, is only a reflection of the will, knowledge, joy of the divine Purushottama. Therefore he does not lay a stress on

doing and its objects bring about in his mind and heart any of those reactions which we call passion and sin. For sin consists not at all in the outward deed, but in an impure reaction of the personal will, mind and heart which accompanies it or causes it; the impersonal, the spiritual is always pure, *apāpaviddham*, and gives to all that it does its own inalienable purity. This spiritual impersonality is a third sign of the divine worker. All human souls, indeed, who have attained to a certain greatness and largeness are conscious of an impersonal Force or Love or Will and Knowledge working through them, but they are not free from egoistic reactions, sometimes violent enough, of their human personality. But this freedom the liberated soul has attained; for he has cast his personality into the impersonal, where it is no longer his, but is taken up by the divine Person, the Purushottama, who uses all finite qualities infinitely and freely and is bound by none. He has become a soul and ceased to be a sum of natural qualities; and such appearance of personality as remains for the operations of Nature, is something unbound, large, flexible, universal; it is a free mould for the Infinite, it is a living mask of the Purushottama.

The result of this knowledge, this desirelessness and this impersonality is a perfect equality in the soul and the nature. Equality is the fourth sign of the divine worker. He has, says the Gita, passed beyond the dualities; he is *dvandvātīta*. We have seen that he regards with equal eyes, without any disturbance of feeling, failure and success, victory and defeat; but not only these, all dualities are in him surpassed and reconciled. The outward distinctions by which men determine their psychological attitude towards the happenings of the world, have for him only a subordinate and instrumental meaning. He does not ignore them, but he is above them. Good happening and evil happening, so all-important to the human soul subject to desire, are to the desireless divine soul equally welcome since by their mingled strand are worked out the developing forms of the eternal good. He cannot be defeated, since all for him is moving towards the divine victory in the Kurukshetra of Nature, *dharmakṣetre kurukṣetre*, the field of doings which is the field

of the evolving Dharma, and every turn of the conflict has been designed and mapped by the foreseeing eye of the Master of the battle, the Lord of works and Guide of the dharma. Honour and dishonour from men cannot move him, nor their praise nor their blame; for he has a greater clear-seeing judge and another standard for his action, and his motive admits no dependence upon worldly rewards. Arjuna the Kshatriya prizes naturally honour and reputation and is right in shunning disgrace and the name of coward as worse than death; for to maintain the point of honour and the standard of courage in the world is part of his dharma: but Arjuna the liberated soul need care for none of these things, he has only to know the *kartavyam karma*, the work which the supreme Self demands from him, and to do that and leave the result to the Lord of his actions. He has passed even beyond that distinction of sin and virtue which is so all-important to the human soul while it is struggling to minimise the hold of its egoism and lighten the heavy and violent yoke of its passions,—the liberated has risen above these struggles and is seated firmly in the purity of the witnessing and enlightened soul. Sin has fallen away from him, and not a virtue acquired and increased by good action and impaired or lost by evil action, but the inalienable and unalterable purity of a divine and selfless nature is the peak to which he has climbed and the seat upon which he is founded. There the sense of sin and the sense of virtue have no starting-point or applicability.

Arjuna, still in the ignorance, may feel in his heart the call of right and justice and may argue in his mind that abstention from battle would be a sin entailing responsibility for all the suffering that injustice and oppression and the evil karma of the triumph of wrong bring upon men and nations, or he may feel in his heart the recoil from violence and slaughter and argue in his mind that all shedding of blood is a sin which nothing can justify. Both of these attitudes would appeal with equal right to virtue and reason and it would depend upon the man, the circumstances and the time which of these might prevail in his mind or before the eyes of the world. Or he might simply feel constrained by his heart and his honour to support his friends against his enemies,

the cause of the good and just against the cause of the evil and oppressive. The liberated soul looks beyond these conflicting standards; he sees simply what the supreme Self demands from him as needful for the maintenance or for the bringing forward of the evolving Dharma. He has no personal ends to serve, no personal loves and hatreds to satisfy, no rigidly fixed standard of action which opposes its rock-line to the flexible advancing march of the progress of the human race or stands up defiant against the call of the Infinite. He has no personal enemies to be conquered or slain, but sees only men who have been brought up against him by circumstances and the will in things to help by their opposition the march of destiny. Against them he can have no wrath or hatred; for wrath and hatred are foreign to the divine nature. The Asura's desire to break and slay what opposes him, the Rakshasa's grim lust of slaughter are impossible to his calm and peace and his all-embracing sympathy and understanding. He has no wish to injure, but on the contrary a universal friendliness and compassion, *maitrah karuṇa eva ca*: but this compassion is that of a divine soul overlooking men, embracing all other souls in himself, not the shrinking of the heart and the nerves and the flesh which is the ordinary human form of pity: nor does he attach a supreme importance to the life of the body, but looks beyond to the life of the soul and attaches to the other only an instrumental value. He will not hasten to slaughter and strife, but if war comes in the wave of the Dharma, he will accept it with a large equality and a perfect understanding and sympathy for those whose power and pleasure of domination he has to break and whose joy of triumphant life he has to destroy.

For in all he sees two things, the Divine inhabiting every being equally, the varying manifestation unequal only in its temporary circumstances. In the animal and man, in the dog, the unclean outcaste and the learned and virtuous Brahmin, in the saint and the sinner, in the indifferent and the friendly and the hostile, in those who love him and benefit and those who hate him and afflict, he sees himself, he sees God and has at heart for all the same equal kindliness, the same divine affection. Circumstances may determine the outward clasp or the outward

conflict, but can never affect his equal eye, his open heart, his inner embrace of all. And in all his actions there will be the same principle of soul, a perfect equality, and the same principle of work, the will of the Divine in him active for the need of the race in its gradually developing advance towards the Godhead.

Again, the sign of the divine worker is that which is central to the divine consciousness itself, a perfect inner joy and peace which depends upon nothing in the world for its source or its continuance; it is innate, it is the very stuff of the soul's consciousness, it is the very nature of divine being. The ordinary man depends upon outward things for his happiness; therefore he has desire; therefore he has anger and passion, pleasure and pain, joy and grief; therefore he measures all things in the balance of good fortune and evil fortune. None of these things can affect the divine soul; it is ever satisfied without any kind of dependence, *nitya-trpti nirāśrayah*; for its delight, its divine ease, its happiness, its glad light are eternal within, ingrained in itself, *ātma-ratiḥ*, *antah-sukho 'ntar-ārāmas tathāntar-jyotir eva yah*. What joy it takes in outward things is not for their sake, not for things which it seeks in them and can miss, but for the self in them, for their expression of the Divine, for that which is eternal in them and which it cannot miss. It is without attachment to their outward touches, but finds everywhere the same joy that it finds in itself, because its self is theirs, has become one self with the self of all beings, because it is united with the one and equal Brahman in them through all their differences, *brahmayoga-yuktātmā, sarvabhūtātmā-bhūtātmā*. It does not rejoice in the touches of the pleasant or feel anguish in the touches of the unpleasant; neither the wounds of things, nor the wounds of friends, nor the wounds of enemies can disturb the firmness of its outgazing mind or bewilder its receiving heart; this soul is in its nature, as the Upanishad puts it, *avranam*, without wound or scar. In all things it has the same imperishable Ananda, *sukham akṣayam aśmute*.

That equality, impersonality, peace, joy, freedom do not depend on so outward a thing as doing or not doing works. The Gita insists repeatedly on the difference between the inward and

the outward renunciation, *tyāga* and *sannyāsa*. The latter, it says, is valueless without the former, hardly possible even to attain without it, and unnecessary when there is the inward freedom. In fact *tyāga* itself is the real and sufficient Sannyasa. “He should be known as the eternal Sannyasin who neither hates nor desires; free from the dualities he is happily and easily released from all bondage.” The painful process of outward Sannyasa, *duḥkham āptum*, is an unnecessary process. It is perfectly true that all actions, as well as the fruit of action, have to be given up, to be renounced, but inwardly, not outwardly, not into the inertia of Nature, but to the Lord in sacrifice, into the calm and joy of the Impersonal from whom all action proceeds without disturbing his peace. The true Sannyasa of action is the reposing of all works on the Brahman. “He who, having abandoned attachment, acts reposing (or founding) his works on the Brahman, *brahmaṇyādhāya karmāṇi*, is not stained by sin even as water clings not to the lotus-leaf.” Therefore the Yogins first “do works with the body, mind, understanding, or even merely with the organs of action, abandoning attachment, for self-purification, *sangam tyaktvātmaśuddhaye*. By abandoning attachment to the fruits of works the soul in union with Brahman attains to peace of rapt foundation in Brahman, but the soul not in union is attached to the fruit and bound by the action of desire.” The foundation, the purity, the peace once attained, the embodied soul perfectly controlling its nature, having renounced all its actions by the mind, inwardly, not outwardly, “sits in its nine-gated city neither doing nor causing to be done.” For this soul is the one impersonal Soul in all, the all-pervading Lord, *prabhu*, *vibhu*, who, as the impersonal, neither creates the works of the world, nor the mind’s idea of being the doer, *na kartṛtvām na karmāṇi*, nor the coupling of works to their fruits, the chain of cause and effect. All that is worked out by the Nature in the man, *svabhāva*, his principle of self-becoming, as the word literally means. The all-pervading Impersonal accepts neither the sin nor the virtue of any: these are things created by the ignorance in the creature, by his egoism of the doer, by his ignorance of his highest self, by his involution in the operations of Nature, and

when the self-knowledge within him is released from this dark envelope, that knowledge lights up like a sun the real self within him; he knows himself then to be the soul supreme above the instruments of Nature. Pure, infinite, inviolable, immutable, he is no longer affected; no longer does he imagine himself to be modified by her workings. By complete identification with the Impersonal he can, too, release himself from the necessity of returning by birth into her movement.

And yet this liberation does not at all prevent him from acting. Only, he knows that it is not he who is active, but the modes, the qualities of Nature, her triple *gunas*. "The man who knows the principles of things thinks, his mind in Yoga (with the inactive Impersonal), 'I am doing nothing'; when he sees, hears, touches, smells, eats, moves, sleeps, breathes, speaks, takes, ejects, opens his eyes or closes them, he holds that it is only the senses acting upon the objects of the senses." He himself, safe in the immutable, unmodified soul, is beyond the grip of the three gunas, *trigunātīta*; he is neither sattvic, rajaslic nor tamasic; he sees with a clear untroubled spirit the alternations of the natural modes and qualities in his action, their rhythmic play of light and happiness, activity and force, rest and inertia. This superiority of the calm soul observing its action but not involved in it, this *traiguṇātītya*, is also a high sign of the divine worker. By itself the idea might lead to a doctrine of the mechanical determinism of Nature and the perfect aloofness and irresponsibility of the soul; but the Gita effectively avoids this fault of an insufficient thought by its illumining supertheistic idea of the Purushottama. It makes it clear that it is not in the end Nature which mechanically determines its own action; it is the will of the Supreme which inspires her; he who has already slain the Dhritarashtrians, he of whom Arjuna is only the human instrument, a universal Soul, a transcendent Godhead is the master of her labour. The reposing of works in the Impersonal is a means of getting rid of the personal egoism of the doer, but the end is to give up all our actions to that great Lord of all, *sarva-loka-maheśvara*. "With a consciousness identified with the Self, renouncing all thy actions into Me, *mayi sarvāṇi karmāṇi*

sannyasyādhyātmacetasā, freed from personal hopes and desires, from the thought of ‘I’ and ‘mine’, delivered from the fever of the soul, fight,” work, do my will in the world. The Divine motives, inspires, determines the entire action; the human soul impersonal in the Brahman is the pure and silent channel of his power; that power in the Nature executes the divine movement. Such only are the works of the liberated soul, *muktasya karma*, for in nothing does he act from a personal inception; such are the actions of the accomplished Karmayogin. They rise from a free spirit and disappear without modifying it, like waves that rise and disappear on the surface of conscious, immutable depths. *Gata-saṅgasya muktasya jñānāvasthita-cetasah, yajñāyācarataḥ karma samagram pravilīyate.*

XIX

Equality

SINCE knowledge, desirelessness, impersonality, equality, the inner self-existent peace and bliss, freedom from or at least superiority to the tangled interlocking of the three modes of Nature are the signs of the liberated soul, they must accompany it in all its activities. They are the condition of that unalterable calm which this soul preserves in all the movement, all the shock, all the clash of forces which surround it in the world. That calm reflects the equable immutability of the Brahman in the midst of all mutations, and it belongs to the indivisible and impartial Oneness which is for ever immanent in all the multiplicities of the universe. For an equal and all-equalising spirit is that Oneness in the midst of the million differences and inequalities of the world; and equality of the spirit is the sole real equality. For in all else in existence there can only be similarity, adjustment and balance; but even in the greatest similarities of the world we find difference of inequality and difference of unlikeness and the adjusted balancings of the world can only come about by a poising of combined unequal weights.

Hence the immense importance attached by the Gita in its elements of Karmayoga to equality; it is the nodus of the free spirit's free relations with the world. Self-knowledge, desirelessness, impersonality, bliss, freedom from the modes of Nature, when withdrawn into themselves, self-absorbed, inactive, have no need of equality; for they take no cognisance of the things in which the opposition of equality and inequality arises. But the moment the spirit takes cognisance of and deals with the multiplicities, personalities, differences, inequalities of the action of Nature, it has to effectuate these other signs of its free status by this one manifesting sign of equality. Knowledge is the consciousness of unity with the One; and in relation with the many different beings and existences of the universe it must

show itself by an equal oneness with all. Impersonality is the one immutable spirit's superiority to the variations of its multiple personality in the world; in its dealings with the personalities of the universe it must show itself in the equal and impartial spirit of its action with regard to all, however various that action may be made by the variety of relations into which it is moulded or of the conditions under which it has to take place. So Krishna in the Gita says that none is dear to him, none hated, to all he is equal in spirit; yet is the God-lover the special receiver of his grace, because the relation he has created is different and the one impartial Lord of all yet meets each soul according to its way of approach to him. Desirelessness is the illimitable Spirit's superiority to the limiting attraction of the separate objects of desire in the world; when it has to enter into relations with those objects, it must show it either by an equal and impartial indifference in their possession or by an equal and impartial unattached delight in all and love for all which, because it is self-existent, does not depend upon possession or non-possession, but is in its essence unperturbed and immutable. For the spirit's bliss is in itself, and if this bliss is to enter into relations with things and creatures, it is only in this way that it can manifest its free spirituality. *Traigunātītya*, transcendence of the gunas, is the unperturbed spirit's superiority to that flux of action of the modes of Nature which is in its constant character perturbed and unequal; if it has to enter into relations with the conflicting and unequal activities of Nature, if the free soul is to allow its nature any action at all, it must show its superiority by an impartial equality towards all activities, results or happenings.

Equality is the sign and also for the aspirant the test. Where there is inequality in the soul, there there is in evidence some unequal play of the modes of Nature, motion of desire, play of personal will, feeling and action, activity of joy and grief or that disturbed and disturbing delight which is not true spiritual bliss but a mental satisfaction bringing in its train inevitably a counterpart or recoil of mental dissatisfaction. Where there is inequality of soul, there there is deviation from knowledge, loss of steadfast abiding in the all-embracing and all-reconciling

oneness of the Brahman and unity of things. By his equality the Karmayogin knows in the midst of his action that he is free.

It is the spiritual nature of the equality enjoined, high and universal in its character and comprehension, which gives its distinctive note to the teaching of the Gita in this matter. For otherwise the mere teaching of equality in itself as the most desirable status of the mind, feelings and temperament in which we rise superior to human weakness, is by no means peculiar to the Gita. Equality has always been held up to admiration as the philosophic ideal and the characteristic temperament of the sages. The Gita takes up indeed this philosophic ideal, but carries it far beyond into a higher region where we find ourselves breathing a larger and purer air. The Stoic poise, the philosophic poise of the soul are only its first and second steps of ascension out of the whirl of the passions and the tossings of desire to a serenity and bliss, not of the Gods, but of the Divine himself in his supreme self-mastery. The Stoic equality, making character its pivot, founds itself upon self-mastery by austere endurance; the happier and serener philosophic equality prefers self-mastery by knowledge, by detachment, by a high intellectual indifference seated above the disturbances to which our nature is prone, *udāśīnavad āśīnah*, as the Gita expresses it; there is also the religious or Christian equality which is a perpetual kneeling or a prostrate resignation and submission to the will of God. These are the three steps and means towards divine peace, heroic endurance, sage indifference, pious resignation, *titikṣā*, *udāśīnatā*, *namas* or *nati*. The Gita takes them all in its large synthetic manner and weaves them into its upward soul-movement, but it gives to each a profounder root, a larger outlook, a more universal and transcendent significance. For to each it gives the values of the spirit, its power of spiritual being beyond the strain of character, beyond the difficult poise of the understanding, beyond the stress of the emotions.

The ordinary human soul takes a pleasure in the customary disturbances of its nature-life; it is because it has this pleasure and because, having it, it gives a sanction to the troubled play of the lower nature that the play continues perpetually; for the

Prakriti does nothing except for the pleasure and with the sanction of its lover and enjoyer, the Purusha. We do not recognise this truth because under the actual stroke of the adverse disturbance, smitten by grief, pain, discomfort, misfortune, failure, defeat, blame, dishonour, the mind shrinks back from the blow, while it leaps eagerly to the embrace of the opposite and pleasurable disturbances, joy, pleasure, satisfactions of all kinds, prosperity, success, victory, glory, praise; but this does not alter the truth of the soul's pleasure in life which remains constant behind the dualities of the mind. The warrior does not feel physical pleasure in his wounds or find mental satisfaction in his defeats; but he has a complete delight in the godhead of battle which brings to him defeat and wounds as well as the joy of victory, and he accepts the chances of the former and the hope of the latter as part of the mingled weft of war, the thing which the delight in him pursues. Even, wounds bring him a joy and pride in memory, complete when the pain of them has passed, but often enough present even while it is there and actually fed by the pain. Defeat keeps for him the joy and pride of indomitable resistance to a superior adversary, or, if he is of a baser kind, the passions of hatred and revenge which also have their darker and crueler pleasures. So it is with the pleasure of the soul in the normal play of our life.

The mind recoils by pain and dislike from the adverse strokes of life; that is Nature's device for enforcing a principle of self-protection, *jugupsā*, so that the vulnerable nervous and bodily parts of us may not unduly rush upon self-destruction to embrace it: it takes joy in the favourable touches of life; that is Nature's lure of rajasic pleasure, so that the force in the creature may overcome the tamasic tendencies of inertia and inactivity and be impelled fully towards action, desire, struggle, success, and by its attachment to these things her ends may be worked out. Our secret soul takes a pleasure in this strife and effort, and even a pleasure in adversity and suffering, which can be complete enough in memory and retrospect, but is present too behind at the time and often even rises to the surface of the afflicted mind to support it in its passion; but what really

attracts the soul is the whole mingled weft of the thing we call life with all its disturbance of struggle and seeking, its attractions and repulsions, its offer and its menace, its varieties of every kind. To the rajasic desire-soul in us a monotonous pleasure, success without struggle, joy without a shadow must after a time become fatiguing, insipid, cloying; it needs a background of darkness to give full value to its enjoyment of light: for the happiness it seeks and enjoys is of that very nature, it is in its very essence relative and dependent on the perception and experience of its opposite. The joy of the soul in the dualities is the secret of the mind's pleasure in living.

Ask it to rise out of all this disturbance to the unmingled joy of the pure bliss-soul which all the time secretly supports its strength in the struggle and makes its own continued existence possible,—it will draw back at once from the call. It does not believe in such an existence; or it believes that it would not be life, that it would not be at all the varied existence in the world around it in which it is accustomed to take pleasure; it would be something tasteless and without savour. Or it feels that the effort would be too difficult for it; it recoils from the struggle of the ascent, although in reality the spiritual change is not at all more difficult than the realisation of the dreams the desire-soul pursues, nor entails more struggle and labour in the attainment than the tremendous effort which the desire-soul expends in its passionate chase after its own transient objects of pleasure and desire. The true cause of its unwillingness is that it is asked to rise above its own atmosphere and breathe a rarer and purer air of life, whose bliss and power it cannot realise and hardly even conceives as real, while the joy of this lower turbid nature is to it the one thing familiar and palpable. Nor is this lower satisfaction in itself a thing evil and unprofitable; it is rather the condition for the upward evolution of our human nature out of the tamasic ignorance and inertia to which its material being is most subject; it is the rajasic stage of the graded ascent of man towards the supreme self-knowledge, power and bliss. But if we rest eternally on this plane, the *madhyamā gatiḥ* of the Gita, our ascent remains unfinished, the evolution of the soul incomplete.

Through the sattwic being and nature to that which is beyond the three gunas lies the way of the soul to its perfection.

The movement which will lead us out of the disturbances of the lower nature must be necessarily a movement towards equality in the mind, in the emotional temperament, in the soul. But it is to be noted that, although in the end we must arrive at a superiority to all the three gunas of the lower nature, it is yet in its incipience by a resort to one or other of the three that the movement must begin. The beginning of equality may be sattwic, rajasic or tamasic; for there is a possibility in the human nature of a tamasic equality. It may be purely tamasic, the heavy equability of a vital temperament rendered inertly irresponsible to the shocks of existence by a sort of dull insensibility undesirous of the joy of life. Or it may result from a weariness of the emotions and desires accumulated by a surfeit and satiety of the pleasure or else, on the contrary, a disappointment and a disgust and shrinking from the pain of life, a lassitude, a fear and horror and dislike of the world: it is then in its nature a mixed movement, rājaso-tamasic, but the lower quality predominates. Or, approaching the sattwic principle, it may aid itself by the intellectual perception that the desires of life cannot be satisfied, that the soul is too weak to master life, that the whole thing is nothing but sorrow and transient effort and nowhere in it is there any real truth or sanity or light or happiness; this is the sattwo-tamasic principle of equality and is not so much equality, though it may lead to that, as indifference or equal refusal. Essentially, the movement of tamasic equality is a generalisation of Nature's principle of *jugupsā* or self-protecting recoil extended from the shunning of particular painful effects to a shunning of the whole life of Nature itself as in sum leading to pain and self-tormenting and not to the delight which the soul demands.

In tamasic equality by itself there is no real liberation; but it can be made a powerful starting-point, if, as in Indian asceticism, it is turned into the sattwic by the perception of the greater existence, the truer power, the higher delight of the immutable Self above Nature. The natural turn of such a movement, however, is towards Sannyasa, the renunciation of life and works, rather

than to that union of inner renunciation of desire with continued activity in the world of Nature which the Gita advocates. The Gita, however, admits and makes room for this movement; it allows as a recoiling starting-point the perception of the defects of the world-existence, birth and disease and death and old age and sorrow, the historic starting-point of the Buddha, *janma-mṛtyu-jarā-vyādhi-duḥkha-doṣānudarśanam*, and it accepts the effort of those whose self-discipline is motived by a desire for release, even in this spirit, from the curse of age and death, *jarā-marana-mokṣāya mām āśritya yatanti ye*. But that, to be of any profit, must be accompanied by the sattvic perception of a higher state and the taking delight and refuge in the existence of the Divine, *mām āśritya*. Then the soul by its recoil comes to a greater condition of being, lifted beyond the three gunas and free from birth and death and age and grief, and enjoys the immortality of its self-existence, *janma-mṛtyu-jarā-duḥkhair vimukto 'mr̥tam aśnute*. The tamasic unwillingness to accept the pain and effort of life is indeed by itself a weakening and degrading thing, and in this lies the danger of preaching to all alike the gospel of asceticism and world-disgust, that it puts the stamp of a tamasic weakness and shrinking on unfit souls, confuses their understanding, *buddhibhedam janayet*, diminishes the sustained aspiration, the confidence in living, the power of effort which the soul of man needs for its salutary, its necessary rajasic struggle to master its environment, without really opening to it—for it is yet incapable of that—a higher goal, a greater endeavour, a mightier victory. But in souls that are fit this tamasic recoil may serve a useful spiritual purpose by slaying their rajasic attraction, their eager preoccupation with the lower life which prevents the sattvic awakening to a higher possibility. Seeking then for a refuge in the void they have created, they are able to hear the divine call, “O soul that findest thyself in this transient and unhappy world, turn and put thy delight in Me,” *anityam asukham lokam imam prāpya bhajasva mām*.

Still, in this movement, the equality consists only in an equal recoil from all that constitutes the world; and it arrives at indifference and aloofness, but does not include that power to

accept equally all the touches of the world pleasurable or painful without attachment or disturbance which is a necessary element in the discipline of the Gita. Therefore, even if we begin with the tamasic recoil,—which is not at all necessary,—it can only be as a first incitement to a greater endeavour, not as a permanent pessimism. The real discipline begins with the movement to mastery over these things from which we were first inclined merely to flee. It is here that the possibility of a kind of rajasic equality comes in, which is at its lowest the strong nature's pride in self-mastery, self-control, superiority to passion and weakness; but the Stoic ideal seizes upon this point of departure and makes it the key to an entire liberation of the soul from subjection to all weakness of its lower nature. As the tamasic inward recoil is a generalisation of Nature's principle of *jugupsā* or self-protection from suffering, so the rajasic upward movement is a generalisation of Nature's other principle of the acceptance of struggle and effort and the innate impulse of life towards mastery and victory; but it transfers the battle to the field where alone complete victory is possible. Instead of a struggle for scattered outward aims and transient successes, it proposes nothing less than the conquest of Nature and the world itself by a spiritual struggle and an inner victory. The tamasic recoil turns from both the pains and pleasures of the world to flee from them; the rajasic movement turns upon them to bear, master and rise superior to them. The Stoic self-discipline calls desire and passion into its embrace of the wrestler and crushes them between its arms, as did old Dhritarashtra in the epic the iron image of Bhima. It endures the shock of things painful and pleasurable, the causes of the physical and mental affections of the nature, and breaks their effects to pieces; it is complete when the soul can bear all touches without being pained or attracted, excited or troubled. It seeks to make man the conqueror and king of his nature.

The Gita, making its call on the warrior nature of Arjuna, starts with this heroic movement. It calls on him to turn on the great enemy desire and slay it. Its first description of equality is that of the Stoic philosopher. "He whose mind is undisturbed in the midst of sorrows and amid pleasures is free from desire, from

whom liking and fear and wrath have passed away, is the sage of settled understanding. Who in all things is without affection though visited by this good or that evil and neither hates nor rejoices, his intelligence sits firmly founded in wisdom." If one abstains from food, it says, giving a physical example, the object of sense ceases to affect, but the affection itself of the sense, the *rasa*, remains; it is only when, even in the exercise of the sense, it can keep back from seeking its sensuous aim in the object, *artha*, and abandon the affection, the desire for the pleasure of taste, that the highest level of the soul is reached. It is by using the mental organs on the objects, "ranging over them with the senses," *viśayān indriyaiś caram*, but with senses subject to the self, freed from liking and disliking, that one gets into a large and sweet clearness of soul and temperament in which passion and grief find no place. All desires have to enter into the soul, as waters into the sea, and yet it has to remain immovable, filled but not disturbed: so in the end all desires can be abandoned. To be freed from wrath and passion and fear and attraction is repeatedly stressed as a necessary condition of the liberated status, and for this we must learn to bear their shocks, which cannot be done without exposing ourselves to their causes. "He who can bear here in the body the velocity of wrath and desire, is the Yogin, the happy man." *Titikṣā*, the will and power to endure, is the means. "The material touches which cause heat and cold, happiness and pain, things transient which come and go, these learn to endure. For the man whom these do not trouble nor pain, the firm and wise who is equal in pleasure and suffering, makes himself apt for immortality." The equal-souled has to bear suffering and not hate, to receive pleasure and not rejoice. Even the physical affections are to be mastered by endurance and this too is part of the Stoic discipline. Age, death, suffering, pain are not fled from, but accepted and vanquished by a high indifference.¹ Not to flee appalled from Nature in her

¹ *Dhīras tatra na muhyati*, says the Gita; the strong and wise soul is not perplexed, troubled or moved by them. But still they are accepted only to be conquered, *jarā-marāṇa-mokṣāya yatanti*.

lower masks, but to meet and conquer her is the true instinct of the strong nature, *puruṣarṣabha*, the leonine soul among men. Thus compelled, she throws aside her mask and reveals to him his true nature as the free soul, not her subject but her king and lord, *svarāṭ*, *samrāṭ*.

But the Gita accepts this Stoic discipline, this heroic philosophy, on the same condition that it accepts the tamasic recoil,—it must have above it the sattwic vision of knowledge, at its root the aim at self-realisation and in its steps the ascent to the divine Nature. A Stoic discipline which merely crushed down the common affections of our human nature,—although less dangerous than a tamasic weariness of life, unfruitful pessimism and sterile inertia, because it would at least increase the power and self-mastery of the soul,—would still be no unmixed good, since it might lead to insensibility and an inhuman isolation without giving the true spiritual release. The Stoic equality is justified as an element in the discipline of the Gita because it can be associated with and can help to the realisation of the free immutable Self in the mobile human being, *param dṛṣṭvā*, and to status in that new self-consciousness, *eṣā brāhmaṇī sthitih*. “Awakening by the understanding to the Highest which is beyond even the discerning mind, put force on the self by the self to make it firm and still, and slay this enemy who is so hard to assail, Desire.” Both the tamasic recoil of escape and the rajasic movement of struggle and victory are only justified when they look beyond themselves through the sattwic principle to the self-knowledge which legitimises both the recoil and the struggle.

The pure philosopher, the thinker, the born sage not only relies upon the sattwic principle in him as his ultimate justification, but uses it from the beginning as his instrument of self-mastery. He starts from the sattwic equality. He too observes the transitoriness of the material and external world and its failure to satisfy the desires or to give the true delight, but this causes in him no grief, fear or disappointment. He observes all with an eye of tranquil discernment and makes his choice without repulsion or perplexity. “The enjoyments born of the touches of things are

causes of sorrow, they have a beginning and an end; therefore the sage, the man of awakened understanding, *budhah*, does not place his delight in these." "The self in him is unattached to the touches of external things; he finds his happiness in himself." He sees, as the Gita puts it, that he is himself his own enemy and his own friend, and therefore he takes care not to dethrone himself by casting his being into the hands of desire and passion, *nātmānam avasādayet*, but delivers himself out of that imprisonment by his own inner power, *uddhared ātmanātmānam*; for whoever has conquered his lower self, finds in his higher self his best friend and ally. He becomes satisfied with knowledge, master of his senses, a Yогin by sattvic equality,— for equality is Yoga, *samatvām yoga ucyate*,— regarding alike clod and stone and gold, tranquil and self-poised in heat and cold, suffering and happiness, honour and disgrace. He is equal in soul to friend and enemy and to neutral and indifferent, because he sees that these are transitory relations born of the changing conditions of life. Even by the pretensions of learning and purity and virtue and the claims to superiority which men base upon these things, he is not led away. He is equal-souled to all men, to the sinner and the saint, to the virtuous, learned and cultured Brahmin and the fallen outcaste. All these are the Gita's descriptions of the sattvic equality, and they sum up well enough what is familiar to the world as the calm philosophic equality of the sage.

Where then is the difference between this and the larger equality taught by the Gita? It lies in the difference between the intellectual and philosophic discernment and the spiritual, the Vedantic knowledge of unity on which the Gita founds its teaching. The philosopher maintains his equality by the power of the buddhi, the discerning mind; but even that by itself is a doubtful foundation. For, though master of himself on the whole by a constant attention or an acquired habit of mind, in reality he is not free from his lower nature, and it does actually assert itself in many ways and may at any moment take a violent revenge for its rejection and suppression. For, always, the play of the lower nature is a triple play, and the rajasic and tamasic qualities are ever lying in wait for the sattvic man. "Even the mind of the

wise man who labours for perfection is carried away by the vehement insistence of the senses." Perfect security can only be had by resorting to something higher than the sattwic quality, something higher than the discerning mind, to the Self,—not the philosopher's intelligent self, but the divine sage's spiritual self which is beyond the three gunas. All must be consummated by a divine birth into the higher spiritual nature.

And the philosopher's equality is like the Stoic's, like the world-fleeing ascetic's, inwardly a lonely freedom, remote and aloof from men; but the man born to the divine birth has found the Divine not only in himself, but in all beings. He has realised his unity with all and his equality is therefore full of sympathy and oneness. He sees all as himself and is not intent on his lonely salvation; he even takes upon himself the burden of their happiness and sorrow by which he is not himself affected or subjected. The perfect sage, the Gita more than once repeats, is ever engaged with a large equality in doing good to all creatures and makes that his occupation and delight, *sarvabhūtahite rataḥ*. The perfect Yогin is no solitary musing on the Self in his ivory tower of spiritual isolation, but *yuktah kṛtsna-karma-kṛt*, a many-sided universal worker for the good of the world, for God in the world. For he is a *bhakta*, a lover and devotee of the Divine, as well as a sage and a Yогin, a lover who loves God wherever he finds Him and who finds Him everywhere; and what he loves, he does not disdain to serve, nor does action carry him away from the bliss of union, since all his acts proceed from the One in him and to the One in all they are directed. The equality of the Gita is a large synthetic equality in which all is lifted up into the integrality of the divine being and the divine nature.

XX

Equality and Knowledge

YOGA and knowledge are, in this early part of the Gita's teaching, the two wings of the soul's ascent. By Yoga is meant union through divine works done without desire, with equality of soul to all things and all men, as a sacrifice to the Supreme, while knowledge is that on which this desirelessness, this equality, this power of sacrifice is founded. The two wings indeed assist each other's flight; acting together, yet with a subtle alternation of mutual aid, like the two eyes in a man which see together because they see alternately, they increase one another mutually by interchange of substance. As the works grow more and more desireless, equal-minded, sacrificial in spirit, the knowledge increases; with the increase of the knowledge the soul becomes firmer in the desireless, sacrificial equality of its works. The sacrifice of knowledge, says the Gita therefore, is greater than any material sacrifice. "Even if thou art the greatest doer of sin beyond all sinners, thou shalt cross over all the crookedness of evil in the ship of knowledge. . . . There is nothing in the world equal in purity to knowledge." By knowledge desire and its first-born child, sin, are destroyed. The liberated man is able to do works as a sacrifice because he is freed from attachment through his mind, heart and spirit being firmly founded in self-knowledge, *gata-saṅgasya jñānāvasthita-cetasah*. All his work disappears completely as soon as done, suffers *laya*, as one might say, in the being of the Brahman, *pravilīyate*; it has no reactionary consequence on the soul of the apparent doer. The work is done by the Lord through his Nature, it is no longer personal to the human instrument. The work itself becomes but power of the nature and substance of the being of the Brahman.

It is in this sense that the Gita is speaking when it says that all the totality of work finds its completion, culmination, end in knowledge, *sarvam karmākhilam jñāne parisamāpyate*. "As

a fire kindled turns to ashes its fuel, so the fire of knowledge turns all works to ashes.” By this it is not at all meant that when knowledge is complete, there is cessation from works. What is meant is made clear by the Gita when it says that he who has destroyed all doubt by knowledge and has by Yoga given up all works and is in possession of the Self is not bound by his works, *yoga-sannyasta-karmāṇam ātmavantam na karmāṇi nibadhnanti*, and that he whose self has become the self of all existences, acts and yet is not affected by his works, is not caught in them, receives from them no soul-ensnaring reaction, *kurvann api na lipyate*. Therefore, it says, the Yoga of works is better than the physical renunciation of works, because, while Sannyasa is difficult for embodied beings who must do works so long as they are in the body, Yoga of works is entirely sufficient and it rapidly and easily brings the soul to Brahman. That Yoga of works is, we have seen, the offering of all action to the Lord, which induces as its culmination an inner and not an outer, a spiritual, not a physical giving up of works into the Brahman, into the being of the Lord, *brahmaṇi ādhāya karmāṇi, mayi sannyasya*. When works are thus “reposed on the Brahman,” the personality of the instrumental doer ceases; though he acts, he does nothing; for he has given up not only the fruits of his works, but the works themselves and the doing of them to the Lord. The Divine then takes the burden of works from him; the Supreme becomes the doer and the act and the result.

This knowledge of which the Gita speaks, is not an intellectual activity of the mind; it is a luminous growth into the highest state of being by the outshining of the light of the divine sun of Truth, “that Truth, the Sun lying concealed in the darkness” of our ignorance of which the Rigveda speaks, *tat satyam sūryam tamasi ksīyatam*. The immutable Brahman is there in the spirit’s skies above this troubled lower nature of the dualities, untouched either by its virtue or by its sin, accepting neither our sense of sin nor our self-righteousness, untouched by its joy and its sorrow, indifferent to our joy in success and our grief in failure, master of all, supreme, all-pervading, *prabhu vibhu*, calm, strong, pure, equal in all things, the source of Nature,

not the direct doer of our works, but the witness of Nature and her works, not imposing on us either the illusion of being the doer, for that illusion is the result of the ignorance of this lower Nature. But this freedom, mastery, purity we cannot see; we are bewildered by the natural ignorance which hides from us the eternal self-knowledge of the Brahman secret within our being. But knowledge comes to its persistent seeker and removes the natural self-ignorance; it shines out like a long-hidden sun and lights up to our vision that self-being supreme beyond the dualities of this lower existence, *ādityavat prakāśayati tat param*. By a long whole-hearted endeavour, by directing our whole conscious being to that, by making that our whole aim, by turning it into the whole object of our discerning mind and so seeing it not only in ourselves but everywhere, we become one thought and self with that, *tad-buddhayas tad-ātmānah*, we are washed clean of all the darkness and suffering of the lower man by the waters of knowledge,¹ *jñāna-nirdhūta-kalmaṣāḥ*.

The result is, says the Gita, a perfect equality to all things and all persons; and then only can we repose our works completely in the Brahman. For the Brahman is equal, *samāṁ brahma*, and it is only when we have this perfect equality, *sāmye sthitam manah*, “seeing with an equal eye the learned and cultured Brahmin, the cow, the elephant, the dog, the outcaste” and knowing all as one Brahman, that we can, living in that oneness, see like the Brahman our works proceeding from the nature freely without any fear of attachment, sin or bondage. Sin and stain then cannot be; for we have overcome that creation full of desire and its works and reactions which belongs to the ignorance, *tair jitah sargah*, and living in the supreme and divine Nature there is no longer fault or defect in our works; for these are created by the inequalities of the ignorance. The equal Brahman is faultless, *nirdoṣam hi samāṁ brahma*, beyond the confusion of good and evil, and living in the Brahman we

¹ The Rigveda so speaks of the streams of the Truth, the waters that have perfect knowledge, the waters that are full of the divine sunlight, *ṛtasya dhārāḥ*, *āpo vicetasah*, *svarvatir apah*. What are here metaphors, are there concrete symbols.

too rise beyond good and evil; we act in that purity, stainlessly, with an equal and single purpose of fulfilling the welfare of all existences, *kṣīṇa-kalmaṣāḥ sarvabhūta-hite ratāḥ*. The Lord in our hearts is in the ignorance also the cause of our actions, but through his Maya, through the egoism of our lower nature which creates the tangled web of our actions and brings back upon our egoism the recoil of their tangled reactions affecting us inwardly as sin and virtue, affecting us outwardly as suffering and pleasure, evil fortune and good fortune, the great chain of Karma. When we are freed by knowledge, the Lord, no longer hidden in our hearts, but manifest as our supreme self, takes up our works and uses us as faultless instruments, *nimitta-mātram*, for the helping of the world. Such is the intimate union between knowledge and equality; knowledge here in the *buddhi* reflected as equality in the temperament; above, on a higher plane of consciousness, knowledge as the light of the Being, equality as the stuff of the Nature.

Always in this sense of a supreme self-knowledge is this word *jñāna* used in Indian philosophy and Yoga; it is the light by which we grow into our true being, not the knowledge by which we increase our information and our intellectual riches; it is not scientific or psychological or philosophic or ethical or aesthetic or worldly and practical knowledge. These too no doubt help us to grow, but only in the becoming, not in the being; they enter into the definition of Yogic knowledge only when we use them as aids to know the Supreme, the Self, the Divine,—scientific knowledge, when we can get through the veil of processes and phenomena and see the one Reality behind which explains them all; psychological knowledge, when we use it to know ourselves and to distinguish the lower from the higher, so that this we may renounce and into that we may grow; philosophical knowledge, when we turn it as a light upon the essential principles of existence so as to discover and live in that which is eternal; ethical knowledge, when by it having distinguished sin from virtue we put away the one and rise above the other into the pure innocence of the divine Nature; aesthetic knowledge, when we discover by it the beauty of the Divine;

knowledge of the world, when we see through it the way of the Lord with his creatures and use it for the service of the Divine in man. Even then they are only aids; the real knowledge is that which is a secret to the mind, of which the mind only gets reflections, but which lives in the spirit.

The Gita in describing how we come by this knowledge, says that we get first initiation into it from the men of knowledge who have *seen*, not those who know merely by the intellect, its essential truths; but the actuality of it comes from within ourselves: "the man who is perfected by Yoga, finds it of himself in the self by the course of Time," it grows within him, that is to say, and he grows into it as he goes on increasing in desirelessness, in equality, in devotion to the Divine. It is only of the supreme knowledge that this can altogether be said; the knowledge which the intellect of man amasses, is gathered laboriously by the senses and the reason from outside. To get this other knowledge, self-existent, intuitive, self-experiencing, self-revealing, we must have conquered and controlled our mind and senses, *samyatendriyah*, so that we are no longer subject to their delusions, but rather the mind and senses become its pure mirror; we must have fixed our whole conscious being on the truth of that supreme reality in which all exists, *tat-parah*, so that it may display in us its luminous self-existence.

Finally, we must have a faith which no intellectual doubt can be allowed to disturb, *śraddhāvān labhate jñānam*. "The ignorant who has not faith, the soul of doubt goeth to perdition; neither this world, nor the supreme world, nor any happiness is for the soul full of doubts." In fact, it is true that without faith nothing decisive can be achieved either in this world or for possession of the world above, and that it is only by laying hold of some sure basis and positive support that man can attain any measure of terrestrial or celestial success and satisfaction and happiness; the merely sceptical mind loses itself in the void. But still in the lower knowledge doubt and scepticism have their temporary uses; in the higher they are stumbling-blocks: for there the whole secret is not the balancing of truth and error, but a constantly progressing realisation of revealed truth. In

intellectual knowledge there is always a mixture of falsehood or incompleteness which has to be got rid of by subjecting the truth itself to sceptical inquiry; but in the higher knowledge falsehood cannot enter and that which intellect contributes by attaching itself to this or that opinion, cannot be got rid of by mere questioning, but will fall away of itself by persistence in realisation. Whatever incompleteness there is in the knowledge attained, it must be got rid of, not by questioning in its roots what has already been realised, but by proceeding to further and more complete realisation through a deeper, higher and wider living in the Spirit. And what is not yet realised must be prepared for by faith, not by sceptical questioning, because this truth is one which the intellect cannot give and which is indeed often quite opposed to the ideas in which the reasoning and logical mind gets entangled: it is not a truth which has to be proved, but a truth which has to be lived inwardly, a greater reality into which we have to grow. Finally, it is in itself a self-existent truth and would be self-evident if it were not for the sorceries of the ignorance in which we live; the doubts, the perplexities which prevent us from accepting and following it, arise from that ignorance, from the sense-bewildered, opinion-perplexed heart and mind, living as they do in a lower and phenomenal truth and therefore questioning the higher realities, *ajñāna-sambhūtam hṛtsthām saṁśayam*. They have to be cut away by the sword of knowledge, says the Gita, by the knowledge that realises, by resorting constantly to Yoga, that is, by living out the union with the Supreme whose truth being known all is known, *yasmin vijñāte sarvam vijñātam*.

The higher knowledge we then get is that which is to the knower of Brahman his constant vision of things when he lives uninterruptedly in the Brahman, *brahmavid brahmani sthitah*. That is not a vision or knowledge or consciousness of Brahman to the exclusion of all else, but a seeing of all in Brahman and as the Self. For, it is said, the knowledge by which we rise beyond all relapse back into the bewilderment of our mental nature, is “that by which thou shalt see all existences without exception in the Self, then in Me.” Elsewhere the Gita puts it more largely,

“Equal-visioned everywhere, he sees the Self in all existences and all existences in the Self. He who sees Me everywhere and all and each in Me, is never lost to Me nor I to him. He who has reached oneness and loves Me in all beings, that Yigin, howsoever he lives and acts, is living and acting in Me. O Arjuna, he who sees all equally everywhere as himself, whether it be happiness or suffering, I hold him to be the supreme Yigin.” That is the old Vedantic knowledge of the Upanishads which the Gita holds up constantly before us; but it is its superiority to other later formulations of it that it turns persistently this knowledge into a great practical philosophy of divine living. Always it insists on the relation between this knowledge of oneness and Karmayoga, and therefore on the knowledge of oneness as the basis of a liberated action in the world. Whenever it speaks of knowledge, it turns at once to speak of equality which is its result; whenever it speaks of equality, it turns to speak too of the knowledge which is its basis. The equality it enjoins does not begin and end in a static condition of the soul useful only for self-liberation; it is always a basis of works. The peace of the Brahman in the liberated soul is the foundation; the large, free, equal, world-wide action of the Lord in the liberated nature radiates the power which proceeds from that peace; these two made one synthesise divine works and God-knowledge.

We see at once what a profound extension we get here for the ideas which otherwise the Gita has in common with other systems of philosophic, ethical or religious living. Endurance, philosophic indifference, resignation are, we have said, the foundation of three kinds of equality; but the Gita’s truth of knowledge not only gathers them all up together, but gives them an infinitely profound, a magnificently ample significance. The Stoic knowledge is that of the soul’s power of self-mastery by fortitude, an equality attained by a struggle with one’s nature, maintained by a constant vigilance and control against its natural rebellions: it gives a noble peace, an austere happiness, but not the supreme joy of the liberated self living not by a rule, but in the pure, easy, spontaneous perfection of its divine being, so that “however it may act and live, it acts and lives

in the Divine," because here perfection is not only attained but possessed in its own right and has no longer to be maintained by effort, for it has become the very nature of the soul's being. The Gita accepts the endurance and fortitude of our struggle with the lower nature as a preliminary movement; but if a certain mastery comes by our individual strength, the freedom of mastery only comes by our union with God, by a merging or dwelling of the personality in the one divine Person and the loss of the personal will in the divine Will. There is a divine Master of Nature and her works, above her though inhabiting her, who is our highest being and our universal self; to be one with him is to make ourselves divine. By union with God we enter into a supreme freedom and a supreme mastery. The ideal of the Stoic, the sage who is king because by self-rule he becomes master also of outward conditions, resembles superficially the Vedantic idea of the self-ruler and all-ruler, *svarāt samrāt*; but it is on a lower plane. The Stoic kingship is maintained by a force put upon self and environment; the entirely liberated kingship of the Yогin exists naturally by the eternal royalty of the divine nature, a union with its unfettered universality, a finally unforced dwelling in its superiority to the instrumental nature through which it acts. His mastery over things is because he has become one soul with all things. To take an image from Roman institutions, the Stoic freedom is that of the *libertus*, the freedman, who is still really a dependent on the power that once held him enslaved; his is a freedom allowed by Nature because he has merited it. The freedom of the Gita is that of the freeman, the true freedom of the birth into the higher nature, self-existent in its divinity. Whatever he does and however he lives, the free soul lives in the Divine; he is the privileged child of the mansion, *bālavat*, who cannot err or fall because all he is and does is full of the Perfect, the All-blissful, the All-loving, the All-beautiful. The kingdom which he enjoys, *rājyam samṛddham*, is a sweet and happy dominion of which it may be said, in the pregnant phrase of the Greek thinker, "The kingdom is of the child."

The knowledge of the philosopher is that of the true nature of mundane existence, the transience of outward things, the

vanity of the world's differences and distinctions, the superiority of the inner calm, peace, light, self-dependence. It is an equality of philosophic indifference; it brings a high calm, but not the greater spiritual joy; it is an isolated freedom, a wisdom like that of the Lucretian sage high in his superiority upon the cliff-top whence he looks down on men tossed still upon the tempestuous waters from which he has escaped,—in the end something after all aloof and ineffective. The Gita admits the philosophic motive of indifference as a preliminary movement; but the indifference to which it finally arrives, if indeed that inadequate word can be at all applied, has nothing in it of the philosophic aloofness. It is indeed a position as of one seated above, *udāśīnavat*, but as the Divine is seated above, having no need at all in the world, yet he does works always and is present everywhere supporting, helping, guiding the labour of creatures. This equality is founded upon oneness with all beings. It brings in what is wanting to the philosophic equality; for its soul is the soul of peace, but also it is the soul of love. It sees all beings without exception in the Divine, it is one self with the Self of all existences and therefore it is in supreme sympathy with all of them. Without exception, *aśeṣena*, not only with all that is good and fair and pleases; nothing and no one, however vile, fallen, criminal, repellent in appearance, can be excluded from this universal, this whole-souled sympathy and spiritual oneness. Here there is no room, not merely for hatred or anger or uncharitableness, but for aloofness, disdain or any petty pride of superiority. A divine compassion for the ignorance of the struggling mind, a divine will to pour forth on it all light and power and happiness there will be, indeed, for the apparent man; but for the divine Soul within him there will be more, there will be adoration and love. For from all, from the thief and the harlot and the outcaste as from the saint and the sage, the Beloved looks forth and cries to us, "This is I." "He who loves Me in all beings,"—what greater word of power for the utmost intensities and profundities of divine and universal love, has been uttered by any philosophy or any religion?

Resignation is the basis of a kind of religious equality, submission to the divine will, a patient bearing of the cross, a

submissive forbearance. In the Gita this element takes the more ample form of an entire surrender of the whole being to God. It is not merely a passive submission, but an active self-giving; not only a seeing and an accepting of the divine Will in all things, but a giving up of one's own will to be the instrument of the Master of works, and this not with the lesser idea of being a servant of God, but, eventually at least, of such a complete renunciation both of the consciousness and the works to him that our being becomes one with his being and the impersonalised nature only an instrument and nothing else. All result good or bad, pleasing or unpleasing, fortunate or unfortunate, is accepted as belonging to the Master of our actions, so that finally not only are grief and suffering borne, but they are banished: a perfect equality of the emotional mind is established. There is no assumption of personal will in the instrument; it is seen that all is already worked out in the omniscient prescience and omnipotent effective power of the universal Divine and that the egoism of men cannot alter the workings of that Will. Therefore, the final attitude is that enjoined on Arjuna in a later chapter, "All has been already done by Me in my divine will and foresight; become only the occasion, O Arjuna," *nimitta-mātrām bhava savyasācin*. This attitude must lead finally to an absolute union of the personal with the Divine Will and, with the growth of knowledge, bring about a faultless response of the instrument to the divine Power and Knowledge. A perfect, an absolute equality of self-surrender, the mentality a passive channel of the divine Light and Power, the active being a mightily effective instrument for its work in the world, will be the poise of this supreme union of the Transcendent, the universal and the individual.

Equality too there will be with regard to the action of others upon us. Nothing that they can do will alter the inner oneness, love, sympathy which arises from the perception of the one Self in all, the Divine in all beings. But a resigned forbearance and submission to them and their deeds, a passive non-resistance, will be no necessary part of the action; it cannot be, since a constant instrumental obedience to the divine and universal Will must mean in the shock of opposite forces that fill the world a

conflict with personal wills which seek rather their own egoistic satisfaction. Therefore Arjuna is bidden to resist, to fight, to conquer; but, to fight without hatred or personal desire or personal enmity or antagonism, since to the liberated soul these feelings are impossible. To act for the *lokasaṅgraha*, impersonally, for the keeping and leading of the peoples on the path to the divine goal, is a rule which rises necessarily from the oneness of the soul with the Divine, the universal Being, since that is the whole sense and drift of the universal action. Nor does it conflict with our oneness with all beings, even those who present themselves here as opponents and enemies. For the divine goal is their goal also, since it is the secret aim of all, even of those whose outward minds, misled by ignorance and egoism, would wander from the path and resist the impulsion. Resistance and defeat are the best outward service that can be done to them. By this perception the Gita avoids the limiting conclusion which might have been drawn from a doctrine of equality impracticably overriding all relations and of a weakening love without knowledge, while it keeps the one thing essential unimpaired. For the soul oneness with all, for the heart calm universal love, sympathy, compassion, but for the hands freedom to work out impersonally the good, not of this or that person only without regard to or to the detriment of the divine plan, but the purpose of the creation, the progressing welfare and salvation of men, the total good of all existences.

Oneness with God, oneness with all beings, the realisation of the eternal divine unity everywhere and the drawing onwards of men towards that oneness are the law of life which arises from the teachings of the Gita. There can be none greater, wider, more profound. Liberated oneself, to live in this oneness, to help mankind on the path that leads towards it and meanwhile to do all works for God and help man also to do with joy and acceptance all the works to which he is called, *kṛtsna-karma-kṛt*, *sarvakarmāṇi joṣayan*, no greater or more liberal rule of divine works can be given. This freedom and this oneness are the secret goal of our human nature and the ultimate will in the existence of the race. It is that to which it must turn for the happiness all

mankind is now vainly seeking, when once men lift their eyes and their hearts to see the Divine in them and around, in all and everywhere, *sarvesu*, *sarvatra*, and learn that it is in him they live, while this lower nature of division is only a prison-wall which they must break down or at best an infant-school which they must outgrow, so that they may become adult in nature and free in spirit. To be made one self with God above and God in man and God in the world is the sense of liberation and the secret of perfection.

The Determinism of Nature

WHEN we can live in the higher Self by the unity of works and self-knowledge, we become superior to the method of the lower workings of Prakriti. We are no longer enslaved to Nature and her gunas, but, one with the Ishwara, the master of our nature, we are able to use her without subjection to the chain of Karma, for the purposes of the Divine Will in us; for that is what the greater Self in us is, he is the Lord of her works and unaffected by the troubled stress of her reactions. The soul ignorant in Nature, on the contrary, is enslaved by that ignorance to her modes, because it is identified there, not felicitously with its true self, not with the Divine who is seated above her, but stupidly and unhappily with the ego-mind which is a subordinate factor in her operations in spite of the exaggerated figure it makes, a mere mental knot and point of reference for the play of the natural workings. To break this knot, no longer to make the ego the centre and beneficiary of our works, but to derive all from and refer all to the divine Supersoul is the way to become superior to all the restless trouble of Nature's modes. For it is to live in the supreme consciousness, of which the ego-mind is a degradation, and to act in an equal and unified Will and Force and not in the unequal play of the gunas which is a broken seeking and striving, a disturbance, an inferior Maya.

The passages in which the Gita lays stress on the subjection of the ego-soul to Nature, have by some been understood as the enunciation of an absolute and a mechanical determinism which leaves no room for any freedom within the cosmic existence. Certainly, the language it uses is emphatic and seems very absolute. But we must take, here as elsewhere, the thought of the Gita as a whole and not force its affirmations in their solitary sense quite detached from each other,—as indeed every truth,

however true in itself, yet, taken apart from others which at once limit and complete it, becomes a snare to bind the intellect and a misleading dogma; for in reality each is one thread of a complex weft and no thread must be taken apart from the weft. Everything in the Gita is even so interwoven and must be understood in its relation to the whole. The Gita itself makes a distinction between those who have not the knowledge of the whole, *akṛtsnavidah*, and are misled by the partial truths of existence, and the Yогin who has the synthetic knowledge of the totality, *kṛtsna-vit*. To see all existence steadily and see it whole and not be misled by its conflicting truths, is the first necessity for the calm and complete wisdom to which the Yогin is called upon to rise. A certain absolute freedom is one aspect of the soul's relations with Nature at one pole of our complex being; a certain absolute determinism by Nature is the opposite aspect at its opposite pole; and there is also a partial and apparent, therefore an unreal eidolon of liberty which the soul receives by a contorted reflection of these two opposite truths in the developing mentality. It is the latter to which we ordinarily give, more or less inaccurately, the name of free will; but the Gita regards nothing as freedom which is not a complete liberation and mastery.

We have always to keep in mind the two great doctrines which stand behind all the Gita's teachings with regard to the soul and Nature,—the Sankhya truth of the Purusha and Prakriti corrected and completed by the Vedantic truth of the threefold Purusha and the double Prakriti of which the lower form is the Maya of the three gunas and the higher is the divine nature and the true soul-nature. This is the key which reconciles and explains what we might have otherwise to leave as contradictions and inconsistencies. There are, in fact, different planes of our conscious existence, and what is practical truth on one plane ceases to be true, because it assumes a quite different appearance, as soon as we rise to a higher level from which we can see things more in the whole. Recent scientific discovery has shown that man, animal, plant and even the metal have essentially the same vital reactions and they would, therefore,

if each has a certain kind of what for want of a better word we must call nervous consciousness, possess the same basis of mechanical psychology. Yet if each of these could give its own mental account of what it experiences, we should have four quite different and largely contradictory statements of the same reactions and the same natural principles, because they get, as we rise in the scale of being, a different meaning and value and have to be judged by a different outlook. So it is with the levels of the human soul. What we now call in our ordinary mentality our free will and have a certain limited justification for so calling it, yet appears to the Yогin who has climbed beyond and to whom our night is day and our day night, not free will at all, but a subjection to the modes of Nature. He regards the same facts, but from the higher outlook of the whole-knower, *kṛtsna-vit*, while we view it altogether from the more limited mentality of our partial knowledge, *akṛtsnavidah*, which is an ignorance. What we vaunt of as our freedom is to him bondage.

The perception of the ignorance of our assumption of freedom while one is all the time in the meshes of this lower nature, is the view-point at which the Gita arrives and it is in contradiction to this ignorant claim that it affirms the complete subjection of the ego-soul on this plane to the gunas. "While the actions are being entirely done by the modes of Nature," it says, "he whose self is bewildered by egoism thinks that it is his 'I' which is doing them. But one who knows the true principles of the divisions of the modes and of works, realises that it is the modes which are acting and reacting on each other and is not caught in them by attachment. Those who are bewildered by the modes, get attached to the modes and their works; dull minds, not knowers of the whole, let not the knower of the whole disturb them in their mental standpoint. Giving up thy works to Me, free from desire and egoism, fight delivered from the fever of thy soul." Here there is the clear distinction between two levels of consciousness, two standpoints of action, that of the soul caught in the web of its egoistic nature and doing works with the idea, but not the reality of free will, under the impulsion of Nature, and that of the soul delivered from its identification with the

ego, observing, sanctioning and governing the works of Nature from above her.

We speak of the soul being subject to Nature; but on the other hand the Gita in distinguishing the properties of the soul and Nature affirms that while Nature is the executrix, the soul is always the lord, *īśvara*. It speaks here of the self being bewildered by egoism, but the real Self to the Vedantin is the divine, eternally free and self-aware. What then is this self that is bewildered by Nature, this soul that is subject to her? The answer is that we are speaking here in the common parlance of our lower or mental view of things; we are speaking of the apparent self, of the apparent soul, not of the real self, not of the true Purusha. It is really the ego which is subject to Nature, inevitably, because it is itself part of Nature, one functioning of her machinery; but when the self-awareness in the mind-consciousness identifies itself with the ego, it creates the appearance of a lower self, an ego-self. And so too what we think of ordinarily as the soul is really the natural personality, not the true Person, the Purusha, but the desire-soul in us which is a reflection of the consciousness of the Purusha in the workings of Prakriti: it is, in fact, itself only an action of the three modes and therefore a part of Nature. Thus there are, we may say, two souls in us, the apparent or desire-soul, which changes with the mutations of the gunas and is entirely constituted and determined by them, and the free and eternal Purusha not limited by Nature and her gunas. We have two selves, the apparent self, which is only the ego, that mental centre in us which takes up this mutable action of Prakriti, this mutable personality, and which says "I am this personality, I am this natural being who am doing these works," — but the natural being is simply Nature, a composite of the gunas, — and the true self which is, indeed, the upholder, the possessor and the lord of Nature and figured in her, but is not itself the mutable natural personality. The way to be free must then be to get rid of the desires of this desire-soul and the false self-view of this ego. "Having become free from desire and egoism," cries the Teacher, "fight with all the fever of thy soul passed away from thee," — *nirāśīr nirmamo bhūtvā*.

This view of our being starts from the Sankhya analysis of the dual principle in our nature, Purusha and Prakriti. Purusha is inactive, *akartā*; Prakriti is active, *kartrī*: Purusha is the being full of the light of consciousness; Prakriti is the Nature, mechanical, reflecting all her works in the conscious witness, the Purusha. Prakriti works by the inequality of her three modes, gunas, in perpetual collision and intermixture and mutation with each other; and by her function of ego-mind she gets the Purusha to identify himself with all this working and so creates the sense of active, mutable, temporal personality in the silent eternity of the Self. The impure natural consciousness overclouds the pure soul-consciousness; the mind forgets the Person in the ego and the personality; we suffer the discriminating intelligence to be carried away by the sense-mind and its outgoing functions and by the desire of the life and the body. So long as the Purusha sanctions this action, ego and desire and ignorance must govern the natural being.

But if this were all, then the only remedy would be to withdraw altogether the sanction, suffer or compel all our nature by this withdrawal to fall into a motionless equilibrium of the three gunas and so cease from all action. But this is precisely the remedy,—though it is undoubtedly a remedy, one which abolishes, we might say, the patient along with the disease,—which the Gita constantly discourages. Especially, to resort to a tamasic inaction is just what the ignorant will do if this truth is thrust upon them; the discriminating mind in them will fall into a false division, a false opposition, *buddhibheda*; their active nature and their intelligence will be divided against each other and produce a disturbance and confusion without true issue, a false and self-deceiving line of action, *mithyācāra*, or else a mere tamasic inertia, cessation of works, diminution of the will to life and action, not therefore a liberation, but rather a subjection to the lowest of the three gunas, to *tamas*, the principle of ignorance and of inertia. Or else they will not be able to understand at all, they will find fault with this higher teaching, assert against it their present mental experience, their ignorant idea of free will and, yet more confirmed by the plausibility of their logic in their

bewilderment and the deception of ego and desire, lose their chance of liberation in a deeper, more obstinate confirmation of the ignorance.

In fact, these higher truths can only be helpful, because there only they are true to experience and can be lived, on a higher and vaster plane of consciousness and being. To view these truths from below is to mis-see, misunderstand and probably to misuse them. It is a higher truth that the distinction of good and evil is indeed a practical fact and law valid for the egoistic human life which is the stage of transition from the animal to the divine, but on a higher plane we rise beyond good and evil, are above their duality even as the Godhead is above it. But the unripe mind, seizing on this truth without rising from the lower consciousness where it is not practically valid, will simply make it a convenient excuse for indulging its Asuric propensities, denying the distinction between good and evil altogether and falling by self-indulgence deeper into the morass of perdition, *sarva-jñāna-vimūḍhān naṣṭān acetasah*. So too with this truth of the determinism of Nature; it will be mis-seen and misused, as those misuse it who declare that a man is what his nature has made him and cannot do otherwise than as his nature compels him. It is true in a sense, but not in the sense which is attached to it, not in the sense that the ego-self can claim irresponsibility and impunity for itself in its works; for it has will and it has desire and so long as it acts according to its will and desire, even though that be its nature, it must bear the reactions of its Karma. It is in a net, if you will, a snare which may well seem perplexing, illogical, unjust, terrible to its present experience, to its limited self-knowledge, but a snare of its own choice, a net of its own weaving.

The Gita says, indeed, "All existences follow their nature and what shall coercing it avail?" which seems, if we take it by itself, a hopelessly absolute assertion of the omnipotence of Nature over the soul; "even the man of knowledge acts according to his own nature." And on this it founds the injunction to follow faithfully in our action the law of our nature. "Better is one's own law of works, *svadharma*, though in itself faulty than an alien

law well wrought out; death in one's own law of being is better, perilous is it to follow an alien law." What is precisely meant by this *svadharma* we have to wait to see until we get to the more elaborate disquisition in the closing chapters about Purusha and Prakriti and the gunas; but certainly it does not mean that we are to follow any impulse, even though evil, which what we call our nature dictates to us. For between these two verses the Gita throws in this further injunction, "In the object of this or that sense liking and disliking are set in ambush; fall not into their power, for they are the besetters of the soul in its path." And immediately after this, in answer to Arjuna's objection who asks him, if there is no fault in following our Nature, what are we then to say of that in us which drives a man to sin, as if by force, even against his own struggling will, the Teacher replies that this is desire and its companion wrath, children of rajas, the second guna, the principle of passion, and this desire is the soul's great enemy and has to be slain. Abstention from evil-doing it declares to be the first condition for liberation, and always it enjoins self-mastery, self-control, *samīyama*, control of the mind, senses, all the lower being.

There is therefore a distinction to be made between what is essential in the nature, its native and inevitable action, which it avails not at all to repress, suppress, coerce, and what is accidental to it, its wanderings, confusions, perversions, over which we must certainly get control. There is a distinction implied too between coercion and suppression, *nigraha*, and control with right use and right guidance, *samīyama*. The former is a violence done to the nature by the will, which in the end depresses the natural powers of the being, *ātmānam avasādayet*; the latter is the control of the lower by the higher self, which successfully gives to those powers their right action and their maximum efficiency, — *yogah karmasu kauśalam*. This nature of *samīyama* is made very clear by the Gita in the opening of its sixth chapter, "By the self thou shouldst deliver the self, thou shouldst not depress and cast down the self (whether by self-indulgence or suppression); for the self is the friend of the self and the self is the enemy. To the man is his self a friend in whom the (lower)

self has been conquered by the (higher) self, but to him who is not in possession of his (higher) self, the (lower) self is as if an enemy and it acts as an enemy." When one has conquered one's self and attained to the calm of a perfect self-mastery and self-possession, then is the supreme self in a man founded and poised even in his outwardly conscious human being, *samāhita*. In other words, to master the lower self by the higher, the natural self by the spiritual is the way of man's perfection and liberation.

Here then is a very great qualification of the determinism of Nature, a precise limitation of its meaning and scope. How the passage from subjection to mastery works out is best seen if we observe the working of the gunas in the scale of Nature from the bottom to the top. At the bottom are the existences in which the principle of tamas is supreme, the beings who have not yet attained to the light of self-consciousness and are utterly driven by the current of Nature. There is a will even in the atom, but we see clearly enough that it is not free will, because it is mechanical and the atom does not possess the will, but is possessed by it. Here the *buddhi*, the element of intelligence and will in Prakriti, is actually and plainly what the Sankhya asserts it to be, *jada*, a mechanical, even an inconscient principle in which the light of the conscious Soul has not at all struggled to the surface: the atom is not conscious of an intelligent will; tamas, the inert and ignorant principle, has its grip on it, contains *rajas*, conceals *sattva* within itself and holds a high holiday of mastery, Nature compelling this form of existence to act with a stupendous force indeed, but as a mechanical instrument, *yantrārūḍham māyayā*. Next, in the plant the principle of *rajas* has struggled to the surface, with its power of life, with its capacity of the nervous reactions which in us are recognisable as pleasure and suffering, but *sattva* is quite involved, has not yet emerged to awaken the light of a conscious intelligent will; all is still mechanical, subconscious or half-conscious, tamas stronger than rajas, both gaolers of the imprisoned sattva.

In the animal, though tamas is still strong, though we may still describe him as belonging to the tamasic creation, *tāmasa sarga*, yet rajas prevails much more against tamas, brings with

it its developed power of life, desire, emotion, passion, pleasure, suffering, while sattwa, emerging, but still dependent on the lower action, contributes to these the first light of the conscious mind, the mechanical sense of ego, conscious memory, a certain kind of thought, especially the wonders of instinct and animal intuition. But as yet the buddhi, the intelligent will, has not developed the full light of consciousness; therefore, no responsibility can be attributed to the animal for its actions. The tiger can be no more blamed for killing and devouring than the atom for its blind movements, the fire for burning and consuming or the storm for its destructions. If it could answer the question, the tiger would indeed say, like man, that it had free will, it would have the egoism of the doer, it would say, "I kill, I devour"; but we can see clearly enough that it is not really the tiger, but Nature in the tiger that kills, it is Nature in the tiger that devours; and if it refrains from killing or devouring, it is from satiety, from fear or from indolence, from another principle of Nature in it, from the action of the guna called tamas. As it was Nature in the animal that killed, so it is Nature in the animal that refrained from killing. Whatever soul is in it, sanctions passively the action of Nature, is as much passive in its passion and activity as in its indolence or inaction. The animal like the atom acts according to the mechanism of its Nature, and not otherwise, *sadr̄śam ceṣṭate svasyāḥ prakṛteḥ*, as if mounted on a machine, *yantrārūḍho māyayā*.

Well, but in man at least there is another action, a free soul, a free will, a sense of responsibility, a real doer other than Nature, other than the mechanism of Maya? So it seems, because in man there is a conscious intelligent will; *buddhi* is full of the light of the observing Purusha, who through it, it seems, observes, understands, approves or disapproves, gives or withholds the sanction, seems indeed at last to begin to be the lord of his nature. Man is not like the tiger or the fire or the storm; he cannot kill and say as a sufficient justification, "I am acting according to my nature", and he cannot do it, because he has not the nature and not, therefore, the law of action, *svadharma*, of the tiger, storm or fire. He has a conscious intelligent will,

a *buddhi*, and to that he must refer his actions. If he does not do so, if he acts blindly according to his impulses and passions, then the law of his being is not rightly worked out, *svadharmaḥ su-anuṣṭhitah*, he has not acted according to the full measure of his humanity, but even as might the animal. It is true that the principle of *rajas* or the principle of *tamas* gets hold of his *buddhi* and induces it to justify any and every action he commits or any avoidance of action; but still the justification or at least the reference to the *buddhi* must be there either before or after the action is committed. And, besides, in man *sattva* is awake and acts not only as intelligence and intelligent will, but as a seeking for light, for right knowledge and right action according to that knowledge, as a sympathetic perception of the existence and claims of others, as an attempt to know the higher law of his own nature, which the sattvic principle in him creates, and to obey it, and as a conception of the greater peace and happiness which virtue, knowledge and sympathy bring in their train. He knows more or less imperfectly that he has to govern his rajasic and tamasic by his sattvic nature and that thither tends the perfection of his normal humanity.

But is the condition of the predominantly sattvic nature freedom and is this will in man a free will? That the Gita from the standpoint of a higher consciousness in which alone is true freedom, denies. The *buddhi* or conscious intelligent will is still an instrument of Nature and when it acts, even in the most sattvic sense, it is still Nature which acts and the soul which is carried on the wheel by Maya. At any rate, at least nine-tenths of our freedom of will is a palpable fiction; that will is created and determined not by its own self-existent action at a given moment, but by our past, our heredity, our training, our environment, the whole tremendous complex thing we call Karma, which is, behind us, the whole past action of Nature on us and the world converging in the individual, determining what he is, determining what his will shall be at a given moment and determining, as far as analysis can see, even its action at that moment. The ego associates itself always with its Karma and it says "I did" and "I will" and "I suffer", but if it looks at

itself and sees how it was made, it is obliged to say of man as of the animal, "Nature did this in me, Nature wills in me", and if it qualifies by saying "my Nature", that only means "Nature as self-determined in this individual creature". It was the strong perception of this aspect of existence which compelled the Buddhists to declare that all is Karma and that there is no self in existence, that the idea of self is only a delusion of the ego-mind. When the ego thinks "I choose and will this virtuous and not that evil action", it is simply associating itself, somewhat like the fly on the wheel, or rather as might a cog or other part of a mechanism if it were conscious, with a predominant wave or a formed current of the sattwic principle by which Nature chooses through the buddhi one type of action in preference to another. Nature forms itself in us and wills in us, the Sankhya would say, for the pleasure of the inactive observing Purusha.

But even if this extreme statement has to be qualified, and we shall see hereafter in what sense, still the freedom of our individual will, if we choose to give it that name, is very relative and almost infinitesimal, so much is it mixed up with other determining elements. Its strongest power does not amount to mastery. It cannot be relied upon to resist the strong wave of circumstance or of other nature which either overbears or modifies or mixes up with it or at the best subtly deceives and circumvents it. Even the most sattwic will is so overborne or mixed up with or circumvented by the rajasic and tamasic gunas as to be only in part sattwic, and thence arises that sufficiently strong element of self-deception, of a quite involuntary and even innocent make-believe and hiding from oneself which the merciless eye of the psychologist detects even in the best human action. When we think that we are acting quite freely, powers are concealed behind our action which escape the most careful self-introspection; when we think that we are free from ego, the ego is there, concealed, in the mind of the saint as in that of the sinner. When our eyes are really opened on our action and its springs, we are obliged to say with the Gita "*gunā gunेशु vartante*", "it was the modes of Nature that were acting upon the modes."

For this reason even a high predominance of the sattwic

principle does not constitute freedom. For, as the Gita points out, the sattwa binds, as much as the other gunas, and binds just in the same way, by desire, by ego; a nobler desire, a purer ego,— but so long as in any form these two hold the being, there is no freedom. The man of virtue, of knowledge, has his ego of the virtuous man, his ego of knowledge, and it is that sattwic ego which he seeks to satisfy; for his own sake he seeks virtue and knowledge. Only when we cease to satisfy the ego, to think and to will from the ego, the limited "I" in us, then is there a real freedom. In other words, freedom, highest self-mastery begin when above the natural self we see and hold the supreme Self of which the ego is an obstructing veil and a blinding shadow. And that can only be when we see the one Self in us seated above Nature and make our individual being one with it in being and consciousness and in its individual nature of action only an instrument of a supreme Will, the one Will that is really free. For that we must rise high above the three gunas, become *trigunātīta*; for that Self is beyond even the sattwic principle. We have to climb to it through the sattwa, but we attain to it only when we get beyond sattwa; we reach out to it from the ego, but only reach it by leaving the ego. We are drawn towards it by the highest, most passionate, most stupendous and ecstatic of all desires; but we can securely live in it only when all desire drops away from us. We have at a certain stage to liberate ourselves even from the desire of our liberation.

Beyond the Modes of Nature

S O FAR then extends the determinism of Nature, and what it amounts to is this that the ego from which we act is itself an instrument of the action of Prakriti and cannot therefore be free from the control of Prakriti; the will of the ego is a will determined by Prakriti, it is a part of the nature as it has been formed in us by the sum of its own past action and self-modification, and by the nature in us so formed and the will in it so formed our present action also is determined. It is said by some that the first initiating action is always free to our choice however much all that follows may be determined by that, and in this power of initiation and its effect on our future lies our responsibility. But where is that first action in Nature which has no determining past behind it, where that present condition of our nature which is not in sum and detail the result of the action of our past nature? We have that impression of a free initial act because we are living at every moment from our present on towards our future and we do not live back constantly from our present into our past, so that what is strongly vivid to our minds is the present and its consequences while we have a much less vivid hold of our present as entirely the consequence of our past; this latter we are apt to look on as if it were dead and done with. We speak and act as if we were perfectly free in the pure and virgin moment to do what we will with ourselves using an absolute inward independence of choice. But there is no such absolute liberty, our choice has no such independence.

Certainly, the will in us has always to choose between a certain number of possibilities, for that is the way in which Nature always acts; even our passivity, our refusal to will, is itself a choice, itself an act of the will of Nature in us; even in the atom there is a will always at its work. The whole difference

is the extent to which we associate our idea of self with the action of the will in Nature; when we so associate ourselves, we think of it as our will and say that it is a free will and that it is we who are acting. And error or not, illusion or not, this idea of our will, of our action is not a thing of no consequence, of no utility; everything in Nature has a consequence and a utility. It is rather that process of our conscious being by which Nature in us becomes more and more aware of and responsive to the presence of the secret Purusha within her and opens by that increase of knowledge to a greater possibility of action; it is by the aid of the ego-idea and the personal will that she raises herself to her own higher possibilities, rises out of the sheer or else the predominant passivity of the tamasic nature into the passion and the struggle of the rajasic nature and from the passion and the struggle of the rajasic nature to the greater light, happiness and purity of the sattvic nature. The relative self-mastery gained by the natural man over himself is the dominion achieved by the higher possibilities of his nature over its lower possibilities, and this is done in him when he associates his idea of self with the struggle of the higher guna to get the mastery, the predominance over the lower guna. The sense of free will, illusion or not, is a necessary machinery of the action of Nature, necessary for man during his progress, and it would be disastrous for him to lose it before he is ready for a higher truth. If it be said, as it has been said, that Nature deludes man to fulfil her behests and that the idea of a free individual will is the most powerful of these delusions, then it must also be said that the delusion is for his good and without it he could not rise to his full possibilities.

But it is not a sheer delusion, it is only an error of standpoint and an error of placement. The ego thinks that it is the real self and acts as if it were the true centre of action and as if all existed for its sake, and there it commits an error of standpoint and placement. It is not wrong in thinking that there is something or someone within ourselves, within this action of our nature, who is the true centre of its action and for whom all exists; but this is not the ego, it is the Lord secret within

our hearts, the divine Purusha, and the Jiva, other than ego, who is a portion of his being. The self-assertion of ego-sense is the broken and distorted shadow in our minds of the truth that there is a real Self within us which is the master of all and for whom and at whose behest Nature goes about her works. So too the ego's idea of free will is a distorted and misplaced sense of the truth that there is a free Self within us and that the will in Nature is only a modified and partial reflection of its will, modified and partial because it lives in the successive moments of Time and acts by a constant series of modifications which forget much of their own precedents and are only imperfectly conscious of their own consequences and aims. But the Will within, exceeding the moments of Time, knows all these, and the action of Nature in us is an attempt, we might say, to work out under the difficult conditions of a natural and egoistic ignorance what is foreseen in full supramental light by the inner Will and Knowledge.

But a time must come in our progress when we are ready to open our eyes to the real truth of our being, and then the error of our egoistic free will must fall away from us. The rejection of the idea of egoistic free will does not imply a cessation of action, because Nature is the doer and carries out her action after this machinery is dispensed with even as she did before it came into usage in the process of her evolution. In the man who has rejected it, it may even be possible for her to develop a greater action; for his mind may be more aware of all that his nature is by the self-creation of the past, more aware of the powers that environ and are working upon it to help or to hinder its growth, more aware too of the latent greater possibilities which it contains by virtue of all in it that is unexpressed, yet capable of expression; and this mind may be a freer channel for the sanction of the Purusha to the greater possibilities that it sees and a freer instrument for the response of Nature, for her resultant attempt at their development and realisation. But the rejection of free will must not be a mere fatalism or idea of natural determinism in the understanding without any vision of the real Self in us; for then the ego still remains as our sole idea of self and, as that

is always the instrument of Prakriti, we still act by the ego and with our will as her instrument, and the idea in us brings no real change, but only a modification of our intellectual attitude. We shall have accepted the phenomenal truth of the determination of our egoistic being and action by Nature, we shall have seen our subjection: but we shall not have seen the unborn Self within which is above the action of the gunas; we shall not have seen wherein lies our gate of freedom. Nature and ego are not all we are; there is the free soul, the Purusha.

But in what consists this freedom of the Purusha? The Purusha of the current Sankhya philosophy is free in the essence of his being, but because he is the non-doer, *akartā*; and in so far as he permits Nature to throw on the inactive Soul her shadow of action, he becomes bound phenomenally by the actions of the gunas and cannot recover his freedom except by dissociation from her and by cessation of her activities. If then a man casts from him the idea of himself as the doer or of the works as his, if, as the Gita enjoins, he fixes himself in the view of himself as the inactive non-doer, *ātmānam akartāram*, and all action as not his own but Nature's, as the play of her gunas, will not a like result follow? The Sankhya Purusha is the giver of the sanction, but a passive sanction only, *anumati*, the work is entirely Nature's; essentially he is the witness and sustainer, not the governing and active consciousness of the universal Godhead. He is the Soul that sees and accepts, as a spectator accepts the representation of a play he is watching, not the Soul that both governs and watches the play planned by himself and staged in his own being. If then he withdraws the sanction, if he refuses to acknowledge the illusion of doing by which the play continues, he ceases also to be the sustainer and the action comes to a stop, since it is only for the pleasure of the witnessing conscious Soul that Nature performs it and only by his support that she can maintain it. Therefore it is evident that the Gita's conception of the relations of the Purusha and Prakriti are not the Sankhya's, since the same movement leads to a quite different result, in one case to cessation of works, in the other to a great, a selfless and desireless, a divine action. In the Sankhya Soul and Nature are two different

entities, in the Gita they are two aspects, two powers of one self-existent being; the Soul is not only giver of the sanction, but lord of Nature, Ishwara, through her enjoying the play of the world, through her executing divine will and knowledge in a scheme of things supported by his sanction and existing by his immanent presence, existing in his being, governed by the law of his being and by the conscious will within it. To know, to respond to, to live in the divine being and nature of this Soul is the object of withdrawing from the ego and its action. One rises then above the lower nature of the gunas to the higher divine nature.

The movement by which this ascension is determined results from the complex poise of the Soul in its relations with Nature; it depends on the Gita's idea of the triple Purusha. The Soul that immediately informs the action, the mutations, the successive becomings of Nature, is the Kshara, that which seems to change with her changes, to move in her motion, the Person who follows in his idea of his being the changes of his personality brought about by the continuous action of her Karma. Nature here is Kshara, a constant movement and mutation in Time, a constant becoming. But this Nature is simply the executive power of the Soul itself; for only by what he is, can she become, only according to the possibilities of his becoming, can she act; she works out the becoming of his being. Her Karma is determined by Swabhava, the own-nature, the law of self-becoming of the soul, even though, because it is the agent and executive of the becoming, the action rather seems often to determine the nature. According to what we are, we act, and by our action we develop, we work out what we are. Nature is the action, the mutation, the becoming, and it is the Power that executes all these; but the Soul is the conscious Being from which that Power proceeds, from whose luminous stuff of consciousness she has drawn the variable will that changes and expresses its changes in her actions. And this Soul is One and Many; it is the one Life-being out of which all life is constituted and it is all these living beings; it is the cosmic Existent and it is all this multitude of cosmic existences, *sarvabhūtāni*, for all these are One; all the many Purushas are in their original being the one and only

Purusha. But the mechanism of the ego-sense in Nature, which is part of her action, induces the mind to identify the soul's consciousness with the limited becoming of the moment, with the sum of her active consciousness in a given field of space and time, with the result from moment to moment of the sum of her past actions. It is possible to realise in a way the unity of all these beings even in Nature herself and to become aware of a cosmic Soul which is manifest in the whole action of cosmic Nature, Nature manifesting the Soul, the Soul constituting the Nature. But this is to become aware only of the great cosmic Becoming, which is not false or unreal, but the knowledge of which alone does not give us the true knowledge of our Self; for our true Self is always something more than this and something beyond it.

For, beyond the soul manifest in Nature and bound up with its action, is another status of the Purusha, which is entirely a status and not at all an action; that is the silent, the immutable, the all-pervading, self-existent, motionless Self, *sarvagatam acalam*, immutable Being and not Becoming, the Akshara. In the Kshara the Soul is involved in the action of Nature, therefore it is concentrated, loses itself, as it were, in the moments of Time, in the waves of the Becoming, not really, but only in appearance and by following the current; in the Akshara Nature falls to silence and rest in the Soul, therefore it becomes aware of its immutable Being. The Kshara is the Sankhya's Purusha when it reflects the varied workings of the gunas of Nature, and it knows itself as the Saguna, the Personal; the Akshara is the Sankhya's Purusha when these gunas have fallen into a state of equilibrium, and it knows itself as the Nirguna, the Impersonal. Therefore while the Kshara, associating itself with the work of Prakriti, seems to be the doer of works, *kartā*, the Akshara dissociated from all the workings of the gunas is the inactive non-doer, *akartā*, and witness. The soul of man, when it takes the poise of the Kshara, identifies itself with the play of personality and readily clouds its self-knowledge with the ego-sense in Nature, so that he thinks of himself as the ego-doer of works; when it takes its poise in the Akshara, it identifies itself with the Impersonal and is aware

of Nature as the doer and itself as the inactive witnessing Self, *akartāram*. The mind of man has to tend to one of these poises, it takes them as alternatives; it is bound by Nature to action in the mutations of quality and personality or it is free from her workings in immutable impersonality.

But these two, the status and immutability of the Soul and the action of the Soul and its mutability in Nature, actually coexist. And this would be an anomaly irreconcilable except by some such theory as that of Maya or else of a double and divided being, if there were not a supreme reality of the Soul's existence of which these are the two contrary aspects, but which is limited by neither of them. We have seen that the Gita finds this in the Purushottama. The supreme Soul is the Ishwara, God, the Master of all being, *sarvaloka-mahesvara*. He puts forth his own active nature, his Prakriti, — *svāṁ prakṛtim*, says the Gita, — manifest in the Jiva, worked out by the *svabhāva*, "own-becoming", of each Jiva according to the law of the divine being in it, the great lines of which each Jiva must follow, but worked out too in the egoistic nature by the bewildering play of the three gunas upon each other, *guṇā guṇeṣu vartante*. That is the *traiguṇyamayī māyā*, the Maya hard for man to get beyond, *duratyayā*, — yet can one get beyond it by transcending the three gunas. For while all this is done by the Ishwara through his Nature-Power in the Kshara, in the Akshara he is untouched, indifferent, regarding all equally, extended within all, yet above all. In all three he is the Lord, the supreme Ishwara in the highest, the presiding and all-pervading Impersonality, *prabhu* and *vibhu*, in the Akshara, and the immanent Will and present active Lord in the Kshara. He is free in his impersonality even while working out the play of his personality; he is not either merely impersonal or personal, but one and the same being in two aspects; he is the impersonal-personal, *nirguṇo guṇī*, of the Upanishad. By him all has been willed even before it is worked out, — as he says of the still living Dhartarashtrians, "already have they been slain by Me," *maya nihatāḥ pūrvam eva*, — and the working out by Nature is only the result of his Will; yet by virtue of his impersonality behind he is not bound by his works, *kartāram akartāram*.

But man as the individual self, owing to his ignorant self-identification with the work and the becoming, as if that were all his soul and not a power of his soul, a power proceeding from it, is bewildered by the ego-sense. He thinks that it is he and others who are doing all; he does not see that Nature is doing all and that he is misrepresenting and disfiguring her works to himself by ignorance and attachment. He is enslaved by the gunas, now hampered in the dull case of tamas, now blown by the strong winds of rajas, now limited by the partial lights of sattwa, not distinguishing himself at all from the nature-mind which alone is thus modified by the gunas. He is therefore mastered by pain and pleasure, happiness and grief, desire and passion, attachment and disgust: he has no freedom.

He must, to be free, get back from the Nature action to the status of the Akshara; he will then be *trigunātīta*, beyond the gunas. Knowing himself as the Akshara Brahman, the unchanging Purusha, he will know himself as an immutable impersonal self, the Atman, tranquilly observing and impartially supporting the action, but himself calm, indifferent, untouched, motionless, pure, one with all beings in their self, not one with Nature and her workings. This self, though by its presence authorising the works of Nature, though by its all-pervading existence supporting and consenting to them, *prabhu vibhu*, does not itself create works or the state of the doer or the joining of the works to their fruit, *na kartr̄tvam na karmāṇi srjati na karma-phala-samyogam*, but only watches nature in the Kshara working out these things, *svabhāvas tu pravartate*; it accepts neither the sin nor the virtue of the living creatures born into this birth as its own, *nādatte kasyacit pāpam na caiva sukṛtam*; it preserves its spiritual purity. It is the ego bewildered by ignorance which attributes these things to itself, because it assumes the responsibility of the doer and chooses to figure as that and not as the instrument of a greater power, which is all that it really is; *ajñānenāvṛtam jñānam tena muhyanti jantavaḥ*. By going back into the impersonal self the soul gets back into a greater self-knowledge and is liberated from the bondage of the works of Nature, untouched by her gunas, free from her shows of good

and evil, suffering and happiness. The natural being, the mind, body, life, still remain, Nature still works; but the inner being does not identify himself with these, nor while the gunas play in the natural being, does he rejoice or grieve. He is the calm and free immutable Self observing all.

Is this the last state, the utmost possibility, the highest secret? It cannot be, since this is a mixed or divided, not a perfectly harmonised status, a double, not a unified being, a freedom in the soul, an imperfection in the Nature. It can only be a stage. What then is there beyond it? One solution is that of the Sannyasin who rejects the nature, the action altogether, so far at least as action can be rejected, so that there may be an unmixed undivided freedom; but this solution, though admitted, is not preferred by the Gita. The Gita also insists on the giving up of actions, *sarvakarmāni sannyasya*, but inwardly to the Brahman. Brahman in the Kshara supports wholly the action of Prakriti, Brahman in the Akshara, even while supporting, dissociates itself from the action, preserves its freedom; the individual soul, unified with the Brahman in the Akshara, is free and dissociated, yet, unified with the Brahman in the Kshara, supports but is not affected. This it can do best when it sees that both are aspects of the one Purushottama. The Purushottama, inhabiting all existences as the secret Ishwara, controls the Nature and by his will, now no longer distorted and disfigured by the ego-sense, the Nature works out the actions by the swabhava; the individual soul makes the divinised natural being an instrument of the divine Will, *nimitta-mātram*. He remains even in action *trigunatīta*, beyond the gunas, free from the gunas, *nistraiguṇya*, he fulfils entirely at last the early injunction of the Gita, *nistraiguṇyo bhavārjuna*. He is indeed still the enjoyer of the gunas, as is the Brahman, though not limited by them, *nirguṇam guṇabhboktr ca*, unattached, yet all-supporting, even as is that Brahman, *asaktam sarvabhṛt*: but the action of the gunas within him is quite changed; it is lifted above their egoistic character and reactions. For he has unified his whole being in the Purushottama, has assumed the divine being and the higher divine nature of becoming, *madbhāva*, has unified even his mind and natural

consciousness with the Divine, *manmanā maccittah*. This change is the final evolution of the nature and the consummation of the divine birth, *rahasyam uttamam*. When it is accomplished, the soul is aware of itself as the master of its nature and, grown a light of the divine Light and will of the divine Will, is able to change its natural workings into a divine action.

XXIII

Nirvana and Works in the World

THE UNION of the soul with the Purushottama by a Yoga of the whole being is the complete teaching of the Gita and not only the union with the immutable Self as in the narrower doctrine which follows the exclusive way of knowledge. That is why the Gita subsequently, after it has effected the reconciliation of knowledge and works, is able to develop the idea of love and devotion, unified with both works and knowledge, as the highest height of the way to the supreme secret. For if the union with the immutable Self were the sole secret or the highest secret, that would not at all be possible; for then at a given point our inner basis for love and devotion, no less than our inner foundation of works, would crumble away and collapse. Union utter and exclusive with the immutable Self alone means the abolition of the whole point of view of the mutable being, not only in its ordinary and inferior action but in its very roots, in all that makes its existence possible, not only in the works of its ignorance, but in the works of its knowledge. It would mean the abolition of all that difference in conscious poise and activity between the human soul and the Divine which makes possible the play of the Kshara; for the action of the Kshara would become then entirely a play of the ignorance without any root or basis of divine reality in it. On the contrary, union by Yoga with the Purushottama means the knowledge and enjoyment of our oneness with him in our self-existent being and of a certain differentiation in our active being. It is the persistence of the latter in a play of divine works which are urged by the motive power of divine love and constituted by a perfected divine Nature, it is the vision of the Divine in the world harmonised with a realisation of the Divine in the self which makes action and devotion possible to the liberated man, and not only possible but inevitable in the perfect mode of his being.

But the direct way to union lies through the firm realisation of the immutable Self, and it is the Gita's insistence on this as a first necessity, after which alone works and devotion can acquire their whole divine meaning, that makes it possible for us to mistake its drift. For if we take the passages in which it insists most rigorously upon this necessity and neglect to observe the whole sequence of thought in which they stand, we may easily come to the conclusion that it does really teach actionless absorption as the final state of the soul and action only as a preliminary means towards stillness in the motionless Immutable. It is in the close of the fifth and throughout the sixth chapter that this insistence is strongest and most comprehensive. There we get the description of a Yoga which would seem at first sight to be incompatible with works and we get the repeated use of the word Nirvana to describe the status to which the Yогin arrives.

The mark of this status is the supreme peace of a calm self-extinction, *śāntim nirvāṇa-paramām*, and, as if to make it quite clear that it is not the Buddhist's Nirvana in a blissful negation of being, but the Vedantic loss of a partial in a perfect being that it intends, the Gita uses always the phrase *brahma-nirvāṇa*, extinction in the Brahman; and the Brahman here certainly seems to mean the Immutable, to denote primarily at least the inner timeless Self withdrawn from active participation even though immanent in the externality of Nature. We have to see then what is the drift of the Gita here, and especially whether this peace is the peace of an absolute inactive cessation, whether the self-extinction in the Akshara means the absolute excision of all knowledge and consciousness of the Kshara and of all action in the Kshara. We are accustomed indeed to regard Nirvana and any kind of existence and action in the world as incompatible and we might be inclined to argue that the use of the word is by itself sufficient and decides the question. But if we look closely at Buddhism, we shall doubt whether the absolute incompatibility really existed even for the Buddhists; and if we look closely at the Gita, we shall see that it does not form part of this supreme Vedantic teaching.

The Gita after speaking of the perfect equality of the

Brahman-knower who has risen into the Brahman-consciousness, *brahmavid brahmani sthitah*, develops in nine verses that follow its idea of Brahmayoga and of Nirvana in the Brahman. “When the soul is no longer attached to the touches of outward things,” it begins, “then one finds the happiness that exists in the Self; such a one enjoys an imperishable happiness, because his self is in Yoga, *yukta*, by Yoga with the Brahman.” The non-attachment is essential, it says, in order to be free from the attacks of desire and wrath and passion, a freedom without which true happiness is not possible. That happiness and that equality are to be gained entirely by man in the body: he is not to suffer any least remnant of the subjection to the troubled lower nature to remain in the idea that the perfect release will come by a putting off of the body; a perfect spiritual freedom is to be won here upon earth and possessed and enjoyed in the human life, *prāk śarīra-vimokṣanāt*. It then continues, “He who has the inner happiness and the inner ease and repose and the inner light, that Yогin becomes the Brahman and reaches self-extinction in the Brahman, *brahma-nirvānam*.” Here, very clearly, Nirvana means the extinction of the ego in the higher spiritual, inner Self, that which is for ever timeless, spaceless, not bound by the chain of cause and effect and the changes of the world-mutation, self-blissful, self-illuminated and for ever at peace. The Yогin ceases to be the ego, the little person limited by the mind and the body; he becomes the Brahman; he is unified in consciousness with the immutable divinity of the eternal Self which is immanent in his natural being.

But is this a going in into some deep sleep of samadhi away from all world-consciousness, or is it the preparatory movement for a dissolution of the natural being and the individual soul into some absolute Self who is utterly and for ever beyond Nature and her works, *laya, mokṣa*? Is that withdrawal necessary before we can enter into Nirvana, or is Nirvana, as the context seems to suggest, a state which can exist simultaneously with world-consciousness and even in its own way include it? Apparently the latter, for in the succeeding verse the Gita goes on to say,

“Sages win Nirvana in the Brahman, they in whom the stains of sin are effaced and the knot of doubt is cut asunder, masters of their selves, who are occupied in doing good to all creatures, *sarvabhūta-hite ratāḥ*.” That would almost seem to mean that to be thus is to be in Nirvana. But the next verse is quite clear and decisive, “*Yatis* (those who practise self-mastery by Yoga and austerity) who are delivered from desire and wrath and have gained self-mastery, for them Nirvana in the Brahman exists all about them, encompasses them, they already live in it because they have knowledge of the Self.” That is to say, to have knowledge and possession of the self is to exist in Nirvana. This is clearly a large extension of the idea of Nirvana. Freedom from all stain of the passions, the self-mastery of the equal mind on which that freedom is founded, equality to all beings, *sarvabhūtesu*, and beneficial love for all, final destruction of that doubt and obscurity of the ignorance which keeps us divided from the all-unifying Divine and the knowledge of the One Self within us and in all are evidently the conditions of Nirvana which are laid down in these verses of the Gita, go to constitute it and are its spiritual substance.

Thus Nirvana is clearly compatible with world-consciousness and with action in the world. For the sages who possess it are conscious of and in intimate relation by works with the Divine in the mutable universe; they are occupied with the good of all creatures, *sarvabhūta-hite*. They have not renounced the experiences of the Kshara Purusha, they have divinised them; for the Kshara, the Gita tells us, is all existences, *sarvabhūtāni*, and the doing universal good to all is a divine action in the mutability of Nature. This action in the world is not inconsistent with living in Brahman, it is rather its inevitable condition and outward result because the Brahman in whom we find Nirvana, the spiritual consciousness in which we lose the separative ego-consciousness, is not only within us but within all these existences, exists not only above and apart from all these universal happenings, but pervades them, contains them and is extended in them. Therefore by Nirvana in the Brahman must be meant a destruction or extinction of the limited separative consciousness, falsifying

and dividing, which is brought into being on the surface of existence by the lower Maya of the three gunas, and entry into Nirvana is a passage into this other true unifying consciousness which is the heart of existence and its continent and its whole containing and supporting, its whole original and eternal and final truth. Nirvana when we gain it, enter into it, is not only within us, but all around, *abhi to vartate*, because this is not only the Brahman-consciousness which lives secret within us, but the Brahman-consciousness in which we live. It is the Self which we are within, the supreme Self of our individual being but also the Self which we are without, the supreme Self of the universe, the self of all existences. By living in that self we live in all, and no longer in our egoistic being alone; by oneness with that self a steadfast oneness with all in the universe becomes the very nature of our being and the root status of our active consciousness and root motive of all our action.

But again we get immediately afterwards two verses which might seem to lead away from this conclusion. "Having put outside of himself all outward touches and concentrated the vision between the eyebrows and made equal the *prāṇa* and the *apāna* moving within the nostrils, having controlled the senses, the mind and the understanding, the sage devoted to liberation, from whom desire and wrath and fear have passed away is ever free." Here we have a process of Yoga that brings in an element which seems quite other than the Yoga of works and other even than the pure Yoga of knowledge by discrimination and contemplation; it belongs in all its characteristic features to the system, introduces the psycho-physical askesis of Rajayoga. There is the conquest of all the movements of the mind, *cittavṛtti-nirodha*; there is the control of the breathing, Pranayama; there is the drawing in of the sense and the vision. All of them are processes which lead to the inner trance of Samadhi, the object of all of them *mokṣa*, and *mokṣa* signifies in ordinary parlance the renunciation not only of the separative ego-consciousness, but of the whole active consciousness, a dissolution of our being into the highest Brahman. Are we to suppose that the Gita gives this process in that sense as the last movement of a release by

dissolution or only as a special means and a strong aid to overcome the outward-going mind? Is this the finale, the climax, the last word? We shall find reason to regard it as both a special means, an aid, and at least one gate of a final departure, not by dissolution, but by an uplifting to the supracosmic existence. For even here in this passage this is not the last word; the last word, the finale, the climax comes in a verse that follows and is the last couplet of the chapter. "When a man has known Me as the Enjoyer of sacrifice and tapasya (of all askesis and energisms), the mighty lord of all the worlds, the friend of all creatures, he comes by the peace." The power of the Karmayoga comes in again; the knowledge of the active Brahman, the cosmic supersoul, is insisted on among the conditions of the peace of Nirvana.

We get back to the great idea of the Gita, the idea of the Purushottama,—though that name is not given till close upon the end, it is always that which Krishna means by his "I" and "Me", the Divine who is there as the one self in our timeless immutable being, who is present too in the world, in all existences, in all activities, the master of the silence and the peace, the master of the power and the action, who is here incarnate as the divine charioteer of the stupendous conflict, the Transcendent, the Self, the All, the master of every individual being. He is the enjoyer of all sacrifice and of all tapasya, therefore shall the seeker of liberation do works as a sacrifice and as a tapasya; he is the lord of all the worlds, manifested in Nature and in these beings, therefore shall the liberated man still do works for the right government and leading on of the peoples in these worlds, *loka-sangraha*; he is the friend of all existences, therefore is the sage who has found Nirvana within him and all around, still and always occupied with the good of all creatures,—even as the Nirvana of Mahayana Buddhism took for its highest sign the works of a universal compassion. Therefore too, even when he has found oneness with the Divine in his timeless and immutable self, is he still capable, since he embraces the relations also of the play of Nature, of divine love for man and of love for the Divine, of bhakti.

That this is the drift of the meaning, becomes clearer when we have fathomed the sense of the sixth chapter which is a large comment on and a full development of the idea of these closing verses of the fifth,—that shows the importance which the Gita attaches to them. We shall therefore run as briefly as possible through the substance of this sixth chapter. First the Teacher emphasises—and this is very significant—his often repeated asseveration about the real essence of Sannyasa, that it is an inward, not an outward renunciation. “Whoever does the work to be done without resort to its fruits, he is the Sannyasin and the Yогin, not the man who lights not the sacrificial fire and does not the works. What they have called renunciation (Sannyasa), know to be in truth Yoga; for none becomes a Yогin who has not renounced the desire-will in the mind.” Works are to be done, but with what purpose and in what order? They are first to be done while ascending the hill of Yoga, for then works are the cause, *kāraṇam*. The cause of what? The cause of self-perfection, of liberation, of nirvana in the Brahman; for by doing works with a steady practice of the inner renunciation this perfection, this liberation, this conquest of the desire-mind and the ego-self and the lower nature are easily accomplished.

But when one has got to the top? Then works are no longer the cause; the calm of self-mastery and self-possession gained by works becomes the cause. Again, the cause of what? Of fixity in the Self, in the Brahman-consciousness and of the perfect equality in which the divine works of the liberated man are done. “For when one does not get attached to the objects of sense or to works and has renounced all will of desire in the mind, then is he said to have ascended to the top of Yoga.” That, as we know already, is the spirit in which the liberated man does works; he does them without desire and attachment, without the egoistic personal will and the mental seeking which is the parent of desire. He has conquered his lower self, reached the perfect calm in which his highest self is manifest to him, that highest self always concentrated in its own being, *samāhita*, in Samadhi, not only in the trance of the inward-drawn consciousness, but always, in the waking state of the mind as well, in exposure to

the causes of desire and of the disturbance of calm, to grief and pleasure, heat and cold, honour and disgrace, all the dualities, *sītoṣṇa-sukhaduhkheśu tathā mānāpamānayoh*. This higher self is the Akshara, *kūṭastha*, which stands above the changes and the perturbations of the natural being; and the Yогin is said to be in Yoga with it when he also is like it, *kūṭastha*, when he is superior to all appearances and mutations, when he is satisfied with self-knowledge, when he is equal-minded to all things and happenings and persons.

But this Yoga is after all no easy thing to acquire, as Arjuna indeed shortly afterwards suggests, for the restless mind is always liable to be pulled down from these heights by the attacks of outward things and to fall back into the strong control of grief and passion and inequality. Therefore, it would seem, the Gita proceeds to give us in addition to its general method of knowledge and works a special process of Rajayogic meditation also, a powerful method of practice, *abhyāsa*, a strong way to the complete control of the mind and all its workings. In this process the Yогin is directed to practise continually union with the Self so that that may become his normal consciousness. He is to sit apart and alone, with all desire and idea of possession banished from his mind, self-controlled in his whole being and consciousness. "He should set in a pure spot his firm seat, neither too high, nor yet too low, covered with a cloth, with a deer-skin, with sacred grass, and there seated with a concentrated mind and with the workings of the mental consciousness and the senses under control he should practise Yoga for self-purification, *ātma-viśuddhaye*." The posture he takes must be the motionless erect posture proper to the practice of Rajayoga; the vision should be drawn in and fixed between the eye-brows, "not regarding the regions." The mind is to be kept calm and free from fear and the vow of Brahmacharya observed; the whole controlled mentality must be devoted and turned to the Divine so that the lower action of the consciousness shall be merged in the higher peace. For the object to be attained is the still peace of Nirvana. "Thus always putting himself in Yoga by control of his mind the Yогin attains to the supreme peace of Nirvana which has its

foundation in Me, *sāntim nirvāṇa-paramāṁ matsamsthām.*"

This peace of Nirvana is reached when all the mental consciousness is perfectly controlled and liberated from desire and remains still in the Self, when, motionless like the light of a lamp in a windless place, it ceases from its restless action, shut in from its outward motion, and by the silence and stillness of the mind the Self is seen within, not disfigured as in the mind, but in the Self, seen, not as it is mistranslated falsely or partially by the mind and represented to us through the ego, but self-perceived by the Self, *svaprakāśa*. Then the soul is satisfied and knows its own true and exceeding bliss, not that untroubled happiness which is the portion of the mind and the senses, but an inner and serene felicity in which it is safe from the mind's perturbations and can no longer fall away from the spiritual truth of its being. Not even the fieriest assault of mental grief can disturb it; for mental grief comes to us from outside, is a reaction to external touches, and this is the inner, the self-existent happiness of those who no longer accept the slavery of the unstable mental reactions to external touches. It is the putting away of the contact with pain, the divorce of the mind's marriage with grief, *duḥkha-samyoga-viyogam*. The firm winning of this inalienable spiritual bliss is Yoga, it is the divine union; it is the greatest of all gains and the treasure beside which all others lose their value. Therefore is this Yoga to be resolutely practised without yielding to any discouragement by difficulty or failure until the release, until the bliss of Nirvana is secured as an eternal possession.

The main stress here has fallen on the stilling of the emotive mind, the mind of desire and the senses which are the recipients of outward touches and reply to them with our customary emotional reactions; but even the mental thought has to be stilled in the silence of the self-existent being. First, all the desires born of the desire-will have to be wholly abandoned without any exception or residue and the senses have to be held in by the mind so that they shall not run out to all sides after their usual disorderly and restless habit; but next the mind itself has to be seized by the buddhi and drawn inward. One should slowly cease from mental action by a buddhi held in the grasp of fixity

and having fixed the mind in the higher self one should not think of anything at all. Whenever the restless and unquiet mind goes forth, it should be controlled and brought into subjection in the Self. When the mind is thoroughly quieted, then there comes upon the Yогin the highest, stainless, passionless bliss of the soul that has become the Brahman. "Thus freed from stain of passion and putting himself constantly into Yoga, the Yогin easily and happily enjoys the touch of the Brahman which is an exceeding bliss."

And yet the result is not, while one yet lives, a Nirvana which puts away every possibility of action in the world, every relation with beings in the world. It would seem at first that it ought to be so. When all the desires and passions have ceased, when the mind is no longer permitted to throw itself out in thought, when the practice of this silent and solitary Yoga has become the rule, what farther action or relation with the world of outward touches and mutable appearances is any longer possible? No doubt, the Yогin for a time still remains in the body, but the cave, the forest, the mountain-top seem now the fittest, the only possible scene of his continued living and constant trance of Samadhi his sole joy and occupation. But, first, while this solitary Yoga is being pursued, the renunciation of all other action is not recommended by the Gita. This Yoga, it says, is not for the man who gives up sleep and food and play and action, even as it is not for those who indulge too much in these things of the life and the body; but the sleep and waking, the food, the play, the putting forth of effort in works should all be *yukta*. This is generally interpreted as meaning that all should be moderate, regulated, done in fit measure, and that may indeed be the significance. But at any rate when the Yoga is attained, all this has to be *yukta* in another sense, the ordinary sense of the word everywhere else in the Gita. In all states, in waking and in sleeping, in food and play and action, the Yогin will then be in Yoga with the Divine, and all will be done by him in the consciousness of the Divine as the self and as the All and as that which supports and contains his own life and his action. Desire and ego and personal will and the thought of the

mind are the motives of action only in the lower nature; when the ego is lost and the Yогin becomes Brahman, when he lives in and is, even, a transcendent and universal consciousness, action comes spontaneously out of that, luminous knowledge higher than the mental thought comes out of that, a power other and mightier than the personal will comes out of that to do for him his works and bring its fruits:¹ personal action has ceased, all has been taken up into the Brahman and assumed by the Divine, *mayi sannyasya karmāni*.

For when the Gita describes the nature of this self-realisation and the result of the Yoga which comes by Nirvana of the separative ego-mind and its motives of thought and feeling and action into the Brahman-consciousness, it includes the cosmic sense, though lifted into a new kind of vision. "The man whose self is in Yoga, sees the self in all beings and all beings in the self, he sees all with an equal vision." All that he sees is to him the Self, all is his self, all is the Divine. But is there no danger, if he dwells at all in the mutability of the Kshara, of his losing all the results of this difficult Yoga, losing the Self and falling back into the mind, of the Divine losing him and the world getting him, of his losing the Divine and getting back in its place the ego and the lower nature? No, says the Gita; "he who sees Me everywhere and sees all in Me, to him I do not get lost, nor does he get lost to Me." For this peace of Nirvana, though it is gained through the Akshara, is founded upon the being of the Purushottama, *mat-samsthām*, and that is extended, the Divine, the Brahman is extended too in the world of beings and, though transcendent of it, not imprisoned in its own transcendence. One has to see all things as He and live and act wholly in that vision; that is the perfect fruit of the Yoga.

But why act? Is it not safer to sit in one's solitude looking out upon the world, if you will, seeing it in Brahman, in the Divine, but not taking part in it, not moving in it, not living in it, not acting in it, living rather ordinarily in the inner Samadhi? Should not that be the law, the rule, the dharma of this highest spiritual

¹ *yoga-kṣemāni vahāmyaham.*

condition? No, again; for the liberated Yigin there is no other law, rule, dharma than simply this, to live in the Divine and love the Divine and be one with all beings; his freedom is an absolute and not a contingent freedom, self-existent and not dependent any longer on any rule of conduct, law of life or limitation of any kind. He has no longer any need of a process of Yoga, because he is now perpetually in Yoga. "The Yigin who has taken his stand upon oneness and loves Me in all beings, however and in all ways he lives and acts, lives and acts in Me." The love of the world spiritualised, changed from a sense-experience to a soul-experience, is founded on the love of God and in that love there is no peril and no shortcoming. Fear and disgust of the world may often be necessary for the recoil from the lower nature, for it is really the fear and disgust of our own ego which reflects itself in the world. But to see God in the world is to fear nothing, it is to embrace all in the being of God; to see all as the Divine is to hate and loathe nothing, but love God in the world and the world in God.

But at least the things of the lower nature will be shunned and feared, the things which the Yigin has taken so much trouble to surmount? Not this either; all is embraced in the equality of the self-vision. "He, O Arjuna, who sees with equality everything in the image of the Self, whether it be grief or it be happiness, him I hold to be the supreme Yigin." And by this it is not meant at all that he himself shall fall from the griefless spiritual bliss and feel again worldly unhappiness, even in the sorrow of others, but seeing in others the play of the dualities which he himself has left and surmounted, he shall still see all as himself, his self in all, God in all and, not disturbed or bewildered by the appearances of these things, moved only by them to help and heal, to occupy himself with the good of all beings, to lead men to the spiritual bliss, to work for the progress of the world Godwards, he shall live the divine life, so long as days upon earth are his portion. The God-lover who can do this, can thus embrace all things in God, can look calmly on the lower nature and the works of the Maya of the three gunas and act in them and upon them without perturbation or fall or disturbance from the height and power

of the spiritual oneness, free in the largeness of the God-vision, sweet and great and luminous in the strength of the God-nature, may well be declared to be the supreme Yogin. He indeed has conquered the creation, *jital sargah*.

The Gita brings in here as always bhakti as the climax of the Yoga, *sarvabhūtasthitam yo mām bhajati ekatvam āsthitah*; that may almost be said to sum up the whole final result of the Gita's teaching— whoever loves God in all and his soul is founded upon the divine oneness, however he lives and acts, lives and acts in God. And to emphasise it still more, after an intervention of Arjuna and a reply to his doubt as to how so difficult a Yoga can be at all possible for the restless mind of man, the divine Teacher returns to this idea and makes it his culminating utterance. "The Yogin is greater than the doers of askesis, greater than the men of knowledge, greater than the men of works; become then the Yogin, O Arjuna," the Yogin, one who seeks for and attains, by works and knowledge and askesis or by whatever other means, not even spiritual knowledge or power or anything else for their own sake, but the union with God alone; for in that all else is contained and in that lifted beyond itself to a divinest significance. But even among Yogins the greatest is the Bhakta. "Of all Yogins he who with all his inner self given up to Me, for Me has love and faith, *śraddhāvān bhajate*, him I hold to be the most united with Me in Yoga." It is this that is the closing word of these first six chapters and contains in itself the seed of the rest, of that which still remains unspoken and is nowhere entirely spoken; for it is always and remains something of a mystery and a secret, *rahasyam*, the highest spiritual mystery and the divine secret.

The Gist of the Karmayoga

THE FIRST six chapters of the Gita form a sort of preliminary block of the teaching; all the rest, all the other twelve chapters are the working out of certain unfinished figures in this block which here are seen only as hints behind the large-size execution of the main motives, yet are in themselves of capital importance and are therefore reserved for a yet larger treatment on the other two faces of the work. If the Gita were not a great written Scripture which must be carried to its end, if it were actually a discourse by a living teacher to a disciple which could be resumed in good time, when the disciple was ready for farther truth, one could conceive of his stopping here at the end of the sixth chapter and saying, "Work this out first, there is plenty for you to do to realise it and you have the largest possible basis; as difficulties arise, they will solve themselves or I will solve them for you. But at present live out what I have told you; work in this spirit." True, there are many things here which cannot be properly understood except in the light thrown on them by what is to come after. In order to clear up immediate difficulties and obviate possible misunderstandings, I have had myself to anticipate a good deal, to bring in repeatedly, for example, the idea of the Purushottama, for without that it would have been impossible to clear up certain obscurities about the Self and action and the Lord of action, which the Gita deliberately accepts so that it may not disturb the firmness of the first steps by reaching out prematurely to things too great as yet for the mind of the human disciple.

Arjuna, himself, if the Teacher were to break off his discourse here, might well object: "You have spoken much of the destruction of desire and attachment, of equality, of the conquest of the senses and the stilling of the mind, of passionless and impersonal action, of the sacrifice of works, of the inner as

preferable to the outer renunciation, and these things I understand intellectually, however difficult they may appear to me in practice. But you have also spoken of rising above the gunas, while yet one remains in action, and you have not told me how the gunas work, and unless I know that, it will be difficult for me to detect and rise above them. Besides, you have spoken of bhakti as the greatest element in Yoga, yet you have talked much of works and knowledge, but very little or nothing of bhakti. And to whom is bhakti, this greatest thing, to be offered? Not to the still impersonal Self, certainly, but to you, the Lord. Tell me, then, what you are, who, as bhakti is greater even than this self-knowledge, are greater than the immutable Self, which is yet itself greater than mutable Nature and the world of action, even as knowledge is greater than works. What is the relation between these three things? between works and knowledge and divine love? between the soul in Nature and the immutable Self and that which is at once the changeless Self of all and the Master of knowledge and love and works, the supreme Divinity who is here with me in this great battle and massacre, my charioteer in the chariot of this fierce and terrible action?" It is to answer these questions that the rest of the Gita is written, and in a complete intellectual solution they have indeed to be taken up without delay and resolved. But in actual *sādhanā* one has to advance from stage to stage, leaving many things, indeed the greatest things to arise subsequently and solve themselves fully by the light of the advance we have made in spiritual experience. The Gita follows to a certain extent this curve of experience and puts first a sort of large preliminary basis of works and knowledge which contains an element leading up to bhakti and to a greater knowledge, but not yet fully arriving. The six chapters present us with that basis.

We may then pause to consider how far they have carried the solution of the original problem with which the Gita started. The problem in itself, it may be useful again to remark, need not necessarily have led up to the whole question of the nature of existence and of the replacement of the normal by the spiritual life. It might have been dealt with on a pragmatical or an ethical

basis or from an intellectual or an ideal standpoint or by a consideration of all of these together; that in fact would have been our modern method of solving the difficulty. By itself it raises in the first instance just this question, whether Arjuna should be governed by the ethical sense of personal sin in slaughter or by the consideration equally ethical of his public and social duty, the defence of the Right, the opposition demanded by conscience from all noble natures to the armed forces of injustice and oppression? That question has been raised in our own time and the present hour, and it can be solved, as we solve it now, by one or other of very various solutions, but all from the standpoint of our normal life and our normal human mind. It may be answered as a question between the personal conscience and our duty to the society and the State, between an ideal and a practical morality, between "soul-force" and the recognition of the troublesome fact that life is not yet at least all soul and that to take up arms for the right in a physical struggle is sometimes inevitable. All these solutions are, however, intellectual, temperamental, emotional; they depend upon the individual standpoint and are at the best our own proper way of meeting the difficulty offered to us, proper because suitable to our nature and the stage of our ethical and intellectual evolution, the best we can, with the light we have, see and do; it leads to no final solution. And this is so because it proceeds from the normal mind which is always a tangle of various tendencies of our being and can only arrive at a choice or an accommodation between them, between our reason, our ethical being, our dynamic needs, our life-instincts, our emotional being and those rarer movements which we may perhaps call soul-instincts or psychical preferences. The Gita recognises that from this standpoint there can be no absolute, only an immediate practical solution and, after offering to Arjuna from the highest ideals of his age just such a practical solution, which he is in no mood to accept and indeed is evidently not intended to accept, it proceeds to quite a different standpoint and to quite another answer.

The Gita's solution is to rise above our natural being and normal mind, above our intellectual and ethical perplexities into

another consciousness with another law of being and therefore another standpoint for our action; where personal desire and personal emotions no longer govern it; where the dualities fall away; where the action is no longer our own and where therefore the sense of personal virtue and personal sin is exceeded; where the universal, the impersonal, the divine spirit works out through us its purpose in the world; where we are ourselves by a new and divine birth changed into being of that Being, consciousness of that Consciousness, power of that Power, bliss of that Bliss, and, living no longer in our lower nature, have no works to do of our own, no personal aim to pursue of our own, but if we do works at all,—and that is the one real problem and difficulty left,—do only the divine works, those of which our outward nature is only a passive instrument and no longer the cause, no longer provides the motive; for the motive-power is above us in the will of the Master of our works. And this is presented to us as the true solution, because it goes back to the real truth of our being and to live according to the real truth of our being is evidently the highest solution and the sole entirely true solution of the problems of our existence. Our mental and vital personality is a truth of our natural existence, but a truth of the ignorance, and all that attaches itself to it is also truth of that order, practically valid for the works of the ignorance, but no longer valid when we get back to the real truth of our being. But how can we actually be sure that this is the truth? We cannot so long as we remain satisfied with our ordinary mental experience; for our normal mental experience is wholly that of this lower nature full of the ignorance. We can only know this greater truth by living it, that is to say, by passing beyond the mental into the spiritual experience, by Yoga. For the living out of spiritual experience until we cease to be mind and become spirit, until, liberated from the imperfections of our present nature, we are able to live entirely in our true and divine being is what in the end we mean by Yoga.

This upward transference of our centre of being and the consequent transformation of our whole existence and consciousness, with a resultant change in the whole spirit and motive of

our action, the action often remaining precisely the same in all its outward appearances, makes the gist of the Gita's Karmayoga. Change your being, be reborn into the spirit and by that new birth proceed with the action to which the Spirit within has appointed you, may be said to be the heart of its message. Or again, put otherwise, with a deeper and more spiritual import, —make the work you have to do here your means of inner spiritual rebirth, the divine birth, and, having become divine, do still divine works as an instrument of the Divine for the leading of the peoples. Therefore there are here two things which have to be clearly laid down and clearly grasped, the way to the change, to this upward transference, this new divine birth, and the nature of the work or rather the spirit in which it has to be done, since the outward form of it need not at all change, although really its scope and aim become quite different. But these two things are practically the same, for the elucidation of one elucidates the other. The spirit of our action arises from the nature of our being and the inner foundation it has taken, but also this nature is itself affected by the trend and spiritual effect of our action; a very great change in the spirit of our works changes the nature of our being and alters the foundation it has taken; it shifts the centre of conscious force from which we act. If life and action were entirely illusory, as some would have it, if the Spirit had nothing to do with works or life, this would not be so; but the soul in us develops itself by life and works and, not indeed so much the action itself, but the way of our soul's inner force of working determines its relations to the Spirit. This is, indeed, the justification of Karmayoga as a practical means of the higher self-realisation.

We start from this foundation that the present inner life of man, almost entirely dependent as it is upon his vital and physical nature, only lifted beyond it by a limited play of mental energy, is not the whole of his possible existence, not even the whole of his present real existence. There is within him a hidden Self, of which his present nature is either only an outer appearance or is a partial dynamic result. The Gita seems throughout to admit its dynamic reality and not to adopt the severer view

of the extreme Vedantists that it is only an appearance, a view which strikes at the very roots of all works and action. Its way of formulating this element of its philosophical thought, — it might be done in a different way, — is to admit the Sankhya distinction between the Soul and Nature, the power that knows, supports and informs and the power that works, acts, provides all the variations of instrument, medium and process. Only it takes the free and immutable Soul of the Sankhyas, calls it in Vedantic language the one immutable omnipresent Self or Brahman, and distinguishes it from this other soul involved in Nature, which is our mutable and dynamic being, the multiple soul of things, the basis of variation and personality. But in what then consists this action of Nature?

It consists in a power of process, Prakriti, which is the interplay of three fundamental modes of its working, three qualities, gunas. And what is the medium? It is the complex system of existence created by a graded evolution of the instruments of Prakriti, which, as they are reflected here in the soul's experience of her workings, we may call successively the reason and the ego, the mind, the senses and the elements of material energy which are the basis of its forms. These are all mechanical, a complex engine of Nature, *yantra*; and from our modern point of view we may say that they are all involved in material energy and manifest themselves in it as the soul in Nature becomes aware of itself by an upward evolution of each instrument, but in the inverse order to that which we have stated, matter first, then sensation, then mind, next reason, last spiritual consciousness. Reason, which is at first only preoccupied with the workings of Nature, may then detect their ultimate character, may see them only as a play of the three gunas in which the soul is entangled, may distinguish between the soul and these workings; then the soul gets a chance of disentangling itself and of going back to its original freedom and immutable existence. In Vedantic language, it sees the spirit, the being; it ceases to identify itself with the instruments and workings of Nature, with its becoming; it identifies itself with its true Self and being and recovers its immutable spiritual self-existence. It is then from this spiritual

self-existence, according to the Gita, that it can freely and as the master of its being, the Ishwara, support the action of its becoming.

Looking only at the psychological facts on which these philosophical distinctions are founded,—philosophy is only a way of formulating to ourselves intellectually in their essential significance the psychological and physical facts of existence and their relation to any ultimate reality that may exist,—we may say that there are two lives we can lead, the life of the soul engrossed in the workings of its active nature, identified with its psychological and physical instruments, limited by them, bound by its personality, subject to Nature, and the life of the Spirit, superior to these things, large, impersonal, universal, free, unlimited, transcendent, supporting with an infinite equality its natural being and action, but exceeding them by its freedom and infinity. We may live in what is now our natural being or we may live in our greater and spiritual being. This is the first great distinction on which the Karmayoga of the Gita is founded.

The whole question and the whole method lie then in the liberation of the soul from the limitations of our present natural being. In our natural life the first dominating fact is our subjection to the forms of material Nature, the outward touches of things. These present themselves to our life through the senses, and the life through the senses immediately returns upon these objects to seize upon them and deal with them, desires, attaches itself, seeks for results. The mind in all its inner sensations, reactions, emotions, habitual ways of perceiving, thinking and feeling obeys this action of the senses; the reason too carried away by the mind gives itself up to this life of the senses, this life in which the inner being is subject to the externality of things and cannot for a moment really get above it or outside the circle of its action upon us and its psychological results and reactions within us. It cannot get beyond them because there is the principle of ego by which the reason differentiates the sum of the action of Nature upon our mind, will, sense, body from her action in other minds, wills, nervous organisms, bodies; and life to us means only the way she affects our ego and the way our

ego replies to her touches. We know nothing else, we seem to be nothing else; the soul itself seems then only a separate mass of mind, will, emotional and nervous reception and reaction. We may enlarge our ego, identify ourselves with the family, clan, class, country, nation, humanity even, but still the ego remains in all these disguises the root of our actions, only it finds a larger satisfaction of its separate being by these wider dealings with external things.

What acts in us is still the will of the natural being seizing upon the touches of the external world to satisfy the different phases of its personality, and the will in this seizing is always a will of desire and passion and attachment to our works and their results, the will of Nature in us; our personal will, we say, but our ego personality is a creation of Nature, it is not and cannot be our free self, our independent being. The whole is the action of the modes of Nature. It may be a tamasic action, and then we have an inert personality subject to and satisfied with the mechanical round of things, incapable of any strong effort at a freer action and mastery. Or it may be the rajasic action, and then we have the restless active personality which throws itself upon Nature and tries to make her serve its needs and desires, but does not see that its apparent mastery is a servitude, since its needs and desires are those of Nature, and while we are subject to them, there can be for us no freedom. Or it may be a sattvic action, and then we have the enlightened personality which tries to live by reason or to realise some preferred ideal of good, truth or beauty; but this reason is still subject to the appearances of Nature and these ideals are only changing phases of our personality in which we find in the end no sure rule or permanent satisfaction. We are still carried on a wheel of mutation, obeying in our circlings through the ego some Power within us and within all this, but not ourselves that Power or in union and communion with it. Still there is no freedom, no real mastery.

Yet freedom is possible. For that we have to get first away into ourselves from the action of the external world upon our senses; that is to say, we have to live inwardly and be able to

hold back the natural running of the senses after their external objects. A mastery of the senses, an ability to do without all that they hanker after, is the first condition of the true soul-life; only so can we begin to feel that there is a soul within us which is other than the mutations of mind in its reception of the touches of outward things, a soul which in its depths goes back to something self-existent, immutable, tranquil, self-possessed, grandiose, serene and august, master of itself and unaffected by the eager runnings of our external nature. But this cannot be done so long as we are subject to desire. For it is desire, the principle of all our superficial life, which satisfies itself with the life of the senses and finds its whole account in the play of the passions. We must get rid then of desire and, that propensity of our natural being destroyed, the passions which are its emotional results will fall into quietude; for the joy and grief of possession and of loss, success and failure, pleasant and unpleasant touches, which entertain them, will pass out of our souls. A calm equality will then be gained. And since we have still to live and act in the world and our nature in works is to seek for the fruits of our works, we must change that nature and do works without attachment to their fruits, otherwise desire and all its results remain. But how can we change this nature of the doer of works in us? By dissociating works from ego and personality, by seeing through the reason that all this is only the play of the gunas of Nature, and by dissociating our soul from the play, by making it first of all the observer of the workings of Nature and leaving those works to the Power that is really behind them, the something in Nature which is greater than ourselves, not our personality, but the Master of the universe. But the mind will not permit all this; its nature is to run out after the senses and carry the reason and will with it. Then we must learn to still the mind. We must attain that absolute peace and stillness in which we become aware of the calm, motionless, blissful Self within us which is eternally untroubled and unaffected by the touches of things, is sufficient to itself and finds there alone its eternal satisfaction.

This Self is our self-existent being. It is not limited by our

personal existence. It is the same in all existences, pervasive, equal to all things, supporting the whole universal action with its infinity, but unlimited by all that is finite, unmodified by the changings of Nature and personality. When this Self is revealed within us, when we feel its peace and stillness, we can grow into that; we can transfer the poise of our soul from its lower immergence in Nature and draw it back into the Self. We can do this by the force of the things we have attained, calm, equality, passionless impersonality. For as we grow in these things, carry them to their fullness, subject all our nature to them, we are growing into this calm, equal, passionless, impersonal, all-pervading Self. Our senses fall into that stillness and receive the touches of the world on us with a supreme tranquillity; our mind falls into stillness and becomes the calm, universal witness; our ego dissolves itself into this impersonal existence. All things we see in this self which we have become in ourself; and we see this self in all; we become one being with all beings in the spiritual basis of their existence. By doing works in this selfless tranquillity and impersonality, our works cease to be ours, cease to bind or trouble us with their reactions. Nature and her gunas weave the web of her works, but without affecting our griefless self-existent tranquillity. All is given up into that one equal and universal Brahman.

But here there are two difficulties. First, there seems to be an antinomy between this tranquil and immutable Self and the action of Nature. How then does the action at all exist or how can it continue once we have entered into the immutable Self-existence? Where in that is the will to works which would make the action of our nature possible? If we say with the Sankhya that the will is in Nature and not in the Self, still there must be a motive in Nature and the power in her to draw the soul into its workings by interest, ego and attachment, and when these things cease to reflect themselves in the soul-consciousness, her power ceases and the motive of works ceases with it. But the Gita does not accept this view, which seems indeed to necessitate the existence of many Purushas and not one universal Purusha, otherwise the separate experience of the soul and its separate

liberation while millions of others are still involved, would not be intelligible. Nature is not a separate principle, but the power of the Supreme going forth in cosmic creation. But if the Supreme is only this immutable Self and the individual is only something that has gone forth from him in the Power, then the moment it returns and takes its poise in the self, everything must cease except the supreme unity and the supreme calm. Secondly, even if in some mysterious way action still continues, yet since the Self is equal to all things, it cannot matter whether works are done or, if they are done, it cannot matter what work is done. Why then this insistence on the most violent and disastrous form of action, this chariot, this battle, this warrior, this divine charioteer?

The Gita answers by presenting the Supreme as something greater even than the immutable Self, more comprehensive, one who is at once this Self and the Master of works in Nature. But he directs the works of Nature with the eternal calm, the equality, the superiority to works and personality which belong to the immutable. This, we may say, is the poise of being from which he directs works, and by growing into this we are growing into his being and into the poise of divine works. From this he goes forth as the Will and Power of his being in Nature, manifests himself in all existences, is born as Man in the world, is there in the heart of all men, reveals himself as the Avatar, the divine birth in man; and as man grows into his being, it is into the divine birth that he grows. Works must be done as a sacrifice to this Lord of our works, and we must by growing into the Self realise our oneness with him in our being and see our personality as a partial manifestation of him in Nature. One with him in being, we grow one with all beings in the universe and do divine works, not as ours, but as his workings through us for the maintenance and leading of the peoples.

This is the essential thing to be done, and once this is done, the difficulties which present themselves to Arjuna will disappear. The problem is no longer one of our personal action, for that which makes our personality becomes a thing temporal and subordinate, the question is then only one of the workings of the divine Will through us in the universe. To understand that we

must know what this supreme Being is in himself and in Nature, what the workings of Nature are and what they lead to, and the intimate relation between the soul in Nature and this supreme Soul, of which bhakti with knowledge is the foundation. The elucidation of these questions is the subject of the rest of the Gita.

END OF THE FIRST SERIES

ESSAYS ON THE GITA
SECOND SERIES

PART I
THE SYNTHESIS OF WORKS,
LOVE AND KNOWLEDGE

I

The Two Natures¹

THE FIRST six chapters of the Gita have been treated as a single block of teachings, its primary basis of practice and knowledge; the remaining twelve may be similarly treated as two closely connected blocks which develop the rest of the doctrine from this primary basis. The seventh to the twelfth chapters lay down a large metaphysical statement of the nature of the Divine Being and on that foundation closely relate and synthetise knowledge and devotion, just as the first part of the Gita related and synthetised works and knowledge. The vision of the World-Purusha intervenes in the eleventh chapter, gives a dynamic turn to this stage of the synthesis and relates it vividly to works and life. Thus again all is brought powerfully back to the original question of Arjuna round which the whole exposition revolves and completes its cycle. Afterwards the Gita proceeds by the differentiation of the Purusha and Prakriti to work out its ideas of the action of the gunas, of the ascension beyond the gunas and of the culmination of desireless works with knowledge where that coalesces with Bhakti,—knowledge, works and love made one,—and it rises thence to its great finale, the supreme secret of self-surrender to the Master of Existence.

In this second part of the Gita we come to a more concise and easy manner of statement than we have yet had. In the first six chapters the definitions have not yet been made which give the key to the underlying truth; difficulties are being met and solved; the progress is a little laboured and moves through several involutions and returns; much is implied the bearing of which is not yet clear. Here we seem to get on to clearer ground and to lay hold of a more compact and pointed expression. But because of this very conciseness we have to be careful always

¹ Gita, VII. 1-14.

of our steps in order to avoid error and a missing of the real sense. For we are here no longer steadily on the safe ground of psychological and spiritual experience, but have to deal with intellectual statements of spiritual and often of supracosmic truth. Metaphysical statement has always this peril and uncertainty about it that it is an attempt to define to our minds what is really infinite, an attempt which has to be made, but can never be quite satisfactory, quite final or ultimate. The highest spiritual truth can be lived, can be seen, but can only be partially stated. The deeper method and language of the Upanishads with its free resort to image and symbol, its intuitive form of speech in which the hard limiting definiteness of intellectual utterance is broken down and the implications of words are allowed to roll out into an illimitable wave of suggestion, is in these realms the only right method and language. But the Gita cannot resort to this form, because it is designed to satisfy an intellectual difficulty, answers a state of mind in which the reason, the arbiter to which we refer the conflicts of our impulses and sentiments, is at war with itself and impotent to arrive at a conclusion. The reason has to be led to a truth beyond itself, but by its own means and in its own manner. Offered a spiritually psychological solution, of the data of which it has no experience, it can only be assured of its validity if it is satisfied by an intellectual statement of the truths of being upon which the solution rests.

So far the justifying truths that have been offered to it are those with which it is already familiar, and they are only sufficient as a starting-point. There is first the distinction between the Self and the individual being in Nature. The distinction has been used to point out that this individual being in Nature is necessarily subject, so long as he lives shut up within the action of the ego, to the workings of the three gunas which make up by their unstable movements the whole scope and method of the reason, the mind and the life and senses in the body. And within this circle there is no solution. Therefore the solution has to be found by an ascent out of the circle, above this nature of the gunas, to the one immutable Self and silent Spirit, because then one gets beyond that action of the ego and desire which

is the whole root of the difficulty. But since this by itself seems to lead straight towards inaction, as beyond Nature there is no instrumentality of action and no cause or determinant of action,—for the immutable self is inactive, impartial and equal to all things, all workings and all happenings,—the Yoga idea is brought in of the Ishwara, the Divine as master of works and sacrifice, and it is hinted but not yet expressly stated that this Divine exceeds even the immutable self and that in him lies the key to cosmic existence. Therefore by rising to him through the Self it is possible to have spiritual freedom from our works and yet to continue in the works of Nature. But it has not yet been stated who is this Supreme, incarnate here in the divine teacher and charioteer of works, or what are his relations to the Self and to the individual being in Nature. Nor is it clear how the Will to works coming from him can be other than the will in the nature of the three gunas. And if it is only that, then the soul obeying it can hardly fail to be in subjection to the gunas in its action, if not in its spirit, and if so, at once the freedom promised becomes either illusory or incomplete. Will seems to be an aspect of the executive part of being, to be power and active force of nature, Shakti, Prakriti. Is there then a higher Nature than that of the three gunas? Is there a power of pragmatic creation, will, action other than that of ego, desire, mind, sense, reason and the vital impulse?

Therefore, in this uncertainty, what has now to be done is to give more completely the knowledge on which divine works are to be founded. And this can only be the complete, the integral knowledge of the Divine who is the source of works and in whose being the worker becomes by knowledge free; for he knows the free Spirit from whom all works proceed and participates in his freedom. Moreover this knowledge must bring a light that justifies the assertion with which the first part of the Gita closes. It must ground the supremacy of bhakti over all other motives and powers of spiritual consciousness and action; it must be a knowledge of the supreme Lord of all creatures to whom alone the soul can offer itself in the perfect self-surrender which is the highest height of all love and devotion. This is what the

Teacher proposes to give in the opening verses of the seventh chapter which initiate the development that occupies all the rest of the book. "Hear," he says, "how by practising Yoga with a mind attached to me and with me as *āśraya* (the whole basis, lodgment, point of resort of the conscious being and action) thou shalt know me without any remainder of doubt, integrally, *samagram mām*. I will speak to thee without omission or remainder, *aśeṣataḥ*," (for otherwise a ground of doubt may remain), "the essential knowledge, attended with all the comprehensive knowledge, by knowing which there shall be no other thing here left to be known." The implication of the phrase is that the Divine Being is all, *vāsudevaḥ sarvam*, and therefore if he is known integrally in all his powers and principles, then all is known, not only the pure Self, but the world and action and Nature. There is then nothing else here left to be known, because all is that Divine Existence. It is only because our view here is not thus integral, because it rests on the dividing mind and reason and the separative idea of the ego, that our mental perception of things is an ignorance. We have to get away from this mental and egoistic view to the true unifying knowledge, and that has two aspects, the essential, *jñāna*, and the comprehensive, *vijñāna*, the direct spiritual awareness of the supreme Being and the right intimate knowledge of the principles of his existence, Prakriti, Purusha and the rest, by which all that is can be known in its divine origin and in the supreme truth of its nature. That integral knowledge, says the Gita, is a rare and difficult thing; "among thousands of men one here and there strives after perfection, and of those who strive and attain to perfection one here and there knows me in all the principles of my existence, *tattvataḥ*."

Then, to start with and in order to found this integral knowledge, the Gita makes that deep and momentous distinction which is the practical basis of all its Yoga, the distinction between the two Natures, the phenomenal and the spiritual Nature. "The five elements (conditions of material being), mind, reason, ego, this is my eightfold divided Nature. But know my other Nature different from this, the supreme which becomes the Jiva and by which this world is upheld." Here is the first new metaphysical

idea of the Gita which helps it to start from the notions of the Sankhya philosophy and yet exceed them and give to their terms, which it keeps and extends, a Vedantic significance. An eightfold Nature constituted of the five *bhūtas*,—elements, as it is rendered, but rather elemental or essential conditions of material being to which are given the concrete names of earth, water, fire, air and ether,—the mind with its various senses and organs, the reason-will and the ego, is the Sankhya description of Prakriti. The Sankhya stops there, and because it stops there, it has to set up an unbridgeable division between the soul and Nature; it has to posit them as two quite distinct primary entities. The Gita also, if it stopped there, would have to make the same incurable antinomy between the Self and cosmic Nature which would then be only the Maya of the three gunas and all this cosmic existence would be simply the result of this Maya; it could be nothing else. But there is something else, there is a higher principle, a nature of spirit, *parā prakrtir me*. There is a supreme nature of the Divine which is the real source of cosmic existence and its fundamental creative force and effective energy and of which the other lower and ignorant Nature is only a derivation and a dark shadow. In this highest dynamis Purusha and Prakriti are one. Prakriti there is only the will and the executive power of the Purusha, his activity of being,—not a separate entity, but himself in Power.

This supreme Prakriti is not merely a presence of the power of spiritual being immanent in cosmic activities. For then it might be only the inactive presence of the all-pervading Self, immanent in all things or containing them, compelling in a way the world action but not itself active. Nor is this highest Prakriti the *avyakta* of the Sankhyas, the primary unmanifest seed-state of the manifest active eightfold nature of things, the one productive original force of Prakriti out of which her many instrumental and executive powers evolve. Nor is it sufficient to interpret that idea of *avyakta* in the Vedantic sense and say that this supreme Nature is the power involved and inherent in unmanifest Spirit or Self out of which cosmos comes and into which it returns. It is that, but it is much more; for that is only one of its spiritual states. It is the integral conscious-power of the supreme Being,

cit-śakti, which is behind the self and cosmos. In the immutable Self it is involved in the Spirit; it is there, but in *nivṛtti* or a holding back from action: in the mutable self and the cosmos it comes out into action, *pravṛtti*. There by its dynamic presence it evolves in the Spirit all existences and appears in them as their essential spiritual nature, the persistent truth behind their play of subjective and objective phenomena. It is the essential quality and force, *svabhāva*, the self-principle of all their becoming, the inherent principle and divine power behind their phenomenal existence. The balance of the gunas is only a quantitative and quite derivative play evolved out of this supreme Principle. All this activity of forms, all this mental, sensuous, intelligential striving of the lower nature is only a phenomenon, which could not be at all except for this spiritual force and this power of being; it comes from that and it exists in that and by that solely. If we dwell in the phenomenal nature only and see things only by the notions it impresses on us, we shall not get at the real truth of our active existence. The real truth is this spiritual power, this divine force of being, this essential quality of the spirit in things or rather of the spirit in which things are and from which they draw all their potencies and the seeds of their movements. Get at that truth, power, quality and we shall get at the real law of our becoming and the divine principle of our living, its source and sanction in the Knowledge and not only its process in the Ignorance.

This is to throw the sense of the Gita into language suited to our modern way of thinking; but if we look at its description of the Para Prakriti, we shall find that this is practically the substance of what it says. For first, this other higher Prakriti is, says Krishna, my supreme nature, *prakṛtim me parām*. And this "I" here is the Purushottama, the supreme Being, the supreme Soul, the transcendent and universal Spirit. The original and eternal nature of the Spirit and its transcendent and originating Shakti is what is meant by the Para Prakriti. For speaking first of the origin of the world from the point of view of the active power of his Nature, Krishna assevers, "This is the womb of all beings," *etad-yonīni bhūtāni*. And in the next line of the couplet, again

stating the same fact from the point of view of the originating Soul, he continues, "I am the birth of the whole world and so too its dissolution; there is nothing else supreme beyond Me." Here then the supreme Soul, Purushottama, and the supreme Nature, Para Prakriti, are identified: they are put as two ways of looking at one and the same reality. For when Krishna declares, I am the birth of the world and its dissolution, it is evident that it is this Para Prakriti, supreme Nature, of his being which is both these things. The Spirit is the supreme Being in his infinite consciousness and the supreme Nature is the infinity of power or will of being of the Spirit,—it is his infinite consciousness in its inherent divine energy and its supernal divine action. The birth is the movement of evolution of this conscious Energy out of the Spirit, *parā prakṛtir jīvabhūtā*, its activity in the mutable universe; the dissolution is the withdrawing of that activity by involution of the Energy into the immutable existence and self-gathered power of the Spirit. That then is what is initially meant by the supreme Nature.

The supreme Nature, *parā prakṛtiḥ*, is then the infinite timeless conscious power of the self-existent Being out of which all existences in the cosmos are manifested and come out of timelessness into Time. But in order to provide a spiritual basis for this manifold universal becoming in the cosmos the supreme Nature formulates itself as the Jiva. To put it otherwise, the eternal multiple soul of the Purushottama appears as individual spiritual existence in all the forms of the cosmos. All existences are instinct with the life of the one indivisible Spirit; all are supported in their personality, actions and forms by the eternal multiplicity of the one Purusha. We must be careful not to make the mistake of thinking that this supreme Nature is identical with the Jiva manifested in Time in the sense that there is nothing else or that it is only nature of becoming and not at all nature of being: that could not be the supreme nature of the Spirit. Even in Time it is something more; for otherwise the only truth of it in the cosmos would be nature of multiplicity and there would be no nature of unity in the world. That is not what the Gita says: it does not say that the supreme Prakriti is in its essence the

Jiva, *jīvātmikām*, but that it has become the Jiva, *jīvabhūtām*; and it is implied in that expression that behind its manifestation as the Jiva here it is originally something else and higher, it is nature of the one supreme spirit. The Jiva, as we are told later on, is the Lord, *īśvara*, but in his partial manifestation, *mamaivāṁśah*; even all the multiplicity of beings in the universe or in numberless universes could not be in their becoming the integral Divine, but only a partial manifestation of the infinite One. In them Brahman the one indivisible existence resides as if divided, *avibhaktam ca bhūteṣu vibhaktam iva ca sthitam*. The unity is the greater truth, the multiplicity is the lesser truth, though both are a truth and neither of them is an illusion.

It is by the unity of this spiritual nature that the world is sustained, *yayedam dhāryate jagat*, even as it is that from which it is born with all its becomings, *etad-yonīni bhūtāni sarvāṇi*, and that also which withdraws the whole world and its existences into itself in the hour of dissolution, *aham kṛtsnasya jagataḥ prabhavaḥ pralayas tathā*. But in the manifestation which is thus put forth in the Spirit, upheld in its action, withdrawn in its periodical rest from action, the Jiva is the basis of the multiple existence; it is the multiple soul, if we may so call it, or, if we prefer, the soul of the multiplicity we experience here. It is one always with the Divine in its being, different from it only in the power of its being,—different not in the sense that it is not at all the same power, but in this sense that it only supports the one power in a partial multiply individualised action. Therefore all things are initially, ultimately and in the principle of their continuance too the Spirit. The fundamental nature of all is nature of the Spirit, and only in their lower differential phenomena do they seem to be something else, to be nature of body, life, mind, reason, ego and the senses. But these are phenomenal derivatives, they are not the essential truth of our nature and our existence.

The supreme nature of spiritual being gives us then both an original truth and power of existence beyond cosmos and a first basis of spiritual truth for the manifestation in the cosmos. But where is the link between this supreme nature and the lower

phenomenal nature? On me, says Krishna, all this, all that is here — *sarvam idam*, the common phrase in the Upanishads for the totality of phenomena in the mobility of the universe — is strung like pearls upon a thread. But this is only an image which we cannot press very far; for the pearls are only kept in relation to each other by the thread and have no other oneness or relation with the pearl-string except their dependence on it for this mutual connection. Let us go then from the image to that which it images. It is the supreme nature of Spirit, the infinite conscious power of its being, self-conscious, all-conscious, all-wise, which maintains these phenomenal existences in relation to each other, penetrates them, abides in and supports them and weaves them into the system of its manifestation. This one supreme power manifests not only in all as the One, but in each as the Jiva, the individual spiritual presence; it manifests also as the essence of all quality of Nature. These are therefore the concealed spiritual powers behind all phenomena. This highest quality is not the working of the three gunas, which is phenomenon of quality and not its spiritual essence. It is rather the inherent, one, yet variable inner power of all these superficial variations. It is a fundamental truth of the Becoming, a truth that supports and gives a spiritual and divine significance to all its appearances. The workings of the gunas are only the superficial unstable becomings of reason, mind, sense, ego, life and matter, *sāttvikā bhāvā rājasās tāmasās ca*; but this is rather the essential stable original intimate power of the becoming, *svabhāva*. It is that which determines the primary law of all becoming and of each Jiva; it constitutes the essence and develops the movement of the nature. It is a principle in each creature that derives from and is immediately related to a transcendent divine Becoming, that of the Ishwara, *madbhāvah*. In this relation of the divine *bhāva* to the *svabhāva* and of the *svabhāva* to the superficial *bhāvāḥ*, of the divine Nature to the individual self-nature and of the self-nature in its pure and original quality to the phenomenal nature in all its mixed and confused play of qualities, we find the link between that supreme and this lower existence. The degraded powers and values of the inferior Prakriti derive from

the absolute powers and values of the supreme Shakti and must go back to them to find their own source and truth and the essential law of their operation and movement. So too the soul or Jiva involved here in the shackled, poor and inferior play of the phenomenal qualities, if he would escape from it and be divine and perfect, must by resort to the pure action of his essential quality of Swabhava go back to that higher law of his own being in which he can discover the will, the power, the dynamic principle, the highest working of his divine nature.

This is clear from the immediately subsequent passage in which the Gita gives a number of instances to show how the Divine in the power of his supreme nature manifests and acts within the animate and so-called inanimate existences of the universe. We may disentangle them from the loose and free order which the exigence of the poetical form imposes and put them in their proper philosophical series. First, the divine Power and Presence works within the five elemental conditions of matter. "I am taste in the waters, sound in ether, scent in earth, energy of light in fire," and, it may be added for more completeness, touch or contact in air. That is to say, the Divine himself in his Para Prakriti is the energy at the basis of the various sensory relations of which, according to the ancient Sankhya system, the ethereal, the radiant, electric and gaseous, the liquid and the other elemental conditions of matter are the physical medium. The five elemental conditions of matter are the quantitative or material element in the lower nature and are the basis of material forms. The five Tanmatras — taste, touch, scent, and the others — are the qualitative element. These Tanmatras are the subtle energies whose action puts the sensory consciousness in relation to the gross forms of matter, — they are the basis of all phenomenal knowledge. From the material point of view matter is the reality and the sensory relations are derivative; but from the spiritual point of view the truth is the opposite. Matter and the material media are themselves derivative powers and at bottom are only concrete ways or conditions in which the workings of the quality of Nature in things manifest themselves to the sensory consciousness of the Jiva. The one original and

eternal fact is the energy of Nature, the power and quality of being which so manifests itself to the soul through the senses. And what is essential in the senses, most spiritual, most subtle is itself stuff of that eternal quality and power. But energy or power of being in Nature is the Divine himself in his Prakriti; each sense in its purity is therefore that Prakriti, each sense is the Divine in his dynamic conscious force.

This we gather better from the other terms of the series. "I am the light of sun and moon, the manhood in man, the intelligence of the intelligent, the energy of the energetic, the strength of the strong, the ascetic force of those who do askesis, *tapasyā*." "I am life in all existences." In each case it is the energy of the essential quality on which each of these becomes depends for what it has become, that is given as the characteristic sign indicating the presence of the divine Power in their nature. Again, "I am pranava in all the Vedas," that is to say, the basic syllable OM, which is the foundation of all the potent creative sounds of the revealed word; OM is the one universal formulation of the energy of sound and speech, that which contains and sums up, synthetises and releases all the spiritual power and all the potentiality of Vak and Shabda and of which the other sounds, out of whose stuff words of speech are woven, are supposed to be the developed evolutions. That makes it quite clear. It is not the phenomenal developments of the senses or of life or of light, intelligence, energy, strength, manhood, ascetic force that are proper to the supreme Prakriti. It is the essential quality in its spiritual power that constitutes the Swabhava. It is the force of spirit so manifesting, it is the light of its consciousness and the power of its energy in things revealed in a pure original sign that is the self-nature. That force, light, power is the eternal seed from which all other things are the developments and derivations and variabilities and plastic circumstances. Therefore the Gita throws in as the most general statement in the series, "Know me to be the eternal seed of all existences, O son of Pritha." This eternal seed is the power of spiritual being, the conscious will in the being, the seed which, as is said elsewhere, the Divine casts into the great Brahman, into the supramental vastness,

and from that all are born into phenomenal existence. It is that seed of spirit which manifests itself as the essential quality in all becomings and constitutes their swabhava.

The practical distinction between this original power of essential quality and the phenomenal derivations of the lower nature, between the thing itself in its purity and the thing in its lower appearances, is indicated very clearly at the close of the series. "I am the strength of the strong devoid of desire and liking," stripped of all attachment to the phenomenal pleasure of things. "I am in beings the desire which is not contrary to their dharma." And as for the secondary subjective becomings of Nature, *bhāvāḥ* (states of mind, affections of desire, movements of passion, the reactions of the senses, the limited and dual play of reason, the turns of the feeling and moral sense), which are sattwic, rajasic and tamasic, as for the working of the three gunas, they are, says the Gita, not themselves the pure action of the supreme spiritual nature, but are derivations from it; "they are verily from me," *matta eva*, they have no other origin, "but I am not in them, it is they that are in me." Here is indeed a strong and yet subtle distinction. "I am" says the Divine "the essential light, strength, desire, power, intelligence, but these derivations from them I am not in my essence, nor am I in them, yet are they all of them from me and they are all in my being." It is then upon the basis of these statements that we have to view the transition of things from the higher to the lower and again from the lower back to the higher nature.

The first statement offers no difficulty. The strong man in spite of the divine nature of the principle of strength in him falls into subjection to desire and to attachment, stumbles into sin, struggles towards virtue. But that is because he descends in all his derivative action into the grasp of the three gunas and does not govern that action from above, from his essential divine nature. The divine nature of his strength is not affected by these derivations, it remains the same in its essence in spite of every obscuration and every lapse. The Divine is there in that nature and supports him by its strength through the confusions of his lower existence till he is able to recover the light, illumine wholly

his life with the true sun of his being and govern his will and its acts by the pure power of the divine will in his higher nature. But how can the Divine be desire, *kāma*? for this desire, this *kāma* has been declared to be our one great enemy who has to be slain. But that desire was the desire of the lower nature of the gunas which has its native point of origin in the rajasic being, *rajoguṇa-samudbhavah*; for this is what we usually mean when we speak of desire. This other, the spiritual, is a will not contrary to the dharma.

Is it meant that the spiritual *kāma* is a virtuous desire, ethical in its nature, a sattvic desire,— for virtue is always sattvic in its origin and motive force? But then there would be here an obvious contradiction,— since in the very next line all sattvic affections are declared to be not the Divine, but only lower derivations. Undoubtedly sin has to be abandoned if one is to get anywhere near the Godhead; but so too has virtue to be overpassed if we are to enter into the Divine Being. The sattvic nature has to be attained, but it has then to be exceeded. Ethical action is only a means of purification by which we can rise towards the divine nature, but that nature itself is lifted beyond the dualities,— and indeed there could otherwise be no pure divine presence or divine strength in the strong man who is subjected to the rajasic passions. Dharma in the spiritual sense is not morality or ethics. Dharma, says the Gita elsewhere, is action governed by the swabhava, the essential law of one's nature. And this swabhava is at its core the pure quality of the spirit in its inherent power of conscious will and in its characteristic force of action. The desire meant here is therefore the purposeful will of the Divine in us searching for and discovering not the pleasure of the lower Prakriti, but the Ananda of its own play and self-fulfilling; it is the desire of the divine Delight of existence unrolling its own conscious force of action in accordance with the law of the swabhava.

But what again is meant by saying that the Divine is not in the becomings, the forms and affections of the lower nature, even the sattvic, though they all are in his being? In a sense he must evidently be in them, otherwise they could not exist. But

what is meant is that the true and supreme spiritual nature of the Divine is not imprisoned there; they are only phenomena in his being created out of it by the action of the ego and the ignorance. The ignorance presents everything to us in an inverted vision and at least a partially falsified experience. We imagine that the soul is in the body, almost a result and derivation from the body; even we so feel it: but it is the body that is in the soul and a result and derivation from the soul. We think of the spirit as a small part of us—the Purusha who is no bigger than the thumb—in this great mass of material and mental phenomena: in reality, the latter for all its imposing appearance is a very small thing in the infinity of the being of the spirit. So it is here; in much the same sense these things are in the Divine rather than the Divine in these things. This lower nature of the three gunas which creates so false a view of things and imparts to them an inferior character is a Maya, a power of illusion, by which it is not meant that it is all non-existent or deals with unrealities, but that it bewilders our knowledge, creates false values, envelops us in ego, mentality, sense, physicality, limited intelligence and there conceals from us the supreme truth of our existence. This illusive Maya hides from us the Divine that we are, the infinite and imperishable spirit. “By these three kinds of becoming which are of the nature of the gunas, this whole world is bewildered and does not recognise Me supreme beyond them and imperishable.” If we could see that that Divine is the real truth of our existence, all else also would change to our vision, assume its true character and our life and action acquire the divine values and move in the law of the divine nature.

But why then, since the Divine is there after all and the divine nature at the root even of these bewildering derivations, since we are the Jiva and the Jiva is that, is this Maya so hard to overcome, *māyā duratyayā?* Because it is still the Maya of the Divine, *daivī hyeṣā guṇamayī mama māyā;* “this is my divine Maya of the gunas.” It is itself divine and a development from the nature of the Divine, but the Divine in the nature of the gods; it is *daivī*, of the godheads or, if you will, of the Godhead, but of the Godhead in its divided subjective and lower cosmic aspects,

sattwic, rajasic and tamasic. It is a cosmic veil which the God-head has spun around our understanding; Brahma, Vishnu and Rudra have woven its complex threads; the Shakti, the Supreme Nature is there at its base and is hidden in its every tissue. We have to work out this web in ourselves and turn through it and from it leaving it behind us when its use is finished, turn from the gods to the original and supreme Godhead in whom we shall discover at the same time the last sense of the gods and their works and the inmost spiritual verities of our own imperishable existence. "To Me who turn and come, they alone cross over beyond this Maya."

II

The Synthesis of Devotion and Knowledge¹

THE GITA is not a treatise of metaphysical philosophy, in spite of the great mass of metaphysical ideas which arise incidentally in its pages; for here no metaphysical truth is brought into expression solely for its own sake. It seeks the highest truth for the highest practical utility, not for intellectual or even for spiritual satisfaction, but as the truth that saves and opens to us the passage from our present mortal imperfection to an immortal perfection. Therefore after giving us in the first fourteen verses of this chapter a leading philosophical truth of which we stand in need, it hastens in the next sixteen verses to make an immediate application of it. It turns it into a first starting-point for the unification of works, knowledge and devotion,—for the preliminary synthesis of works and knowledge by themselves has already been accomplished.

We have before us three powers, the Purushottama as the supreme truth of that into which we have to grow, the Self and the Jiva. Or, as we may put it, there is the Supreme, there is the impersonal spirit, and there is the multiple soul, timeless foundation of our spiritual personality, the true and eternal individual, *mamaivāṁśah sanātanah*. All these three are divine, all three are the Divine. The supreme spiritual nature of being, the Para Prakriti free from any limitation by the conditioning Ignorance, is the nature of the Purushottama. In the impersonal Self there is the same divine nature, but here it is in its state of eternal rest, equilibrium, inactivity, nivritti. Finally, for activity, for pravritti, the Para Prakriti becomes the multiple spiritual personality, the Jiva. But the intrinsic activity of this supreme

¹ Gita, VII. 15-28.

Nature is always a spiritual, a divine working. It is force of the supreme divine Nature, it is the conscious will of the being of the Supreme that throws itself out in various essential and spiritual power of quality in the Jiva: that essential power is the swabhava of the Jiva. All act and becoming which proceed directly from this spiritual force are a divine becoming and a pure and spiritual action. Therefore it follows that in action the effort of the human individual must be to get back to his true spiritual personality and to make all his works flow from the power of its supernal Shakti, to develop action through the soul and the inmost intrinsic being, not through the mental idea and vital desire, and to turn all his acts into a pure outflowing of the will of the Supreme, all his life into a dynamic symbol of the Divine Nature.

But there is also this lower nature of the three gunas whose character is the character of the ignorance and whose action is the action of the ignorance, mixed, confused, perverted; it is the action of the lower personality, of the ego, of the natural and not of the spiritual individual. It is in order to recede from that false personality that we have to resort to the impersonal Self and make ourselves one with it. Then, freed so from the ego personality, we can find the relation of the true individual to the Purushottama. It is one with him in being, even though necessarily partial and determinative, because individual, in action and temporal manifestation of nature. Freed too from the lower nature we can realise the higher, the divine, the spiritual. Therefore to act from the soul does not mean to act from the desire soul; for that is not the high intrinsic being, but only the lower natural and superficial appearance. To act in accordance with the intrinsic nature, the swabhava, does not mean to act out of the passions of the ego, to enact with indifference or with desire sin and virtue according to the natural impulses and the unstable play of the gunas. Yielding to passion, an active or an inert indulgence of sin is no way either to the spiritual quietism of the highest impersonality or to the spiritual activity of the divine individual who is to be a channel for the will of the supreme Person, a direct power and visible becoming of the Purushottama.

The Gita has laid it down from the beginning that the very first precondition of the divine birth, the higher existence is the slaying of rajasic desire and its children, and that means the exclusion of sin. Sin is the working of the lower nature for the crude satisfaction of its own ignorant, dull or violent rajasic and tamasic propensities in revolt against any high self-control and self-mastery of the nature by the spirit. And in order to get rid of this crude compulsion of the being by the lower Prakriti in its inferior modes we must have recourse to the highest mode of that Prakriti, the sattwic, which is seeking always for a harmonious light of knowledge and for a right rule of action. The Purusha, the soul within us which assents in Nature to the varying impulse of the gunas, has to give its sanction to that sattwic impulse and that sattwic will and temperament in our being which seeks after such a rule. The sattwic will in our nature has to govern us and not the rajasic and tamasic will. This is the meaning of all high reason in action as of all true ethical culture; it is the law of Nature in us striving to evolve from her lower and disorderly to her higher and orderly action, to act not in passion and ignorance with the result of grief and unquiet, but in knowledge and enlightened will with the result of inner happiness, poise and peace. We cannot get beyond the three gunas, if we do not first develop within ourselves the rule of the highest guna, sattwa.

“The evil-doers attain not to me,” says the Purushottama, “souls bewildered, low in the human scale; for their knowledge is reft away from them by Maya and they resort to the nature of being of the Asura.” This bewilderment is a befooling of the soul in Nature by the deceptive ego. The evil-doer cannot attain to the Supreme because he is for ever trying to satisfy the idol ego on the lowest scale of human nature; his real God is this ego. His mind and will, hurried away in the activities of the Maya of the three gunas, are not instruments of the spirit, but willing slaves or self-deceived tools of his desires. He sees this lower nature only and not his supreme self and highest being or the Godhead within himself and in the world: he explains all existence to his will in the terms of ego and desire and serves only ego and desire. To serve ego and desire without aspiration

to a higher nature and a higher law is to have the mind and the temperament of the Asura. A first necessary step upward is to aspire to a higher nature and a higher law, to obey a better rule than the rule of desire, to perceive and worship a nobler godhead than the ego or than any magnified image of the ego, to become a right thinker and a right doer. This too is not in itself enough; for even the sattvic man is subject to the bewilderment of the gunas, because he is still governed by wish and disliking, *icchā-dvesa*. He moves within the circle of the forms of Nature and has not the highest, not the transcendental and integral knowledge. Still by the constant upward aspiration in his ethical aim he in the end gets rid of the obscuration of sin which is the obscuration of rajasic desire and passion and acquires a purified nature capable of deliverance from the rule of the triple Maya. By virtue alone man cannot attain to the highest, but by virtue² he can develop a first capacity for attaining to it, *adhikāra*. For the crude rajasic or the dull tamasic ego is difficult to shake off and put below us; the sattvic ego is less difficult and at last, when it sufficiently subtilises and enlightens itself, becomes even easy to transcend, transmute or annihilate.

Man, therefore, has first of all to become ethical, *sukṛti*, and then to rise to heights beyond any mere ethical rule of living, to the light, largeness and power of the spiritual nature, where he gets beyond the grasp of the dualities and its delusion, *dvandva-moha*. There he no longer seeks his personal good or pleasure or shuns his personal suffering or pain, for by these things he is no longer affected, nor says any longer, "I am virtuous," "I am sinful," but acts in his own high spiritual nature by the will of the Divine for the universal good. We have already seen that for this end self-knowledge, equality, impersonality are the first necessities, and that that is the way of reconciliation between knowledge and works, between spirituality and activity in the world, between the ever immobile quietism of the timeless self and the eternal play of the pragmatic energy of Nature. But

² Obviously, by the true inner *pūnya*, a sattvic clarity in thought, feeling, temperament, motive and conduct, not a merely conventional or social virtue.

the Gita now lays down another and greater necessity for the Karmayogin who has unified his Yoga of works with the Yoga of knowledge. Not knowledge and works alone are demanded of him now, but *bhakti* also, devotion to the Divine, love and adoration and the soul's desire of the Highest. This demand, not expressly made until now, had yet been prepared when the Teacher laid down as the necessary turn of his Yoga the conversion of all works into a sacrifice to the Lord of our being and fixed as its culmination the giving up of all works, not only into our impersonal Self, but through impersonality into the Being from whom all our will and power originate. What was there implied is now brought out and we begin to see more fully the Gita's purpose.

We have now set before us three interdependent movements of our release out of the normal nature and our growth into the divine and spiritual being. "By the delusion of the dualities which arises from wish and disliking, all existences in the creation are led into bewilderment," says the Gita. That is the ignorance, the egoism which fails to see and lay hold on the Divine everywhere, because it sees only the dualities of Nature and is constantly occupied with its own separate personality and its seekings and shrinkings. For escape from this circle the first necessity in our works is to get clear of the sin of the vital ego, the fire of passion, the tumult of desire of the rajasic nature, and this has to be done by the steady sattwic impulse of the ethical being. When that is done, *yeshāṁ tvantagataṁ pāpam janānāṁ puṇyakarmanām*, — or rather as it is being done, for after a certain point all growth in the sattwic nature brings an increasing capacity for a high quietude, equality and transcendence, — it is necessary to rise above the dualities and to become impersonal, equal, one self with the Immutable, one self with all existences. This process of growing into the spirit completes our purification. But while this is being done, while the soul is enlarging into self-knowledge, it has also to increase in devotion. For it has not only to act in a large spirit of equality, but to do also sacrifice to the Lord, to that Godhead in all beings which it does not yet know perfectly, but which it will be able so to know, integrally, *samagramī mām*,

when it has firmly the vision of the one self everywhere and in all existences. Equality and vision of unity once perfectly gained, *te dvandva-moha-nirmuktāḥ*, a supreme bhakti, an all-embracing devotion to the Divine, becomes the whole and the sole law of the being. All other law of conduct merges into that surrender, *sarva-dharmāṇ parityajya*. The soul then becomes firm in this bhakti and in the vow of self-consecration of all its being, knowledge, works; for it has now for its sure base, its absolute foundation of existence and action the perfect, the integral, the unifying knowledge of the all-originating Godhead, *te bhajante māṁ drḍha-vratāḥ*.

From the ordinary point of view any return towards bhakti or continuation of the heart's activities after knowledge and impersonality have been gained, might seem to be a relapse. For in bhakti there is always the element, the foundation even of personality, since its motive-power is the love and adoration of the individual soul, the Jiva, turned towards the supreme and universal Being. But from the standpoint of the Gita, where the aim is not inaction and immersing in the eternal Impersonal, but a union with the Purushottama through the integrality of our being, this objection cannot at all intervene. In this Yoga the soul escapes indeed its lower personality by the sense of its impersonal and immutable self-being; but it still acts and all action belongs to the multiple soul in the mutability of Nature. If we do not bring in as a corrective to an excessive quietism the idea of sacrifice to the Highest, we have to regard this element of action as something not at all ourselves, some remnant of the play of the gunas without any divine reality behind it, a last dissolving form of ego, of I-ness, a continued impetus of the lower Nature for which we are not responsible since our knowledge rejects it and aims at escape from it into pure inaction. But by combining the tranquil impersonality of the one self with the stress of the works of Nature done as a sacrifice to the Lord, we by this double key escape from the lower egoistic personality and grow into the purity of our true spiritual person. Then are we no longer the bound and ignorant ego in the lower, but the free Jiva in the supreme Nature. Then we no longer live in the

knowledge of the one immutable and impersonal self and this mutable multiple Nature as two opposite entities, but rise to the very embrace of the Purushottama discovered simultaneously through both of these powers of our being. All three are the spirit, and the two which are apparent opposites prove to be only confronting faces of the third which is the highest. "There is the immutable and impersonal spiritual being (Purusha)," says Krishna later on, "and there is the mutable and personal spiritual being. But there is too another Highest (*uttama puruṣa*) called the supreme self, Paramatman, he who has entered into this whole world and upbears it, the Lord, the imperishable. I am this Purushottama who am beyond the mutable and am greater and higher even than the immutable. He who has knowledge of me as the Purushottama, adores me (has bhakti for me, *bhajati*), with all-knowledge and in every way of his natural being." And it is this bhakti of an integral knowledge and integral self-giving which the Gita now begins to develop.

For note that it is bhakti with knowledge which the Gita demands from the disciple and it regards all other forms of devotion as good in themselves but still inferior; they may do well by the way, but they are not the thing at which it aims in the soul's culmination. Among those who have put away the sin of the rajasic egoism and are moving towards the Divine, the Gita distinguishes between four kinds of *bhaktas*. There are those who turn to him as a refuge from sorrow and suffering in the world, *ārta*. There are those who seek him as the giver of good in the world, *arthārthī*. There are those who come to him in the desire for knowledge, *jijñāsu*. And lastly there are those who adore him with knowledge, *jñāni*. All are approved by the Gita, but only on the last does it lay the seal of its complete sanction. All these movements without exception are high and good, *udārāḥ sarva evaite*, but the bhakti with knowledge excels them all, *viśisyate*. We may say that these forms are successively the bhakti of the vital-emotional and affective nature,³ that of the

³ The later *bhakti* of ecstatic love is at its roots psychic in nature; it is vital-emotional only in its inferior forms or in some of its more outward manifestations.

practical and dynamic nature, that of the reasoning intellectual nature, and that of the highest intuitive being which takes up all the rest of the nature into unity with the Divine. Practically, however, the others may be regarded as preparatory movements. For the Gita itself here says that it is only at the end of many existences that one can, after possession of the integral knowledge and after working that out in oneself through many lives, attain at the long last to the Transcendent. For the knowledge of the Divine as all things that are is difficult to attain and rare on earth is the great soul, *mahātmā*, who is capable of fully so seeing him and of entering into him with his whole being, in every way of his nature, by the wide power of this all-embracing knowledge, *sarvavit sarvabhāvena*.

It may be asked how is that devotion high and noble, *udāra*, which seeks God only for the worldly boons he can give or as a refuge in sorrow and suffering, and not the Divine for its own sake? Do not egoism, weakness, desire reign in such an adoration and does it not belong to the lower nature? Moreover, where there is not knowledge, the devotee does not approach the Divine in his integral all-embracing truth, *vāsudevah sarvam iti*, but constructs imperfect names and images of the Godhead which are only reflections of his own need, temperament and nature, and he worships them to help or appease his natural longings. He constructs for the Godhead the name and form of Indra or Agni, of Vishnu or Shiva, of a divinised Christ or Buddha, or else some composite of natural qualities, an indulgent God of love and mercy, or a severe God of righteousness and justice, or an awe-inspiring God of wrath and terror and flaming punishments, or some amalgam of any of these, and to that he raises his altars without and in his heart and mind and falls down before it to demand from it worldly good and joy or healing of his wounds or a sectarian sanction for an erring, dogmatic, intellectual, intolerant knowledge. All this up to a certain point is true enough. Very rare is the great soul who knows that Vasudeva the omnipresent Being is all that is, *vāsudevah sarvam iti sa mahātmā sudurlabhalah*. Men are led away by various outer desires which take from them the working

of the inner knowledge, *kāmais tais tair hṛtajñānāḥ*. Ignorant, they resort to other godheads, imperfect forms of the deity which correspond to their desire, *prapadyante 'nyadevataḥ*. Limited, they set up this or that rule and cult, *tam tam niyamam āsthāya*, which satisfies the need of their nature. And in all this it is a compelling personal determination, it is this narrow need of their own nature that they follow and take for the highest truth, — incapable yet of the infinite and its largeness. The Godhead in these forms gives them their desires if their faith is whole; but these fruits and gratifications are temporary and it is a petty intelligence and unformed reason which makes the pursuit of them its principle of religion and life. And so far as there is a spiritual attainment by this way, it is only to the gods; it is only the Divine in formations of mutable nature and as the giver of her results that they realise. But those who adore the transcendent and integral Godhead embrace all this and transform it all, exalt the gods to their highest, Nature to her summits, and go beyond them to the very Godhead, realise and attain to the Transcendent. *Devān deva-yajo yānti mad-bhaktā yānti mām api.*

Still the supreme Godhead does not at all reject these devotees because of their imperfect vision. For the Divine in his supreme transcendent being, unborn, imminable and superior to all these partial manifestations, cannot be easily known to any living creature. He is self-enveloped in this immense cloak of Maya, that Maya of his Yoga, by which he is one with the world and yet beyond it, immanent but hidden, seated in all hearts but not revealed to any and every being. Man in Nature thinks that these manifestations in Nature are all the Divine, when they are only his works and his powers and his veils. He knows all past and all present and future existences, but him none yet knoweth. If then after thus bewildering them with his workings in Nature, he were not to meet them in these at all, there would be no divine hope for man or for any soul in Maya. Therefore according to their nature, as they approach him, he accepts their bhakti and answers to it with the reply of divine love and compassion. These forms are after all a certain kind of

manifestation through which the imperfect human intelligence can touch him, these desires are first means by which our souls turn towards him: nor is any devotion worthless or ineffective, whatever its limitations. It has the one grand necessity, faith. "Whatever form of me any devotee with faith desires to worship, I make that faith of his firm and undeviating." By the force of that faith in his cult and worship he gets his desire and the spiritual realisation for which he is at the moment fitted. By seeking all his good from the Divine, he shall come in the end to seek in the Divine all his good. By depending for his joys on the Divine, he shall learn to fix in the Divine all his joy. By knowing the Divine in his forms and qualities, he shall come to know him as the All and the Transcendent who is the source of all things.⁴

Thus by spiritual development devotion becomes one with knowledge. The Jiva comes to delight in the one Godhead,—in the Divine known as all being and consciousness and delight and as all things and beings and happenings, known in Nature, known in the self, known for that which exceeds self and Nature. He is ever in constant union with him, *nityayukta*; his whole life and being are an eternal Yoga with the Transcendent than whom there is nothing higher, with the Universal besides whom there is none else and nothing else. On him is concentrated all his bhakti, *ekabhaktih*, not on any partial godhead, rule or cult. This single devotion is his whole law of living and he has gone beyond all creeds of religious belief, rules of conduct, personal aims of life. He has no griefs to be healed, for he is in possession of the All-blissful. He has no desires to hunger after, for he possesses the highest and the All and is close to the All-Power that brings all fulfilment. He has no doubts or baffled seekings left, for all knowledge streams upon him from the Light in which he lives. He loves perfectly the Divine and is his beloved; for as he takes joy in the Divine, so too the Divine takes joy in him. This is

⁴ There is a place also for the three lesser seekings even after the highest attainment, but transformed, not narrowly personal,—for there can still be a passion for the removal of sorrow and evil and ignorance and for the increasing evolution and integral manifestation of the supreme good, power, joy and knowledge in this phenomenal Nature.

the God-lover who has the knowledge, *jñānī bhakta*. And this knower, says the Godhead in the Gita, is my self; the others seize only motives and aspects in Nature, but he the very self-being and all-being of the Purushottama with which he is in union. His is the divine birth in the supreme Nature, integral in being, completed in will, absolute in love, perfected in knowledge. In him the Jiva's cosmic existence is justified because it has exceeded itself and so found its own whole and highest truth of being.

III

The Supreme Divine¹

ALREADY what has been said in the seventh chapter provides us with the starting-point of our new and fuller position and fixes it with sufficient precision. Substantially it comes to this that we are to move inwardly towards a greater consciousness and a supreme existence, not by a total exclusion of our cosmic nature, but by a higher, a spiritual fulfilment of all that we now essentially are. Only there is to be a change from our mortal imperfection to a divine perfection of being. The first idea on which this possibility is founded, is the conception of the individual soul in man as in its eternal essence and its original power a ray of the supreme Soul and Godhead, here a veiled manifestation of him, a being of his being, a consciousness of his consciousness, a nature of his nature, but in the obscurity of this mental and physical existence self-forgetful of its source, its reality, its true character. The second idea is that of the double nature of the Soul in manifestation, — the original nature in which it is one with its own true spiritual being, and the derived in which it is subject to the confusions of egoism and ignorance. The latter has to be cast away and the spiritual has to be inwardly recovered, fulfilled, made dynamic and active. Through an inner self-fulfilment, the opening of a new status, our birth into a new power, we return to the nature of the Spirit and re-become a portion of the Godhead from whom we have descended into this mortal figure of being.

There is here at once a departure from the general contemporary mind of Indian thought, a less negating attitude, a greater affirmation. In place of its obsessing idea of a self-annulment of Nature we get the glimpse of an ampler solution, the principle of a self-fulfilment in divine Nature. There is, even, at least

¹ Gita, VII. 29-30, VIII.

a foreshadowing of the later developments of the religions of Bhakti. Our first experience of what is beyond our normal status, concealed behind the egoistic being in which we live, is still for the Gita the calm of a vast impersonal immutable self in whose equality and oneness we lose our petty egoistic personality and cast off in its tranquil purity all our narrow motives of desire and passion. But our second completer vision reveals to us a living Infinite, a divine immeasurable Being from whom all that we are proceeds and to which all that we are belongs, self and nature, world and spirit. When we are one with him in self and spirit, we do not lose ourselves, but rather recover our true selves in him poised in the supremacy of this Infinite. And this is done at one and the same time by three simultaneous movements,—an integral self-finding through works founded in his and our spiritual nature, an integral self-becoming through knowledge of the Divine Being in whom all exists and who is all, and—most sovereign and decisive movement of all—an integral self-giving through love and devotion of our whole being to this All and this Supreme, attracted to the Master of our works, to the Inhabitant of our hearts, to the continent of all our conscious existence. To him who is the source of all that we are, we give all that we are. Our persistent consecration turns into knowledge of him all our knowing and into light of his power all our action. The passion of love in our self-giving carries us up to him and opens the mystery of his deepest heart of being. Love completes the triple cord of the sacrifice, perfects the triune key of the highest secret, *uttamam rahasyam*.

An integral knowledge in our self-giving is the first condition of its effective force. And therefore we have first of all to know this Purusha in all the powers and principles of his divine existence, *tattvatah*, in the whole harmony of it, in its eternal essence and living process. But to the ancient thought all the value of this knowledge, *tattvajñāna*, lay in its power for release out of our mortal birth into the immortality of a supreme existence. The Gita therefore proceeds next to show how this liberation too in the highest degree is a final outcome of its own movement of spiritual self-fulfilment. The knowledge of the Purushottama,

it says in effect, is the perfect knowledge of the Brahman. Those who have resort to Me as their refuge, *mām āśritya*, their divine light, their deliverer, receiver and harbourer of their souls, those who turn to Me in their spiritual effort towards release from age and death, from the mortal being and its limitations, says Krishna, come to know that Brahman and all the integrality of the spiritual nature and the entirety of Karma. And because they know Me and know at the same time the material and the divine nature of being and the truth of the Master of sacrifice, they keep knowledge of Me also in the critical moment of their departure from physical existence and have at that moment their whole consciousness in union with Me. Therefore they attain to Me. No longer bound to the mortal existence, they reach the very highest status of the Divine quite as effectively as those who lose their separate personality in the impersonal and immutable Brahman. Thus the Gita closes this important and decisive seventh chapter.

Here we have certain expressions which give us in their brief sum the chief essential truths of the manifestation of the supreme Divine in the cosmos. All the originative and effective aspects of it are there, all that concerns the soul in its return to integral self-knowledge. First there is that Brahman, *tad brahma*; *adhyātma*, second, the principle of the self in Nature; *adhibhūta* and *adhidaiva* next, the objective phenomenon and subjective phenomenon of being; *adhiyajña* last, the secret of the cosmic principle of works and sacrifice. I, the Purushottama (*mām viduh*), says in effect Krishna, I who am above all these things, must yet be sought and known through all together and by means of their relations,—that is the only complete way for the human consciousness which is seeking its path back towards Me. But these terms in themselves are not at first quite clear or at least they are open to different interpretations, they have to be made precise in their connotation, and Arjuna the disciple at once asks for their elucidation. Krishna answers very briefly,—nowhere does the Gita linger very long upon any purely metaphysical explanation; it gives only so much and in such a way as will make their truth just seizable for the soul to proceed on to

experience. By that Brahman, a phrase which in the Upanishads is more than once used for the self-existent as opposed to the phenomenal being, the Gita intends, it appears, the immutable self-existence which is the highest self-expression of the Divine and on whose unalterable eternity all the rest, all that moves and evolves, is founded, *akṣaram paramam*. By *adhyātma* it means *svabhāva*, the spiritual way and law of being of the soul in the supreme Nature. Karma, it says, is the name given to the creative impulse and energy, *visargah*, which looses out things from this first essential self-becoming, this Swabhava, and effects, creates, works out under its influence the cosmic becoming of existences in Prakriti. By *adhibhūta* is to be understood all the result of mutable becoming, *kṣaro bhāvah*. By *adhidaiva* is intended the Purusha, the soul in Nature, the subjective being who observes and enjoys as the object of his consciousness all that is this mutable becoming of his essential existence worked out here by Karma in Nature. By *adhiyajña*, the Lord of works and sacrifice, I mean, says Krishna, myself, the Divine, the Godhead, the Purushottama here secret in the body of all these embodied existences. All that is, therefore, falls within this formula.

The Gita immediately proceeds from this brief statement to work out the idea of the final release by knowledge which it has suggested in the last verse of the preceding chapter. It will return indeed upon its thought hereafter to give such ulterior light as is needed for action and inner realisation, and we may wait till then for a fuller knowledge of all that these terms indicate. But before we proceed farther, it is necessary to bring out as much of the connection between these things as we are justified in understanding from this passage itself and from what has gone before. For here is indicated the Gita's idea of the process of the cosmos. First there is the Brahman, the highest immutable self-existent being which all existences are behind the play of cosmic Nature in time and space and causality, *desa-kāla-nimitta*. For by that self-existence alone time and space and causality are able to exist, and without that unchanging support omnipresent, yet indivisible they could not proceed to their divisions and results and measures. But of itself the immutable

Brahman does nothing, causes nothing, determines nothing; it is impartial, equal, all-supporting, but does not select or originate. What then originates, what determines, what gives the divine impulsion of the Supreme? what is it that governs Karma and actively unrolls the cosmic becoming in Time out of the eternal being? It is Nature as Swabhava. The Supreme, the Godhead, the Purushottama is there and supports on his eternal immutability the action of his higher spiritual Shakti. He displays the divine Being, Consciousness, Will or Power, *yayedam dhāryate jagat*: that is the Para Prakriti. The self-awareness of the Spirit in this supreme Nature perceives in the light of self-knowledge the dynamic idea, the authentic truth of whatever he separates in his own being and expresses it in the Swabhava, the spiritual nature of the Jiva. The inherent truth and principle of the self of each Jiva, that which works itself out in manifestation, the essential divine nature in all which remains constant behind all conversions, perversions, reverersions, that is the Swabhava. All that is in the Swabhava is loosed out into cosmic Nature for her to do what she can with it under the inner eye of the Purushottama. Out of the constant *svabhāva*, out of the essential nature and self-principle of being of each becoming, she creates the varied mutations by which she strives to express it, unrolls all her changes in name and form, in time and space and those successions of condition developed one out of the other in time and space which we call causality, *nimitta*.

All this bringing out and continual change from state to state is Karma, is action of Nature, is the energy of Prakriti, the worker, the goddess of processes. It is first a loosing forth of the *svabhāva* into its creative action, *visargah*. The creation is of existences in the becoming, *bhūta-karāḥ*, and of all that they subjectively or otherwise become, *bhāva-karāḥ*. All taken together, it is a constant birth of things in Time, *udbhava*, of which the creative energy of Karma is the principle. All this mutable becoming emerges by a combination of the powers and energies of Nature, *adhibhūta*, which constitutes the world and is the object of the soul's consciousness. In it all the soul is the enjoying and observing Deity in Nature; the divine powers of

mind and will and sense, all the powers of its conscious being by which it reflects this working of Prakriti are its godheads, *adhidaiva*. This soul in Nature is therefore the *ksara puruṣa*, it is the mutable soul, the eternal activity of the Godhead: the same soul in the Brahman drawn back from her is the *akṣara puruṣa*, the immutable self, the eternal silence of the Godhead. But in the form and body of the mutable being inhabits the supreme Godhead. Possessing at once the calm of the immutable existence and the enjoyment of the mutable action there dwells in man the Purushottama. He is not only remote from us in some supreme status beyond, but he is here too in the body of every being, in the heart of man and in Nature. There he receives the works of Nature as a sacrifice and awaits the conscious self-giving of the human soul: but always even in the human creature's ignorance and egoism he is the Lord of his swabhava and the Master of all his works, who presides over the law of Prakriti and Karma. From him the soul came forth into the play of Nature's mutations; to him the soul returns through immutable self-existence to the highest status of the Divine, *param dhāma*.

Man, born into the world, revolves between world and world in the action of Prakriti and Karma. Purusha in Prakriti is his formula: what the soul in him thinks, contemplates and acts, that always he becomes. All that he had been, determined his present birth; and all that he is, thinks, does in this life up to the moment of his death, determines what he will become in the worlds beyond and in lives yet to be. If birth is a becoming, death also is a becoming, not by any means a cessation. The body is abandoned, but the soul goes on its way, *tyaktvā kalevaram*. Much then depends on what he is at the critical moment of his departure. For whatever form of becoming his consciousness is fixed on at the time of death and has been full of that always in his mind and thought before death, to that form he must attain, since the Prakriti by Karma works out the soul's thoughts and energies and that is in real fact her whole business. Therefore, if the soul in the human being desires to attain to the status of the Purushottama, there are two necessities, two conditions which must be satisfied before that can be possible. He must have

moulded towards that ideal his whole inner life in his earthly living; and he must be faithful to his aspiration and will in his departing. "Whoever leaves his body and departs" says Krishna "remembering me at his time of end, comes to my *bhāva*," that of the Purushottama, my status of being. He is united with the original being of the Divine and that is the ultimate becoming of the soul, *paro bhāvah*, the last result of Karma in its return upon itself and towards its source. The soul which has followed the play of cosmic evolution that veils here its essential spiritual nature, its original form of becoming, *svabhāva*, and has passed through all these other ways of becoming of its consciousness which are only its phenomena, *tam tam bhāvam*, returns to that essential nature and, finding through this return its true self and spirit, comes to the original status of being which is from the point of view of the return a highest becoming, *mad-bhāvam*. In a certain sense we may say that it becomes God, since it unites itself with nature of the Divine in a last transformation of its own phenomenal nature and existence.

The Gita here lays a great stress on the thought and state of mind at the time of death, a stress which will with difficulty be understood if we do not recognise what may be called the self-creative power of the consciousness. What the thought, the inner regard, the faith, *śraddhā*, settles itself upon with a complete and definite insistence, into that our inner being tends to change. This tendency becomes a decisive force when we go to those higher spiritual and self-evolved experiences which are less dependent on external things than is our ordinary psychology, enslaved as that is to outward Nature. There we can see ourselves steadily becoming that on which we keep our minds fixed and to which we constantly aspire. Therefore there any lapse of the thought, any infidelity of the memory means always a retardation of the change or some fall in its process and a going back towards what we were before,—at least so long as we have not substantially and irrevocably fixed our new becoming. When we have done that, when we have made it normal to our experience, the memory of it remains self-existently because that now is the natural form of our consciousness. In the critical moment of passing

from the mortal plane of living, the importance of our then state of consciousness becomes evident. But it is not a death-bed remembrance at variance with or insufficiently prepared by the whole tenor of our life and our past subjectivity that can have this saving power. The thought of the Gita here is not on a par with the indulgences and facilities of popular religion; it has nothing in common with the crude fancies that make the absolution and last unction of the priest, an edifying "Christian" death after an unedifying profane life or the precaution or accident of a death in sacred Benares or holy Ganges a sufficient machinery of salvation. The divine subjective becoming on which the mind has to be fixed firmly in the moment of the physical death, *yam smaran bhāvam tyajati ante kalevaram*, must have been one into which the soul was at each moment growing inwardly during the physical life, *sadā tad-bhāva-bhāvitah*. "Therefore," says the divine Teacher, "at all times remember me and fight; for if thy mind and thy understanding are always fixed on and given up to Me, *mayi arpita-mano-buddhiḥ*, to Me thou shalt surely come. For it is by thinking always of him with a consciousness united with him in an undeviating Yoga of constant practice that one comes to the divine and supreme Purusha."

We arrive here at the first description of this supreme Purusha,—the Godhead who is even more and greater than the Immutable and to whom the Gita gives subsequently the name of Purushottama. He too in his timeless eternity is immutable and far beyond all this manifestation and here in Time there dawn on us only faint glimpses of his being conveyed through many varied symbols and disguises, *avyakto akṣarāḥ*. Still he is not merely a featureless or indiscernible existence, *anirdeśyam*; or he is indiscernible only because he is subtler than the last subtlety of which the mind is aware and because the form of the Divine is beyond our thought, *anor anyāṁsam acintya-rūpam*. This supreme Soul and Self is the Seer, the Ancient of Days and in his eternal self-vision and wisdom the Master and Ruler of all existence who sets in their place in his being all things that are, *kavīm purāṇam anuśāsitāram sarvasya dhātāram*. This supreme Soul is the immutable self-existent Brahman of whom the Veda-

knowers speak, and this is that into which the doers of askesis enter when they have passed beyond the affections of the mind of mortality and for the desire of which they practise the control of the bodily passions.² That eternal reality is the highest step, place, foothold of being (*padam*); therefore is it the supreme goal of the soul's movement in Time, itself no movement but a status original, semipiternal and supreme, *param sthānam ādyam*.

The Gita describes the last state of the mind of the Yогin in which he passes from life through death to this supreme divine existence. A motionless mind, a soul armed with the strength of Yoga, a union with God in bhakti,—the union by love is not here superseded by the featureless unification through knowledge, it remains to the end a part of the supreme force of the Yoga,—and the life-force entirely drawn up and set between the brows in the seat of mystic vision. All the doors of the sense are closed, the mind is shut in into the heart, the life-force taken up out of its diffused movement into the head, the intelligence concentrated in the utterance of the sacred syllable OM and its conceptional thought in the remembrance of the supreme Godhead, *mām anusmaran*. That is the established Yogic way of going, a last offering up of the whole being to the Eternal, the Transcendent. But still that is only a process; the essential condition is the constant undeviating memory of the Divine in life, even in action and battle—*mām anusmara yudhya ca*—and the turning of the whole act of living into an uninterrupted Yoga, *nitya-yoga*. Whoever does that, finds Me easy to attain, says the Godhead; he is the great soul who reaches the supreme perfection.

The condition to which the soul arrives when it thus departs from life is supracosmic. The highest heavens of the cosmic plan are subject to a return to rebirth; but there is no rebirth imposed on the soul that departs to the Purushottama. Therefore whatever fruit can be had from the aspiration of knowledge to the indefinable Brahman, is acquired also by this other and comprehensive aspiration through knowledge, works and love to the

² The language here is taken bodily from the Upanishads.

self-existent Godhead who is the Master of works and the Friend of mankind and of all beings. To know him so and so to seek him does not bind to rebirth or to the chain of Karma; the soul can satisfy its desire to escape permanently from the transient and painful condition of our mortal being. And the Gita here, in order to make more precise to the mind this circling round of births and the escape from it, adopts the ancient theory of the cosmic cycles which became a fixed part of Indian cosmological notions. There is an eternal cycle of alternating periods of cosmic manifestation and non-manifestation, each period called respectively a day and a night of the creator Brahma, each of equal length in Time, the long aeon of his working which endures for a thousand ages, the long aeon of his sleep of another thousand silent ages. At the coming of the Day all manifestations are born into being out of the unmanifest, at the coming of the Night all vanish or are dissolved into it. Thus all these existences alternate helplessly in the cycle of becoming and non-becoming; they come into the becoming again and again, *bhūtvā bhūtvā*, and they go back constantly into the unmanifest. But this unmanifest is not the original divinity of the Being; there is another status of his existence, *bhāvo 'nyo*, a supracosmic unmanifest beyond this cosmic non-manifestation, which is eternally self-seated, is not an opposite of this cosmic status of manifestation but far above and unlike it, changeless, eternal, not forced to perish with the perishing of all these existences. "He is called the unmanifest immutable, him they speak of as the supreme soul and status, and those who attain to him return not; that is my supreme place of being, *paramāṁ dhāma*." For the soul attaining to it has escaped out of the cycle of cosmic manifestation and non-manifestation.

Whether we entertain or we dismiss this cosmological notion,—which depends on the value we are inclined to assign to the knowledge of "the knowers of day and night,"—the important thing is the turn the Gita gives to it. One might easily imagine that this eternally unmanifested Being whose status seems to have nothing to do with the manifestation or the non-manifestation, must be the ever undefined and indefinable Absolute, and the proper way to reach him is to get rid of all

that we have become in the manifestation, not to carry up to it our whole inner consciousness in a combined concentration of the mind's knowledge, the heart's love, the Yogic will, the vital life-force. Especially, bhakti seems inapplicable to the Absolute who is void of every relation, *avyavahārya*. "But" insists the Gita,—although this condition is supracosmic and although it is eternally unmanifest,—still "that supreme Purusha has to be won by a bhakti which turns to him alone in whom all beings exist and by whom all this world has been extended in space." In other words, the supreme Purusha is not an entirely relationless Absolute aloof from our illusions, but he is the Seer, Creator and Ruler of the worlds, *kavim anuśāsitāram, dhātāram*, and it is by knowing and by loving Him as the One and the All, *vāsudevaḥ sarvam iti*, that we ought by a union with him of our whole conscious being in all things, all energies, all actions to seek the supreme consummation, the perfect perfection, the absolute release.

Then there comes a more curious thought which the Gita has adopted from the mystics of the early Vedanta. It gives the different times at which the Yогin has to leave his body according as he wills to seek rebirth or to avoid it. Fire and light and smoke or mist, the day and the night, the bright fortnight of the lunar month and the dark, the northern solstice and the southern, these are the opposites. By the first in each pair the knowers of the Brahman go to the Brahman; but by the second the Yогin reaches the "lunar light" and returns subsequently to human birth. These are the bright and the dark paths, called the path of the gods and the path of the fathers in the Upanishads, and the Yогin who knows them is not misled into any error. Whatever psycho-physical fact or else symbolism there may be behind this notion,³—it comes down from the age of the mystics who saw in every physical thing an effective symbol of the psychological

³ Yogic experience shows in fact that there is a real psycho-physical truth, not indeed absolute in its application, behind this idea, viz., that in the inner struggle between the powers of the Light and the powers of the Darkness, the former tend to have a natural prevalence in the bright periods of the day or the year, the latter in the dark periods, and this balance may last until the fundamental victory is won.

and who traced everywhere an interaction and a sort of identity of the outward with the inward, light and knowledge, the fiery principle and the spiritual energy,— we need observe only the turn by which the Gita closes the passage: "Therefore at all times be in Yoga."

For that is after all the essential, to make the whole being one with the Divine, so entirely and in all ways one as to be naturally and constantly fixed in union, and thus to make all living, not only thought and meditation, but action, labour, battle, a remembering of God. "Remember me and fight," means not to lose the ever-present thought of the Eternal for one single moment in the clash of the temporal which normally absorbs our minds, and that seems sufficiently difficult, almost impossible. It is entirely possible indeed only if the other conditions are satisfied. If we have become in our consciousness one self with all, one self which is always to our thought the Divine, and even our eyes and our other senses see and sense the Divine Being everywhere so that it is impossible for us at any time at all to feel or think of anything as that merely which the unenlightened sense perceives, but only as the Godhead at once concealed and manifested in that form, and if our will is one in consciousness with a supreme will and every act of will, of mind, of body is felt to come from it, to be its movement, instinct with it or identical, then what the Gita demands can be integrally done. The remembrance of the Divine Being becomes no longer an intermittent act of the mind, but the natural condition of our activities and in a way the very substance of the consciousness. The Jiva has become possessed of its right and natural, its spiritual relation to the Purushottama and all our life is a Yoga, an accomplished and yet an eternally self-accomplishing oneness.

IV

The Secret of Secrets

ALL THE truth that has developed itself at this length step by step, each bringing forward a fresh aspect of the integral knowledge and founding on it some result of spiritual state and action, has now to take a turn of immense importance. The Teacher therefore takes care first to draw attention to the decisive character of what he is about to say, so that the mind of Arjuna may be awakened and attentive. For he is going to open his mind to the knowledge and sight of the integral Divinity and lead up to the vision of the eleventh book, by which the warrior of Kurukshetra becomes conscious of the author and upholder of his being and action and mission, the Godhead in man and the world, whom nothing in man and the world limits or binds, because all proceeds from him, is a movement in his infinite being, continues and is supported by his will, is justified in his divine self-knowledge, has him always for its origin, substance and end. Arjuna is to become aware of himself as existing only in God and as acting only by the power within him, his workings only an instrumentality of the divine action, his egoistic consciousness only a veil and to his ignorance a misrepresentation of the real being within him which is an immortal spark and portion of the supreme Godhead.

This vision is to remove whatever doubt may still remain within his mind; it is to make him strong for the action from which he has shrunk, but to which he is irrevocably commanded and can no more recoil from it,—for to recoil would be the negation and denial of the divine will and sanction within him already expressed in his individual consciousness but soon to assume the appearance of the greater cosmic sanction. For now the world Being appears to him as the body of God ensouled by the eternal Time-spirit and with its majestic and dreadful voice missions him to the crash of the battle. He is called by it to

the liberation of his spirit, to the fulfilment of his action in the cosmic mystery, and the two—liberation and action—are to be one movement. His intellectual doubts are clearing away as a greater light of self-knowledge and the knowledge of God and Nature is being unfolded before him. But intellectual clarity is not enough; he must see with the inner sight illuminating his blind outward human vision, so that he may act with the consent of his whole being, with a perfect faith in all his members, *śraddhā*, with a perfect devotion to the Self of his self and the Master of his being and to the same Self of the world and Master of all being in the universe.

All that has gone before laid the foundations of the knowledge or prepared its first necessary materials or scaffolding, but now the full frame of the structure is to be placed before his unsealed vision. All that is to come after will have its great importance because it will analyse parts of this frame, show in what this or that in it consists; but in substance the integral knowledge of the Being who is speaking to him is to be now unveiled to his eyes so that he cannot choose but see. What has gone before showed him that he is not bound fatally to the knot of the ignorance and egoistic action in which he had hitherto remained contented till its partial solutions sufficed no longer to satisfy his mind bewildered by the conflict of opposite appearances that make up the action of the world and his heart troubled by the entanglement of his works from which he feels himself unable to escape except by renunciation of life and works. He has been shown that there are two opposed ways of working and living, one in the ignorance of the ego, one in the clear self-knowledge of a divine being. He may act with desire, with passion, an ego driven by the qualities of the lower Nature, subject to the balance of virtue and sin, joy and sorrow, preoccupied with the fruits and consequences of his works, success and defeat, good result and evil result, bound on the world machine, caught up in a great tangle of action and inaction and perverse action which perplex the heart and mind and soul of man with their changing and contrary masks and appearances. But he is not utterly tied down to the works of the ignorance; he may do if he will the

works of knowledge. He may act here as the higher thinker, the knower, the Yogin, the seeker of freedom first and afterwards the liberated spirit. To perceive that great possibility and to keep his will and intelligence fixed on the knowledge and self-vision which will realise and make it effectual, is the path of escape from his sorrow and bewilderment, the way out of the human riddle.

There is a spirit within us calm, superior to works, equal, not bound in this external tangle, surveying it as its supporter, source, immanent witness, but not involved in it. Infinite, containing all, one self in all, it surveys impartially the whole action of nature and it sees that it is only the action of Nature, not its own action. It sees that the ego and its will and its intelligence are all a machinery of Nature and that all their activities are determined by the complexity of her triple modes and qualities. The eternal spirit itself is free from these things. It is free from them because it knows; it knows that Nature and ego and the personal being of all these creatures do not make up the whole of existence. For existence is not merely a glorious or a vain, a wonderful or a dismal panorama of a constant mutation of becoming. There is something eternal, immutable, imperishable, a timeless self-existence; that is not affected by the mutations of Nature. It is their impartial witness, neither affecting nor affected, neither acting nor acted upon, neither virtuous nor sinful, but always pure, complete, great and unwounded. Neither grieving nor rejoicing at all that afflicts and attracts the egoistic being, it is the friend of none, the enemy of none, but one equal self of all. Man is not now conscious of this self, because he is wrapped up in his outward-going mind, because he will not learn or has not learned to live within; he does not detach himself, draw back from his action and observe it as the work of Nature. Ego is the obstacle, the linch-pin of the wheel of delusion, the loss of the ego in the soul's self the first condition of freedom. To become spirit, no longer merely a mind and ego, is the opening word of this message of liberation.

Arjuna has been therefore called upon first to give up all desire of the fruits of his works and become simply the desireless

impartial doer of whatever has to be done, — leaving the fruit to whatever power may be the master of the cosmic workings. For he very evidently is not the master; it is not for the satisfaction of his personal ego that Nature was set upon her ways, not for the fulfilment of his desires and preferences that the universal Life is living, not for the justification of his intellectual opinions, judgments and standards that the universal Mind is working, nor is it to that petty tribunal that it has to refer its cosmic aims or its terrestrial method and purposes. These claims can only be made by the ignorant souls who live in their personality and see everything from that poor and narrow standpoint. He must stand back first from his egoistic demand on the world and work only as one among the millions who contributes his share of effort and labour to a result determined not by himself, but by the universal action and purpose. But he has to do yet more, he has to give up the idea of being the doer and to see, freed from all personality, that it is the universal intelligence, will, mind, life that is at work in him and in all others. Nature is the universal worker; his works are hers, even as the fruits of her works in him are part of the grand sum of result guided by a greater Power than his own. If he can do these two things spiritually, then the tangle and bondage of his works will fall far away from him; for the whole knot of that bondage lay in his egoistic demand and participation. Passion and sin and personal joy and grief will fade away from his soul, which will now live within, pure, large, calm, equal to all persons and all things. Action will produce no subjective reaction and will leave no stain nor any mark on his spirit's purity and peace. He will have the inner joy, rest, ease and inalienable bliss of a free unaffected being. Neither within nor without will he have any more the old little personality, for he will feel consciously one self and spirit with all, even as his outer nature will have become to his consciousness an inseparable part of the universal mind, life and will. His separative egoistic personality will have been taken up and extinguished in the impersonality of spiritual being; his separative egoistic nature will be unified with the action of cosmic Nature.

But this liberation is dependent on two simultaneous, but

not yet reconciled perceptions, the clear vision of spirit and the clear vision of Nature. This is not the scientific and intelligent detachment which is quite possible even to the materialistic philosopher who has some clear vision of Nature alone, but not the perception of his own soul and self-being. Nor is it the intellectual detachment of the idealistic sage who escapes from the more limiting and disturbing forms of his ego by a luminous use of the reason. This is a larger, more living, more perfect spiritual detachment which comes by a vision of the Supreme who is more than Nature and greater than mind and reason. But even this detachment is only the initial secret of freedom and of the clear vision of knowledge, it is not the whole clue to the divine mystery,— for by itself it would leave Nature unexplained and the natural active part of being isolated from the spiritual and quietistic self-existence. The divine detachment must be the foundation for a divine participation in Nature which will replace the old egoistic participation, the divine quietism must support a divine activism and kinetism. This truth which the Teacher has had in view all along and therefore insisted on the sacrifice of works, the recognition of the Supreme as the master of our works and the doctrine of the Avatar and the divine birth, has yet been at first kept subordinate to the primary necessity of a quietistic liberation. Only the truths which lead to spiritual calm, detachment, equality and oneness, in a word, to the perception and becoming of the immutable self, have been fully developed and given their largest amplitude of power and significance. The other great and necessary truth, its complement, has been left in a certain obscurity of a lesser or relative light; it has been hinted at constantly, but not as yet developed. Now in these successive chapters it is being rapidly released into expression.

Throughout Krishna, the Avatar, the Teacher, the charioteer of the human soul in the world-action, has been preparing the revelation of the secret of himself, Nature's deepest secret. He has kept one note always sounding across his preparatory strain and insistently coming in as a warning and prelude of the larger ultimate harmony of his integral Truth. That note was the idea of a supreme Godhead which dwells within man and Nature,

but is greater than man and Nature, is found by impersonality of the self, but of which impersonal self is not the whole significance. We now see the meaning of that strong recurring insistence. It was this one Godhead, the same in universal self and man and Nature who through the voice of the Teacher in the chariot was preparing for his absolute claim to the whole being of the awakened seer of things and doer of works. "I who am within thee," he was saying, "I who am here in this human body, I for whom all exists, acts, strives, am at once the secret of the self-existent spirit and of the cosmic action. This 'I' is the greater I of whom the largest human personality is only a partial and fragmentary manifestation, Nature itself only an inferior working. Master of the soul, master of all the works of the cosmos, I am the one Light, the sole Power, the only Being. This Godhead within thee is the Teacher, the Sun, the lifter of the clear blaze of knowledge in which thou becomest aware of the difference between thy immutable self and thy mutable nature. But look beyond the light itself to its source; then shalt thou know the supreme Soul in which is recovered the spiritual truth of personality and Nature. See then the one self in all beings that thou mayst see me in all beings; see all beings in one spiritual self and reality, because that is the way to see all beings in me; know one Brahman in all that thou mayst see God who is the supreme Brahman. Know thyself, be thyself that thou mayst be united with me of whom this timeless self is the clear light or the transparent curtain. I the Godhead am the highest truth of self and spirit."

Arjuna has to see that the same Godhead is the higher truth too not only of self and spirit but of Nature and his own personality, the secret at once of the individual and the universe. That was the Will universal in Nature, greater than the acts of Nature which proceed from him, to whom belong her actions and man's and the fruits of them. Therefore has he to do works as a sacrifice, because that is the truth of his works and of all works. Nature is the worker and not ego, but Nature is only a power of the Being who is the sole master of all her works and energisms and of all the aeons of the cosmic sacrifice. Therefore

since his works are that Being's, he has to give up all his actions to the Godhead in him and the world by whom they are done in the divine mystery of Nature. This is the double condition of the divine birth of the soul, of its release from the mortality of the ego and the body into the spiritual and eternal,—knowledge first of one's timeless immutable self and union through it with the timeless Godhead, but knowledge too of that which lives behind the riddle of cosmos, the Godhead in all existences and their workings. Thus only can we aspire through the offering of all our nature and being to a living union with the One who has become in Time and Space all that is. Here is the place of bhakti in the scheme of the Yoga of an integral self-liberation. It is an adoration and aspiration towards that which is greater than imperishable self or changing Nature. All knowledge then becomes an adoration and aspiration, but all works too become an adoration and aspiration. Works of nature and freedom of soul are unified in this adoration and become one self-uplifting to the one Godhead. The final release, a passing away from the lower nature to the source of the higher spiritual becoming, is not an extinction of the soul,—only its form of ego becomes extinct,—but a departure of our whole self of knowledge, will and love to dwell no longer in his universal, but in his supracosmic reality, a fulfilment, not an annulation.

Necessarily, to make this knowledge clear to the mind of Arjuna, the divine Teacher sets out by removing the source of two remaining difficulties, the antinomy between the impersonal self and the human personality and the antinomy between the self and Nature. While these two antinomies last, the Godhead in Nature and man remains obscure, irrational and unbelievable. Nature has been represented as the mechanical bondage of the gunas, the soul as the egoistic being subject to that bondage. But if that be all their truth, they are not and cannot be divine. Nature, ignorant and mechanical, cannot be a power of God; for divine Power must be free in its workings, spiritual in its origin, spiritual in its greatness. The soul bound and egoistic in Nature, mental, vital, physical only, cannot be a portion of the Divine and itself a divine being; for such a divine being must be itself of

the very nature of the Divine, free, spiritual, self-developing, self-existent, superior to mind, life and body. Both these difficulties and the obscurities they bring in are removed by one illuminating ray of truth. Mechanical Nature is only a lower truth; it is the formula of an inferior phenomenal action. There is a higher which is the spiritual and that is the nature of our spiritual personality, our true person. God is at once impersonal and personal. His impersonality is to our psychological realisation an infinite of timeless being, consciousness, bliss of existence; his personality represents itself here as a conscious power of being, a conscious centre of knowledge and will and the joy of multiple self-manifestation. We are that one impersonality in the static essence of our being; we are each of us the multitude of that essential power in our spiritual person. But the distinction is only for the purposes of self-manifestation; the divine impersonality is, when one goes behind it, at the same time infinite He, a supreme soul and spirit. It is the great "I"—so *aham*, I am He, from which all personality and nature proceed and disport themselves here diversely in the appearance of an impersonal world. Brahman is all this that is, says the Upanishad, for Brahman is one self which sees itself in four successive positions of consciousness. Vasudeva, the eternal Being, is all, says the Gita. He is the Brahman, consciously supports and originates all from his higher spiritual nature, consciously here becomes all things in a nature of intelligence, mind, life and sense and objective phenomenon of material existence. The Jiva is he in that spiritual nature of the Eternal, his eternal multiplicity, his self-vision from many centres of conscious self-power. God, Nature and Jiva are the three terms of existence, and these three are one being.

How does this Being manifest himself in cosmos? First as the immutable timeless self omnipresent and all-supporting which is in its eternity being and not becoming. Then, held in that being there is an essential power or spiritual principle of self-becoming, *svabhāva*, through which by spiritual self-vision it determines and expresses, creates by liberation all that is latent or contained in its own existence. The power or the energy of that self-becoming looses forth into universal action, Karma, all

that is thus determined in the spirit. All creation is this action, is this working of the essential nature, is Karma. But it is developed here in a mutable Nature of intelligence, mind, life, sense and form-objectivity of material phenomenon actually cut off from the absolute light and limited by the Ignorance. All its workings become there a sacrifice of the soul in Nature to the supreme Soul secret within her, and the supreme Godhead dwells therefore in all as the Master of their sacrifice, whose presence and power govern it and whose self-knowledge and delight of being receive it. To know this is to have the right knowledge of the universe and the vision of God in the cosmos and to find out the door of escape from the Ignorance. For this knowledge, made effective for man by the offering up of his works and all his consciousness to the Godhead in all, enables him to return to his spiritual existence and through it to the supracosmic Reality eternal and luminous above this mutable Nature.

This truth is the secret of being which the Gita is now going to apply in its amplitude of result for our inner life and our outer works. What it is going to say is the most secret thing of all.¹ It is the knowledge of the whole Godhead, *samagran mām*, which the Master of his being has promised to Arjuna, that essential knowledge attended with the complete knowledge of it in all its principles which will leave nothing yet to be known. The whole knot of the ignorance which has bewildered his human mind and has made his will recoil from his divinely appointed work, will have been cut entirely asunder. This is the wisdom of all wisdoms, the secret of all secrets, the king-knowledge, the king-secret. It is a pure and supreme light which one can verify by direct spiritual experience and see in oneself as the truth: it is the right and just knowledge, the very law of being. It is easy to practise when one gets hold of it, sees it, tries faithfully to live in it.

But faith is necessary; if faith is absent, if one trusts to the critical intelligence which goes by outward facts and jealously questions the revelatory knowledge because that does not square

¹ Gita, IX. 1-3.

with the divisions and imperfections of the apparent nature and seems to exceed it and state something which carries us beyond the first practical facts of our present existence, its grief, its pain, evil, defect, undivine error and stumbling, *aśubham*, then there is no possibility of living out that greater knowledge. The soul that fails to get faith in the higher truth and law, must return into the path of ordinary mortal living subject to death and error and evil: it cannot grow into the Godhead which it denies. For this is a truth which has to be lived,—and lived in the soul's growing light, not argued out in the mind's darkness. One has to grow into it, one has to become it,—that is the only way to verify it. It is only by an exceeding of the lower self that one can become the real divine self and live the truth of our spiritual existence. All the apparent truths one can oppose to it are appearances of the lower Nature. The release from the evil and the defect of the lower Nature, *aśubham*, can only come by accepting a higher knowledge in which all this apparent evil becomes convinced of ultimate unreality, is shown to be a creation of our darkness. But to grow thus into the freedom of the divine Nature one must accept and believe in the Godhead secret within our present limited nature. For the reason why the practice of this Yoga becomes possible and easy is that in doing it we give up the whole working of all that we naturally are into the hands of that inner divine Purusha. The Godhead works out the divine birth in us progressively, simply, infallibly, by taking up our being into his and by filling it with his own knowledge and power, *jñānadīpena bhāsvatā*; he lays hands on our obscure ignorant nature and transforms it into his own light and wideness. What with entire faith and without egoism we believe in and impelled by him will to be, the God within will surely accomplish. But the egoistic mind and life we now and apparently are, must first surrender itself for transmutation into the hands of that inmost secret Divinity within us.

The Divine Truth and Way

THE GITA then proceeds to unveil the supreme and integral secret, the one thought and truth in which the seeker of perfection and liberation must learn to live and the one law of perfection of his spiritual members and of all their movements. This supreme secret is the mystery of the transcendent Godhead who is all and everywhere, yet so much greater and other than the universe and all its forms that nothing here contains him, nothing expresses him really, and no language which is borrowed from the appearances of things in space and time and their relations can suggest the truth of his unimaginable being. The consequent law of our perfection is an adoration by our whole nature and its self-surrender to its divine source and possessor. Our one ultimate way is the turning of our entire existence in the world, and not merely of this or that in it, into a single movement towards the Eternal. By the power and mystery of a divine Yoga we have come out of his inexpressible secracies into this bounded nature of phenomenal things. By a reverse movement of the same Yoga we must transcend the limits of phenomenal nature and recover the greater consciousness by which we can live in the Divine and the Eternal.

The supreme being of the Divine is beyond manifestation: the true sempiternal image of him is not revealed in matter, nor is it seized by life, nor is it cognisable by mind, *acintyārūpa, avyaktamūrti*. What we see is only a self-created form, *rūpa*, not the eternal form of the Divinity, *svarūpa*. There is someone or there is something that is other than the universe, inexpressible, unimaginable, an ineffably infinite Godhead beyond anything that our largest or subtlest conceptions of infinity can shadow. All this weft of things to which we give the

name of universe, all this immense sum of motion to which we can fix no limits and vainly seek in its forms and movements for any stable reality, any status, level and point of cosmic leverage, has been spun out, shaped, extended by this highest Infinite, founded upon this ineffable supracosmic Mystery. It is founded upon a self-formulation which is itself unmanifest and unthinkable. All this mass of becomings always changing and in motion, all these creatures, existences, things, breathing and living forms cannot contain him either in their sum or in their separate existence. He is not in them; it is not in them or by them that he lives, moves or has his being,—God is not the Becoming. It is they that are in him, it is they that live and move in him and draw their truth from him; they are his becomings, he is their being.¹ In the unthinkable timeless and spaceless infinity of his existence he has extended this minor phenomenon of a boundless universe in an endless space and time.

And even to say of him that all exists in him is not the whole truth of the matter, not the entirely real relation: for it is to speak of him with the idea of space, and the Divine is spaceless and timeless. Space and time, immanence and pervasion and exceeding are all of them terms and images of his consciousness. There is a Yoga of divine Power, *me yoga aiśvarah*, by which the Supreme creates phenomena of himself in a spiritual, not a material, self-formulation of his own extended infinity, an extension of which the material is only an image. He sees himself as one with that, is identified with that and all it harbours. In that infinite self-seeing, which is not his whole seeing,—the pantheist's identity of God and universe is a still more limited view,—he is at once one with all that is and yet exceeds it; but he is other also than this self or extended infinity of spiritual being which contains and exceeds the universe. All exists here in his world-conscious infinite, but that again is upheld as a self-conception by the supracosmic reality of the Godhead which exceeds all our terms of world and being and consciousness.

¹ *matsthāni sarvabhūtāni na cāhaṁ teṣvavasthitah.*

This is the mystery of his being that he is supracosmic, yet not in any exclusive sense extracosmic. For he pervades it all as its self; there is a luminous uninvolved presence of the self-being of God, *mama ātmā*, which is in constant relation with the becoming and brings all its existences into manifestation by his simple presence.² Therefore it is that we have these terms of Being and becoming, existence in itself, *ātman*, and existences dependent upon it, *bhūtāni*, mutable beings and immutable being. But the highest truth of these two relations and the resolution of their antinomy must be found in that which exceeds it; it is the supreme Godhead who manifests both containing self and its contained phenomena by the power of his spiritual consciousness, *yogamāyā*. And it is only through union with him in our spiritual consciousness that we can arrive at our real relations with his being.

Metaphysically stated, this is the intention of these verses of the Gita: but they rest founded not upon any intellectual speculation, but on spiritual experience; they synthetise because they arise globally from certain truths of spiritual consciousness. When we attempt to put ourselves into conscious relations with whatever supreme or universal Being there exists concealed or manifest in the world, we arrive at a very various experience and one or other variant term of this experience is turned by different intellectual conceptions into their fundamental idea of existence. We have, to start with, the crude experience first of a Divine who is something quite different from and greater than ourselves, quite different from and greater than the universe in which we live; and so it is and no more so long as we live only in our phenomenal selves and see around us only the phenomenal face of the world. For the highest truth of the Supreme is supracosmic and all that is phenomenal seems a thing other than the infinity of the self-conscious spirit, seems an image of a lesser truth if not an illusion. When we dwell in this difference only, we regard the Divine as if extracosmic. That he is only in this sense that he is not, being supracosmic,

² *bbūtabhṛn na ca bhūtastho mamātmā bbūtabbhāvanah*.

contained in the cosmos and its creations, but not in the sense that they are outside his being: for there is nothing outside the one Eternal and Real. We realise this first truth of the God-head spiritually when we get the experience that we live and move and have our being in him alone, that however different from him we may be, we depend on him for our existence and the universe itself is only a phenomenon and movement in the Spirit.

But again we have the farther and more transcendent experience that our self-existence is one with his self-existence. We perceive a one self of all and of that we have the consciousness and the vision: we can no longer say or think that we are entirely different from him, but that there is self and there is phenomenon of the self-existent; all is one in self, but all is variation in the phenomenon. By an exclusive intensity of union with the self we may even come to experience the phenomenon as a thing dreamlike and unreal. But again by a double intensity we may have too the double experience of a supreme self-existent oneness with him and yet of ourselves as living with him and in many relations to him in a persistent form, an actual derivation of his being. The universe, and our existence in the universe, becomes to us a constant and real form of the self-aware existence of the Divine. In that lesser truth we have our relations of difference between us and him and all these other living or inanimate powers of the Eternal and our dealings with his cosmic self in the nature of the universe. These relations are other than the supracosmic truth, they are derivative creations of a certain power of consciousness of the spirit, and because they are other and because they are creations the exclusive seekers of the supracosmic Absolute tax them with an unreality relative or complete. Yet are they from him, they are existent forms derived from his being, not figments created out of nothing. For it is ever itself and figures of itself and not things quite other than itself that the Spirit sees everywhere. Nor can we say that there is nothing at all in the supracosmic that corresponds to these relations. We cannot say that they are derivations of consciousness sprung from that source but

yet with nothing in the source which at all supports or justifies them, nothing that is the eternal reality and supernal principle of these forms of his being.

Again if we press in yet another way the difference between the self and the forms of self, we may come to regard the Self as containing and immanent, we may admit the truth of omnipresent spirit, and yet the forms of spirit, the moulds of its presence may affect us not only as something other than it, not only as transient, but as unreal images. We have the experience of the Spirit, the Divine Being immutable and ever containing in his vision the mutabilities of the universe; we have too the separate, the simultaneous or the coincident experience of the Divine immanent in ourselves and in all creatures. And yet the universe may be to us only an empirical form of his and our consciousness, or only an image or a symbol of existence by which we have to construct our significant relations with him and to grow gradually aware of him. But on the other hand, we get another revealing spiritual experience in which we are forced to see as the very Divine all things, not only that Spirit which dwells immutable in the universe and in its countless creatures, but all this inward and outward becoming. All is then to us a divine Reality manifesting himself in us and in the cosmos. If this experience is exclusive, we get the pantheistic identity, the One that is all: but the pantheistic vision is only a partial seeing. This extended universe is not all that the Spirit is, there is an Eternal greater than it by which alone its existence is possible. Cosmos is not the Divine in all his utter reality, but a single self-expression, a true but minor motion of his being. All these spiritual experiences, however different or opposed at first sight, are yet reconcilable if we cease to press on one or other exclusively and if we see this simple truth that the divine Reality is something greater than the universal existence, but yet that all universal and particular things are that Divine and nothing else,—significative of him, we might say, and not entirely That in any part or sum of their appearance, but still they could not be significative of him if they were something else and not term and stuff of the

divine existence. That is the Real; but they are its expressive realities.³

This is what is intended by the phrase, *vāsudevah sarvam iti*; the Godhead is all that is universe and all that is in the universe and all that is more than the universe. The Gita lays stress first on his supracosmic existence. For otherwise the mind would miss its highest goal and remain turned towards the cosmic only or else attached to some partial experience of the Divine in the cosmos. It lays stress next on his universal existence in which all moves and acts. For that is the justification of the cosmic effort and that is the vast spiritual self-awareness in which the Godhead self-seen as the Time-Spirit does his universal works. Next it insists with a certain austere emphasis on the acceptance of the Godhead as the divine inhabitant in the human body. For he is the Immanent in all existences, and if the indwelling divinity is not recognised, not only will the divine meaning of individual existence be missed, the urge to our supreme spiritual possibilities deprived of its greatest force, but the relations of soul with soul in humanity will be left petty, limited and egoistic. Finally, it insists at great length on the divine manifestation in all things in the universe and affirms the derivation of all that is from the nature, power and light of the one Godhead. For that seeing too is essential to the God-knowledge; on it is founded the integral turn of the whole being and the whole nature Godwards, the acceptance by man of the works of the divine Power in the world and the possibility of remoulding his mentality and will into the type of the God-action, transcendent in initiation, cosmic in motive, transmitted through the individual, the Jiva.

The supreme Godhead, the Self immutable behind the cosmic consciousness, the individual Divinity in the human being

³ Even if in the mind we feel them to be comparatively unreal in face of the absolutely Real. Shankara's Mayavada apart from its logical scaffolding comes when reduced to terms of spiritual experience to no more than an exaggerated expression of this relative unreality. Beyond mind the difficulty disappears, for there it never existed. The separate experiences that lie behind the differences of religious sects and schools of philosophy or Yoga, transmuted, shed their divergent mental sequences, are harmonised and, when exalted to their highest common intensity, unified in the supramental infinite.

and the Divine secretly conscious or partially manifested in cosmic Nature and all her works and creatures, are then one reality, one Godhead. But the truths that we can put forward the most confidently of one, are reversed or they alter their sense when we try to apply them to the other poises of the one Being. Thus the Divine is always the Lord, Ishwara; but we cannot therefore crudely apply the idea of his essential lordship and mastery in exactly the same way without change in all four fields. As the Divine manifest in cosmic Nature he acts in close identity with Nature. He is himself then Nature, so to speak, but with a spirit within her workings which foresees and forewills, understands and enforces, compels the action, overrules in the result. As the one silent self of all he is the non-doer, and Nature alone is the doer. He leaves all these works to be done by her according to the law of our being, *svabhāvas tu pravartate*, and yet he is still the lord, *prabhu vibhu*, because he views and upholds our action and enables Nature to work by his silent sanction. He by his immobility transmits the power of the supreme Godhead through the compulsion of his pervading motionless Presence and supports its workings by the equal regard of his witness Self in all things. As the supreme supracosmic Godhead he originates all, but is above all; he compels all to manifest, but does not lose himself in what he creates or attach himself to the works of his Nature. His is the free presiding Will of being that is antecedent to all the necessities of the natural action. In the individual he is during the ignorance the secret Godhead in us who compels all to revolve on the machine of Nature on which the ego is carried round as part of the machinery, at once a clog and a convenience. But since all the Divine is within each being, we can rise above this relation by transcending the ignorance. For we can identify ourselves with the one Self supporter of all things and become the witness and non-doer. Or else we can put our individual being into the human soul's right relation with the supreme Godhead within us and make it in its parts of nature the immediate cause and instrument, *nimitta*, and in its spiritual self and person a high participant in the supreme, free and unattached mastery of that inner Numen. This is a thing we have to see clearly in

the Gita; we have to allow for this variation of the sense of the same truth according to the nodus of relation from which its application comes into force. Otherwise we shall see mere contradiction and inconsistency where none exists or be baffled like Arjuna by what seems to us a riddling utterance.

Thus the Gita begins by affirming that the Supreme contains all things in himself, but is not in any, *matsthāni sarva-bhūtāni*, "all are situated in Me, not I in them," and yet it proceeds immediately to say, "and yet all existences are not situated in Me, my self is the bearer of all existences and it is not situated in existences." And yet again it insists with an apparent self-contradiction that the Divine has lodged himself, has taken up his abode in the human body, *mānuṣīm tanum āśritam*, and that the recognition of this truth is necessary for the soul's release by the integral way of works and love and knowledge. These statements are only in appearance inconsistent with each other. It is as the supracosmic Godhead that he is not in existences, nor even they in him; for the distinction we make between Being and becoming applies only to the manifestation in the phenomenal universe. In the supracosmic existence all is eternal Being and all, if there too there is any multiplicity, are eternal beings; nor can the spatial idea of indwelling come in, since a supracosmic absolute being is not affected by the concepts of time and space which are created here by the Lord's Yogamaya. There a spiritual, not a spatial or temporal coexistence, a spiritual identity and coincidence must be the foundation. But on the other hand in the cosmic manifestation there is an extension of universe in space and time by the supreme unmanifest supracosmic Being, and in that extension he appears first as a self who supports all these existences; *bhūta-bhṛt*, he bears them in his all-pervading self-existence. And, even, through this omnipresent self the supreme Self too, the Paramatman, can be said to bear the universe; he is its invisible spiritual foundation and the hidden spiritual cause of the becoming of all existences. He bears the universe as the secret spirit in us bears our thoughts, works, movements. He seems to pervade and to contain mind, life and body, to support them by his presence: but this pervasion is itself an act

of consciousness, not material; the body itself is only a constant act of consciousness of the spirit.

This divine Self contains all existences; all are situated in him, not materially in essence, but in that extended spiritual conception of self-being of which our too rigid notion of a material and etheric space is only a rendering in the terms of the physical mind and senses. In reality all even here is spiritual coexistence, identity and coincidence; but that is a fundamental truth which we cannot apply until we get back to the supreme consciousness. Till then such an idea would only be an intellectual concept to which nothing corresponds in our practical experience. We have to say, then, using these terms of relation in space and time, that the universe and all its beings exist in the divine Self-existent as everything else exists in the spatial primacy of ether. "It is as the great, the all-pervading aerial principle dwells in the etheric that all existences dwell in Me, that is how you have to conceive of it," says the Teacher here to Arjuna. The universal existence is all-pervading and infinite and the Self-existent too is all-pervading and infinite; but the self-existent infinity is stable, static, immutable, the universal is an all-pervading movement, *sarvatragah*. The Self is one, not many; but the universal expresses itself as all existence and is, as it seems, the sum of all existences. One is Being; the other is Power of Being which moves and creates and acts in the existence of the fundamental, supporting, immutable Spirit. The Self does not dwell in all these existences or in any of them; that is to say, he is not contained by any,—just as the ether here is not contained in any form, though all forms are derived ultimately from the ether. Nor is he contained in or constituted by all existences together—any more than the ether is contained in the mobile extension of the aerial principle or is constituted by the sum of its forms or its forces. But still in the movement also is the Divine; he dwells in the many as the Lord in each being. Both these relations are true of him at one and the same time. The one is a relation of self-existence to the universal movement; the other, the immanence, is a relation of the universal existence to its own forms. The one is a truth of being in its all-containing

immutability, self-existent: the other is a truth of Power of the same being manifest in the government and information of its own self-veiling and self-revealing movements.

The Supreme from above cosmic existence leans, it is here said, or presses down upon his Nature to loose from it in an eternal cyclic recurrence all that it contains in it, all that was once manifest and has become latent. All existences act in the universe in subjection to this impelling movement and to the laws of manifested being by which is expressed in cosmic harmonies the phenomenon of the divine All-existence. The Jiva follows the cycle of its becoming in the action of this divine Nature, *prakṛtim māmikām, svāmī prakṛtim*, the “own nature” of the Divine. It becomes in the turns of her progression this or that personality; it follows always the curve of its own law of being as a manifestation of the divine Nature, whether in her higher and direct or her lower and derived movement, whether in ignorance or in knowledge; it returns out of her action into her immobility and silence in the lapse of the cycle. Ignorant, it is subject to her cyclic whirl, not master of itself, but dominated by her, *avaśah prakṛter vasāt*; only by return to the divine consciousness can it attain to mastery and freedom. The Divine too follows the cycle, not as subject to it, but as its informing Spirit and guide, not with his whole being involved in it, but with his power of being accompanying and shaping it. He is the presiding control of his own action of Nature, *adhyakṣa*,—not a spirit born in her, but the creative spirit who causes her to produce all that appears in the manifestation. If in his power he accompanies her and causes all her workings, he is outside it too, as if One seated above her universal action in the supracosmic mastery, not attached to her by any involving and mastering desire and not therefore bound by her works, because he infinitely exceeds them and precedes them, is the same before, during and after all their procession in the cycles of Time. All their mutations make no difference to his immutable being. The silent self that pervades and supports the cosmos is not affected by its changes because, though supporting, it does not participate in them. This greatest supreme supracosmic Self also is not affected because it

exceeds and eternally transcends them.

But also since this action is the action of the divine Nature, *svā prakṛtiḥ*, and the divine Nature can never be separate from the Divine, in everything she creates the Godhead must be immanent. That is a relation which is not the whole truth of his being, but neither is it a truth which we can at all afford to ignore. He is lodged in the human body. Those who ignore his presence, who despise because of its masks the divinity in the human form, are bewildered and befooled by the appearances of Nature and they cannot realise that there is the secret Godhead within, whether conscious in humanity as in the Avatar or veiled by his Maya. Those who are great-souled, who are not shut up in their idea of ego, who open themselves to the indwelling Divinity, know that the secret spirit in man which appears here bounded by the limited human nature, is the same ineffable splendour which we worship beyond as the supreme Godhead. They become aware of the highest status of him in which he is master and lord of all existences and yet see that in each existence he is still the supreme Deity and the indwelling Godhead. All the rest is a self-limitation for the manifesting of the variations of Nature in the cosmos. They see too that as it is his Nature which has become all that is in the universe, everything here is in its inner fact nothing but one Divine, all is Vasudeva, and they worship him not only as the supreme Godhead beyond, but here in the world, in his oneness and in every separate being. They see this truth and in this truth they live and act; him they adore, live, serve both as the Transcendent of things and as God in the world and as the Godhead in all that is, serve him with works of sacrifice, seek him out by knowledge, see nothing else but him everywhere and lift their whole being to him both in its self and in all its inward and outward nature. This they know to be the large and perfect way; for it is the way of the whole truth of the one supreme and universal and individual Godhead.⁴

⁴ Gita, IX. 4-11, 13-15, 34.

VI

Works, Devotion and Knowledge

THIS THEN is the integral truth, the highest and widest knowledge. The Divine is supracosmic, the eternal Para-brahman who supports with his timeless and spaceless existence all this cosmic manifestation of his own being and nature in Space and Time. He is the supreme spirit who ensouls the forms and movements of the universe, Paramatman. He is the supernal Person of whom all self and nature, all being and becoming in this or any universe are the self-conception and the self-energising, Purushottama. He is the ineffable Lord of all existence who by his spiritual control of his own manifested Power in Nature unrolls the cycles of the world and the natural evolution of creatures in the cycles, Parameshwara. From him the Jiva, individual spirit, soul in Nature, existent by his being, conscious by the light of his consciousness, empowered to knowledge, to will and to action by his will and power, enjoying existence by his divine enjoyment of the cosmos, has come here into the cosmic rounds.

The inner soul in man is here a partial self-manifestation of the Divine, self-limited for the works of his Nature in the universe, *prakrtir jīva-bhūtā*. In his spiritual essence the individual is one with the Divine. In the works of the divine Prakriti he is one with him, yet there is an operative difference and many deep relations with God in Nature and with God above cosmic Nature. In the works of the lower appearance of Prakriti he seems by an ignorance and egoistic separation to be quite other than the One and to think, will, act, enjoy in this separative consciousness for the egoistic pleasure and purpose of his personal existence in the universe and its surface relations with other embodied minds and lives. But in fact all his being, all his thinking, all his willing and action and enjoyment are only a reflection—egoistic and perverted so long as he is in the ignorance—of the

Divine's being, the Divine's thought, will, action and enjoyment of Nature. To get back to this truth of himself is his direct means of salvation, his largest and nearest door of escape from subjection to the Ignorance. Since he is a spirit, a soul with a nature of mind and reason, of will and dynamic action, of emotion and sensation and life's seeking for the delight of existence, it is by turning all these powers Godwards that the return to the highest truth of himself can be made entirely possible. He must know with the knowledge of the supreme Self and Brahman; he must turn his love and adoration to the supreme Person; he must subject his will and works to the supreme Lord of cosmos. Then he passes from the lower to the divine Nature: he casts from him the thought and will and works of the Ignorance and thinks, wills and works in his divine identity as soul of that Soul, power and light of that Spirit; he enjoys all the inner infinite of the Divine and no longer only these outward touches, masks and appearances. Thus divinely living, thus directing his whole self and soul and nature Godwards, he is taken up into the truest truth of the supreme Brahman.

To know Vasudeva as all and live in that knowledge is the secret. He knows him as the Self, immutable, continent of all as well as immanent in all things. He draws back from the confused and perturbed whirl of the lower nature to dwell in the still and inalienable calm and light of the self-existent spirit. There he realises a constant unity with this self of the Divine that is present in all existences and supports all cosmic movement and action and phenomenon. He looks upward from this eternal unchanging spiritual hypostasis of the mutable universe to the greater Eternal, the supracosmic, the Real. He knows him as the divine Inhabitant in all things that are, the Lord in the heart of man, the secret Ishwara, and removes the veil between his natural being and this inner spiritual Master of his being. He makes his will, thought and works one in knowledge with the Ishwara's, attuned by an ever-present realisation to the sense of the indwelling Divinity, sees and adores him in all and changes the whole human action to the highest meaning of the divine nature. He knows him as the source and the substance of all that

is around him in the universe. All things that are he sees as at once in their appearance the veils and in their secret trend the means and signs of self-manifestation of that one unthinkable Reality and everywhere discovers that oneness, Brahman, Purusha, Atman, Vasudeva, the Being that has become all these creatures. Therefore too his whole inner existence comes into tune and harmony with the Infinite now self-revealed in all that lives or is within and around him and his whole outer existence turns into an exact instrumentation of the cosmic purpose. He looks up through the Self to the Parabrahman who there and here is the one and only existence. He looks up through the divine Inhabitant in all to that supernal Person who in his supreme status is beyond all habitation. He looks up through the Lord manifested in the universe to the Supreme who exceeds and rules all his manifestation. Thus he arises through a limitless unfolding of knowledge and upward vision and aspiration to that to which he has turned with an all-compelling integrality, *sarvabhāvena*.

This integral turning of the soul Godwards bases royally the Gita's synthesis of knowledge and works and devotion. To know God thus integrally is to know him as One in the self and in all manifestation and beyond all manifestation,—and all this unitedly and at once. And yet even so to know him is not enough unless it is accompanied by an intense uplifting of the heart and soul Godwards, unless it kindles a one-pointed and at the same time all-embracing love, adoration, aspiration. Indeed the knowledge which is not companioned by an aspiration and vivified by an uplifting is no true knowledge, for it can be only an intellectual seeing and a barren cognitive endeavour. The vision of God brings infallibly the adoration and passionate seeking of the Divine,—a passion for the Divine in his self-existent being, but also for the Divine in ourselves and for the Divine in all that is. To know with the intellect is simply to understand and may be an effective starting-point,—or, too, it may not be, and it will not be if there is no sincerity in the knowledge, no urge towards inner realisation in the will, no power upon the soul, no call in the spirit: for that would mean that the brain has

externally understood, but inwardly the soul has seen nothing. True knowledge is to know with the inner being, and when the inner being is touched by the light, then it arises to embrace that which is seen, it yearns to possess, it struggles to shape that in itself and itself to it, it labours to become one with the glory of its vision. Knowledge in this sense is an awakening to identity and, since the inner being realises itself by consciousness and delight, by love, by possession and oneness with whatever of itself it has seen, knowledge awakened must bring an overmastering impulse towards this true and only perfect realisation. Here that which is known is not an externalised object, but the divine Purusha, self and lord of all that we are. An all-seizing delight in him and a deep and moved love and adoration of him must be the inevitable result and is the very soul of this knowledge. And this adoration is no isolated seeking of the heart, but an offering of the whole existence. Therefore it must take also the form of a sacrifice; there is a giving of all our works to the Ishwara, there is a surrender of all our active inward and outward nature to the Godhead of our adoration in its every subjective and in its every objective movement. All our subjective workings move in him and they seek him, the Lord and Self, as the source and goal of their power and endeavour. All our objective workings move out towards him in the world and make him their object, initiate a service of God in the world of which the controlling power is the Divinity within us in whom we are one self with the universe and its creatures. For both world and self, Nature and the soul in her are enlightened by the consciousness of the One, are inner and outer bodies of the transcendent Purushottama. So comes a synthesis of mind and heart and will in the one self and spirit and with it the synthesis of knowledge, love and works in this integral union, this embracing God-realisation, this divine Yoga.

But to arrive at this movement at all is difficult for the ego-bound nature. And to arrive at its victorious and harmonious integrality is not easy even when we have set our feet on the way finally and for ever. Mortal mind is bewildered by its ignorant reliance upon veils and appearances; it sees only the outward human body, human mind, human way of living and catches no

liberating glimpse of the Divinity who is lodged in the creature. It ignores the divinity within itself and cannot see it in other men, and even though the Divine manifest himself in humanity as Avatar and Vibhuti, it is still blind and ignores or despises the veiled Godhead, *avajānanti mām mūḍhā mānuṣīm tanum āśritam*. And if it ignores him in the living creature, still less can it see him in the objective world on which it looks out from its prison of separative ego through the barred windows of the finite mind. It does not see God in the universe; it knows nothing of the supreme Divinity who is master of these planes full of various existences and dwells within them; it is blind to the vision by which all in the world grows divine and the soul itself awakens to its own inherent divinity and becomes of the Godhead, godlike. What it does see readily, and to that it attaches itself with passion, is only the life of the ego hunting after finite things for their own sake and for the satisfaction of the earthly hunger of the intellect, body, senses. Those who have given themselves up too entirely to this outward drive of the mentality, fall into the hands of the lower nature, cling to it and make it their foundation. They become a prey to the nature of the Rakshasa in man who sacrifices everything to a violent and inordinate satisfaction of his separate vital ego and makes that the dark godhead of his will and thought and action and enjoyment. Or they are hurried onward in a fruitless cycle by the arrogant self-will, self-sufficient thought, self-regarding act, self-satisfied and yet ever unsatisfied intellectualised appetite of enjoyment of the Asuric nature. But to live persistently in this separative ego-consciousness and make that the centre of all our activities is to miss altogether the true self-awareness. The charm it throws upon the misled instruments of the spirit is an enchantment that chains life to a profitless circling. All its hope, action, knowledge are vain things when judged by the divine and eternal standard, for it shuts out the great hope, excludes the liberating action, banishes the illuminating knowledge. It is a false knowledge that sees the phenomenon but misses the truth of the phenomenon, a blind hope that chases after the transient but misses the eternal, a sterile action whose every

profit is annulled by loss and amounts to a perennial labour of Sisyphus.¹

The great-souled who open themselves to the light and largeness of the diviner nature of which man is capable, are alone on the path narrow in the beginning, inexpressibly wide in the end that leads to liberation and perfection. The growth of the god in man is man's proper business; the steadfast turning of this lower Asuric and Rakshasic into the divine nature is the carefully hidden meaning of human life. As this growth increases, the veil falls and the soul comes to see the greater significance of action and the real truth of existence. The eye opens to the Godhead in man, to the Godhead in the world; it sees inwardly and comes to know outwardly the infinite Spirit, the Imperishable from whom all existences originate and who exists in all and by him and in him all exist always. Therefore when this vision, this knowledge seizes on the soul, its whole life-aspiration becomes a surpassing love and fathomless adoration of the Divine and Infinite. The mind attaches itself singly to the eternal, the spiritual, the living, the universal, the Real; it values nothing but for its sake, it delights only in the all-blissful Purusha. All the word and all the thought become one hymning of the universal greatness, Light, Beauty, Power and Truth that has revealed itself in its glory to the human spirit and a worship of the one supreme Soul and infinite Person. All the long stress of the inner self to break outward becomes a form now of spiritual endeavour and aspiration to possess the Divine in the soul and realise the Divine in the nature. All life becomes a constant Yoga and unification of that Divine and this human spirit. This is the manner of the integral devotion; it creates a single uplifting of our whole being and nature through sacrifice by the dedicated heart to the eternal Purushottama.²

Those who lay a predominant stress on knowledge, arrive to the same point by an always increasing, engrossing, enforcing power of the vision of the Divine on the soul and the nature. Theirs is the sacrifice of knowledge and by an ineffable ecstasy

¹ Gita, IX. 11-12. ² IX. 13-14.

of knowledge they come to the adoration of the Purushottama, *jñāna-yajñena yajanto mām upāsate*. This is a comprehension filled with Bhakti, because it is integral in its instruments, integral in its objective. It is not a pursuit of the Supreme merely as an abstract unity or an indeterminable Absolute. It is a heartfelt seeking and seizing of the Supreme and the Universal, a pursuit of the Infinite in his infinity and of the Infinite in all that is finite, a vision and embracing of the One in his oneness and of the One in all his several principles, his innumerable visages, forces, forms, here, there, everywhere, timelessly and in time, multiply, multitudinously, in endless aspects of his Godhead, in beings without number, all his million universal faces fronting us in the world and its creatures, *ekatvena pr̥thaktvena bahudhā viśvatomukham*. This knowledge becomes easily an adoration, a large devotion, a vast self-giving, an integral self-offering because it is the knowledge of a Spirit, the contact of a Being, the embrace of a supreme and universal Soul which claims all that we are even as it lavishes on us when we approach it all the treasures of its endless delight of existence.³

The way of works too turns into an adoration and a devotion of self-giving because it is an entire sacrifice of all our will and its activities to the one Purushottama. The outward Vedic rite is a powerful symbol, effective for a slighter though still a heavenward purpose; but the real sacrifice is that inner oblation in which the Divine All becomes himself the ritual action, the sacrifice and every single circumstance of the sacrifice. All the working and forms of that inner rite are the self-ordinance and self-expression of his power in us mounting by our aspiration towards the source of its energies. The Divine Inhabitant becomes himself the flame and the offering, because the flame is the Godward will and that will is God himself within us. And the offering too is form and force of the constituent Godhead in our nature and being; all that has been received from him is given up to the service and the worship of its own Reality,

³ IX. 15.

its own supreme Truth and Origin. The Divine Thinker becomes himself the sacred mantra; it is the Light of his being that expresses itself in the thought directed Godward and is effective in the revealing word of splendour that enshrines the thought's secret and in the rhythm that repeats for man the rhythms of the Eternal. The illumining Godhead is himself the Veda and that which is made known by the Veda. He is both the knowledge and the object of the knowledge. The Rik, the Yajur, the Sama, the word of illumination which lights up the mind with the rays of knowledge, the word of power for the right ordaining of action, the word of calm and harmonious attainment for the bringing of the divine desire of the spirit, are themselves the Brahman, the Godhead. The mantra of the divine Consciousness brings its light of revelation, the mantra of the divine Power its will of effectuation, the mantra of the divine Ananda its equal fulfilment of the spiritual delight of existence. All word and thought are an outflowering of the great OM,—OM, the Word, the Eternal. Manifest in the forms of sensible objects, manifest in that conscious play of creative self-conception of which forms and objects are the figures, manifest behind in the self-gathered superconscious power of the Infinite, OM is the sovereign source, seed, womb of thing and idea, form and name,—it is itself, integrally, the supreme Intangible, the original Unity, the timeless Mystery self-existent above all manifestation in supernal being.⁴ This sacrifice is therefore at once works and adoration and knowledge.⁵

To the soul that thus knows, adores, offers up all its workings in a great self-surrender of its being to the Eternal, God is all and all is the Godhead. It knows God as the Father of this world who nourishes and cherishes and watches over his children. It knows God as the divine Mother who holds us in her bosom, lavishes upon us the sweetness of her love and fills the universe with her forms of beauty. It knows him as the first Creator from

⁴ AUM,—A the spirit of the gross and external, Virat, U the spirit of the subtle and internal, Taijasa, M the spirit of the secret superconscious omnipotence, Prajna, OM the Absolute, Turiya.—*Mandukya Upanishad*.

⁵ IX. 16-17.

whom has originated all that originates and creates in space and time and relation. It knows him as the Master and ordainer of all universal and of every individual dispensation. The world and fate and uncertain eventuality cannot terrify, the aspect of suffering and evil cannot bewilder the man who has surrendered himself to the Eternal. God to the soul that sees is the path and God is the goal of his journey, a path in which there is no self-losing and a goal to which his wisely guided steps are surely arriving at every moment. He knows the Godhead as the master of his and all being, the upholder of his nature, the husband of the nature-soul, its lover and cherisher, the inner witness of all his thoughts and actions. God is his house and country, the refuge of his seekings and desires, the wise and close and benignant friend of all beings. All birth and status and destruction of apparent existences is to his vision and experience the One who brings forward, maintains and withdraws his temporal self-manifestation in its system of perpetual recurrences. He alone is the imperishable seed and origin of all that seem to be born and perish and their eternal resting-place in their non-manifestation. It is he that burns in the heat of the sun and the flame; it is he who is the plenty of the rain and its withholding; he is all this physical Nature and her workings. Death is his mask and immortality is his self-revelation. All that we call existent is he and all that we look upon as non-existent still is there secret in the Infinite and is part of the mysterious being of the Ineffable.⁶

Nothing but the highest knowledge and adoration, no other way than an entire self-giving and surrender to this Highest who is all, will bring us to the Highest. Other religion, other worship, other knowledge, other seeking has always its fruits, but these are transient and limited to the enjoyment of divine symbols and appearances. There are always open for our following according to the balance of our mentality an outer and an inmost knowledge, an outer and an inmost seeking. Outward religion is the worship of an outward deity and the pursuit of an external beatitude: its devotees purify their conduct from sin and attain

⁶ IX. 17-19.

to an active ethical righteousness in order to satisfy the fixed law, the Shastra, the external dispensation; they perform the ceremonial symbol of the outer communion. But their object is to secure after the mortal pleasure and pain of earthly life the bliss of heavenly worlds, a greater happiness than earth can give but still a personal and mundane enjoyment though in a larger world than the field of this limited and suffering terrestrial nature. And to that to which they aspire, they attain by faith and right endeavour; for material existence and earthly activities are not the whole scope of our personal becoming or the whole formula of the cosmos. Other worlds there are of a larger felicity, *svargalokam visālam*. Thus the Vedic ritualist of old learned the exoteric sense of the triple Veda, purified himself from sin, drank the wine of communion with the gods and sought by sacrifice and good deeds the rewards of heaven. This firm belief in a Beyond and this seeking of a diviner world secures to the soul in its passing the strength to attain to the joys of heaven on which its faith and seeking were centred: but the return to mortal existence imposes itself because the true aim of that existence has not been found and realised. Here and not elsewhere the highest Godhead has to be found, the soul's divine nature developed out of the imperfect physical human nature and through unity with God and man and universe the whole large truth of being discovered and lived and made visibly wonderful. That completes the long cycle of our becoming and admits us to a supreme result; that is the opportunity given to the soul by the human birth and, until that is accomplished, it cannot cease. The God-lover advances constantly towards this ultimate necessity of our birth in cosmos through a concentrated love and adoration by which he makes the supreme and universal Divine the whole object of his living — not either egoistic terrestrial satisfaction or the celestial worlds — and the whole object of his thought and his seeing. To see nothing but the Divine, to be at every moment in union with him, to love him in all creatures and have the delight of him in all things is the whole condition of his spiritual existence. His God-vision does not divorce him from life, nor does he miss anything of the fullness of life; for God himself becomes the spontaneous

bringer to him of every good and of all his inner and outer getting and having, *yoga-kṣemāṁ vahāmyaham*. The joy of heaven and the joy of earth are only a small shadow of his possessions; for as he grows into the Divine, the Divine too flows out upon him with all the light, power and joy of an infinite existence.⁷

Ordinary religion is a sacrifice to partial godheads other than the integral Divinity. The Gita takes its direct examples from the old Vedic religion on its exoteric side as it had then developed; it describes this outward worship as a sacrifice to other godheads, *anya-devatāḥ*, to the gods, or to the divinised Ancestors, or to elemental powers and spirits, *devān*, *pitṛn*, *bhūtāni*. Men consecrate their life and works ordinarily to partial powers or aspects of the divine Existence as they see or conceive them — mostly powers and aspects that ensoul to them things prominent in Nature and man or else reflect to them their own humanity in a divine exceeding symbol. If they do this with faith, then their faith is justified; for the Divine accepts whatever symbol, form or conception of himself is present to the mind of the worshipper, *yāṁ yāṁ tanum śraddhayā arcati*, as it is said elsewhere, and meets him according to the faith that is in him. All sincere religious belief and practice is really a seeking after the one supreme and universal Godhead; for he always is the sole master of man's sacrifice and askesis and infinite enjoyer of his effort and aspiration. However small or low the form of the worship, however limited the idea of the godhead, however restricted the giving, the faith, the effort to get behind the veil of one's own ego-worship and limitation by material Nature, it yet forms a thread of connection between the soul of man and the All-soul and there is a response. Still the response, the fruit of the adoration and offering is according to the knowledge, the faith and the work and cannot exceed their limitations, and therefore from the point of view of the greater God-knowledge, which alone gives the entire truth of being and becoming, this inferior offering is not given according to the true and highest law of the sacrifice. It is not founded on a knowledge of the supreme Godhead in his integral

⁷ IX. 20-22.

existence and the true principles of his self-manifestation, but attaches itself to external and partial appearances,—*na mām abhijānanti tattvena*. Therefore its sacrifice too is limited in its object, largely egoistic in its motive, partial and mistaken in its action and its giving, *yajanti avidhi-pūrvakam*. An entire seeing of the Divine is the condition of an entire conscious self-surrender; the rest attains to things that are incomplete and partial, and has to fall back from them and return to enlarge itself in a greater seeking and wider God-experience. But to follow after the supreme and universal Godhead alone and utterly is to attain to all knowledge and result which other ways acquire, while yet one is not limited by any aspect, though one finds the truth of him in all aspects. This movement embraces all forms of divine being on its way to the supreme Purushottama.⁸

This absolute self-giving, this one-minded surrender is the devotion which the Gita makes the crown of its synthesis. All action and effort are by this devotion turned into an offering to the supreme and universal Godhead. “Whatever thou doest, whatever thou enjoyest, whatever thou sacrificest, whatever thou givest, whatever energy of tapasya, of the soul’s will or effort thou puttest forth, make it an offering unto Me.” Here the least, the slightest circumstance of life, the most insignificant gift out of oneself or what one has, the smallest action assumes a divine significance and it becomes an acceptable offering to the Godhead who makes it a means for his possession of the soul and life of the God-lover. The distinctions made by desire and ego then disappear. As there is no straining after the good result of one’s action, no shunning of unhappy result, but all action and result are given up to the Supreme to whom all work and fruit in the world belong for ever, there is no farther bondage. For by an absolute self-giving all egoistic desire disappears from the heart and there is a perfect union between the Divine and the individual soul through an inner renunciation of its separate living. All will, all action, all result become that of the Godhead, work divinely through the purified and illumined nature and no

⁸ IX. 23-25.

longer belong to the limited personal ego. The finite nature thus surrendered becomes a free channel of the Infinite; the soul in its spiritual being, uplifted out of the ignorance and the limitation, returns to its oneness with the Eternal. The Divine Eternal is the inhabitant in all existences; he is equal in all and the equal friend, father, mother, creator, lover, supporter of all creatures. He is the enemy of none and he is the partial lover of none; none has he cast out, none has he eternally condemned, none has he favoured by any despotism of arbitrary caprice: all at last equally come to him through their circlings in the ignorance. But it is only this perfect adoration that can make this indwelling of God in man and man in God a conscious thing and an engrossing and perfect union. Love of the Highest and a total self-surrender are the straight and swift way to this divine oneness.⁹

The equal Divine Presence in all of us makes no other preliminary condition, if once this integral self-giving has been made in faith and in sincerity and with a fundamental completeness. All have access to this gate, all can enter into this temple: our mundane distinctions disappear in the mansion of the All-lover. There the virtuous man is not preferred, nor the sinner shut out from the Presence; together by this road the Brahmin pure of life and exact in observance of the law and the outcaste born from a womb of sin and sorrow and rejected of men can travel and find an equal and open access to the supreme liberation and the highest dwelling in the Eternal. Man and woman find their equal right before God; for the divine Spirit is no respecter of persons or of social distinctions and restrictions: all can go straight to him without intermediary or shackling condition. "If" says the divine Teacher "even a man of very evil conduct turns to me with a sole and entire love, he must be regarded as a saint, for the settled will of endeavour in him is a right and complete will. Swiftly he becomes a soul of righteousness and obtains eternal peace." In other words a will of entire self-giving opens wide all the gates of the spirit and brings in response an entire descent and self-giving of the Godhead to the human being, and that at

⁹ IX. 26-29.

once reshapes and assimilates everything in us to the law of the divine existence by a rapid transformation of the lower into the spiritual nature. The will of self-giving forces away by its power the veil between God and man; it annuls every error and annihilates every obstacle. Those who aspire in their human strength by effort of knowledge or effort of virtue or effort of laborious self-discipline, grow with much anxious difficulty towards the Eternal; but when the soul gives up its ego and its works to the Divine, God himself comes to us and takes up our burden. To the ignorant he brings the light of the divine knowledge, to the feeble the power of the divine will, to the sinner the liberation of the divine purity, to the suffering the infinite spiritual joy and Ananda. Their weakness and the stumbling of their human strength make no difference. "This is my word of promise," cries the voice of the Godhead to Arjuna, "that he who loves me shall not perish." Previous effort and preparation, the purity and the holiness of the Brahmin, the enlightened strength of the king-sage great in works and knowledge have their value, because they make it easier for the imperfect human creature to arrive at this wide vision and self-surrender; but even without this preparation all who take refuge in the divine Lover of man, the Vaishya once preoccupied with the narrowness of wealth-getting and the labour of production, the Shudra hampered by a thousand hard restrictions, woman shut in and stunted in her growth by the narrow circle society has drawn around her self-expansion, those too, *pāpa-yonayah*, on whom their past Karma has imposed even the very worst of births, the outcaste, the Pariah, the Chandala, find at once the gates of God opening before them. In the spiritual life all the external distinctions of which men make so much because they appeal with an oppressive force to the outward mind, cease before the equality of the divine Light and the wide omnipotence of an impartial Power.¹⁰

The earthly world preoccupied with the dualities and bound to the immediate transient relations of the hour and the moment is for man, so long as he dwells here attached to these things

¹⁰ IX. 30-32.

and while he accepts the law they impose on him for the law of his life, a world of struggle, suffering and sorrow. The way to liberation is to turn from the outward to the inward, from the appearance created by the material life which lays its burden on the mind and imprisons it in the grooves of the life and the body to the divine Reality which waits to manifest itself through the freedom of the spirit. Love of the world, the mask, must change into the love of God, the Truth. Once this secret and inner Godhead is known and is embraced, the whole being and the whole life will undergo a sovereign uplifting and a marvellous transmutation. In place of the ignorance of the lower Nature absorbed in its outward works and appearances the eye will open to the vision of God everywhere, to the unity and universality of the spirit. The world's sorrow and pain will disappear in the bliss of the All-blissful; our weakness and error and sin will be changed into the all-embracing and all-transforming strength, truth and purity of the Eternal. To make the mind one with the divine consciousness, to make the whole of our emotional nature one love of God everywhere, to make all our works one sacrifice to the Lord of the worlds and all our worship and aspiration one adoration of him and self-surrender, to direct the whole self Godwards in an entire union is the way to rise out of a mundane into a divine existence. This is the Gita's teaching of divine love and devotion, in which knowledge, works and the heart's longing become one in a supreme unification, a merging of all their divergences, an intertwining of all their threads, a high fusion, a wide identifying movement.¹¹

¹¹ IX. 33-34.

The Supreme Word of the Gita

WE HAVE now got to the inmost kernel of the Gita's Yoga, the whole living and breathing centre of its teaching. We can see now quite clearly that the ascent of the limited human soul when it withdraws from the ego and the lower nature into the immutable Self calm, silent and stable, was only a first step, an initial change. And now too we can see why the Gita from the first insisted on the Ishwara, the Godhead in the human form, who speaks always of himself, "*aham, mām,*" as of some great secret and omnipresent Being, lord of all the worlds and master of the human soul, one who is greater even than that immutable self-existence which is still and unmoved for ever and abides for ever untouched by the subjective and objective appearances of the natural universe.

All Yoga is a seeking after the Divine, a turn towards union with the Eternal. According to the adequacy of our perception of the Divine and the Eternal will be the way of the seeking, the depth and fullness of the union and the integrality of the realisation. Man, the mental being, approaches the Infinite through his finite mind and has to open some near gate of this finite upon that Infinite. He seeks for some conception on which his mind is able to seize, selects some power of his nature which by force of an absolute self-heightening can reach out and lay its touch on the infinite Truth that in itself is beyond his mental comprehension. Some face of that infinite Truth — for, because it is infinite, it has numberless faces, words of its meaning, self-suggestions — he attempts to see, so that by attaching himself to it he can arrive through direct experience to the immeasurable reality it figures. However narrow the gate may be, he is satisfied if it offers some prospect into the wideness which attracts him, if it sets him on the way to the fathomless profundity and unreachable heights of that which calls to his spirit. And as he approaches it, so it

receives him, *ye yathā mām prapadyante*.

Philosophic mind attempts to attain to the Eternal by an abstractive knowledge. The business of knowledge is to comprehend and for the finite intellect that means to define and determine. But the only way to determine the indeterminable is by some kind of universal negation, *neti neti*. Therefore the mind proceeds to exclude from the conception of the Eternal all that offers itself as limitable by the senses and the heart and the understanding. An entire opposition is made between the Self and the not-self, between an eternal, immutable, indefinable self-existence and all forms of existence,—between Brahman and Maya, between the ineffable Reality and all that undertakes to express, but cannot express the Ineffable,—between Karma and Nirvana, between the ever continuous but ever impermanent action and conception of the universal Energy and some absolute ineffable supreme Negation of its action and conception which is empty of all life and mentality and dynamic significance. That strong drive of knowledge towards the Eternal leads away from everything that is transient. It negates life in order to return to its source, cuts away from us all that we seem to be in order to get from it to the nameless and impersonal reality of our being. The desires of the heart, the works of the will and the conceptions of the mind are rejected; even in the end knowledge itself is negated and abolished in the Identical and Unknowable. By the way of an increasing quietude ending in an absolute passivity the Maya-created soul or the bundle of associations we call ourselves enters into annihilation of its idea of personality, makes an end of the lie of living, disappears into Nirvana.

But this difficult abstractive method of self-negation, however it may draw to it some exceptional natures, cannot satisfy universally the embodied soul in man, because it does not give an outlet to all the straining of his complex nature towards the perfect Eternal. Not only his abstracting contemplative intellect but his yearning heart, his active will, his positive mind in search of some Truth to which his existence and the existence of the world is a manifold key, have their straining towards the Eternal and Infinite and seek to find in it their divine Source and the jus-

tification of their being and their nature. From this need arise the religions of love and works, whose strength is that they satisfy and lead Godwards the most active and developed powers of our humanity,— for only by starting from these can knowledge be effective. Even Buddhism with its austere and uncompromising negation both of subjective self and objective things had still to found itself initially on a divine discipline of works and to admit as a substitute for bhakti the spiritualised emotionalism of a universal love and compassion, since so only could it become an effective way for mankind, a truly liberating religion. Even illusionist Mayavada with its ultralogical intolerance of action and the creations of mentality had to allow a provisional and practical reality to man and the universe and to God in the world in order to have a first foothold and a feasible starting-point; it had to affirm what it denied in order to give some reality to man's bondage and to his effort for liberation.

But the weakness of the kinetic and the emotional religions is that they are too much absorbed in some divine Personality and in the divine values of the finite. And, even when they have a conception of the infinite Godhead, they do not give us the full satisfaction of knowledge because they do not follow it out into its most ultimate and supernal tendencies. These religions fall short of a complete absorption in the Eternal and the perfect union by identity,— and yet to that identity in some other way, if not in the abstractive, since there all oneness has its basis, the spirit that is in man must one day arrive. On the other hand, the weakness of a contemplative quietistic spirituality is that it arrives at this result by a too absolute abstraction and in the end it turns into a nothing or a fiction the human soul whose aspiration was yet all the time the whole sense of this attempt at union; for without the soul and its aspiration liberation and union could have no meaning. The little that this way of thinking recognises of his other powers of existence, it relegates to an inferior preliminary action which never arrives at any full or satisfying realisation in the Eternal and Infinite. Yet these things too which it restricts unduly, the potent will, the strong yearning of love, the positive light and all-embracing intuition

of the conscious mental being are from the Divine, represent essential powers of him and must have some justification in their Source and some dynamic way of self-fulfilment in him. No God-knowledge can be integral, perfect or universally satisfying which leaves unfulfilled their absolute claim, no wisdom utterly wise which in its intolerant asceticism of search negates or in the pride of pure knowledge belittles the spiritual reality behind these ways of the Godhead.

The greatness of the central thought of the Gita in which all its threads are gathered up and united, consists in the synthetic value of a conception which recognises the whole nature of the soul of man in the universe and validates by a large and wise unification its many-sided need of the supreme and infinite Truth, Power, Love, Being to which our humanity turns in its search for perfection and immortality and some highest joy and power and peace. There is a strong and wide endeavour towards a comprehensive spiritual view of God and man and universal existence. Not indeed that everything without any exception is seized in these eighteen chapters, no spiritual problem left for solution; but still so large a scheme is laid out that we have only to fill in, to develop, to modify, to stress, to follow out points, to work out hint and illuminate adumbration in order to find a clue to any further claim of our intelligence and need of our spirit. The Gita itself does not evolve any quite novel solution out of its own questionings. To arrive at the comprehensiveness at which it aims, it goes back behind the great philosophical systems to the original Vedanta of the Upanishads; for there we have the widest and profoundest extant synthetic vision of spirit and man and cosmos. But what is in the Upanishads undeveloped to the intelligence because wrapped up in a luminous kernel of intuitive vision and symbolic utterance, the Gita brings out in the light of a later intellectual thinking and distinctive experience.

In the frame of its synthesis it admits the seeking of the abstractive thinkers for the Indefinable, *anirdeśyam*, the ever unmanifest Immutable, *avyaktam akṣaram*. Those who devote themselves to this search, find, they also, the Purushottama, the supreme Divine Person, *mām*, the Spirit and highest Soul

and Lord of things. For his utmost self-existent way of being is indeed an unthinkable, *acintyārūpam*, an unimaginable positive, an absolute quintessence of all absolutes far beyond the determination of the intelligence. The method of negative passivity, quietude, renunciation of life and works by which men feel after this intangible Absolute is admitted and ratified in the Gita's philosophy, but only with a minor permissive sanction. This negating knowledge approaches the Eternal by one side only of the truth and that side the most difficult to reach and follow for the embodied soul in Nature, *duḥkham dehavadbhīr avāpyate*; it proceeds by a highly specialised, even an unnecessarily arduous way, "narrow and difficult to tread as a razor's edge." Not by denying all relations, but through all relations is the Divine Infinite naturally approachable to man and most easily, widely, intimately seizable. This seeing is not after all the largest or the truest truth that the Supreme is without any relations with the mental, vital, physical existence of man in the universe, *avyavahāryam*, nor that what is described as the empirical truth of things, the truth of relations, *vyavahāra*, is altogether the opposite of the highest spiritual truth, *paramārtha*. On the contrary there are a thousand relations by which the supreme Eternal is secretly in contact and union with our human existence and by all essential ways of our nature and of the world's nature, *sarvabhāvena*, can that contact be made sensible and that union made real to our soul, heart, will, intelligence, spirit. Therefore is this other way natural and easy for man, *sukham āptum*. God does not make himself difficult of approach to us: only one thing is needed, one demand made on us, the single indomitable will to break through the veil of our ignorance and the whole, the persistent seeking of the mind and heart and life for that which is all the time near to it, within it, its own soul of being and spiritual essence and the secret of its personality and its impersonality, its self and its nature. This is our one difficulty; the rest the Master of our existence will himself see to and accomplish, *aham tvāṁ mokṣayisyāmi mā śucah*.

In the very part of its teaching in which the Gita's synthesis leans most towards the side of pure knowledge, we have

seen that it constantly prepares for this fuller truth and more pregnant experience. Indeed, it is implied in the very form the Gita gives to the realisation of the self-existent Immutable. That immutable Self of all existences seems indeed to stand back from any active intervention in the workings of Nature; but it is not void of all relation whatever and remote from all connection. It is our witness and supporter; it gives a silent and impersonal sanction; it has even an impassive enjoyment. The many-sided action of Nature is still possible even when the soul is poised in that calm self-existence: for the witness soul is the immutable Purusha, and Purusha has always some relation with Prakriti. But now the reason of this double aspect of silence and of activity is revealed in its entire significance,—because the silent all-pervading Self is only one side of the truth of the divine Being. He who pervades the world as the one unchanging self that supports all its mutations, is equally the Godhead in man, the Lord in the heart of every creature, the conscient Cause and Master of all our subjective becoming and all our inward-taking and outward-going objectivised action. The Ishwara of the Yogins is one with the Brahman of the seeker of knowledge, one supreme and universal Spirit, one supreme and universal Godhead.

This Godhead is not the limited personal God of so many exoteric religions; for those are all only partial and outward formations of this other, this creative and directive, this personal side of his complete truth of existence. This is the one supreme Person, Soul, Being, Purusha of whom all godheads are aspects, all individual personality a limited development in cosmic Nature. This Godhead is not a particularised name and form of Divinity, *ista-devatā*, constructed by the intelligence or embodying the special aspiration of the worshipper. All such names and forms are only powers and faces of the one Deva who is the universal Lord of all worshippers and all religions: but this is itself that universal Deity, *deva-deva*. This Ishwara is not a reflection of the impersonal and indeterminable Brahman in illusive Maya: for from beyond all cosmos as well as within it he rules and is the Lord of the worlds and their creatures. He is

Parabrahman who is Parameshwara, supreme Lord because he is the supreme Self and Spirit, and from his highest original existence he originates and governs the universe, not self-deceived, but with an all-knowing omnipotence. Nor is the working of his divine Nature in the cosmos an illusion whether of his or our consciousness. The only illusive Maya is the ignorance of the lower Prakriti which is not a creator of non-existent things on the impalpable background of the One and Absolute, but because of its blind encumbered and limited working misrepresents to the human mind by the figure of ego and other inadequate figures of mind, life and matter the greater sense, the deeper realities of existence. There is a supreme, a divine Nature which is the true creatrix of the universe. All creatures and all objects are becomings of the one divine Being; all life is a working of the power of the one Lord; all nature is a manifestation of the one Infinite. He is the Godhead in man; the Jiva is spirit of his Spirit. He is the Godhead in the universe; this world in Space and Time is his phenomenal self-extension.

In the unrolling of this comprehensive vision of existence and super-existence the Yoga of the Gita finds its unified significance and unexampled amplitude. This supreme Godhead is the one unchanging imperishable Self in all that is; therefore to the spiritual sense of this unchanging imperishable self man has to awake and to unify with it his inner impersonal being. He is the Godhead in man who originates and directs all his workings; therefore man has to awake to the Godhead within himself, to know the divinity he houses, to rise out of all that veils and obscures it and to become united with this inmost Self of his self, this greater consciousness of his consciousness, this hidden Master of all his will and works, this Being within him who is the fount and object of all his various becoming. He is the Godhead whose divine nature, origin of all that we are, is thickly veiled by these lower natural derivations; therefore man has to get back from his lower apparent existence, imperfect and mortal, to his essential divine nature of immortality and perfection. This Godhead is one in all things that are, the self who lives in all and the self in whom all live and move; therefore man has to

discover his spiritual unity with all creatures, to see all in the self and the self in all beings, even to see all things and creatures as himself, *ātmaupamyaṇa sarvatra*, and accordingly think, feel and act in all his mind, will and living. This Godhead is the origin of all that is here or elsewhere and by his Nature he has become all these innumerable existences, *abhūt sarvāṇi bhūtāṇi*; therefore man has to see and adore the One in all things animate and inanimate, to worship the manifestation in sun and star and flower, in man and every living creature, in the forms and forces, qualities and powers of Nature, *vāsudevaḥ sarvam iti*. He has to make himself by divine vision and divine sympathy and finally by a strong inner identity one universality with the universe. A passive relationless identity excludes love and action, but this larger and richer oneness fulfils itself by works and by a pure emotion: it becomes the source and continent and substance and motive and divine purpose of all our acts and feelings. *Kasmai devāya haviṣā vidhema*, to what Godhead shall we give all our life and activities as an offering? This is that Godhead, this the Lord who claims our sacrifice. A passive relationless identity excludes the joy of adoration and devotion; but bhakti is the very soul and heart and summit of this richer, completer, more intimate union. This Godhead is the fulfilment of all relations, father, mother, lover, friend and refuge of the soul of every creature. He is the one supreme and universal Deva, Atman, Purusha, Brahman, Ishwara of the secret wisdom. He has manifested the world in himself in all these ways by his divine Yoga: its multitudinous existences are one in him and he is one in them in many aspects. To awaken to the revelation of him in all these ways together is man's side of the same divine Yoga.

To make it perfectly and indisputably clear that this is the supreme and entire truth of his teaching, this the integral knowledge which he had promised to reveal, the divine Avatar declares, in a brief reiteration of the upshot of all that he has been saying, that this and no other is his supreme word, *paramām vacaḥ*. "Again hearken to my supreme word," *bhūya eva śṛṇu me paramām vacaḥ*. This supreme word of the Gita is, we find, first the explicit and unmistakable declaration that the highest

worship and highest knowledge of the Eternal are the knowledge and the adoration of him as the supreme and divine Origin of all that is in existence and the mighty Lord of the world and its peoples of whose being all things are the becomings. It is, secondly, the declaration of a unified knowledge and bhakti as the supreme Yoga; that is the destined and the natural way given to man to arrive at union with the eternal Godhead. And to make more significant this definition of the way, to give an illuminating point to this highest importance of bhakti founded upon and opening to knowledge and made the basis and motive-power for divinely appointed works, the acceptance of it by the heart and mind of the disciple is put as a condition for the farther development by which the final command to action comes at last to be given to the human instrument, Arjuna. "I will speak this supreme word to thee" says the Godhead "from my will for thy soul's good, now that thy heart is taking delight in me," *te priyamāñāya vakṣyāmi*. For this delight of the heart in God is the whole constituent and essence of true bhakti, *bhajanti priti-pūrvakam*. As soon as the supreme word is given, Arjuna is made to utter his acceptance of it and to ask for a practical way of seeing God in all things in Nature, and from that question immediately and naturally there develops the vision of the Divine as the Spirit of the universe and there arises the tremendous command to the world-action.¹

The idea of the Divine on which the Gita insists as the secret of the whole mystery of existence, the knowledge that leads to liberation, is one that bridges the opposition between the cosmic procession in Time and a supracosmic eternity without denying either of them or taking anything from the reality of either. It harmonises the pantheistic, the theistic and the highest transcendental terms of our spiritual conception and spiritual experience. The Divine is the unborn Eternal who has no origin; there is and can be nothing before him from which he proceeds, because he is one and timeless and absolute. "Neither the gods nor the great Rishis know any birth of me. . . . He who knows

¹ Gita, X. 1-18.

me as the unborn without origin . . . ” are the opening utterances of this supreme word. And it gives the high promise that this knowledge, not limiting, not intellectual, but pure and spiritual,—for the form and nature, if we can use such language, of this transcendental Being, his *svarūpa*, are necessarily unthinkable by the mind, *acintyārūpa*,—liberates mortal man from all confusion of ignorance and from all bondage of sin, suffering and evil, *yo vetti asammūḍhah sa martyesu sarva-pāpaiḥ pramuc-yate*. The human soul that can dwell in the light of this supreme spiritual knowledge is lifted by it beyond the ideative or sensible formulations of the universe. It rises into the ineffable power of an all-exceeding, yet all-fulfilling identity, the same beyond and here. This spiritual experience of the transcendental Infinite breaks down the limitations of the pantheistic conception of existence. The infinite of a cosmic monism which makes God and the universe one, tries to imprison the Divine in his world manifestation and leaves us that as our sole possible means of knowing him; but this experience liberates us into the timeless and spaceless Eternal. “Neither the Gods nor the Titans know thy manifestation” cries Arjuna in his reply: the whole universe or even numberless universes cannot manifest him, cannot contain his ineffable light and infinite greatness. All other lesser God-knowledge has its truth only by dependence on the ever unmanifested and ineffable reality of the transcendent Godhead.

But at the same time the divine Transcendence is not a negation, nor is it an Absolute empty of all relation to the universe. It is a supreme positive, it is an absolute of all absolutes. All cosmic relations derive from this Supreme; all cosmic existences return to it and find in it alone their true and immeasurable existence. “For I am altogether and in every way the origin of the gods and the great Rishis.” The gods are the great undying Powers and immortal Personalities who consciously inform, constitute, preside over the subjective and objective forces of the cosmos. The gods are spiritual forms of the eternal and original Deity who descend from him into the many processes of the world. Multitudinous, universal, the gods weave out of the primary principles of being and its thousand complexities the whole web

of this diversified existence of the One. All their own existence, nature, power, process proceeds in every way, in every principle, in its every strand from the truth of the transcendent Ineffable. Nothing is independently created here, nothing is caused self-sufficiently by these divine agents; everything finds its origin, cause, first spiritual reason for being and will to be in the absolute and supreme Godhead,—*aham ādiḥ sarvaśaḥ*. Nothing in the universe has its real cause in the universe; all proceeds from this supernal Existence.

The great Rishis, called here as in the Veda the seven original Seers, *maharṣayaḥ sapta pūrve*, the seven Ancients of the world, are intelligence-powers of that divine Wisdom which has evolved all things out of its own self-conscious infinitude, *prajñā purāṇī*, —developed them down the range of the seven principles of its own essence. These Rishis embody the all-upholding, all-illuminating, all-manifesting seven Thoughts of the Veda, *sapta dhiyāḥ*, —the Upanishad speaks of all things as being arranged in septettes, *sapta sapta*. Along with these are coupled the four eternal Manus, fathers of man, —for the active nature of the Godhead is fourfold and humanity expresses this nature in its fourfold character. These also, as their name implies, are mental beings. Creators of all this life that depends on manifest or latent mind for its action, from them are all these living creatures in the world; all are their children and offspring, *yeṣāṁ loka imāḥ prajāḥ*. And these great Rishis and these Manus are themselves perpetual mental becomings of the supreme Soul² and born out of his spiritual transcendence into cosmic Nature, —originators, but he the origin of all that originates in the universe. Spirit of all spirits, Soul of all souls, Mind of all mind, Life of all life, Substance of all form, this transcendent Absolute is no complete opposite of all we are, but on the contrary the originating and illuminating Absolute of all the principles and powers of our and the world's being and nature.

This transcendent Origin of our existence is not separated

² *mad-bhāvā mānasā jātāḥ*.
